BERNARD, MOUNTAGUE (1820–1882), international lawyer, was descended from a Huguenot family which left France after the revocation of the edict of Nantes, and for several generations owned land at Montego Bay in Jamaica. He was the third son of Mr. Charles Bernard of Eden in that island, by Margaret, daughter of Mr. John Baker of Waresley House, Worcestershire, and was born at Tibberton Court, Gloucestershire, on 28 Jan. 1820. After passing through Sherborne school, he gained a scholarship at Trinity College, Oxford, where Professor Freeman, Sir R. Lingen, and the present bishop of St. David's, Dr. W. B. Jones, were scholars at the same time. In 1842 he took a first class in classics and a second in mathematics. He subsequently took the degree of bachelor of civil law, was elected to the Vinerian scholarship and fellowship, and in 1846, after studying in the chambers of Mr. Palmer, now Lord Selborne, with whom it was his fortune to be associated on several occasions in after life, was called to the bar at Lincoln's Inn. Few thoughtful minds at Oxford forty years ago escaped the influence, by way either of attraction or repulsion, of the high-church movement. Bernard's interest in ecclesiastical questions led him in 1846 to be one of those who founded the 'Guardian' newspaper, of which he is said to have been for some years the editor. He also found time for much historical reading, and for a wider study of legal systems than is usual for a practising lawyer. The Oxford University Commissioners of 1854 having founded a chair of international law and diplomacy out of the revenues of All Souls' College, Bernard in 1859 became its first holder. The appointment was in many ways a happy one. A new subject was introduced by a teacher of unquestioned authority; the academical study of law gained a zealous advocate, while the university acquired a wise counsellor and an indefatigable helper in the details of its administration. Bernard was appointed assessor, or judge, of the Chancellor's Court, and, as such, was instrumental in assimilating its procedure, which had previously been that of the civilians, to the practice of the courts of common law. But the demand for his services was not confined to the precincts of the university. In 1866 he was secretary to the royal commission for investigating the nature of the cattle plague, and in 1868 was a member of the commission on naturalisation and allegiance, the report of which led to the abandonment by Great Britain of the time-honoured, but now inconvenient rule, 'nemo potest exuere patriam.' In 1871 he went out to America as one of the high commissioners who eventually signed the treaty of Washington, and on his return was made a privy councillor, a member of the Judicial Committee of Council, and a D.C.L. He had been elected, a year or two previously, to a fellowship in All Souls' College. In 1872 he was sent to Geneva to assist Sir Roundell Palmer in presenting the British case to the tribunal of arbitration constituted in pursuance of the treaty. His public employments had become hardly compatible with his work at Oxford, and in 1874 he resigned his professorship and left the university. Henceforth he lived chiefly in London or with relations at Overross near Ross in Herefordshire, reappearing only from

time to time in his rooms at All Souls. In 1876 he served on the royal commission for inquiring into the duties of commanders of British vessels with reference to fugitive slaves, and in 1877 became a member of the University of Oxford Commission under the Universities of Oxford and Cambridge Act of that year. Upon this commission, at any rate after Lord Selborne, upon becoming a second time lord chancellor, had ceased to preside over it, Bernard's combination of legal training with academical experience gave him the leading place. To him, more than to any single commissioner, is doubtless due the character of compromise which was arrived at between the interests of the university on the one hand and the autonomy of the colleges on the other. The commission has been blamed for timidity, but its work was much more thorough than is generally supposed. The university is now not only better endowed than it has ever been, but is also far better organised than it has been for some centuries past. The faculties have been revived, and encouragement has been given to branches of learning which have no direct bearing upon the examinations. The labour of constructing what was practically a new *corpus juris academicum* for the university and its twenty colleges was immense, and seems to have fatally overtaxed the strength of Bernard. In the spring of 1882, just when the new statutes for Oxford had received the royal assent, he became seriously ill, and after lingering for some months, died at Overross on 2 Sept. of that year.

Bernard was accomplished in all branches of law, and his reputation as a master of the law of nations was as high on the continent and in America as in his own country. He was one of the original members of the Institut de Droit International, founded in 1873, and presided over its Oxford meeting in 1880 with much tact and dignity. As a professor he inclined rather to the historical than to the systematic exposition of his subject, dwelling by preference upon the analysis of treaties, the character of politicians, and the by-play of diplomacy. He could be generous, both of time and money. He was laborious, impartial, conscientious, fastidious, and averse to extremes. All that he did was governed by a consummate common-sense, which was, however, perhaps wanting in robustness. Though sometimes reserved in manner, he could be delightful as a conversationalist, and was the friend of many of the leading men of his day. His public services were of a very high order, though not of a kind to win the applause, or even to come to the knowledge, of the public generally. A monument erected to his memory in All Souls' College chapel truly sets forth how 'in hoc collegio xv. annos, tum juris gentium professor, tum socius bis cooptatus, Academiam scientia, ingenio, exemplo, auxit et ornavit; Reipublicæ fideliter deserviit.'

His style as a writer reflected his qualities as a man. It was conspicuous for good sense, good taste, and lucidity. The following is probably a complete list of his acknowledged writings: 1. The article on 'The Growth of Laws and Usages of War,' in the 'Oxford Essays' for 1856, T. W. Parker, London. 2. 'Remarks on the Proposed Alteration of the Law of Naval Prize,' 1857, London. 3. 'An Introductory Lecture on International Law,' 1859, Oxford. 4. 'A Lecture on the Principles of Nonintervention,' 1860, T. W. Parker, Oxford and London. 5. 'Two Lectures on the Present American War,' 1861, Parker, Oxford. 6. 'Notes on some Questions suggested by the Case of the Trent,' 1862, Oxford. 7. 'A Lecture on Alleged Violations of Neutrality by England in the Present War,' 1863, Ridgway, London. 8. 'A Letter to the Vice-Chancellor on the Study of Law at Oxford,' 1864, University Press. 9. 'A Lecture on the Schleswig-Holstein Question,' 1864, University Press. 10. 'Remarks on some late Decisions respecting the Colonial Church,' 1866, Oxford. 11. 'Four Lectures on Diplomacy,' 1868, Macmillan, London. 12. 'Notes on the Academical Study of Law,' 1868, Oxford. 13. 'An Historical Account of the Neutrality of Great Britain during the American Civil War,' 1870, 4to, Longmans, London. 14. 'A Letter to the Right Hon. W. E. Gladstone on the Statutes of the University' (dated 27 Feb.), 1882, Rivington, London.

[Personal knowledge.] T. E. H.

BERNARD, NICHOLAS, D.D. (*d.* 1661), divine, was born about the commencement of the seventeenth century, and educated at Cambridge, though nothing is known of his academic course. Having migrated to Ireland, he was ordained by Archbishop Ussher, in St. Peter's church, Drogheda, in 1626 (Wood, *Athenæ Oxon.*) He became the archbishop's chaplain and librarian. On 12 July 1627 he was presented to the deanery of Kilmore (another account states that he was nominated by the archbishop and elected on 9 Oct. 1627, and installed same day). Ussher, in his 'Visitation Book of the Province' in 1622, says of Kilmore: 'This deanery is merely titulary, nothing belonging to it, but the bishop for the time being made choice of any one of his clergie whom he thought fittest to give unto the name

title of a deane.' In the taxation-book of King James I, six years previously (1616) we find this entry, 'Decanatus de Kilmore, 20*l*.'

In 1628 Bernard was incorporated M.A. of Oxford. In 1637 he exchanged with the Very Rev. Henry Jones, D.D., the deanery of Kilmore for that of Ardagh. The patent is dated 22 June of that year, and his installation took place on 3 Nov. In the taxation by the commissioners of Queen Elizabeth, dated 1586, the entry occurs: 'Decanatus Ardach 14*l*. sterling money.' On 13 July 1637 he also became prebendary of Dromore. The rebellion of 1641 caused him much suffering. In connection with the rebellion he wrote some interesting pamphlets, of which the titles are: 1. 'The whole Proceedings of the Siege of Drogheda in Ireland, with a thankful Remembrance of its wonderful Delivery, raised with God's Assistance by the Prayers and sole Valour of the Besieged, with a Relation of such Passages as have fallen out there and in the Parts near adjoining,' Dublin, 1642. 2. 'A Letter sent from Dr. Barnard [sic], Parson of Tredagh . . . wherein is contained divers very memorable Passages twixt the King's Armies and the Rebels,' 1641. 3. 'The whole Proceedings of the Siege of Derry,' 1642. 4. 'A worthy Relation from Deane Bernard concerning . . . our Forces in the County of Louth,' 1642. These are vivid narratives, and have not been utilised historically as they might have been. They give us overlooked details and the verdict of a keen observer. Before these, he had printed an extraordinary story—'The penitent Death of a woful Sinner, John Atherton [Bishop of Waterford], executed at Dublin the 6th of December 1640. With a Sermon preached at the Funeral of the said John Atherton' [q. v.], Dublin, 1641. This was for long a popular chap-book. Bernard did not—like many of the resident Englishmen—fly to England in the outset. He bore the brunt of the tempest. He preached a 'Farewell Sermon' at Drogheda in 1649 on 2 Corinthians xiii. 11, 'Of Comfort and Concord,' London, 1651. In 1642, together with his books on the siege, he had published 'Dialogue between Paul and Agrippa,' London, 1642.

He returned to England, probably about 1649. He was appointed preacher of Gray's Inn 17 June 1651. He was further appointed chaplain and almoner to Oliver Cromwell. While he filled the latter office the great James Ussher, archbishop of Dublin, died on 21 March 1655, and on the 31st of that month 'Oliver the Protector' signed a warrant directed to the lords of the treasury for the sum of 200*l*. to bear the charges of his funeral; the amount was paid to Bernard. Bernard published the 'Life and Death of Archbishop Usaher in a Sermon preached at his Funeral at Westminster, 1656,' and in the following year 'The Judgment of the late Archbishop of Armagh and Primate of Ireland, of the Extent of Christ's Death and Satisfaction, of the Sabbath and Observation of the Lord's Day and of Ordination in other Reformed Churches, with a Vindication of him from a pretended Change of Opinion in the First, some Advertisements upon the Latter, and in Prevention of further Injuries, a Declaration of his Judgment on several other Subjects,' 1657. This led to an exchange of passionate letters between Bernard and Dr. Peter Heylin. Heylin commented on Bernard's works about Ussher, and defended himself from what he regarded as slanders on his good name contained in them, in the two tracts—'P. Heylyn's Extraneus Vapulans; or the Observator rescued from the violent but vaine assaults of H. L'Estrange, Esq., and the Back-blows of Dr. Bernard, &c., 1656'—'P. Heylyn. Respondet Petrus, or the Answer of Peter Heylyn . . . to so much of Dr. Bernard's Book entituled "The Judgment of the late Primate of Ireland," and as he is made a Party,' 1658.

In 1647 Bernard had somehow got into difficulties with those who might have been expected to be in sympathy with him. A singular tractate, dated 1648, bore the title, 'The Still-borne Nativitie, or a Copy of an Incarnation Sermon [on John i. 14] that should have been delivered at St. Margaret's, Westminster, 25 Dec. 1647, by Nicholas Bernard, but prevented by the Committee for Plunder'd Ministers, who sent and seized the Preacher and committed him to the Fleet for his undertaking to preach without the licence of Parliament,' London [31 Jan. 1647], 1648.

On 16 July 1660 Bernard was appointed by the patron, John, earl of Bridgwater, rector of Whitchurch, Shropshire. At the Restoration he was offered, but declined, his former deanery of Ardagh. He was now old, and preferred the learned leisure of a not overburdensome post. In 1659 he published 'Devotions of the Ancient Church, in Seven Pious Prayers.' In the same year followed, or possibly preceded, 'Certain Discourses, to which is added a Character of Bishop Bedell, with a Sermon by him on Rev. xviii. 4, and an Answer to Mr. Pierce, 1659.' Finally came 'Clavi Trabales, or Nails fastened by some great Masters of Assemblies, confirming the King's Supremacy, the Subjects' Duty and Church Government by Bishops, being a Collection of some Pieces written on these

Subjects by Archbishop Ussher, Mr. Hooker, Bishop Andrewes, and Dr. Hadrian Saravia, with a preface by the Bishop of Lincoln. Published by Nicholas Bernard, 1661.'

He died on 15 Oct. 1661, and his 'buryal' entry is thus made in the parish register of his church of Whitchurch: 'Nickolas Bernard, rector of Whitchurch, dyed the 15 of Octob. and was buryed Novemb. 7 [1661].' Philip Henry calls him 'a worthy and moderate man.' One of William Marshall's best engravings is a portrait of Dr. Bernard.

[Cotton's Fasti Ecclesiæ Hibernicæ (1851), i. and vii. iii. pp. 163, 172, 187, 302, v. pp. 229–30; Ware's Writers of Ireland (Works, iii. 342, &c.); Williams's Life of Philip Henry, p. 269; communications from Rev. Thomas Hamilton, M.A., Belfast, and Rev. W. H. Egerton, M.A., rector of Whitchurch.] A. B. G.

BERNARD, RICHARD (1568–1641), puritan divine, is described in a portrait (before his 'Threefold Treatise on the Sabbath,' 1641) as then aged 74. He was born at Epworth, Lincolnshire, in 1568, as the parish register shows, and he describes his first publication, his translation of 'Terence,' as achieved 'opera ac industria Ricardi Bernardi in Axholmensi Insula, Lincolnsherii, Epwortheatis.' Most of his earlier patrons addressed in his dedications and epistles belonged to his native county. He was fortunate enough as a boy to fall under the notice of two daughters of Sir Christopher Wray, lord chief-justice of England. One of these was the wife successively of Godfrey Foljambe, Sir William Bowes of Walton, near Chesterfield, and of John, the good Lord Darcy of Aston. The other married Sir George Saint Paul (spelled oddly Saintpoll) of Lincolnshire, and afterwards the Earl of Warwick, and as Countess of Warwick appears in many of Bernard's and contemporary dedicatory epistles. These two joined in sending Richard to the university, and he is never weary of acknowledging their kindnesses to him. A Richard Bernard appears in the registers of Christ's College, Cambridge, as proceeding B.A. 1567–8. He has been taken for the father of our Richard Bernard. This is improbable; but the later Richard was also at Christ's College, where he probably proceeded B.A. 1594–5, and certainly passed M.A. in 1598.

He stayed with relatives at Epworth in 1598. He dated thence his edition of 'Terence' in Latin with an English translation. He was presented to the vicarage of Worksop, in Nottinghamshire, by Richard Whalley, and was instituted on 19 June 1601. He sent out several of his books from Worksop, as the dates 1605 to 1612–13 show. One of the most distinctive is the following: 'Christian Advertisements and Counsels of Peace. Also Disuasions from the Separatists schisme, commonly called Brownisme, which is set apart from such truths as they take from us and other Reformed Churches, and is nakedly discovred, that so the falsitie thereof may better be discerned, and so iustly condemned and wisely avoided. Published for the benefit of the humble and godlie louer of the truthe. By Richard Bernard, preacher of God's Word. Reade (my friend) considerately; expound charitably; and judge, I pray thee, without partialitie; doe as thou wouldest bee done vnto. At London, imprinted by Felix Kyngston. 1608.'

Bernard was brought into union and communion with the separatists, but treacherously and basely as they alleged, conscientiously as he himself affirmed, withdrew from them. Thereupon commenced his invectives and their replies. His 'Christian Advertisements' was followed by his 'Plaine Evidences the Church of England is Apostolicall, the Separation Schismaticall. Directed against Mr. Ainsworth, the Separatist, and Mr. Smith, the Se-Baptist; both of them severally opposing the book called the Separatist's Schisme. By Richard Bernard, preacher of the Word of God at Worksop. For truth and peace to any indifferent iudgment, 1610.' It gives the real state of the case as between Bernard and his former friends and associates. Many of them had been his regular hearers; while equally with them he was a puritan in doctrine, and in practice a nonconformist in well-nigh everything they objected to, 'carrying to an extreme length the puritan scruples, going to the very verge of separation, and joining himself even to those of his puritan brethren who thought themselves qualified to go through the work of exorcism' (Hunter). Not only so, but he was silenced by the archbishop. On the whole, it must be conceded that Bernard sought, according to John Robinson, 'rather to oppress the person of his adversary with false and proud reproaches, than to convince (i.e. confute) his tenets by sound arguments' (*People's Plea for the Exercise of Prophecy*, 1618, p. vi).

A singular incident in which Bernard played a prominent part also belongs to his Worksop incumbency, viz. the exorcising of a (cataleptic) 'possessed person,' John Fox, of Nottingham. A contemporary tractate gives full details.

Notwithstanding his conflicts with many adversaries, Bernard wrote at Worksop one of his finest books, 'The Faithful Shepherd' (1607). He ceded Worksop in 1612–13

(Holland, *History of Worksop*, p. 127). But there was unpleasantness in the matter. John Smyth records that, besides a difficulty as to subscription, Bernard had shown 'vehement desire to the patronage of Sowerby,' and extreme indignation when defeated of it, and 'further earnest desire to have been vicar of Gainsborough' (p. 5).

In 1613 he was presented to Batcombe in Somersetshire. Thither he was summoned by the devout Dr. Bisse (or Bis). Bisse had been himself pastor from the dawn of the Reformation, and had purchased the advowson of his living, to present once only, for 200*l*. On presenting Bernard to it, he said: 'I do this day lay aside nature, respect of profit, flesh and blood, in thus bestowing as I do my living, only in hope of profiting and edifying my people's souls,' after which he did not live above three weeks. This, his last act, he called his 'packing-penny' between God and himself (Brook, ii. 460, and see note in Dr. Grosart's memoir of Bernard before his 'Ruth,' p. ix, 1865).

Whatever the circumstances were under which he ceded Worksop, he ever recalled his ministry there gratefully. He refers to it in the epistle dedicatory of his 'Faithful Shepherd' as 'wholly in a manner transposed and made anew, and very much inlarged, both with precepts and examples, to further young divines in the studie of divinitie,' 1621.

As minister of Batcombe he also faithfully fulfilled his trust. He still held fast to his objections to the 'ceremonies;' but he was indulged by his diocesan. It could be shown from his books that in three characteristics he was far ahead of his generation. In his epistle dedicatory to his remarkable book, 'The Isle of Man,' his pleading for 'an unbegun work' of caring for the prisoners anticipates the mission of John Howard. Again, the second portion of the 'Seven Golden Candlesticks,' which is entitled 'The Great Mysterie of God's Mercie yet to Come,' is one sustained argument and appeal on behalf of the Jews. Further, in our day all the churches have organisations towards systematic benevolence, which Bernard recommended in his 'Ready Way to Good Works, or a Treatise of Charitie, wherein, besides many other things, is shewed how we may be always ready and prepared, both in affection and action, to give cheerfully to the poor and to pious uses, never heretofore published' (1635).

At Batcombe he wrote a large number of books on various themes, which may be found tabulated at length in the bibliographical authorities. He translated 'Terence' (1598, 1604, 1617), and printed it in Latin and English; he wrote 'A Guide to Grand Jurymen with respect to Witches,' of which the second book is 'a treatise touching witches good and bad,' 1627. His 'Bible Battels, or the Sacred Art Military,' appeared in 1629. He bitingly attacked the high-church claims of the prelates in his 'Twelve Arguments proving that the Ceremonies imposed upon the Ministers of the Church of England by the Prelates are unlawful; and therefore that the ministers of the Gospel, for the bare and sole omission of them, for conscience sake, are most unjustly charged with disloyalty to his Majesty.' He showed some poetic imaginativeness in his 'Ruth's Recompence' (1628), a commentary on the book of Ruth, and dimly preluded the 'Pilgrim's Progress' in 'Isle of Man or Proceedings in Manshire' (1627). 'The Fabvlous Foundation of the Popedome' (1619), and 'Looke beyond Luther' (1623), are also among his works. Bernard had in later years several assistants, including Robert Balsom and Richard Alleine. He died at the end of March 1641. The epistle dedicatory to his 'Threefold Treatise on the Sabbath' bears date 'London, 20 March 1641.' The posthumous 'Thesaurus Biblicus' (1644, folio) contains in its epistle a character of Bernard by Conant.

BERNARD, THOMAS. [See under Bernard, John]

BERNARD, Sir THOMAS (1750-1818), philanthropist, was born at Lincoln 27 April 1750. He was the son of Sir Francis Bernard [see Bernard, Sir Francis], by Amelia, daughter of Stephen Offley, of Norton Hall, Derbyshire. He was educated at a private school in New Jersey and at Harvard University, where, however, his studies were interrupted by his father being obliged to employ him as confidential secretary during the disturbed condition of political affairs. Shortly afterwards he accompanied his father to England, and obtained the situation of commissary of musters. At the same time, having entered the Middle Temple, he prosecuted his studies in law, and was called to the bar in 1780; but on account of an impediment in his speech he devoted himself to the business of conveyancing. Having through his marriage in May 1782 to Margaret, daughter and coheiress of Patrick Adair, and his rapid success in business, acquired a considerable fortune, he retired from the law, and occupied his subsequent life in

the promotion of plans for the welfare of the poorer classes. It is impossible to admire too highly his enthusiastic and ceaseless energy, his remarkable insight into practical details, or his readiness to make the best use he could of the suggestions and proposals of others. The proximity of the residence of Bernard in Bloomsbury Square to the Foundling Hospital led him to take an active interest in that institution, even when he was in full practice in his profession. After he had been for several years one of the governors, he was, in 1795, elected treasurer, and for eleven years he was constantly in attendance on its concerns, until ill-health compelled him to resign office in December 1806, after which he became a vice-president. By the erection of streets on the hospital estates he greatly increased the revenues of the institution, and in the internal management he was equally successful, his adoption of Count Rumford's plans in regard to food and fuel being found so profitable that the system was introduced into all the workhouses and parishes of the kingdom. He published in 1799 a pamphlet entitled 'An Account of the Foundling Hospital, London.' In 1796, along with the Bishop of Durham, Mr. Wilberforce, and others, he established the Society for Bettering the Condition of the Poor. Among the immediate results of his recommendations was the formation, in 1800, of a school for the indigent blind, and in 1801 of the Fever Institution. He also exerted himself in promoting vaccination, and in the furthering of measures for protecting children in cotton mills and the apprentices of chimneysweeps. In 1797 he published 'A Short Account of Britton Abbot'—a Yorkshire cottager who had enclosed a rood of waste land, on which he had succeeded in maintaining a wife and six children —as an example of the improvement that might be effected in the condition of the poor by allotting them small pieces of ground to reclaim and cultivate. Bernard took a prominent part in the founding of other important institutions. At the suggestion of Count Rumford he, in 1799, set on foot the plan of the Royal Institution, Piccadilly, for which the king's charter was obtained 13 Jan. 1800. With kindred aims in reference to art he, in 1805, succeeded in establishing the British Institution for the Promotion of Fine Arts in the United Kingdom. He was also the originator of the Albert Club, a clubhouse for literature, from which all gaming, drinking, and party politics were to be excluded. Having in 1801 been appointed by the Bishop of Durham chancellor of that diocese, he, in 1808, set on foot at Bishop Auckland a collegiate school for the training of promising scholars as teachers. The school was under the direct superintendence of Dr. Bell; and as at this time no central school of a similar character had been established in the metropolis, there was soon a great demand upon it for a supply of teachers. In explanation of the experiment and of the method of instruction employed, he published in 1809 'The New School,' of which a second edition appeared in 1810, an enlarged edition under the title of 'The Barrington School' in 1812, and another under the same title in 1815. Bernard also endeavoured to set on foot a movement, in which he was only partially successful, for the erection of free chapels, the first of which was opened in West Street, Seven Dials. He took an eager interest in every measure designed to effect the removal of accidental hardships and disabilities affecting the circumstances of the poor. He rendered important assistance in the formation, in 1812, of an 'Association for the Relief of the Manufacturing Poor,' as well as, in 1813, of the 'Fish Association for the Benefit of the Community,' and in 1816 he began an active agitation against the salt duties, conceiving them to exercise an injurious influence not only on the fishing industries, but on the manufactures and agriculture of the country. On this subject he, in 1816, addressed a letter and two postscripts to Mr. Vansittart, the chancellor of the exchequer. He also expounded his views in 1817 in a pamphlet 'On the Supply of Employment and Subsistence to the Labouring Classes in Fisheries, Manufactures, and Cultivation of Waste Land,' and in 1818 in a more elaborate work 'On the Case of the Salt Duties, with Notes and Illustrations.' The result was that after parliamentary inquiry a bill was brought in for reducing the duty on rock salt for agricultural purposes. The anxiety and labour connected with this agitation seriously affected his already weakened health. A visit to Leamington Spa proved ineffectual in restoring it, and he died 1 July 1818. He was buried in a vault under the Foundling Hospital.

In 1801 the Archbishop of Canterbury conferred on Bernard the degree of M.A., and the same year he received that of LL.D. from the university of Edinburgh. In 1810 he succeeded to the baronetcy on the death of his brother. His first wife died 6 June 1813, and on 15 June 1815 he married Charlotte Matilda, youngest daughter of Sir Edward Hulse, Bart., but by neither marriage had he any issue. In addition to the works already mentioned he was the author of 'Observations relating to the Liberty of the Press,' 1793; 'An Historical View of Christianity,' 1806; and the 'Comforts of Old Age,' printed pri-

vately in 1813 for distribution in the infirmaries of the town, and published in 1816. He was also connected with Dr. Dibdin in the publication of the 'Director,' a weekly periodical, chiefly devoted to notices of lectures at the Royal Institution, and to criticisms of pictures in the British Gallery. A number of manuscripts of Sir Thomas Bernard are in the British Museum, including a 'Letter to the Right Hon. N. Vansittart on Repeal of the Salt Duties' (*MS. Add.* 29233); 'Letters to W. Hastings' (*MS. Add.* 29191); and 'Letters to H. Boase' (*MS. Add.* 29281).

[Gent. Mag. lxxxviii. pt. ii. pp. 82-3; Baker's Life of Sir Thomas Bernard (1819); Dr. Dibdin's Reminiscences of a Literary Life (1836), pp. 230-234.] T. F. H.

BERNARD, WILLIAM BAYLE (1807-1875), English dramatist, by birth an American, but a British subject and the son of British parents, was born on 27 Nov. 1807 at Boston, where his father, John Bernard [q. v.], was then manager of the theatre. In 1820 his family returned to England, and he completed his education at a school at Uxbridge. In 1826 he was appointed to a clerkship in the army accounts office by Canning, whose mother had been a leading actress in the elder Bernard's company at Plymouth. The office was abolished in 1830, and young Bernard was thrown upon his resources. He had already begun to write for the stage, having in 1827 produced his nautical drama, 'The Pilot,' for which he received 3*l.*, and when the piece reached the hundredth night 2*l.* more, 'to prompt him to further exertions.' In 1828 he wrote a novel, 'The Freebooter's Bride,' in five volumes, a production of the Minerva Press school; and in 1829 he compiled 'Retrospections of the Stage' from memoranda left by his father, bringing the life of the latter down to his departure for America in 1797. In 1830 he became a professional dramatist, and produced plays and farces with such rapidity that, notwithstanding an eight years' interruption of his dramatic labours, the total number amounted to 114. Many were written for America, and not half have been printed. The best-known are: 'Rip Van Winkle,' 1832; 'The Nervous Man,' 1833; 'The Man about Town,' 1836; 'Marie Ducange,' 1837; 'His Last Legs,' 1839; 'The Boarding School,' 1841; and 'The Round of Wrong,' 1846. His last piece was 'The Doge of Venice,' 1867. He collaborated with Dr. Westland Marston in the production of 'Trevanion,' 1849, and wrote much dramatic and other criticism for the press. In 1874 he published the biography of Samuel Lover, an uninteresting book, owing to the entire dearth of material. He died at Brighton on 5 Aug. 1875. Bernard was a highly accomplished man, a prolific and efficient playwright, an excellent dramatic critic, thoughtful, studious, and interested in serious subjects.

[Men of the Time, 9th ed.; Era Newspaper; private information.] R. G.

BERNARDI, JOHN (1657-1736), major, a suspected conspirator in the 'assassination plot' against William III, was the son of Count Francis Bernardi, a Genoese nobleman who, after representing the republic of Genoa for some years in London, took up a permanent residence in Worcestershire. The chief authority for the son's life is a narrative written by himself, which, although inaccurate in certain particulars, and pervaded throughout by a tone of exaggeration and boastfulness, must in its main outlines be accepted as trustworthy. He was born at Evesham in 1657. In childhood he occasionally received such severe treatment from his father, that at last, at the age of thirteen, he resolved to escape to Packington Hall, the seat of Sir Clement Fisher, whose wife had previously expressed sympathy for his misfortunes. Finding, when he reached Packington Hall, that Sir Clement and his lady were in London, he followed them thither, was kindly received, and was recommended to their relative, Captain Clent, then in garrison at Portsmouth, who caused him to be taught military exercises along with his company. When the regiment was disbanded at the close of the Dutch war, Bernardi, having received from the captain a parting gift of 20*l.*, went to London, where he caught the small-pox, and was reduced to such hard straits, that he addressed himself to his godfather, Colonel Anselme. The colonel, being about to set out for Holland, invited Bernardi to accompany him, and shortly after his arrival he entered as a private the service of the states, exchanging afterwards into one of the English independent regiments. He was present at many of the principal battles and sieges of the war, receiving an English commission in 1674 under Sir John Fenwick, and being promoted captain in 1685 in Colonel Monk's company. He was wounded at the siege of Grave in 1674, was again wounded in 1675 in parting two gentlemen in a duel, and at the siege of Maestricht in 1676 lost the sight of an eye, was shot through the arm, and, but for the devotion of one of his company, would have been left for dead. When in 1687 James II resolved to recall the English troops from Holland, he was one of the sixty

officers who obeyed the summons; and at the revolution he refused to sign the obligation to stand by the Prince of Orange. Being thus compelled to leave England, he arrived at St. Germains as King James was about to set out on the expedition to Ireland, and received from him the command of a division. After the death of Dundee at Killiecrankie, he was despatched from Ireland, along with Sir Robert Southwell, to the highlands of Scotland, to assist the Earl of Seaforth in organising a resistance to General Mackay. The defeat of the army of James at the battle of the Boyne rendering further efforts in his cause hopeless, Bernardi, after the dispersion of the highland forces, made his escape southwards to London, where, as he was about to set sail for Holland, he was apprehended on a charge of high treason. The bill was, however, rejected, and, after a visit on parole to Holland, he took up his residence near Brentford until the Christmas of 1695, when he began to frequent the Jacobite coffee-houses in London. In 1696 he was arrested in bed in a tavern on Tower Hill on suspicion of being concerned in the 'assassination plot,' but, no tangible evidence being forthcoming against him, he was never put upon his trial. When the suspension of the Habeas Corpus Act had expired, a bill was brought in to sanction the imprisonment of him and four others for a year, on the plea that further time was required to collect evidence. The act was renewed at the end of a year, and on its second expiration an act was passed for confining them during the pleasure of King William. Similar acts were passed on the accession of Anne, George I, and George II. The strong Jacobite sympathies of Bernardi, and the fact that he was arrested in company with an old acquaintance, Captain Rookwood, who was convicted, formed indeed strong presumptive evidence against him; but to doom him to hopeless captivity without trial was a gross violation of those very principles of liberty which William of Orange came to vindicate. Bernardi attained the pathetic pre-eminence of surviving by several years all the other prisoners. After nearly forty years' imprisonment, he died in Newgate in his eightieth year, 20 Sept. 1736. Notwithstanding that his later years were rendered additionally irksome from frequent suffering caused by the breaking out of his old wounds, he bore his hard fate with great cheerfulness. While in Holland he had married in 1677 a Dutch lady of good family, but she died before his imprisonment, and in 1712 he was married again in Newgate. His second wife bore him ten children, and her care did much to mitigate the evils of his lot.

[A Short History of Major Bernardi written by Himself in Newgate, where he has been for near thirty-three years a Prisoner of State, without any allowance from Government, and could never be admitted to his Trial, 1729; Biog. Brit. ii. 267–74; Thurloe's State Papers; Macaulay's History of England; Gent. Mag. vi. 553, l. 125.] T. F. H.

BERNERS, second BARON (1467–1533). [See BOURCHIER, JOHN.]

BERNERS, BERNES, or BARNES, JULIANA (*b.* 1388?), writer on hawking, hunting, and heraldry.

The historic and the legendary Dame Juliana Berners are very different persons. 'What is really known of the dame is almost nothing, and may be summed up in the following few words. She probably lived at the beginning of the fifteenth century, and she possibly compiled from existing MSS. some rhymes on hunting;' so writes one of the latest and most destructive of Dame Juliana's biographers (BLADES, *The Boke of St. Albans in Facsimile*, 1881, p. 13). Mr. Blades evidently judges from the only mention of Juliana Berners in the original edition of the 'Boke of St. Albans,' 1486, in the colophon of its second treatise. This consists of a rhymed treatise on hunting, and concludes: 'Explicit Dam Julyans Barnes in her boke of huntyng.' In the reprint of the 'Boke' ten years later by Wynkyn de Worde, the colophon is varied, thus: 'Explicit dame Julyans Bernes doctryne in her boke of huntynge;' and the 'Boke' itself ends: 'Enprynted at Westmestre by Wynkyn the Worde the yere of thyncarnacon of our lorde, m.cccc.lxxxxvj.' Clearly Wynkyn de Worde attributed the authorship of the hunting treatise in the 'Boke' to one Julyans Bernes. This is all that contemporaneous history knows of the lady. 'It must not be concealed that no such person can be found in any authentic pedigree of the Berners family, nor do the county historians of Hertfordshire, nor indeed any other writers, notice her from documents' (DUGDALE'S *Monast. Anglic.* iii. 363, ed. 1821). She possesses, however, a biography which is more or less mythical, and which is due to conjecture, inference, and perhaps not a little to imagination. Haslewood assigns a distinguished lineage to the dame on the authority of Chauncy (*Hist. of Hertfordshire*, 1700). She 'is supposed,' he says, 'to have been born towards the latter end of the fourteenth century. The received report is that she was the daughter of Sir James Berners, whose son was created Baron Berners, temp. Henry IV, and that she once held the situation of prioress of Sopwell

Nunnery, in Hertfordshire.' The pedigree may be found p. 11 (HASLEWOOD, *Boke of St. Albans*, London, 1810, fol.), drawn out in full. It is enough to note here that Sir John Berners of Berners Roding, Essex, died in 1347. His son, Sir James, father of Dame Juliana, was beheaded on Tower Hill in 1388. The family branched out into Sir Humphrey Bourchier, who was slain at Barnet 1471, fighting for Edward IV, and was a son of one Margery Berners. His son was the translator of Froissart. Thence it stretches to Jane, mother of Sir Thomas Knyvet, whose great-great-grandson left a sole heir, Katharine. She married Richard Bokenham, to whom the barony of Berners was adjudged in 1720. The dame is said to have spent her youth probably at the court, and to have shared in the woodland sports then fashionable, thus acquiring a competent knowledge of hunting, hawking, and fishing. Having withdrawn from the world, and finding plenty of leisure in the cloister after being raised to the position of prioress, it is next believed that she committed to writing her experience of these sports. As for fishing, if she were an active prioress, the exigencies of fasting days would demand that she should busy herself in the supply of fish required for the sisterhood. Like all observant anglers, she would daily learn more of that craft as she grew older, and so she naturally treats of it more fully and in a clearer order than the other subjects of the 'Boke' are handled. The title 'dame' did not of itself imply in the fifteenth century any connection with nobility; 'it meant simply mistress or Mrs.,' says Mr. Blades (p. 10). 'Had the Dame Julyans Barnes of the fifteenth century lived now, she would have been just "Mrs. Barnes."' But this is somewhat too broadly stated. The usual account of this title is that the lady was one of the sisters called Dames, as she was able to pay the little community for her maintenance, and so was placed on a higher footing than the ordinary nun, who performed menial tasks in lieu of payment. She calls herself dame in the 'Treatise on Hunting.' The scanty ruins of Sopwell Nunnery may yet be seen about a quarter of a mile north-east of the Abbey of St. Albans, not far from the little river Ver, in which the dame may have fished, and which is yet famous for its trout. The well from which the name was derived is also visible hard by. Of this nunnery the authoress of the 'Boke of St. Albans' was certainly an inmate, and probably, as tradition has handed down, its prioress. Her name does not appear in the list of the prioresses of Sopwell; but there is a gap in their enumeration between 1430, when Matilda Flamstead died, and 1480, when a commission was issued by the abbot of St. Albans (on whom the nunnery was dependent) to Rothebury, the cellarer, and Thomas Ramrugge, the subprior, to supersede from her office of prioress Joan Chapell, who was very old and too infirm to discharge her duties. In this space of fifty years upholders of the time-honoured belief may legitimately insert the dame as prioress if they will. The nunnery itself had been founded under the rule of St. Benedict about 1140. The rule of life was very strict, and at first the nuns had been enclosed under lock and key; but this discipline was gradually relaxed, and it is quite conceivable that, without participating in the license and evil-living which rendered notorious many of the religious houses prior to the reformation, the dame and her companions might have allowed themselves a decent liberty, during which field sports suitable to their sex might have alternated with the exercises of devotion. In the well-watered, well-timbered neighbourhood of Sopwell the dame may have found inducements to follow the field-sports which are inseparably connected with her name and the 'Boke of St. Albans.' A century after her time, Mary Queen of Scots displayed the same passionate enthusiasm for hunting and hawking which animated so many high-born ladies during the middle ages. In any case, the dame could solace herself with her treatises among the ruthless succession of battles, treasons, and executions which marked the wars of the Roses, and from which her own kith and kin had not escaped. She had heard, it may be, of the marvellous art which Caxton had been introducing into England at his Westminster Press, 'the almonry at the red pale.' Suddenly she found another of these wonder-working printers settled at her own doors, and made over to him her manuscripts, much to the delectation of posterity.

Such being the shadowy life of Dame Juliana Berners, it is curious that a like fate pursues even her printer. He is only known from Wynkyn de Worde's reprint of 'St. Alban's Chronicle,' the colophon of which states: 'Here endith this present chronicle, compiled in a book and also enprinted by our sometime schoolmaster of St. Alban.' From 1480 to 1486 he issued eight works, the first six of which are in Latin. Towards the end of his life he seems to have grasped the fact that fame waited for the man who should give books in their own tongue to the English. Accordingly his last two books, 'The Boke of St. Albans' and 'St. Alban's Chronicle,' were printed in the vernacular. He printed

from an old worn-out fount of type which had been discarded by Caxton, and after the stoppage of the press at St. Albans (probably by Cardinal Wolsey) this same fount returned to Westminster, and was actually used by Wynkyn de Worde in his reprints (1496-7) of the two English books which had been issued by the press of St. Albans (Blades, *Introd. to the Boke of St. Albans*, pp. 17-23).

The first edition of the 'Boke of St. Albans' (1486) consists of four separate treatises on 'Hawking,' 'Hunting,' the 'Lynage of Coote Armiris,' and the 'Blasyng of Armys,' together with a good deal of intercalated matter resembling the subjects usually found at the end of a modern almanac. Warton, Blades, and most moderns consider these treatises as but translations, probably from French manuscripts, much as Cædmon's poems are probably but the versification of previous Saxon paraphrases. Indeed, the colophon at the end of the 'Blasyng of Armys' states: 'Here now endyth the boke of blasyng of armys translatyd and compylyt togedyr at Seynt albons.' There is also internal evidence to the same effect. What seems to render this certain, however, is that in 1883 Messrs. Satchell published the 'Treatyse of Fysshynge with an Angle' from a manuscript in the possession of A. Denison, Esq., which differs considerably in orthography, phrase, and sense from that in the 'Boke of St. Albans;' and Professor Skeat is inclined to assign to it an earlier date than 1450. After full consideration, Haslewood finally attributes to the dame's pen (1) a small portion of the treatise on Hawking; (2) the whole treatise upon Hunting; (3) a short list of the beasts of chase; (4) another short one of beasts and fowls. 'It is plain Julyans Bernes wrote the book of Hunting' (Herbert and Dibdin's *Ames*, ii. 65, 1810). Chalmers states that 'what relates to the blazing of arms contains no more than abstracts from a performance of Nicholas Upton, written about 1441.' Only three perfect copies of this first edition are known. One is in the Althorp Library, another in the Earl of Pembroke's collection, and the third is in the library of the Earl of Devon. The only copy which has appeared in an auction-room this century (with the exception of that in the Duke of Roxburghe's sale, which was very imperfect) was itself imperfect. It came from the library of Mr. F. L. Popham of Littlecote, and was sold in March 1882 for 600 guineas to Mr. Quaritch.

In the next edition (1496), that of Wynkyn de Worde, first appears the celebrated 'Treatyse on Fysshynge with an Angle.' A hundred years after its first publication the work figures, in 1586, as the 'Boke of St. Albans, Hawking, Hunting, Fishing, with the True Measures of Blowing' (b.l. Printed by Edward Allde, 4to, 44 leaves). During the sixteenth century the 'Boke' was so frequently reprinted, owing to its extreme popularity, as almost to defy the bibliographer's skill. Its 'circulation for a long time vied with and perhaps exceeded that of every other contemporary production of the press of lesser eminence than Holy Writ' (Haslewood, p. 21).

The first edition of the 'Boke' is illustrated with coats of arms in black and red, but in the second edition, 1496, appear the quaint and celebrated woodcuts. These are three in number. The first consists of a group of men going hawking, while a hawk flies over them, and two dogs like Italian greyhounds run at their side. The costume of the sportsmen is as noticeable as the character of their dogs. In the second appears a 'bevy' or 'sege' of fowls (as the dame orders them to be called), some of which are flying, others swimming, others again standing on the banks of a stream. A lion is seizing one of these which resembles a bittern. The woodcut attached to the 'Treatyse of Fysshynge' is probably better known than the other two, owing to its numerous reproductions. A countryman is engaged with rueful face in angling. His rod and line are extremely primitive. An open tub lies at his side, in which he is intended to place his captives and keep them alive until they could be deposited in the 'stew.'

An excellent facsimile of the original edition of the 'Boke' was published by Mr. E. Stock in 1881; and a reproduction, also in facsimile, of the 'Treatyse of Fysshynge' in 1880.

BERNHER, AUGUSTINE (*fl.* 1554), clerk and servant of Latimer, bishop of Worcester, was a Swiss, or, according to Foxe, a Belgian. During the reign of Mary he was minister of a congregation in London, and is said to have lived much at Baxterley. He was married (Tanner). When Latimer was committed to the Tower (13 Sept. 1553)

Bernher attended him there, and the next year waited on him and the other bishops imprisoned at Oxford (Strype's *Cranmer*, 492, 957). In this year also he succoured Jewel when in great need during his flight from Oxford, and so saved his life (*Memorials*, i. 227). Throughout the Marian persecution he was a constant friend to the martyrs, and 'a kind of overseer to the wives and fatherless children of those who died for religion' (*ib.* 589). In a letter written shortly before his death, Robert Glover bade his wife be guided by Bernher, whom he calls 'an angel of God;' and Bradford, writing from his prison, addresses him as 'my own good Augustine' (Foxe, *Acts and Monuments*, vii. 262). He comforted and attended on Glover (*ib.* 398), Careless (*ib.* viii. 185), Mrs. Joyce Lewes (*ib.* 404), and Cuthbert Sympson (*ib.* 456), who suffered martyrdom 1555–58. In the reign of Elizabeth he was rector of Sutton (*Memorials*, i. 589), or, according to Tanner, of Southam, and was noted for the indignation he expressed against the priests who conformed to the ecclesiastical changes then enforced. He wrote 'Testimonies taken out of God's Word,' &c., 'An Answer to certain Scriptures,' &c., manuscripts in the Bodleian Library, 'Epistola ad dominum suum' (Ridley), a manuscript in Emanuel College, Cambridge, and edited Latimer's Sermons with a Latin preface addressed to Catherine, duchess of Suffolk, 4to, 1572, 1635, and Latimer's Works (Parker Soc.), i. 311. Notices of Bernher will be found in various works published by the Parker Society, e.g. Bradford's Works, i. 306, ii. 168, 186, and Ridley's Works, 381; see index to the series.

[Strype's Ecclesiastical Memorials, Memorials of Cranmer, 8vo, Oxford, 1828; Foxe's Acts and Monuments, 1849; Publications of Parker Society, with Gough's Index; Tanner's Bibl. Brit.]

W. H.

BERNICIA, Kings of. [See Ida, *d.* 559; Adda, *d.* 565· Ethelfrid, *d.* 617; Oswald, 605?–642; Oswy, 612?–670.]

BERNINGHAM, RICHARD de (*fl.* 1313), was a justice itinerant. There were two families of this name in the reign of Edward II, one in Yorkshire and the other in Norfolk. Both contained a Richard de Berningham, the former a son of John de Berningham, the latter of Walter de Berningham, lord of the manor of Hanteyns Barnham, Norfolk. The Richard de Berningham who was so often in this reign summoned to the council among justices and others probably belonged to the Yorkshire family (Sir F. Palgrave). A parliamentary writ, dated 6 Sept. 1313 (*Parl. Writs*, ii. p. ii. 534), requires him to lay aside the caption of assize in the northern counties during the meeting of parliament and repair to Westminster. He continued to be summoned in 1314, 1315, 1317, 1318, 1319, 1320, until 1324, and during that time was included in judicial commissions as conservator of the peace, justice of oyer and terminer, and commissioner of array for the county of York, in which county he was knight in 1323. From 1314 to 1315 he was a collector of scutages in Yorkshire, and in 1318 was empowered, as a landowner beyond the Trent, to raise and arm his tenants. The name of Richard de Bernyngham, miles, appears as witness to a charter of Marigg Abbey, Yorkshire, 5 April 1321 (*Collect. Topographica*, 1843, Marigg Charters, v. 123). He died, holding property at Middleton and Queenrow in Yorkshire, in 1329.

[Foss's Lives of the Judges; Blomefield's Norfolk, i. 636; Cal. Inquis. post mortem, ii. 19; Parly. Writs, ii. div. 3, p. 534.] J. A. H.

BERRIDGE, JOHN (1716-1793), an evangelical clergyman, was the eldest son of John Berridge, a wealthy farmer of Kingston, Nottinghamshire, and was born there 1 March 1716. He was entered at Clare Hall, Cambridge, 28 Oct. 1734, took the degree of B.A. in 1738, and that of M.A. in 1742. Whilst at the university he was a diligent student, and often worked for fifteen hours a day. For many years he remained a resident fellow of his college, and for the last six years of his residence at Cambridge (1749–55) he served the curacy of Stapleford. Cole, in an amusing passage quoted in Mr. Thompson Cooper's biographical dictionary, says that he was 'the head of a sect called Berridges in the neighbourhood of Cambridge,' a statement which is corroborated to some extent by George Dyer, who asserts that his sermons at St. Mary's gave great offence, but that he had many followers in town and country. On 7 July 1755 he was inducted to the college of Everton, Bedfordshire, where he remained until his death. In the year 1758 he became acquainted with Wesley and Whitefield; they preached in his parish church, and he preached in their London chapels. His first sermon out of doors was delivered 14 May 1759, after which date he regularly travelled on preaching tours through the neighbouring counties. 'One of the most simple as well as most sensible men' was John Wesley's description of Berridge, and all his contemporaries agreed in praising his kindly and simple disposition. Tall of stature, strong in voice, naturally witty, and of a cheerful disposition, his qualities attracted great crowds to listen to his sermons, and he laboured zealously whilst his health lasted. He died at Everton 22 Jan. 1793, and was

buried in the churchyard 27 Jan., when Simeon preached his funeral sermon.

Although Berridge was a man of great knowledge, he in later life, to the regret of Wesley, rejected the aid of human learning for christianity. When at Cambridge he was an Arminian in creed, but afterwards he became a Calvinist, putting his faith in divine mediation and 'free grace,' whilst refraining as much as possible from controversy. His works were numerous: 1. 'A Collection of Divine Songs' (1760), mostly from Wesley's hymns, a volume which he afterwards suppressed, substituting for it 'Sion's Songs' (1785 and 1815). 2. 'Justification by Faith alone,' the substance of a letter to a clergyman (1762), reproduced in 1794 under the title of 'A Short Account of the Life and Conversion of Rev. John Berridge,' and in 1827 and 1836 as 'The great Error detected, or Self-righteousness disclaimed.' 3. 'The Christian World unmasked, pray come and peep' (1773), a plain and homely, but an effective, expression of his religious belief, which passed through many editions, and was answered by Fletcher of Madeley in the first and second parts of his 'Fifth Check to Antinomianism.' 4. 'Chearful Piety, or Religion without Gloom' (1792), 7th edition in 1813. 5. 'Last Farewell Sermon, preached at the Tabernacle 1 April 1792, with a short account of Mr. Berridge's death' (1793 and 1834). The Rev. Richard Whittingham, who had been Berridge's curate at Everton, added a short memoir of his life to a reprint of the 'Christian World unmasked,' about 1818. An enlarged biography by Mr. Whittingham, with a reprint of the same work and of 'Sion's Songs,' appeared in 1838; an appendix was published in 1844, and a second edition of the whole work in 1864. A sermon on his death by Rev. William Holland, and an anonymous elegy, were published in 1793; and so late as 1882 there appeared a volume of 'Gospel Gems, a Collection of Notes from the Margins of the Bible of the Rev. J. Berridge.' Numerous anecdotes, as well as letters from him, are contained in the 'Life and Times of the Countess of Huntingdon,' and in the 'Congregational Magazine' for 1841 and 1845.

[Tyerman's Whitefield, ii. 410, 441, 462; Tyerman's Wesley, ii. 309–70, 463, 491, iii. 2, 158; Tyerman's Fletcher, 51–3, 283–5, 294–8, 371; Gadsby's Hymn Writers, 14–35, 153; Dyer's Cambridge, i. 122–4.] W. P. C.

BERRIMAN, JOHN (1691–1768), divine, born in 1691, was the son of John Berriman, a London apothecary, and thus brother of William Berriman, D.D. [q. v.] He was a member of St. Edmund Hall, Oxford, where he matriculated 11 May 1714, proceeding B.A. 1718, and M.A. 1720, was for many years rector of St. Olave's and St. Alban's. He published in 1722 a sermon (on Kings xxi. 12-13) entitled 'The Case of Naboth considered and compared with that of the Royal Martyr,' 4to. This was followed in 1741 by 'Θεὸς ἐφανερώθη ἐν σαρκὶ, or a critical dissertation on 1 Tim. iii. 16. Wherein rules are laid down to distinguish in various readings which is genuine. . . . Being the substance of eight sermons preached at the Lady Moyer's lecture in 1737–8,' 8vo. In 1751 he edited his brother William Berriman's 'Christian Doctrines explained in Forty Sermons,' 8vo, and in 1758 he wrote a preface to C. Wheatley's 'Fifty Sermons.' He died in 1768.

[Gent. Mag. xxxviii. 590; Rawlinson MSS., fo. 16182, Bodleian Library; British Museum Catalogue.] A. H. B.

BERRIMAN, WILLIAM, D.D. (1688–1750), divine, son of John Berriman, apothecary in Bishopsgate Street, London, in the parish of St. Ethelburga (by Mary, daughter of William Wagstaffe, of Farnborough, Warwickshire), and grandson of the Rev. Charles Berriman, rector of Beddington, Surrey, was born on 24 Sept. 1688. His first school was at Banbury, Oxfordshire; he continued there seven years. Thence he was removed to Merchant Taylors' School, London, under Dr. Shorting, in 1700. He was entered commoner of Oriel College, Oxford, on 4 March 1705. He went to reside in Oxford on 21 June 1705; was B.A. 2 Nov. 1708; M.A. 2 June 1711; D.D. 25 June 1722. His brother, in his memoir of him, lauds his learning at the university, and Glocester Ridley, LL.B., in his funeral sermon remarks: 'Aware of the ridiculousness of that dangerous and troublesome acquisition, "a little learning," he did not quit the university when yet but a novice there, and rush into the world to be a teacher of it, till he had formed his judgment by the compleat axle of academical sciences and the exercises of the school' (p. 11). He mastered Hebrew, Syriac, and Arabic. He was ordained deacon at Oxford by Bishop Talbot, but continued in residence at the university till he was settled in London on 5 May 1712. He is found as curate at Allhallows in Thames Street in 1712. He was ordained priest on 12 Dec. 1712 by the Bishop of Hereford (Dr. Bisse). He was chosen lecturer of St. Michael's, Queenhithe, 22 July 1714. He became domestic chaplain to Dr. Robinson, bishop of London, April 1720, and resided at Fulham. On 26 April

1722 he was presented to St. Andrew's Undershaft, and thereupon resigned his lectureship at Queenhithe. He was known privately as author of 'A seasonable Review of Mr. Whiston's Account of Primitive Doxologies,' 1719, and of 'A Second Review,' also 1719. In 1723–4 was delivered his 'Historical Account of the Trinitarian Controversy,' being the Lady Moyer's lecture, published 1725. In 1731 followed 'A Defence of some Passages in the Historical Account.'

On 17 Nov. 1724 he married Mary Hudson. On 16 June 1727 he was elected fellow of Eton College, and for the remainder of his life took special interest in this foundation. Eton became his summer residence. In 1730–1 he preached the Boyle lecture, published in 1733 (2 vols. 8vo). In 1733 appeared his 'Brief Remarks on Mr. Chandler's Introduction to the History of the Inquisition.' There were other occasional sermons and tractates. He died on 5 Feb. 1749–50, in his sixty-second year. His brother John [q. v.] published posthumously two volumes of sermons, entitling them 'Christian Doctrines and Duties explained and recommended in xl Sermons' (1751).

[Memoir by John Berriman in his Christian Doctrines, 1751; The Good Christian never dies, by Glocester Ridley, 1750; Chandler's Answer to William Berriman, D.D., 1733; with A Second Letter, 1733, and A Vindication against the Misrepresentations of William Berriman, 1734; Biog. Brit.; Wilson's Dissenting Churches, ii. 365.] A. B. G.

BERROW, CAPEL (1715–1782), divine, was born in 1715, son of Capel Berrow (of Christ's College, Cambridge, B.A. 1703, M.A. 1712), chaplain to William, Earl Cowper, and for forty years the curate of Northill, Bedfordshire, who died 28 Oct. 1751 (Lysons, *Bedfordshire*, 120). He was admitted into Merchant Taylors' School 16 Oct. 1728, and became head scholar in 1733 (Robinson, *M. T. School Register*). He proceeded to the university of Oxford, matriculated a commoner of St. John's College 7 Sept. 1734, proceeded B.A. 1 June 1738, M.A. of Christ's College, Cambridge, 1758. He became curate of St. Botolph's, Aldersgate, March 1741, and afterwards of St. Austin's, and on 12 July 1744 was chosen lecturer of St. Benedict and Paul's Wharf. The title-pages of his different books show his further offices and dignities, as follows: 'Theological Dissertations by Capel Berrow, A.M. Rector of Rossington, Northamptonshire; Lecturer of St. Bennet's and St. Peter Paul's Wharf, and Chaplain to the Honourable Society of Judges and Serjeants in Serjeants' Inn,' 1782. This work was simply a binding-up together on his death of the unsold copies of his separately issued writings: (1) 'Remarks on the Rt. Rev. Dr. Sherlock's Discourses on the Use and Intent of Prophecy: in a Letter formerly sent to his Lordship.' (2) 'On Predestination, Election, Reprobation, and Future Punishments.' (3) 'A few Extracts from a Discourse concerning Origen and the Chiefest of his Opinions; first printed in the year 1661.' (4) 'Observations on the End and Design of Christ's Death.' (5) 'Deism not consistent with the Religion of Reason and Nature.' (6) 'A Lapse of Human Souls in a State of Pre-existence, the only Original Sin and the Ground Work of the Gospel Dispensation.' Among the subscribers to the collective volume stands 'Samuel Johnson,' who in the 'Rambler' had discussed Berrow's speculations. The last, originally published in 1766, is his only book now remembered. Berrow never mentions the Jesuit writer, G. H. Bougeaut, from whose 'Amusement Philosophique sur le Langage des Bestes,' translated into English in 1739 (there was a '2nd edition corrected,' 1740), he derived nearly all his theories. Nor does Berrow refer to Hildrop's 'Examination of Father Bougeaut's Philosophical Amusement,' 1742, from which he also borrowed. Berrow brings in, in the most reckless and uncritical way, the most famous names as holding the doctrine of 'the lapse of souls in a state of pre-existence.' His work is a farrago of ill-digested learning. While Bougeaut jested, Berrow was as grave as a judge. Local inquiries show that he was non-resident at Rossington. Various occasional sermons (1746 onward) were also published by him. He died on 5 Oct. 1782.

[Rawlinson MSS. 4to, 6304, Bodleian Library; Notes and Queries, 2nd series, xi. 341, 417; Gent. Mag. lii. 503; communications from Rossington and London parishes; Berrow's Works.] A. B. G.

BERRY, CHARLES (1783–1877), unitarian minister, was born 10 Nov. 1783 at Romsey, Hants; a direct descendant of James Berry [q. v.], colonel of a regiment of horse, and afterwards one of Cromwell's major-generals; whose son John, a London West India merchant, married Anne, daughter of Sir Charles Wolseley, and was father of Rev. Charles Berry, of Shrewsbury (*d.* 1741, æt. 41). This presbyterian minister's son John was a jeweller at Birmingham, and father of Rev. John Berry (*d.* about 1821), independent minister successively at Shaftesbury, Romsey, and West Bromwich, classical tutor at Homerton College, and finally minister at Camberwell till his retirement from ill-health (so Clephan; Waddington, in *Surrey Cong. Hist.*

1866, p. 171, gives William Berry of Warminster as the pastor who resigned Camberwell Green, from ill-health, in 1812). Rev. John Berry left four sons, John (*d.* 3 Nov. 1867, æt. 88); Joseph, an independent minister (*d.* 2 Aug. 1864, æt. 82); Charles; and Cornelius, for fifty-three years independent minister at Hatfield Heath, Essex (*d.* 8 Sept. 1864, æt. 76). Charles was educated for the independent ministry at Homerton, entering in 1799, at the time when Dr. Pye Smith succeeded John Berry as classical tutor. He acted as assistant to Pye Smith in a course of chemical experiments. In 1802 some of the students, including Charles Berry, developed heretical views. Berry left Homerton, and in 1803, at the age of twenty, became minister of the Great Meeting, Leicester, in succession to Robert Jacomb. Here he ministered till 1859, having Rev. Charles Clement Coe, F.R.G.S., as colleague from 1855. In 1808 he opened a school which he maintained for over thirty years. To him Dr. Parr addressed, 19 Dec. 1819, his famous letter on the methods of classical training (PARR'S *Works*, ed. Johnston, 1828, viii. 481–6). His pupils included many who afterwards distinguished themselves in public life. In 1810 he married Ann (*d.* 24 May 1870, æt. 90), daughter of Thomas Paget. He was one of the founders of the Leicester Literary and Philosophical Society, and of the Leicester Town Museum. A ripe scholar and mathematician, as a preacher he dealt with topics of common life in language pithy but studiously simple. His Christology was humanitarian; early in his ministry he had a pulpit controversy on the subject with Robert Hall, then baptist minister at Harvey Lane, Leicester, with whom he maintained an unbroken friendship. He died 4 May 1877 in the house of his son-in-law, near Liverpool. He published several sermons, including: 1. 'The Duty of National Thanksgiving,' 1812. 2. 'Funeral Sermon for Queen Caroline,' 1821. 3. 'Remarks on Popery and the present Anti-papal Agitation,' 1851.

[Chn. Reformer, 1847, p. 323; Chn. Life, 1877, p. 230; Remembrance of Rev. C. B., 1877, by J. C. (James Clephan).] A. G.

BERRY, SIR EDWARD (1768–1831), rear-admiral, was one of a large family left in straitened circumstances by the early death of his father, a merchant in London. Lord Mulgrave had been a pupil of his uncle, the Rev. Titus Berry of Norwich, and through him, then one of the lords of the admiralty, the boy was in 1779 appointed as a volunteer to the Burford, 70 guns, with Captain Rainier, then sailing for the East Indies, where she remained till after the conclusion of the war in 1783. He was made lieutenant on 20 Jan. 1794, as a reward, it is said, for his gallantry in boarding a French ship of war; he is said also, in a vague way, to have distinguished himself on the First of June; but the first distinct mention of him is on his appointment to the Agamemnon with Captain Nelson in May 1796. He quickly won Nelson's esteem (*Nelson Despatches*, ii. 175), followed him to the Captain (11 June), and whilst Nelson was on shore conducting the siege of Porto Ferrajo, Berry, then first lieutenant, commanded the ship in such a manner as to call forth an official expression of his captain's 'fullest approbation' (*ib.* ii. 209, 272). This special service won for him his commander's rank, 12 Nov. 1796; but whilst waiting for an appointment, he remained as a volunteer on board the Captain, and was thus present in the battle of Cape St. Vincent: when the order was given to board the San Nicolas, 'The first man,' wrote Nelson, 'who jumped into the enemy's mizen chains was Captain Berry, late my first lieutenant; he was supported from our spritsail-yard, which hooked in the mizen-rigging' (*ib.* ii. 342). Captain Berry afterwards assisted Nelson into the main chains of the San Josef. Berry was posted on 6 March, and, being in England in October, was taken to court by Nelson, who, on the king remarking on the loss of his right arm, promptly presented Berry as his right hand (*ib.* ii. 448 *n.*) It was agreed between them that, when Nelson hoisted his flag, Berry was to go as his flag-captain; and on 8 Dec. Nelson wrote to him: 'If you mean to marry, I would recommend your doing it speedily, or the to-be Mrs. Berry will have very little of your company, for I am well, and you may expect to be called for every hour' (*ib.* ii. 456). On 12 Dec. Berry was married to his cousin Louisa, daughter of the Rev. Dr. Forster of Norwich. On 19 Dec. he was appointed to the Vanguard, but the ship did not leave England till 10 April 1798. In the battle of the Nile Berry, as captain of the flag-ship, had his full share, and when Nelson was wounded caught him in his arms and saved him from falling (*ib.* iii. 55). He afterwards published anonymously 'An authentic Narrative of the Proceedings of his Majesty's Squadron under the command of Rear-admiral Sir Horatio Nelson, from its sailing from Gibraltar to the Conclusion of the glorious Battle of the Nile, drawn up from the Minutes of an Officer of Rank in the Squadron' (reprinted from the 'True Briton' and the 'Sun' newspapers, with additions, 8vo, 1798), a pamphlet which, under the special circum-

stances of its authorship, is of singular interest and value.

Within a few days of the battle Berry was sent off in the Leander with the admiral's despatches. On 18 Aug. the little 50-gun ship was met by the Généreux, 74 guns, and captured after a stout defence, in the course of which Berry received a severe wound in the arm. He was taken, with the ship, to Corfu, and did not reach England till the beginning of December. The news of which he was the bearer had been already received in duplicate, but Berry was welcomed with the utmost enthusiasm, was knighted on 12 Dec., and presented with the freedom of the city. Early in the spring of 1799 he was appointed to the Foudroyant, in which he arrived at Palermo on 6 June. On the 8th Nelson hoisted his flag on board, but afterwards, staying at Palermo, sent the Foudroyant to strengthen the blockade of Malta. Berry had thus the gratification of assisting in the capture of his former captor, the Généreux, 18 Feb., and of the Guillaume Tell, 31 March, the last of the French ships which had been in the battle of the Nile [see Blackwood, Sir Henry]. In the following June the Foudroyant carried the queen of Naples from Palermo to Leghorn, on which occasion her majesty presented Berry with a gold box set with diamonds and a diamond ring. A few months later Berry quitted the ship and returned to England. In the summer of 1805 he was appointed to the Agamemnon, and joined the fleet off Cadiz only just in time to share in the glories of Trafalgar; he had, however, no opportunity of special distinction in it, nor yet, the following year, 6 Feb., in the action off St. Domingo. The Agamemnon was put out of commission towards the end of 1806, and Berry was made a baronet. He is said to have been the only officer in the navy, of his time, except Collingwood, who had three medals, having commanded a ship in three general actions, namely, the Nile, Trafalgar, and St. Domingo. If to these we add St. Vincent and the First of June, and the five actions in the East Indies between Hughes and Suffren, together with the loss of the Leander and the capture of the Généreux and the Guillaume Tell, it will be seen that the record of his war services is in the highest degree exceptional. In 1811 he commanded the Sceptre, and in September 1812 changed into the Barfleur, which he took to the Mediterranean. In December 1813 till the peace he commanded one of the royal yachts, and on 2 Jan. 1815 was made a K.C.B. On 19 July 1821 he attained the rank of rear-admiral, but never hoisted his flag. His health was much broken, and for several years before his death, on 13 Feb. 1831, he had been quite incapable of any active duties. He left no children, and the baronetcy became extinct. His portrait by Copley is in the Painted Hall at Greenwich, to which it was presented by his widow in 1835; another and perhaps more pleasing portrait, drawn and engraved by Orme, is given in the 'Naval Chronicle.'

[Naval Chronicle, xv. 177; Marshall's Royal Nav. Biog. ii. (vol. i. pt. ii.), p. 774; Gent. Mag. (1831), ci. i. 270; Nicolas's Nelson Despatches, passim, see index.] J. K. L.

BERRY, JAMES (*fl.* 1655), one of Cromwell's major-generals, was about 1642 a clerk in some iron-works in Shropshire. Baxter speaks of him as 'my old bosom friend that had lived in my house and been dearest to me' (Baxter's *Autobiography*, pp. 57–97). Berry took service under Cromwell, and instigated the other officers of his troop to invite Baxter to become their chaplain. He was one of Cromwell's favourites. Acting as his captain-lieutenant, he slew Charles Cavendish at the battle of Gainsborough (28 July 1643. Carlyle's *Cromwell*, Appendix, v). In the course of the disputes between the army and parliament in 1647 Berry was active for the army, and was chosen president of the council of adjutators. He was selected by Cromwell to carry the despatch narrating the victory of Preston, and was rewarded by the house with 200*l.* (*Journals of the House of Commons*, 23 Aug. 1648). Baxter speaks mournfully of the change which under Cromwell's influence came over Berry's religious views. He became, he says, filled with spiritual pride, and was led away by 'the new light' to look down on puritans of the old type. Still he admits that Berry 'lived as honestly as could be expected in one that taketh error for truth and evil to be good' (p. 57). In the spring of 1655 Berry was employed in suppressing an attempted rising in Nottinghamshire, and in the winter became major-general of Hereford, Shropshire, and Wales. He was elected M.P. in 1656 for three constituencies, Herefordshire, Monmouthshire, and Worcestershire, and sat for the last. Cromwell nominated him a member of his House of Lords, and it is said that, unlike most of the army, he was in favour of the Protector's acceptance of the crown. On Cromwell's death he took an active part in the councils of the party which overthrew Richard. This he later repented, and meeting Mr. Howe after the Restoration, 'he very freely told him, with tears running down his cheeks, that if Richard had but at that time hanged up him and nine or ten more, the nation might have been happy'

(*Life of Howe*, p. 25). He signed the invitation of the army to the members of the Rump to return to their seats, and was appointed both a member of the council of state and one of the committee who nominated to all offices (May 1659). In the struggle between the army and the Rump he took part with the former, and was cashiered for signing the army petition of 5 Oct. He was naturally chosen one of the committee of safety established by the army (26 Oct. 1659), but could not prevent his own regiment, when sent to blockade Portsmouth, from deserting in large numbers to the partisans of the parliament. Whitelocke informs us that Berry was one of the persons whose influence prevented Fleetwood from accepting the proposal to recall Charles II and anticipate Monk (22 Dec. 1659. Whitelocke, p. 691). On the reassembling of the remains of the Long parliament he was ordered to leave London (10 Jan. 1660), and refusing to give an engagement to live peaceably was imprisoned by the council of state. 'Afterwards,' says Baxter, 'he being one of the four whom General Monk had the worst thoughts of, was closely confined in Scarborough Castle.' On his wife's petition in April 1663, the severity of his imprisonment was relaxed, but he seems to have continued a prisoner for the rest of his life. From a letter which he wrote to Sir Jordan Crossland, under whose charge he was, it appears that he was refused release without an acknowledgment of guilt, which he steadfastly refused to give (*Cal. S. P.* Dom. 25 Oct. 1667). But according to Baxter, 'being released he became a gardener, and lived in a safer state than in all his greatness.' He has been identified with Lieutenant-colonel Berry who was second in command at Newton Butler in 1689, and died 9 May 1691, but this is uncertain (Clephan's *Remembrance of Rev. C. Berry*, 1877).

[Baxter's Reliquiæ Baxterianæ, 57–8, 72, 97; Baxter's Treatise of Self-denial, pref.; Thurloe State Papers; Noble's House of Cromwell, i. 422.]

C. H. F.

BERRY, Sir JOHN (1635–1690), admiral, of a family long settled near Ilfracombe, was the second son of a clergyman, vicar of Knoweston in Devonshire, who, having lost his living and his means of livelihood in the civil wars, died in 1652, leaving a large family almost entirely destitute. John, as well as his elder brother, went to sea in the merchant service, and in 1663, entering into the navy, was appointed boatswain of the Swallow ketch in the West Indies. Some little time after he was advanced to be lieutenant of the Swallow, and having had the good fortune to assist in capturing a pirate of superior force, was appointed to the command, her captain being promoted to the command of the Constant Warwick, 17 Sept. 1665. On arriving in England he was appointed to the Little Mary, and in the course of 1666 to the Guinea. In 1667 he was appointed to command the hired ship Coronation, of 56 guns, in which he was sent out to the West Indies. The presence of a considerable force of French and Dutch was giving much uneasiness, and the governor of Barbadoes, having taken up eight large merchant ships, which he equipped as men-of-war, gave the command of the squadron to Captain Berry, who, in an engagement with the enemy off Nevis, drove them back under the guns of St. Kitt's, burnt one of their number in the roadstead by means of a fireship, and forced the rest to scatter and fly. In 1668 he commanded the Pearl, which in June 1669 was sent to the Mediterranean with Sir Thomas Allin, and employed with some success and distinction against the Algerine pirates. In 1670 he commanded the Nonsuch, still in the Mediterranean, and in 1671 returned to England in command of the Dover. In 1672 he commanded the Resolution in the hard-fought battle of Solebay, and won much credit by the timely and resolute succour he brought to the Duke of York when hard pressed, in acknowledgment of which he was specially knighted by the king on the return of the fleet to the Nore. In the battle of 28 May 1673 he again distinguished himself by his forward and resolute conduct, his ship suffering so severely that she had to be sent into port. In 1675 he was again in the Mediterranean in command of the Bristol, and seems to have been employed on that station, with few intermissions, till 1680. In 1682 he was appointed to the Gloucester, in which the Duke of York took a passage for Scotland; but on 6 May, by the mistake of the pilot, she ran on to a sandbank off the Yorkshire coast, and was totally lost. The Duke of York and as many of his train as could be put into the boat were saved; the yachts in company sent their boats and picked up many of the men, including Berry himself, who stayed by the ship till the last, and took his chance with the rest (*Pepys to Hewer*, 8 May 1682; *Diary and Correspondence of Sam. Pepys*, Bright's ed., vi. 142; *Add. MS.* 15892, ff. 132, 134); but, notwithstanding every exertion, several of the young noblemen and about 150 of the ship's company were lost. Berry was acquitted of all blame, and the next month was appointed

to the Henrietta. In 1683 he was vice-admiral of the squadron which, under the command of Lord Dartmouth, was sent out to dismantle Tangier and bring home the garrison, and on his return was appointed one of the commissioners of the navy. In 1688 he commanded in the second post, under Lord Dartmouth, in the fleet intended to oppose the invasion from Holland, but when the crisis came the king shrank from the contest, and the officers of the fleet were left to accept the will of the people. The fleet was shortly afterwards laid up for the winter, and Berry returned to his duties in London, in which he appears to have introduced a strict adherence to routine that was then somewhat unusual and distasteful. His death, which took place at Portsmouth after a few days' illness, was attributed to poison; it might perhaps with greater probability be attributed to a pestilential fever caused by the filthy state of the town. He was buried in Stepney Church, where there is a monument to his memory. The date of his death is given on this as 14 Feb. 1691, that is 1691-2, but the true date of his death is 14 Feb. 1689-90.

[Campbell's Lives of the Admirals, ii. 524; Charnock's Biographia Navalis, 1794-8, i. 143.]

J. K. L.

BERRY, MARY (1763-1852), authoress, was born 16 March 1763, at Kirkbridge in Yorkshire. Her younger sister, Agnes, was born there fourteen months afterwards, on 29 May 1764, and they were constantly together for nearly eighty-eight years. Their father, Robert Berry, was the nephew of a Scotch merchant, named Ferguson, who had thriven in trade in London, and by middle life had realised 300,000*l.*, besides purchasing a considerable estate at Raith in Fifeshire. Robert, elder of the two sons of Ferguson's sister, entered his uncle's counting-house in Broad Street, Austin Friars. In 1762 he married a distant cousin, a Miss Seaton. His wife, after the birth of the two children, Mary and Agnes, died in 1767, aged 23, in childbed of a third who also died. Meanwhile Robert's younger brother, William, brought up in a mercantile house, had ingratiated himself with his uncle. Besides this, he had married a Miss Crawford, who brought him 5,000*l.* in money and two sons in the first two years of their marriage. Robert, having, on the contrary, had a portionless wife and two daughters, had to content himself with an income of 300*l.* a year and a dingy residence in Austin Friars. From the time of their mother's death, his infant children had been cared for by their grandmother, Mrs. Seaton, at Askham, in Yorkshire. Thence they were removed in 1770 to Chiswick, where they resided in the College House. Their governess at Chiswick was married in 1775. From that date the two girls were entirely self-educated. Their only religious instruction consisted in Mary reading aloud to her grandmother every morning one of the psalms, and every Sunday one of the Saturday papers from the 'Spectator.' In 1781 the uncle, Mr. Ferguson, died, aged 93, leaving to William Berry (who then took the name of Ferguson) 300,000*l.* in the funds, and an estate worth from 4,000*l.* to 5,000*l.* a year in Scotland. Robert Berry had a bare legacy of 10,000*l.* William, however, settled on Robert an annuity of 1,000*l.* a year. In 1783 Robert Berry and his two young daughters went abroad to Holland, Switzerland, and Italy. The father, as Mary says of him, was chiefly remarkable for 'the odd inherent easiness of his character.' His daughter found that she must be a protecting mother to her sister, and a guide and monitor to her father. Mary Berry began at Florence, in 1783, the 'Journals and Correspondence,' completed seventy years later. After a long stay in Italy, her tour was completed by a return home through France to England in June 1785. Mary Berry and her sister Agnes, in the winter of 1788, first made the acquaintance of Horace Walpole, then more than seventy years of age. A letter, addressed to Lady Ossory, under date Strawberry Hill, 11 Oct. 1788, relates how he had just then willingly yielded himself up to their witcheries on meeting them at the house of his friend Lady Herries, wife of the banker in St. James's Street. Mary he speaks of as 'an angel both inside and out,' adding, in regard to them both, 'I do not know which I like best, except Mary's face, which is formed for a sentimental novel, but it is ten times fitter for a fifty times better thing—genteel comedy.' An intimacy was then contracted between himself and the two sisters, which surpassed in tenderness on his part the most ardent affections of his youth. He lavished upon both every conceivable term of endearment, one while (17 April 1789) addressing the elder as 'Suavissima Maria,' and another (17 Oct. 1793) apostrophising the younger as 'my sweet lamb.' Writing to his 'twin wives,' as he calls them, in one letter he thanks them for a double missive from 'Dear Both,' adding, playfully, that 'its duplicity makes it doubly welcome;' and at another time ending with 'Adieu! mes Amours,' signs himself 'Horace Fondlewives.' He begins on 31 Oct. 1788 writing, solely with an eye to their amusement, his 'Reminiscences

of the Courts of George I and II,' which he completes on 13 Jan. 1789. To them in the same year he inscribed his 'Catalogue of Strawberry Hill.' He secured a house for them at Teddington in 1789. In 1791 he prevailed upon them to take possession of Little Strawberry Hill, previously known as Cliveden from its having been the abode of his friend Kitty Clive, the famous actress. Little Strawberry Hill was for many years the favourite home of the Berrys. George, the third earl of Orford, died 5 Dec. 1791, and the earldom devolved upon Horace Walpole. The only value of the earldom in his eyes was that it enabled him to place within reach of Mary Berry's acceptance the title of countess. 'There is a tradition handed down by Lord Lansdowne,' says the 'Edinburgh Review' (October 1865, cxxii. 298), 'that he was ready to go through the formal ceremony of marriage with either sister, to make sure of their society, and confer rank and fortune on the family; as he had the power of charging the Orford estate with a jointure of 2,000*l.* a year.' Mary Berry had, in 1779, been sought in marriage by a Mr. Bowman, and wrote long afterwards that she had 'suffered as people do' at sixteen 'from what, wisely disapproved of, I resisted and dropped.' General O'Hara, governor of Gibraltar, had met Miss Berry in 1784 in Italy, and was engaged to her before leaving England in the November of 1795 for Gibraltar. Her reluctance to leave her home at once as his bride led to their gradual estrangement, and to the ultimate breaking off of the proposed marriage at the end of April 1796. Lord Orford died on 2 March 1797. He left to each the sum of 4,000*l.*, and to Mary and Agnes jointly, for their lives, the house and garden of Little Strawberry Hill, together with the long meadow in front of it, and all the furniture. He also bequeathed to Robert, Mary, and Agnes Berry, to be divided among them, share and share alike, his printed works, and a box containing manuscripts, to be published at their discretion and for their emolument. In 1798 was published in five quarto volumes the collective edition of the 'Works of Horace Walpole.' Nominally edited by Mr. Berry, it was in reality all Mary Berry's doing, save only one brief passage, a reference to herself, in the preface. A comedy in five acts, written by Mary Berry, and entitled 'Fashionable Friends,' having been performed with some success at Strawberry Hill (among other amateurs) by Robert Berry and his two daughters, was afterwards, in May 1802, brought out at Drury Lane Theatre, where it was represented for three nights only, and then summarily withdrawn. It failed on the score of its lax morality. Pure-souled woman though she was, she had not shrunk, four years previously, from including among Horace Walpole's works the 'Mysterious Mother.' Oddly enough, too, she prefixed to her published play of 'Fashionable Friends' a note, imputing it to her dead and buried friend, Horace Walpole! Another dramatic work of her own, a farce called 'The Martins,' set down in a manuscript list of her writings, was never produced either in print or on the stage. Immediately before her failure at Drury Lane, Miss Berry had returned from Paris, whither she had gone on her second visit, on the occasion of the peace of Amiens. During her stay she was presented to Napoleon in the palace of the Tuileries. Returning to France 30 Oct. with her sister and father, she went on to Nice, and thence round through Switzerland and Germany, being back again in England in September 1803. Agnes was at this time engaged (probably) to her first cousin, Colonel Ferguson (*Edin. Rev.* cxxii. 311), but the engagement was broken off. In 1810 Mary Berry brought out in four volumes, annotated by herself, the letters of Mme. du Deffand to Horace Walpole between 1766 and 1780, as well as those written by her to Voltaire between 1759 and 1775, all from the French originals at Strawberry Hill. For her editorial labours on this occasion Miss Berry received 200*l.* On 18 May 1817 Robert Berry died of old age at Genoa, and, his brother William's annuity to him of 1,000*l.* a year then ceasing, his two daughters had thenceforth to live upon an annual income of 700*l.* In 1819 Mary Berry brought out 'Some Account of the Life of Rachel Wriothesley, Lady Russell, followed by a series of Letters from Lady Russell to her husband, Lord William Russell, from 1672 to 1682, together with some Miscellaneous Letters to and from Lady Russell.' The work was published from the originals in the possession of the Duke of Devonshire. The first volume of her most ambitious work, 'A comparative View of the Social Life of England and France from the Restoration of Charles the Second to the French Revolution,' was published in 1828; a second appeared in March 1831, called 'Social Life in England and France from the French Revolution in 1789 to that of July 1830.' It was reissued as a collected whole in the complete edition of her 'Works' in 1844, with this new title, 'England and France: a comparative View of the Social Condition of both Countries.' During her whole life Mary Berry had had but one serious illness, namely, on 16 March 1825, when she was struck down by an all but

fatal attack of bilious fever. Death came to her at last very gently at midnight, 20 Nov. 1852, as the result of exhaustion from sheer old age, she being then well on in her ninetieth year. In 1865 was published 'Extracts from the Journals and Correspondence of Miss Berry from 1783 to 1852, edited by Lady Theresa Lewis.' Portraits of Mary Berry at different ages, from girlhood to eighty-six, enable us to realise something of her personal charm. Those who would see an effigy of her at her very best should turn to the classic bust of her in white marble sculptured by the Hon. Anne Seymour Damer for Horace Walpole, who regarded it as one of his most precious treasures.

K.

BERRY, WILLIAM (1774–1851), genealogist, well known from his various works on family history, was in the earlier part of his life, 1793–1809, employed as a writing clerk to the registrar of the College of Arms. On his retirement from that post, he for some time resided in Guernsey, where he published a very able work called 'The History of the Island of Guernsey, compiled from the collections of Henry Budd,' 1815, 4to. Previously to this, in 1810, he had brought out a work entitled 'Introduction to Heraldry.' Returning to England, he resided at Doddington Place, Kennington, Surrey, and in 1832 commenced 'A Genealogical Peerage of England, Scotland, and Ireland.' It was a carefully compiled family history, with very beautifully engraved coats of arms, but it did not receive much support, and after the issue of the fourth number, which terminated with an account of the dukes of Rutland, no further parts were printed. His 'Genealogia Antiqua, or Mythological and Classical Tables,' published in 1816, met with more success, and a second and improved edition appeared in 1840. This work was dedicated to Lord Grenville. His next undertaking was entitled 'Encyclopedia Heraldica, or Complete Dictionary of Heraldry.' It was brought out in numbers between 1828 and 1840, and forms four quarto volumes. This is a valuable heraldic work, as it embraces the greater part of the contents of Edmondson and other writers, with much original matter. Perhaps, however, the writings by which Berry is best known are his county genealogies published in small folio volumes, at five or six guineas per volume. These were Kent, 1830; Sussex, 1830; Hampshire, 1833; Berkshire, Buckinghamshire, and Surrey, 1837; Essex, 1839; and Hertfordshire, 1842. The three latter volumes were printed by means of lithography from the handwriting of the author. The first portion of 'The County Genealogies, Kent,' being severely reviewed in 'The Gentleman's Magazine,' and objections taken to Berry calling himself on the title-page of that work 'registering clerk in the College of Arms,' he brought an action for libel against Messrs. J. B. Nichols & Son, the publishers of the magazine. The trial took place in the court of king's bench before Lord Tenterden on 1 Nov. 1830, when, although the plaintiff was represented by Henry Brougham, afterwards the lord chancellor, the jury, without hearing any rebutting evidence, almost immediately gave a verdict in favour of the defendants. He died at his son's residence, Spencer Place, Brixton, 2 July 1851, aged 77, having survived his wife two months.

BERSTEDE or BURGSTED, WALTER DE (*fl.* 1257), justice itinerant, is first heard of in 1257 as sub-sheriff of Kent. In December of that year Reginald de Cobham, sheriff of the county, dying, Berstede succeeded to his office for the remainder of the annual term, viz. till Easter 1258, paying the same rent. He afterwards was appointed constable of Dover Castle (Hasted, *Kent*, i. lxxxi). A commission of assize, consisting of Martin Litilbiri, Galfrey de Leukenor, Richard de Hemington, and De Berstede, travelled in 1262 through Leicestershire, and in the following year through Norfolk, Suffolk, and Lincolnshire. According to Hasted (*Kent*, 4, 69), he was for a short time again constable and warden of Kent in 1263, succeeding Edward and Robert de Gascoigne in July. Richard de Grey was his successor. In February 1266 a fine was levied by him, and Dugdale makes him a justice of the bench, and in September of the same his name appears to a writ of assize. He was possibly connected with one John de Benstede, who, in this reign, was possessed of the manor of Bensted, in the parish of Huntington, as one quarter of the knight's fee of the barony of Crevequer (Hasted, ii. 298).

BERTHA, BERCTA, or (as GREG. *Epp.* xi. 29) ADILBERGA (*d.* before 616), the daughter of Haribert, king of the Franks, reigning in Paris, and his wife Ingoberg, married Æthelberht, king of Kent. The dates of her birth and her marriage are not known. Haribert reigned 561–567, and seems to have married Ingoberg soon after his accession. Bertha's parents are said to have consented to her marriage on the condition that she and the bishop who should come over with her should be allowed the free exercise of the rites of christianity. It is certain, however, that her father died before her marriage. Her mother died 589 (GREG. TURON. ix. 26). Bertha came over to England accompanied by Liudhard, bishop of Senlis, who was appointed to minister to her. She received St. Martin's, an old Roman-British church, situated outside the walls, to the east of the newer Canterbury, for the purposes of her worship. The coming of Bertha and her bishop must, to some extent at least, have paved the way for the work of Augustine, and though Liudhard died before the arrival of the Roman missionaries (BÆDA, *H. E.* ix. 27), it is probable that Gregory had some communication with the queen on the subject of the mission. And in coming to a heathen husband Bertha must have remembered the example set in her own family by Hlotchild (Clothilde), wife of her great ancestor Hlodowig (Clovis) whose marriage led to the conversion of the Franks. In Bertha's church Augustine and his companions worshipped and preached, and there doubtless her husband was baptised in 597. When, in 601, Pope Gregory sent Mellitus, Paulinus, and others to England as additional workers in the new harvest-field, he wrote a letter to Bertha, in which he speaks of the conversion of the English as due to her, comparing her to Helena, the mother of Constantine; he also mentions her learning, and declares that her good works were spoken of not in Rome alone, but that they had reached Constantinople and had been heard of by the emperor. At the same time he implies that she might have done even more, and exhorts her to greater diligence in strengthening the faith of her husband. This is the last record of Bertha's life, for the tradition which speaks of her as having been present at the foundation of St. Augustine's monastery is without historical basis. The date of her death is not known; she certainly died before her husband Æthelberht, for he appears to have married a second wife. She was buried in the porch of St. Martin, in the church of SS. Peter and Paul. She left a son, Eanbald, who was still a heathen when he succeeded his father on the throne, and a daughter Æthelburh, who married Eadwine, king of the Northumbrians.

[Bæda, H. E. i. 25, ii. 5; Greg. Turon. iv. 26, ix. 26; S. Greg. Magni Epp. xi. 29; Thorne, ed. Twysden, 1761.] W. H.

BERTHEAU, CHARLES (1660–1732), French pastor in London, was born at Montpelier, and educated partly in France and partly in Holland. He was admitted to the ministry at the synod held at Vigan in 1681, and shortly afterwards became one of the pastors of the then important church of Charenton, Paris. The revocation of the edict of Nantes drove him out of France, and he came to England in 1685. In the following year he was chosen one of the pastors of the French church in Threadneedle Street, London, a post which he occupied for forty-four years.

He is said to have been remarkable for his memory and eloquence. Two volumes of his sermons were printed in Holland in 1712 and 1730.

[An obituary notice in vol. i. of the Bibliothèque Britannique, published at the Hague in 1733, is the main authority for the facts of Bertheau's life, and has been copied, or abridged, by subsequent biographers. But the article in Chaufepié's Nouveau Dictionnaire historique et critique, published at Amsterdam in 1750, furnishes some additional information, and a list of the subjects of the published sermons.] F. T. M.

BERTIE, SIR ALBEMARLE (1755–1824), admiral, was born on 20 Jan. 1755. He was made lieutenant on 20 Dec. 1777, and in the battle of Ushant, 27 July 1778, was first lieutenant of the Fox, which acted as repeating ship. On 10 Sept. the Fox was captured by the Junon, a French frigate of vastly superior force (BEATSON, *Nav. and Mil. Memoirs*, iv. 431), and Bertie, with the other officers and the ship's company, became a prisoner of war. He was able, however, to return to England in the following January to give evidence on the trials of Keppel and Pallisser, which told heavily against the latter [see KEPPEL, the Hon. AUGUSTUS]. He had no further employment till the downfall of the ministry in March 1782, when he was appointed captain of the Crocodile frigate, in the Channel. In 1790 Bertie commanded the Latona frigate; in 1792-3 he commanded the Edgar, 74 guns, in the Channel fleet under Lord Howe; and in 1794 commissioned the Thunderer, 74 guns, in which he had a small share in the action of the First of June. In 1795, still in the Thunderer, he was with Sir John Borlase Warren in the Bay of Biscay. Afterwards, in rapid suc-

cession, he commanded the Renown, Windsor, and Malta, all in the Channel. He became rear-admiral on 23 April 1804, and vice-admiral on 28 April 1808. He was then sent out as commander-in-chief at the Cape of Good Hope, and in October 1810, when the attack on Mauritius was being prepared by the East Indian squadron, he went in the Africaine frigate to join the expedition. His unexpected arrival beyond the limits of his station, and his necessary assumption of the chief command, not unnaturally nettled Vice-admiral Drury, who, though Bertie's junior, was commander-in-chief in India, and had had the whole charge of organising the expedition. Drury expressed himself with great bitterness, and wrote to the admiralty that he considered himself to be 'insulted and injured' (8 Nov. 1810). After all, Bertie's share in the enterprise was extremely small, for the French naval force had been previously overpowered, and the surveys necessary to insure a safe landing had been made. Once on shore the troops found no enemy capable of withstanding them, and the island surrendered on 3 Dec. (James, *Naval Hist.*, 1860, v. 204). Bertie returned to the Cape, and shortly afterwards received orders to return to England, principally, it would appear, in consequence of a disagreement with the local commissioner of the navy. On his arrival he wrote to the secretary of the admiralty (28 March 1811) requesting, almost demanding, an exact inquiry into his official conduct. This, however, was coldly refused, and Bertie had to rest content till the ministerial crisis in the following year, when the verdict of the outgoing admiralty was immediately reversed, and Bertie's services, more especially in respect of the capture of Mauritius, were acknowledged by a baronetcy, 9 Dec. He had, however, no further command. He became an admiral on 4 June 1814, was made K.C.B. on 2 Jan. 1815, and died on 24 Feb. 1824.

[Official Letters in the P.R.O.; Marshall's Naval Biog. i. 195; Gent. Mag. (1824), xciv. i. 459.] J. K. L.

BERTIE, CATHARINE, Duchess (Dowager) of Suffolk (1520–1580), only child of William Willoughby, eighth Lord Willoughby de Eresby, was born in 1520. Her mother, Mary de Salines or Saluces, a near relative of Katharine of Arragon, had been maid of honour to that queen, and had come with her to England on her marriage with Prince Arthur. On her father's death in 1526 she succeeded to his dignity and fortune, and was entrusted to the guardianship of Charles Brandon, duke of Suffolk, and eventually became that nobleman's fourth wife. She was married at the early age of sixteen, and was left a widow in 1545 with two sons, Henry and Charles, both of whom died of the sweating sickness within a few hours of each other on 16 July 1551 [see Brandon, Henry and Charles]. She was married to Richard Bertie about the end of the year 1552. In the latter part of Edward VI's reign she distinguished herself by her zeal for the reformation. To escape the vengeance of Bishop Gardiner she left England with her husband, and remained abroad during the reign of Queen Mary. An account of her wanderings on the continent will be found in the memoir of her husband [see Bertie, Richard]. Her death occurred on 19 Sept. 1580. Fuller says that she was 'a lady of a sharp wit and sure hand to thrust it home and make it pierce when she pleased.' Seventeenth-century copies of a popular Elizabethan ballad (by T. Deloney), entitled 'The most Rare and Excellent History of the Dutchess of Suffolk and her husband Richard Bertie's Calamities,' are extant in the Roxburghe, Pepys, and Bagford collections of broadside ballads.

[Lady Georgina Bertie's Five Generations of a Loyal House; Biog. Brit. (Kippis), ii. 280; Courthope's Historic Peerage, 511.] T. C.

BERTIE, MONTAGUE, second Earl of Lindsey (1608?–1666), adherent of Charles I, was the eldest son of the first Earl of Lindsey by Elizabeth, sole daughter of Edward Lord Montague, of Boughton, Northamptonshire. In early life he served in the Low Countries as captain of a troop of cavalry, and on the outbreak of the civil war he assisted his father to rally the county of Lincoln on the side of the king, by himself raising a regiment of cavalry. At the battle of Edgehill, where he commanded the regiment of guards, he made a desperate attempt to rescue his father; but finding this impossible, he voluntarily delivered himself up, that he might attend upon him when wounded. For some time he remained a prisoner in Warwick Castle, from which he issued a vindication of the king's cause, which was printed under the title, 'A Declaration and Justification of the Earl of Lindsey, now Prisoner in Warwick Castle, wherein he makes apparent the Justice of his Majesty's cause in taking armes for the preservation of his Royall person and prerogative. As it was sent in a letter to the Right Honourable Henry, Earl of Newarke, now resident with his Majesty at Oxford, 26 Jan. 1643.' Obtaining an exchange he was joyfully welcomed by the king at Oxford, and took part in the battles of Newbury, Copredy,

and Lostwithiel. At Naseby, where he was wounded, he commanded, along with Lord Ashley, the right-hand reserve. As one of the gentlemen of the bedchamber and a member of the privy council, he accompanied the king on his flight to Wales, and shared his hardships and misfortunes till he joined the Scots at Newark. During the progress of the negotiations in the Isle of Wight the king sent for him to act as one of his commissioners and advisers. After the king's execution he was one of the four noblemen who accompanied the royal corpse to Windsor, where it was buried. Having compounded he continued to reside in retirement in England till the Restoration, when he was chosen a member of the privy council, and appointed one of the judges for the trial of the regicides. He was also in April 1661 chosen a knight of the Garter, and at the coronation had his claim recognised to exercise the office of lord high chamberlain of England. He died at Camden House, Kensington, 25 July 1666, at the age of fifty-eight, and was buried at Edenham in the vault with his father. By his first wife Martha, third daughter of Sir William Cockaine, knight, of Rushton, Northamptonshire, and widow of John, earl of Holderness, he had five sons and three daughters; and by his second wife Bridget, daughter and sole heir of Edward Wray, groom of the bedchamber, two sons.

[Lloyd's Memoirs, 315-20; Biog. Brit. ii. 285; Whitelocke's Memorials; Dugdale's Baronage, ii. 410; Clarendon's History of the Rebellion; numerous references in State Papers, Domestic Series, during Charles I, Commonwealth, and Charles II.] T. F. H.

BERTIE, PEREGRINE, Lord Willoughby de Eresby (1555–1601), military commander, the son of Richard Bertie [q. v.], and of Catherine Bertie [q. v.], baroness of Willoughby de Eresby in her own right, was born at Lower Wesel, Cleves, 12 Oct. 1555, while his parents were fleeing from the Marian persecution in England. He was baptised two days later, in the church of S. Willibrord, by Henry Bomelius, the father of Eliseus Bomelius [q. v.] He was named Peregrine because he was born *in terra peregrina*. An inscription on a tablet in the church of S. Willibrord (set up in 1680 by Charles Bertie, son of Montague Bertie [q. v.], and still legible) states that Peregrine was born in the church-porch; but the municipal records at Wesel prove the story to be baseless (cf. *Notes and Queries*, 5th ser. i. 366, 474). On the return of the family to England after Elizabeth's accession, a patent of naturalisation was obtained for Peregrine (2 Aug. 1559). His mother sought the aid of Sir William Cecil in directing his education, and in 1574 made an abortive attempt to marry him to a daughter of Sir William Cavendish, who afterwards became the wife of the Earl of Lennox and mother of Arabella Stuart. A few years later he married Mary, the daughter of John de Vere, sixteenth earl of Oxford. On the death of his mother in 1580 Bertie claimed to succeed to her title as Lord Willoughby de Eresby. His claim was admitted, and he took his seat in the House of Lords 16 Jan. 1580-1.

In 1582 Lord Willoughby (as he was generally called) escorted the Duke of Anjou, one of Elizabeth's suitors, from Canterbury to Antwerp. Later in the same year he was sent to Denmark on a special mission to invest Frederick II with the order of the Garter, and to discuss with the king the commercial relations between England and Denmark. He arrived at Elsinore on 22 July, and returned on 27 Sept. Willoughby overcame with much tact the king's objections to the ceremonious oath necessary to his investiture with the order of Garter, and obtained from him an assurance that English merchant ships should not be molested in Danish seas. A detailed account of the mission in Willoughby's own hand is preserved at the British Museum among the Cottonian MSS. (Titus, c. 7, art. 226). In 1585 Willoughby was sent a second time to Denmark to petition the king for succour, either in men or money, in behalf of Henry of Navarre, and to induce him to aid England in the Netherlands against Spain. On the journey Willoughby attended the marriage of a son of the Duke of Brunswick at Wolfenbüttel, and arrived at Copenhagen 10 Oct. 1585. Frederick II treated Willoughby with much respect, but declined to give a favourable reply to his request. The negotiations proceeded slowly. In his letters to Sir Francis Walsingham, Willoughby often complained bitterly that all his expenses were paid out of his private resources; he begged to be relieved of his office, and to be despatched to serve under Leicester in the war in Flanders. Late in December the King of Denmark yielded in part to Willoughby's arguments. He promised to use his influence to induce the King of Spain to retire from the Low Countries, and to send two thousand horse to the aid of the English force sent there by Elizabeth. Willoughby deemed this practical assurance of Denmark's goodwill towards England and her allies a satisfactory termination of his mission, and set off for Hamburg on his way to Flanders. He arrived at Embden 29 Jan. 1585-6, and on 12 March he was at Amsterdam. He was

engaged a few days later under Sir John Norris in the relief of Grave, in Brabant, which was invested by a Spanish army under Count Mansfeld, and before 24 March 1586 was appointed to succeed Sir Philip Sidney in the governorship of Bergen-op-Zoom. On 27 May 1586 Leicester informed the queen of 'a notable piece of service' achieved by Willoughby in capturing with a small force a large Spanish convoy bound for Antwerp. A few days later he helped in the surprise of the city of Axel. In June an attack was made on another convoy loaded with supplies for Zutphen. Willoughby took prisoner George Cressiac, the commander, and with the aid of other English officers completely routed the enemy. In the skirmish Willoughby's friend, Sir Philip Sidney, received his death-wound. During the following winter, while hostilities were in suspense, serious disagreements arose among the English commanders, and between the English government and the States-General of Holland. Before the campaign opened in 1587 Sir John Norris had been recalled, and Willoughby had succeeded him in the command of the cavalry. In July 1587 Leicester and Willoughby failed, after strenuous efforts, to relieve Sluys, then besieged by the Duke of Parma. Willoughby took part with the garrison of Bergen-op-Zoom in many engagements in the two succeeding months, but with no decisive results. On 10 Nov. 1587 Leicester was recalled, and Willoughby was installed in his place as commander of the English forces in the Low Countries. He thereupon resigned his post at Bergen-op-Zoom, and formally assumed the supreme command on 4 Dec. Willoughby's new post was one of extraordinary difficulty: the home government failed to remit to him either money, food, or clothing for the troops, and after a fruitless appeal for supplies made to the States-General, Willoughby wrote directly to the queen (7 Jan. 1587–8). He bitterly complained to Lord Burghley at the same time that his authority was so restricted that it was out of the question for him to carry on the war, and that the Netherlanders were resenting the apparently purposeless intrusion of the English. On 14 March 1587-8 10,000*l.* was forwarded to Willoughby from England, and he was ordered to negotiate a peace between the States-General and Spain. The terms which he was directed to propose the States refused to entertain. While matters were thus in doubt, the Spaniards threatened Bergen and Ostend, the two chief strongholds of the Netherlanders. The queen, angered by the unsatisfactory course of events, and not unwilling that the States should suffer for their obstinate refusal to follow her advice, addressed a series of indignant letters to Willoughby, complaining of the plans he was making to withstand the new Spanish attack. In June 1588 Willoughby was ordered to send two thousand men to England in anticipation of the arrival of the Spanish armada, and he then begged in vain to be recalled. In July his wife joined him at Gertruydenberg. On 31 July he captured the San Matteo, a Spanish man-of-war that had run aground between Ostend and Sluys while escaping from the rout of the armada. Throughout that and the previous days Willoughby, then at Flushing, had directed the ships under his command to keep a close watch on the Duke of Parma's fleet, and he thus prevented the latter from going to the aid of the Spanish armada. The enemy became active in the Netherlands later in the year, and on 14 Sept. 1588 Willoughby, with his small forces, arrived at Bergen, resolved to defend it at all hazard against the Spaniards. The city was soon under siege, but Willoughby's energy kept the enemy at bay, and on 3 Nov. they finally retired. In December Willoughby was ordered by the home government to despatch a portion of his forces to Portugal, an order which he was very unwilling to carry out. The States still loudly expressed their dissatisfaction with Elizabeth's treatment of them, and Willoughby's position was one of increasing embarrassment. At length, early in March 1588-9, his request to leave the Low Countries was granted, and on 14 March 1588-9 he arrived in England. His health was broken by his many anxieties, and his estate ruined by the remissness of the home government in forwarding supplies, the expenses of which he had had to defray out of his own pocket.

But Willoughby was for the present allowed little leisure. After his arrival in this country he was one of the commissioners appointed to try Philip Howard, earl of Arundel, for treason. On 20 Sept. 1589 he was nominated to the command of a poorly-equipped army of four thousand men sent to the aid of Henry of Navarre at Dieppe. Henry warmly welcomed Willoughby, although he expressed a desire for more men, and Willoughby, writing to Walsingham, called attention to the disgracefully inadequate equipment of the English soldiers (30 Sept.) Buoyed up by the presence of the English auxiliaries, Henry determined, at Willoughby's suggestion, to march boldly on the forces of the league in Paris; but when he had arrived in the faubourgs near the capital, he judged the step to be over-bold and retreated, although Willoughby strongly urged him to persist in the attempt. On the return of

Navarre's army to the north, Willoughby took a prominent part in the capture of Vendôme early in November, of Mons (19 Nov.), of Alençon (14 Dec.), and of Falaise (27 Dec.); but his troops suffered terribly from want of food and of proper clothing. Willoughby received no money from home, and Henry of Navarre, though he treated Willoughby with much deference, declined to pay his men. Willoughby wrote to the privy council that his soldiers marched barefooted throughout the fatiguing campaign, and that more died from hunger and cold than in battle. After Henry had taken Honfleur (14 Jan. 1589-90) Willoughby obtained permission to return home with the remnants of his suffering army.

After 1590 Willoughby's poverty and ill-health determined him to live a 'Coridon's life' on the continent. He was at Spa in 1594, and later on travelled in Italy (cf. Nichols, *Progresses*, iii. 260–1). On 7 Oct. 1594 Elizabeth sent Willoughby an autograph letter, expressing the hope that he had recovered his health, and lamenting his inability to serve her. Dr. Hawkins, writing to Anthony Bacon in February 1595-6, mentions that Willoughby had been very seriously ill at Venice, but had with great difficulty managed to remove to Vienna. 'Very certain advertisement,' which proved false, of the death of Willoughby reached London in June 1596 (Birch, *Memoirs of Eliz.* i. 327, 377, 428, 453, ii. 34). On 28 Aug. and 12 Sept. 1596 Willoughby appealed to Essex to use his influence to obtain for him the governorship of Berwick-on-Tweed. In October 1596 Willoughby returned to England. On 12 Oct. he sent to Anthony Bacon from his house in Barbican, London, a memorandum on the best way of withstanding another Spanish invasion, which is printed in Birch's 'Memoirs of Queen Elizabeth,' ii. 164–8. Towards the end of February 1597-8 Willoughby was appointed governor of Berwick and warden of the East March. He arrived at his post on 28 April. In a letter dated 2 May, addressed to the privy council, Willoughby called attention to the inefficient state of the army in the north, and of the fortifications on the borders. In June 1599 he came into conflict with James VI of Scotland. He had sent a small force into Scotland to arrest an Englishman named Ashfield, suspected of secret hostility to Queen Elizabeth. Autograph letters on the subject passed between James and Willoughby, and it required much negotiation to satisfy the king that no disrespect had been intended him. In February 1599-1600 Willoughby was in London on leave of absence, and in intimate relations with Sir Robert Cecil. On his return to Berwick he energetically put in order the fortifications, and governed the town and district with a severity that produced a long series of disputes between him and his neighbours. Many of the latter complained to the council of the north sitting at York of Willoughby's alleged injustice, but in almost every instance the government in London approved Willoughby's action. On 22 Nov. 1600 Willoughby sent a long justification of his rigorous treatment of the garrison of Berwick to the queen. Soon afterwards he was busily engaged in watching pirate 'Dunkirkers' off the coast, and a ship was sent him for the service. He regularly sent information to Cecil of all that happened in Scotland, and was frequently in direct correspondence with King James. But his health was rapidly failing, and he died on 25 June 1601, protesting with his last breath his loyalty to the queen and his affection for Sir Robert Cecil. On 20 July his remains were removed from Berwick, and buried at Spilsby, Lincolnshire, in accordance with his will (dated 7 Aug. 1599). Lady Willoughby survived her husband till 1624. His eldest son Robert [q. v.] became Earl of Lindsey. His second son Peregrine entered the service of Prince Henry, and was made knight of the Bath by James I in 1610. He afterwards fought a duel with Lord Norris, in which he was wounded, and died in 1640, aged 65 (Nichols, *Progresses of James I*, ii. 309, 344, 676). Bertie's other children were Henry, Vere, Roger, and Catharine, who married Sir Lewis Watson, first Lord Rockingham.

Willoughby's valour, chiefly exhibited in the war in the Netherlands, and especially at the siege of Bergen, excited more admiration on the part of his contemporaries than that of almost any other soldier of the time. Glowing descriptions of his prowess appear in 'A True Discourse Historical of the succeeding Governors in the Netherlands' (London, 1602), translated by Thomas Churchyard from the 'Historica Belgica' by Emanuel Meteren; in 'Honor in his Perfection,' a eulogy on the earls of Essex, Oxford, and Southampton, and on Robert Bertie, Willoughby's son, published in 1624 (a copy is in the Grenville Library); in Naunton's 'Fragmenta Regalia,' 1653; and in Lloyd's 'Worthies.' The spirited ballad of 'Brave Lord Willoughby' relates one of Willoughby's exploits in Flanders with no very strict adherence to historical fact. The earliest copy known is an illustrated broadside in the Roxburghe collection, and cannot be dated earlier than 1640. It was very frequently reprinted in the seventeenth century, and Dr. Percy included it in his 'Reliques,' 1765. The

absence of all reference to it in the 'Stationers' Registers' of the sixteenth century, and its historical inaccuracy, go far to support the conclusion that it is not of Elizabethan origin. There is evidence, however, to prove that there once existed two undoubtedly sixteenth-century ballads concerning Lord Willoughby—the one entitled 'Lord Willobie's Welcome Home,' and the other 'Lord Willoughby's March;' but neither of these is now extant. 'The good Lord Willoughbey' mentioned more than once in the ballad of 'Flodden Field' (*Percy Folio MS.*, ed. Hales and Furnivall, i. 329) is a description of Sir John Willoughby, a relative of Bertie's mother, and does not of course concern Bertie himself.

[The account of Bertie in Five Generations of a Loyal House, by Lady Georgina Bertie (1845), pt. i. 57–401, is very complete, and gives copious extracts from his numerous letters and journals preserved at the Record Office. A memoir of Peregrine Bertie, by a descendant of the fourth generation, edited by C. H. P[arry], 1838, is rich in genealogical tables, but is otherwise of little value. Henry of Navarre's letters to Willoughby are printed in Lettres Missives de Henri IV, t. iii. (in Collection de Documents Inédits). The interesting questions connected with the Willoughby Ballads are ably and fully discussed by the Rev. J. W. Ebsworth in the Ballad Society's reprint of the Roxburghe Ballads, iv. 4–11. See also Biog. Brit. (Kippis); Birch's Memoirs of Queen Elizabeth (1754); Fuller's Worthies; Cal. State Papers, 1585–1601; Strype's Annals; Leycester Correspondence, 1585–6 (Camd. Soc.); Froude's Hist. England.] S. L.

BERTIE, RICHARD (1517–1582), husband of the Duchess Dowager of Suffolk, was son and heir of Thomas Bertie, of Bersted, in Kent, captain of Hurst Castle, in Hampshire. He was born in the latter county about Christmas Day 1517. He was admitted a scholar of Corpus Christi College, Oxford, in February 1533–4, proceeded B.A. in 1537, and is said to have been a fellow of that house. Subsequently he joined the household of Sir Thomas Wriothesley, lord chancellor, and ultimately earl of Southampton. He was reputed to be a very accomplished gentleman, well versed in the Latin, French, and Italian languages, bold and shrewd in discourse, and quick at repartee. In 1552 he married Catharine, duchess dowager of Suffolk, who was also in her own right Baroness Willoughby of Eresby [see BERTIE, CATHARINE]. On Good Friday 1553-4 he appeared under compulsory process before Bishop Gardiner, the lord chancellor, at his residence, Winchester House, in Southwark, and on the following day a singular conversation respecting the Duchess of Suffolk passed between them. The bishop referred to three particulars in which that lady had given him offence. In the lifetime of the duke she had at a dinner selected the bishop as the man she loved least. In her progress she had caused a dog to be carried in a rochet, calling it in derision by the name of Gardiner. When the bishop was in the Tower he veiled his bonnet to her out of his chamber window, whereupon she remarked that it was merry with the lambs when the wolf was shut up. In fine, Bertie was urged by the bishop to persuade the duchess to conform to the catholic religion. Bertie frankly declared, however, that that would be quite hopeless unless she could be satisfied of the truth of catholicism. He was then dismissed in a friendly manner, and soon afterwards contrived, through the bishop's instrumentality, to obtain the queen's license to leave the realm, and to pass and repass at pleasure, for the purpose of obtaining payment of certain debts due from the emperor and others abroad to the duchess as executrix of her former husband. He sailed from England in June 1554.

Subsequent events impressed him with a sense of the danger to which the duchess would be exposed by remaining in this country; he therefore returned to England, and on 1 Jan. 1554-5, with much difficulty and risk, got her away from London in disguise, with a few attendants. They lay hid in Kent until 5 Feb., when they embarked at Gravesend, and thence went to Santon in Cleves; but they were soon obliged to leave that place by night. After enduring great hardships they reached Wesel, where on their arrival they could find no shelter, and suffering from cold and hunger they were about to pass the night in the church porch, when they casually discovered Francis de Rivers, minister of the refugee Walloons there, by whose kind aid they were comfortably settled in a hired cottage. There the duchess was delivered of a son, who, from the circumstances of his birth abroad, during the wanderings of his parents, was named Peregrine, and who afterwards became Lord Willoughby de Eresby [see BERTIE, PEREGRINE].

Bertie and the duchess found themselves insecure at Wesel, as a plan to entrap them had been matured by Lord Paget. On a friendly hint from Sir John Mason they therefore removed first to Strasburg, and then to Weinheim, in the palatinate of the Rhine, where they remained until they began to be in want and almost in despair. At this juncture they received a kind invitation from Sigismund Augustus, king of Poland, who had been apprised by John Alasko [see LASKI] of their distress. In April 1557 they left

Weinheim. Before they reached Frankfort they narrowly escaped murder; but, after encountering much trouble and danger, they arrived in Poland, where they were well received by the king, and generously placed by him in the earldom of Kroze, in Samogitia. They continued there in great quiet and honour until they received intelligence of the death of Queen Mary, soon after which time they returned to England.

Bertie sat in the parliament which assembled on 11 Jan. 1562-3 as one of the knights for the county of Lincoln, his colleague being Sir William Cecil, secretary of state. He was in Queen Elizabeth's retinue when she visited Cambridge in August 1564, and on that occasion the degree of M.A. was conferred upon him by the university. In 1572 he claimed to be summoned to the House of Lords in right of his wife's barony, and it appears that for a short period his claim to be so summoned was recognised as valid. The Duchess of Suffolk died in 1580, and his son Peregrine soon afterwards succeeded to the barony of Willoughby. Bertie died at Bourn, in Lincolnshire, on 9 April 1582, and was buried at Spilsby in the same county. In Spilsby church there is a stately monument to his memory and that of the Duchess of Suffolk. Besides his son Peregrine he had issue by the Duchess of Suffolk a daughter, Susan, born in England in 1554, who was successively wife of Reginald Grey, earl of Kent, and of Sir John Wingfield. His portrait, painted by Holbein in 1548, has been engraved. He wrote a 'Narrative of the Troubles of Catharine, Duchess of Suffolk, during the Reign of Queen Mary,' which is printed in Foxe's 'Acts and Monuments.'

[Lady Georgina Bertie's Five Generations of a Loyal House, pt. i., containing the lives of Richard Bertie and his son Peregrine, Lord Willoughby (London, 1845); Memoir of Peregrine Bertie, eleventh Lord Willoughby de Eresby (1828); Collins's Peerage; Foxe's Acts and Mon.; Strype's Works; Biog. Brit. (Kippis), ii. 280; Cooper's Athenæ Cantab. i. 453; Craik's Romance of the Peerage, iii. 61–82.] T. C.

BERTIE, ROBERT, first EARL OF LINDSEY (1582–1642), admiral of the ship-money fleet, and general of the king's forces, was the eldest son of Peregrine Bertie, Lord Willoughby de Eresby [q. v.], by Mary, daughter of John Vere, earl of Oxford, and was born in London, 16 Dec. 1582 (LLOYD, *Memoirs*, p. 308). Queen Elizabeth was his godmother, and the earls of Essex and Leicester his sponsors. Being 'followed,' according to Lloyd, 'by a set of masters that disposed of all his hours at home, and an excellent tutor that disposed of his time in the university' (Oxford), he acquired high proficiency in various kinds of learning, especially history, mathematics, heraldry, geography, physics, religion, and divinity. He also displayed a strong love of adventure, and an eager interest in foreign travel. In 1597 he accompanied the expedition of the earls of Essex and Nottingham against Spain, and after the capture of Cadiz was knighted in the market-place for his distinguished valour. Continuing to spend his time for the most part abroad, he was present in 1598 at the siege of Amiens, and afterwards varied the monotony of visits to foreign capitals by taking part in various brilliant captures of Spanish galeons. He had meantime, in 1601, succeeded to the barony and estates of his father, but found himself, notwithstanding this, in straitened circumstances, for in a letter in 1603 (*Cal. State Papers*, Dom. Series, James I (1603–10), p. 18) he asks leave to continue his travels abroad until he has paid off certain debts incurred by his father. After his return to England he laid claim, through his mother, to the earldom of Oxford, and to the office of lord high chamberlain. His claim was contested by Robert de Vere, who after long dispute was declared Earl of Oxford, decision being, however, given in favour of Lord Willoughby so far as concerned the office of lord high chamberlain, and in the second year of Charles's reign he took his seat above all the barons. During the greater part of the reign of James I he lived in retirement in Lincolnshire, seeking, according to Lloyd, to improve his fortunes by thrifty management; by 'noble traffic, he having learned at Venice and Florence that merchandise is consistent with nobility;' by the due improvement of his estate; and by a 'rich match' with Elizabeth, sole daughter of Edward, Lord Montague of Boughton, Northamptonshire. In 1605 he was made knight of the Bath. In parliament he afterwards spoke frequently on plantations, trade, and draining of the fens. In the last of these subjects he took special interest, and when the landowners in Lincolnshire refused to pay a tax towards the accomplishment of the work, a contract was made with him in 1635 to drain the fens lying between Kyme Eau and the Glen, computed to contain 36,000 acres, on condition that he should receive two-thirds, or 24,000 acres, of the reclaimed land. The work was completed within three years at a cost of 45,000*l.*, and houses and farmsteadings were afterwards built by him on the enclosed land (WHEELER, *The Fens of South Lincolnshire*, p. 97; *State Papers*, Dom. Series). These peaceful avocations engaged only a portion of his attention, for already, on the declaration of war against

Spain in 1624, he had served for some time in the Low Countries as colonel of a regiment of 1,500 men. Thence he was recalled to take part in the naval expeditions of the Duke of Buckingham. For his important services he was in 1626 created Earl of Lindsey, and on the duke's death at Portsmouth, at the hands of Felton, in August 1628, he succeeded him as admiral of the fleet which had been gathered together to make a final effort for the relief of Rochelle. The attempt issued in disastrous failure, not in any degree from fault of the admiral, but owing to the fact that the condition of the vessels and the character of the officers rendered it impossible that the fleet could perform a naval achievement of any difficulty. In 1630 Lindsey was made a knight of the order of the Garter and a member of the privy council. In the following year, upon trial of combat between Lord Reay and David Ramsay, he was appointed to act as lord high constable for the day. After commanding a fleet of forty sail for securing the Narrow Seas, he became in 1636 admiral of the fleet equipped by the levy of ship-money. On the Scots taking up arms in 1639 he was appointed governor of Berwick. At the trial of Strafford in the following year he, being at that time speaker of the House of Lords, acted as lord high constable. When the civil war broke out he raised the counties of Lincoln and Nottingham in the king's defence, the gentlemen of Lincoln engaging themselves in the service of the king chiefly from their strong regard for the Earl of Lindsey. He was the chief adviser of Charles in the measures he took to rally the defenders of the throne, and was appointed commander-in-chief of the royal forces. Prince Rupert was general of the horse, and in the prince's commission there was a clause exempting him from receiving orders from any but the king himself. It was impossible from such an arrangement to expect satisfactory results. As the king began to show a preference for the opinions of the prince on all matters relating to the war, the Earl of Lindsey found himself virtually deprived of his command. Matters reached a crisis at the battle of Edgehill, 23 Oct. 1642, when the 'prince set out without advising him, and in a form he liked not.' Deeply galled at the unmerited slight, Lindsey exclaimed that 'if he was not fit to be a general he would at least die a colonel at the head of his regiment.' He was as good as his word, and, while leading his regiment forward pike in hand, received a mortal wound. He was carried off the field to a cottage hard by. Had surgeons been procured, it is supposed he might have recovered, but on the opening of the wounds he died from loss of blood before morning. While lying on the straw in the cottage he was visited by the Earl of Essex and other officers, whom he with great earnestness exhorted to return to their allegiance. He was buried in the vault at Edenham, Lincolnshire. Clarendon, who characterises the Earl of Lindsey as a person of 'great honour, sagacity, courage, and of an excellent nature,' states that his loss was 'a great grief to the army, and generally to all who knew him.' An earlier eulogy, together with a finely engraved portrait, appears in a rare tract entitled 'Honor in his Perfection,' London, 1624. A copy is in the Grenville Library. Bertie was succeeded in the earldom by his eldest son Montague Bertie [q. v]

BERTIE, Sir THOMAS (1758–1825), admiral, was son of George Hoare, Esq., of London and formerly of Middleton Era, Durham. Entering the navy in 1773, on board the Seahorse, he was messmate there of both Nelson and Troubridge, with whom he kept up a close intimacy till their deaths (*Nelson Despatches*, freq., see index). He afterwards served with Sir Edward Hughes in the Salisbury, and with Captain Rowley in the Monarch, in which he was present in the battle of Ushant on 27 July 1778. He followed Rowley to the Suffolk, and was engaged at Grenada, 6 July 1779; and again to the Conqueror, as lieutenant, and was in Rodney's three actions with De Guichen, 17 April, 15 and 19 May 1780. He continued with Admiral Rowley until made commander, 10 Aug. 1782.

On 20 May 1788 he married Catherine Dorothy, daughter of Peregrine Bertie, Esq., whose name he assumed, in accordance with the terms of Bertie's will.

Captain Bertie was advanced to post rank on 22 Nov. 1790, and appointed for a short time to the Leda frigate. In 1795 he was sent out to the West Indies in command of the Hindostan, 54 guns; but, after a severe attack of yellow fever at Port-au-Prince, was obliged to return home in October 1796. The following year he commanded the Braakel, 54 guns, at Plymouth, and in October was appointed to the Ardent. The Ardent, though only of 64 guns, was a large and roomy ship:

'the finest man-of-war upon her decks that ever I saw,' wrote Nelson in congratulating him (*ib.* iii. 2). For the next three years she was employed in the North Sea, under Lord Duncan and Vice-admirals Mitchell and Dickson, and in the beginning of 1801 was sent into the Baltic with Sir Hyde Parker. It was Bertie's good fortune to be in the division detached under Lord Nelson against Copenhagen, and to have am important share in that hard-fought battle, 2 April. Early on the morning after the action Lord Nelson went on board the Ardent to thank her commander, officers, and men for their conduct and exertions, and on 9 April Sir Hyde Parker appointed Bertie to the Bellona, 74 guns, in room of Sir Thomas B. Thompson, who had lost a leg in the battle. The Bellona remained in the Baltic with Nelson till the July following, when she was sent to England and thence to join the blockade of Cadiz. On the peace she was sent to the West Indies, and was eventually paid off in June 1802. On the renewal of the war Bertie was appointed to the Courageux, but was compelled by family affairs to give up the command after a few months. In December 1805 he was appointed to the St. George, in the Channel, and continued in her until his promotion to flag rank, 28 April 1808. He was shortly after sent to the Baltic, and was actively engaged in that very arduous service till 19 Feb. 1810, when he was obliged by ill-health to strike his flag and go on shore, nor was he able again to accept employment before the peace. In June 1813 he was knighted, and received also the royal permission to accept and wear the insignia of the Swedish order of the Sword. He became vice-admiral on 4 Dec. 1813, admiral 27 May 1825, and died on 13 June 1825.

[Marshall's Roy. Nav. Biog. i. 380; Naval Chronicle, xxxvi. 1 (with portrait); Gent. Mag. (1825), xcv. ii. 177.] J. K. L.

BERTIE, VERE (*d.* 1680), judge, was of a loyalist family, being fourth son to the lord chamberlain Montagu, second earl of Lindsey, by his first wife Martha, daughter of Sir William Cockayn of Rushton in Northamptonshire, and widow of John Ramsey, earl of Holderness. To this probably he owed his rapid professional advancement. He was entered at the Middle Temple 29 Jan. 1654-5, was called to the bar 10 June 1659, and became a master of the bench of his inn in January 1673-4. Previously to 1665 he obtained the degree of serjeant-at-law, and in that year, with his brother Charles, was made an honorary M.A. at Oxford on the occasion of the visit of the Earl of Manchester, secretary of the treasury and treasurer of the ordnance (Wood, *Fasti Oxon.* ii. 285). On 4 June 1675 he was made a baron of the exchequer, and was transferred to the common pleas 15 June 1678. On the king's forming a new council of thirty, with Lord Shaftesbury as president of the ministry, he was discharged from his office 29 April 1679. With him were discharged also Sir William Wilde, and Sir Edward Thurland, and Sir Francis Bramston, barons of the exchequer. As Mr. Justice Bertie, along with these judges, had four days previously been among those who tried Nathaniel Reading in the court of king's bench at Westminster, who was indicted on the evidence of Bedloe for stifling king's evidence against the lords in the Tower, and as none of these judges concurred in the sentence of 1,000*l.* fine, one year's imprisonment, and one hour in the pillory, pronounced by the other judges, Sir F. North, lord chief justice of the common pleas, William Montagu, chief baron, and Sir R. Atkins, baron of the exchequer, Sir T. Jones, and Sir W. Dolben, probably the cause of his disgrace was want of political complaisance (*State Trials*, vii. 201, 24 April, 1679). He died unmarried 23 Feb. 1680-1, and was buried in the Temple Church. The contemporary law reports contain no report of any of his decisions.

BERTIE, WILLOUGHBY, fourth Earl of Abingdon (1740–1799), politician, the son of Willoughby Bertie, the third earl, by his wife Anna Maria, daughter of Sir John Collins, was born on 16 Jan. 1740, and succeeded to the earldom on his father's death in 1760. He was educated at Westminster School under Dr. William Markham, afterwards archbishop of York: in 1767 he was one of the stewards of the school anniversary. He proceeded to Magdalen College, Oxford, and was created M.A. on 20 Jan. 1761. He afterwards spent a few years in Geneva, where he adopted democratic principles. He seems to have made the acquaintance of Wilkes at an early date, and to have loyally supported him in his early struggles with the government (see Bertie's letter to Wilkes at Paris, 28 June, 1767; *Addit. MSS.* 30869, f. 133; 30875, ff. 1, 2). In 'The Speeches of John Wilkes,' published in 1777, the anonymous editor of the volumes, who is easily identified with Wilkes himself, describes Abingdon as 'one of the most steady and intrepid assertors of liberty in this age,' and the most delightful companion in

private life. Abingdon was a very frequent speaker in the House of Lords from 1775 until his death. He was an intimate friend of the Marquis of Rockingham, and usually voted with the Rockingham whigs, but he advanced far beyond the principles of his party in his support of popular rights. In his first speech (1775) he denounced the bill for restraining the trade of America as a 'most diabolic measure,' and he seized every opportunity between 1775 and 1783 of attacking the policy that produced the war with America. In 1777 he published, through Almon, 'Thoughts on Mr. Burke's Letter to the Sheriffs of Bristol on the Affairs of America,' in which he attacked Burke for not following up with sufficient energy or persistency his first great speeches against the war. The pamphlet attracted great attention from all political parties. Horace Walpole, writing to the Rev. William Mason (21 Sept. 1777), says: 'Are you not content with Lord Abingdon's pamphlet? are you not more? are you not glad he has so well puffed away Burke's sophistries?' Burke felt the attack keenly. Before its publication he had met Abingdon at the Marquis of Rockingham's, and had treated the earl with scant respect; but when he saw Abingdon's 'Thoughts' announced for publication, he wrote to the author begging him to suppress the book, and Abingdon in a polite reply regretted his inability to accede to the request. After its publication Burke discussed with Rockingham the desirability of replying to it. An anonymous reply to Abingdon's 'Thoughts' was issued by Cadell in 1778, but the popularity of the pamphlet remained unchecked, and after passing through five editions it was republished in 1780 under the new title of 'A Dedication to the collective body of the people of England, in which the source of our present political distractions are pointed out, and a plan proposed for their remedy and redress.' Abingdon's speech (2 Dec. 1783) in favour of peace with America was issued as a broadside in 1783, with a caricature of the coalition ministry of Fox and North. From 1782 onwards Abingdon mainly devoted his attention to Irish affairs, bringing into the House of Lords a series of bills for the conciliation of the Irish people, but he found few supporters. A speech of his on the affairs of Ireland, with the copy of a bill for reorganising the Irish parliament, was published as a pamphlet in 1782.

Abingdon sympathised strongly with the French revolution. He opposed the war with France, and in 1798 published a rhapsodical eulogy on the revolution under the title of 'A Letter to Lady Loughborough from the Earl of Abingdon in consequence of her presentation of the colours to the Bloomsbury and Inns of Court Association.' This pamphlet passed through nine editions. Abingdon, who was also author of some songs (cf. *Brit. Mus. Music Cat.*), died on 26 Sept. 1799. He married on 7 July 1768 Charlotte, daughter of Admiral Sir Peter Warren (at one time M.P. for Westminster). She died on 28 Jan. 1794. By her he had three sons and a daughter. The eldest son, Montagu (1780–1854), succeeded his father as fifth earl. Willoughby, the second son (*b.* 1787) became a captain in the navy, and was wrecked in the Satellite off the Goodwin Sands in 1810.

Abingdon was in the habit of sending copies of his speeches in parliament to the newspapers, 'with' (it is said) 'a handsome fee' to insure their insertion in a prominent position. In a speech delivered in the House of Lords on 17 June 1794 Abingdon called attention to the immoral practices of attorneys, and instanced the conduct of one, Thomas Sermon, an attorney once employed by himself. Abingdon forwarded the speech to the newspapers, and it was published. Sermon thereupon brought a criminal information for libel against the earl in the court of king's bench. The case was heard on 6 Dec. 1794 before Lord Kenyon. Erskine was the prosecuting counsel; the defendant pleaded his own case. The jury found Abingdon guilty, and he was sentenced, 12 Jan. 1795, to three months' imprisonment, was fined 100*l.*, and was required to find sureties for future good behaviour (Isaac Espinasse's *Cases at Nisi Prius, King's Bench*, i. 35; *Parliamentary Hist.* xxxi. 931–5).

S. L.

BERTON, WILLIAM OF (*fl.* 1376), chancellor of Oxford, 1380, is first mentioned in 1376, as B.D. of Merton College, among the witnesses summoned to give information to a royal commission appointed to inquire into a dispute between the faculties of arts and divinity and that of law in the university (Wood, *Antiquities of Oxford*, i. 489). In February 1379–80 he served on a similar commission nominated to examine the disorderly state of Queen's College (*ib.* p. 496). By this time he was D.D. and chancellor of the university, having been elected in succession to Robert Aylesham, who died in the autumn of 1379 (Wood, *Fasti Oxon.* p. 30). Berton's chancellorship is important because of

its connection with the Wycliffite controversy respecting the sacrament which then agitated Oxford. According to the author of the 'Fasciculi Zizaniorum' (p. 241), he had at an earlier time taken an energetic part ('strenue egit ac determinavit') in opposition to the new opinions. It is noticeable that, unlike the majority of Wycliffe's antagonists, he belonged to the secular clergy. As chancellor he was able to give an official weight to his arguments. He issued a decree condemning the sacramental doctrine under severe penalties, but not mentioning Wycliffe by name. It was this 'sententia,' bearing the signatures of twelve doctors, which was promulgated in the Augustinian school at the very time that Wycliffe chanced to be disputing there 'in cathedra' in defence of the doctrines it condemned (*Fascic. Ziz.* pp. 110 seqq.) The duration of Berton's chancellorship is uncertain. Anthony à Wood (*Fasti*, l.c.) makes it expire in 1380, and Robert Rygge hold the office in 1381. Yet, if the dates in the 'Fasciculi Zizaniorum' (see Shirley's introd. p. xliii, n. 1) are to be trusted, Berton's decree against Wycliffe's teaching must have been published shortly before 10 May in the latter year, and this chronology has been universally accepted (even by Wood himself, in his 'History,' i. 499). On the other hand, a correction in a manuscript of Wycliffe's 'Confession' (*Fascic. Ziz.* p. 115, n. 1) raises a doubt whether the affair did not actually take place in 1380. Wood also states (*Fasti*, l.c.) that Berton was again chancellor in 1382, until, 'he quitting his place, or else desired to leave it, forasmuch as he seemed now to favour Wycleve and his disciples,' was in May or June succeeded once more by Rygge. The latter's action, however, in the subsequent stages of the Wycliffite controversy (*Fascic. Ziz.* pp. 299, 304, 309 seq.) renders it more likely that his election marked the temporary ascendency of the reformer's party (compare MATTHEW, *English Works of Wyclif hitherto unprinted*, introd. pp. xxv seqq., 1880). Be this as it may, both Berton's and Rygge's signatures are attached to the condemnation of Wycliffe's 'conclusions' resolved on by the council of London in the summer of 1382 (*Fascic. Ziz.* pp. 288, 290), and the only works ascribed to Berton (BALE, *Script. Brit. Catal.* vi. 89) are exclusively directed against Wycliffe.

[Authorities cited above.] R. L. P.

BERTRAM. [See RATRAMNUS.]

BERTRAM, CHARLES (1723–1765), or, as he sometimes chose to sign himself, CHARLES JULIUS, the cleverest and most successful literary impostor of modern times, was born in London in 1723. His father, who was a silk dyer, removed a few years afterwards with his family to Copenhagen. Here, at an early age, young Bertram obtained the post of English teacher in the school for naval cadets. Being keenly desirous of celebrity, he conceived, at the age of twenty-four, the idea of bringing himself into notice by means of a literary forgery. He selected as the victim of his imposture the celebrated Dr. William Stukeley, whose reputation for antiquarian learning, and whose manifest eager credulity, rendered him a suitable object for such a design. In June 1747 Bertram commenced a correspondence with Stukeley, in the course of which he mentioned that a friend of his was in possession of a manuscript work on Roman antiquities, by a monk named Richard of Westminster, which included a copy of an ancient itinerary of Britain, in many points correcting and supplementing the itinerary of Antoninus. Stukeley's interest being excited, he strongly pressed Bertram to obtain possession of the manuscript, 'which, after some difficulty, he accomplished;' and in subsequent letters he transmitted to Stukeley what purported to be copies of successive portions of the work, with a facsimile of a few lines of the manuscript, the writing of which was pronounced by the English palæographers to be over four hundred years old. In the meantime Stukeley had made inquiries, which resulted in the discovery that Richard of Cirencester, a chronicler of the fourteenth century, was an inmate of the abbey of Westminster. This information he imparted to Bertram, who readily accepted it, and 'Richard of Cirencester' was thenceforward the name by which the supposed author was designated. In 1756 Stukeley read before the Society of Antiquaries a paper containing an analysis of the newly discovered work, and this paper was published in 1757, accompanied by a copy of Richard's map. In the same year Bertram published at Copenhagen a small volume, with the title, 'Britannicarum Gentium Historiæ Antiquæ Scriptores Tres,' containing the works of Gildas and Nennius, and the full text of his own forgery, with an elaborate commentary. It is remarkable that the map given in this volume differs very materially from that in Stukeley's tract. Stukeley, however, adopted Bertram's map in his account of Richard's work, published in his 'Itinerarium Curiosum' in 1776. The ingenuity and learning displayed in Bertram's forgery are really extraordinary, and fully account for the unparalleled success which the imposture obtained. At the time when the work appeared, the idiom of mediæval Latin writers

had been little studied, and there were in England few, if any, persons capable of perceiving that the Latinity of the pseudo-Richard was not that of a fourteenth-century monk. Bertram's antiquarian information, moreover, was, on the whole, quite on a level with the best knowledge of his time. The spurious treatise, therefore, was eagerly accepted by most of the English antiquaries as an invaluable source of information on the Roman geography of Britain; and the injury which the forgery has inflicted on this study can scarcely be overestimated. Amongst the eminent writers whose speculations are seriously vitiated by the admission of this fictitious authority may be mentioned Whitaker (the historian of Manchester), General Roy, Dr. Lingard, Lappenberg, and Stuart (the author of 'Caledonia Romana'). The map of Britain contained in Dr. William Smith's 'Classical Atlas' abounds with errors derived from this source, and many of Bertram's imaginary names of Roman stations have found their way into the ordnance maps. In fact, nearly all the current works on Roman Britain show important traces of the same misleading influence. Although one or two earlier scholars (as Reynolds in his 'Commentary on Antoninus') had ventured to suggest that the monk of Westminster had drawn somewhat freely on his imagination, it was not till near the middle of this century that the work was seriously suspected to be a modern forgery. This suspicion gained strength from the fact that a diligent search at Copenhagen failed to discover any trace of the original manuscript. The question, however, was not conclusively settled until the publication in the 'Gentleman's Magazine' for 1866 and 1867 of a series of papers by the late B. B. Woodward, librarian of Windsor Castle. Mr. Woodward showed that the handwriting of Bertram's alleged facsimile specimen was a mixture of the styles of several different periods, the forms of some of the letters being quite modern, or indeed entirely imaginary. He also pointed out that Bertram's Latin is, for the most part, a literal rendering of the English idiom of the eighteenth century, containing many words (as *statio* for a Roman 'station,' and *supplementum* for a 'supplement' or appendix) used in modern senses, which are as foreign to the usage of mediæval writers as to that of the ancient Romans, and gave instances in which the forger had copied the mistakes of Camden and the false readings of modern editions of the classics. In spite of this masterly exposure, a translation of the work, with no expression of doubt as to its genuineness, was published in 1872 by Dr. Giles, as one of the 'Six English Chronicles' in Bohn's 'Antiquarian Library;' and Bertram's forgery, though now repudiated by all competent scholars, still continues to mislead ill-informed students of British antiquities. Bertram died (according to Nyerup's *Literaturlexicon*) in 1765. Besides the work already referred to, he published at Copenhagen: 1. 'An Essay on the Excellency of the English Tongue' (1749). 2. 'Rudimenta Grammaticæ Anglicanæ' (1750). 3. 'Ethics from various Authors' (1751). 4. 'The Royal English-Danish Grammar' (1753). 5. A corrected edition (in German) of Dauw's 'Wohlunterrichteter Schilderer und Mahler' (1755). 6. An edition of Nennius (1758). 7. A Danish translation of an English work 'On the great Advantages of a Godly Life' (1760). 8. 'A Statistical Account of the Danish Army' (in German, 1761; in Danish, 1762).

BERTRAM, ROGER (*d.* 1242), judge and baronial leader, was son of William Bertram, lord of Mitford in Northumberland. Having joined the northern barons in their advance on London in the spring of 1215, his castle and barony of Mitford were subsequently (31 Jan. 1216) seized on by the king (*Claus.* 17 *John*, m. 11), and entrusted to William de Ulecotes. After the accession of Henry III he made his peace, 24 July 1217 (*Claus.* 1 *Hen. III*, m. 13), but only recovered Mitford from Philip de Ulecotes after many months' litigation and a fine of 100*l.* (*Claus.* 1 *Hen. III*, m. 6 dors.; 2 *Hen. III*, m. 8, m. 15). Becoming in favour with the court, he was one of the witnesses to Henry's pledge to marry his sister to the King of Scots, 15 July 1220 (Rymer's *Fœdera*, i. 241). He was summoned to besiege Cockermouth 3 Feb. 1221 (*Claus.* 5 *Hen. III*, m. 16 dors.), and was excused scutage 'pro fideli servicio suo,' 3 July 1224 (*Claus.* 8 *Hen. III*, m. 11). He was appointed a justice itinerant for Northumberland 14 July 1225 (*ib.* 9 *Hen. III*, m. 11 dors.), and 14 Dec. 1226 (*ib.* 10 *Hen. III*, m. 26 dors.), and for Cumberland 30 June 1226 (*ib.* 10 *Hen. III*, m. 15 dors.), and 10 Sept. 1227 (*ib.* 11 *Hen. III*, m. 5 dors.). In 18 Henry III (1233–4) he was again appointed for both these counties and for Lancashire, and in March 1237 he was a witness to the agreement at York before Cardinal Otho as to the differences between England and Scotland. At the beginning of 1242 he paid 35 marks to be excused from the Gascon

expedition (*Pip.* 26 *Hen. III*, North.), and died very shortly afterwards (MATT. WESTM.), his lands being delivered to the king's escheator 24 May 1242 (*Fin.* 26, *Hen. III*).

[Dugdale's Baronage, i. 544; Foss's Judges, ii. 237; Hodgson's Northumberland, ii. (ii). 40.] J. H. R.

BERTRAM, ROGER (*fl.* 1264), baronial leader, was son of Roger Bertram, *d.* 1242 [q. v.] He did homage for his lands on attaining his majority, 28 June 1246 (*Fin.* 30 *Hen. III*, m. 6), and, joining the baronial party at the outbreak of the barons' war, was among the prisoners captured at Northampton by the king, 5 April 1264 (*Fin.* 48 *Hen. III*, m. 4), whereupon his castle of Mitford was seized and entrusted to William de Valence (*Pat.* 48 *Hen. III*, m. 14). Released by the victory of Lewes (13 May 1264), he was one of the eighteen barons summoned to Simon de Montfort's parliament, 14 Dec. 1264 (*Claus.* 49 *Hen. III*, m. 12 dors.), but is not further mentioned. He was compelled to alienate most of his property, and was dead in 1275, when his widow had remarried a Robert de Nevill, and his son was claimed as a ward of the crown (*Rot. Hun.* 3 *Ed. I*).

BERWICK, third BARON (*d.* 1842). [See HILL, WILLIAM NOEL-.]

BERWICK, EDWARD (*b.* 1750), Irish clergyman and author. He was a native of county Down, and was educated at Trinity College, Dublin, where he gained a scholarship. Berwick was first brought into notice by his successful resistance to certain arbitrary regulations of the provost, who forbade the students to take a public part in electoral matters, whilst he expected them to vote for parliamentary candidates of his own nomination. The provost in question was Major Hely Hutchinson, M.P. for Cork, whose appointment was regarded by the younger members of the college as having a political object, and was resented by them on that ground. His dictatorial sway called forth a number of squibs, some of which (appearing between 1774 and 1776) were collected and edited by Robert Dodsley, under the title of 'Pranceriana.' In 1775 Berwick, in common with several other non-complying scholars, was deprived of his scholarship, ostensibly because he had failed to reside in college as regularly as the statutes demanded. He appealed to the visitors, who were the archbishops of Armagh and Dublin, and after a hearing, which occupied three days—in the course of which Provost Hutchinson admitted that his 'unexceptionable character entitled him to every indulgence'—he was reinstated. In reference to this trial one of the authors in Dodsley's collection writes:—

> Proud of imagin'd arbitrary sway,
> Prancer long dream'd he safely might display
> Imperial pow'r, accountable to none,
> Fear'd like a German monarch on his throne.
> Subservient to his will the board conven'd,
> Submissive, loyal; Berwick was arraign'd,
> Condemn'd, depriv'd, a convict on record;
> Three rebels only disobeyed their lord.
> But Robinson and justice interfer'd,
> Revers'd the sentence, and the victim spar'd.

After this Berwick took orders and was presented by Bishop Percy, of Dromore, to the vicarage of Tullylish, in his native county; from whence, in 1795, he was preferred to the vicarage of Leixlip, co. Dublin, and to the rectory of Clongish, co. Longford, on the presentation of the Earl of Moira (subsequently Marquis of Hastings), who made him his domestic chaplain. In 1810 he published the 'Life of Apollonius of Tyana, from the Greek, with notes and illustrations,' and in 1811 'A Treatise on the Government of the Church.' In 1812 he dedicated to his patron (dating his preface from Esker, near Leixlip) the 'Lives of Marcus Valerius, Messala Corvinus, and Titus Pomponius Atticus.' His patron, when Marquis of Hastings, commissioned him to edit a number of letters to and from Dr. Bramhall, primate of Ireland in the seventeenth century, which had come into the possession of the marquis through the Rawdon family. The preface to this work is dated 'Lurgan, 1 Jan. 1819.'

BESSBOROUGH, fourth EARL OF. [See PONSONBY, JOHN WILLIAM.]

BESSE, JOSEPH (1683?–1757), quaker controversialist, was born about 1683, and was resident at Colchester, where he was a writing master. He married, 9 Oct. 1716, in that town Hannah Dehorne, who died at Chelmsford, and after her decease he removed to Ratcliffe, where he died 25 Nov. 1757, and was buried

in the Friends' burial-ground. He had a son of the same name, who emigrated to Pennsylvania. Besse was a convert from the Anglican church, and refused a church living of 400*l.* a year. He was a vigorous controversialist, and full details of his writings are given by Smith. Besides editing various works of Sewell, Claridge, Henton Brown, Isaac Penington, and Bownas, he wrote the following books and tracts: 1. 'Carmen Spirituale . . . olim à Richardo Claridge Anglicè compositum et editum et nunc Latinè versum ab J. B.' London, 1728. 2. 'A Cloud of Witnesses proving that the Bishop of Lichfield and Coventry hath misrepresented the Quakers' (signed J. B.), London, 1732. 3. 'A Defence of Quakerism,' London, 1732. 4. 'Abstract of the Sufferings of the People call'd Quakers,' London, vol. i. 1733, vols. ii. and iii. 1738 (not an abridgment of the 'Sufferings' mentioned later). 5. 'The Protestant Flail' (an anonymous book on baptism), London, 1735. 6. 'A Brief Account of many of the Prosecutions of the People call'd Quakers for Tithes, Church-rates, &c.' (anon.), London, 1736. 7. 'A Collection of the Sufferings of the People called Quakers, for the Testimony of a Good Conscience, from 1650 to 1689,' London, 1753, 2 vols. folio. 8. 'The Universality of the Love of God to Mankind,' London, 1755. 9. 'Some Scriptural Observations on (1) the Spirituality of Gospel-worship; (2) the Nature of true Christian Prayer; (3) Our Saviour's Direction concerning Fasting,' London, 1756; and various pamphlets.

His most important work is the 'Sufferings of the Quakers,' a laborious compilation. The cases of persecution &c. are arranged under the several counties, followed by New England, Barbadoes, Nevis, Bermudas, Antigua, Maryland, Jamaica, Europe and Asia, Isle of Malta, Hungaria and Austria, Dantzig, Hamburg, Germany, Ireland and Scotland. The use of the work is further facilitated by copious though somewhat peculiar indexes.

[Smith's Descriptive Catalogue of Friends' Books, 1867.] W. E. A. A.

BEST, CHARLES (*fl.* 1602), poet, was a contributor to Francis Davison's 'Poetical Rapsodie.' The first edition of that anthology contains two pieces by Best, 'A Sonnet of the Sun' (eighteen lines) and 'A Sonnet of the Moon.' To the third edition (1611) he contributed 'An Epitaph on Henry Fourth, the last French King,' 'An Epitaph on Queen Elizabeth,' 'Union's Jewell,' 'A Panegyrick to my Sovereign Lord the King,' and a few other pieces. Best's name is only known in connection with the 'Poetical Rapsodie.' The 'Sonnet of the Sun' and 'Sonnet of the Moon' are graceful pieces, and make us regret that the author wrote so little.

[Davison's Poetical Rhapsody, ed. N. H. Nicolas, 1826.] A. H. B.

BEST, GEORGE (*d.* 1584?), navigator, accompanied Martin Frobisher in the three voyages undertaken (in 1576, 1577, and 1578) to discover the North-west Passage, and published, on the return from the third voyage in 1578, 'A Trve Discovrse of the late voyages of discouerie, for the finding of a passage to Cathaya, by the Northweast, vnder the conduct of Martin Frobisher, generall: deuided into three Bookes. In the first whereof is shewed his first voyage. Wherein also by the way is sette out a geographicall description of the worlde and what partes thereof haue bin discouered by the Nauigations of the Englishmen. Also there are annexed certayne reasons to proue all partes of the Worlde habitable, with a generall Mappe adioyned. In the second is set out his second voyage, with the aduentures and accidents thereof. In the thirde is declared the strange fortunes which hapned in the third, with a seuerall description of the Countrey and the people there inhabiting. With a particular Card therevnto adioyned of Meta incognita, so farre forth as the secretes of the voyage may permit. At London, Imprinted by Henry Bynnyman, seruant of the Right Honourable Sir Christopher Hatton, Vizchamberlain, Anno Domini 1578,' 4to, black letter. The book, which is of the highest rarity, is dedicated to Sir Christopher Hatton. In the third voyage the fleet consisted of seventeen ships. Best was captain of the Jane Anne. The adventures through which the voyagers passed are described graphically and quaintly. At the time of its publication the narrative attracted much attention. A French translation appeared in the same year, under the title of 'La Navigation du Cap. Martin Frobisher Anglois es regions de west et nordwest en l'amée 1577. Pour Antoine Chuppen,' 8vo. In 1580 a Latin translation (from the French) of the account of the second voyage was published at Nurenberg. Two years later an Italian version appeared at Naples. A second Latin translation (from the French) was issued nearly a century afterwards, in 1675, at Hamburg. Best's narrative was included in the third volume of Hakluyt's 'Voyages,' 1600, and was reprinted in 1867 by the Hakluyt Society. A George Best, servant to Sir Christopher Hatton, was

killed in a duel, about March 1583–4, by Oliver St. John, afterwards Viscount Grandison. This person is doubtless to be identified with the writer of the 'Trve Discovrse.' Another George Best, fellow of Jesus College, Cambridge, was instituted to the vicarage of All Saints, Cambridge, in 1572, and to the rectory of St. Dunstan-in-the-East, London, in 1596. He died in November 1609. (see *Athenæ Cantabrigienses*, ii. 524, where it is wrongly stated that he was perhaps the author of 'Beware the Cat,' which certainly belongs to William Baldwin [q. v.]).

[A Trve Discovrse of the late Voyages of Discouerie, &c. edited by Rear-admiral Richard Collinson, Hakluyt Society's Publications, 1867; Nicolas's Hatton, 366; Herbert's Ames, 982.]

A. H. B.

BEST, afterwards **BESTE**, HENRY DIGBY (1768–1836), miscellaneous author, born in Lincoln 21 Oct. 1768, was the son of Henry Best, D.D., prebendary of Lincoln. His mother was Magdalen, daughter of Kenelm Digby, of North Luffenham in Rutland. He was educated in the grammar school of Lincoln. His father, who had been senior wrangler of his year, had proposed sending him to Eton and Oxford, thinking him such a blockhead that he would be plucked at Cambridge. Dr. Best died, however, on 29 June 1782, and his son, in 1784, was sent by his mother to Oxford. He matriculated at University College 17 March 1785, and soon afterwards was nominated a demy of Magdalen. His father had said to him: 'These old women (speaking of some catholic relations) will make a papist of you, Harry.' His discovery of a Douay testament in an old closet of his father's produced in him some leanings to catholicism. He took his B.A. degree in 1788, and his M.A. in 1791, while still residing in Magdalen. He obtained a fellowship six weeks afterwards, and in September 1791 was ordained deacon, and in December was appointed to the curacy of St. Martin in Lincoln. His first works were a treatise entitled 'The Christian Religion briefly defended against the Philosophers and Republicans of France,' 8vo, 1793, and a 'Sermon on St. John xx. 23,' preached at St. Mary's, Oxford, on 24 Nov. 1793, a discourse on 'Priestly Absolution,' which was republished in 1874. It is curious that this discourse, which anticipated some of the 'tractarian' arguments, was highly approved by the chief members of the university of Oxford in 1794. Shortly afterwards Beste (as he now wrote his name) read the 'Pluralities Indefensible' of Dr. Richard Newton, the founder of Hertford College, which greatly affected his mental development. On the death of his mother, 10 April 1797, he succeeded to a freehold estate, and had to resign his fellowship at Magdalen. He settled at Lincoln without ecclesiastical duties, and stronger doubts sprang up in his mind as to the spiritual authority of the church of England. These doubts were further strengthened by intercourse with the Abbé Beaumont, then in charge of the small catholic chapel at Lincoln. On 17 May 1798 he was present in London at the high mass in St. Patrick's Chapel, Soho, and was deeply moved. Next day he called on Bishop Douglass, by whom he was introduced to the Rev. Mr. Hodgson as his first confessor, and on 26 May 1789 he was received into the catholic church in the chapel in St. George's Fields. His intimate friend Phillpotts, afterwards bishop of Exeter, wrote to him lamenting the change, but affectionately desiring the continuance of his friendship. In 1838 Bishop Phillpotts spoke warmly to Beste's son of his father's intelligence and kindness. Beste still remained on friendly terms with the president of Magdalen, and he was frequently a guest at his table. After a collision with Dr. Parr at one of these dinners, Beste said, 'Mr. President, the next time you invite a bear to your table, I beg that you will muzzle him.' Dr. Routh, glancing at Parr, who was laughing, remarked, 'He is a clever fellow for all that.' Three years after his conversion Beste married Sarah, daughter of Edward Sealy, Esq., of Bridgewater. For a year or two, then, his time was given up to the management of one of his estates in Lincolnshire. Occasionally at this period he contributed to the periodicals of his co-religionists. In 1818 he left England with his family for the south of France, and published in 1826 'Four Years in France, or Narrative of an English Family's Residence there during that Period, preceded by some Account of the Conversion of the Author to the Catholic Faith,' 8vo. The book, dated 21 March 1826, Clermont en Auvergne, is full of fervour, lit up here and there with quaint and sometimes coarse humour. Cardinal Wiseman had seen him at Rome in the jubilee of 1825, and mentions him in his 'Last Four Popes,' p. 271. Beste published in 1828 'Italy as it is, or Narrative of an English Family's Residence for three years in that Country,' 8vo, the work being whimsically dated at its close Torquay, Chiaja della Torre, Devon, 23 Oct. 1827. In 1829 appeared 'Personal and Literary Memorials,' 8vo. Seven years later Beste died at Brighton in his sixty-eighth year on 28 May 1836. Ten years after his death was published his last

work, called 'Poverty and the Baronet's Family, a Catholic Story,' 12mo, 1846, a few months previously, in 1845, some papers of his on 'Vices, Sins, and Crimes,' having appeared in 'Dolman's Magazine.'

[Autobiographical writings of Henry Digby Beste, reissued with the reprint in a third edition of his Sermon on Priestly Absolution, 1874, pp. 1–85, and 114–239; Register of the Demies of S. M. Magdalen College, Oxford, 1785, iv. 97; Catholic Magazine for 1838, p. 480; Notes and Queries, 1st series, xii. 227, 314, 3rd series, xi. 57, note.]

C. K.

BEST, PAUL (1590?–1657), controversialist, came of a family which had been long of the gentry in the North Riding of Yorkshire; but his father, James Best, having removed to the East Riding, was resident in the rectory-house of Hatton Cranswick, near Driffield, known as the burial-place of Alfred, king of Northumbria. Here it is believed Paul was born 'about 1590.' In 1598 his father purchased the manor of Emswell, about two miles from Driffield, for 2,050*l*. It had been a monastery of St. Mary of York, and in possession of Sir Thomas Crompton. James Best, as was the wont then with squires, cultivated his own land and grew rich. Dying in April 1617, he left in his will 'competent portions' to his younger children, and his manor of Emswell and messuages at Beverley to Paul, his eldest son. Paul was at the university of Cambridge when the message reached him of his father's death. From a manuscript written by the Rev. Roger Ley, we learn that Paul was of Jesus College, Cambridge, having Sir William Boswell, afterwards ambassador for England at the Hague, as his tutor, and this Roger Ley as his fellow-student and 'intimate.' In September 1617 he left Jesus, and became a fellow of Catherine Hall. His father, who was most probably a puritan, had meant him to be of Emmanuel. On 13 Feb. 1618 he parted with his manor of Emswell to his younger brother Henry for the sum of 2,200*l*., which was paid him as an annuity for his life. Of his character while at the university Ley thus writes: 'In wit he surpassed the ordinary sort, and had a mighty reach. Yet was he more nimble than staid. His quaint and curious searches in philosophy above the ordinary strain made me and others much admire him. For a serious study he excelled in the mathematics, and for a pleasantrie in poetry.' Verses by P. B. prefixed to Robert Anton's 'Vice's Anatomy' (1617) have been assigned to him, but this P. B. was of Magdalen College. The only poetry by him now traceable is a copy of verses 'to Christ.' On leaving Cambridge he followed 'uncertain courses.' He proceeded to the continent, and mingled a good deal with educated and 'disputative' men of the period. He is found in Germany in 1624, and in Poland, and as a soldier under Gustavus Adolphus; but Ley, his biographer, does not claim for him military renown. 'If he had any good military parts,' he says, 'I may say he was able *tam Marte quam Mercurio*. Fit to hold discourse with any man he was, and an excellent companion.' Ley continues: 'He fell to dispute often where he had opportunity, as in the university of Gryphiswald in Pomerania . . . where Priscian was slain. . . . In these northern parts of Germany, and also Poland and Transylvania, places not free from error, he unhappily disputed with some anti-trinitarians, and more adhering to carnal reason than to mysteries of faith, he was drawn to the dangerous opinion, the denial of our Saviour's divinity.'

His return was preceded by some years of retirement in Germany, chiefly spent in the study of unitarian theology. His annuity from the sale of Emswell is traced as having been paid 26 May 1628, also in 1632 at Emswell, and again upon August 1632 and April 1634. The chronology is not exact, but after-allusions bring him before us as a sufferer for his opinions. Having written out his conclusions on the doctrine of the Trinity, he submitted his 'loose papers' to the Rev. Roger Ley for his judgment. The manuscript was sent privately and in confidence. Ley appears to have instantly made the 'loose papers' public by bringing them under the notice of those in authority. Best never changed in this allegation. In his last pamphlet, 'Mysteries discovered,' in a reiterated copy of his 'Humble Petition' he expressly places it on record that he had been 'a close prisoner ever since the 14th February 1644[–5] onely for this his presumed reason or opinion, committed to a minister (a supposed friend) for his judgment and advice onely.' Be this as it may, all we learn is that Roger Ley and other divines were assiduous and earnest in their visits and reasonings with the prisoner.

Roger Ley's manuscript, as well as Whitelocke's 'Memorial of the English Affairs during the Reign of Charles I,' enables us to go behind the scenes so far. Best is represented as having applied 'the most profane epithets to the doctrine of the Trinity,' calling it 'a mystery of iniquity, a three-headed monster, a figment, a tradition of Rome, *monstrum biforme* and *triforme*,' &c. For this he was committed to the Gatehouse 14 Feb. 1644–5. After several examinations, on 28 March 1645–6 the house voted that he be hanged for his offence. On 23 Nov. a provision, affirming the

lawfulness of capital punishment for heresy, was carried, but it was not till 2 May 1648 that the ordinance was actually passed, and by that date Best had been released. In 1646 Best drew up 'A Letter of Advice vnto the Ministers assembled at Westminster, with severall parcels of Queries, recommended to their saddest considerations. . . . The possibility of a heretick's repentance, so long as he lives, and such as do any wayes cause him to dye in heresie, as much as in them lyes, do effectually damn him eternally; and consequently, that *Paul Best* (what-ever his errours be at present), as well as *Paul* the Apostle, once a blasphemer, may one day become a convert, if he be not untimely starved to death beforehand, 1646' [in MS. marked 28 April]. Having launched his 'Letter of Advice,' Best set about the preparation of a respectful petition to the House of Commons. He appealed to the house to 'be pleased to take notice' that he had been 'eighteen months imprisoned,' with what 'impairing of his substance' he forbore stating. The petition sought release or 'a speedie hearing.' This was on 13 Aug. 1646. Still his release lingered. He once more appealed to the authorities in a treatise entitled: 'Mysteries Discovered, or a Memoriall Picture pointing out the Way from Babylon to the Holy City, for the good of all such as during that night of general errour and apostacie (2 Thess. ii. 3, Revel. iii. 10) have been so long misled with Rome's hobgoblins. By me, Paul Best, Prisoner in the Gatehouse, Westminster, 1647.' This is an appeal to justice, and a defence against the charges brought against him. On the blank spaces of the Bodleian copy is a manuscript anti-trinitarian note in Latin, which was supposed by Brook Aspland to be in Milton's autograph.

It seems most probable that Cromwell at last interfered. However it came about, he was silently released towards the close of 1647. He quietly returned to his family seat. His brother Henry was then dead, and had been succeeded in Emswell by his son, John Best, to whom by some arrangement Paul (his uncle) surrendered his annuity on 22 Jan. 1651–2, and, with what of his fortune he had left, cultivated a farm. He still pursued his old studies, and masses of his manuscripts were left behind at his death. The parish register of Little Driffield gives the dates of death and burial: '1657. Paul Best, Master of Arts, died at Great Driffield 17 Sept., and was buried at Little Driffield 19 Sept. in the churchyard.'

[Ley's MS., formerly in possession of H. B. Bright, and latterly of Joseph Hunter, from the Chorus Vatum; letters from Rev. Horace Newton, Driffield; Wallace's Anti-Trinitarian Biography, i. 87, iii. 161; Whitelocke's Memorials; Neal, iii. 292; Best's Works.] A. B. G.

BEST, SAMUEL (1738–1825), a pretended prophet, is stated to have been at one period of his life a servant in several families in London, where he earned a reputation for dishonesty (*Imposture detected*, p. 42). According to another account he had been—possibly subsequent to this—a Spitalfields weaver in good circumstances (*Gent. Mag.* lvii. 115). Some time before 1787, having disowned his children 'either from indolence or morbidity,' he became an inmate of Shoreditch workhouse, an allowance of eight shillings a week being contributed to his support by one of his daughters. Discarding his original name, he took that of 'Poor-help,' as descriptive, in self-deprecatory language, of the special mission which his prophetic gifts enabled him to fulfill. He received his visitors in a room adorned with fantastic emblems and devices, and, after inspecting the palms of their hands, professed to give an outline of their past lives, their present circumstances, and their future prospects in verses of Scripture, which he repeated with rapid fluency. He also undertook, by licking the hands of his patients, to discover the disease under which they laboured. Owing to the interest excited in his pretensions, 'Poor-help' removed to a house in Kingsland Road, where he was consulted by many of the upper classes of London, whom he also visited at their own homes. He professed to eat no other food than bread and cheese, and to drink only gin tinctured with rhubarb. At night he found the strength and refreshment he needed for his pretentious daily duties, not in sleep, but in converse with celestial powers. For the last thirty years of his life he was possessed of the conviction that he should be the leader of the children of Israel to rebuild the city of Jerusalem. He died 7 March 1825, aged 87.

[Martin's Imposture detected, or Thoughts on a Pretended Prophet and on the Prevalence of his Impositions, 1787; Gent. Mag. lvi. 1106, lvii. 115, 309, xc. part i. 380.] T. F. H.

BEST, THOMAS (1570?–1638?), captain in the navy, was probably the son of Captain George Best, the companion of Frobisher in his Arctic voyages (HAKLUYT, iii. 47, 60, 75, &c.; *Calendar of State Papers*, East Indies, 1513–1616, see index). He went first to sea about 1583 (*Best to Conway*, 13 July 1623), being then presumably about thirteen years old; and yet he is referred to as being, in 1598, a man of substance and repute, well known in Ratcliff and Limehouse (RUNDALL'S *Memorials of the Empire*

of Japan (Hakluyt Society), 29). He was appointed, 30 Dec. 1611, to command the Red Dragon, a ship of some 600 tons and 200 men, then fitting for a voyage to the East Indies, and accompanied by the Osiander pinnace, he sailed from Gravesend on 5 Feb. 1611-12. He arrived at Surat in the beginning of September to the great annoyance of the Portuguese, who had previously established themselves in the country. They collected a force of four galeons, each as large as the Dragon, and some twenty small craft, row-boats carrying many men, and on 29 Oct. appeared off the mouth of the river, where they hoped to surprise the English. Best, in the Dragon, at once weighed, stood out to meet them, and passed between two of their ships, firing into each. This caused the Portuguese to pause. The darkness closed in, and they had to anchor for the night. The next morning the Osiander also came out, and when three of the galeons, in trying to avoid the Dragon, got on shore, the Osiander, drawing little water, 'danced the hay about them, and so payed them that they durst not show a man on their decks.' The fight continued till dark of the second day. The third day was very similar to the second. Towards evening the Portuguese drew back and attempted to burn the Dragon by means of a hastily equipped fireship. This Best succeeded in sinking before she got dangerously near, and so the fight ended. The loss of the English was returned as three killed and one wounded; that of the Portuguese was certainly very heavy (PURCHAS, i. 482).

Some few days later the Portuguese attempted a further attack, when Best, again standing out to sea, engaged them with such resolution and skill that after four hours' severe fighting they made all sail to get away. The flight was witnessed by thousands on the shore. The Great Mogul was now quite willing to recognise the English as having rights equal to those of the Portuguese. The English trade was placed on a permanent footing, and the birth of the English power in India may properly be dated from this November 1612, rather than from any of the semi-piratical voyages of previous years.

In January 1612-13 Best in the Dragon, accompanied by the Osiander, left Surat, and, passing down the coast, crossed over to Acheen, where he arrived on 12 April. He described (12 July) the king and people as very griping, base, and covetous. All trade was forbidden except at Acheen: but by releasing a Portuguese whom he had captured, he succeeded in winning the favour of the king, who gave him the title of '*Orancaya pute*,' which is 'white or clear-hearted lord.' He also obtained permission to open a trade with Siam, and received assurance of good entertainment. At Bantam he obtained a grant of land on which to build warehouses, and when, having got a full cargo, he sailed in November on the return voyage, the company's affairs in the East were far more satisfactorily settled than before. The Red Dragon, 'richly laden,' arrived in the Downs in the first week of June 1614, and Best shortly afterwards attended the council to give a detailed account of his proceedings. He was considered to have 'deserved extraordinarily well,' though at the same time some dissatisfaction was expressed at 'his great private trade' (*Cal. State Papers*, East Indies, 22 June, 26 July, 9 and 19 Aug. 1614). The question was left to the governor, Sir Thomas Smythe, who gave his opinion that no one could be a fitter commander than Best, but that for merchandise Captain Keeling was far before him, and should be sent to Surat (7 Sept.). Best refused to go the voyage without private trade, and a few days later (16 Sept.), nettled, it would appear, by the refusal of the council to give his son an appointment as one of their factors, he refused to go at all. As he very shortly afterwards (27 Sept.) signified his willingness to go another year, it is not improbable that the council gave way. Reports to his disadvantage, however, continued to be circulated, so that Best insisted on an investigation. The decision was that the company was 'content to remit all that is past and let these things die, which should not have been ripped up, had he not called them in question himself' (24 Oct. 1615).

In October 1617 the question of sending out a chief commander to Bantam came before the council, and after discussing the relative merits of Sir Richard Hawkins, Sir Thomas Dale, and others, they requested the governor to confer with Best as the fittest of all. Best accepted the appointment, and agreed to sail again in the Dragon, but a complaint was presently lodged against him for having appointed his son as a master's mate. On this and other matters Best took high ground; he was summoned before the court, and after some discussion and his refusal to sign a bond for 5,000*l.* to perform the articles agreed on, he was dismissed the company's service (25 Nov.) He afterwards (27 Jan. 1617-18) made his peace with them, but he does not seem to have again accepted any office under the company. It is probable that Best had already served in royal ships, and from this time he was actively employed

under the crown. In 1623 he commanded the Garland, and when the fleet sailed for Spain to bring back Prince Charles, Best remained as senior officer in the Downs. He had previously been engaged in the prevention of piracy, or the pursuit of pirates (*Conway to Commissioners of the Navy*, 6 June 1623), and he would probably have had more of the same duty, had not the insolence of the Dutch, in destroying a Dunkirk privateer at Leith and blockading another at Aberdeen, rendered it necessary to send a small force to the coast of Scotland. It was determined that Best was the proper man to command this expedition; but the Bonaventure, the only other ship available, was commanded by Sir William St. Leger, who held that, as a knight, he could not be under the orders of Best. The commissioners of the navy recommended that St. Leger should be superseded in the Bonaventure by some captain of 'meaner quality.' Captain Christian, who had formerly commanded the Osiander with Best, was accordingly appointed in his place. The Garland and Bonaventure sailed from Margate on 30 June, and, having gone to Aberdeen, brought the blockaded Dunkirker to the Downs, closely attended by two of the Dutch ships, and when, on 29 July, the convoy attempted to run off by herself, the Dutchmen would have made a prize of her if Best had not beat them off. He vowed vengeance, but the Dutch ships outsailed him. On 4 Aug. they had all anchored in the Downs, the Dutch at some distance, when Best slipped alongside of them in the dark, and beat them out of the road. The next day the Dutch gathered in force, and threatened summary punishment, unless he could show the king's commission for what he had done. As naval commissions then, as now, were signed only by the admiralty, Best had not the authority the Dutch required, and to evade the difficulty he was ordered to bring the ships up to Gravesend. Eventually he was superseded, and the Dunkirker was sent home with a safe-conduct from the Dutch (*Cal. State Papers*, Dom., August 1623; Gardiner's *Hist. of England*, v. 81–8). In 1626–7 Best commanded the Vanguard (19 March 1626–7), which formed part of the fleet assembled at Portsmouth under Lord Willoughby (*State Papers*, Dom., Charles I, xxxii. 74), and in the disastrous expedition to Rhé in 1627 (*ib.* lvi. 88, lxv. 14). In September 1630 he was member of a commission to report on the keeping of the king's ships at Chatham and Portsmouth, and in April 1632 of another to consider the manning of ships. In 1633 he seems to have been senior warden of the Trinity House, and in 1634 to have been master (*ib.* cclxxiii. 25, 271); in 1637 he appears to have been still master of the Trinity House; and in April 1638 he sat on a commission for inquiring into frauds in the supply of timber. This is the last mention of him that can be traced; it seems, therefore, probable that he died shortly afterwards.

[Calendar of State Papers, Domestic and East Indies, 1611–38.] J. K. L.

BEST, WILLIAM DRAPER, first Baron Wynford (1767–1845), judge, the third son of Thomas Best, by a daughter of Sir William Draper, K.B. (by his first wife), was born at Haselbury-Plucknett, Somerset, on 13 Dec. 1767. After receiving his education at the grammar school at Crewkerne, he was admitted to Wadham College, Oxford, at the age of fifteen, but left the university in his seventeenth year without taking his degree. He had been intended at first for the church, but, having come into a considerable fortune from a cousin during his residence at Oxford, he entered the Middle Temple on 9 Oct. 1784. He was called to the bar on 6 Nov. 1789, and joined the home circuit. The first cause in which he attracted notice was that of Shakespear *v.* Peppin (6 *T. R.* 741) in June 1796, when Lord Kenyon, C.J., paid many compliments to 'his talents and industry.' It is said that the brief in this case fell into his hands by the happy accident of the absence of the counsel who was engaged in the cause. He soon afterwards secured an extensive practice, both on the home circuit and at Westminster Hall. Though at Westminster he chiefly practised in the common pleas, he was engaged in many cases of importance in the king's bench and exchequer, and also in some of the principal criminal trials of the day. In 1799 he became a serjeant-at-law, and in July 1802 was elected member for Petersfield. He was now attached to the whig party, and was one of the acting managers on the impeachment of Lord Melville. He continued to sit for Petersfield until the dissolution of parliament. In March 1809 he was elected recorder of Guildford in the place of Lord Grantley. In October 1812 he was returned as a member for Bridport, and, having changed his politics, was appointed, 7 Dec. 1813, solicitor-general to the Prince of Wales. On 14 Feb. 1816 he became the prince's attorney-general, and in 1818 chief justice of Chester, and M.P. for Guildford. These offices Best resigned, when, on the elevation of Abbott to the chief-justiceship, he succeeded to the vacancy in the king's bench (30 Nov. 1818); he was knighted 3 June 1819. After sitting as a puisne judge for

rather more than five years, he was made chief justice of the common pleas on 15 April 1824, and admitted to the privy council on 25 May in the same year. His health throughout his career was a source of great suffering, and he was constantly incapacitated by severe attacks of gout. In June 1829 he gave up his post on the bench, and, a pension having been granted to him, was called to the House of Lords by the title of Baron Wynford of Wynford Eagle in the county of Dorset, on 5 June 1829. He was appointed one of the deputy speakers of the house, where he was a vehement supporter of the tory party, and strenuously opposed the Reform Bill at every stage.

As a lawyer he had no great reputation, but as an advocate his qualities were both varied and extensive. His style of speaking was forcible and pointed, but not always fluent, though his arguments were at all times remarkable for their clearness. His quickness and unwearying activity made him a most watchful adversary, though as a leader he was not always safe. As a parliamentary speaker he was much less successful than as an advocate, and as a judge he was unfortunately far from being free of bias of temper, and sometimes even of political prejudice. The opinions which he was supposed to have uttered on the subject of the game laws in the case of Ilott *v.* Wilkes (3 *B. & A.* 304) called forth a bitter article by Sydney Smith in the 'Edinburgh Review' (vol. xxxv.), entitled 'Spring Guns and Man Traps.' Best's judgment, however, seems to have been grossly misreported in the account of the case to which Sydney Smith referred. A number of his judgments will be found in vols. ii. to v. of 'Bingham's Reports.' On 11 June 1834 the degree of D.C.L. was conferred upon him by the university of Oxford. When attending the House of Lords he used to be carried there in an arm-chair, in which he was permitted to sit when addressing the house. In his later years his increasing infirmities compelled him gradually to withdraw from public life. He died at his country seat of Leasons in Kent, on 3 March 1845, aged 78. Early in life, on 6 May 1794, he married Mary Anne, second daughter of Jerome Knapp, clerk to the Haberdashers' Company, by whom he had ten children. The title is now borne by his grandson, William Draper Mortimer Best, who succeeded his father, the second baron, on 28 Feb. 1869.

G. F. R. B.

BESTON, JOHN (*d.* 1428), theological writer, prior of the Carmelite convent at Bishop's Lynn, was doctor in theology both of Cambridge and Paris, and was highly esteemed as a theologian and a philosopher, and also as a preacher. In 1423 he was deputed to attend the council held at Sienna. He died at Bishop's Lynn in 1428. His name is in Latin variously written Bestonus, Bastonus, and Besodunus. The works ascribed to him are the following: 1. 'Lecturæ Sacræ Scripturæ' (one book). 2. 'Sermones in Evangelia' (one book). 3. 'Sermones in Epistolas Apostolorum' (one book). 4. 'Compendium Theologiæ Moralis' (one book). 5. 'De Virtutibus et Vitiis oppositis' (one book). 6. 'Quæstiones Ordinariæ' (one book). 7. 'Super Universalia Roberti Holcothi' (one book). 8. 'Rudimenta Logices' (one book). 9. 'Epistolæ ad diversos' (two books). 10. 'Sacræ Conciones' (one book). 11. 'De Trinitate.' 12. 'Determinationes' (one book). It is stated in Rose's 'Biographical Dictionary' that several of these works are preserved in manuscript in the University Library at Cambridge, but no mention of them occurs in the published catalogue.

H. B.

BETAGH, THOMAS (1739–1811), jesuit, was descended from a branch of an old Roman catholic family in Meath, Ireland, which, through the Cromwellian confiscations, lost considerable estates. Some members of this family followed the fortunes of the Stuarts on the continent, and held important rank in the Irish brigades in the service of France. Betagh was born in 1739 at Kells, in Meath, where his father carried on the business of tanning. At an early age admission was obtained for him to the seminary of the Society of Jesus at Pont-à-Mousson in France. He there evinced high talents, was appointed professor of languages, and acquired reputation by his erudition and humility. After the suppression of the jesuits in France he returned to Ireland, and in conjunction with other members of that society carried on a school at Dublin, where he became a curate. He was subsequently appointed parish priest in Dublin and vicar-general of that diocese. Betagh's talents as a preacher are stated to have been of a high order. By

his untiring efforts for the promotion of education and the amelioration of the condition of the poor he acquired great influence with the people, which he exerted beneficially in the disturbed times through which he lived. Betagh died at Dublin on 16 Feb. 1811, after a lingering illness. An elaborate marble monument to him, with his likeness in medallion, was erected by public subscription, and stands in the parish church of SS. Michael and John, Dublin. Two portraits of him were engraved by Brocas of Dublin. A considerable amount of Betagh's unpublished correspondence is still preserved by the Society of Jesus.

[History of Irish Confederation, Dublin, 1882; Ireland's Case, 1695, p. 102; O'Callaghan's Hist. Irish Brigades, 1870; Hist. of City of Dublin, i. 312, 1854; Archives of Jesuits, Dublin; Irish Monthly Magazine, Dublin, 1811; Sermon at Funeral of T. Betagh, 1811.] J. T. G.

BETHAM, EDWARD (1707–1783), scholar and divine, was educated at Eton, and in 1728 proceeded to King's College, Cambridge. He became a fellow of King's College in 1731, and was also for some time bursar. He was subsequently presented by the provost and fellows to the living of Greenford, in Middlesex. He was appointed one of the preachers at Whitehall, and in 1771 the provost and fellows of Eton elected him to a vacant fellowship. Betham appears to have impressed his contemporaries equally by his learning and his benevolence. 'His fortune was not large, yet his liberality kept more than equal pace with it, and pointed out objects to which it was impossible for his nature to resist lending his assistance.'

In 1780 Betham founded and endowed a charity school in his own parish of Greenford, having previously erected a schoolhouse there. He gave 2,000*l.* for the better maintaining of the botanical garden at Cambridge. His affection for Eton was strikingly manifested in his will. He directed a marble statue of Henry VI to be prepared and erected at a cost of 700*l.* The statue was entrusted to the well-known sculptor Bacon, and it now stands in the chapel of Eton College, bearing the inscription: 'Posuit Edvardus Betham, collegii hujusce socius.' The king holds a model of the college in his hand. A bust of Henry was also given to the college library by Betham, and other benefactions are associated with his name. Betham died in 1783.

[Gent. Mag. 1783; Harwood's Alumni Etonenses; Chalmers's Biographical Dictionary.] G. B. S.

BETHAM, JOHN, D.D. (*d.* 1709), catholic priest, a native of Warwickshire, where his elder brother possessed a handsome estate, completed his studies in the English college at Douay, and was ordained priest there. Afterwards he went to Paris (1667), where he resumed his studies, and at the expiration of ten years was created a doctor of the Sorbonne. Then he came to England on the English mission, but the excitement caused by Titus Oates's narrative of a pretended popish plot was so great that he soon deemed it prudent to return to the French capital. When the catholic cause in England appeared to be in a flourishing condition Betham's presence here was required, and he was appointed one of the chaplains and preachers in ordinary to King James II. This office he held till the revolution of 1688, and soon afterwards he followed his royal master to St. Germain. He was appointed preceptor to the Chevalier de Saint George, and after King James's death that office was confirmed to him by commission, dated 30 Oct. 1701.

During his residence in Paris after his first visit to this country Betham revived an old project for erecting a seminary for the benefit of such of the English clergy as were disposed to take degrees in the university of Paris. The college of Arras at Paris had been founded as early as 1611 for the maintenance of learned writers in defence of the catholic religion. In 1667 this institution was greatly augmented by the Rev. Thomas Carr of Douay College; but the scheme was not completed till many years later, when Betham was appointed to preside over the seminary. Betham was enabled to purchase a handsome house and garden in the Rue des Postes, Faubourg Saint Marceau, and opened the establishment as St. Gregory's seminary by letters patent from the king of France in 1701. Some years before he died he retired to this seminary, where he ended his days in 1709. Dodd says 'he was a person of strict morals, grave, and reserved in conversation. The court was his cell, and he seldom appeared in publick but when duty called him forth.'

He was the author of: 1. 'A Sermon of the Epiphany, preach'd in the Queen-Dowager's Chapel at Somerset-House upon Twelfth day Jan. 6 1686. Published by her Majesty's command,' London, 1686, 4to. 2. 'A Sermon preach'd before the King and Queen in their Majesties Chappel at St. James's upon the Annunciation of our Blessed Lady, March 25 1686. Published by his Majestie's command,' London, 1686, 4to; this and the preceding sermon are reprinted in 'A Select Collection of Catholick Sermons,' 2 vols., London, 1741, 8vo. 3. 'Observations upon the *Bulla Plan-*

tata, at the request of the Pope's Nuncio,' manuscript.

[Dodd's Church Hist. iii. 293, 485; Husenbeth's Notices of English Colleges and Convents on the Continent, 18; Lowndes's Bibl. Man., ed. Bohn, 2243.] T. C.

BETHAM, MARY MATILDA (1776–1852), woman of letters and miniature painter, was the eldest daughter of the Rev. William Betham [q. v.], of Stonham Aspel, Suffolk, and rector of Stoke Lacy, Herefordshire (the compiler of some 'Genealogical Tables of the Sovereigns of the World, and of a 'Baronetage of England'). Her education, which consisted mainly in having free access to her father's fine library, and in a little occasional teaching from him, developed in her an ardent love of literature, especially of history. She was sent to school, but 'only to learn sewing, and prevent a too strict application to books.' Matilda taught herself miniature painting, and many of her portraits possess much sweetness of expression and delicacy of finish; but from a total want of any training in art they are weakly drawn, and she was unable to achieve an enduring success. Belonging to a large family she made strenuous efforts to turn her talents to practical account; and gathering together some of the fruits of her large miscellaneous historical reading she published, in 1804, a 'Biographical Dictionary of the Celebrated Women of every Age and Country,' which, though quite fragmentary and disproportioned, contains much entertaining matter, and is agreeably and often judiciously written. She had already gone up to London, where she gave Shakespearean readings, exhibited her portraits at the Royal Academy, and had a brief but brilliant period of literary and artistic success. She formed cordial friendships with Charles and Mary Lamb, with Coleridge, Southey, Mrs. Barbauld, and others. How high she stood in their esteem and liking may be gathered from their letters to her, some of which are printed in 'Six Life Studies of Famous Women,' by her niece, M. Betham-Edwards. Matilda had already published two small volumes of verse, 'Elegies,' 1797, and 'Poems,' 1808, which are poor enough; but in 1816 her 'Lay of Marie' achieved a considerable success. Charles Lamb, to whom the volume had been shown in manuscript, wrote: 'Did I not ever love your verses? The domestic half will be a sweet heirloom in the family. 'Tis fragrant with cordiality. What friends you must have had or dreamed of having! and what a widow's cruse of heartiness you have doled among them!' Southey and Allan Cunningham were still warmer in their praise, Southey advising her to insert at the end of her fictitious 'Lay of Marie' the real 'Lais de Marie' (Marie being a poetess of considerable figure among the Anglo-Norman *Trouveurs* of the middle of the thirteenth century), so as to give her book an antiquarian value. This advice Matilda followed in part, adding two appendices, the first containing extracts from a 'Dissertation on the Life and Writings of Marie, by M. La Rue,' in the 'Archæologia,' vol. xiii.; the second not, unfortunately, the actual 'Lais' from the Harleian MSS., but only some paraphrases from them. Family circumstances and misfortunes, combined with a breakdown of health, compelled Matilda to return to the country and relinquish literary pursuits. But her friendships remained, and when, as an elderly woman, she once more settled in London with unabated love of literature, her wit, her stores of apt quotation and anecdote, her sweetness and cheerfulness of disposition, made her still a favourite, not only with the literary people of her own date, but with the new generation. 'I would rather talk to Matilda Betham than to the most beautiful young woman in the world,' said a young man of her in her old age. She died in 1852.

[Betham-Edwards's Six Life Studies of Famous Women, 1880; obituary notice in the Gent. Mag. 1852.] A. G-T.

BETHAM, WILLIAM (1749–1839), antiquary, was born at Little Strickland, near Morland, Westmoreland, on 17 May 1749. His family seems to have been settled in the county from the twelfth century, and to have derived its name from the little village of Betham, near Milnthorpe. From the sixteenth century Betham's immediate ancestors resided at Little Strickland. He was educated at the public school of Bampton, was ordained in 1773, apparently without graduating at a university, and became chaplain to the earl of Ancaster. From 1784 to 1833 he was head master of the endowed school at Stonham Aspel, Suffolk; he resigned the post in 1833, on being presented to the rectory of Stoke Lacy, in the diocese of Hereford. He died six years later, aged 90. In 1774 he married Mary, daughter of William Damont, of Eye, Suffolk, and by her he had fifteen children. His eldest surviving son was Sir William Betham, Ulster king of arms [q. v.], and Matilda Betham, the authoress [q. v.], was his daughter. Betham was the author of two important antiquarian works. In 1795 he published by subscription, in London, 'Genealogical Tables of the Sovereigns of the World, from the earliest to the present period,' a folio

volume giving pedigrees of royal families, beginning with the 'Antediluvian Patriarchs,' and concluding with the 'House of Cromwell.' It was dedicated to George III. At the period of this publication Betham announced a work on the baronetage of England. The first volume, however, did not appear till 1801, when it was published at Ipswich with the following title: 'The Baronetage of England, or the History of the English Baronets, and such Baronets of Scotland as are of English Families, with Genealogical Tables and Engravings of their Armorial Bearings.' The first volume was dedicated to James Cecil, marquis of Salisbury. The second volume, dedicated to Charles, marquis and earl Cornwallis, was published at London in 1802. The third, fourth, and fifth volumes appeared in 1803, 1804, and 1805. An unprinted collection of letters, addressed to the author by the subscribers and others interested in the work during its progress, is in the British Museum (*Addit. MS.* 21033). A portrait of Betham, engraved from a drawing by his daughter Matilda, is prefixed to this volume. Betham also made collections with a view to a 'History of Suffolk,' but his advanced age compelled him to relinquish the undertaking; his papers were advertised for sale in the 'Suffolk Chronicle,' 3 Feb. 1833, but nothing is known of their subsequent history.

[Gent. Mag. (new ser.), xii. 655-6; Davy's MS. Suffolk Collections in Brit. Mus. Addit. MS. 19118, pp. 189 et seq.; Nicholson and Burn's Hist. of Westmoreland, i. 223.] J. T. G.

BETHAM, Sir WILLIAM (1779–1853), Ulster king of arms, son of the Rev. William Betham [q. v.], was born on 22 May 1779, at Stradbrooke, Suffolk. In his early years he passed some time in acquiring a practical knowledge of typography, and undertook to revise a portion of Camden's 'Britannia' for Stockdale, the publisher. In 1805 he came to Dublin to search for documents in connection with a law case in which he was employed. He found the documents in 'the tower' at Dublin Castle, and in the office of the Ulster king of arms, unarranged and in a very neglected state. The sinecure office of keeper of the records in 'the tower' at Dublin Castle was at that time held by Philip Henry Stanhope, Lord Viscount Mahon, who, on Betham's representations, appointed him as his deputy. Betham also obtained the appointment of deputy to Admiral Chichester Fortescue, then Ulster king of arms. Under the record commission Betham held, from 1811 to 1812, the post of sub-commissioner. Betham was knighted in 1812, and was appointed Ulster king of arms in 1820. He devoted much time to the preparation of repertories and indexes to collections of records. Inquiries in connection with pedigrees, descents of properties and titles, were much facilitated by these compilations. In 1827 he published an octavo volume of 'Irish Antiquarian Researches,' illustrated with plates. This publication was succeeded in 1830 by the first volume of a work by him with the following title: 'Dignities, Feudal and Parliamentary, and the Constitutional Legislature of the United Kingdom. The nature and functions of the Aula Regis, the Magna Concilia, and the Communia Concilia of England. And the History of the Parliaments of France, England, Scotland, and Ireland, investigated and considered with a view to ascertain the origin, progress, and final establishment of legislative Parliaments and of the history of a Peer or Lord of Parliament.' In 1834 this volume was reissued with a new title-page, as 'The Origin and History of the Constitution of England, and of the early Parliaments of Ireland.' The author, in a preliminary note, stated that the title by which the work was first published very inadequately expressed its real character, and that it had been thought expedient to republish it with one more fully declaring its contents and objects. He added that some necessary additions had been made to the volume. These consist of six pages which are added at the end of the book. The materials intended for a second volume were, Betham intimated, reserved by him for a general history of Ireland, which, however, has not appeared.

Betham published in 1834 'The Gael and Cymbri, or an Inquiry into the Origin and History of the Irish, Scots, Britons, and Gauls; and of the Caledonians, Picts, Welsh, Cornish, and Bretons,' 8vo. In 1837 he issued 'Observations on Evidence taken before a Committee of the House of Commons on the Record Commission.' Betham took an active part in the proceedings of the Royal Irish Academy, Dublin, from the period of his admission to it as a member in 1826. He became one of its governing body, acted as secretary, and made several contributions to its publications. In 1840 differences arose between him and the council of the academy in relation to the distribution of prizes and the publication of essays by Dr. George Petrie, among which was that on 'The Ecclesiastical Architecture of Ireland anterior to the Anglo-Norman Invasion, and on the Origin and Uses of the Round Towers of Ireland.' A statement on these matters was addressed by Betham to the lord-lieu-

tenant of Ireland, who submitted it to the council of the academy, by which it was officially replied to. The last publication of Betham appeared in 1842, with the following title: 'Etruria Celtica: Etruscan Literature and Antiquities investigated, or the language of that people compared and identified with the Iberno-Celtic, and both shown to be Phœnician,' 2 vols. 8vo. A large collection of manuscripts in the Irish language acquired by Betham was purchased from him in 1850 by the Royal Irish Academy, in the library of which they are preserved. Betham died 26 Oct. 1853, and was buried at Monkstown, co. Dublin. As Ulster king of arms he was succeeded by Sir J. B. Burke. Betham's genealogical and heraldic manuscripts were sold at auction in London by Sotheby & Wilkinson in 1860. The greater part was purchased by private collectors. Portions, however, were bought for the British Museum, London, and for the office of Ulster King of Arms, Dublin.

[MSS. of Sheffield (P. F. Betham, Esq., Dublin); Records of Office of Ulster King of Arms, Dublin; Archives of the Royal Irish Academy, Dublin; Fourth Report of Royal Commission on Historical MSS., 1874; Letter from George Petrie to Sir William R. Hamilton, Astronomer Royal, Ireland, 1840; Life of G. Petrie, by W. Stokes, 1868.] J. T. G.

BETHEL, SLINGSBY (1617–1697), republican, was the third son of Sir Walter Bethel of Alne, Yorkshire, who married Mary, the second daughter of Sir Henry Slingsby of Scriven, near Knaresborough, and was baptised at Alne 27 Feb. 1617. Being a younger son, he was placed in business, and went to Hamburg in 1637, staying there until December 1649. He was strongly opposed to the cause of the cavaliers, but did not approve of the conduct of the Protector, nor did he, as member for Knaresborough in the parliament of 1659, support Richard Cromwell's adherents in their efforts to procure his succession as protector with unlimited powers of action. In the new council of state appointed to hold office from 1 Jan. 1660, he was the last of the ten non-parliamentary members. When the estates of his uncle, Sir Henry Slingsby, the unfortunate cavalier who suffered for his devotion to the royal cause, were sequestered, they were bought in for his family by Mr. Stapylton and Slingsby Bethel; the letters which passed between them on this matter are printed in the 'Diary of Sir Henry Slingsby' (1836), pp. 344–54, 411. Through success in trade and through his family descent, he acquired considerable property in the East Riding of Yorkshire, and for many years after the Restoration he passed a retired life in London, living on his means, and taking no active part in opposition to a government which he distrusted. But on 24 June 1680 Bethel, who was a member of the company of leathersellers, and Henry Cornish, were chosen sheriffs of London and Middlesex, though they were unable to serve in consequence of their not having taken the oaths commanded by the Corporation Act. The country was divided into two parties through religious and political differences, Bethel and his colleague being the candidates of the whig and popular party in the city. Roger North, the tory historian, in his 'Examen,' p. 93, says of them that 'the former used to walk about more like a corncutter than sheriff of London. He kept no house, but lived upon chops, whence it is proverbial for not feasting "to Bethel the city;"' and Dryden, in the first part of his 'Absalom and Achitophel,' threw at Bethel, under the name of Shimei, all the slanders of his opponents. By Burnet the whig historian Bethel was styled 'a known republican in principle' and 'a sullen and wilful man,' and he adds that the selection of these candidates gave some plausibility to the rumour that the king would not have justice done him against his enemies, as Bethel 'had expressed his approving the late king's death in very indecent terms,' whilst their taking the sacrament, though they were independents, to qualify themselves for the office, damaged the anti-court party (*History of own Times* (1823 ed.), ii. 241–43). This last remark of Burnet refers to the fact that before the date of the second election Bethel and Cornish had duly qualified, and that thereupon they were elected by a large majority over the court candidates. On their retirement in 1681 they were thanked by the grand jury for the city, but Bethel was defeated on 5 Sept. in his candidature for the aldermanship of Bishopsgate ward. The sheriffs were accused, with Sir Robert Clayton and others, of having visited Fitzharris in Newgate with a message from Lord Howard that nothing would save his life but a discovery of the popish plot; but the accusation was promptly denied in a pamphlet called 'Truth vindicated,' 1681, which is reprinted in the 'State Trials,' viii. 411–25. Several pamphlets were published on the conduct of the sheriffs in taking the sacrament, and on Bethel's attempt to be returned for Southwark at the election of February 1681. A folio tract published in his interest at this election, entitled 'The Vindication of Slingsby Bethel' (1681), gave an emphatic denial to the assertion of his antagonists that he was a papist,

a jesuit, a cruel soldier in the parliamentary army, a judge of the late king, and an assistant at the scaffold when King Charles was executed. He was defeated at the poll for the borough of Southwark, and in the following October was fined five marks for assaulting a waterman at the election day, the fact being that he had removed two men who were preventing his electors from tendering their votes (*The Tryal of Slingsby Bethel* (1681), and *State Trials*, viii. 747–58). In the same month of October 1681, Bethel showed his liberality by a gift of several hundred pounds for the relief of poor prisoners for debt. In July 1682 he thought it prudent to retire to Hamburg, and there he remained until February 1689. Whilst absent he was found guilty and heavily fined, with several others (8 May 1683), for an assault on the preceding midsummer day at the election of sheriffs, a proceeding which was generally condemned. After the accession of William and Mary the convicted persons presented a petition to the king, praying him to except out of his act of grace all those who were concerned in this prosecution (*The humble Petition of Sir Thomas Pilkington, Slingsby Bethel, &c.*) Bethel died early in February 1697. In Foster's 'Yorkshire Pedigrees' (vol. ii.) he is said to have married Mary Burrell of Huntingdon; but if this statement be correct, he was a widower in 1681.

Bethel was the author of several works. In 1659 he published 'A true and impartial Narrative of the most material Debates and Passages in the late Parliament,' reprinted in the 'Somers Tracts' (1748), iv. 524–33, in vol. vi. of the 1809 ed. of the same work, and again as an appendix to his anonymous tract, 'The Interest of Princes and States,' 1680. Most of the discourses in the last-mentioned volume were written many years previously, when the author was on his travels. They advocated freedom of trade and liberty of conscience. 'The World's Mistake in Oliver Cromwell' (anon.), 1668, contained a severe censure of Cromwell's foreign policy, and of his conduct towards Lilburne and Sir Henry Vane. Another of Bethel's anonymous pamphlets, 'Observations on the Letter written to Sir Thomas Osborn,' 1673, by the Duke of Buckingham, advocated the support of Holland against France. The last of his works, 'The Providence of God observed through several ages towards this Nation' (anon.), 1691, republished in 1694 and 1697, dealt mainly with the proceedings under the Stuarts for the establishment of arbitrary power. There is a contemporary print of Bethel in his robes as sheriff which was reproduced in 1800. It represents him as an austere and determined man.

BETHELL, CHRISTOPHER (1773–1859), bishop of Bangor, was the second son of the Rev. Richard Bethell, of Wadham College, Oxford, B.A. 1755, M.A. 1759, rector of St. Peter's, Wallingford, who died 12 Jan. 1806, having married in 1771 Ann, daughter of James Clitherow, of Boston House, Middlesex. He was born at Isleworth, Surrey, 21 April 1773, and educated at King's College, Cambridge, where he proceeded B.A. 1796, M.A. 1799, and D.D. 1817; obtained a fellowship, and was second member's prizeman 1797. He was rector of Kirby Wiske, Yorkshire, from 1808 to 1830; dean of Chichester from 5 April 1814 until he became a bishop, and prebendary of Exeter 22 June 1830. Lord Liverpool nominated him bishop of Gloucester 11 March 1824. The Duke of Wellington transferred him to the more lucrative see of Exeter 8 April 1830, and again on 28 Oct. in the same year to the still more lucrative see of Bangor, which he held up to the time of his death.

Dr. Bethell was during the whole of his life identified with the high-church party. He was the author of several theological works, the principal of which is 'A General View of the Doctrine of Regeneration in Baptism,' 1821, of which a fourth edition was published in 1845. His other works are chiefly charges and sermons. His ignorance of the Welsh language was a very great hindrance to his usefulness in the diocese of Bangor, where 195,000 out of 200,000 people understood little more than their native tongue. He died at the palace, Bangor, 19 April 1859, and was buried in Llandegai churchyard on 27 April. At the time of his death he was the oldest prelate on the episcopal bench.

[Guardian, 27 April 1859, p. 375; Record, 23 April 1859, p. 3.] G. C. B.

BETHELL, RICHARD, first LORD WESTBURY (1800–1873), lord chancellor, the son of Richard Bethell, M.D., of Bristol, the grandson of Samuel Bethell of Bradford-on-Avon, and the great-grandson of Thomas Bethell, also of Bradford-on-Avon, who died in 1755, was born at Bradford-on-Avon 30 June 1800. He was educated partly at Corsham School, near Bath, partly at Bristol. At the age of fourteen, 'while still,' as he used to say, 'wearing a jacket and a frill,' he presented himself at Wadham College, matriculated,

and in a few months gained a scholarship. He had just completed his eighteenth year when he graduated, taking a first class in classics and a second in mathematics—an instance of precocity which, among men who have gained distinction in later life, is paralleled only by that of Phillpotts, bishop of Exeter. It was his frequent boast that from the age of seventeen he supported himself entirely by his own exertions, his father being no longer able to bear the expense of maintaining him at Oxford. After taking his degree he continued to reside in Oxford, and in a few years he was appointed to a fellowship in his own college, having previously, it is said, unsuccessfully opposed the future Cardinal Newman as a candidate for an Oriel fellowship. In 1823 he was called to the bar as a member of the Middle Temple, and he decided to practise in the equity courts, then presided over by Lord Eldon, the chancellor, Sir Thomas Plumer, the master of the rolls, and Sir John Leach, the vice-chancellor. On the strength of his academical reputation an opportunity was offered to Bethell a few years after his call, of which he availed himself, and which assured his success. An action had been brought against Brasenose College, and some eminent legal authority had advised the college to agree to a compromise. The question was of great importance, and on the recommendation of Dr. Gilbert, then principal of Brasenose, Bethell's opinion was taken. It was strongly in favour of continuing the action. The college followed his advice, and both before the vice-chancellor and on appeal before the House of Lords they were successful ('Attorney-General *v.* Brasenose College,' 1 *L. J.*, N. S. 66; 2 *Cl. & Fin.* 295). From this time his practice grew very rapidly. In 1840 he was made a queen's counsel by Lord Cottenham, and thereafter he settled in the court of Vice-chancellor Shadwell, over whose easy mind he exercised an extraordinary influence. By the aid of a wide knowledge of law, great industry, and unexampled audacity, he moved quickly to the front, and on the promotion of Knight Bruce and Wigram, in 1841, found himself the leader of the chancery bar, making an income which is said to have for many years exceeded 20,000*l.* Not till 1847 did he make any attempt to enter parliament. He failed in his first contest, when he stood as a liberal-conservative for Shaftesbury; but four years later he appeared with somewhat more advanced opinions, prepared to support the ballot and the abolition of church rates, and was returned for Aylesbury. The change in his attitude has been curiously exaggerated through his having been confounded with another Richard Bethell, a tory, who was member for the East Riding of Yorkshire from 1832 to 1841; but certainly his liberalism was steadily growing stronger, and, after being re-elected for Aylesbury in 1852 and 1857, was in 1859 returned for Wolverhampton. The conservative element in his nature, however, never disappeared; though on questions of personal liberty, such as the admission of Jews to parliament and the abolition of tests in universities, he was at one with the advanced party. He retained his belief in the value of a landed aristocracy. 'I do not know anything,' he said, 'that is more important to preserve in this country than the great rule by which the landed property of the father passes to the eldest son.'

Bethell had not long to wait for promotion. In 1851 he was appointed vice-chancellor of the duchy of Lancaster; in the following year he became solicitor-general in the 'Government of all the talents,' and in 1856, when Sir Alexander Cockburn was raised to the bench, he was made attorney-general. With one interval in 1858 and 1859 he held this last office until he became lord chancellor. When Bethell entered the House of Commons the necessity of great measures of law reform had for the first time begun to be recognised as of serious political consequence, and the weight of the work fell chiefly on his shoulders. Nothing did more to raise his reputation than the manner in which he carried through committee Mr. Gladstone's Succession Duty Bill, one of the most difficult and technical measures ever dealt with by parliament, and one which gave splendid scope for that readiness of apprehension and clearness of exposition in which he was unrivalled. He took a leading part also in the debates on the Oxford University Bill of 1854, and as attorney-general he introduced and carried through in 1857 the Probate and Administration Bill, the Divorce and Matrimonial Bill (carried almost single-handed against the most bitter opposition), and the Fraudulent Trustees Bill, and in 1861 the Bankruptcy and Insolvency Bill. This last measure, on which he had built high hopes, was marred, as he believed, by the rejection of his proposal to create a chief judge in bankruptcy—a proposal to which parliament returned when in 1869 it next legislated on the subject. He had other schemes of law reform, which advanced more slowly. On the subject of legal education he entertained the largest notions, desiring to see the Inns of Court erected into one great legal university, which should not merely undertake the training of professional lawyers, but co-operate with other universities in general

education (Hansard, 1 March 1854); but he was able to do no more than induce the different Inns of Court to consolidate their rules, and to institute studentships as an encouragement to legal study. More valuable results came from the impulse which he gave to the question of codifying the law. One of his first acts as solicitor-general was to prepare, and induce Lord Cranworth to accept, a measure for the consolidation of the statute law. The measure did not become law, and the subject was handed over to be considered by a statute law commission, which reported in favour of revising and consolidating the statutes, and of repealing all obsolete provisions. Bethell was himself in favour of codification pure and simple, but agreed to support the modified scheme as the first step towards a code; and in 1861, under his guidance, was passed the first of the Statute Law Revision Acts, formally repealing all enactments which are no longer in force, or which have become unnecessary. In 1863, when as lord chancellor he introduced the second of these acts, he reviewed the whole subject in one of his ablest speeches (afterwards published and edited by Macqueen, Q.C.), describing the confusion into which law had passed, and advocating as a further step the framing of a digest. The commission of 1866 reported in similar terms, but after some attempts to carry it out the proposal was abandoned. The work of revision, however, has since been actively carried on, and has led to the publication of a new edition of the statutes, now brought up to the year 1875, and including in seventeen volumes all of them that are effective (see Holland's *Essays on the Form of the Law*). Another and wider reform has been accomplished in a great measure through Bethell's persistent advocacy. As president of the Juridical Society (see his Address, i. 1), in his public speeches in and out of parliament, and even on the bench, he lost no occasion of proclaiming the absurdity of the separation of law and equity; but it was reserved for other hands to carry out the work of fusion. He died a fortnight before the passing of the act which declared that thenceforth law and equity should be concurrently administered.

His eager desire to take the lead in the removal of legal abuses brought him into frequent conflict with his chiefs, for whom he had an undisguised contempt. Especially did he exasperate them by repeatedly calling public attention to the inefficient condition of the House of Lords as a court of appeal, which he did rather venomously, but with perfect sincerity and with good cause. Lord Campbell has unjustly credited him with purely personal motives in making his attacks. 'Bethell,' he says, 'hardly attempts to disguise his eagerness to clutch the great seal' (*Life*, ii. 315). So strained did his and Cockburn's relations become with Lord Cranworth that Lord Campbell took the unusual step of addressing the prime minister, and warning him of the dangers to which the government was exposed 'from the insubordination which prevails among your legal functionaries.' 'Indeed,' he wrote, 'I must frankly tell you that there seems to me a systematic purpose to vilipend the lord chancellor' (*ibid.* ii. 343). Nothing came of this interposition; constant bickerings continued, and matters reached a climax in 1858, when Bethell, then out of office, in a speech of irritating satire, and still worth reading as an admirable example of his style, complained to the House of Commons of the systematic manner in which he had been misrepresented successively by Lord St. Leonards and Lord Campbell (*Hansard*, 26 Feb. 1858). At this time he was unquestionably looking forward with confidence to becoming chancellor when his party should return to power; he did not hesitate to say so openly, and on Lord Derby's resignation in 1859 his disappointment at having to give way to Lord Campbell was so great that only with difficulty was he induced again to serve as attorney-general. He did consent, however, and, 'strange to say,' Lord Campbell tells us, 'I get on more harmoniously with Bethell than with other members of the government.' He had not long to wait for the coveted prize. In the summer of 1861 Lord Campbell died, and Bethell succeeded him under the title of Baron Westbury of Westbury, in the county of Wilts. His bitter tongue had made him many enemies, but no one questioned his right to the office, and he fully satisfied the expectation that he would prove himself one of the chancellors whose names are distinctly associated with the advance of English law.

The judgments which he has left are in many ways unique. Our law reports contain no more perfect examples of precise and lucid statement, of concise reasoning, or of polished English; and no judge has ever striven more persistently than did Lord Westbury to bring every question to the test of principle, and to restrain within due limits what seemed to him the excessive authority of precedents. His habit was to brush aside, or pass by unnoticed, the crowd of cases which had accumulated during the argument, to treat with scant respect judicial opinions which might stand in his way, and to come to his decision by the light of 'a few elementary rules of law'—a phrase which he had a malicious

fondness for using when about to reverse Lord Campbell. Following this method, indeed, he frequently decided a great deal more than the facts of the case required, and the authority of his judgments has been thereby much weakened; but where he had a comparatively clear field, as in the subject of domicile, he succeeded in building up a great portion of the existing law (see an estimate of his judgments in CAMPBELL SMITH'S *Writings by the Way*, p. 397). With one exception, however, the cases in which he took part have only a legal interest. In 1864 he sat as a member of the judicial committee of the privy council to hear the appeals on the 'Essays and Reviews' cases ('Bishop of Salisbury *v.* Williams' and 'Fendall *v.* Wilson,' 2 *Moore P. C.*, N. S. 375; and see WILBERFORCE'S *Life*, iii. 6–10), and delivered with keen relish the judgment acquitting the defendants on all the counts—a judgment by which, said the author of a suggested epitaph for Lord Westbury himself, 'he took away from orthodox members of the church of England their last hope of everlasting damnation.'

Meanwhile his zeal for law reform remained unabated, though the result fell far short of his plans. He had long recognised the urgency of simplifying the transfer of land, and of carrying out the proposal of a general registry made by the Real Property Commission of 1830. He had been an active member of the commission of 1854, which in 1857 reported in favour of registration of title. When in opposition he had supported the bills introduced by Sir Hugh Cairns, and in 1862, taking up the subject again in the House of Lords, he succeeded in passing 'An Act to facilitate the proof of title to and the conveyance of real estate.' It offered two alternative modes of registration: that of an indefeasible title, or that of a merely possessory title to become subsequently indefeasible; but, against Lord Westbury's own convictions, registration was made voluntary. He expected great results from the act, and was slow to recognise its failure. Speaking after it had been in operation for nearly two years, he said: 'If there is one measure on which I can put my finger with the hope of being hereafter remembered, it will undoubtedly be this bill, when its utility and the relief which it is calculated to give to owners of landed property shall have been fully developed' (21 April 1864). It proved a failure nevertheless. Few indefeasible titles were registered, and the number decreased every year, while the possessory clauses were not made use of at all; and in 1868 a commission (of which Lord Westbury himself was afterwards made a member, though he took no part in the proceedings) was appointed to consider the causes of its failure. These they found to be the expense and the trouble of registration, which were proved to be greater than in the case of an ordinary sale, and which arose from the necessity imposed by the act of (1) showing a marketable title, (2) defining the boundaries of the property, and (3) registering partial interests (see also Lord Cairns's evidence before the commission of 1878). It would be difficult to say whether the act of 1862, known as Lord Westbury's Act, has had most effect in rousing people to the advantages of simpler modes of transfer or in discrediting by its failure subsequent attempts to accomplish the same end.

Most of the personal incidents which enlivened Lord Westbury's chancellorship have grown dim now, though at the time they were in everybody's mouth. One of them, however, bids fair to be historical. The occasion was the debate in the House of Lords on the sentence passed by Convocation on 'Essays and Reviews.' In language of solemn mockery, characterised by Bishop Wilberforce as 'ribaldry,' he told the bench of bishops that they had probably incurred the penalties of *præmunire*; he described a synodical judgment as 'a well-lubricated set of words—a sentence so oily and saponaceous that no one can grasp it,' and he warned them that 'whenever there is any attempt to carry Convocation beyond its proper limits their best security will be to gather up their garments and flee, and, remembering the pillar of salt, not to cast a look behind' (15 July 1864). The epithet 'saponaceous' was never forgotten.

In 1865 Lord Westbury was forced to retire from office. Circumstances connected with the granting of a pension to a Mr. Edmunds, who, as clerk to the patents (under the lord chancellor), was found to have appropriated public moneys, and certain transactions with reference to appointments in the Leeds Bankruptcy Court, had excited public indignation, and Lord Westbury was freely accused of having unworthily used his position to advance his relatives. The two cases were separately examined by two select committees, who agreed in acquitting him of having acted from unbecoming motives, but found that he had shown himself lax and inattentive to the public interests. A vote of censure, framed in moderate terms, was moved in the House of Commons, and, having been carried in spite of the defence made by the government, Lord Westbury at once announced his resignation, in a speech so full of real grace and dignity, that it almost turned indignation into sympathy. It was remem-

bered that in other cases he had been peculiarly active in correcting abuses in the departments under his charge, and that in using his position to favour his relatives he had been following a long, if an evil, tradition, to break which the public had clamoured for the sacrifice of somebody. (For the facts of the two cases, see the Committee Reports: Edmunds's case, 1865 (294), ix. 1, and (173) xliii. 495; Leeds Bankruptcy Court case, 1865 (397), ix. 413, and (295) xliii. 465, also the *Annual Register* for 1865; and for different commentaries on the facts, see *Law Magazine*, xix. 281, and *Fraser's Magazine*, lxxii. 247). After his fall Lord Westbury retired to a villa which he had purchased in Italy, having resolved, as he said, to quit public life for ever. But he was very soon back again, to sit on appeals in the House of Lords and the Privy Council, and occasionally to take part in political debate. His intellect was still too bright and keen, and his delight too great in the exercise of his power of epigrammatic speech, to have made a life of retirement possible. He took especial interest in the Irish Church Bill, and, while agreeing that the existence of the Irish church was a great evil that needed to be cured by legislation, protested against the bill as a measure of mere destruction and confiscation. The case of St. Ambrose had been often mentioned in the debates, and there was much controversy as to whether in applying the vessels of the church to secular uses he had been guilty of sacrilege: 'What might be the opinion respecting St. Ambrose,' said Westbury, 'in the days when he lived, I do not know; but I must say, with the modern ideas of property, that if St. Ambrose had been brought before me in equity I should not have hesitated to find him guilty of a breach of trust, and to make him refund the property' (29 June 1869). The Irish Land Act of 1870 was even more repellent to his rigid and lawyer-like ideas of justice. He himself, on the other hand, succeeded in inducing Lord Hatherley to amend the constitution of the judicial committee of the privy council, which had long been unable to deal satisfactorily with its legal business (*Judicial Committee Act*, 1871); while he found in Lord Selborne's Judicature Act of 1873, carrying out the fusion which he had so long advocated, a measure to which he could give a hearty support.

The last year of his life was one of great labour. By the private act 35 and 36 Vict. c. xlv. he was appointed arbitrator in the winding-up of the affairs of the European Assurance Society, the number of questions involved being so great that, as in the previous case of the Albert Company, of which Earl Cairns had been appointed arbitrator, the ordinary courts proved incapable of settling them. It is the opinion of lawyers who at this time practised before him that he had never shown more clearly his acuteness, his knowledge of men and things, and his power of rapid and sound decision. As he was not bound by rigid rules of law, his decisions are not authoritative, but they are constantly referred to by judges and text-writers as containing a valuable body of principles on several titles of the law of public companies. (Reported by F. S. Reilly, and published 1873.) Till within a few weeks of his death he was engaged at this work, which was left unfinished, and was continued by Lord Romilly. He died at his house in London 20 July 1873, just the day after his old antagonist, Bishop Wilberforce.

Lord Westbury was twice married: (1) in 1825 to Ellinor Mary, eldest daughter of Robert Abraham, by whom he left seven children surviving; and (2) on 25 Jan. 1873 to Eleanor Margaret, third daughter of Henry Tennant, of Cadoxton in Glamorgan.

His character remains a difficult and interesting study, for it was full of contrasts. It combined a love of display with habits of the greatest frugality, and absolute ruthlessness with considerable benevolence of spirit and good nature. Few men have had a greater power of sarcastic speech, and no one has ever used such a power more mercilessly. Delivered in the most urbane manner, and in his mincing, drawling, half-affected tones, and set off by his round, placid face, his sentences fell with blistering effect. Lord Derby once described him as 'standing up and for upwards of an hour pouring upon the head of a political opponent a continuous stream of vitriolic acid;' and a judge once appealed to him to be addressed at least as a vertebrate animal. Judges, indeed, he treated at the bar as superciliously as on the woolsack he treated bishops, and Lincoln's Inn is rich in traditions of his audacity. Once, at any rate, his boldness was useful, in his famous protest against Knight Bruce's habit of prejudging cases (see *Times*, 14 and 15 March, and *Punch*, 26 March 1859). His manner of speech was the outcome of an overpowering and evidently sincere belief in his own intellectual superiority over other men, and his sleepless ambition to have his superiority acknowledged. In order to attain his end he spared no one, and he was not over-scrupulous of the means which he employed. But his character had another side. To those who did not stand in his way he could be the best of friends, and when the story of his life comes to be told in full there

will be much to be said of acts of kindness for which he has hitherto had little credit. One who knew him well has said: 'A more kind and feeling nature never existed. He did not make many professions, but had the good of his fellow-creatures at heart. He always found time to give advice and help.' Indeed, to his habit of helping others, and not to any particular ability, he himself modestly ascribed his success: at least he said so in a famous address delivered in 1859 to the Young Men's Christian Institute of Wolverhampton: 'I am perfectly confident,' he added, in very odd language, 'that the principle of mutual benevolence, of a universal desire to do good, derived from Christianity, and which is the first lesson inculcated when you are taught to read the New Testament, is one of the best and most sure modes of securing even temporary success in life.' He exaggerated his own intellect, no doubt, but in critical keenness and subtlety he certainly had no rival. Without being an orator he had a rare gift of fluent, graceful, and persuasive speech, and a power of luminous exposition which has perhaps never been surpassed. In irony he was once described as 'a gentleman who possesses such a plain, straightforward, John-Bull-like character of mind: rusticus, abnormis, sapiens, crassaque Minerva;' but, irony apart, he had a singular faculty, which he exercised when his cause was good, of going straight to the heart of a question, and of bringing out the truth in a single telling sentence. Less able men have had a more durable fame than his will prove to be, for he left few of those definite records of work accomplished which keep a man's memory green. The lawyer's is like the actor's fame. Lord Westbury deserves to be remembered as a zealous and wise reformer, and as the boldest judge who ever sat on the English bench; but he will probably be known rather as the author of audacious sayings, and as the mythical source of innumerable stories.

P. M.

BETHUNE, ALEXANDER (1804–1843), poet, the son of an agricultural day-labourer, was born at Upper Rankeillor, in the parish of Monimail, Fifeshire, about the end of July 1804. Owing to the poverty of his parents he received an extremely scanty education. Up to his twenty-second year he had been at school only from four to five months in all. But his mother was a woman of superior intellect and force of character. Her name was Alison Christie, and her sons Alexander and John [q. v.] owed her much.

In his fourteenth year Alexander was hired as a labourer. He describes himself as having been set to dig the stiff clayey soil 'at raw fourteen,' and says that for more than a year afterwards his joints on first attempting to move in the morning creaked like machinery lacking oil. Previous to this his parents had moved to the village of Lochend, near the Loch of Lindores. Here, in his twenty-first year, he gladly embraced the opportunity of attending a night-school, or school-classes held in the evening, taught by the Rev. John Adamson, afterwards of Dundee. Encouraged by the progress he made under this teacher, Bethune put himself under the instruction of his brother John, in order to learn weaving. The two expended their hard-won and still harder-saved earnings as labourers, on looms, &c.; but 1825 proved a disastrous year for the poor weavers all over Scotland, and their all went. In 1826 the two brothers were once more employed as outdoor labourers, with one shilling a day for wage. In 1829, while working in a quarry, Alexander was thrown into the air by a sudden blast of gunpowder. He was so mangled that his death was expected. But he recovered, and in about four months was again at his day-labouring. About three years later he met with an exactly similar accident. He recovered, but was much mutilated and disfigured, and carried his hurts with him through life. It was about this time he commenced author. Having won a place in the 'Poet's Corner' of several local newspapers, he published his 'Tales and Sketches of the Scottish Peasantry' in 1838. They brought him fame at once. His printer—a Mr. Shortrede, of Edinburgh—gave the author the sale-price of the first fifty copies disposed of, as copyright payment. This yielded him far more money than he had ever dreamed of possessing.

His brother John having about this time been appointed overseer on the estate of Inchtyre, Alexander became his assistant. But within a year the estate passed to another proprietor, and their engagement ended. Their home at Lochend, which formed part of Inchtyre, had likewise to be vacated. The brothers therefore came to the resolution of farming a piece of ground near Newburgh, Fifeshire, and of erecting a home for themselves. To raise funds for this purpose they published 'Lectures on Practical Economy' in 1839; but this work

fell all but stillborn from the press. Alexander the same year lost his brother John—a great and lasting sorrow. He revised and edited his poems, and prefixed a pathetic memoir. This proved a success; 750 copies were sold immediately, and a second edition was speedily called for. The little volume having fallen under the notice of Mrs. Hill, wife of Frederick Hill, inspector of prisons for Scotland, she wrote to Bethune, and a situation was procured for him as a turnkey in Glasgow. This post, however, he found utterly uncongenial, and in March 1841 he gave it up. In 1842 he visited Edinburgh, and arranged with Messrs. Adam and Charles Black for the publication of his most noticeable book, the 'Scottish Peasant's Fireside,' a presentation of Scottish character among the lower classes, of scenery, and of manners. The new volume was welcomed far and near, and especially among the Scottish emigrants of Canada. But Bethune's days were numbered. He took a fever, and, though he partially recovered from it, showed signs of pulmonary consumption. He was offered the post of editor of the 'Dumfries Standard,' a liberal and Free-church newspaper then being started. He conditionally accepted; but his disease made rapid progress, and he had to release himself from his engagement. He died at Newburgh on 13 June 1843, having consigned his manuscripts to his friend William M'Combie (then an Aberdeenshire farmer). M'Combie in 1845 published his 'Life, with Selections from his Correspondence and Literary Remains.'

BETHUNE, Sir HENRY LINDESAY (1787–1851), major-general, the eldest son of Major Martin Eccles Lindesay, commissary-general in Scotland, was appointed to the Madras artillery in 1804. In 1810, when a subaltern in the horse artillery, he accompanied Sir John Malcolm's mission to Persia as one of the officers of the escort. His tall stature—he was six feet eight inches in height without his shoes—is said to have greatly excited the admiration and curiosity of the Persians. It is related of him that on one occasion, while the mission was in Persia, Sir John Malcolm overheard a Persian call out to one of Bethune's servants, 'Is your *date-tree* asleep or awake?' On the departure of the mission Lindesay and Captain Christie, another very remarkable Indian officer, together with one or two others, were permitted to remain in Persia to aid in drilling and disciplining the Persian army. Bethune was employed on this duty for several years, and served with the Persian army in various engagements with the Russian troops, distinguishing himself so much by his military skill and gallantry that he was regarded by the Persians as a veritable Rústam, not in stature alone. He returned to England in 1821, retiring in the following year from the service of the East India Company, and settling in Scotland on the estate of Kilconquhar, to which he had succeeded on the death of his grandfather. On succeeding to the estate he adopted the surname of Bethune, in conformity with the deed of entail. In 1834 he was sent back to Persia by the British government, and commanded a part of the Persian army in the war of succession in the following year, leading his division from Tabríz to Teherán, and completely quelling the rebellion against Mahomed Shah, the successor of the late Shah, Fath-i-Ali Khán. For this service he received from the Shah the order of the Lion and Sun, and on his return to England was created a baronet, in accordance with a special request made by the Shah, that his majesty would confer upon Bethune 'some rank which in the English state may descend lineally to his posterity, and always remain in his family.'

In 1836 Bethune was a third time sent to Persia, with the local rank of major-general in Asia, to take command of the Persian army; but owing to a misunderstanding, arising from the Persian advance upon Herat, the Shah's government declined to allow him to take up this command. He accordingly returned to England in 1839, and finally retired from military life. Some years afterwards he again visited Persia as a traveller, and died at Tabríz in 1851.

Sir Henry Bethune married in 1822 a daughter of John Trotter, of Dyrham Park, Hertfordshire, by whom he had three sons and five daughters. The Scotch earldom of Lindsay, created in 1633, which had been in abeyance for many years, was revived in the person of his eldest son, who established his right to it in 1878.

BETHUNE, JOHN (1812–1839), poet, a younger brother of Alexander Bethune [q.v.], was born, like him, at Upper Rankeillor, Monimail, Fifeshire, in 1812. In 1813 his

parents removed to Lochend, near the Loch of Lindores. He never received any school education. He was taught to read by his mother, and writing and arithmetic by his brother Alexander. The two lads, from the thirteenth year of the elder, earned their living by breaking stones on the road between Lindores and Newburgh. John, having been apprenticed to weaving in the village of Collessie, became so expert in the craft that in 1825 he set up looms for himself in a house immediately adjoining his father's, and with Alexander for apprentice. The failure of the trade all over Scotland in this year ruined them all. The two brothers returned to their former occupation of outdoor labourers. Alexander tells how John would eagerly seize any scrap of white paper that offered itself whereon to write out his poems. Before 1831 he had a large collection of manuscripts of the most miscellaneous sort. In October 1829 he was a day-labourer on the estate of Inchtyre. His integrity and capacity in this humble position so commended him to the proprietor that, on the death in 1835 of the overseer, he was appointed his successor at a salary of 26*l.* per annum, with fodder for a cow, and with his brother for assistant. Unfortunately the estate changed hands, and the situation was lost. In 1838, to Alexander's 'Tales and Sketches of the Scottish Peasantry' he contributed five pieces. In 1839 appeared 'Lectures on Practical Economy' by both brothers. In the title-page he describes himself as a 'Fifeshire Forester.' Under the same signature of a 'Fifeshire Forester' he contributed many poems to the two Scottish periodicals called the 'Scottish Christian Herald' and the 'Christian Instructor'—the latter under the editorship of Dr. Andrew Thomson. In 1838 his health failed; he therefore gave up manual labour, and endeavoured to gain a livelihood out of literary work. He died of consumption on Sunday, 1 Sept. 1839, in his twenty-seventh year.

BETHUNE, JOHN DRINKWATER (1762–1844), originally John Drinkwater, historian of the siege of Gibraltar, was born at Latchford, near Warrington, in June 1762. His father, John Drinkwater, formerly a surgeon in the navy, was at the time of his birth a medical practitioner at Salford, then a suburb of Manchester. At the age of fifteen he joined as an ensign a regiment of volunteers raised by a subscription in Manchester, at a time of indignant excitement produced by the news of General Burgoyne's surrender at Saratoga. The Manchester regiment, as it was called, more properly the 72nd regiment of the line, or Royal Manchester Volunteers, was not, however, sent to America, but to Gibraltar. Gibraltar was besieged in June 1779 by a Spanish-French force [see Elliot, George Augustus, Lord Heathfield]. During the whole of the siege, which lasted until February 1783, Drinkwater kept a careful record of events. With the peace the 72nd, in which Drinkwater had become a captain, was ordered home and disbanded. From his memoranda chiefly Drinkwater compiled the work 'A History of the Siege of Gibraltar, 1779–1783, with a description and account of that garrison from the earliest period. By John Drinkwater, Captain in the late Seventy-second Regiment, or Royal Manchester Volunteers.' Plans and views accompanied the letterpress of the volume, which appears to have been published in 1785, and was dedicated by permission to the king. The narrative, one of our few military classics, went through four editions in as many years. A cheap reprint of it was added in 1844 to the Home and Colonial Library. In 1787 Drinkwater purchased a company in the second battalion of the 1st or Royal regiment of foot, then stationed at Gibraltar, whither he proceeded. By Lord Heathfield, who had been governor of Gibraltar during the siege, he was publicly thanked for his work. During this second stay at Gibraltar, Drinkwater established a garrison library, which served as a model for many other similar institutions.

Drinkwater accompanied his regiment to Toulon, and acted as military secretary during its occupation by the English. After the English annexation of Corsica he became secretary for the military department and deputy judge-advocate during the English occupation of that island and the viceroyalty of Sir Gilbert Elliot, afterwards Earl of Minto. Corsica having been evacuated, Drinkwater returned with Sir Gilbert in the Minerva, carrying the pendant of Nelson as commodore, with whom he had formed while in Corsica a close intimacy. Sir John Jervis's squadron off Cape St. Vincent having been reached, Drinkwater witnessed the battle of St. Vincent. The news of the victory was brought to England by Drinkwater. Nelson was not mentioned in the published despatches; and considering his services to have been under-estimated, Drinkwater published anonymously a 'Narrative of the Battle of St. Vincent,' in which full justice was done to Nelson.

In 1794 Drinkwater had become by purchase major, and in 1796 lieutenant-colonel,

of his regiment. He was placed on half-pay with the rank of colonel, when forming the long connection with the civil administration of the army, which began by his acceptance, after Sir Gilbert Elliot had strongly recommended him to Pitt, of a commission to arrange and settle the complicated accounts connected with the English occupation of Toulon and Corsica. In 1799 he was appointed commissary-general of the force which was being despatched to the Helder, and which he accompanied. In 1801 he accepted an honorary appointment in the household of the Duke of Kent. In 1805 he was nominated a member of the parliamentary commission of military inquiry, becoming afterwards its chairman. In 1807 he declined the under-secretaryship of state for war and the colonies offered to him by Windham. In 1811 he was appointed comptroller of army accounts, and filled the office for five-and-twenty years, until it was abolished in 1835. In 1840 he republished, in aid of the fund for the Nelson testimonial, and with an acknowledgment of its authorship, his 'Narrative of the Battle of St. Vincent,' adding to it some new anecdotes of Nelson. He was preparing an enlarged edition of the history of the siege of Gibraltar, of the garrison of which he was then, it is said, the sole survivor, when he died, aged 81, on 16 Jan. 1844, at Thorncroft, near Leatherhead, in Surrey. After his withdrawal from public life, and on the death of his brother-in-law, whose property, Balfour Castle in Fifeshire, his wife inherited, he had assumed the surname of Bethune. Besides being the author of the two works already mentioned, he published in 1830 'A Compendium of the Regent's Canal, showing its connection with the metropolis,' and in 1835 he printed for private circulation 'Statements respecting the late Departments of the Comptrollership of the Army Accounts, showing the inconveniency which will probably result from its abolition.'

BETHUNE, JOHN ELLIOT DRINKWATER (1801–1851), an eminent Indian legislator and educationist, was the eldest son of Lieutenant-colonel John Drinkwater Bethune, C.B. and F.S.A. [q.v.], author of the 'History of the Siege of Gibraltar.' Having been educated at Trinity College, Cambridge, and called to the bar in 1827, Bethune was employed by Lord Grey's government, shortly after its accession to office, on several important commissions, and subsequently as counsel to the Home Office, which appointment he retained for nearly fourteen years. While holding this office he drafted, among many other legislative measures, the Municipal Reform Act, the Tithe Commutation Act, and the County Courts Act. In 1848 Bethune was appointed fourth ordinary, or legislative member of the Supreme Council of India, and after his arrival at Calcutta accepted the additional unpaid office of president of the Council of Education. In India, as in England, his principal official duties engaged him in the consideration of questions of legislative reform. Two of the most important of these were a bill for removing the exemption enjoyed by European British subjects from the jurisdiction of the criminal courts of the East India Company, and a bill for extending to the whole of British India the law passed for Bengal by Lord William Bentinck's government in 1832, relieving native converts to christianity or to any other religion from forfeiture of rights or property or of rights of inheritance. The first of these measures was postponed until the Indian penal code should have been enacted, and has not yet become law to the extent contemplated by Bethune and his colleagues; the second was passed a few months before his death. An act for establishing small cause courts at the presidency towns, upon the principle of the English county courts, was another of the measures which illustrated his career as a legislator.

As an educationist, Bethune's name is identified with the establishment at Calcutta of a school for educating native girls of the higher classes, which he endowed by his will with lands and other property in that city. This institution, still called the Bethune Girls' School, was for some time after Bethune's death supported by the governor-general, Lord Dalhousie, from his private funds, and was subsequently taken charge of by the state, by which it is still maintained.

Bethune died at Calcutta on 12 Aug. 1851, greatly lamented by all classes, native as well as European.

[Annual Reg. 1851, pp. 319–320; The Unrepealed Acts of the Governor-General of India in Council, vol. i., Calcutta, 1875; Report of the Indian Education Commission, p. 525, Calcutta, 1883.] A. J. A.

BETTERTON, THOMAS (1635?–1710), actor and dramatist, was born in Tothill Street, Westminster, and was apprenticed by his father, who was under-cook to Charles I, to a bookseller. These are the only undisputed facts concerning his life before he adopted the stage as a profession. The mystery with which his early years are surrounded

is the less explicable, as Betterton appears to have been communicative and to have found contemporaries willing to collect and give to the world information concerning him. Their statements, however, are conflicting. In the 'Life of Betterton' in the 'Biographia Britannica' an attempt is made upon the strength of new information from Southerne to disprove the previously accepted assertions of Gildon and others. On the appearance of the first volume of the 'Biographia Britannica' (1747) Southerne had been dead a year. He was eighty-six years of age at the time of his death, and there is no reason for supposing that his memories concerning his conversations with Betterton thirty-six years previously were more trustworthy than those of Gildon, who was in direct personal communication with Betterton, in whose lifetime he wrote, or than those of Downes, who also had constant access to the actor, and whose 'Roscius Anglicanus' was published in 1708, two years before Betterton's death. Gildon, who speaks of Betterton as being seventy-five years of age at his death, supports the view that his birth took place in 1635. Downes speaks of Betterton as about twenty-two years of age in 1659, and Curll, in a 'History of the English Stage from the Restauration to the Present Time' (1741), which he fathered upon Betterton, gives the date of his birth as 1637. Curll says that Betterton was present as a soldier at the battle of Edgehill in 1642, when, if Curll's date of his birth be correct, he was only five years old, and, upon any date suggested, he was not more than seven. This ridiculous assertion is, however, copied by Messrs. Maidment and Logan in the Life of Davenant prefixed to the reprint of his works (Edinburgh, Paterson). Betterton, who received a good education, displayed some taste for reading. According to the 'Biographia Britannica,' presumably following Southerne, the intention of bringing him up to a learned profession was abandoned, owing to the 'violence and confusion of the times putting this out of the power of his family.' That the lad elected to be apprenticed to a bookseller is acknowledged by all authorities. He was, according to the 'Biographia Britannica,' bound to Mr. John Holden, who, as the publisher of 'Gondibert,' was much in the confidence of Sir William Davenant. A way to the stage, it has been suggested, was thus at once opened out. The authority advanced for this is Richardson's 'Life of Milton' (p. 90), in which it is affirmed that Betterton told Pope that he was bound to Holden. The 'Biographia Britannica' then assumes it to be 'highly probable' that Betterton 'began to act under the direction of Sir William Davenant in 1656 or 1657 at the Opera House in Charter House Yard.' Gildon (supported by Downes) says: 'His father bound him apprentice to one Mr. Rhodes, a bookseller, at the Bible at Charing Cross, and he had for his under-prentice Mr. Kynaston. But that which prepar'd Mr. Betterton and his fellow-prentice for the stage was that his master, Rhodes, having formerly been wardrobe-keeper to the king's company of comedians in the Black-fryars, on General Monck's march to London in 1659 with his army, got a licence from the powers then in being to set up a company of players in the Cockpit in Drury Lane and soon made his company compleat, his apprentices, Mr. Betterton for men's parts, and Mr. Kynaston for women's parts, being at the head of them' (*Life of Betterton*, p. 5). Downes gives the company with which Rhodes started at the Cockpit, the chief names, in addition to Betterton and Kynaston, being Underhill, Nokes (Robert and William), and William Betterton, assumed to be a brother of Thomas. The story told by Gildon has been accepted by the authors of the 'Biographia Dramatica,' by Genest (with the assumption that Salisbury Court should be substituted for Cockpit), by Galt in his 'Lives of the Players' (1831), and Bellchambers in his edition of Colley Cibber's 'Apology,' 1822. Davies, in his 'Dramatic Miscellanies,' attaches value to Southerne's recollections, but points out errors and inconsistencies in them. R. S. (? Shiels), who contributed the account of Betterton to the 'Lives of the Poets' of Theophilus Cibber, 1753, adheres closely to the views of the 'Biographia Britannica.'

The first plays in which Betterton made a public appearance are said to have been the 'Loyal Subject,' the 'Wild Goose Chase,' and the 'Spanish Curate' of Beaumont and Fletcher. He played also while a member of Rhodes's company in the 'Maid in the Mill,' 'Mad Lover,' 'Pericles,' 'Wife for a Month,' 'Rule a Wife and have a Wife,' 'Woman's Prize,' 'Aglaura,' 'Changeling,' 'Bondman,' &c. His chief success appears to have been obtained in 'Pericles,' the 'Mad Lover,' the 'Loyal Subject,' the 'Bondman,' and as Deflores in the 'Changeling.' His voice, according to Downes, who was the prompter at Lincoln's Inn Fields, was even at this time 'as strong, full, and articulate as in the meridian of his acting.' When, accordingly, he joined in 1661 the company formed by Sir William Davenant at the Lincoln's Inn Fields Theatre, he was an actor of some experience. To distinguish it from the company of Thomas Killigrew, formed like itself under a patent from Charles II, and known

as the King's Company, the troupe collected by Davenant was styled the Duke's Company. One of the first recorded duties of Betterton was, at royal command, to visit Paris with a view to seeing the French stage, and judging what, in its scenery, &c., might with advantage be adopted in England. Scenery was not altogether unknown on the English stage. Davenant had employed it in an entertainment entitled the 'Cruelty of the Spaniards in Peru, expressed by vocal and instrumental music and by art of perspective in scenes.' This was performed at the Cockpit in 1658, Cromwell, by whom it is said to have been read, having given permission for its performance as calculated to inflame public sentiment against the Spaniards. In the 'Siege of Rhodes' in two parts by Davenant, witnessed by Pepys on 2 July 1661, and in the 'Wits' of the same author, scenery, according to Downes, was first publicly employed. Supposing the visit of Betterton to have immediately anticipated the performance of the 'Siege of Rhodes,' in which he played Solyman, Betterton would probably have seen 'L'Ecole des Maris' of Molière. He must, whenever his visit took place, have seen the representations given at the Théâtre de Molière. That the comedies of Molière influenced him in his dramatic composition is evident. At the close of this year (1661) Betterton played Colonel Jolly in the 'Cutter of Coleman Street' of Cowley, and made his first appearance in one of his greatest characters, Hamlet. Mercutio, Sir Toby Belch, Bosola in the 'Duchess of Malfi,' and Macbeth are among the characters he assumed in 1662–6. In 1665 and 1666 performances, in consequence of the plague and the fire, were almost entirely suspended. In April 1668 Davenant died. The Duke's Company remained at Lincoln's Inn Fields until 1671, when it migrated to a new house built for it, by subscription as it seems, in Salisbury Court, Fleet Street, and named Dorset Garden Theatre. Davenant's patent had come into the hands of his son, Charles Davenant, who associated with himself in the management Harris and Betterton. Prior to the removal Betterton had taken part in a play of his own and had married. 'Woman made a Justice,' a comedy which has never been printed, and concerning which nothing is known except that it was acted fourteen consecutive days, a long run for the period; the 'Amorous Widow, or the Wanton Wife,' a comedy taken from Georges Dandin; and the 'Roman Virgin, or the Unjust Judge,' an alteration of Webster's 'Appius and Virginia,' all by Betterton, were all, according to Downes, given at Lincoln's Inn Fields. In the 'Amorous Widow' Betterton played a character called Lovemore; in the 'Roman Virgin' he was naturally Virginius. Mrs. Saunderson, whom Betterton married, was a member of the Lincoln's Inn company. She has been erroneously said to have been the first woman who ever appeared on the English stage. Downes mentions her as one of the four principal women actresses of Davenant's company whom Davenant boarded at his own house. She was an excellent actress and an estimable woman. Colley Cibber preferred her Lady Macbeth in some respects to that of Mrs. Barry. 'She was,' he continues, 'to the last the admiration of all true judges of nature and lovers of Shakespeare, in whose plays she chiefly excelled, and without a rival. When she quitted the stage, several good actresses were the better for her instruction. She was a woman of an unblemished and sober life, and had the honour to teach Queen Anne, when princess, the part of Semandra in "Mithridates," which she acted at court in King Charles's time. After the death of Mr. Betterton, her husband, that princess, when queen, ordered her a pension for life, but she lived not to receive more than the first half-year of it.' She also, according to Davies (*Dramatic Miscellanies*), gave lessons to the Princess Mary and to Mrs. Sarah Jennings, afterwards Duchess of Marlborough. After the death of her husband she lost her reason. Mrs. Betterton is said in the 'Biographia Britannica,' on the authority of 'a lady intimate with her for many years,' to have recovered her senses before she died. 'According to our best information,' says the same publication, her death 'was about six months' after that of her husband. This is inaccurate. Betterton died on 28 April 1710. On 4 June 1711, or more than thirteen months after his death, the 'Man of the Mode' was acted at Drury Lane Theatre for the benefit of the 'widow of the late famous tragedian Mr. Betterton.' She lived for nearly six months after this date. 1670 is ordinarily given as the year of her marriage to Betterton. Both the 'Biographia Britannica' and the 'Biographia Dramatica,' the last edition of which is generally trustworthy, speak positively on the subject. This date is also wrong. Downes, the prompter to the company, gives the cast with which the 'Villain' by Major Thomas Porter, 'King Henry VIII,' 'Love in a Tub' by Etherege, the 'Cutter of Coleman Street' of Cowley, Webster's 'Duchess of Malfi,' and other dramas were played between 1662 and the outbreak of the plague in 1665, and in each case numbers Mrs. Betterton among

the actors. Before 1662 she is always called Mrs. Saunderson. Genest, noticing the performance of the 'Villain,' 20 Oct. 1662, says Belmont = Mrs. Betterton, late Saunderson. Under the management of Charles Davenant (acting for his father's widow), Betterton, and Harris, the Duke's Company, established (1671) in Dorset Garden, though recruited by such actors as Leigh, Jevon, and Mrs. Barry, found some difficulty in coping with the rival company at the Theatre Royal (Drury Lane). A theatre, accordingly, which could boast such actors as the Bettertons, Sandford, Underhill, and Smith, was driven to the production of spectacular and musical pieces, such as the 'Psyche' of Shadwell (February 1673–4), on the scenery of which no less than 800*l.*, an enormous sum for those days, was spent. Betterton, however, found opportunity to enlarge his repertory, to which, without counting characters now forgotten, he added Antony in Sedley's 'Antony and Cleopatra,' Orestes in Charles Davenant's 'Circe,' Œdipus in the tragedy of Dryden and Lee, and Timon of Athens, Troilus, King Lear, &c., in adaptations from Shakespeare by Dryden, Shadwell, or Tate. In 1675 he superintended the performance at court of Crowne's pastoral, 'Calisto, or the Chaste Nymph.' So successful were the spectacular pieces at Dorset Garden that the King's Company was in turn brought into difficulties. In 1682 the two companies, probably in consequence of a royal order, coalesced. A memorandum of an agreement between Dr. Charles Davenant, Thomas Betterton, gent., and William Smith, gent., of the one part, and Charles Hart, gent., and Edward Kynaston, gent., of the other part, dated 14 Oct. 1681, given in the life of Betterton by Gildon and frequently reprinted, proves that Hart and Kynaston had been won over to the side of Betterton. So one-sided and dishonest was this agreement that it was regarded in those days as a blot upon Betterton. Gildon can only plead that the two houses were at war, and ask: 'Dolus an virtus, quis in hoste requirat?' The union of the companies was effected in 1682 according to Gildon and Downes, and 1684 according to Colley Cibber, who is followed by Dr. Burney. On the strength of a prologue of Dryden, dated 1686, the 'Biographia Britannica' would assign the event to 1686. The correct date is 1682, and the united companies opened at the Theatre Royal on 16 Nov. of that year in the 'Duke of Guise,' Betterton playing the Duke, Kynaston the King of France, Mountfort Alphonso Corso, and Mrs. Barry Marmoutier. Dorset Garden was not, however, abandoned, those pieces which required mechanical and spectacular effects being reserved for that theatre. Hart, according to Cibber, regretted so much his Judas-like action, the result of which was to hand over his former associates to their rivals, that he left the stage. He appears, however, to have taken for four years previously little part in the performances, his name not appearing in the bills after 1678. His old associate as soldier and actor, Mohun, also died immediately after the union, Colley Cibber seems to imply in consequence of it. The new management prospered, but the fortunes of Betterton suffered at this time a defeat from which they never rallied. Betterton embarked (1692) a sum of 8,000*l.*, 6,000*l.* of which were advanced by the famous Dr. Radcliffe, in a venture to the East Indies undertaken by a friend, Sir Francis Watson, bart. The speculation was successful, but the vessel on the return voyage, after arriving safely in Ireland, was seized by the French in the Channel. The entire savings of Betterton appear to have been sunk in this speculation. Sir Francis Watson is said to have died of his loss, leaving a daughter Elizabeth, aged about fifteen, whom Betterton adopted and who subsequently married Bowman the player. The outlines of this story are supplied by Gildon; the filling up is due to a correspondent of the 'Biographia Britannica,' who elected to remain anonymous, and who was too discreet, as were all authorities of the day, to mention the name of Sir Francis. The united company was probably one of the strongest ever collected. Soon after this period dissension began to manifest itself. Fearing, it may be assumed, no opposition, and anxious to reduce expenses, the patentees, whose outlay upon spectacular pieces had involved them in heavy debt, began to reduce the salary of the principal actors. Mountfort was stabbed on 9 Dec. 1692 by Lord Mohun and died the following day. Leigh expired a week later, and Nokes, or more properly Noke, according to Malone, died about the same time. Betterton and Mrs. Barry were accordingly the chief sufferers by the new departure. To justify the reduction of salary the patentees, under the pretence of bringing forward younger actors, entrusted several of Betterton's characters to the younger Powell, and offered Mrs. Barry's chief parts to Mrs. Bracegirdle. Colley Cibber, who had joined the company in 1690, gives a full account of these transactions. As a measure of defence the principal performers, with Betterton as their head, formed a combination. An offer of a peaceful arrangement from the united actors was refused by the patentees, with results

very damaging to the fortunes of the theatre. The grievances of the players were laid before the Lord Chamberlain, the Earl of Dorset, who induced King William to grant an audience to Betterton, Mrs. Barry, and others of the company. The death of Queen Mary, by stopping all public diversions, interrupted the negotiations. Royal license (not a patent) was, however, granted to Betterton and his associates to act in a theatre by themselves, and a subscription was formed for the purpose of erecting a theatre within the walls of the tennis-court in Lincoln's Inn Fields. While the old company accordingly, strengthened by some additions, played with marked insuccess at the Theatre Royal, Betterton, with his associates Doggett, Sandford, Williams, Underhill, Bowman, Smith, Mrs. Barry, Mrs. Mountfort, and Mrs. Bracegirdle, who with commendable discretion refused the invitation of the patentees to rival Mrs. Barry and joined the coalition, opened 30 April 1695 in what was frequently called the 'Theatre in Little Lincoln's Inn Fields.' Williams and Mrs. Mountfort, however, soon rejoined the old company. The first venture was Congreve's 'Love for Love,' the success of which was so great that they had, according to Cibber, who was at the rival house, 'seldom occasion to act any other play till the close of the season.' Besides his profits from 'Love for Love,' Congreve accepted a full share from the company, binding himself, if his health permitted, to give them a new play every year. This undertaking was not kept, and the associated comedians were in a bad way when, between two and three years later, 1697, the 'Mourning Bride' came to save them. A like service was accomplished again in 1700 by the 'Way of the World,' which though coolly received on the first production, kept possession of the stage, and 'was very soon after its first exhibition in favour with the public' (Davies, *Dramatic Miscellanies*, iii. 360). Once more things went wrong in a way that leaves room for suspicion that Betterton was an indifferent manager. A further subscription to provide a new house was set on foot. The building erected by Sir John Vanbrugh in the Haymarket was opened 9 April 1705. Betterton, who felt the weight of increasing years, resigned the management of the new house to Congreve and Vanbrugh, the former of whom soon abandoned it to Vanbrugh. Seventy years of age and a martyr to gout, Betterton, in spite of straitened circumstances, found himself compelled by physical infirmities to act less frequently. At the desire 'of several persons of quality' a benefit was got up for him. The date of this famous performance is generally given 7 April 1709. In Curll's 'History of the Stage' it is said that the benefit took place on Thursday, 7 April. As 7 April was a Friday the date seems suspicious. Genest, however, gives the performance and the cast for the same day. By a note to the 'Tatler' for Tuesday 11 April, No. 157, however, the date, unless the performance was repeated, is fixed for Thursday, 13 April. Addison says: 'Mr. Bickerstaff, in consideration of his ancient friendship and acquaintance with Mr. Betterton, and great esteem for his merit, summons all his disciples, whether dead or living, mad or tame, Toasts, Smarts, Dappers, Pretty-fellows, musicians, or scrapers, to make their appearance at the play-house in the Haymarket on Thursday next, when there will be a play acted for the benefit of the same Betterton.' A great concourse of persons of distinction was assembled, the stage as well as the auditorium being crowded with ladies and gentlemen. The performance, at increased prices, brought Betterton 500*l*. The piece was 'Love for Love.' Betterton played Valentine; Doggett for that occasion only appeared at the Haymarket, and enacted Ben. Mrs. Barry and Mrs. Bracegirdle came from their retirement and appeared respectively as Mrs. Frail and Angelica. A prologue by Congreve, which has not survived, was, according to Curll, spoken by Mrs. Bracegirdle. After the performance Betterton appeared, supported on either side by Mrs. Barry and Mrs. Bracegirdle, the former of whom spoke an occasional prologue by Rowe. Though it has been much commended, it is poor stuff. It was then determined that the benefit should be annual. No more than one anniversary was kept. Betterton acted rarely at the Opera House in the Haymarket, then under the management of Owen Swinny or Swiney. For his second benefit he played Melantius in the 'Maid's Tragedy' of Beaumont and Fletcher, 25 April 1710 (13 April according to Genest, who is assumably wrong). Mrs. Barry again appeared and played Evadne. An attack of the gout was relieved by external applications, which, however, drove the disease inward. Betterton played with unusual spirit and briskness, but was obliged to act with a slipper on one foot. On 28 April he died, and on 2 May his body was interred in Westminster Abbey, in the south end of the east cloister. The funeral and the character of Betterton formed the subject of the 'Tatler,' No. 167, 4 May 1710, in which Steele pays a high tribute to the deceased actor. There seems to have been less pomp about the funeral than has been believed. Dr. Doran says he 'had a royal funeral;' Whincop, or the author of the list of 'English Dramatic Poets,' appended

to his 'Scanderbeg,' affirms, on the contrary, that 'he was buried in a decent manner in the cloyster of Westminster Abbey.' Gildon (*Life of Betterton*) also says 'he was buried with great decency at Westminster Abbey.' If special honours had been paid the actor, it is fair to suppose they would have been chronicled by Steele or some contemporary writer.

The character of Betterton stands almost unassailed, a noteworthy circumstance in the case of a man who, during very many years, occupied a position that besides being prominent brought him into collision with all sorts and conditions of men. Scarcely a discordant note is there in the chorus of praise. That he was once, 1698, fined for using indecent and profane expressions, as was also at the same time Mrs. Bracegirdle, may be set down, as may the indelicacy of some scenes in his plays, to the manners of the age. The selection of Betterton for prosecution means probably that in the fit of virtue caused by the publication of Collier's famous 'Short View' representative actors were chosen for attack rather than the greatest offenders. The one regrettable action of Betterton that is on record is the share he took in securing the signature of the iniquitous agreement which preceded the fusion of the two companies. Against this stands out a life distinguished not only by integrity, respectability, and prudence, but by that last of virtues to be expected in an actor, modesty. Out of a salary which in his best days never exceeded four pounds a week—an extra pound was after a certain period paid him as a pension to his wife—he saved money. His financial troubles were attributable to the loss of his capital in the speculation with Sir Francis Watson and to the difficulties of management. He enjoyed the friendship of two if not three kings. For the performance of Alvaro in 'Love and Honour' Charles II lent his coronation suit. The chief writers of the day accorded him their friendship, and Pope at the outset of his career was admitted by him into close intimacy. A likeness in oil of the actor, by Pope, is now (1885) in the collection of Lord Mansfield at Caen Wood, Highgate. Dryden and Rowe bear testimony to the services rendered them by Betterton. In the preface to 'Don Sebastian' the former says that 'above twelve hundred lines were judiciously lopp'd by Mr. Betterton, to whose care and excellent action I am equally obliged that the connection of this story was not lost' (*Dramatic Works*, vi. 15, ed. 1772). Rowe meanwhile, in the 'Life of Shakespeare,' owns 'a particular obligation' to Betterton 'for the most considerable part of the passages' relating to the life. Praise for extending pecuniary assistance to embarrassed writers is said to be accorded Betterton in the 'State Poems.' The only reference of interest to the actor that a search through the four volumes of that unsavoury receptacle has furnished occurs in 'A Satyr on the Modern Translators,' by Mr. P——r, the third and fourth lines of which are—

> Since Betterton of late so thrifty's grown,
> Revives old plays, or wisely acts his own.
> Vol. i. pt. i. p. 194.

Betterton's acting has been depicted with a vivacity and a closeness of observation that enables us to form a correct estimate of its value. Men of tastes so different as Pepys and Pope have left on record their sense of his merits. Speaking of Betterton at a period when he could not have been long on the stage, 4 Nov. 1661, Pepys says: 'But for Betterton, he is called by us both (himself and wife) the best actor in the world.' Again, 28 May 1663, he says: 'And so to the Duke's house, and there saw "Hamlett" done, giving us fresh reason never to think enough of Betterton.' Pope, in a letter to H. Cromwell, 17 May 1710, suggests as an epitaph suiting Betterton, 'as well in his moral as his theatrical capacity,' the line of Cicero, 'Vitæ bene actæ jucundissima est recordatio.' In the opening number of the 'Tatler' Steele gives an account of Betterton's benefit. Speaking of his funeral (*Tatler, No.* 167), he says: 'I have hardly a notion that any performer of antiquity could surpass the action of Mr. Betterton in any of the occasions on which he has appeared on our stage. The wonderful agony which he appeared in when he examined the circumstance of the handkerchief in Othello; the mixture of love that intruded upon his mind, upon the innocent answers Desdemona makes, betrayed in his gesture such a variety and vicissitude of passions as would admonish a man to be afraid of his own heart, and perfectly convince him that it is to stab it, to admit that worst of daggers, jealousy. Whoever reads in his closet this admirable scene will find that he cannot, except he has as warm an imagination as Shakespeare himself, find any but dry, incoherent, and broken sentences; but a reader that has seen Betterton act it observes there could not be a word added, that longer speeches had been unnatural, nay impossible, in Othello's circumstances.' In another 'Tatler,' No. 71, Steele dwells upon Betterton's Hamlet, praising 'the noble ardour after seeing his father's ghost,' and the 'generous distress for the death of Ophelia.'

Cibber's analysis of Betterton's acting is too well known for quotation. 'Betterton,'

he says, 'was an actor as Shakespeare was an author, but without competitors.'

The writer of 'A Lick at the Laureate,' 1730, says: 'I have lately been told by a gentleman who has frequently seen Betterton perform Hamlet, that he observed his countenance, which was naturally ruddy and sanguine, in the scene of the third act, when his father's ghost appears, through the violent and sudden emotion of amazement and horror, turn instantly, on the sight of his father's spirit, as pale as his neckcloth, when his whole body seemed to be affected with a tremor inexpressible; so that had his father's ghost actually risen before him, he could not have been seized with more real agonies. And this was felt so strongly by the audience, that the blood seemed to shudder in their veins likewise, and they, in some measure, partook of the astonishment and horror with which they saw this excellent actor affected.' Stories are told of the effect produced by Betterton upon those with whom he played. There is, as a rule, little point in the anecdotes concerning Betterton which still survive. One, however, relating to Colley Cibber presents Betterton in a very agreeable light. For some breach of discipline Colley Cibber was condemned by Betterton to be fined. Against this order it was advanced that the youth had no salary. 'Put him down ten shillings,' said Betterton, and forfeit him five.' Tony Aston, who in a tract of singular rarity, 'A Brief Supplement to Colley Cibber, Esq., the Lives of the late famous Actors and Actresses, by Anthony, vulgò Tony, Aston,' undertakes to supply the omissions of his predecessor, expresses a wish that Betterton in his later years would 'have resigned the part of Hamlet to some young actor who might have personated though not have acted it better,' pp. 4–5. He owns, however, that no one else could have pleased the town. Of the appearance of Betterton he does not give a very flattering picture. His words are: 'Mr. Betterton, although a superlative good actor, labour'd under ill figure, being clumsily made, having a great head, a short thick neck, stoop'd in the shoulders, and had fat short arms, which he rarely lifted higher than his stomach—his left hand frequently lodg'd in his breast, between his coat and waistcoat while with his right he prepar'd his speech; his actions were few, but just. He had little eyes and a broad face, a little pock-fretten, a corpulent body, and thick legs, with large feet. He was better to meet than to follow, for his aspect was serious, venerable, and majestic, in his later time a little paralytic. His voice was low and grumbling, yet he could tune it by an artful *climax* which enforc'd universal attention even from the *fops* and orange girls. He was incapable of dancing even in a country dance,' pp. 3–4. Dibdin, in his 'History of the Stage,' iv. 232, gives the opinion of Steed, for many years prompter at Covent Garden, with whom, when a boy, he had been glad to converse on the relative merits of Betterton and Garrick. Steed, who lived to be eighty, said that while he admitted the various merits of Betterton, he was not, 'taking everything into consideration,' the equal of Garrick. A contrary opinion, however, generally obtains. Betterton's dramas are adaptations. The list assigned him is as follows: 1. 'The Roman Virgin, or the Unjust Judge,' a tragedy, 4to, 1679, performed at Lincoln's Inn Fields 1670, an alteration of Webster's 'Appius and Virginia.' 2. 'The Prophetess, or the History of Diocletian,' 4to, 1690, acted at the Theatre Royal 1690 according to Genest, at the Queen's Theatre according to Langbaine and the 'Biographia Dramatica;' this is an opera founded on the 'Prophetess' of Beaumont and Fletcher, and supplied with music by Purcell. It was acted so late as 1784. Langbaine assigns it to Dryden. 3. 'King Henry IV, with the Humours of Sir John Falstaff,' a tragi-comedy, 4to, 1700; acted at Lincoln's Inn Fields 1700, with Betterton as Falstaff, in which character he had a great success. It is a mere alteration of Shakespeare, more judicious than such ordinarily were at the epoch, as no interpolation is attempted, and the departure from text consists only in omission. 4. 'The Amorous Widow, or the Wanton Wife,' comedy, 4to, 1706, played at Lincoln's Inn Fields, circa 1670. This is a not very delicate adaptation of Georges Dandin. It is printed at the close of the biography of Betterton, assigned to Gildon. 5. 'Sequel of Henry IV, with the Humours of Sir John Falstaffe and Justice Shallow,' 8vo, no date (? 1719), an alteration from Shakespeare, acted at Drury Lane. 6. 'The Bondman, or Love and Liberty,' a tragi-comedy, 8vo, 1719, altered from Massinger and acted at Drury Lane 1719. From a paragraph in the 'Roscius Anglicanus' it may be assumed that the piece was played by Betterton twenty to thirty years earlier, probably at Lincoln's Inn Fields. 7. 'The Woman made a Justice,' a comedy never printed, but acted at Lincoln's Inn Fields. In addition to these works the 'Biographia Dramatica' and after it Mr. Halliwell-Phillips assign to Betterton 'The Revenge, or a Match in Newgate,' a comedy, 4to, 1680, acted at Dorset Garden (Mr. Halliwell-Phillips calls it the Duke's Theatre) 1680. This is an alteration of Marston's 'The Malcontent,' assigned by Langbaine to Mrs. Behn.

BETTES, JOHN (*d.* 1570?), miniature painter, is commonly stated to have been a pupil of Nicholas Hilliard. This opinion is based upon the statement of Vertue and a quotation from Richard Haydock's translation of 'Lomazzo on Painting,' which, however, will hardly bear the construction which has been put upon it:—'Limnings, much used in former times in church books, as also in drawing by the life in small models, of late years by some of our countrymen, as *Shoote, Betts*, &c. But brought to the rare perfection *which we now see* by the most ingenious, painful, and skilful master, Nicholas Hilliard, and his well-profiting scholar, whose farther commendations I refer to the curiositie of his works.' The pupil here referred to is most probably Isaac Oliver [Oliver and Rowland Lockey are elsewhere mentioned by Haydock as the scholars of Hilliard]. The italicised words 'which we now see' in the quoted extract certainly seem to refer Bettes to an earlier date than Hilliard. In the exhibition of 'Old Masters' at the Academy 1875 was a picture attributed to Bettes with the date 1545. Hilliard was born 1547. Bettes painted a miniature in oils of Queen Elizabeth, which is said to have been highly successful. He is mentioned by Foxe in his 'Ecclesiastical History' as having engraved a pedigree and some vignettes for Hall's 'Chronicle.' He is also said to have painted the portrait of Sir John Godsalve. Foxe speaks of Bettes as already dead in 1576. His brother Thomas was also a miniature painter.

E. R.

BETTESWORTH, GEORGE EDMUND BYRON (1780–1808), naval captain, was the second son of John Bettesworth of Carhayes, Cornwall, who married Frances Elinor, daughter of Francis Tomkyns of Pembrokeshire. At an early age he was sent to sea as midshipman under Captain Robert Barlow, commanding the frigate Phœbe. In this ship he remained for several years, but in January 1804 he was lieutenant of the Centaur, and took part in the action with the Curieux, when the latter vessel was taken from the French. Bettesworth received a slight wound in this engagement, but his commanding officer suffered so severely that he died, and his lieutenant succeeded to the command of the Curieux. Whilst in this position he engaged in an action with the Dame Ernouf about twenty leagues from the Barbadoes. After a sharp fight the French vessel surrendered, but Bettesworth was again wounded. In the same year (1805) he brought home from Antigua the despatches of Nelson, apprising the government of Villeneuve's homeward flight from the West Indies, and at once received from Lord Barham a post-captain's commission. Lord Byron, in October 1807, wrote: 'Next January . . . I am going to sea for four or five months with my cousin, Captain Bettesworth, who commands the Tartar, the finest frigate in the navy. . . . We are going probably to the Mediterranean or to the West Indies, or to the devil; and if there is a possibility of taking me to the latter, Bettesworth will do it, for he has received four-and-twenty wounds in different places, and at this moment possesses a letter from the late Lord Nelson stating that Bettesworth is the only officer in the navy who had more wounds than himself.' The promised voyage never took place. In May 1808, Bettesworth was engaged in watching some vessels off Bergen, when it was deemed possible to cut some of them off from the protecting gunboats. In this attempt the Tartar became becalmed amid the rocks, and was attacked by a schooner and five gunboats, when its brave captain was killed by the first shot, 16 May 1808. The body was buried at Howick, Northumberland, in the vault of the Grey family, on 27 May. Major Trevanion, 'a brother of Captain Bettesworth,' was a chief mourner Byron's grandmother was a Miss Trevanion Bettesworth had married at St. George's Hanover Square, 24 Sept. 1807, Hannah Althea, second daughter of the first Earl Grey. His widow married, in October 1809, Mr. Edward Ellice, a well-known whig politician. Captain Bettesworth was only twenty-eight years old at the time of his death, and was the beau idéal of an English officer.

[Gent. Mag. 1808, pt. i. p. 560; Moore's Byron, i. 174–5; Brenton's Naval Hist. ii. 99, 232; James's Naval Hist. ii. 245, v. 34–5.] W. P. C.

BETTS, JOHN, M.D. (*d.* 1695), physician, was son of Edward Betts by his wife Dorothy, daughter of John Venables of Rapley in Hampshire. He was born at Winchester, and educated there in grammar learning, was elected a scholar of Corpus Christi College, Oxford, in February 1642–3, and took the degree of B.A. on 9 Feb. 1646–7. Being ejected by the visitors appointed by the parliament in 1648, he applied himself to the study of medicine, and accumulated the degrees of M.B. and M.D. at Oxford on 11 April 1654. He was admitted a candidate of the College of Physicians on 30 Sept. 1654 and a fellow on 20 Oct. 1664. Dr. Betts practised with great success in London, chiefly among the Roman catholics, he himself being a member of their church. Afterwards he was appointed physician in ordinary to King Charles II. His position in the College of Physicians appears to have been influenced by his religious opinions and the varying tendencies of the times in which he lived. For instance, Dr. Middleton Massey in his manuscript notes speaks of 'Joannes Betts, qui ob suam in Pontificis Romani superstitione contumaciam, Collegio exclusus fuit anno 1679, sed 1684 restitutus.' Betts was censor of the college in 1671, 1673, 1685, and 1686, and was named an elect on 25 June 1685. On 1 July 1689 he was returned to the House of Lords as 'a papist,' and on 25 Oct. 1692 was threatened with the loss of his place as an elect if he did not take the oath of allegiance to the king. Although he did not take the oath, he was allowed to remain undisturbed in his position, probably on account of his age. He was dead on 15 May 1695, when Dr. Hulse was named an elect in his place; and he was buried at St. Pancras.

He published: 1. 'De ortu et natura Sanguinis,' London, 1669, 8vo. Dr. George Thompson animadverted on this treatise in his 'True way of Preserving the Blood in its integrity.' 2. 'Medicinæ cum Philosophia naturali consensus,' London, 1692, 8vo. 3. 'Anatomia Thomæ Parri annum centesimum quinquagesimum secundum et novem menses agentis, cum clariss. viri Gulielmi Harveii aliorumque adstantium Medicorum Regiorum observationibus.' Wood says that this account was drawn up by Dr. Harvey.

His son, Edward Betts, also became a doctor of medicine, acquired a high reputation as a physician, and died on 27 April 1695.

BETTY, WILLIAM HENRY WEST (1791–1874), better known as the Young Roscius, was born 13 Sept. 1791 at St. Chad's, Shrewsbury. His father, William Henry Betty, was son of a physician of the same name, who had made a fortune at Lisburn in Ireland. Dr. Betty's eldest son settled for a time at Shrewsbury, where he married the only daughter of James Staunton, of Hopton Court in Shropshire. His mother, a lady of rare accomplishments, began to instruct him almost in his infancy. His father (who had meanwhile moved to Ballynahinch, in the county Down, where he conducted a farm and a linen manufactory) having one day recited Wolsey's speech from 'Henry VIII,' the child learnt it with his mother's help, and afterwards learnt 'My name is Norval,' and Thomson's Lavinia. Thenceforth he was encouraged to practise declamation. In 1801 he entered a theatre for the first time at Belfast, to see Mrs. Siddons as Elvira. On his return he said that he would die if he were not allowed to become an actor. Two years later he made his first appearance at Belfast on Friday, 19 Aug. 1803. He was announced beforehand as 'a young gentleman only eleven years old, whose theatrical abilities have been the wonder and admiration of all who have heard him.' His part was Osman in the tragedy of 'Zara,' Aaron Hill's version in English of the 'Zaïre' of Voltaire. The house was densely crowded, the success complete. The manager, Mr. Atkins, had engaged him for four nights. He appeared on 24 Aug. as Douglas, on the 26th as Rolla, and on the 29th as Romeo. His first appearance in Dublin was at the Crow Street theatre on 28 Nov. There he added to his repertory the parts of Frederick in Mrs. Inchbald's play of 'Lovers' Vows,' altered from the German of Kotzebue, of Prince Arthur in 'King John,' of Tancred in Thomson's tragedy of 'Tancred and Sigismunda,' and of Hamlet. The last-mentioned part, notoriously the longest in the whole range of the drama, he actually learnt in three hours. After starring in Dublin for nine nights, he was welcomed with equal delight at Cork and at Waterford. In the spring of 1804 he played for fourteen nights at Glasgow, his first appearance there being on 21 May in the Dunlop theatre as Douglas. At Edinburgh dignitaries of the church and of the university, as well as lords of the Court of Session, vied with each other in offering presents and adulation. More than

one Scotch critic declared emphatically that the young Roscius, as the boy phenomenon was by that time universally called, completely eclipsed John Kemble. One rash dissentient had to leave Edinburgh. Home declared that his impersonation of Douglas for the first time adequately realised his own imagining. Mr. Macready, the father of the famous tragedian, engaged him at Birmingham, where he appeared 13 Aug. 1804. Soon after this he was engaged for twelve performances at Covent Garden Theatre, at the rate of fifty guineas a night and a clear benefit. On 1 Dec. 1804, when he appeared as Selim in 'Barbarossa,' the military had to be called out to preserve order. Many were seriously injured in the crush to obtain admittance. His success was triumphant. His life as 'the celebrated and wonderful young Roscius,' with a portrait of him as a 'theatrical star of the first magnitude,' was published on 7 Dec. p. 36, and helped to spread his repute by passing at once into wide circulation. On 10 Dec. he appeared at Drury Lane in Douglas. There on the boards of Drury the twenty-eight nights of his first season produced the gross sum of 17,210*l.* 11*s.*, the nightly average being 614*l.* 13*s.* During the following season he appeared for twenty-four nights alternately at each of the two great patent theatres, his terms then being more than fifty guineas a performance. He was presented to the queen and the princesses by the king himself. Upon one occasion Mr. Pitt adjourned the House of Commons in order that members might be in time to witness his representation of Hamlet. He was selected by Charles Fox to listen to his reading of 'Zanga.' Opie, the historical painter, idealised him as having drawn inspiration from the tomb of Shakespeare. Between his first two seasons in London he acted at Liverpool and at Birmingham, where he received for thirteen nights nearly 1,000*l.*, obtaining 800*l.* for a less number of nights at Stourbridge, Worcester, and Wolverhampton. At the end of 1805 he again appeared on alternate nights at Covent Garden and Drury Lane, adding to his Shakespearian parts Richard III and Macbeth, and taking Zanga in the 'Revenge,' and Dorilas in 'Merope.' Gradually, however, in the metropolis, the enthusiasm abated, though it survived so long afterwards in the provinces that for three years more Master Betty added considerably to the large fortune he had already accumulated. His final appearance as a boy actor was on 26 March 1808 at Bath. After being placed for a time there under the tuition of the Rev. Mr. Wollaston, formerly one of the masters of the Charterhouse, he was entered in the July of 1801 as a fellow commoner of Christ's College, Cambridge. His father's death nearly three years afterwards, at Pym's Farm, near Wem, in Shropshire, in the June of 1811, led to his premature withdrawal from the university. In the following year he reappeared, 15 Feb. 1812, at Bath, as the Earl of Essex, and in London, 3 Nov. 1812, at Covent Garden, as Achmet, otherwise Selim, in 'Barbarossa.' Mrs. Inchbald observes (*Brit. Theatre*, xv. 5), 'that though a great majority of the audience thought young Betty a complete tragedian,' yet he failed in 'power over their hearts,' and that bursts of laughter were excited from the audience in parts of this tragedy on his first appearance. At intervals during the next twelve years he drew large audiences together in various parts of the country; but he found it expedient to withdraw altogether from the stage before the completion of his thirty-third year, his farewell benefit taking place on 9 Aug. 1824 at Southampton. He lived for fifty years afterwards in the quiet enjoyment of the large fortune he had so early amassed, and he frankly acknowledged that the enthusiastic admirers of his boyhood had been mistaken. He died 24 Aug. 1874, in his eighty-third year, at his residence in Ampthill Square, London.

BEULAN, a priest, described as the master of 'Nennius.' In the manuscript of the 'Historia Britonum' in the public library at Cambridge (quoted as A in *Mon. Hist. Brit.*, and as L in ed. Stevenson, Eng. Hist. Soc.), which, though not the most ancient manuscript, and though containing evident interpolations, has been used by Gale (*Historiæ Britannicæ, &c. Scriptores XV.*) and Petrie (*Mon. Hist. Brit.*) as the foundation of their texts, it is stated that the writer was the disciple of a priest of this name, to whom he dedicated his work, and that he left out the genealogies of the Saxons and of other races because they seemed to be of no use to his master. In this manuscript are given certain 'Versus Nennini' addressed by the writer to Samuel the son of Beulan, for whom he worked. Whoever the author of the 'Historia Britonum' may have been, it is certain that the writer of these verses and of the other references to Beulan lived after his time, and even after 858, the year assigned in the prologue to the work of 'Nennius,' and that he was a scribe who

made glosses for Samuel the son of Beulan. On the strength of these notices, as it seems, Bale has made Beulan the author of certain works, 'De Genealogia Gentium,' 'Arthuri facta apud Scotos,' &c. Tanner has recorded Bale's dicta. The story connecting Beulan, Samuel, and the original compiler of the 'Historia Britonum' is a fiction.

[The question of the authorship of the Historia Britonum, which includes that of the identity of Beulan, has been thoroughly discussed by Sir T. D. Hardy in the Preface and Introduction to the Monumenta Hist. Brit. 62–68, 108. His decisions on these points may be taken as final. See also text of Historia Nennii by Petrie in same collection, 48A, 76A, 77A, 81D; Stevenson's Nennii Hist. Præf. (Eng. Hist. Soc.); Wright's Biog. Brit. Lit. 135-139; Tanner's Bibl. Brit. 99.] W. H.

BEUNO or **BEINO**, ST. (*d.* 660?), was the son of Hywgi or Bugi ab Gwynlliw Filwr, and Beren or Perferen, daughter of Llewyddyn Lwyddog of Dinas Eiddyn, to whom he was born after twelve years of barren wedlock. On his father's side he was related to St. Cadoc the Wise of Llancarfan, and on his mother's side to St. Kentigern, the founder of the see of St. Asaph. Having received a religious education from St. Tangwn ab Talhaiarn, Beuno took orders and became a monk. According to the old Welsh life of Beuno printed in Rees's 'Cambro-British Saints,' he founded several churches on lands granted to him by various persons. In 616 he established a religious society at Clynnog Fawr in Carnarvonshire. A quaint story is related about the foundation of this monastery. Cadvan, king of Gwynedd or North Wales, and probably also supreme king of all Wales, had been converted to Christianity by Beuno and had given him much land and promised more. Cadvan's son and successor, Cadwallon, carrying out his father's intentions, gave Beuno a piece of land called Gwaredog in Carnarvonshire, where he built a church, but the land being claimed by a widow for her infant son as having been his father's property, Beuno relinquished it and demanded compensation from Cadwallon, to whom he had given a golden sceptre in return for the land he had just lost. Cadwallon rejected the claim and was cursed by Beuno, who, however, was appeased by the grant of the township of Clynnog given him by the king's cousin Gweddeint. In his old age Beuno became the instructor of his niece St. Winifred, daughter of his sister Gwenlo, and it was he who performed the miracle of reuniting St. Winifred's head to her body after her decapitation by Caradog ab Alan. St. Beuno is recorded to have died in 660, and three places, Clynnog, Bardsey Island, and Nevin, claimed to be his burial-place. His festival is 21 April.

The following eleven churches are dedicated to St. Beuno: Clynnog Fawr, Carngiwch, Penmorfa, and Pistyll in Carnarvonshire; Aberffraw and Trefdraeth in Anglesey; Gwyddelwern and Llanycil in Merionethshire; Berriew and Bettws in Montgomeryshire; Llanfeuno in Herefordshire.

A. M.

BEVAN, EDWARD, M.D. (1770–1860), physician and an eminent apiarian, was born in London on 8 July 1770. Being left fatherless in early infancy, he was received into the house of his maternal grandfather, Mr. Powle, of Hereford, and at the age of eight was placed at the grammar school, Wootton-under-Edge, where he remained for four years. He was afterwards removed to the college school at Hereford, and it having been determined that he should adopt medicine as a profession, he was apprenticed to a surgeon in that town. He then proceeded to London, was entered as a student at St. Bartholomew's Hospital, and during three sessions of attendance on the lectures of his instructors Abernethy, Latham, and Austin, he acquired the honourable appellation of 'the indefatigable.' His degree of M.D. was obtained from the university of St. Andrew's in 1818. He commenced practice at Mortlake as assistant to Dr. John Clarke. After five years so spent he settled on his own account first at Stoke-upon-Trent, and then at Congleton. There he married the second daughter of Mr. Cartwright, an apothecary, one of the last of the 'bishops' of a sect called the primitive christian church. After twelve years' residence in Cheshire, his health not bearing the fatigue of a country business, Bevan again returned to Mortlake, and practised there for two years, but with a like result. He thereupon retired to a small estate at Bridstow, near Ross, in Herefordshire, where he devoted himself to the development of an apiary which he found already established on his newly acquired property. Previous to this he had, in 1822, assisted his friend Mr. Samuel Parkes in the preparation of the third and revised edition of the latter's 'Rudiments of Chemistry.'

The first edition of his book on bees was issued in 1827, with the title, 'The Honey-Bee: its Natural History, Physiology, and Management.' This treatise at once established the author's reputation as a scientific apiarian, and was read wherever the bee is

regarded as an object of interest. The second edition, published in 1838, is dedicated to her Majesty. In it the author has included much new and valuable matter. A third edition, by W. A. Munn, appeared in 1870. Bevan also wrote a paper on the 'Honey-Bee Communities' in the first volume of the 'Magazine of Zoology and Botany,' and published a few copies of 'Hints on the History and Management of the Honey-Bee,' which had formed the substance of two lectures read before the Hereford Literary Institution in the winter of 1850–51. He had from 1849 fixed his residence at Hereford, where he died on 31 Jan. 1860, when within a few months of completing his ninetieth year. As a public man Bevan was shy and retiring, but was much beloved in the circle of his private acquaintances. It is recorded as a proof of the esteem in which he was held, that on the occasion of a great flood in the Wye, in February 1852, washing away all the doctor's beehives, a public subscription was raised, and a new apiary presented to him, of which, as a very pleasing substitute for what he had playfully called his 'Virgilian Temple,' the venerable apiarian was justly proud. Bevan was one of the founders of the Entomological Society in 1833.

[Naturalist, ed. Neville Wood, iv. 142–6; Athenæum, 11 Feb. 1860, p. 206; Hereford Times, 4 Feb. 1860, p. 8; London and Provincial Medical Directory for 1860, p. 478.] G. G.

BEVAN, JOSEPH GURNEY (1753–1814), quaker writer, the son of Timothy and Hannah Bevan, was born in London 18 Feb. 1753. He was of a lively and affectionate disposition and very quick to learn. From an uncle, who was an artist and naturalist, he derived much information. His literary studies were pursued for some years under a physician—a classical scholar, with a taste for poetry. Bevan's own love of poetry induced him afterwards to recommend the study of Latin under certain restrictions. We are told that he applied himself diligently to the study of Greek when fifty, in order to read the New Testament. The kindness of his parents shielded him from early temptation. In his desire for gay apparel he twice altered his dress, but returned to his old raiment from a filial regard to his mother's request. When seventeen years old he was 'under serious impressions of mind,' and the first thing he thought it his duty to change was the heathen names of the months. In 1776 he married Mary Plumstead, a young woman of genuine piety and circumspect conduct. His father now gave him a share in his business of a chemist and druggist in Plough Court, Lombard Street. In 1784, '3 mo. 28,' as Bevan puts it, his mother died. Thus he records her death: 'Hodie mater mea optima flentem maritum, flentem filium reliquit.' He pursued his trade with integrity, justice, and truth, and retired from it in 1794 with a considerable diminution of capital. He had refused, from conscientious motives, to supply armed vessels with drugs. Chosen, however, to act as a constable in his ward, he faithfully fulfilled the duties of his office. In a journal which he now kept we find him regretting his spiritual pride and want of resignation. On one occasion he goes in 'some degree of the cross' to a school meeting; at another he is 'quickened' by a constable's overturning an old woman's apple-basket. It was in 1794 that he began writing for an almanac published by James Phillips, and continued for four years, with the exception of 1797, for which year his poem on 'Patience' was not, he tells us in a letter, ready in time. He wrote also a few poems in imitation of some of the Psalms, and other pieces of verse. In 1796 he removed to Stoke Newington. In 1800 he wrote his 'Refutation of the Misrepresentations of the Quakers,' comprising 124 pages, and noticing the writings of Mosheim, Formey, Hume, and the editors of the 'Encyclopædia Britannica,' who quoted much from Lesley and Wesley. Two years after appeared his examination of an 'Appeal to the Society of Friends,' of which the design was, by an investigation of the quotations in the work to which it is an answer and of the writings of early Friends, to show that they were not unitarians, in that which is now a very general acceptation of the term. His 'Thoughts on Reason and Revelation,' in 1805, a small publication of twenty-three pages, is divided into sections on the following subjects: Reason, revelation in general, infidelity, scripture, faith, and experience. During this literary work he was not in other respects idle. He filled for many years the station of an elder, no light office, with zeal and acceptance to his friends. At their disposal always was the information derived from his daily family readings of Scripture, 'my habit of nearly thirty years' standing,' as he says in a letter writ in 1806. In 1807 we find him busied with preparing for the press Sarah Stephenson's 'Memoirs.' While engaged in copying them he dwells on her pious character, 'one of the most indefatigable and devoted.' Bevan himself was all this while labouring in the interests of the society to which he belonged. He loved its religious welfare; its prosperity was the object of his earnest solicitude. He had little time for relaxation. We find him

making continual efforts to control the natural man. His temper, he tells us in one of his letters, may be described in one little word 'hot.' His business, it has been seen, brought him loss instead of profit; but out of his small supply he was always liberal and ready to listen to the cry of distress. Whilst on a visit to friends in Scotland, by appointment of the yearly meeting in 1808, Bevan began to suffer from cataract in his left eye, and two years later he was attacked by paralysis in his left side. His wife, on whom he was wont to rely, was then seized by an apoplectic fit, which disordered her memory and intellect: it is said she was unable to recognise her own husband. She died in 1813. Bevan, who was now afflicted with asthma and dropsy, bore all these troubles with exemplary humility and patience. In the last part of his life two female friends were accustomed to read to him selections from Kendall's 'Collection of Letters,' Thomas Elwood's 'Journal,' and Mary Waring's 'Diary.' These ladies were two sisters, daughters of a Mr. Capper, of whom the eldest had been married to Paul Bevan, the cousin of Joseph Gurney. Paul lived at Tottenham, where his cousin passed the greater portion of his latter days. On 12 Sept. 1814 Joseph Gurney Bevan died, and was buried at the Friends' burial-ground, near Bunhill Fields. In a fly-leaf of a 'Piety Promoted,' preserved at the British Museum, is an autograph of the famous Elizabeth Fry, who was Bevan's cousin, and presented the book to a friend as a memorial of him and of her brother, John Gurney, who both died on the same day.

Lowndes says that Bevan is the ablest of the quaker apologists. Certainly he writes with good sense, good temper, and good feeling. Orme speaks of his 'Life of Paul' as doing credit to the talents and piety of the writer, besides being interesting as affording some explanation of the theological sentiments of the quakers. The work is written in the very words of Scripture, with care to establish a connected historical chain; the notes are selected from the best commentators. Horne says that those which are geographical are most conspicuous, and stamp a real value on the work, which, though designed for youthful quakers, may be studied by all christians 'without danger of finding anything introduced which can give the smallest bias towards any principle not really and truly christian' (*Brit. Crit.* O. S. 33, 477).

The full titles of his chief works, in their order of publication, are: 1. 'A Refutation of some of the more modern Misrepresentations of the Society of Friends, commonly called Quakers, with a life of James Nayler; also a Summary of the History, Doctrine, and Discipline of Friends,' 8vo, 1800. 2. 'An Examination of the First Part of a Pamphlet, called An Appeal to the Society of Friends,' 8vo, 1802. 3. 'A Short Account of the Life and Writings of Robert Barclay,' 18mo, 1802. 4. 'Thoughts on Reason and Revelation, particularly the Revelation of the Scriptures,' 8vo, 1805, 1828, 1853. 5. 'Memoirs of the Life of Isaac Penington, to which is added a Review of his Writings,' 8vo, 1807. 6. 'Memoirs of the Life and Travels in the service of the Gospel of Sarah Stephenson, chiefly from her own papers,' 8vo, 1807. 7. 'The Life of the Apostle Paul as related in Scripture, but in which his epistles are inserted in that part of the history to which they are supposed respectively to belong; with select notes, critical, explanatory, and relating to persons and places,' 8vo, 1807, and corrected and enlarged 1811. 8. 'A Reply to so much of a Sermon published in the course of last year by Philip Dodd as relates to the scruple of Friends, Quakers, against all Swearing,' 8vo, 1808. 9. 'Piety promoted in brief memorials and dying expressions of some of the Society of Friends, commonly called Quakers; the tenth part, to which is prefixed an historical account of the preceding parts of volumes, and of their several compilers and editors,' 2nd edition, 12mo, 1811.

BEVER, JOHN (*d.* 1311), chronicler. [See JOHN OF LONDON.]

BEVER, THOMAS, LL.D. (1725–1791), scholar and civilian, was born at Mortimer, Berkshire, in 1725. He was educated at Oriel College, Oxford, where he graduated B.A. 21 April 1748. At All Souls College, where he became a fellow, he graduated bachelor of law 3 July 1753, and doctor 5 April 1758. He was admitted to Doctors' Commons 21 Nov. 1758, and afterwards was promoted to be judge of the Cinque Ports, and chancellor of Lincoln and Bangor. In 1762, with the permission of the vice-chancellor and the approbation of the professor of civil law, who was unable from ill-health to discharge his duties, he delivered a course of lectures on civil law at the university. In 1766 he published 'A Discourse on the Study of Jurisprudence, and on the Civil Law, being an Introduction to a Course of Lectures.' His intention was to publish the whole series of lectures, but the project did not meet with sufficient encouragement. In

1781 he published a volume on 'The History of the Legal Polity of the Roman State; and of the rise, progress, and extent of the Roman Laws.' The work, which displays both learning and acuteness, was not completed, the remainder of his manuscripts being committed to the flames during his last illness. He died at his house in Doctors' Commons on 8 Nov. 1791, and was buried in Mortimer church, Berkshire, where there is a mural monument in the chancel to his memory. He is said to have been 'a better scholar than writer, and a better writer than pleader.' He took a special interest in music and the fine arts. By Sherwin the engraver, in recognition of peculiar obligations, he was presented with a painting of Leonidas taking leave of his wife and infant son, the only original work of this engraver of which there is any record.

[Gent. Mag. liii. 667–70, lxi. 632–3, 1068, lxviii. 517, 753–4; Coote's English Civilians, 125–6; Chalmers's Biog. Dict. v. 194–5.]

T. F. H.

BEVERIDGE, WILLIAM (1637–1708), bishop of St. Asaph, son of the Rev. William Beveridge, B.D., was born early in 1636–7, and was baptised on 21 Feb. at Barrow, Leicestershire, of which place his grandfather, father, and elder brother John were successively vicars (Nichols, *Hist. of Leicestershire*, iii. part i. pp. 77–8). He was first taught by his learned father. He was next sent to the New Free School at Oakham, Rutland, where William Cave [q. v.] was his schoolfellow. Here he remained two years. On 24 May 1653 he was admitted a sizar in St. John's College, Cambridge, with Bullingham as his tutor. Dr. Anthony Tuckney was then head of the college, and took a special interest in young Beveridge. Beveridge specially devoted himself to the learned languages, including the oriental. In his twenty-first year he published a Latin treatise on the 'Excellency and Use of the Oriental Tongues, especially Hebrew, Chaldee, Syriac, and Samaritan, together with a Grammar of the Syriac Language,' 1658, 2nd ed. 1664. It was a somewhat too ambitious task, and is crudely executed. In 1656 he proceeded B.A., and in 1660 M.A. On 3 Jan. 1660–1 he was ordained deacon by Dr. Robert Saunderson, bishop of Lincoln (*Biog. Brit.* ii. 782, 1st ed.) By special favour he was ordained priest on the 31st of the same month. Dr. Gilbert Sheldon at the same time collated him to the vicarage of Yealing (or Ealing), Middlesex (Kennett, *Biog. Coll.* lii. 392; *Lansdowne MS.* 987). His 'Private Thoughts' reveal the awe with which he entered on his duties as a clergyman. He resolved beforehand, 'by the grace of God, to feed the flock over which God shall set him with wholesome food, neither starving them by idleness, poisoning them with error, nor puffing them up with impertinences' (Resolution V.) For twelve years he remained in this living. The charge was not onerous, and left him leisure for learned pursuits. The fruits of his reading during this period appeared in his 'Institutiones Chronologicæ,' 1669. In 1672 he published at Oxford his great 'Συνοδικόν,' a collection of the apostolic canons and decrees of the councils received by the Greek church, together with the canonical epistles of the fathers. These two huge folios of Greek and Latin are a monumental evidence of the compiler's erudition, although, not content with reproduction of an accurate text, he claimed apostolic origin and sanction for what were long post-apostolic. His 'Vindication of his Collection of the Canons' (1679), in answer to an anonymous Latin attack (as it is now known) by Matthieu de Larroque of Rouen, demonstrates that he lacked the instinct of the genuine scholar as distinguished from the merely largely-read man. It is to be regretted that this 'Vindication' has been reproduced in the Anglo-catholic collection of the bishop's works. Hartwell Horne more judiciously excluded it.

In 1672 he was presented by the lord mayor and aldermen to the living of St. Peter's, Cornhill. Thereupon he resigned Ealing. He had daily service in his church and the Lord's Supper every Sunday. On 22 Dec. 1674 he was collated to the prebend of Chiswick in St. Paul's, London. In 1679 he proceeded D.D. On 3 Nov. 1681 he was appointed archdeacon of Colchester (Kennett, *Biog. Coll.* liii. 292). He personally visited every parish, and made himself the friend and adviser of every clergyman (*Biog. Brit.* ii. and note B). On 27 Nov. 1681 he preached a sermon on the 'Excellency and Usefulness of the Common Prayer.' It rapidly went through four editions. In 1683 he preached another popular sermon on the anniversary of the great fire of 1666. On 5 Nov. 1684 he was made prebendary of Canterbury in succession to Du Moulin. In 1687–8 he joined with Dr. Horneck and others in forming religious societies for 'reformation of manners' (Woodward, *Account of the Rise and Progress of the Religious Societies*). In 1689 he became president of Sion College.

Beveridge, who was not in advance of his age, stood aloof from the scheme of comprehension of 1668, first projected by the lord keeper of the great seal (Sir Orlando Bridgman), Bishop Wilkins and Lord Chief-justice

Hale, with the view of 'relaxing the terms of conformity to the established church.' The project was revived in 1674 by Tillotson and Stillingfleet, and settled by them to the satisfaction of the leading nonconformists, but again was defeated, and unsupported by Beveridge. So with William III's scheme of a synod of divines. Tillotson was prompted by Beveridge's attitude to these reforms to address to him the words: 'Doctor, doctor, charity is better than rubrics.' Beveridge spoke vehemently against the Act of Union between England and Scotland, on the ground that the presbyterianism of Scotland would endanger the national church of England.

In 1691 Beveridge was selected to fill the see of Bath and Wells vacated by the deposition of Ken, who with other bishops refused to take the oath of allegiance to King William and Queen Mary. He took three weeks to consider, and at first accepted the preferment, but he ultimately declined it. It was the pressure brought to bear upon him by the Jacobites that caused him to take this final decision, and he appears to have repented of it when too late. His refusal gave great offence at court (KENNETT, *Eng.* iii. 634; D'OYLY, *Life of Sancroft*, i. 463), and he was roughly dealt with in the pamphlet: 'A Vindication of their Majesties' Authority to fill the Sees of the Deprived Bishops. In a Letter out of the Country, occasioned by Dr. B——'s refusal of the Bishoprick of Bath and Wells,' 1691.

Beveridge had reached a good old age before he wore the mitre. It was not until 1704 that he was again invited to become a bishop. He was installed bishop of St. Asaph on 16 July 1704. His new dignity left the man unchanged. He addressed a pathetic letter to his clergy on catechising, and prepared a kind of text-book for it. On 5 Nov. 1704 he preached before the House of Lords on the gunpowder treason, and again on the martyrdom of Charles I. In his place in the house he opposed the union with Scotland (BURNET). His last public appearance was on 20 Jan. 1707–8. He died in apartments in the cloisters of Westminster Abbey on 5 March 1707–8. He left 100*l.* to the Society for the Propagation of the Gospel, he gave his books to found a library at St. Paul's, and gave the vicarage of Barrow to St. John's. His wife was sister to William Stanley, of Hinckley, Leicestershire. They had no issue. After his death his executor published (1) 'Private Thoughts upon Religion,' 1709; (2) 'Private Thoughts upon a Christian Life,' 1709; (3) 'The Great Necessity . . . of Public Prayer and Frequent Communion,' 1710; (4) 'Defence of the Book of Psalms (preferring Steinhold and Hopkins to Tate and Brady),' 1710; (5) 'Exposition of the 39 Articles,' 1710; (6) 'Thesaurus Theologicus,' 1711. There have been two modern collected editions of the works of Beveridge: (*a*) by the Rev. T. Hartwell Horne, 9 vols, 8vo, 1824; (*b*) in the 'Library of Anglo-Catholic Theology,' 12 vols. 8vo, 1842–6. Neither is complete nor critically careful. The largest proportion consists of sermons—chiefly of a poor type. Their authorship explains their translation into German by Engleschall (1732) and others. The later edition gives a much more accurate text than any previous of his 'Ecclesia Anglicana Ecclesia Catholica; or the Doctrine of the Church of England' (1846), from the original manuscript. His posthumously published 'Private Thoughts' alone continues to be read. Dr. Whitby (*Short View of Dr. Beveridge's Writings*, 1711) said severely of him: 'He delights in jingle and quibbling, affects a tune and rhyme in all he says, and rests arguments upon nothing but words and sounds.'

[Life, by Horne, also in Anglo-Cath. edition of Theological Works; Biog. Brit.; Burnet's Own Times; Le Neve's Fasti; Patres Apost. of Cotelerius; Baker's Hist. of St. John's, 703–5; Ayscough's Catal.; Add. MSS. 4724, 11, and 4275; Rawlinson MSS. fol. 9, ii. 176.] A. B. G.

BEVERLEY, CHARLES JAMES (1788–1868), naturalist, the son of a soldier, was born in August 1788 at Fort Augustus in the highlands of Scotland, where his father's regiment was then quartered. Of his early education we have no trustworthy information, beyond the fact of his having been apprenticed to a surgeon, and having entered the navy as assistant surgeon in 1810. Beverley was employed in that capacity during four years on the Baltic and Mediterranean stations, but chiefly on the latter. He was frequently sent in boats on cutting-out expeditions, and was present at the capture of Porto d'Anzo in 1813. He displayed much bravery in these expeditions, and exhibited at all times considerable mental activity. He was placed on Lord Exmouth's list for promotion, but, his health failing him, he was sent home from the fleet in charge of the sick and wounded. On recovering he was appointed to H.M.S. Tiber, and served in that ship until 1818, when, upon strong recommendation, he was selected by the admiralty to be assistant surgeon in the Isabella, about to proceed under the command of Sir John Ross to the Polar regions. In 1819–20 he served under Sir Edward Parry in his first

expedition, and passed the winter on Melville Island. On his return from the Arctic Sea, being highly commended for his skill and care in his attendance on the sick, Beverley was promoted to the rank of full surgeon, and in May 1821 he was elected a fellow of the Royal Society. On his return to England he suffered severely from ophthalmia, but quite unexpectedly, on his recovery from this painful affliction, he was nominated supernumerary surgeon to the flagship on the Barbadoes station. The risk, however, of changing suddenly from an arctic to a tropical climate, while still in weak health, compelled him to decline the appointment, and he was consequently removed from the list of surgeons. In 1827 Beverley served as a volunteer under Sir Edward Parry in the capacity of surgeon and naturalist in the long and perilous journey on the Spitzbergen seas. We do not find any especial record of his labours as a naturalist, but we learn incidentally that he rendered much valuable assistance in the collection and naming of botanical specimens, and was of much service in preparing many of the examples of Arctic zoology which were brought home. After his retirement from the navy Beverley entered into private practice in London. He lived to see his eightieth birthday, shortly after which he died, 16 Sept. 1868.

[Proceedings of the Royal Society, xvii. p. lxxxvii (1869); Parry's Journals of Voyages for the Discovery of a North-West Passage, 2nd ed. (1821).] R. H-T.

BEVERLEY, HENRY ROXBY (1796–1863), actor, was the son of an actor named Beverley, at one time of Covent Garden Theatre, and subsequently manager of the house in Tottenham Street, known among other names as the King's Concert Rooms, the Regency, the West London, the Queen's, and the Prince of Wales's theatre. At this house, then called the Regency, Henry Roxby Beverley first appeared. Full opportunities of practice were afforded him by his father, and he acquired some reputation as a low comedian. In October 1838 he replaced John Reeve at the Adelphi, playing in November Newman Noggs in 'Nicholas Nickleby.' He subsequently appeared in 'Oliver Twist,' 'Jack Sheppard,' and other melodramas, and played the principal characters in 'The Dancing Barber' and other farces. In September 1839 he took the management of the Victoria Theatre. After relinquishing the post, he played in the country theatres, and was for some time manager of the Sunderland theatre and other houses, principally in the north of England, where he was an established favourite. Harry Beverley, as he was generally called, had more unction than often characterises a low comedian, and was a humorous and a sound, though not a brilliant actor. He died on Sunday, 1 Feb. 1863, at 26 Russell Square, the house of his brother, Mr. William Beverley, the eminent scene painter.

[Theatrical Inquisitor; Era Almanack; Era newspaper, 8 Feb. 1863.] J. K.

BEVERLEY, ST. JOHN OF (*d.* 721). [See JOHN.]

BEVERLEY, JOHN OF (*d.* 1414), a Carmelite of great theological fame, doctor and professor of divinity at Oxford, was born at Beverley, in the East Riding of Yorkshire. He became a canon of St. John's Church in that town, and from the few records left of him it appears that in 1367 he gave a chaplain and his successor forty acres of land in North Burton and Raventhorpe, and in 1378 alienated by license certain tenements in Yorkshire for the benefit of a chancery priest and his successors. He was trained in the theology of the Carmelite friars; wrote 'Quæstiones in Magistrum Sententiarum' (Master of the Sentences; *i.e.*, Peter Lombard), Lib. iv., and 'Disputationes Ordinariæ,' Lib. i., and other works of a like nature which exist in manuscript in the Queen's College Library, Oxford; and being a popular preacher, was specially regarded by Oxford men for the soundness of his theology. He proceeded B.D. in the year 1393. No more is told of him in general history than that he flourished about 1390, and he is even confounded with, and his works attributed to, Johannes Beverlay, an Augustinian monk, ordained by Oliver Sutton, bishop of Lincoln, in 1294.

We think, however, that he is the same person as John of Beverley the Lollard. He certainly lived in the days of this society of itinerant preachers, the followers in England of John Wycliffe, so severely persecuted by Richard II and Henry IV. In addition to denial of transubstantiation and other important doctrines of the then existing church, the Lollards preached against pilgrimages to Canterbury, Walsingham, and Beverley as 'accursed, foolish, and a spending of goods in waste.' And John of Beverley seems to have joined 'certain other Oxford men,' and become one of the earliest converts to their views. Shortly after Sir John Oldcastle, Lord Cobham, the chief favourer of the movement, had escaped from the Tower, the Lollards were taken at their usual assembly-place in St. Giles's Fields, and tried for

treason against church and state. In defence some of them stated that they were a persecuted flock, and as their worship in a public place was prohibited, they had simply met together in a thicket in Ficket's field (part of St. Giles's Fields) to hear the preaching of John of Beverley the priest. On 12 Jan. 1413-14 sixty-nine of the prisoners were condemned, and next day thirty-seven of them were drawn to St. Giles's Fields and hanged and burned. On 19 Jan. John of Beverley the priest, and shortly after Sir Roger Acton, knight, and others, were drawn and hanged at the same place.

BEVERLEY, JOHN (1743–1827), esquire bedell of Cambridge University, was a native of Norwich, where his father was in the wine trade, and received his education at Christ's College, Cambridge (B.A. 1767, M.A. 1770). He was elected one of the esquire bedells of the university in 1770, and held that appointment until his death. Mr. Gunning, who was one of his colleagues, gives some extraordinary instances of the careless and perfunctory way in which Beverley discharged the duties of his office. Beverley was always in pecuniary difficulties, and in order to extricate himself from them he resorted to a variety of ingenious expedients. For example, he would dispose of musical instruments and choice flowers, of which he had a fine collection, at a very high price, by means of a lottery, and he and his friends used to canvass the members of the university to purchase tickets. He was a great favourite with the Earl of Sandwich, first lord of the admiralty, who appointed him commissioner and comptroller of the Sixpenny Office. This he held from 1776 to 1817. He married a daughter of Cooper Thornhill, the famous rider from Stilton. In consequence of his long services as esquire bedell he was allowed to have a deputy in 1821. In an undated manuscript note, Cole, the antiquary, says: 'Beverley was extravagant, and his wife improvident and proud; they have six young children; it is said he has others at Norwich. Lord Sandwich about three years ago got him a small place in his office of the admiralty, of about 100*l.* per annum, he being a good performer on the violin.' His death occurred in London 25 March 1827.

Besides some poll-books of university elections he published: 1. 'An Account of the different Ceremonies observed in the Senate House of the University of Cambridge throughout the year, together with tables of fees, modes of electing officers, forms of proceeding to degrees, and other articles relating to the customs of the university,' Cambridge, 1788, 8vo. 2. 'The Trial of William Frend in the Vice-Chancellor's Court for writing and publishing a pamphlet entitled "Peace and Union recommended to the Associated Bodies of Republicans and Anti-Republicans,"' Cambridge [1793], 8vo. 3. 'The Proceedings in the Court of Delegates on the Appeal of William Frend from the Vice-Chancellor's Court,' Cambridge [1793], 8vo.

BEVERLEY or INGLEBERD, PHILIP (*fl.* 1290), Oxford benefactor, rector of Kayingham, in the East Riding of Yorkshire, is said to have been 'the most subtle Aristotelian in Oxford.' Having probably been a member of the society founded by William of Durham, now University College, he endowed it with certain lands in 1290, and again in 1319 he further granted to it other lands in Holderness and elsewhere for the maintenance of two fellows from Beverley, Holderness, or the neighbourhood.

[Wood's History and Antiquities of Oxford (Gutch), 42, 43, 227, 228.] W. H.

BEVERLEY, THOMAS OF (*fl.* 1174), hagiographer. [See THOMAS.]

BEVILLE, ROBERT (*d.* 1824), barrister-at-law, was called to the bar at the Inner Temple between 1795 and 1799, and practised on the Norfolk circuit and at the Ely assizes, as well as in London and Middlesex, until 1807, when he seems to have given up practice, as his name does not appear in the 'Law List' after that year until 1816, when he is described as of the Fen Office, 3 Tanfield Court, Temple. He had obtained in 1812 the post of registrar to the Bedford Level Corporation, which he held until his death in 1824. In 1813 a new edition of Dugdale's 'History of Imbanking and Drayning of divers Fens and Marshes' was announced in the 'Gentleman's Magazine' as in preparation by him. It did not, however, appear. Beville married in 1800 Miss Sauter, described as of Chancery Lane. His son Charles survived him. Beville was the author of a small treatise 'On the Law of Homicide and Larceny,' published in 1799, and terribly lacerated the same year by the 'London

Monthly Review.' He does not appear to have written anything else.

[Gent. Mag. lxxi. 181, lxxxiii. (pt. ii.) 448, lxxxviii. (pt. i.) 323; Wells's Bedford Level, i. 555, 658; Brit. Mus. Cat.] J. M. R.

BEVIN, ELWAY (*fl.* 1605–1631), a composer of Welsh origin, concerning whom but little is known, was sworn a gentleman-extraordinary of the Chapel Royal on 3 June 1605, and is said to have been a pupil of Thomas Tallis. Dr. Rimbault, quoting Wood (*Fasti Oxon.* (Bliss), ii. 265), says that he was organist of Bristol from 1589 to 1637, when he was discovered to be a Roman catholic and expelled from both his appointments. The chapter books of Bristol Cathedral prior to 1650, upon which Wood is said to have based his information, were destroyed in the riots of the present century; but the Chapel Royal cheque-book contains no mention of the composer's expulsion, and the source of Rimbault's information, which he gives as 'Ashmol. MS. 8568, 106' (an incorrect reference), cannot now be verified. In 1631 Bevin published the work by which he is best known, 'A Briefe and Short Instruction of the Art of Musicke, to teach how to make Discaut, of all proportions that are in vse: very necessary for all such as are desirous to attaine to knowledge in the Art; and may by practice, if they can sing, soone be able to compose three, foure, and five parts: And also to compose all sorts of Canons that are usuall, by these directions of two or three parts in one, upon the Plain-Song' (London, printed by R. Young, at the signe of the Starre on Bread Street Hill). This work is dedicated to the Bishop of Gloucester, 'unto whom,' Bevin states, he has 'beene much bound for many favours.' Prefixed to the book is a set of verses by one Thomas Palmer, of Bristol, in the course of which mention is made of 'old judicious Bevin;' and as the composer himself says that he has studied canons 'for these many years last past'—a statement borne out by a manuscript volume (partly in his autograph) in the Queen's Collection at Buckingham Palace, which contains some studies and canons dated 1 July 1611, and included in the printed work—it is safe to conclude that the 'Briefe Discourse' was not published until Bevin was advanced in years. The book itself is most curious, and is still the best authority extant for the solution of the extremely intricate canons in which certain composers of that period delighted. At the end of the work Bevin promises a larger volume if he is encouraged and shall live; but no other book was published in fulfilment of this promise. His other compositions are not numerous, nor very commonly met with. Benjamin Cosyn's 'Virginal Book' (in the Queen's Collection) has a service by him included amongst six entitled 'These are ye Six Services for the King's Royall Chappell.' Copies of this work are to be found in most large collections, and it has been printed in Barnard's 'Selected Church Musick' and Boyce's 'Cathedral Music.' The Christ Church Collection (Oxford) contains (in a set of part-books almost wholly consisting of Latin motets) a 'Browninge, 3 parts,' by Bevin. One of the part-books is missing, and there is only left of this curiously named composition a superius and contra tenor. The Music School Collection (Oxford) also contains an 'In Nomine' by the same composer. A few compositions by him are to be found in the British Museum (*Add. MSS.* 11587, 31403, 29289, 29430, 29996; *Harl. MS.* 7339), the most remarkable of which is a part-song, 'Hark, Jolly Shepherds,' in twenty parts.

BEVIS or BEVANS, JOHN, M.D. (1693–1771), astronomer, was born 31 Oct. 1693, at Tenby, Pembrokeshire. His parents occupied a good position, and having been entered at Christ Church, Oxford, he took the degrees of B.A. and M.A. respectively 13 Oct. 1715 and 20 June 1718. He studied medicine as a profession, but Newton's 'Optics' was his inseparable companion, and he rapidly became a proficient in astronomy and optics. On the termination of his university career he travelled for some time in France and Italy, then settled in London as a physician some time before 1730. He was successful, but unsatisfied, until in 1738 he removed to Stoke Newington, where he had built and fitted up an observatory. Here he worked with such diligence, frequently taking 160 star-transits in a single night, that in 1745 he found himself in a position to undertake the compilation of a 'Uranographia Britannica,' or exact view of the heavens, in fifty-two large plates, including many more stars than had been given in Bayer's maps. An explanation accompanied each plate, and a catalogue of stars was added, with two hemispheres, representing the constellations according to the ancients. The work was all but ready for the press when, in 1750, John Neale, the publisher, became bankrupt; the plates, already completely engraved, were

sequestered by the court of Chancery, as it proved, irrevocably; and Bevis's heavy toils remained without fruit.

His friendship for Halley, whom he assisted at Greenwich in observing the transit of Mercury, 31 Oct. 1736 (*Phil. Trans.* xlii. 622), led him to procure and superintend in 1749 the publication of his 'Tabulæ Astronomicæ' (an English version was issued in 1752), after they had been printed twenty years. He added some supplementary tables, with precepts for using the whole. In 1739 he ascertained by observation that the effects of aberration in right ascension corresponded no less accurately to Bradley's theory than those in declination; but in this Eustachio Manfredi had been, without his knowledge, nine years beforehand with him (Bradley, *Miscellaneous Works*, p. xxxiii). About the same time he drew up and communicated to Thomas Simpson a set of 'Practical Rules for finding the Aberration of the Fixt Stars,' published by him at page 11 of his 'Essays' (1740).

On 23 Dec. (O.S.) 1743 Bevis, ignorant as yet of its appearance elsewhere, discovered at London the great comet of 1744. 'Last night,' he wrote to Bradley, with whom he was in constant and confidential intercourse, 'about half an hour after seven, I thought I saw a comet, and afterwards found it to be one; the nucleus in the telescope seemed considerably bigger than Jupiter, with a large capillitium about it, though little of a tail; 'twas as easily seen as a star of the second magnitude' (*ibid.* p. 425). He also observed Halley's comet in May 1759 (*Phil. Trans.* li. 93). The transits of Venus of 6 June 1761 and 3 June 1769 were both observed by him, the former at Savile House, London, in company with Short and Blair, the latter at Mr. Joshua Kirby's house at Kew, with a 3½-foot reflector, when he noticed certain curious effects of irradiation entirely unperceived by him in 1761. He was elected a fellow of the Royal Society 21 Nov. 1765, and acted as its foreign secretary from 11 Dec. 1766 to 13 Feb. 1771. A diploma bearing date 11 June 1750, and accompanied by a note from Maupertuis complimenting him on his 'inimitable Atlas' (then expected shortly to appear), constituted him a member of the Berlin Academy of Sciences; and he was chosen a correspondent of that of Paris 12 July 1768. Soon after the death of Bliss (2 Sept. 1764), being disappointed in his hopes of succeeding him as astronomer-royal, he took chambers in the Middle Temple, and resumed his long-suspended medical practice. Far, however, from abandoning astronomy, he fell a victim to his constancy in its cultivation. For in turning hastily from the telescope to the clock, while observing the sun's meridian altitude, he got a fall, from the effects of which he died, 6 Nov. 1771, aged 76. He was of a mild and benevolent disposition and lively temperament. His astronomical work appears to have been characterised by diligence rather than precision.

He published a work entitled 'Cymbalum Mundi;' a translation of a treatise by Professor H. Boerhaave, of Leyden, 'On the Venereal Disease and its Cure,' 1719; two pamphlets, the 'Satellite's Sliding Rule,' for determining the immersions and emersions of Jupiter's satellites, and 'An Experimental Inquiry concerning the Contents, Qualities, and Medicinal Virtues of the two Mineral Waters lately discovered at Bagnigge Wells, near London' (1760, 2nd enlarged edition 1767); besides twenty-seven short papers in the 'Philosophical Transactions' (vols. xl. to lix.), mostly records of his astronomical observations. He contributed to the few numbers published of the 'Mathematical Magazine,' and is said to have, from modesty, concealed his authorship of several creditable works. He co-operated in Dr. Watson's electrical experiments in 1747 (*Phil. Trans.* xlv. 62, 77), suggested strengthening the charge of a Leyden jar by applying a coating of tinfoil (Priestley, *Hist. of Electricity*, p. 89), and first distinguished Dollond's lenses with the term 'achromatic.'

Horsefall, F.R.S., Bevis's executor and friend); Rawlinson MSS., 4to, 6, 97, Bodleian Library; Hutton's Phil. and Math. Dict. i. 226, 1815; Poggendorff's Biog.-Lit. Handwörterbuch, 1863; Gent. Mag. xli. 523.]

A. M. C.

BEWICK, JANE (1787–1881), eldest daughter and child of Thomas Bewick by his wife Isabella, was born on 29 April 1787, and died 7 April 1881. Miss Bewick's chief claim to recollection is her lifelong veneration for her father's memory, and her store of anecdote respecting his work and ways. In 1862 she edited and issued 'A Memoir of Thomas Bewick, written by Himself. Embellished by numerous wood engravings, designed and engraved by the author for a work on British Fishes, and never before published.' This memoir, prepared at her request in 1822–8, must always be the standard authority for Bewick's personal history, and it ranks highly as a frank, manly, and characteristic piece of autobiography. It gives, however, but a meagre account of his method and technique. Another sister, Isabella, survived Jane

Bewick until 1883, dying in the old house, now 19 West Street, Gateshead, where her father, mother, brother, and sisters had died before her. In 1882 Miss Isabella Bewick anticipated a bequest, agreed upon with her sister Jane, and gave to the British Museum a choice collection of water-colours and woodcuts by her father, his brother John, and his son, some of which had been exhibited in London in November and December 1880. Since her death her executors have also presented several valuable portraits, drawings, prints, and other Bewick relics to the Newcastle Natural History Society's Museum.

[See authorities under Thomas Bewick.]

A. D.

BEWICK, JOHN (1760-1795), wood-engraver, younger brother of Thomas Bewick, was born at Cherryburn in March 1760. In 1777 he was apprenticed to Bewick and Beilby. It has been asserted that, during the time of his apprenticeship, he assisted his brother in the illustrations to 'Gay's Fables,' 1779, and the 'Select Fables,' 1784. In Bewick's 'Memoir,' however, where some acknowledgment to this effect might reasonably have been expected, there is not a word upon the subject. As a matter of fact, it is difficult to understand what material aid the younger brother could have rendered to the elder in the 'Gay's Fables,' seeing that he was only in the second year of his apprenticeship when it was first published. To the 'Select Fables' of 1784 the argument of inexperience does not equally apply; but it may be noted that John Bewick's work, for many years subsequent to 1784, will not either in draughtsmanship or engraving sustain a comparison with the illustrations in that volume. Moreover, though this is of minor importance, for at least two years previous to its appearance John Bewick had been resident in London.

According to the 'Memoir of Thomas Bewick,' John continued in his apprenticeship for about five years, when his brother gave him his liberty, and he left Newcastle for London. Here he found immediate and active, though not lucrative employment, chiefly on blocks for children's books. Hugo's Catalogue gives us the titles of some of these: The 'Children's Miscellany,' by Day of Sandford and Merton fame; the 'Honours of the Table, or Rules for Behaviour during Meals;' the 'History of a School-Boy;' and the 'New Robinson Crusoe.' The date of the last named is 1788, and many of its cuts are signed. But the first work of real importance attributed to Bewick is an edition of 'Gay's Fables,' printed in the same year for J. Buckland and others, in which, with minor variations and some exceptions, the earlier designs of Thomas Bewick are followed. This book affords an opportunity of comparing the brothers on similar grounds, and the superiority of the elder is incontestable. Next to Gay comes a book which has usually been placed first, the 'Emblems of Mortality,' published by T. Hodgson in 1789. This is a copy of the famous 'Icones,' or 'Imagines Mortis,' of Holbein, from the Latin edition issued at Lyons in 1547 by Jean Frellon 'Soubz l'escu de Cologne.' Hugo associates Thomas Bewick with John in this work; and we have certainly seen an edition which has both names on the title-page. The early writers, however, assign it to John Bewick alone; and this view is confirmed by the following extract from a letter of Thomas to John, printed in the 'Transactions of the Natural History Society of Northumberland,' &c., for 1877. 'I am much pleased, says Thomas Bewick, 'with the Cuts for Death's Dance. . . . I am surprised that you would undertake to do them for 6s. each. You have been spending your time and grinding out your eyes to little purpose indeed. I would not have done them for a farthing less than double that sum. . . . I am glad to find you have begun on your own bottom, and I would earnestly recommend you to establish your character by taking uncommon pains with what you do.' The quotation seems to indicate that John Bewick had set up on his own account in November 1787, the date of the letter to which the above is an answer. It gives some idea besides of the prices paid for wood-engraving both in London and Newcastle, which, as may be seen, were on anything but a liberal scale.

Even in these days of Amand-Durand facsimiles the 'Emblems of Mortality' is a praiseworthy memento of those marvellous woodcuts which, as we are now taught to believe, the obscure Hans Lutzelburger engraved after Holbein's designs. In details, John Bewick's copies vary considerably from the originals; and in one instance, that of the 'Creation,' where the earlier illustrator has represented the first person of the Trinity in a papal tiara, his imitator, by editorial desire, has substituted a design of his own. But the spirit of the old cuts is almost always preserved; and considering the hasty and ill-paid character of the work, its general fidelity to Holbein is remarkable. After 'Death's Dance' came a little group of books, chiefly intended for the education of children. Of these it is impossible to give any detailed or exhaustive account, nor is it needful, as they have all a strong family resemblance. The first two, 'Proverbs Exemplified,' 1790, and

the 'Progress of Man and Society,' 1791, were by Hogarth's commentator, Dr. Trusler. The former is sufficiently explained by its title; the latter is a kind of modern version of the old Latin and High Dutch 'Orbis Pictus' of Comenius published at Amsterdam in 1657. Both of these books are undoubtedly illustrated by John Bewick alone, whose name is given in the 'Preface' to the 'Proverbs.' Besides these there are the 'Looking Glass for the Mind,' 1792, the charming 'Tales for Youth,' 1794, and the 'Blossoms of Morality,' 1796.

The appearance of the 'Blossoms of Morality' was for some time delayed in consequence of the illness of the artist, and long before it was published John Bewick was sleeping in Ovingham churchyard. His health had been seriously impaired by the close confinement of the metropolis; and though a visit to Cherryburn seems to have partially restored him, he was finally obliged to return to his native air in the summer of 1795, and shortly afterwards died of consumption. In the year of his death was published a sumptuous edition of the 'Poems of Goldsmith and Parnell' due to the enterprise of that William Bulmer, of the 'Shakespeare Printing Office,' whom his contemporaries fondly likened to the Aldi and Elzevirs of old, and the preface proudly sets forth the luxuries of its type, its printing, its Whatman paper, and its embellishments. To this book John Bewick contributed one cut, drawn and engraved by him in illustration of the well-known passage in the 'Deserted Village' respecting the old watercress gatherer. He is also understood to have designed two of the vignettes and one of the tail-pieces. During the last months of his life he was also engaged in making sketches on the block for the Fabliaux of Le Grand, translated by Way, 1796; and for an edition of Somervile's 'Chase' issued by Bulmer in the same year. These were chiefly engraved by Thomas Bewick, who also, he says (*Memoir*, p. 108), completed the drawings for the 'Chase' after his brother's death.

As is generally the case with those who die young, it is somewhat difficult to speak of John Bewick's merits as an artist and engraver. Much of his work bears evident signs of haste, as well as of an invention which was far in advance of his powers of execution. He had evidently a keen eye for character, and considerable skill in catching strongly marked expression. Many of the little groups in the 'Proverbs exemplified' might be elaborated into striking studies. His animals, too, are admirable—witness the popular prowling cat in 'Tales for Youth,' the hunting scenes in the 'Chase,' and many of the vignettes in the children's books, though it should be noted that a large proportion of these last are obvious adaptations of his brother's work. But he seems to have had one quality not possessed by Thomas Bewick, a certain gift of grace, especially in his pictures of children. Whether he caught this from the novel illustrators of the period is matter for speculation; but examples of it might easily be pointed out in the 'Looking Glass,' the 'Progress of Man,' and elsewhere. As an engraver he falls far below his brother. His style is flatter, more conventional, less happy in black and white. But he improved greatly in his latest work.

Only one portrait of John Bewick is known to exist—a crayon by George Gray in the Newcastle Museum. Personally he seems to have been witty, vivacious, and very popular with his associates, an advantage, in the eyes of his graver brother, not without its perils. At the time of his death (5 Dec. 1795) he was engraving the view of Cherryburn afterwards issued as a frontispiece to the 'Memoir' of 1862. He left it uncompleted, and it was eventually finished by Thomas Bewick. The original sketch, probably made much earlier, is carefully preserved, with some water-colours and other relics, by his grand-nieces, who still (1884) speak affectionately of the talents and amiability of their 'uncle John.'

[The authorities for John Bewick's life are the same as those for that of Thomas Bewick.]

A. D.

BEWICK, ROBERT ELLIOT (1788–1849), wood engraver, was the only son of Thomas Bewick [q. v.]. He was born on 26 April 1788, and was brought up to his father's business. In 1812 he became Thomas Bewick's partner. He designed with great care, and, as an engraver, was laboriously minute and accurate, but seems never to have developed the latent talent which his father believed him to possess (*Memoir*, p. 250). He assisted Thomas Bewick in the 'Fables of Æsop,' 1818, and in the illustrations and vignettes for the projected 'History of British Fishes,' which occupied his latter days. Some specimens of these are given in the 'Memoir.' One of them, 'The Maigre,' is engraved on copper by 'R. E. Bewick;' and Miss Bewick states (*Memoir*, p. 289) that her brother left behind him some 'fifty highly finished and accurately coloured drawings of fishes from nature,' together with some descriptive text, which he had prepared for the same never-completed work. These drawings now form part of the Bewick bequest to the British Museum. Robert Bewick died unmarried

27 July 1849, and is buried in Ovingham churchyard.

[Memoir of Thomas Bewick, &c.] A. D.

BEWICK, THOMAS (1753–1828), wood engraver, was born in August 1753, at Cherryburn House, on the south bank of the Tyne, in the parish of Ovingham, Northumberland. Part of the old cottage still exists as 'byre' or cowhouse to a more modern Cherryburn, yet occupied by his descendants. His father, John Bewick, was a small farmer, who also rented a land-sale colliery (i.e. a colliery the coals of which are sold on the spot to persons in the neighbourhood) at Mickley, close by. His mother, John Bewick's second wife, came of a Cumberland family. Her maiden name was Jane Wilson. She bore John Bewick eight children, of whom Thomas was the eldest, and John [see BEWICK, JOHN] the fifth. Another son, William, and five daughters completed the family. Young Bewick first went to school at Mickley. Then, two successive preceptors there having died, he was placed under the care of the Rev. Christopher Gregson of Ovingham, whose church and rectory, though in the same parish as Cherryburn, lay on the opposite or northern side of the Tyne. His schooldays were undistinguished; but he seems to have acquired some little knowledge of Latin, and better still of English. In the characteristic autobiography published by his eldest daughter Jane in 1862, and hereafter referred to as the 'Memoir,' is a good account of his boyhood. He there appears as a fairly mischievous but not vicious lad, delighting in all sorts of youthful escapades. Already, however, he gave evidence of two tastes which strongly coloured his after life, a love of drawing and a love of nature. Like Hogarth's, his 'exercises when at school were more remarkable for the ornaments which adorned them, than for the exercise itself.' After exhausting the margins of his books, he had recourse to the flagstones and hearth of his home, or the floor of the church porch at Ovingham, which he covered with devices in chalk. He studied the inn signs and the rude knife-cut prints then to be found in every farm or cottage, records of victories by sea and land, portraits of persons famous or notorious,

> ballads, pasted on the wall,
> Of Chevy Chace and English Moll,
> Fair Rosamond, and Robin Hood,
> The little Children in the Wood.

Then, by the kindness of a friend, after a probation of pen and ink and blackberry-juice, he passed to a paint brush and colours, and began to copy the animal life about him. 'I now, in the estimation of my rustic neighbours, became an eminent painter, and the walls of their houses were ornamented with an abundance of my rude productions, *at a very cheap rate.* These chiefly consisted of particular hunting scenes, in which the portraits of the hunters, the horses, and of every dog in the pack, were, in their opinion, *as well as my own,* faithfully delineated' (*Memoir,* pp. 7, 8). Meanwhile the love of nature, which was born in him, grew and gathered strength. Some of the most delightful pages of his autobiography are those which recall his delight in the change of seasons, with their varied feathered visitors, in angling and field-sports, in the legends, tales, and strange characters of his birth-place. Then came the rude breaking-up of all the pleasant country life. His taste for drawing determined the choice of his calling, and on 1 Oct. 1767 he was apprenticed to a Newcastle engraver, Mr. Ralph Beilby [q. v.] The 'Memoir' describes the parting with Cherryburn in a characteristic passage: 'I liked my master; I liked the business; but to part from the country, and to leave all its beauties behind me, with which I had been all my life charmed in an extreme degree—and in a way I cannot describe—I can only say my heart was like to break; and as we passed away I inwardly bade farewell to the whinny wilds, to Mickley bank, to the Stobcross hill, to the water banks, the woods, and to particular trees, and even to the large hollow old elm which had lain perhaps for centuries past on the haugh near the ford we were about to pass, and which had sheltered the salmon fishers while at work there from many a bitter blast' (p. 51).

In 1767, when Bewick went to Newcastle as an apprentice, the art of wood engraving had fallen into comparative disuse. For a long time previously, in truth, it can scarcely be said to have existed, except in its ruder forms. Tasteless emblematical ornaments and tail-pieces, diagrams and rough designs for magazines, illustrations of an elementary character for a few books like Croxall's 'Fables of Æsop,' together with the coarse knife-cut prints and broadsides already referred to, made up the chief examples. In 1750 Hogarth had attempted to substitute wood for copper in engraving the last two plates of the 'Progress of Cruelty;' but the attempt, though exceedingly meritorious, was not successful financially. So low, in short, was the condition of the art, that Walpole, writing about 1770 of Papillon's recently published 'Traité historique et pratique de la Gravure en Bois,' expressed a doubt whether that author would ever, as he wished, 'persuade the world to return to wooden cuts.'

If this was the state of wood engraving in London, it was naturally lower at Newcastle. Mr. Ralph Beilby's business, indeed, was of a most miscellaneous character. He engraved pipe-moulds, bottle-moulds, brass clock-faces, coffin-plates, stamps, seals, bill-heads, crests, and ciphers. Young Bewick's first occupation on entering the establishment was to copy Copeland's 'Ornaments' as an exercise in drawing. From this he was set to etch sword-blades, and block out the wood about the lines on diagrams for the popular almanac known as the 'Ladies' Diary,' then edited by a Newcastle schoolmaster, afterwards the great Dr. Hutton of Woolwich. He also prepared the cuts to Hutton's 'Treatise on Mensuration,' published by Saint in 1770, and, besides giving great satisfaction, is said to have shown some ingenuity in devising a double-pointed graver which was exceedingly useful in this particular work. Soon he was entrusted with most of Beilby's wood-engraving business, and executed several bill-heads which were highly approved. Then commissions for cuts for children's books began to be received, the chief employer being the Newcastle Newbery, Thomas Saint. The first efforts of this kind with which Bewick can be directly associated are the 'new invented Horn Book' and the 'New Lottery-Book of Birds and Beasts,' 1771. After these come the 'Child's Tutor, or Entertaining Preceptor,' 1772; the 'Moral Instructions of a Father to his Son,' 1772; and the 'Youth's Instructive and Entertaining Story Teller,' 1774. To the last Bewick himself refers in the 'Memoir' (p. 60), and his daughter acknowledged that he engraved the illustrations to the 'Moral Instructions' (*Select Fables*, Pearson's Reprint, p. xiii). It is not necessary, however, to linger on these merely tentative efforts, which he subsequently so greatly excelled. Before the end of his apprenticeship he had completed some cuts for 'Gay's Fables,' which were of far superior quality. So good were they considered by honest Mr. Beilby that he sent five blocks to the Society of Arts, who, in 1775, awarded a premium of seven guineas to the engraver. One of the five was the 'Hound and the Huntsman,' illustrating Gay's forty-fourth fable.

On 1 Oct. 1774 Bewick's period of apprenticeship terminated. After a few weeks he returned to Cherryburn, where he continued to work on his own account. In 1776 he made a pedestrian tour to the north, and in the same year started for London. Here he speedily found employment with an engraver named Cole, with Isaac Taylor, with Thomas Hodgson, the printer and publisher, and others. But London did not suit the sturdy Northumbrian, strongly attached to his birthplace and hungering for country sights and sounds. After brief trial he left London again for Newcastle, and shortly afterwards entered into partnership with his old master, Beilby.

For many years after his apprenticeship had come to an end, wood engraving seems to have been the exception rather than the rule of Bewick's work—the general business of the firm being of the indiscriminate character already described. Among other illustrated books attributed to this period are several that have attained an importance with collectors to which they are scarcely entitled. Such are 'Tommy Trip's History of Beasts and Birds,' 1779, which is supposed to have been a first draught of the more famous 'Quadrupeds' and 'Birds,' and the 'Lilliputian Magazine,' published by Carnan, Newbery's successor, but probably printed earlier at Newcastle. In both cases the letterpress is traditionally supposed to have been by Goldsmith, but the tradition is incapable of proof. The works which most deserve attention between 1774 and 1784 are the 'Gay's Fables' of 1779 and 'Select Fables' of 1784, both of which were printed and published by Saint of Newcastle. As already stated, the illustrations to the former had been begun during Bewick's apprenticeship. Many of these illustrations are plainly based upon the earlier copper plates designed by Kent, Wootton the animal painter, and H. Gravelot, for Tonson's and Knapton's editions issued in 1727 and 1738 respectively. In most cases Bewick distinctly improves upon his model, in some he breaks away from it altogether, e.g. in 'The Man, the Cat, the Dog, and the Fly,' and the 'Squire and his Cur,' which are little pictures in *genre*. The 'Select Fables,' now very rare, is an advance upon the Gay. It was an expansion of an earlier book of 1776 with ruder engravings from Bewick's hand, and this again was an offshoot from the before-mentioned 'Moral Instructions' of 1772. It has sometimes been denied that these earlier cuts were Bewick's, but without going minutely into the evidence the point may now be taken as established. The 'Select Fables' of 1784 was an improved issue of this book of 1776, the majority of the illustrations being designed afresh with greater finish and elaboration, and only thirteen of the best of the old cuts being reproduced. Following his practice in the Gay, Bewick seems to have again depended rather upon his predecessors than himself, most of the cuts being based upon those of the unknown illustrator of

the 'Fables of Æsop and Others,' translated by Samuel Croxall, sometime archdeacon of Hereford, of which, between 1722 and 1775, there had been no less than ten editions. But even Croxall's illustrator does not appear to have been the originator of the plates, as some of them are plainly copied from Sebastian le Clerc, while others again have their prototypes in the fine old folio Æsop of Francis Barlow, published as far back as 1665. Bewick, however, probably knew little of Barlow and le Clerc, and only aimed at the modernisation and improvement of Croxall. In this he thoroughly succeeded, substituting more accurate studies of animals and more natural arrangements of detail and background. As before, his own special designs (e.g. the 'Hounds in Couples,' the 'Beggar and his Dog,' the 'Collier and the Fuller') are superior to the rest, and already foreshadow the thoroughly individual talent of the tail-pieces to the 'Quadrupeds' and 'Birds.' In fact, in altering and modernising Wootton and the rest, Bewick had graduated as a designer, and the discipline seems to have been his best academic training. Before parting with the Gay and 'Select Fables,' it should be added that their beauties can only be adequately appreciated in the very rare originals. In Emerson Charnley's so-called 'Select Fables' issued at Newcastle in 1820, a vamped-up volume which included many of the cuts from Gay and other sources, the original blocks, according to Hugo (*Bewick Collector*, i. 147), had been 'much altered, and certainly not improved' by Bewick's pupil Charlton Nesbit. From these the more modern reprints are naturally derived.

With the publication of the 'Select Fables' it had become manifest that there had arisen an engraver who, to singular technical dexterity, added an unexampled appreciation of the qualities and limitations of wood as a medium for the reproduction of designs. It was also clear that, besides being an engraver, he was, in his own way, an artist of remarkable capacity as a faithful interpreter of animal life, and a genuine humourist of a sub-Hogarthian type. All that he now required was a field in which he might adequately exhibit either side of his pictorial character. In the illustrations to the 'Quadrupeds' and 'Birds' he found opportunities for both.

The 'Quadrupeds' were begun soon after the publication of the 'Select Fables.' But while working at them Bewick produced the large block known as the 'Chillingham Bull,' 1789, one of the famous wild cattle which Landseer has painted and Scott has sung in the ballad of 'Cadyow Castle.' This, when it appeared, was Bewick's best and most ambitious work, though he excelled it in his subsequent efforts. An accident which made early impressions extremely rare has, however, given it a fictitious value with collectors. After a few copies had been struck off on parchment and paper, the block split, and though, by repairing it and fixing it in a gun-metal frame, it was found possible to take impressions, they have, naturally, never acquired the importance which attaches to those struck off before the accident, one, at least, of which has fetched as much as fifty guineas. The 'General History of Quadrupeds' was begun in 1785, Bewick executing the cuts and vignettes after working hours, and his partner, Mr. Beilby, who was 'of a bookish or reading turn,' undertaking the letterpress. It was published in 1790, and sold rapidly. A second and third edition appeared in 1791 and 1792 respectively, and by 1824 an eighth edition had been reached. Generally speaking, those animals with which Bewick had been familiar in their native haunts were admirably rendered; but where he had to depend upon stuffed specimens or the representations of earlier artists, the result is scarcely so satisfactory. The 'Badger' and the 'Hedgehog,' for example, are unimpeachable; the 'Bison' and 'Hippopotamus' are poor and unsuggestive.

It was probably some sense of this inequality which determined the subject of Bewick's next effort, the 'History of British Birds.' In this case he was much less likely to meet with difficulties in the way of obtaining an accurate idea of his subject, and frequently might either work directly from life or from newly shot specimens. His determination, in fact, in his own words, was 'to stick to nature as closely as he could' (*Memoir*, p. 154). The result, as may be seen from some of the beautiful water-colour drawings given to the British Museum by Miss Isabella Bewick in 1882, fully justified the wisdom of this resolve. The first volume, the 'Land Birds,' was published in 1797. The text, as before, was by Beilby, largely amended and edited by Bewick himself. The second volume, the 'Water Birds,' followed in 1804, the text this time being supplied by the Rev. Mr. Cotes, of Bedlington, Bewick's partnership with Beilby having been dissolved. To both volumes large additions were made in the succeeding issues, both in the way of illustrations and vignettes. In the eighth edition of 1847, published by Bewick's son [see BEWICK, ROBERT ELLIOT], the book was rearranged by Mr. John Hancock, a Newcastle naturalist, to suit the no-

menclature and classification of Temminck, and some twenty further vignettes were added from a projected 'History of British Fishes' left unfinished at Bewick's death.

The 'Birds' are Bewick's high-water mark. As we have said, the conditions under which he worked were wholly favourable to his realistic genius. He was his own artist, and he was his own engraver; he was called upon to copy faithfully rather than to divine or reconstruct; and he loved his subject with that absorbing passion which makes even the dullest sense intelligent. Hence, to repeat some words we have used elsewhere, his birds, and especially those which he had seen and studied in their sylvan homes, are *alive*. 'They swing on boughs, they light on wayside stones; they flit rapidly through the air; they seem almost to utter their continuous or intermittent cries; they are glossy with health and freedom; they are alert, bright-eyed, watchful of the unfamiliar spectator, and ready to dart off if he so much as stir a finger. And as Bewick saw them, so we see them, with their fitting background of leaf and bough, of rock or underwood,—backgrounds that are often studies in themselves. Behind the rook his fellows stalk the furrows, disdainful of the scarecrow, while their black nests blot the trees beyond; the golden plover stands upon his marshy heath; the robin and the fieldfare have each his appropriate snow-clad landscape; the little petrel skims swiftly in the hollow of a wave.'

The mention of these apt backgrounds brings us naturally to another, and, with the ordinary public, perhaps more popular feature of the 'Quadrupeds' and 'Birds,' the well-known tail-pieces, in many of which Bewick displayed a humour, a pathos, an observation, and a sense of the *lacrimæ rerum*, which are unique. It would take pages to describe them adequately, and they must be studied to be appreciated. The largest number are contained in the 'Birds' of 1847 and the 'Quadrupeds' of 1807, and some of the delicate little water-colours from which they were engraved are to be found at the British Museum. It has been affirmed (Chatto's *Treatise on Wood Engraving*, 3rd ed., 1860, p. 496 et seq.) that many of these were the work of clever pupils whom by this period Bewick had drawn about him. At so great a distance of time it is difficult to decide what extent of truth there is in this statement, never very acceptable to Bewick's representatives. Some of the tail-pieces are obviously not cut by him, and bear traces of the graver of Clennell [see Clennell, Luke]. Two other pupils, Johnson [see Johnson, Robert], and Nesbit [see Nesbit, Charlton], are also supposed to have assisted. The fact would appear to be that, after the fashion of those days, all Bewick's staff were pressed into his undertaking. But he was without question the presiding spirit; the initial impulse came from him; and, however they may have prospered when working under his eye, none of those named ever rivalled him in his own way when working by themselves. That they rendered him valuable aid, therefore, detracts little or nothing from his reputation.

In 1804, when the second volume of the 'Birds' was issued, Bewick was a man of fifty. He had still four-and-twenty years to live. But, if we except the part taken by him in the 'Poems by Goldsmith and Parnell,' 1795, and Somervile's 'Chase,' 1796 [see Bewick, John], he never produced anything to equal the 'Select Fables' of 1784, and the three volumes on Natural History. A large number of works illustrated, or said to be illustrated, by him have been traced out by the enthusiasm of the late Mr. Hugo, whose unwieldy and indiscriminate collection was dispersed at Sotheby's in August 1877. The only book of any real importance subsequent to 1804 is the 'Fables of Æsop,' 1818. If any other volumes issued in the interval deserve a passing mention, they are Thomson's 'Seasons,' 1805; 'The Hive of Ancient and Modern Literature,' 1806, the majority of the cuts to which were by Clennell; Burns's 'Poems,' 1808; and Ferguson's 'Poems,' 1814. The designs for the Burns and the Thomson were by Thurston [see Thurston, John]; and it is stated, on the authority of William Harvey, that the former were engraved by a pupil named Henry White. Of the 'Fables of Æsop' Bewick speaks as if it had been a long-cherished idea. 'I could not,' he says, '... help regretting that I had not published a book similar to "Croxall's Æsop's Fables," as I had always intended to do' [he seems to forget or ignore the 'Select Fables' of 1784]; and he goes on to say that after a severe illness that he had in 1812, as soon as he was so far recovered as to be able to sit at the window, he began to 'draw designs upon the wood' for the illustrations (*Memoir*, p. 173). He was assisted in this book, he expressly tells us, by his son R. E. Bewick, and by two of his pupils, William Temple and William Harvey. Most of the designs are based upon Croxall. Many of the tail-pieces are good and humorous, but, as compared with the earlier works, they are generally more laboured and less happy.

Little more remains to be told of Bewick's life. He continued until a short time before

his death to occupy his old shop in St. Nicholas Churchyard, where, by the way, it still exists (1885), with a tablet proclaiming its history, and rejoicing in a window upon which his name is scratched. In 1823 he went to Edinburgh, where he made his only sketch upon the stone ('The Cadger's Trot'). In 1827 he was visited by the American naturalist Audubon, who has left an interesting account of his impressions (*Ornithological Biography*, 1835, iii. pp. 300 et seq.), and he came to London. But he was old and in failing health; and it is recorded that when driven to the Regent's Park he declined to alight in order to see the animals. His last work, in addition to the never completed 'History of British Fishes' already referred to, was a large cut, intended to serve as a cottage print of the kind familiar to his boyhood. Progressing with this, a lean-ribbed and worn-out old horse waiting patiently in the rain for death, he was overtaken by the illness to which he succumbed. Copies of the block in its unfinished state were struck off in 1832 by R. E. Bewick, and it was again reprinted at Newcastle, in 1876, by Mr. Robert Robinson of Pilgrim Street.

Bewick died on 8 Nov. 1828, at his house, 19 West Street, Gateshead. He is buried in Ovingham churchyard by the side of his wife, who had preceded him in February 1826. His character seems to have been that of a thoroughly upright and honourable man, independent but unassuming, averse to display, very methodical, very industrious, and devoted to his fireside, his own folk, and that particular patch of earth which constituted his world. In such scant glimpses as we get of him in letters and the recollections of friends, it is chiefly under some of these latter aspects. Now he is chatting to the country people in the market-place, or making friends with some vagrant specimen of bird or beast; now throwing off a sketch at the kitchen table to please the bairns, or working diligently at the 'Birds' in the winter evenings to the cheery sound of his beloved Northumberland pipes.

As an engraver Bewick has been justly styled the restorer of wood engraving in England. It is to the impulse which it received from his individual genius that its revival as an art must be ascribed. To give an account of the special features of his technique here would, however, be impossible. But two points may be mentioned in special. In the first place, he was among the earliest, if not the earliest, to cut upon the end of the wood instead of along it, as had been the practice of the old plank or knife cutters; and, in the second, he was the inventor of what is technically known as 'white line' in wood-engraving. Of this he may be allowed to give his own definition. Speaking in the 'Memoir,' p. 241, of the effect produced in a woodcut by plain parallel lines as opposed to cross lines, he goes on: 'This is very apparent when to a certainty the plain surface of the wood will print as black as ink and balls can make it, without any further labour at all; and it may easily be seen that the thinnest strokes cut upon the plain surface will throw *some light* on the subject or design, and if these strokes are made wider and deeper, it will receive more light; and if these strokes again are made still wider, or of equal thickness to the black lines, the colour these produce will be a grey; and the more the white strokes are thickened, the nearer will they, in their varied shadings, approach to white, and, if quite taken away, then a perfect white is obtained.' Bewick, in short, paid most attention, not to what he left, but to what he cut away from the block. He regarded himself as making a white design upon a black block which was to produce a black design upon white paper. To his knowledge of this method must be ascribed the effect of his work, but to understand it thoroughly some treatise such as Hamerton's 'Graphic Arts,' 1882, or Linton's 'Practical Hints on Wood Engraving,' 1879, should be consulted. In the latter work the point is very clearly and fully explained.

There are numerous portraits of Bewick. Miss Bewick of Cherryburn (his great-niece) has a picture of him when young, by a local artist, George Gray. Then there is the engraving by Kidd in 1798, after Miss Kirkley. There are also at least three well-known portraits by James Ramsay. One of these, that engraved by Burnet in 1817, is in the Newcastle Natural History Society's Museum; the National Portrait Gallery contains another, dated 1823; and a third is the little full-length, engraved by F. Bacon in 1852, the original of which is in the possession of Mr. R. S. Newall of Gateshead. Besides these there is an excellent portrait by Good of Berwick, showing Bewick in old age, as well as a portrait by Nicholson, belonging to Mr. T. Crawhall of Condercum, and etched by Flameng in 1882 for the Fine Arts Society. Nicholson also did another picture, engraved by Ranson in 1816, and there is a miniature by Murphy, engraved by J. Summerfield. Lastly, there is E. H. Baily's bust in the Newcastle Literary and Philosophical Society's Library, which was engraved in the 'Century Magazine' for September 1882, and is regarded by those who knew Bewick as an excellent likeness.

[The chief authorities for Bewick's life are: Atkinson's Memoir in the Transactions of the Natural History Society of Northumberland, &c., for 1831; Chatto's Treatise on Wood Engraving, 1839, ch. vii.; Memoir of Thomas Bewick, written by himself, 1862; Bell's Catalogue, 1851; Hugo's Bewick Collector, 1866–8 (2 vols.) Little has been added to these by later researches, although much information not hitherto brought together in one volume is to be found in D. C. Thomson's Life and Works of Bewick, 1882. There is also much appreciative criticism in the Notes prefixed by Mr. F. G. Stephens to the Fine Art Society's Bewick Catalogue of 1881. It should be stated that most of the above account is abridged from an article by the present writer in the 'Century Magazine' for September 1882, since republished in the volume entitled 'Thomas Bewick and his Pupils,' 1884.] A. D.

BEWICK, WILLIAM (1795–1866), portrait and historical painter, was born at Darlington 20 Oct. 1795. His father was an upholsterer, his mother a beautiful quakeress. The surroundings in the staid and money-making Durham town were not favourable to art aspirations, and had it not been for an aunt who lived near Barnard Castle, young Bewick's gifts might have remained undeveloped. As it was, her store of legend and her collection of curiosities stimulated his imagination, and when he left school to enter his father's business, it was decreed that he should be a painter. He devoted all his spare time to sketching and taking portraits, gained some furtive instruction from wandering artists, and by the time he was seventeen had accumulated the orthodox portfolio of productions. Then he drifted into oil-painting under the auspices of an artistic jack-of-all-trades named George Marks, and ultimately, afire with enthusiasm for London and its wider opportunities, started at twenty for the metropolis, carrying with him (like Romney) the slender savings of his pencil. He was luckier than most youthful adventurers. Haydon, whom he had learned to admire in his northern home, received him gratuitously as a pupil, and with the fortunes of that unfortunate man he became more or less identified. From 1817 to 1820 he was daily in Haydon's studio. His master employed him in making copies of the Elgin marbles for Goethe, and inspired him with his own passion for the grandiose and historic. One of Bewick's pictures, 'Una in the Forest,' was exhibited at Spring Gardens in 1820; in 1822, 'Jacob and Rachel,' a large composition which Haydon particularly admired, followed it at the British Institution, and other ambitious works were projected. His skill as a copyist was remarkable, and he excelled in reproducing Rembrandt. At Haydon's he met many contemporary literary celebrities, Wordsworth, Ugo Foscolo, Hazlitt, Shelley, Keats, and others. He also visited Scott at Abbotsford, and has left a delightful description of the yet 'Great Unknown' in the freedom of his own fireside.

In 1824–5 Bewick went back to Darlington, where he found ready employment as a portrait-painter. In 1826 Sir Thomas Lawrence sent him to Rome to copy, among other things, Michael Angelo's Prophets and Sibyls in the Sistine Chapel. These copies were exhibited in 1840 at Bewick's house in George Street, Hanover Square. He returned to England in 1829, settling again in London. In 1839 and 1840 he exhibited at the Academy. Finally, his health failing, he retired to some property he possessed at Haughton-le-Skerne, near Durham. He still continued to paint a little, and in 1843 took part in the Westminster Hall cartoon competition, sending up a 'Triumph of David.' The last twenty years of his life were passed in comparative seclusion. He died 8 June 1866. His artistic promise was greater than his performance. He is best known in his native county, and his chief successes were as a copyist and portrait-painter; but his reminiscences of men and events, as given in his letters and autobiographic sketches, by their penetration, vivacity, and graphic power, seem to indicate that he might have acquired a greater reputation by the pen than by the pencil.

[Thomas Landseer's Life and Letters of William Bewick (artist), 1871.] A. D.

BEWLEY, WILLIAM (*d.* 1783), friend of Dr. Burney, was a native of Massingham, in Norfolk, where he practised medicine. He made for himself some scientific reputation, and was a friend of Priestley, whom he once visited at Birmingham. But it is through his friendship with Dr. Burney that his name has been preserved. He is spoken of more than once in Madame d'Arblay's 'Memoirs of her Father.' We are told that on account of the simplicity of his life and the nature of his pursuits he was known as 'the philosopher of Massingham,' and that he was as remarkable for his wit and conversational powers as for the extent of his knowledge of science and literature. He died at Dr. Burney's house in St. Martin's Street, Leicester Square, on 5 Sept. 1783. An obituary notice of him was written by Dr. Burney 'for the Norwich newspaper,' and is given in Madame d'Arblay's 'Memoirs.' It is here said that 'Mr. Bewley for more than twenty years supplied the editor of the "Monthly Review" with an examination of innumerable works in science and articles of foreign literature, written with a

force, spirit, candour, and—when the subject afforded opportunity—humour, not often found in critical discussions.'

[Madame d'Arblay's Memoirs of Dr. Burney, i. 105, 265, ii. 347; Gent. Mag. for 1783, ii. 805.] T. W-R.

BEXFIELD, WILLIAM RICHARD (1824–1853), musical composer, was born at Norwich on 27 April 1824, entered the cathedral choir at the age of seven, and studied music under the organist, Dr. Buck, to whom he was articled. He learnt the violin, trumpet, trombone, and drum, but he excelled as an organist when still quite young. On the expiration of his articles he obtained the post of organist at the parish church of Boston, Lincolnshire, and on 16 Nov. 1846 took the degree of Mus.Bac. at Oxford, where his name was entered at New College. His degree exercise was a canon in five parts. On the death of Dr. Crotch he became a candidate for the professorial chair of music at Oxford, but without success, probably on account of his youth. In February 1848 he left Boston, having obtained the post of organist at St. Helen's, Bishopsgate, the competition for which brought forward thirty-six candidates. In the following year he proceeded Mus.Doc. at Cambridge, his name being entered at Trinity College. In 1850 Dr. Bexfield married Miss Mellington, of Boston, by whom he had two children. Soon after his marriage he wrote the oratorio by which his name is best remembered, 'Israel Restored.' This work was produced by the Norwich Choral Society in October 1851, and was again performed at the Norwich Festival on 22 Sept. 1852, when the solo parts were sung by Madame Viardot, Misses Pyne, Dolby, and Alleyne, and Messrs. Sims Reeves, Gardoni, Lockey, Formes, Belletti, and Weiss. The excellence of much of the music was at once recognised; but the book was fatally dull, and the whole work suffered from being forced by a local clique into injudicious rivalry with H. H. Pierson's 'Jerusalem,' which was produced on the following day. Bexfield's other published works are a set of organ fugues, a set of six songs (words by the composer), and a collection of anthems. He died at 12 Monmouth Road, Bayswater, on 28 Oct. 1853, too young to have fulfilled the expectation aroused by the talents he displayed.

[Annual Register, 1853, p. 267; Gent. Mag. for 1854, pt. i. pp. 102–3; Musical Directory, 1854; Grove's Dict. of Music, i. 239; Catalogue of Oxford Graduates, 1851; Luard's Graduati Cantabrigienses, 1760–1856; Musical Times, Oct. 1852.] W. B. S.

BEXLEY, first BARON (1766–1851). [See VANSITTART, NICHOLAS.]

BIANCONI, CHARLES (1786–1875), promoter of the Irish car system in Ireland, was born 24 Sept. 1786, at the village of Tregolo in Lombardy, not far from Como. His father, a peasant-proprietor, owned a small silk-mill. Carlo was brought up by a prosperous uncle. At fifteen or sixteen he was bound for eighteen months to a countryman, whom he accompanied to Dublin, where he was sent out to vend cheap prints. From Dublin he was transferred to Waterford, and resolved to start on his own account as an itinerant vendor of prints with a capital of about 100*l.* which his father had given him on leaving Italy. In his long pedestrian journeys he was led to envy those of his own calling who could afford to drive. In 1806 he opened as carver and gilder a shop in Carrick-on-Suir. After a removal to Waterford he settled at Clonmel, where he added to his former business dealings in bullion, which was in great demand by the government for the payment of its continental subsidies. Every extension of business deepened his sense of the need of better communication. In July 1815 he started a one-horse two-wheeled car to carry passengers, goods, and the mail-bags, from and to Clonmel and Cahir, a distance of eight miles with no public conveyance. The experiment succeeded financially. The carriage-tax led many persons to give up their jaunting-cars, numbers of which were thus thrown upon the market. Horses became cheap after the peace of 1815. Bianconi was, thirty years after he started his first car, conveying passengers and goods over 1,633 miles, and working daily 3,266 miles of road. Although he started his cars as a boon to the humbler classes, they were much used by others, and to this commingling of classes Bianconi attached great importance. He stated in 1856 that after the more remote parts of Ireland had been opened up by his cars, calico, which had previously cost 8*d.* or 9*d.* a yard, was sold for 3*d.* and 4*d.* As an employer Bianconi was strict, but kindly and just. Merit always insured promotion, and pensions were liberally given. He was able to boast late in his career that the slightest injury had never been done to his property, and that not once had any of his cars been stopped, even when conveying mails through disturbed districts.

In 1826 Bianconi had given up his shop in Clonmel, and in 1831 he received letters of naturalisation from the Irish privy council. A zealous Roman catholic and an ardent liberal, he was a friend and adherent of

O'Connell. He took an active part in the civic affairs of Clonmel, and was twice elected mayor, in 1844 and 1845. The establishment of railways in Ireland had then begun, and Bianconi refused invitations to oppose any of them, and took shares in some of them. Their growth forced him between 1846 and 1865 to discontinue running cars on 4,534 miles of road, but during the same period he extended his system over other 3,594 miles. In 1846 Bianconi purchased the estate of Longfield, in Tipperary, near Cashel, in which he resided till his death, and most of the fortune which he had amassed was invested in the purchase of Irish land. During the ensuing famine-years he gave employment on his estate to all who applied for it, and was otherwise usefully beneficent. The passenger traffic in 1864 had realised 27,731*l.*, and the mail contracts paid 12,000*l.* Appointed in 1863 a deputy-lieutenant, he began in 1865 to withdraw from the great business which he had created, disposing of it on liberal terms to his agents and others employed in working it. The remainder of his life he passed in improving his estates and in promoting patriotic schemes. In the course of a visit to Rome, where his only son, who married a granddaughter of O'Connell, was appointed chamberlain to the pope, he erected at his sole cost the monument over O'Connell's heart preserved in the church of the Irish college. Bianconi died in September 1875, on the verge of his ninetieth year. Of his three children the only survivor was the daughter who married Morgan John O'Connell, a nephew of the Liberator, and became her father's biographer.

[Charles Bianconi, a Biography, by his daughter, Mrs. Morgan John O'Connell, 1878.]
F. E.

BIBBY, THOMAS (1799-1863), poetical writer, born at Kilkenny, was educated at the grammar school there and at Trinity College, Dublin, where he obtained a scholarship. At the age of thirteen he won the gold medal for science, and became one of the best Greek students of his day. He subsequently led a studious but secluded life at Kilkenny, developing eccentricities which suggest insanity. He published two dramatic poems, 'Gerald of Kildare,' 1854, and its sequel, 'Silken Thomas,' 1859. In the blank verse there are passages of spirit and beauty, and an address to his son, which prefaces the second work, exhibits much pathos and delicate feeling. The notes display varied reading, and original if not eccentric thought. He died, aged 46, on 7 Jan. 1863, after a painful illness, at his house at St. Canice's steps. His brother, Samuel Hale Bibby, a surgeon in Green Street, Grosvenor Square, London, shared his literary taste without his eccentricity.

[Kilkenny Moderator, 10 and 14 Jan. 1863; Gent. Mag. ccxiv. 248.] J. M.

BIBELESWORTH or BIBBESWORTH, WALTER DE (*fl.* 1270), was author of two French poems. One of these consists of some French verses addressed to Dyonisia de Mounchensy, being composed with the object of teaching her the language. This poem is printed in Joseph Mayer's 'Library of National Antiquities,' i. 142, from two manuscripts in the British Museum. There is, however, another copy in the library of All Souls' College, Oxford (MS. 182), which differs considerably from the printed text, both in the French verse and the accompanying English gloss. Bibelesworth's other work is a dialogue between the author and Henry de Lacy, earl of Lincoln (1249-1312), on the subject of the crusade. The earl had taken the cross, but could not prevail upon himself to leave a lady whom he loved, which Bibelesworth endeavours to persuade him to do. The occasion of its composition was the expedition of Edward I, when prince, to the Holy Land in 1270, in which Bibelesworth took part, as appears from letters of protection granted to him in that year. This poem is printed in Wright and Halliwell's 'Reliquiæ Antiquæ,' i. 134.

Bibelesworth owned the manors of Bibbysworth Hall in the parish of Kimpton, Hertfordshire, and of Saling, Latton, and Waltham in Essex. He died between 1277 and 1283, and was buried before St. Peter's altar in the church of Little Dunmow.

BIBER, GEORGE EDWARD, LL.D. (1801-1874), miscellaneous writer, was born 4 Sept. 1801, at Ludwigsburg, Würtemberg. After studying at the Lyceum there, where his father was professor, he entered the university of Tübingen, and proceeded Ph.D., afterwards graduating LL.D. from Göttingen. His share in the agitations for German unity made it prudent for him to quit Würtemberg, first for Italy and then for the Grisons, whence he ventured to Yverdun, becoming there a master in a Pestalozzi institution. He afterwards published 'Beitrag zur Biographie Heinrich Pestalozzi's,' 8vo, St. Gallen, 1827, and 'Henry Pestalozzi and his Plan of Educa-

tion,' 8vo, London, 1831. In 1826 he accepted the offer of a tutorship in England, and in 1830 he published 'The Christian Minister and Family Friend,' and 'Christian Education,' the substance of lectures delivered in 1828 and 1829. Biber became the head of a flourishing classical school at Hampstead, and afterwards at Coombe Wood. On his arrival in England Biber had 'no settled religious convictions,' but decided to join the church of England. Naturalised by act of parliament he was ordained to the curacy of Ham in July 1839, and next year published 'The Standard of Catholicity, or an Attempt to point out in a plain Manner certain safe and leading Principles amidst the conflicting Opinions by which the Church is at present agitated,' 8vo, London, 1840; 2nd edition, 1844. In 1842 he published his 'Catholicity *v.* Sibthorp,' 8vo, London, called in a second edition 'The Catholicity of the Anglican Church vindicated, and the alleged Catholicity of the Roman Church disproved,' 8vo, London, 1844. In 1842 he was appointed to the new vicarage of Holy Trinity, Roehampton, a hamlet of Putney, and laboured here for thirty years. He took part in the establishment of the National Club in 1845, of the Metropolitan Church Union in 1849, and in 1850 of the Society for the Revival of Convocation. He was elected a member of the council of the English Church Union in 1863, 'when he took a leading part in the action of the union in the Colenso case, but resigned his seat in June 1864, on the ground of mediævalist tendencies and rationalistic sympathies in the council.' He protested earnestly against the disestablishment of the Irish church, and sympathised with the Old Catholic movement of Germany, with one of the leaders of which, Dr. Michaelis, he carried on a Latin correspondence; this was afterwards published as 'De Unitate Ecclesiæ, et de Concilio Œcumenico libero congregando Epistola;' an English version was called, 'On the Unity of the Church,' 8vo, London, 1871. Biber attended the Old Catholic congress at Cologne, and he published a German sermon, 'Ein Wort der Liebe und Hoffnung,' the English version of which was entitled 'A Word of Love and Hope, addressed to the Old Catholics of Germany,' 8vo, London, 1872. Biber was a principal writer in the 'English Review,' which took the place of the 'British Critic' after the appearance of No. XC. of 'Tracts for the Times.' He was also editor of 'John Bull,' 1848–1856. Early in 1872 Biber was presented by Lord Chancellor Hatherley to the rectory of West Allington, near Grantham. There Biber died 19 Jan. 1874. He published, amongst many other works, 'The Seven Voices of the Spirit,' 8vo, London, 1857, a commentary on the Apocalypse; 'Royalty of Christ and the Church and Kingdom of England,' 8vo, London, 1857; 'The Supremacy Question, or Justice to the Church of England,' 8vo, London, 1847, expanded into 'The Royal Supremacy over the Church, considered as to its Origin and its Constitutional Limits,' 8vo, London, 1848; 'The Supremacy Question considered in its successive Phases, Theocratic, Imperial or Royal, Papal, and Popular,' 8vo, London, 1865; 'Life of St. Paul,' 8vo, London, 1849; 'A Plea for an Edition of the Authorised Version of Holy Scripture,' 8vo, London, 1857; and 'The Veracity and Divine Authority of the Pentateuch vindicated,' 8vo, London, 1863.

BICHENO, JAMES EBENEZER (1785–1851), colonial secretary in Van Diemen's Land, and author, born in 1785, was only surviving son of James Bicheno (*d.* 1831), a well-to-do dissenting minister and schoolmaster at Newbury, Berkshire, who wrote politico-theological works. The son spent the first part of his life at Newbury, and there wrote 'An Inquiry into the Nature of Benevolence, chiefly with a view to elucidate the Principles of the Poor Laws' (London, 1817; republished in an extended form, and under the title of 'An Inquiry into the Poor Laws,' London, 1824). This was an attack on the system of poor-law administration then prevailing in England.

In the 'Philosophy of Criminal Jurisprudence' (London, 1819), Bicheno urged that the penalties of the criminal code were too severe, and that we should not 'burden the colonies with the refuse of our prisons.'

Called to the bar by the Middle Temple 17 May 1822, Bicheno joined the Oxford circuit, but continued his economic and scientific studies. For a time he engaged in vain mining speculations in Wales, while residing at Tymaen, near Pyle, in Glamorganshire. In 'Ireland and its Economy' (London, 1830), he records his impressions of a tour in Ireland. He served on a commission, under the chairmanship of Archbishop Whately, to investigate the condition of the Irish poor. To the last report, presented in 1836, he appended his opinion that the land's 'real improvement must spring from herself, her own inhabitants, and

her own indigenous institutions, irrespective of legislation and of English interference.'

In September 1842 he was appointed colonial secretary in Van Diemen's Land, and shortly after proceeded to that country, where he fulfilled the duties of his office to the satisfaction alike of the colonists and of the home government. He was one of the founders, a vice-president, and member of council of the Royal Society of Van Diemen's Land, and a contributor to its papers. He died at Hobart Town, after a short illness, 25 Feb. 1851.

Bicheno's scientific writings took usually the form of papers contributed to the publications of the various learned bodies with which he was connected. He was elected fellow of the Linnean Society 7 April 1812, and was secretary from 1825 to 1832. His herbarium is in the public museum at Swansea. His papers were: 'Observations on the Orchis militaris of Linnæus' (Linn. Soc. Trans. xii., 1818); 'Observations on the Linnean Genus Juncus' (Linn. Soc. Trans. xii., 1818); 'On Systems and Methods in Natural History' (Linn. Soc. Trans. xv., 1827; 'Philosophical Mag.' iii., 1828); 'On the Plant intended by the Shamrock of Ireland' (Royal Inst. Journ. i., 1831); 'On the Potato in connexion with Distress in Ireland' (Van Diemen's Land Royal Soc. Papers, i., 1851); and (to the same volume) 'On a Specimen of Pristis cirrhatus.'

[Gent. Mag. vol. xxxvi., new series; Annual Register for 1851; Nicholls's History of the Irish Poor Law (London, 1856); Report of the Royal Society of Van Diemen's Land for 1851 (Hobart Town, 1852).] F. W-T.

BICKERSTAFF, WILLIAM (1728–1789), antiquary, was born at Leicester 17 July 1728, where he was appointed undermaster of the Lower Free Grammar School 30 Jan. 1749–50. He took orders in December 1770, being successively curate at most of the churches at Leicester, and also at Great Wigston and Ayleston, two villages in the neighbourhood. He died suddenly at his lodgings in Leicester on 26 Jan. 1789. He possessed good classical attainments, and had a wide knowledge of antiquarian and historical subjects, being a frequent contributor to the 'Gentleman's Magazine.' From a correspondence published in that periodical after his death it appears that he was in straitened circumstances throughout the greater part of his career, receiving a salary of only 19*l.* 16*s.* for his services at the Leicester grammar school. At fifty-eight years of age he speaks of himself as 'a poor curate, unsupported by private property.' Among his antiquarian researches may be noticed several valuable communications, which Mr. Nichols embodied in his 'History of Leicester.'

[Gent. Mag. 1789, lix. 181, 203–5; Bibliotheca Topographica Britannica, 1790, viii. 1371.] T. F. T. D.

BICKERSTAFFE, ISAAC (*d.* 1812?), dramatic writer, was born in Ireland about 1735. At the age of eleven he was appointed one of the pages to Lord Chesterfield, then lord-lieutenant of Ireland. His earliest production was 'Leucothoe,' a tragic opera, printed in 1756, but never acted. In 1762 his comic opera, 'Love in a Village,' was acted with great applause at Covent Garden. For the plot the author was indebted to Charles Johnson's 'Village Opera,' Wycherley's 'Gentleman Dancing-Master,' and Marivaux's 'Jeu de l'Amour et du Hazard.' The piece was printed in 1763, and has been included in Bell's 'British Theatre' and other collections. In 1765 was published the 'Maid of the Mill,' founded on Richardson's 'Pamela.' It met with much success, and as an after-piece continued to be acted with applause for many years. Between 1760 and 1771 Bickerstaffe produced a score of pieces for the stage. Mrs. Inchbald considered him second only to Gay as a farce writer. His songs are written with some gusto, and the dialogue is often sparkling. While he was engaged in writing for the stage, Bickerstaffe enjoyed the society of the most famous men of his time. On 16 Oct. 1769, as recorded by Boswell, he was one of a company that dined in Boswell's rooms in Old Bond Street. The others were Dr. Johnson, Sir Joshua Reynolds, Goldsmith, Garrick, and Murphy. From an honourable position he afterwards sank into the deepest ignominy. He had been an officer in the marines, but was dismissed from the service under discreditable circumstances. In 1772, being suspected of a capital crime, he fled abroad. For a time he was living at St. Malo under an assumed name; and from that place he wrote in French a piteous letter to Garrick, dated 24 June 1772, in which he says: 'Ayant perdu mes amis, mes espérances, tombé, exilé et livré au désespoir comme je suis, la vie est un fardeau presque insupportable; j'étois loin de soupçonner que la dernière fois que j'entrais dans votre librairie, serait la dernière fois que j'y entrerais de ma vie, et que je ne reverrais plus le maître.' The letter is endorsed by Garrick, 'From that poor wretch Bickerstaffe. I could not answer it.' In 1805 the author of the 'Thespian Dictionary' speaks of Bickerstaffe as then living abroad; and in 1812, if

the statement of Stephen Jones in the 'Biographia Dramatica' is to be trusted, he was still dragging out his life (after forty years' exile), 'poor and despised of all orders of people.' What became of him afterwards is unknown. In 1812 he was an old man of seventy-seven years. Shortly after his flight in 1772 the malignant Dr. Kenrick published anonymously a venomous satire, 'Love in the Suds, a Town Eclogue; being the lamentation of Roscius for the loss of his Nyky,' fol., in which he did not scruple to make the grossest charges against Garrick. Doubtless Garrick had rejected some play offered by Kenrick, and the latter avenged himself by penning his abominable libel. A full account of Bickerstaffe's dramatic productions is given in 'Biographia Dramatica,' 1812. A copy, preserved in the British Museum, of a tract entitled 'The Life and Strange Unparallel'd and Unheard-of Voyages and Adventures of Ambrose Gwinet. . . . Written by Himself,' 8vo, 1770, has the following manuscript note by a former owner: 'Dr. Percy told me that he had heard that this pamphlet was a mere fiction, written by Mr. Bickerstaffe, the dramatic poet.'

[Thespian Dictionary, 1805; Biographia Dramatica, ed. Stephen Jones, 1812; Private Correspondence of David Garrick, 1831, i. 266–7, 273–5, 277, 417–18; Preface to the Maid of the Mill, in vol. viii. of Bell's British Theatre, 1797.]

A. H. B.

BICKERSTETH, EDWARD (1786–1850), evangelical divine, was the fourth son of Henry Bickersteth, surgeon, of Kirkby Lonsdale, Westmoreland, author of 'Medical Hints for the Use of Clergymen' (London, 1829), and Elizabeth, daughter of John Batty. His third eldest brother was Henry, Lord Langdale [see BICKERSTETH, HENRY], master of the rolls. After a few years at Kirkby Lonsdale grammar school he received at the age of fourteen an appointment in the General Post Office, and left his father's house to live in London. In 1803 he joined the Bloomsbury Volunteer Association. Becoming weary of the monotonous nature of his employment and the slender prospect of advancement, he engaged himself in 1806 to work in a solicitor's office, after his regular work for the day was done. His employer, Mr. Bleasdale, was struck by his industry, and the next year took him as an articled clerk on advantageous terms. In 1805 he was under strong religious impressions. He laid down exact rules for his conduct, and kept a weekly diary in which he noted any failure in his observance of them. These impressions increased in strength, and in 1808 his correspondence was almost wholly on spiritual matters, and his diary was filled with religious meditations. At the same time he was diligent at the office, working from 9 a.m. till 9 p.m., and doing, his employer said, 'the work of three or four clerks.' With this work, however, he now combined an active part in the administration of the Widows' Friend and the Spitalfields Benevolent Societies. In 1812 he left Mr. Bleasdale's office, married Sarah, the daughter of Thomas Bignold, and entered into partnership with his brother-in-law, a solicitor at Norwich. During his residence at Norwich he took an active part in religious matters. At this time also he wrote his 'Help to Studying the Scriptures,' which passed through twenty-one editions. In 1815 he gave up the practice of law, was ordained deacon 10 Dec., and as he engaged himself to go out to Africa at once in the service of the Church Missionary Society, he received priest's orders 21 Dec. The object of his mission was to inspect and report on the work of the society in Africa, and on certain disputes between the missionaries. Leaving Portsmouth 24 Jan. 1816, he arrived at Sierra Leone on 7 March. He returned home by Barbadoes, and arrived in England 17 Aug. An account of his work in Africa will be found in the Church Missionary Society's sixteenth annual report. Immediately on his return he was engaged as one of the society's secretaries. During the next fourteen years he constantly travelled from place to place as a Church Missionary Society's 'deputation,' and on the few Sundays when he was at home acted as assistant minister of Wheler Episcopal Chapel, Spitalfields. Up to 1820 he lived in the Church Missionary Society's house in Salisbury Square, and in that year moved to another house belonging to the society in Barnsbury Park, Islington. In spite of his constant journeys he wrote several religious books which had a large sale. In 1827 he was sent to Basel to inspect the working of the missionary institution there which was in connection with the English Church Missionary Society. Finding that his constant absence from home hindered him from paying sufficient attention to his family, to the congregation of Wheler Chapel, and even to his committee work, he pressed the society not to give him more than six Sundays' travelling in the year. His request was refused; he therefore gladly accepted the rectory of Watton, Hertfordshire, offered him by Mr. Abel Smith, and moved thither in November 1830.

Although Bickersteth resigned his secretaryship on accepting the living of Watton, he continued all through his life to travel for the Church Missionary Society. He also

frequently acted as 'a deputation' for the Society for the Conversion of the Jews, and for other religious associations. In 1832 he was much engaged in editing the 'Christian's Family Library,' a series of republications of various theological works. He was a strong protestant and 'Millenarian.' He opposed the action of the Bible Society in admitting unitarian ministers to a share in its management. While, however, he upheld the Trinitarian Bible Society which was established at this crisis, he did not separate himself from the older association. About this time Bickersteth compiled his 'Christian Psalmody,' a collection of over 700 hymns, to which he subsequently added about 200 more. This collection met with great popularity, and in about seven years after its first appearance reached its fifty-ninth edition. It long continued the most popular hymn-book of the evangelical party, and forms the basis of a collection compiled by Bickersteth's son, the Rev. E. H. Bickersteth, entitled the 'Hymnal Companion to the Book of Common Prayer.' In order to counteract the tendency of the 'Tracts for the Times,' Bickersteth, in 1836, edited the 'Testimony of the Reformers.' In the introduction to this work, afterwards republished in a separate form under the title of the 'Progress of Popery,' he made some strictures on the character of the publications of the Society for the Propagation of Christian Knowledge, which led some of the evangelical party to withdraw their support from the society, and caused considerable discussion in the religious world. With the same object he took part in 1840 in the formation of the Parker Society for republishing the works of the English reformers. An attack of paralysis in the next year incapacitated him for some months. He was active in promoting the 'Protest against Tractarianism' of 1843, and in forwarding the formation of the Evangelical Alliance. In October 1845 he took a prominent part in the meeting held at Liverpool to settle the basis of the Alliance, and the next year answered the attack made on the meeting by the 'Christian Observer.' A severe accident befell him in February 1846. While on his way to an Alliance meeting, he was thrown out of his carriage and run over, the cart which passed over him, oddly enough, being engaged in hauling materials for the erection of a Roman catholic church. For a while his life was despaired of, and for two months he was unable to leave his room. The Maynooth grant strongly excited his indignation, and in 1847 he interested himself in the 'Special Appeal for Ireland' which the next year led to the establishment of the Irish Church Missions Society. He took part in the foundation of this society, and visited Ireland in order to promote it. Early in 1850 Bickersteth again suffered from paralysis, and died on 28 Feb. He left one son, Rev. E. H. Bickersteth, at present (1885) vicar of Christ Church, Hampstead (the author of 'Yesterday, To-day, and Forever,' a poem, and other works), and five daughters, of whom the eldest married Rev. T. R. Birks [q. v.], the author, among other books, of the life of his father-in-law. Bickersteth's works are numerous. A collective edition of the more important of them was published (London, 1853) in 16 vols. 8vo, including 'A Scripture Help,' 21st edition; 'A Treatise on Prayer,' 18th edition; 'A Treatise on the Lord's Supper,' 13th edition; 'The Christian Hearer,' 5th edition; 'The Christian Student,' 2 vols., 5th edition; 'The Chief Concerns of Man,' a volume of sermons; 'A Guide to the Prophecies, embodying Practical Remarks on Prophecy,' also published separately, 8th edition; 'Christian Truth,' 4th edition; 'On Baptism,' 3rd edition; 'Restoration of the Jews,' 3rd edition; 'Family Prayers,' 18th thousand; 'The Promised Glory of the Church,' 3rd edition; 'Divine Warning,' 5th edition; 'Family Expositions,' 2nd edition; 'Signs of the Times in the East,' 2nd edition. To these must be added the 'Christian Psalmody,' 1833; a 'Harmony of the Gospels,' 1833; 'Domestic Portraiture,' 1833; 'The Testimony of the Reformers,' including the 'Progress of Popery,' also published separately, 1836; 'Letters on Christian Union,' 1845; 'Destruction of Babylon,' &c., 1848; 'Defence of Baptismal Services,' 1850; together with much editorial work, prefaces, and introductions, as well as a large number of small publications, sermons, tracts, &c.

[Birks's Memoir of Rev. E. Bickersteth, 2 vols. 8vo; Memoir by Sir C. E Eardley, Bart., 16mo, reprinted from Evangelical Christendom; Record newspaper, 1845–50; Christian Observer, 1846.]

W. H.

BICKERSTETH, HENRY, BARON LANGDALE (1783–1851), master of the rolls, was born at Kirkby Lonsdale on 18 June 1783, and was the third son of Henry Bickersteth, and brother of Edward Bickersteth [q. v.] After receiving an education at the grammar school of his native place, he was apprenticed to his father in 1797, and in the following year was sent up to London further to qualify himself for the medical profession under the guidance of his maternal uncle, Dr. Robert Batty [q. v.] By the advice of this uncle, in October 1801, he went to Edinburgh to pursue his medical studies, and in the following year was called home

to take his father's practice in his temporary absence. Disliking the idea of settling down in the country as a general practitioner, young Bickersteth determined to become a London physician. With a view to obtaining a medical degree, on 22 June 1802 his name was entered in the books of Caius College, Cambridge, and, on 27 Oct. in the same year, he was elected a scholar on the Hewitt foundation. Owing to his intense application to work, his health broke down after his first term. A change of scene being deemed necessary to insure his recovery, he obtained, through Dr. Batty, the post of medical attendant to Edward, fifth earl of Oxford, who was then on a tour in Italy. After his return from the continent he continued with the Earl of Oxford until 1805, when he returned to Cambridge. At this time he had a great wish to enter the army, but gave it up in deference to his parents' disapproval.

After three years of indefatigable industry he became the senior wrangler, and senior Smith's mathematical prizeman of his year (1808), Miles Bland, the mathematical writer, Blomfield, bishop of London, and Adam Sedgwick, the geologist, being amongst his most distinguished competitors. Having taken his degree, he was immediately elected a fellow of his college, and thereupon made up his mind to enter the profession of the law. On 8 April 1808 he was admitted to the Inner Temple as a student, and, in the beginning of 1810, became a pupil of John Bell [q. v.], an eminent chancery counsel. He was called to the bar on 22 Nov. 1811, and in the same year took his degree of M.A.

At first his professional progress was so slow that he seems to have doubted whether he ought to have occasioned his father any further expense by continuing at the bar. In 1819 he was offered a seat in parliament, through the Hon. Douglas Kinnaird, but this he refused, and he never sat in the House of Commons. His business and reputation so much advanced, however, that, in August 1824, he was examined before the commission appointed to inquire into the procedure of the court of chancery. His examination lasted four days, and the evidence which he gave showed the thorough grasp which he had of the subject, and the necessity of the reforms which he advocated. In May 1827 he was appointed a king's counsel, and thenceforth confined his practice wholly to the court of Sir John Leach, master of the rolls, where he shared the lead of the court with Mr. Pemberton Leigh for many years. He was called to the bench of his inn on 22 June 1827. In 1831 he declined the newly created office of chief judge in bankruptcy, in February 1834 that of baron of the exchequer, and in September of the same year the post of solicitor-general. On 16 Jan. 1836 he was sworn a member of the privy council, and on the 19th of that month was appointed master of the rolls in the place of Pepys, who had been made lord chancellor. By letters patent, dated 23 Jan. 1836, he was created Baron Langdale of Langdale in the county of Westmoreland. It was not without a considerable struggle that he consented to take a peerage, and at length only withdrew his objections on the conditions that he might have entire political independence and be allowed to devote himself to law reform. During the fifteen years that he held the post of master of the rolls his judicial character stood deservedly high. Eminently patient in listening to argument, and painstaking in getting hold of the whole facts of the case, he has rarely been surpassed on the bench in impartiality, sound reasoning, or clearness of language. The appeals against his decisions were few and rarely successful. The reports of his more important judgments in the rolls court will be found in Beavan, vols. i. to xiii. The earliest of his decisions is the case of 'Tullett *v.* Armstrong,' so familiar to lawyers as a leading case on the law of married women's property, a subject about which he was always especially vigilant. By far the best known of his judgments, however, is that which he drew up and delivered in 'Gorham *v.* the Bishop of Exeter,' which came before the judicial committee of the privy council on appeal from the dean of arches. As keeper of the rolls he gained the name of the 'father of record reform.' It was through his unremitting perseverance that the government at last consented to provide an adequate repository for the national records. In the House of Lords he abstained from party controversy as being inconsistent with his judicial office, and devoted his time there to the prosecution of legal reforms. He conducted the act for the amendment of wills through the house, and was the principal author of the acts for abolishing the six clerks' office and for amending the law in relation to attorneys and solicitors. His speech on the second reading of the bill for the better administration of justice in the High Court of Chancery, which he delivered on 13 June 1836, was published as a pamphlet. His labours, however, as a reformer of the court of chancery fell far short of his intentions, for his time was fully occupied by his judicial and other numerous duties. He also gave unremitting attention to his duties as trustee of the British Museum and as head of the registration and conveyancing commis

sion which was issued 18 Feb. 1847. During the illness of Lord Cottenham in 1850 he undertook the duties of speaker of the House of Lords. Under the strain of this incessant labour his health gave way, and, in May 1850, when he was offered the post of lord chancellor by Lord John Russell, he felt obliged to decline it. He, however, consented to act as the head of a commission until a lord chancellor was appointed and the seal was delivered to him, Sir Lancelot Shadwell, the vice-chancellor of England, and Baron Rolfe, on 19 June 1850. This additional work overtaxed his failing health, and on 28 March 1851 he resigned the office of master of the rolls. Three weeks afterwards, on 18 April, he died at Tunbridge Wells, whither he had been ordered by the doctors, and on the 24th was buried in the Temple Church, close to the last resting-place of Sir William Follett.

He was a man of most admirable character, both in private and public life, of high principle, great integrity, and of wonderful industry. In politics he was throughout his life devoted to the cause of liberal opinions, and in his early life was the friend of Sir Francis Burdett and Jeremy Bentham, a circumstance which somewhat retarded his career at the bar. He married Lady Jane Elizabeth Harley, the eldest daughter of his friend and patron the Earl of Oxford, on 17 Aug. 1835, and by her had an only daughter, Jane Frances, who married Alexander, Count Teleki, and died on 3 May 1870. In default of male issue the barony became extinct on Lord Langdale's death. His wife survived him, and upon the death of her brother Alfred, the sixth and last earl of Oxford, resumed her maiden name as the heiress of the Oxford family. She died on 1 Sept. 1872.

F. R. B.

BICKERSTETH, ROBERT (1816–1884), bishop of Ripon, the fourth son of the Rev. John Bickersteth, rector of Sapcote, Leicestershire, and Henrietta, daughter of Mr. G. Lang, was born at Acton, Suffolk. His father was brother of Edward Bickersteth [q. v.] After some medical training, he entered Queens' College, Cambridge, and graduated as a junior optime in 1841. He was ordained the same year to the curacy of Sapcote, where he remained until 1843. The next year he was appointed curate of St. Giles's, Reading, and the year after of Holy Trinity, Clapham. In 1845 he was appointed to the incumbency of St. John's, Clapham, which he held for six years. During this period he attained considerable popularity as an evangelical preacher. In 1846 he married Elizabeth, daughter of Mr. J. Garde of Cork. On the death of his uncle, the Rev. Edward Bickersteth of Watton [q. v.], in 1850, he took up his work as an hon. secretary of the Irish Church Missions. He left Clapham for the living of St. Giles's-in-the-Fields, where he had a large congregation. In 1854 he was appointed canon residentiary and treasurer of the cathedral church of Salisbury. On the translation of Bishop Longley to the see of Durham in 1856 Bickersteth succeeded to the bishopric of Ripon, and was consecrated 18 June 1857. The bishop was a liberal in politics. He occasionally took part in the debates in the House of Lords. He opposed the disestablishment of the Irish church, and on 17 June 1869 spoke with considerable ability against the bill. He strongly advocated the legalisation of marriage with a deceased wife's sister. As long as his health allowed he was active in the discharge of his official duties. During his episcopate he consecrated 155 churches. The restoration of his cathedral church was begun in June 1862, and carried out at the cost of 40,000*l.* He preached constantly in different parts of his diocese, sometimes as often as three times in a single Sunday. Although he was not a total abstainer, he was zealous in promoting temperance. He was regarded as one of the leaders of the evangelical school, and was strongly opposed to the introduction of any ceremonies or doctrines not strictly in accord with the opinions of his party. At the same time his long episcopate seems to have been free from all actions at law on matters of ritual. During the last two years of his life he was disabled by sickness from active work, and some newspaper attacks were made on him for not resigning his see. As, however, eminent physicians assured him that he might hope to be restored to health, he did not see fit to resign. He died at his palace at Ripon 15 April 1884, leaving four sons and one daughter. Bishop Bickersteth published his speech on the Irish Church Disestablishment Bill, London, 1869, and several charges, sermons, lectures, tracts, and prefaces to books.

[Record, 18 April 1884; Leeds Mercury, 16 April 1884; Guardian, May 1883; private information.] W. H.

BICKERTON, SIR RICHARD (1727–1792), rear-admiral, son of a captain in the

4th dragoon guards, entered the navy in 1739, on the outbreak of the war with Spain. In the following year he was appointed to the Suffolk, of 70 guns, with Captain Davers, and sailed in her to the West Indies, to form part of the expedition against Cartagena in the spring of 1741. After more than two years in the Suffolk he was for a few months in the Stirling Castle in the Mediterranean; he was then appointed to the Channel station, with Sir Charles Hardy or Sir John Norris, in the St. George, Duke, and Victory. Fortunately for himself [see BALCHEN, Sir JOHN], he was early in 1744 appointed from the Victory to the Cornwall, of 80 guns, bearing the flag of his old captain, now Vice-admiral Davers, who was going out as commander-in-chief to the West Indies. Admiral Davers promoted him to a lieutenancy on 8 Feb. 1745-6, and he continued on the same station, in the Worcester, till the peace of 1748. In 1759 he commanded the Ætna fireship in the Mediterranean with Boscawen, by whom he was advanced to post rank on 21 Aug. after the destruction of M. de la Clue's squadron at Lagos. He was then appointed to the Glasgow frigate in the West Indies, and in 1761 to the Lively in the Channel. In 1767 he commanded the Renown in the West Indies; on the dispute about the Falkland Islands in 1770 he was appointed to the Marlborough, which he commanded for three years, and at the naval review, June 1773, steered the king's barge and received the honour of knighthood. For the next four years he commanded the Augusta yacht, and, when war with France was imminent in the spring of 1778, was appointed to the Terrible, of 74 guns, which he commanded in the battle of Ushant, 27 July. During the shameful summer of 1779, while the combined fleets of France and Spain swept the Channel, the Terrible was one of the fleet at Spithead under Sir Charles Hardy. In 1780 Bickerton commanded the Fortitude, of 74 guns, still in the Channel, under Admirals Geary and Darby, and assisted in the second relief of Gibraltar, April 1781. He was shortly afterwards appointed to the Gibraltar, 80, as commodore of the first class; and with six other ships of the line and two frigates under his orders, he sailed for the East Indies on 6 Feb. 1782. The squadron did not arrive on the station till the beginning of the following year, with many men sick of scurvy. They were, however, able to take part in the indecisive action off Cuddalore, 20 June 1783. Sir Richard returned to England in 1784, and in 1786 was appointed commander-in-chief at the Leeward Islands, with his broad pennant on board the Jupiter, from which he was superseded on his promotion to flag rank 24 Sept 1787. During the Spanish armament of 1790 he held a command in the fleet under Lord Howe, and hoisted his flag in the Impregnable, of 90 guns. He became a rear-admiral of the white on 21 September, and the dispute with Spain being arranged, he was appointed port-admiral at Plymouth, with his flag in the St. George. He was still holding that office when he died, of an apoplectic fit, 25 Feb. 1792.

He was created a baronet 29 May 1778, on the occasion of the king's visit to Portsmouth. From 1790 till his death he was member of parliament for Rochester. He married, in 1758, Mary Anne, daughter of Thomas Hussey, Esq., of Wrexham, and had issue two sons and two daughters.

[Charnock's Biog. Nav. vi. 349; Beatson's Naval and Military Memoirs (under date); Burke's Extinct and Dormant Baronetcies.]

J. K. L.

BICKERTON, Sir RICHARD HUSSEY (1759-1832), admiral, son of Vice-admiral Sir Richard Bickerton [q. v.], entered the navy in December 1771, on board the Marlborough, then commanded by his father. In the Marlborough, and afterwards in the Augusta yacht, he continued with his father till 1774, when he was appointed to the Medway, of 60 guns, flagship in the Mediterranean. Two years later he was transferred to the Enterprise frigate, and afterwards to the Invincible with Captain Hyde Parker. On 16 Dec. 1777 he was made lieutenant in the Prince George, commanded by Captain Middleton, afterwards Lord Barham. He followed Middleton to the Jupiter, of 50 guns, where he remained as first lieutenant with Captain Reynolds, who afterwards succeeded to the command. On 20 Oct. 1778 the Jupiter, in company with the Medea frigate, fell in with the French 64-gun ship Triton on the coast of Portugal. A brisk action followed (BEATSON, *Nav. and Mil. Memoirs*, iv. 441), in which both ships suffered severely; and though no particular advantage was gained on either side, the odds against the Jupiter were considered so great as to render her equal engagement equivalent to a victory. Her first lieutenant was accordingly promoted 20 March 1779, and appointed to the command of the Swallow sloop. After nearly two years' service in the Channel the Swallow was sent out to join Sir George Rodney in the West Indies; and on 8 Feb. 1781 Bickerton was posted into the Gibraltar. In the action between Hood and De Grasse off Martinique, 29 April 1781, he commanded the Invincible, and was soon afterwards sent

home in command of the Amazon frigate. From 1787 to 1790 he commanded the Sibylle frigate in the West Indies. By the death of his father in 1792 he succeeded to the baronetcy, and in 1793 commissioned the Ruby, 64, for service in the Channel. Towards the end of 1794 he was transferred to the Ramillies, in which he went to the West Indies and Newfoundland, returning in the end of 1795 to form part of the North Sea fleet, in 1796, under Admiral Duncan, and of the Channel fleet in 1797 under Lord Bridport. In 1798 he commanded the Terrible, still in the Channel fleet, and attained the rank of rear-admiral 14 Feb. 1799. In the autumn of the same year he hoisted his flag at Portsmouth as assistant to the port-admiral; in May 1800 he was sent out to the Mediterranean, and, with his flag on board the Swiftsure, had the immediate command of the blockade of Cadiz until joined by Lord Keith in October. During the following year, with his flag in the Kent, he was employed on the coast of Egypt, conducting the blockade in the absence of the commander-in-chief, and afterwards superintending the embarkation of the French army. For his services at this time he was rewarded by the sultan with the order of the Crescent, with the insignia of which he was ceremoniously invested by the capitan pasha 8 Oct. 1801. During the short peace he remained in the Mediterranean as commander-in-chief, and, on the renewal of the war, as second in command under Lord Nelson, with whom he served, during 1804 and the early months of 1805, in the blockade of Toulon. In May, when Nelson sailed for the West Indies, Bickerton, with his flag in the Royal Sovereign, was left in command (*Nelson Despatches*, vi. 421), but soon afterwards took office at the admiralty, where he continued till 1812, when he was appointed commander-in-chief at Portsmouth. He was M.P. for Poole (1807–12). His active service ended after the grand review in 1814, at which he commanded in the second post under the Duke of Clarence. He attained the rank of vice-admiral 9 Nov. 1805, of admiral 31 July 1810, was made K.C.B. 2 Jan. 1815, lieutenant-general of marines 5 Jan. 1818, and succeeded William IV as general of marines in June 1830. In 1823 he assumed, by royal permission, the name of Hussey before that of Bickerton. He married, in 1788, Anne, daughter of Dr. James Athill, of Antigua, but had no children, and on his death, 9 Feb. 1832, the baronetcy became extinct.

J. K. L.

BICKHAM, GEORGE, the elder (*d.* 1769), writing-master and engraver, was born about the end of the seventeenth century. He was the most celebrated penman of his time, and published in 1743 a folio volume entitled 'The Universal Penman . . . exemplified in all the useful and ornamental branches of modern Penmanship, &c.; the whole embellished with 200 beautiful decorations for the amusement of the curious.' He also practised engraving, but his productions in this department had little merit. He engraved Rubens's 'Peace and War' and 'Golden and Silver Ages;' 'Philosophy,' a large plate from his own design; a few portraits, including those of Sir Isaac Newton, Bishop Blackall, Stephen Duck the poet, and George Shelly, John Clark, and Robert More, writing-masters; the plates to 'British Monarchy, or a new Chorographical Description of all the Dominions subject to the King of Great Britain,' 1748; and those to 'The Beauties of Stow,' 1753. Bickham was a member of the Free Society of Artists, and exhibited with them from 1761 to 1765. His stock-in-trade, plates, &c., were sold by auction in May 1767, and he died at Richmond in 1769.

[Walpole's Anecdotes of Painting (Wornum), p. 969; Strutt's Biog. Dict. of Engravers (1785); Bryan's Dictionary of Painters and Engravers (ed. Graves), 1885; Redgrave's Dictionary of Artists (1878); MS. notes in British Museum.]

L. F.

BICKHAM, GEORGE, the younger (*d.* 1758), engraver, son of George Bickham (*d.* 1769), [q. v.], was one of the earliest political caricaturists, and executed many of the humorous designs published by Messrs. Bowles. He engraved 'A View and Representation of the Battle of Zenta, fought 11 Sept. 1696,' and 'The Description of the Loss of his Majesty's Ship the Northumberland, taken by the French, 8 May 1744;' also many head-pieces for songs, portraits of himself and his father, and that of Serjeant Thomas Barnardiston [q. v.] The younger Bickham was the author of 'An Introductive Essay on Drawing, with the Nature and Beauty of Light and Shadows,' &c., 1747. He died in 1758.

[Strutt's Biog. Dict. of Engravers (1785); Redgrave's Dictionary of Artists (1878); MS. notes in British Museum.]

L. F.

BICKLEY, THOMAS, D.D. (1518–1596), bishop of Chichester, was born at Stow, in Buckinghamshire, and began his education as a chorister in the free school of Magdalen College, Oxford. He afterwards became demy, and in 1541 was elected a fellow of the

college. He acquired considerable reputation as a reformer and preacher of reformed doctrine, and soon after the accession of Edward VI was appointed one of the king's chaplains at Windsor. It is hard, however, to believe a story told by Fuller (*Worthies*, p. 131), that, to show his contempt for the doctrine of transubstantiation, he on one occasion broke the Host in pieces in the college chapel at evening prayers and trampled it under his feet. Anyhow, he was too notable a man to stay with safety in the country during the reign of Mary, and accordingly he retired to France, where he spent most of his time in study at Paris and Orleans. Returning to England after the accession of Elizabeth, he enjoyed rapid promotion, being made, within ten years, chaplain to Archbishop Parker, rector of Biddenden in Kent, of Sutton Waldron in Dorsetshire, archdeacon of Stafford (1567), chancellor in Lichfield Cathedral (1560), and warden of Merton College, Oxford (1569).

He was made bishop of Chichester in 1585, consecrated at Lambeth 30 Jan. (1585-6), and enthroned by proxy 3 March. He was diligent in discharging the duties of his office, and was much respected and beloved in the diocese. Some of the returns to articles of inquiry made at his visitations have been preserved amongst the episcopal records, and supply curious information respecting the condition of the church at that time. The altars had, as a rule, been moved out from the east end, and complaints are numerous that 'the floor was not paved where the altar had stode.' The walls of all churches were required to be 'whyted and beautyfied with sentences from Holy Scripture.' A quarterly sermon from the parish parson was considered a sufficient allowance; but even this was not always regularly given, and in some parishes it is stated that there had not been any sermon for a year or more. Bickley died 30 April 1596, and was buried in the cathedral on 26 May, when 'his body was accompanied to the earthe with dyverse woorshipfull persons' (note in Heralds' Office; KENNETT). He bequeathed 40*l.* to Magdalen College, to be expended on ceiling and paving the school, and 100*l.* to Merton for the purchase of land, the revenue of which was bestowed annually on one of the fellows who preached a sermon to the university on May day in the college chapel.

A tablet to Bickley's memory is attached to the north wall of the lady chapel in Chichester Cathedral. The inscription (in Latin) states that he administered his diocese 'piously and religiously, with sobriety and sincerity, the highest justice and singular prudence.' The tablet is surmounted by a small kneeling effigy of the bishop, 'which shows him,' says Wood, 'to have been a comely and handsome man.' If so, ideas of manly beauty must have changed very much since Wood's time.

[Fuller's Worthies, p. 131; Wood's Athenæ Oxon. ii. 839; Bickley's Register in Chichester Cathedral; Lansd. MSS. 982, f. 238.]

W. R. W. S.

BICKNELL, ALEXANDER (*d.* 1796), author, was an industrious littérateur of the last quarter of the eighteenth century, whose writings received their due meed of ridicule or faint praise in the 'Monthly Review,' and are now forgotten. He died 22 Aug. 1796 in St. Thomas's Hospital, London.

He published the following books and pamphlets: 1. 'History of Edward Prince of Wales, commonly termed the Black Prince,' 8vo, 1777. 2. 'Life of Alfred the Great, King of the Anglo-Saxons,' 8vo, 1777. 3. 'The Putrid Soul, a Poetical Epistle to Joseph Priestley, LL.D.,' 4to, 1780. 4. 'The Patriot King, or Alfred and Elvida, an Historical Tragedy,' 8vo, 1788. 5. 'History of Lady Anne Neville.' 6. 'Isabella, or the Rewards of Good Nature.' 7. 'The Benevolent Man, a Novel.' 8. 'Prince Arthur, an Allegorical Romance.' 9. 'Doncaster Races, or the History of Miss Maitland, a True Tale, in a series of letters,' 2 vols. 12mo, 1790. 10. 'A History of England and the British Empire,' 12mo, 1791. 11. 'The Grammatical Wreath, or a Complete System of English Grammar,' 12mo, 1790. 12. 'Instances of the Mutability of Fortune, selected from Ancient and Modern History,' 8vo, 1792. 13. 'Philosophical Disquisitions on the Christian Religion, addressed to Soame Jenyns, Esq., and Dr. Kenrick.' It is stated on the title-page of No. 9 that Bicknell edited Captain J. Carver's 'Travels through the Interior Parts of North America,' 8vo, 1778, and Mrs. George Anne Bellamy's 'Apology for her Life,' 6 vols. 12mo, 1785.

[Monthly Review, vols. lvii. lviii. lxiii. lxxviii., New Series, ii. iv. v. ix.; Gent. Mag.; Watt's Bibl. Brit.]

C. W. S.

BICKNELL, ELHANAN (1788-1861), patron of art, was born 21 Dec. 1788, in Blackman Street, London, being the son of William Bicknell, serge manufacturer there, and of Elizabeth Bicknell, previously a Miss Randall, of Sevenoaks, Kent. Elhanan Bicknell's father had been partly educated at Wesley's school at Kingswood, Bristol, and always entertained John Wesley in Blackman Street when he came to preach at Snow's

Fields. Another divine among the most cherished friends of Elhanan's parents at this time, after whom he was named, was Elhanan Winchester, author of 'Universal Restoration' (*Christian Reformer*, xviii. 56). William Bicknell bought the copyright of this work in the year of his son Elhanan's birth, and on finding that his bargain was profitable, he generously surrendered it to the author in 1789, with a characteristic letter (*ibid.*) Elhanan Bicknell was educated by his father, who, having established a school at Ponder's End in 1789, when Elhanan was an infant, removed it to Tooting Common in 1804; and there, among Elhanan's schoolfellows, was Thomas Wilde, afterwards Lord Chancellor Truro. In 1808 Elhanan was sent to Cause, near Shrewsbury, to learn farming; but at the end of a year this project was abandoned. He returned to London and joined a firm at Newington Butts, engaged in the sperm whale fishery, into which, for over half a century, he threw all his active energies and financial aptitude. About 1835 he foresaw how the repeal of the navigation laws, then in agitation, would injure his individual trade, yet he magnanimously supported the movement, together with the abolition of all protection; and when the inevitable crippling of his undertakings and his income came, he cheerfully accepted it. In 1838, having occupied his residence at Herne Hill, Surrey, since 1819, Bicknell commenced there his magnificent collection of pictures, all of the modern British school. In the course of twelve years, 1838-50, he became the possessor of masterpieces of Gainsborough, Turner, Roberts, Landseer, Stanfield, Webster, Collins, Etty, Callcott, &c. (Waagen, *Treasures of Art*, ii. 359; *Art Journal*, 1862, p. 45); and, in default of a gallery, these splendid works, with many pieces of sculpture, such as Baily's 'Eve,' enriched all the principal apartments of his house, and were always hospitably open to the inspection of art connoisseurs. Bicknell, moreover, became acquainted with artists themselves, as well as with their works; he was munificent in his payments, and generously entertained them. Bicknell had bought many of Turner's best works before Mr. Ruskin's advocacy had made their beauties known. He had a strong desire to leave his collection to the nation; but for family reasons his pictures, which numbered 122 at his death, were eventually sold at Christie's auction rooms, realising a sum little short of 80,000*l.* (*Times*, 27 April 1863). The Marquis of Hertford bought about one-third for his own gallery.

In politics and in theology Elhanan Bicknell was an ardent and advanced liberal. He supported unitarianism consistently and warmly, was a principal contributor to the building of the unitarian chapel at Brixton, and gave 1,000*l.* to the British and Foreign Unitarian Association (*Inquirer*, 7 Dec. 1861, p. 895). His remarkable business powers, which were recognised on all sides, led to his being invited to become a partner in the great firm of Maudslay, the eminent engineer, but this offer was declined. In 1859 his health began to fail, and he retired from business. He passed the rest of his time at Herne Hill, where he died 27 Nov. 1861, aged 72 (*Inquirer*, 30 Nov. 1861). He was buried at Norwood.

In 1829 Bicknell married Lucinda Browne, a sister of Hablot Knight Browne ('Phiz'). He left a large family by this and a previous marriage, and several of his sons (one of whom married the only child of David Roberts, R.A.), in succeeding to his fortune, have made names for themselves in the various departments of art patronage, travel, and reform, in which he himself took such constant delight.

[Waagen's Treasures of Art in Great Britain, i. 36, ii. 349; Christian Reformer, xviii. 55 et seq.; Inquirer, 1861, p. 895; Art Journal, 1862, p. 45; Athenæum, 7 Dec. 1861; Times, 27 April 1863; private information.] J. H.

BICKNELL, HERMAN (1830-1875), author, orientalist, and traveller, third son of Elhanan Bicknell [q. v.], born at Herne Hill 2 April 1830, received his education at Paris, Hanover, University College, and St. Bartholomew's Hospital. After taking his degree at the College of Surgeons in 1854, and passing the military medical examination, he joined the 59th regiment at Hong Kong in 1855 as assistant surgeon, whence he was transferred, in 1856, to the 81st regiment at Mianmír, Lahore. Whilst serving four years in India, throughout the period of the great mutiny, he assiduously studied oriental dialects, at intervals exploring portions of Java, Thibet, and the Himalayas. On returning to England, by the Indus and Palestine, he exchanged into the 84th regiment, and was soon placed on the staff at Aldershot, but speedily resigned his commission, that he might devote himself entirely to travel and languages. From this period he undertook many journeys of various duration and difficulty, extending from the Arctic regions to the Andes of Ecuador, and from America to the far East, more especially with the object of improving himself in ethnology, botany, and general science. In 1862 he started from London in the assumed character of an English Mohammedan

gentleman, and, without holding intercourse with Europeans, proceeded to Cairo, where he lived for a considerable period in the native quarter of the city. By this time so intimately acquainted had he become with the habits and manners of Islám, that in the spring of the same year he boldly joined the annual pilgrimage to the shrine of Mohammed at Mecca, and successfully accomplished a dangerous exploit which no other Englishman had achieved without disguise of person or of nationality. In 1868 he passed by Aleppo and the Euphrates to Shiráz, where he resided some months in 1869, employed in making himself thoroughly acquainted with the scenes and life of Persia, in order to carry out more efficiently the great work of his life, a metrical and literal translation of the chief poems of Háfiz, which, during fifteen years, had been under revision. But on 14 March 1875, before the manuscripts had received their final corrections, his life was abruptly terminated by disease, induced or hastened by the wear of constant change of climate, exposure in mountain exploration, and by an accident in an attempt to ascend the Matterhorn. He died in London, and was buried at Ramsgate. As a traveller he had great powers of endurance, he was a fair draughtsman, and as a linguist of unsurpassed ability; his varied accomplishments being also united with the happiest power of lucidly explaining the most abstruse theories of metaphysics and etymology, which his extensive reading had mastered. Besides the translation of Háfiz (posthumously issued) he published a few pamphlets.

[Bicknell's Háfiz of Shiráz, 4to, 1875; Times, 25 Aug. 1862; reviews in periodical literature, December 1875 to September 1876; private information.] A. S. B-L.

BICKNELL, M— (1695?–1723), actress, was sister of Mrs. Younger, an actress, who survived her some years. Mrs. Younger informed Mrs. Saunders, a well-known actress who had for some years quitted the stage, that her father and mother, James and Margaret Younger, were born in Scotland; that the former rode in the third troop of the Guards, and served several years in Flanders under King William, and that the latter was a Keith, 'nearly related to the late earl marshall.' The letter giving these facts is written from Watford to the author of the 'History of the English Stage,' obviously in response to a request for information, and is dated 22 June 1736. It does not appear whether the name of Bicknell, which is frequently written Bignell, was taken for the purpose of distinguishing the bearer from her sister, or whether it is that of a husband. On 7 Nov. 1706 we first hear of Mrs. Bicknell playing, at the Haymarket, 'Edging, a Chambermaid,' in 'The Careless Husband' of Cibber, her associates including Wilks, Cibber, Mrs. Oldfield, and Mrs. Barry. Subsequent years saw her appear as Miss Prue in Congreve's 'Love for Love,' Miss Hoyden in the 'Relapse' of Vanbrugh, Melantha (the great rôle of Mrs. Mountfort) in 'Marriage à la Mode,' and other characters of which sauciness and coquetry are the chief features. Her name appears to a petition signed by Barton Booth and other actors of Drury Lane Theatre, presented apparently about 1710 to Queen Anne, complaining of the restrictions upon the performances of the petitioners imposed by the lord chamberlain. She remained at Drury Lane from 1708 to 1721, on 14 Feb. of which year she 'created' the character of Lady Wrangle in Cibber's comedy, the 'Refusal.' Her last recorded appearance was on 2 April 1723. The 'Daily Journal' of 25 May following announces her death from consumption. Steele had a high opinion of her. In the 'Tatler' for 5 May 1709 he calls her pretty Mrs. Bignell, and in that for 16 April previous he says that in the 'Country Wife' she 'did her part very happily, and had a certain grace in her rusticity, which gave us hopes of seeing her a very skilful player, and in some parts supply our loss of Mrs. Verbruggen.' In the 'Spectator' for Monday, 5 May 1712, he talks of her 'agreeable girlish person,' and her 'capacity of imitation,' and in the 'Guardian' for 8 May 1713 he calls her his friend, and gives a singularly pleasant picture of her winning ways. Her signature to the petition mentioned above is M. Bicknell, suggesting that her name might be Margaret, like her mother.

[Genest's English Stage; History of the English Stage (Curll), 1741; Davies's Dramatic Miscellanies; Chalmers's British Essayists, vols. i., xi., 16.] J. K.

BICKNOR or BYKENORE, ALEXANDER (*d.* 1349), archbishop of Dublin, was prebendary of Maynooth and treasurer of Ireland, when in 1310 he was elected to the archbishopric by the two cathedral chapters of Dublin on the resignation of Ferings. His election, however, was set aside by Edward II in favour of Lech. On the death of Lech in 1313 Walter Thornbury was elected, but died before consecration; and on 29 Jan. 1314 Bicknor received a letter from the king to Clement V asking that his election might be confirmed, and stating that he was well spoken of by Richard de Burgh, earl of Ulster, and other nobles of Ireland (*Fœdera*, ii. 408). Being employed on the king's

business, he was for some time unable to go to Rome; nor was it until 22 July 1317 that he was consecrated by Nicolas of Prato, cardinal of Ostium. The next year he was made lord justice of Ireland, and, after receiving this appointment, visited Dublin and was enthroned. He received a summons to the English parliament, though by what right does not appear (*First Report on the Peerage*, 276); and on 24 Sept. of the same year joined the Archbishop of Canterbury and the Bishop of Winchester in publishing the excommunication of Robert Bruce in a consistorial court held at St. Paul's (*Ann. Paul.* 283). That he had some care for the welfare of his province is evident from his foundation of a college in St. Patrick's church in 1320. This foundation was confirmed by John XXII, but the scheme fell through for lack of students (Ware; D'Alton). About the same time he made the church of Inisboyne a prebend of St. Patrick's. In 1323 he was sent on an embassy to France, in company with Edmund, earl of Kent, the king's brother. Their mission was unsuccessful (*Ypodigma Neustriæ*, 258). Again the next year he went with the earl to negotiate peace with France, and to treat for the marriage of the Prince of Wales with a daughter of the King of Aragon (*Fœdera*, iii. 45; *Ann. Paul.* 307). On his return the king accused him of causing the surrender of La Rozelle in Aquitaine. It was probably during his stay in France that he was persuaded to join the plan that was formed there for the overthrow of the Despensers, for in May 1325 the king wrote to Pope John setting forth his causes of complaint against him, declaring that he was an enemy of his minister, the younger Despenser, and that he had wasted the revenues of Ireland, and praying the pope to remove him (by translation) from the kingdom (*Fœdera*, iii. 152). When Queen Isabella returned to England in 1326, Bicknor joined her party, and united with other prelates and barons in declaring the Prince of Wales guardian of the kingdom in an assembly held at Bristol in October. In January he took the oath administered in the Guildhall to maintain the cause of the queen. The next year the see of Dublin was in the king's hands, the revenues being seized probably in order to insure a settlement of the accounts of Bicknor's financial administration. In 1330 the archbishop was appointed papal collector. About this time he sheltered certain persons who were prosecuted as heretics by Richard, bishop of Ossory. The bishop complained to the king; but Edward, instead of taking his part, kept him in exile for nine years. During his absence, the archbishop, in 1335, held a visitation in Ossory, and seized the revenues of the see, until the pope suspended his metropolitical power over the diocese. On 13 July 1338 he was present at the consecration of Richard Brintworth to the see of London. He is said to have preached a sermon in Christ Church, Dublin, against the swarms of beggars who infested the city, which stirred up the mayor to take measures to put down the evil. He built the bishop's house at Taulaght. In 1348 he presided at a synod held at Dublin, in which several important decrees were made concerning ecclesiastical discipline and government. During the last years of his life he was engaged in a dispute with Ralph, archbishop of Armagh, concerning the right to the primacy of Ireland. He died in 1349.

[D'Alton's Archbishops of Dublin; Sir James Ware's Antiquities of Ireland; Rymer's Fœdera, ed. 1704; Annales Paulini ap. Materials for the Hist. of Edw. I and Edw. II, ed. Stubbs (Rolls Ser.); Stubbs's Constitutional History, ii. 360.] W. H.

BIDDER, GEORGE PARKER (1806–1878), the rapid calculator and engineer, was born at Moreton Hampstead, a village on the borders of Dartmoor, where his father was a stonemason. As a child he showed a most extraordinary power of mental calculation, a power in which he was equalled by few and perhaps surpassed by none who have ever lived. He was about six years of age when he first commenced the study of figures, by learning to count up to ten. His instructor was an elder brother, and the instruction ceased when he could count up to one hundred. The gradual steps by which he acquired his powers of calculation, and the system on which he worked, are fully given in a paper read by him in 1856 before the Institution of Civil Engineers. In this paper, without disclaiming for himself special powers, he went so far as to assert that mental arithmetic could be taught as easily as ordinary arithmetic, and that its practice required no extraordinary powers of memory. From the account he gave it appeared that his own powers were only limited by the power of registering the various steps of a calculation as he proceeded, but that this ability of registration was carried to a point very far beyond the limits of an ordinary mind. It may probably be assumed without much question that he possessed in a great degree the faculty of 'visualising' numbers, first recognised by Mr. Francis Galton, and that this faculty gave him his wonderful

command over figures. His son and his grandchildren possess this visualising power, and they also inherit considerable calculating abilities. A study of Bidder's system, partly natural and partly elaborated, cannot fail to be of value to all who wish to improve their calculating powers; but the power with which he used it will not readily be rivalled.

The lad's peculiar talents, evinced by the rapidity with which he answered arithmetical questions requiring the performance of intricate calculations, soon drew public attention to him, and his father found it more profitable to carry him about the country and exhibit him as the 'calculating phenomenon' than to leave him at school. Fortunately for him his powers attracted the attention of several eminent men, by whom he was placed at school, first at Camberwell, and afterwards at Edinburgh. His education was completed at the university of Edinburgh, where, in 1822, he obtained the prize given for the study of the higher mathematics by the magistrates of Edinburgh. It is pleasant to note that many years afterwards, in 1846, Bidder founded a bursary or scholarship for poor students of 40*l.* a year, which he named the 'Jardine Bursary,' in joint recognition of the university where he had obtained his education, and of the eminent man by whose influence he had been sent thither. After a brief employment in the Ordnance Survey and a still briefer trial of a clerkship in the office of a life assurance company, he took regularly to engineering. He was employed on several works of more or less importance, and became associated with Robert Stephenson in 1834 in the London and Birmingham railway. A year or so later this brought him into parliamentary work, and here he soon found full scope for his marvellous powers of calculation. He could work out on the instant, and in his head, calculations which would take most men a considerable time and require the use of paper and pencil. He was never disconcerted, and he was always minutely accurate. So great did his reputation soon become that on one occasion an opposing counsel asked that he should not be allowed to remain in the committee-room, on the ground that 'nature had endowed him with qualities that did not place his opponents on a fair footing.' Numerous stories are still extant, attesting the skill with which he would detect a flaw in some elaborate set of calculations, thereby upsetting an opponent's case, or would support his own conclusions by an argument based on mathematical data, possibly only then put before him. Probably nowhere else could he have found so suitable a field for the exercise of his peculiar talents as in a parliamentary committee-room. Bidder was also much employed in the practice of his profession, and as engineer constructed numerous railways and other works at home and abroad. The Victoria Docks (London) are considered one of his chief constructive works, and, after railway matters, hydraulic engineering principally engaged his attention. But he was more or less interested in a large proportion of the subjects coming within the wide range of engineering science. He was the originator of the railway swing bridge, the first of which was designed and erected by him at Reedham on the Norwich and Lowestoft Railway; he was one of the founders of the Electric Telegraph Company (the first company formed to provide telegraphic communication), and was associated in many other great engineering works. He was president of the Institute of Civil Engineers 1860–2. He died at Dartmouth on 20 Sept. 1878, and was buried in the churchyard of Stoke Fleming. His son, George Parker Bidder (1836–1896), a Q.C. (1874) and bencher of Lincoln's Inn, and writer on cryptography, died in Westminster on 1 Feb. 1896 (*Times*, 3 Feb. 1896).

[A very full life is given in the Proc. Inst. C.E. lvii. 294; other interesting details will be found in the paper on Mental Calculation, ibid. xv. 251.] H. T. W.

BIDDLE, JOHN (1615–1662), unitarian, son of Edward Biddle, tailor or woollen-draper, of Wotton-under-Edge, Gloucestershire, was baptised on 14 Jan. 1615. He early showed great promise. He was fortunate enough to come under the notice of George, eighth Lord Berkeley, who allowed him, with other scholars, an annual exhibition of ten pounds, though he was not yet ten years old. 'He was educated,' says Wood, 'in grammar-learning in the free school, by John Rugg and John Turner, successive teachers.' Under the latter he 'outran his instructors, and became tutor to himself.' While still a schoolboy he 'english'd' 'Virgil's Bucolics and the two first Satyrs of Juvenal.' These were printed in 1634, and dedicated to 'John Smith, Esq., of Nibley,' Gloucestershire, and the 'Mecænas of the Wottonian muses.' He likewise 'compos'd and recited before a full auditory,' in the beginning of 1634, 'an elaborate oration in Latin for the funeral of an honourable schoolfellow.' He was a dutiful son to his mother who was left a widow in straitened circumstances at this period.

He proceeded in 1634 to Oxford, and was entered a student of Magdalen Hall. 'And for a time,' says Anthony à Wood, 'if I

mistake not, was put under the tuition of John Oxenbridge, a person noted to be of no good principles.' In his college, an early biographer informs us, 'he did so philosophize, as it might be observed, he was determined more by reason than authority; however, in divine things he did not much dissent from the common doctrine, as may be collected from a little tract he wrote against dancing.'

On 23 June 1638 he passed B.A., and then became an eminent tutor in his college. On 20 May 1641 he proceeded M.A. Before this date he had been 'invited to take upon him the care of teaching the school wherein he had been educated' (*Athenæ Oxon.*) Soon after the magistrates of Gloucester, 'upon ample recommendations from the principal persons in the university,' chose him 'master of the free school in the parish of St. Mary le Crypt in that city.' He accepted this appointment, and 'he was much esteemed for his diligence in his profession, serenity of manners, and sanctity of life.' 'At length,' says Wood, 'the nation being brought into confusion by the restless presbyterians, the said city garrison'd for the use of the parliament, and every one vented his or their opinions as they pleased, he began to be free of his discourses of what he studied there at leisure hours concerning the Trinity, from the Holy Scriptures, having not then, as he pretended, convers'd with Socinian books. . . . But the presbyterian party, then prevalent, having notice of these matters, and knowing well what mischief he might do among his disciples, the magistrate summon'd him to appear before him; and after several interrogatories, a form of confession under three heads was proposed to him to make, which he accordingly did 2 May 1644, but not altogether in the words proposed. Which matter giving them no satisfaction, he made another confession in the same month, more evident than the former, to avoid the danger of imprisonment which was to follow if he did deny it.'

The matter seemed to have blown over, and Biddle quietly pursued his study in Holy Scripture. His manuscript—which ultimately he meant to print and publish—containing a statement of his religious opinions, was treacherously obtained by a supposed friend. The parliamentary commissioners were then sitting in Gloucester, and were put in possession of his manuscript on 2 Dec. 1645. The commissioners read his 'Arguments,' and forthwith committed their author to the common gaol till opportunity should offer of bringing his case before the House of Commons. A local gentleman interposing on his behalf, and becoming bail for him, he was allowed out 'on condition of his appearing before parliament when required, to answer any charges which might be brought against him.'

In June 1646 Archbishop Ussher, passing through Gloucester on his way to London, held a conference with the bailed prisoner of state, but could not convince him of his errors. The great prelate 'spoke to and used him with all fairness and pity, as well as strength of argument,' and it must be added with all respect; 'for the truth is,' observes Anthony à Wood, 'except his opinions there was little or nothing blameworthy in him.'

About six months after he had been liberated on bail, he was cited to Westminster to make his defence. The parliament appointed a committee to examine him. He admitted that he did not believe in the Divinity of the Holy Ghost, and expressed his readiness to discuss the subject with any theologian whom they might appoint. There was delay, and Biddle desired Sir Henry Vane of the committee to see that his cause might be heard or he be set at liberty. Vane proposed this on the floor of the house, and otherwise showed a friendliness to Biddle which did not improve his prospects. Biddle therefore boldly published 'Twelve Questions or Arguments drawn out of Scripture, wherein the commonly received Opinion touching the Deity of the Holy Spirit is clearly and fully refuted,' 1647. Prefixed is a letter to Vane, and at the end 'An Exposition of five principal Passages of the Scripture alledged by the Adversaries to prove the Deity of the Holy Ghost.' Called to the bar of the house, he owned the book, and was remanded to prison, and on 6 Sept. 1647 the 'Twelve Arguments' was ordered to be burnt by the hangman as being blasphemous.

The 'Twelve Arguments' attracted great attention, and was reprinted in the same year. It was answered by Matthew Poole in his 'Plea for the Godhead of the Holy Ghost,' subsequently enlarged. The letter to Vane is able and dignified. Nicholas Estwick, B.D., and others, exposed mistakes of fact in the book, but Biddle, who read all, would not admit that he was confuted.

On 2 May 1648 an ordinance was passed that inflicted the penalty of death upon those who denied the doctrine of the Trinity. None the less Biddle published in the same year his 'Confession of Faith touching the Holy Trinity according to Scripture,' and in quick succession 'The Testimonies of Irenæus, Justin Martyr, Tertullian, Novatianus, Theophilus, Origen (who lived in the first two centuries after Christ was born or thereabouts), as also of Arnobius, Lactantius, &c., concerning that One God and the Persons of

the Trinity, with observations on the same. Upon the publication of the 'Testimonies' the assembly of divines sitting at Westminster made their appeal to the parliament that he might suffer death. The divines had given him up as hopelessly unconvertible. Dr. Peter Gunning, indeed, visited him still, but with no success. But parliament did not confirm the divines' appeal. He never was brought to trial, and at length personal friends united, and one of their number once more procured his liberation 'by becoming surety for his appearance whenever he might be called upon.' He went down with a friend to Staffordshire, and not only became his chaplain, but also a preacher in a church there. Tidings of these things having been conveyed to the lord president Bradshaw, Biddle was once more apprehended and closely confined. Almost contemporaneously his Staffordshire benefactor died, and left him a small legacy. This was 'soon devoured by the payment of prison fees,' and he was left in utter indigence. His chief support, it is pathetically recorded, consisted of 'a draught of milk from the cow every morning and evening.'

Relief came unexpectedly. A learned man, who knew his competency, recommended him as a corrector of the press to Roger Daniel, printer, who was about to publish an edition of the Septuagint. This and other like literary employment enabled him, while it lasted, to procure a comfortable subsistence. Thomas Firmin dared to deliver also at this time to Cromwell a petition for his release from Newgate. Bishop Kennet thus reports the Protector's answer: 'You curl-pate boy, do you think I'll show any favour to a man who denies his Saviour, and disturbs the government?' (*Register and Chronicle*, p. 761).

On 10 Feb. 1652, by the will of Oliver, the parliament passed a general act of oblivion. This restored Biddle and many others to their full liberty. The first use which he made of his recovered freedom was 'to meet each Lord's day those friends whom he had gained in London, and expound the Scriptures to them.' He is also alleged to have translated and published at home and in Holland a number of Socinian books. It is very uncertain which were really translated by him. He further organised a conventicle, and conducted public worship.

In 1654 he again laid himself open to legal penalties. He published now 'A Twofold Catechism, the one simply called A Scripture Catechism, the other A Brief Scripture Catechism for Children.' Complaint was made of these catechisms in parliament. Early in December 1654 the author was placed at the bar of parliament and asked whether he wrote the books. He replied by asking whether it seemed reasonable that one brought before a judgment-seat as a criminal should accuse himself. After debate and resolutions, he was on 13 Dec. 'committed a close prisoner to the Gatehouse and forbidden the use of pen, ink, and paper, or the access of any visitant; and all the copies of his books which could be found were ordered to be burnt.'

This resolution was carried out on the following day, and a bill afterwards ordered to be brought in for punishing him. But after about six months' imprisonment he obtained his liberty at the court of the Upper or King's Bench, 28 May 1655. He was only out a month when he was entangled in a disputation with one John Griffin, pastor of a baptist church. Griffin was illiterate, and could not possibly have held his own against Biddle. But instead of mere disputation the law was invoked, an information was lodged against Biddle, and he was apprehended, and put first into the Poultry Compter and then into Newgate. At the next sessions he was indicted at the Old Bailey under the obsolete and abrogated ordinance called the 'Draconick ordinance,' which had been passed on 2 May 1648, but had never acquired the force of law. At first the aid of counsel was denied him, but after a time, on putting in a bill of exceptions, his request was complied with, and the trial was fixed for the next day. But Cromwell interposed his authority and put a stop to the proceedings. A miserable tangle ensued. The upshot of the whole was that, as the lesser of two evils, he was 'banished to the Scilly Islands 5 Oct. 1655, to remain in close custody in the castle of St. Mary's during his life.' On the day previous (4 Oct.) there came out 'Two Letters of Mr. John Biddle, late Prisoner in Newgate, but now hurried away to some remote Island. One to the Lord Protector, the other to the Lord President Lawrence, 1655.' He expressly separates himself from Socinus as to the personality of the Holy Spirit.

The Protector allowed him 100 crowns per annum. He remained in prison until 1658. In the interval many means were taken to obtain his release. Calamy interceded. Baptist ministers interceded. He himself wrote with pathos and power. At length, through the intercession of many friends, he was conveyed from St. Mary's Castle by *habeas corpus* to the Upper Bench at Westminster, and, no accuser appearing, he was discharged by Lord Chief Justice Glynn.

Hereupon with alacrity he re-founded a 'society on congregational principles, and

resumed his long suspended classes among his friends.' Thus he continued until Cromwell's death on 3 Sept. following. Before the parliament summoned by Richard Cromwell met, he was advised to retire into the country by, it is believed, the lord chief justice. It was a prudent step, though he was reluctant to assent. A committee was appointed by the house to examine into the state of religion, and one of its first acts was to institute an inquiry into his liberation. The matter subsided. He ventured back to London. But on 1 June 1662 he was seized in his lodging 'with a few of his friends who were assembled for divine worship, and carried before a justice of the peace, Sir Richard Brown.' They were 'all sent to prison without bail.' The trial lingered. At last he was brought in guilty and fined 'one hundred pounds, and to lie in prison till paid; and each of his hearers in the sum of twenty pounds.' In less than five weeks after the sentence, the closeness of his imprisonment and the foulness of the air brought on a disease which terminated fatally. Sir Richard Brown refused any mitigation of the prison rules in his favour; but the sheriff, whose name was Meynell, granted permission for him to be removed 'into a situation more favourable to his recovery.' The indulgence came too late. In less than two days he died 'between the hours of five and six on the morning of 22 Sept. 1662, in the forty-seventh year of his age.'

B. G.

BIDDLECOMBE, Sir GEORGE (1807-1878), captain and author, born at Portsea on 5 Nov. 1807, was the son of Thomas Biddlecombe of Sheerness Dockyard, who died on 12 Sept. 1844. He was educated at a school kept by Dr. Neave at Portsea, and joined the ship Ocean of Whitby as a midshipman in 1823. After some years he left the mercantile marine, and, passing as a second master in the royal navy in May 1828, was soon after employed in surveying in the Ætna and the Blonde until 1833. He was in active service in various ships from this date until 1854, being specially noted for the great skill which he displayed in conducting naval surveys in many parts of the world. Whilst in the Actæon, in 1836, he surveyed a group of islands discovered by her in the Pacific. When attached to the Talbot, 1838-42, he surveyed numerous anchorages on the Ionian station, in the Archipelago, and up the Dardanelles and Bosphorus; examined the south shore of the Black Sea as far as Trebizond, as well as the port of Varna, and prepared a survey, published by the admiralty, of the bays and banks of Acre. He also displayed much skill and perseverance in surveying the Sherki shoals, where he discovered many unknown patches. A plan which he proposed for a 'hauling-up slip' was approved of by the authorities, and money was voted for its construction. For his survey of Port Royal and Kingston he received the thanks of the common council of Kingston, and on 20 Aug. 1843, on the occurrence of a destructive fire in that town, the services rendered by Biddlecombe at imminent risk to himself obtained for him a letter of acknowledgment from the merchants and other inhabitants. Few officers saw more active service. As master of the Baltic fleet, 14 March 1854, he reconnoitered the southern parts of the Aland islands, Hango Bay, Baro Sund, and the anchorage of Sweaborg, preparatory to taking the fleet to those places. He conducted the allied fleets to Cronstadt, and taking charge in Led Sund of the Prince steamer, with upwards of 2,000 French troops on board, he carried that ship to Bomarsund, and was afterwards present at the fall of that fortress. He was employed as assistant master attendant at Keyham Yard, Devonport, 1855-64, and from the latter date to January 1868 as master attendant of Woolwich Yard. He was made a C.B. 13 March 1867, but the highest rank he obtained in the navy was that of staff captain, 1 July in the same year. He was knighted by the queen at Windsor, 26 June 1873, and received a Greenwich Hospital pension soon afterwards. His death took place at Lewisham, 22 July 1878. He had been twice married, first in 1842 to Emma Louisa, third daughter of Thomas Kent, who died 13 Aug. 1865, and secondly, in the following year, to Emma Sarah, daughter of William Middleton, who died 6 May 1878, aged 49.

Sir George Biddlecombe published the following works: 1. 'A Treatise on the Art of Rigging,' 1848. 2. 'Remarks on the English Channel,' 1850; sixth edition, 1863. 3. 'Naval Tactics and Trials of Sailing,' 1850. 4. 'Steam Fleet Tactics,' 1857. This list does not include the accounts of the surveys made by him in various parts of the world, and which were published by order of the admiralty.

[The Autobiography of Sir George Biddlecombe (1878); O'Byrne's Naval Biographical Dictionary (1861 edition), pp. 80–2.]

G. C. B.

BIDDULPH, Sir THOMAS MYDDLETON (1809–1878), general, born 29 July 1809, was the second son of Robert Biddulph, Esq., of Ledbury; his mother was Charlotte, the daughter of Richard Myddleton, Esq., M.P., of Chirk Castle, of the old Welsh family of Myddleton of Gwaynenog. He became a cornet in the 1st life guards 7 Oct. 1826, lieutenant 23 Feb. 1829, captain 16 May 1834, and brevet-major 9 Nov. 1846. On 31 Oct. 1851 he was major in the 7th light dragoons, and lieutenant-colonel unattached. He had been gazetted 16 July 1851 as master of Queen Victoria's household, for which office he had been selected by Baron Stockmar (Martin, *Life of the Prince Consort*, ii. 382–3). On 16 July 1854 he was appointed an extra equerry to the queen, and became colonel 28 Nov. 1854. Colonel Biddulph married, 16 Feb. 1857, Mary Frederica, only daughter of Mr. Frederick Charles W. Seymour, who was at one time maid of honour, and afterwards honorary bedchamber woman to the queen. He was created, 27 March 1863, a knight commander of the order of the Bath for his civil services, and was appointed, 3 March 1866, one of the joint keepers of her majesty's privy purse, in succession to the Hon. Sir C. B. Phipps, and in conjunction with General the Hon. Charles Grey. On Grey's appointment to be private secretary to Queen Victoria, 30 April 1867, Sir Thomas Biddulph became sole keeper of the privy purse. He became major-general 31 May 1865, and lieutenant-general 29 Dec. 1873, and he was gazetted, 1 Oct. 1877, to the brevet rank of general, as one of a large number of officers who obtained promotion under the provisions of article 137 of the royal warrant of 13 Aug. 1877. Later in the same year he was sworn of the privy council. From 1866 till death he was receiver-general of the duchy of Cornwall, and from 1873 of the duchy of Lancaster. The official duties of Sir Thomas Biddulph involved close attendance on the queen. He died at Abergeldie Mains, near Balmoral, after a short illness, during which he was daily visited by her majesty, 28 Sept. 1878, and was buried at Clewer. Sir Theodore Martin says of Biddulph that 'he was the last survivor of the three very able men—Sir Charles Phipps and General Grey being the other two—who had been intimately associated with the prince from their position as leading members of her majesty's household' (*Life of the Prince Consort*, iv. 12).

A. H. G.

BIDDULPH, THOMAS TREGENNA (1763–1838), evangelical divine, was the only son of the Rev. Thomas Biddulph by his first wife, Martha, daughter and coheir of Rev. John Tregenna, rector of Mawgan in Cornwall. He was born at Claines, Worcestershire, 5 July 1763, but his father became in 1770 the vicar of Padstow in Cornwall, and the younger Biddulph was educated at the grammar school of Truro in that county. In his eighteenth year he matriculated at Queen's College, Oxford (23 Nov. 1780), and took his degree of B.A. and M.A. in 1784 and 1787 respectively. He was ordained deacon by Bishop Ross of Exeter, 26 Sept. 1785, being licensed to the curacy of Padstow, and preaching his first sermon in its church, and after holding many curacies became the incumbent of Bengeworth near Evesham in 1793. Though he retained this small benefice for ten years, he resided for the greater part of his time at Bristol, and it was as the incumbent from 1799 to 1838 of St. James's, Bristol, that his reputation as a preacher and a parish priest was acquired. His doctrines were at first unpopular among the citizens of Bristol, but in the course of years his services were rewarded by the respect and affection of his fellow-townsmen. He died at St. James's Square, Bristol, 19 May 1838, and was buried 29 May. His wife, Rachel, daughter of Zachariah Shrapnel, whom he married at Bradford, Wiltshire, 19 Feb. 1789, died at St. James's Square, Bristol, 10 Aug. 1828. Portraits by Opie of the Rev. Thomas Tregenna Biddulph and of his father and mother are in the possession of Mr. W. P. Punchard of Taunton. The catalogue of the writings of Mr. Biddulph occupies more than six pages of the 'Bibliotheca Cornubiensis.' All his works were of a theological character, and were written in support of evangelical doctrines. On their behalf he engaged in controversy with the Rev. John Hey, the Rev. Richard Warner, and the Rev. Richard (afterwards bishop) Mant. A periodical called at first 'Zion's Trumpet,' but afterwards known for many years under the title of 'The Christian Guardian,' was established by him in 1798.

[Gent. Mag. x. 331–34 (1838); Bibl. Cornub. i. and iii.; May's Evesham, 148; Rogers's Opie, 74–5; Christian Guardian, 1838, pp. 257–63.]

W. P. C.

BIDGOOD, JOHN, M.D. (1624–1690), the son of Humphrey Bidgood, an apothecary of Exeter, was born in that city 13 March 1623–4. His father was poisoned in 1641 by his servant, Peter Moore, a crime for which the offender was tried at the Exeter assizes, and executed on 'the Magdalen gibbet belonging to the city,' his dying confession being printed and preserved in the British Museum. The son was sent to Exeter College about 1640, and admitted a Petreian fellow 1 July 1642. On 1 Feb. 1647-8 he became a bachelor of physic at Oxford, but in the following June was ejected from his fellowship by the parliamentarian visitors. After this loss of his income he withdrew to Padua, then a noted school of medicine, and became M.D. of that university. With this diploma he returned to England, and, after a few years' practice at Chard, settled in his native city, where he remained until his death. On the restoration in 1660, Bidgood resumed his fellowship, and in the same year (20 Sept. 1660) was incorporated M.D. at Oxford. Two years later he resigned his fellowship, possibly because a kinsman, who had matriculated in 1661, was then qualified to hold it. His skill in medicine was shown by his admission, in December 1664, to the College of Physicians in London as honorary fellow—an honour which he acknowledged by the gift of 100*l.* towards the erection of their new college in Warwick Lane—and by his subsequent election in 1686 as an ordinary fellow. Some years before his death he retired to his country house of Rockbeare, near Exeter, but he died in the Close, Exeter, 13 Jan. 1690–1, and was buried in the lady chapel in the cathedral. A flat stone, with an English inscription, in the pavement indicated the place of his burial, and a marble monument with a Latin inscription to his memory was fixed in the wall of the same chapel by his nephew and heir. An extensive practice brought Dr. Bidgood a large fortune, but his good qualities were marred by a morose disposition and by a satirical vein of humour. He left the sum of 600*l.* to St. John's Hospital at Exeter.

[Prince's Worthies; Munk's College of Physicians (ed. 1878), i. 348; Boase's Exeter Coll. 67, 212, 229; Davidson's Bibliotheca Devon. 138; Izacke's Exeter (ed. 1731), p. 189; Register of Visitors of Oxford Univ. (Camden Soc. 1881), pp. 13, 60, 93, 138.] W. P. C.

BIDLAKE, JOHN (1755–1814), divine and poet, was the son of a jeweller at Plymouth, and was born in that town in 1755. His education was begun at the grammar school of that town, and he proceeded thence to Christ Church, Oxford, being entered on its books as a servitor 10 March 1774, where he took his degree of B.A. in 1778, and those of M.A. and D.D. in 1808. He was for many years master of the Plymouth grammar school, and minister of the chapel of ease at Stonehouse. Neither of these posts brought much gain to their holder, nor were his pecuniary troubles lightened by his obtaining the offices of chaplain to the prince regent and the Duke of Clarence. He was appointed Bampton lecturer in 1811, but during the delivery of the third discourse he was attacked with cerebral affection, which terminated in blindness. In consequence of this crushing misfortune he was forced to resign his curacy at Stonehouse, and as he was totally without the means of support, an appeal to the charitable was made on his behalf in June 1813. On 17 Feb. in the following year he died at Plymouth.

Bidlake's works were very numerous, both in divinity and poetry. He published separately at least seven sermons, in addition to three volumes of collected discourses on various subjects (1795, 1799, and 1808). His earliest poem was an anonymous 'Elegy written on the author's revisiting the place of his former residence' (1788). It was followed by 'The Sea' (1796), 'The Country Parson' (1797), 'Summer's Eve' (1800), 'Virginia or the Fall of the Decemvirs, a tragedy' (1800), 'Youth' (1802), and 'The Year' (1813). Three volumes of his poetical works were issued in 1794, 1804, and 1814 respectively. In 1799 he composed a moral tale entitled 'Eugenio, or the Precepts of Prudentius,' and in 1808 he issued an 'Introduction to the Study of Geography.' His Bampton lectures were entitled 'The Truth and Consistency of Divine Revelation' (1811). Three numbers of a periodical called 'The Selector' were published by him at Plymouth in 1809, but with the third number it expired. Bidlake was a man of varied talents and considerable acquirements, but his poetry was imitative, and the interest of his theological works was ephemeral.

[Watt's Bibl. Brit.; Gent. Mag. 1813, pt. i. 560, 1814, pt. i. 410; Worth's Plymouth (2nd ed.) p. 322; Worth's Three Towns Bibliotheca (Trans. Plymouth Instit. vol. iv.] W. P. C.

BIDWILL, JOHN CARNE (1815–1853), botanist and traveller, was born in 1815 at Exeter, his father being a well-known citizen of that place. At an early age he went out to New South Wales, and entered into business as a merchant at Sydney. In February 1839 he started upon an exploring expedition in New Zealand. From Tawranga

he made his way into hitherto unknown regions. So savage were the native tribes at that period that, shortly before the traveller's arrival at Tawranga, a band from Roturoa had seized a number of people and cooked them absolutely in sight of the inhabitants of the surrounding villages. Bidwill explored the shores of Lake Taupo; amongst other discoveries made, he found in the vicinity of Roturoa a species of eugenia, identified as the *Earina mucronata*. In the mountains of the Arrohaw he met with the gigantic tree fern, the *Mummuke*. He next investigated the great plain of the Thames or Waiho.

Bidwill fell a victim to the spirit of investigation. While engaged in marking out a new road he was accidentally separated from his party, and lost himself, without his compass, in the bush. He struggled to extricate himself, remaining on one occasion eight days without food. In cutting his way with a pocket-hook through the scrub, he brought on internal inflammation, of which he eventually died. Bidwill was an ardent botanist. He contributed to the 'Gardener's Chronicle' many interesting papers upon horticultural subjects, but more especially on hybridising, in which he was an adept. 'To him,' says Professor Lindley, 'we owe the discovery of the famous Bunya-Bunya tree, subsequently named after him *Araucaria Bidwilli*, and of the *Nymphæa gigantea*, that Australian rival of the Victoria. By his friends, of whom he had more than most men, his loss will be found to be irreparable, and the colony in which he died could ill afford to lose him.' Bidwill, who died at Tinana, Maryborough, in March 1853, was commissioner of crown lands and chairman of the bench of magistrates for the district of Wide Bay, New South Wales.

[Bidwill's Rambles in New Zealand, 1841; Gardener's Chronicle, March 1853; Gent. Mag. 1853.] G. B. S.

BIFFIN or BEFFIN, SARAH (1784–1850), miniature painter, was born at East Quantoxhead, near Bridgwater, Somerset, in 1784. Her parents were apparently of very humble station. She was born without arms, hands, or legs (*Handbill* in British Museum, 1881 *a* 2, where her name is printed Beffin). Her height never exceeded thirty-seven inches; but by indomitable perseverance she contrived, by means of her mouth, to use the pen, the pencil, and paint-brush, and even the scissors and needle. Her first instructor was a Mr. Dukes (*Gent. Mag.* xxxiv. new series, 668), to whom she bound herself, and with whom she stayed sixteen years. In 1812 she was carried round the country to exhibit her powers and ingenuity, and was at Swaffham in October, the race week (*Handbill*). A commodious booth was hired there for her: the pit seats were 1*s.*, the gallery seats 6*d.* Miss Biffin wrote her autograph for her visitors, drew landscapes before them, and painted miniatures (the charge for which, on ivory, was three guineas); and her 'conductor,' probably Mr. Dukes, promised to give a thousand guineas if she were not found to produce all he described. It is complained that Miss Biffin received only 5*l.* per annum from Mr. Dukes (*Gent. Mag.*) The Earl of Morton, becoming acquainted with Miss Biffin's talents, had further instruction given to her in painting by Mr. Craig, then popular for his portraits and 'Keepsake' illustrations (Redgrave, *Dictionary of Artists*). The poor little artist was patronised by the royal family, and she managed to support herself by her art, receiving a medal from the Society of Artists in 1821. She finally retired to Liverpool. There age overtook her, exertions of her extraordinary kind grew very painful, and she fell into poverty, which was only lightened by the benevolence of Mr. Richard Rathbone, who organised a subscription for her benefit. She died 2 Oct. 1850, aged sixty-six years.

[Chambers's Book of Days, vol. ii. p. 404; Redgrave's Dict of Artists of British School; Handbill to the Nobility, Ladies, and Gentlemen, No. 1881 a 2, Brit. Mus.; Gent. Mag. vol. xxxiv. new series, 1850, p. 668.] J. H.

BIFIELD, NICHOLAS. [See Byfield.]

BIGG, JOHN STANYAN (1828–1865), poet and journalist, was born at Ulverston 14 July 1828. He was educated at the old Town Bank School in that town, and at an early age began to exhibit strong literary predilections. It is said that the 'Arabian Nights' Entertainments' first fired him with imaginative ardour. He would recite the oriental stories to his companions, and as the latter recompensed him for so doing, young Bigg was able to indulge the love of books, and became possessed of the works of the best English poets. At thirteen he was sent by his father to a boarding school in Warwickshire. On his return to his native town, he assisted his father in the conduct of his business. Soon afterwards the family removed to the beautiful vicinity of Penny Bridge. His poetical enthusiasm was here stirred into action, and he penned many attractive lyrics.

Returning to Ulverston, he published in 1848 his first work, 'The Sea King,' a metri-

cal romance in six cantos, with very copious historical and illustrative notes. The romance arose out of a study of Sharon Turner's 'History of the Anglo-Saxons.' In conception it has something in common with Fouqué's 'Undine,' though Bigg states that book to have been unknown to him at the time of the composition of his own work. The 'Sea King' interested several men of letters, including Lord Lytton and James Montgomery. Bigg was now appointed editor of the 'Ulverston Advertiser,' a post which he occupied for several years. He subsequently went to Ireland, and edited for some years the 'Downshire Protestant,' the proprietor of which was Mr. W. Johnston, of Ballykilbeg House, the author of 'Nightshade,' and other works. At Downpatrick Bigg married Miss R. A. H. Pridham. In 1859 the Burns centenary was celebrated, and his ode competing for the Crystal Palace prize was selected by the three judges as one of the six best.

Previous to his Irish experiences, Bigg had written his most important poem, 'Night and the Soul.' It appeared in 1854. Bigg belonged to that class of poets which acquired the name of the 'Spasmodic School,' a school severely travestied by Professor Aytoun in his spasmodic tragedy of 'Firmilian.'

In 1860 Bigg left Ireland and returned to Ulverston, where he became both editor and proprietor of the 'Advertiser,' which position he continued to occupy until his death. In 1860 he also published a novel in one volume, entitled 'Alfred Staunton,' which met with a favourable reception. In 1862 appeared his last work, 'Shifting Scenes, and other Poems.' In the course of his brief career Bigg was a contributor to the 'Critic,' 'Literary Gazette,' 'London Quarterly Review,' 'Eclectic Review,' 'Church of England Review,' 'Scottish Quarterly Review,' 'Dublin University Magazine,' and 'Hogg's Instructor.' In all the private relations of life he was most estimable, and his premature death was widely lamented. He died 19 May 1865, in his thirty-seventh year.

[Works of Bigg; Gent. Mag. 1865; Gilfillan's Literary Portraits; Athenæum, 1854 and 1862; Ulverston Advertiser, 25 May 1865.] G. B. S.

BIGG, WILLIAM REDMORE (1755-1828), painter, was a pupil of Edward Penny, R.A., and by choice of his subjects at least a faithful follower of his master. In 1778 he entered the Academy schools. Bigg delighted in depicting florid children. The first of many engaging works of this class was exhibited in 1778, 'Schoolboys giving Charity to a Blind Man.' It was followed a year later by one similar, 'A Lady and her Children relieving a Distressed Cottager.' Besides these his 'Palemon and Lavinia,' the 'Shipwrecked Sailor Boy,' and 'Youths relieving a Blind Man' were highly popular works, and were all engraved. Two good pictures from his easel are preserved in the Cottonian Museum at Plymouth. He had not the naive rusticity of Wheatley, nor the rough and ready naturalism of Morland, though by choice of subjects and general manner of treatment he would rightly be classed with those painters. He was highly popular in his day, and the best engravers were employed upon his work. In 1787 he became A.R.A., and was elected academician in 1814. He sat to C. R. Leslie for the knight in 'Sir Roger de Coverley.' The younger painter spoke eloquently of his fine presence and genial nature. He died in Great Russell Street on 6 Feb. 1828.

[Gent. Mag. vol. xcviii. pt. i. p. 376; Redgrave's Dict. of Artists of the Eng. School.] E. R.

BIGLAND, JOHN (1750-1832), schoolmaster and author, was born in 1750 of poor parents at Skirlaugh, or Skirlaw, in Holderness in Yorkshire. He began life as a village schoolmaster. At the age of fifty (1803) he published his first work, 'Reflections on the Resurrection and Ascension of Christ,' occasioned, as he tells us himself, by his religious scepticism. Having removed his own doubts, he ventured to place the reasons for his convictions in print. His work was a success, and the encouragement he received in consequence determined him to follow a literary career. He soon developed into a professional author, and published in rapid succession a series of popular books, chiefly connected with geography and history. Towards the end of his life he resided at Finningley near Doncaster, and used to spend a portion of his time in his garden rearing flowers and vegetables. He devoted the rest of his leisure to his books. His long scholastic life has given to the majority of his books a distinctly practical turn. He died, at the age of eighty-two, at Finningley, on 22 Feb. 1832.

He was the author of sundry articles in the magazines; of a continuation to April 1808 of Lord Lyttelton's 'History of England in a Series of Letters from a Nobleman to his Son;' and of an addition of the whole period of the third George to Dr. Goldsmith's 'History of England.' His other works are: 1. 'Reflections on the Resurrection and Ascension of Christ,' 1803. 2. 'Letters on the Study and Use of Ancient and Modern His-

tory,' 1804. 3. 'Letters on the Modern History and Political Aspect of Europe,' 1804. 4. 'Essays on Various Subjects,' 2 vols. 1805. 5. 'Letters on Natural History,' 1806. 6. 'A Geographical and Historical View of the World, exhibiting a complete Delineation of the Natural and Artificial Features of each Country,' &c., 5 vols. 1810. 7. 'A History of Spain from the Earliest Period to the close of the year 1809' (translated and continued by Le Comte Mathieu Dumas to the epoch of the Restoration, 1814), 2 vols. 1810. 8. 'A Sketch of the History of Europe from the year 1783 to the Present Time,' in a later edition continued to 1814 (translated, and augmented in the military part, and continued to 1819 by J. MacCarthy, Paris, 1819), 2 vols. 1811. 9. 'The Philosophical Wanderers, or the History of the Roman Tribune and the Priestess of Minerva, exhibiting the vicissitudes that diversify the fortunes of nations and individuals,' 1811. 10. 'Yorkshire,' being the 16th volume of the 'Beauties of England and Wales,' 1812. 11. 'A History of England from the Earliest Period to the Close of the War, 1814,' 2 vols. 1815. 12. 'A System of Geography for the Use of Schools and Private Students,' 1816. 13. 'An Historical Display of the Effects of Physical and Moral Causes on the Character and Circumstances of Nations, including a Comparison of the Ancients and Moderns in regard to their Intellectual and Social State,' 1816. 14. 'Letters on English History for the Use of Schools,' 1817. 15. 'Letters on French History for the Use of Schools,' 1818. 16. 'A Compendious History of the Jews,' 1820. 17. 'Memoirs,' 1830.

BIGLAND, RALPH (1711–1784), Garter king-of-arms, was born at Kendal in Westmoreland in 1711, his father being Richard Bigland, the descendant of an old family originally from Bigland in Lancashire. He was appointed head of the College of Arms in 1780, after passing through all the minor offices. He had been elected Bluemantle in 1757, Somerset 1759, registrar 1763, Norroy king-of-arms May 1773, Clarenceux August 1774; but he enjoyed his elevation as Garter king-of-arms only a few years, dying 27 March 1784 at the age of seventy-three, in St. James's Street, Bedford Row. He married at Frocester, 13 June 1737, Ann, daughter of John Wilkins of that town, by whom he had one son, born on 3 April 1738, and who died at the early age of twenty-two on 1 Dec. 1738. Bigland afterwards married Ann, daughter of Robert Weir; this marriage also being of short duration, for she died 5 April 1766, leaving no issue. The collections which he had made during his lifetime for a history of Gloucestershire were intended to have been arranged and presented by him to the public. After his death they were partly published by his son, Richard Bigland of Frocester, Gloucestershire, under the title of 'Historical, Monumental, and Genealogical Collections relative to the County of Gloucester' (fol. 1791–2). Among some of his other literary labours may be mentioned his 'Account of the Parish of Fairford, co. Gloucester, with a description of the celebrated windows and monuments.' In 1764 he also published a small work entitled 'Observations on Marriages, Baptisms, and Burials, as preserved in Parochial Registers,' in which he pointed out the necessity of these documents being accurately kept 'for the benefit of society.' An interesting correspondence between him and Mr. G. Allan on various subjects was published in Nichols's 'Literary Anecdotes.'

[Noble's History of the College of Arms, 1804, 417–18; Lowndes's Bibliographers' Manual, 1864, i. 203; Nichols's Literary Anecdotes, 1814, viii. 713–18; Gent. Mag. 1788, lviii. 344; 1791, lxi. 345, 725; 1793, lxiii. 655.] T. F. T. D.

BIGNELL, HENRY (1611–1660?), divine, the son of Foulk Bignell of Souldern, Oxfordshire, was born in the parish of St. Mary, Oxford, in July 1611. In 1629 he became a servitor of Brasenose College, and subsequently entered at St. Mary's Hall. After taking the degree of B.A. he was ordained and set up as a schoolmaster. In 1645 he was made rector of St. Peter-le-Bayly, Oxford, but was ejected from his benefice for scandalous conduct. Shortly before the Restoration he went out to the West Indies, where he seems to have died. According to Wood he published, in 1640, a book 'for the education of youth in knowledge,' called 'The Son's Portion,' and was the author of some other 'trivial things not worth mentioning.'

[Wood's Athenæ, iii. 406, and Fasti, i. 465.] A. R. B.

BIGNELL, MRS. [See BICKNELL, M——.]

BIGOD or BYGOD, SIR FRANCIS (1508–1537), rebel, of Settrington and Mulgrave Castle in Yorkshire, was descended from John, brother and heir of Roger Bigod, sixth earl of Norfolk. His grandfather, Sir Ralph Bigod, died in 1515, leaving Francis, then aged seven, his heir (*Inq. p.m.* 7 *Hen. VIII*,

Nos. 139, 144); for his father, John Bigod, had fallen in the Scotch wars. He had livery of lands by patent, 21 Dec. 1529 (*Pat.* 21 *Hen. VIII*, p. i., m. 28), and was soon afterwards knighted. He spent some time at Oxford, but took no degree, though his letters show that he was a scholar. In 1527 and the following years he was in the service of Cardinal Wolsey, and under Cromwell, Wolsey's successor in the favour of Henry VIII, was engaged in advancing in Yorkshire the king's reforms in church matters. Nevertheless in 1536 we find him implicated (though unwillingly) in the Pilgrimage of Grace, an insurrection produced by these reforms. In January 1537 he headed an unsuccessful rising at Beverley, and for this was hanged at Tyburn on 2 June 1537. By his wife Katharine, daughter of William, Lord Conyers, he left a son, Ralph, who was restored in blood by act of parliament, 3 Edward VI, but died without issue, and a daughter, Dorothy, through whom the estates passed to the family of Radclyffe. Rastell (the chronicler) in a letter to Cromwell, 17 Aug. [1534] (*Cal. of State Papers Hen. VIII*, vol. vii. no. 1070), calls Bigod wise and well learned; and Bale describes him as 'homo naturalium splendore nobilis ac doctus et evangelicæ veritatis amator.' His letters to Cromwell, many of which are preserved in the Public Record Office, show him to have been deeply in debt. He wrote a treatise on 'Impropriations,' against the impropriation of parsonages by the monasteries (London, by Tho. Godfray *cum privilegio regali*, small 8vo). It appears to have been written after the birth of Elizabeth and before Anne Boleyn's disgrace, i.e. between September 1533 and April 1536. Copies are in the British Museum and in Lambeth library, and the preface is reprinted at the end of Sir Henry Spelman's 'Larger work of Tithes' (1647 edition). Bigod also translated some Latin works, and, during the insurrection, wrote against the royal supremacy.

[Calendar of State Papers, Henry VIII, vols. iv. and onwards; Tanner's Bibliotheca; Bale; Fuller's Worthies, ii. 209; Wood's Athen. Oxon. i. 101; Wriothesley's Chronicle, i. 64; Blomefield's Norfolk, v. 228.] R. H. B.

BIGOD, HUGH, first EARL OF NORFOLK (*d.* 1176 or 1177), was the second son of Roger Bigod, the founder of the house in England after the Conquest. The origin of the name is quite uncertain. The French called the Normans 'bigoz e draschiers' (*Rom. de Rou*, iii. 4780) in contempt. The second word is said to mean beer-drinkers; the other has been explained as a nickname derived from the oath 'bi got' commonly used by the early Normans. But whether the family name Bigod had any connection with this term or not, it is evident that in England in the thirteenth and fourteenth centuries it was punned upon in words of profane swearing (WRIGHT'S *Political Songs*, pp. 67, 68; HEMINGBURGH'S *Chronicle*, ii. 121).

The first person who, bearing the name of Bigod or Bigot, appears in history is Robert le Bigod, a poor knight, who gained the favour of William, duke of Normandy, by discovering to him the intended treachery of William, count of Mortain. This Robert may have been the father of Roger, and one or the other, or both, may have been present at the battle of Hastings. In the 'Roman de Rou,' iii. 8571–82, the ancestor of Hugh Bigod (perhaps the above Robert) is named as holding lands at Malitot, Loges, and Chanon in Normandy, and as serving the duke in his household as one of his seneschals. He was small of body, but brave and bold, and assaulted the English gallantly. Roger Bigod is not traced in English records before 1079, but by this time he may have been endowed with the forfeited estates of Ralph de Guader, earl of Norfolk, whose downfall took place in 1074. In Domesday he appears as holding six lordships in Essex, and 117 in Suffolk. From Henry I he received the gift of Framlingham, which became the principal stronghold of him and his descendants. He likewise held the office of king's *dapifer*, or steward, under William Rufus and Henry I. He died in 1107, and was succeeded by his eldest son, William, who, however (26 Nov. 1120), was drowned in the wreck of the White Ship. Roger's second son, Hugh, thus entered into possession of the estates.

At the time of his father's death, whom he survived some seventy years, Hugh must have been quite a young child. Little is heard of him at first, no doubt on account of his youth, but he appears as king's *dapifer* in 1123, and before that date he was constable of Norwich Castle and governor of the city down to 1122, when it obtained a charter from the crown. Passing the best years of his manhood in the distractions of the civil wars of Stephen and Matilda, when men's oaths of fealty sat lightly on their consciences, he appears to have surpassed his fellows in acts of desertion and treachery, and to have been never more in his element than when in rebellion. His first prominent action in history was on the death of Henry I in 1135, when he is said to have hastened to England, and to have sworn to Archbishop William Corbois that the dying king, on some quarrel with his daughter Matilda, had

disinherited her, and named Stephen of Blois his successor. Stephen's prompt arrival in England settled the matter, and the wavering prelate placed the crown on his head. Hugh's reward was the earldom of Norfolk. The new king's energy at first kept his followers together, but before Whitsuntide in the next year Stephen was stricken with sickness, a lethargy fastened on him, and the report of his death was quickly spread abroad. A rising of the turbulent barons necessarily followed, and Bigod was the first to take up arms. He seized and held Norwich; but Stephen, quickly recovering, laid siege to the city, and Hugh was compelled to surrender. Acting with unusual clemency, Stephen spared the traitor, who for a short time remained faithful. But in 1140 he is said to have declared for the empress, and to have stood a siege in his castle of Bungay; yet in the next year he is in the ranks of Stephen's army which fought the disastrous battle of Lincoln. In the few years which followed, while the war dragged on, and Stephen's time was fully occupied in subduing the so-called adherents of the empress, who were really fighting for their own hand, the Earl of Norfolk probably remained within his own domains, consolidating his power, and fortifying his castles, although in 1143–4 he is reported to have been concerned in the rising of Geoffrey de Mandeville. The quarrel between the king and Archbishop Theobald in 1148 gave the next occasion for Hugh to come forward; he this time sided with the archbishop, and received him in his castle of Framlingham, but joined with others in effecting a reconciliation. Five years later, in 1153, when Henry of Anjou landed to assert his claim to the throne, Bigod threw in his lot with the rising power, and held out in Ipswich against Stephen's forces, while Henry, on the other side, laid siege to Stamford. Both places fell, but in the critical state of his fortunes Stephen was in no position to punish the rebel. Negotiations were also going on between the two parties, and Hugh again escaped.

On Henry's accession in December 1154, Bigod at once received a confirmation of his earldom and stewardship by charter issued apparently in January of the next year. The first years of the new reign were spent in restoring order to the shattered kingdom, and in breaking the power of the independent barons. It was scarcely to be expected that Hugh should rest quiet. He showed signs of resistance, but was at once put down. In 1157 Henry marched into the eastern counties and received the earl's submission. After this Hugh appears but little in the chronicles for some time; only in 1169 he is named among those who had been excommunicated by Becket. This, however, was in consequence of his retention of lands belonging to the monastery of Pentney in Norfolk. In 1173 the revolt of the young crowned prince Henry against his father, and the league of the English barons with the kings of France and Scotland in his favour, gave the Earl of Norfolk another opportunity for rebellion. He at once became a moving spirit in the cause, eager to revive the feudal power which Henry had curtailed. The honour of Eye and the custody of Norwich Castle were promised by the young prince as his reward. But the king's energy and good fortune were equal to the occasion. While he held in check his rebel vassals in France, the loyal barons in England defeated his enemies here Robert de Beaumont, earl of Leicester (*d.* 1190) [q. v.], landing at Walton, in Suffolk, on 29 Sept. 1173, had marched to Framlingham and joined forces with Hugh. Together they besieged and took, 13 Oct., the castle of Hagenet in Suffolk, held by Randal de Broc for the crown. But Leicester, setting out from Framlingham, was defeated and taken prisoner at Fornham St. Geneviève, near Bury, by the justiciar, Richard de Lucy, and other barons, who then turned their arms against Earl Hugh. Not strong enough to fight, he opened negotiations with his assailants, and, it is said, bought them off, at the same time securing for the Flemings in his service a safe passage home. In the next year, however, he was again in the field, with the aid of the troops of Philip of Flanders, and laid siege to Norwich, which he took by assault and burned. But Henry returned to England in the summer, and straightway marched into the eastern counties; and when Hugh heard that the king had already destroyed his castle of Walton, and was approaching Framlingham, he hastened to make his submission at Laleham on 25 July, surrendering his castles, which were afterwards dismantled, and paying a fine. After these events Hugh Bigod ceases to appear in history. His death is briefly recorded under the year 1177, and is generally mentioned as occurring in the Holy Land, whither he had accompanied Philip of Flanders on a pilgrimage. It is to be observed, however, that on 1 March of that year his son Roger appealed to the king on a dispute with his stepmother, Hugh being then dead, and that the date of his death is fixed 'ante caput jejunii,' i.e. before 9 March. If, then, he died in Palestine, his death must have taken place in the preceding year, 1176, to allow time for the arrival of the news in England.

Henry took advantage of Roger's appeal to seize upon the late earl's treasure. Besides the vast estates which he inherited, Hugh Bigod was in receipt of the third penny levied in the county of Norfolk. He was twice married, his first wife being Juliana, sister of Alberic de Vere, earl of Oxford, by whom he had a son, Roger, *d.* 1221 [q. v.], his successor; and his second, Gundreda, who after his death was married to Roger de Glanville.

[Chronicles of Henry of Huntingdon, Rog. de Hoveden, Rad. de Diceto, Benedict of Peterborough, Gervase of Canterbury (Rolls Series, passim); Dugdale's Baronage, i. 132; Blomfield's Hist. of Norfolk, iii. 24 seq.; Stubbs's Constitutional History and Early Plantagenets; Eyton's Itinerary of Henry II; Additional MS. 31939 (Eyton's Pedigrees), f. 129.] E. M. T.

BIGOD, HUGH (*d.* 1266), the justiciar, was the younger son of Hugh Bigod, third earl of Norfolk. Nothing is known of his early life. In 39 Henry III he was made chief ranger of Farndale Forest, Yorkshire, in consideration of a payment of 500 marks, and in the next year became governor of the castle of Pickering. In 1257 he accompanied Henry in his expedition into Wales. In 1258, on the formation of the government under the Provisions of Oxford, of which his brother, Roger, *d.* 1270 [q. v.], earl of Norfolk and marshal of England, was a member, Bigod was named chief justiciar, and in that capacity had the custody of the Tower of London. He was likewise made governor of Dover Castle, but resigned that place in 1261. He must at this period have been very wealthy, for he paid 3,000*l.* for the wardship of William de Kime, of Lincolnshire. His character as a judge has been placed high by Matthew Paris: 'legum terræ peritum, qui officium justiciariæ strenue peragens nullatenus permittat jus regni vacillare.' In 1259–60 he went with two of the principal judges on a circuit to administer justice throughout the kingdom. Soon after he became governor of Scarborough, and about the end of 1260 he resigned his office of justiciar, probably from dissatisfaction with the conduct of the barons. He afterwards, in 1263, joined the royal party, and was present on the king's side at the battle of Lewes on 14 May 1264, but fled from the field. He was afterwards reappointed to the government of Pickering Castle. He died about November 1266, leaving a son, Roger, who became in 1270 the fifth earl of Norfolk [q. v.] Bigod was twice married: first to Joanna, daughter of Robert Burnet; and secondly to Joanna, daughter of Nicholas de Stuteville and widow of Hugh Wake.

[Chronicles of Matthew Paris and Gervase of Canterbury (Rolls Ser.); Dugdale's Baronage, i. 135; Foss's Judges of England, ii. 239; Stubbs's Constitutional History.] E. M. T.

BIGOD, ROGER (*d.* 1221), second **Earl of Norfolk**, was son of Hugh, first earl [q. v.] On the death of his father in 1176, he and his stepmother, Gundreda, appealed to the king on a dispute touching the inheritance, the countess pressing the claims of her own son. Henry thereupon seized the treasures of Earl Hugh into his own hands, and it seems that during the remainder of this reign Roger had small power, even if his succession was allowed. His position, however, was not entirely overlooked. He appears as a witness to Henry's award between the kings of Navarre and Castile on 16 March 1177, and in 1186 he did his feudal service as steward in the court held at Guildford.

On Richard's succession to the throne, 3 Sept. 1189, Bigod was taken into favour. By charter of 27 Nov. the new king confirmed him in all his honours, in the earldom of Norfolk, and in the stewardship of the royal household, as freely as Roger, his grandfather, and Hugh, his father, had held it. He was next appointed one of the ambassadors to Philip of France to arrange for the crusade, and during Richard's absence from England on that expedition he supported the king's authority against the designs of Prince John. On the pacification of the quarrel between the prince and the chancellor, William Longchamp, bishop of Ely, on 28 July 1191, Bigod was put into possession of the castle of Hereford, one of the strongholds surrendered by John, and was one of the chancellor's sureties in the agreement. In April 1193 he was summoned with certain other barons and prelates to attend the chancellor into Germany, where negotiations were being carried on to effect Richard's release from captivity; and in 1194, after the surrender of Nottingham to the king, he was present in that city at the great council held on 30 March. At Richard's re-coronation, 17 April, he assisted in bearing the canopy. In July or August of the same year he appears as one of the commissioners sent to York to settle a quarrel between the archbishop and the canons.

After Richard's return home, Bigod's name is found on the records as a justiciar, fines being levied before him in the fifth year of that king's reign, and from the seventh onwards. He also appears as a justice itinerant in Norfolk. After Richard's death, Bigod succeeded in gaining John's favour, and in the first years of his reign continued to act as a judge. In October 1200 he was one of the

envoys sent to summon William of Scotland to do homage at Lincoln, and was a witness at the ceremony on 22 Nov. following; but at a later period he appears to have fallen into disgrace, and was imprisoned in 1213. In the course of the same year, however, he was released and apparently restored to favour, as he accompanied the king to Poitou in February 1214, and about the same time compounded by a fine of 2,000 marks for the service of 120 knights and all arrears of scutages. Next year he joined the confederate barons in the movement which resulted in the grant of Magna Charta on 15 June 1215, and was one of the twenty-five executors, or trustees, of its provisions. He was consequently included in the sentence of excommunication which Innocent III soon afterwards declared against the king's opponents, and his lands were cruelly harried by John's troops in their incursions into the eastern counties.

After the accession of Henry III, Bigod returned to his allegiance, and his hereditary right to the stewardship of the royal household was finally recognised at the council of Oxford on 1 May 1221. But before the following August he died. He was succeeded by his eldest son, Hugh, as third earl, who, however, survived him only four years.

[Chronicles of R. de Hoveden, Bened. of Peterborough, and Matthew Paris (Rolls Ser.); Dugdale's Baronage, i. 132; Foss's Judges of England, ii. 40; Stubbs's Constitutional History; Eyton's Itinerary of Henry II.] E. M. T.

BIGOD, ROGER, fourth EARL OF NORFOLK (*d.* 1270), marshal of England, was grandson of Roger, second earl [q. v.], and son of Hugh, third earl, by his wife Matilda, daughter of William Marshal, earl of Pembroke. Being a minor at the time of his father's death, early in 1225, his wardship was granted to William de Longespee, earl of Salisbury, but was transferred to Alexander, king of Scotland, on the marriage of Roger with Isabella, the king's sister. In 1233, when he probably came of age, he was knighted by Henry III at Gloucester, and in the same year received livery of the castle of Framlingham. He was head of the commission of justices itinerant into Essex and Hertfordshire, issued 1 Aug. 1234. In 1237 he greatly distinguished himself by his prowess at the tournament at Blythe, Nottinghamshire, in which the rival barons of the north and south had a serious encounter. A serious illness, as late as 1257, was attributed to the exertions he went through on that occasion. He took part in Henry's costly expedition to France in 1242, and displayed great bravery in the skirmish at Saintes, 22 July; but soon after he and other nobles asked leave to retire and returned to England. In the parliament or assembly of the magnates in 1244 Roger Bigod was appointed one of the twelve representatives of the two estates present, lay and clerical, to obtain measures of reform from the king in return for a money grant, and in the next year he was one of the envoys sent to the council of Lyons to protest against papal exactions. Redress was refused, and the embassy retired, threatening and protesting; and in the parliament which met on 18 March 1246, Bigod took part in drawing up a list of grievances and addressing a letter of remonstrance to the pope.

In 1246 also Roger Bigod was invested with the office of earl marshal in right of his mother, eldest daughter of William, earl of Pembroke, on whom it devolved on failure of the male line. Matthew Paris, the chronicler, has narrated two anecdotes of Roger which illustrate his resolute character. In 1249, when the Count of Guines was passing through England, Roger ordered his arrest, in retaliation for a road tax which he had been forced to pay when traversing the count's territories on his embassy to Lyons. And in 1255, when, by speaking in favour of Robert de Ros who was in disgrace, he incurred the king's anger, he openly defied Henry, and did not hesitate to give him the lie when the latter called him traitor.

In 1253 Roger was present at the solemn confirmation of the charters, when sentence of excommunication was formally passed against all who violated them. He was with the king in France in the same year; but in January 1254 was sent to England to obtain money from parliament. Soon after he with other nobles retired in disgust from the army in Gascony. In 1257 he was member of an abortive embassy to France to demand certain rights. The next year he played an important part in the reforms introduced under the title of the Provisions of Oxford, being one of the twelve chosen to represent the barons, and subsequently being also a member of the council formed to advise the king. In 1258 he was one of the ambassadors to attend the conference at Cambray between the representatives of England, France, and Germany. The dissensions which sprang up among the barons in the course of 1259 eventually sent Roger Bigod, together with others, over to the king's side in opposition to Simon de Montfort. It is in reference to the events of this period that he is invoked in the political poem preserved by Rishanger (WRIGHT'S *Polit. Songs*, 121):

O tu comes le Bigot, pactum serva sanum ;
Cum sis miles strenuus, nunc exerce manum.

But the award of the French king, who was appealed to to arbitrate, and who now set aside the Provisions of Oxford, probably ranged Bigod again on the popular side. After the decisive battle of Lewes he is found holding the castle of Oxford for De Montfort's party, and he was one of the five earls who were summoned to the parliament of 1265. Nothing further is known of him to the time of his death in 1270. He was buried at Thetford, and, dying without issue, was succeeded in his honours by his nephew Roger [q. v.] He had put away his wife Isabella of Scotland on the pretext of consanguinity, but took her again in 1253.

[Matthew Paris (Rolls Ser.); Dugdale's Baronage, i. 133; Foss's Judges of England, ii. 241; Stubbs's Constitutional History.] E. M. T.

BIGOD, ROGER, fifth EARL OF NORFOLK (1245–1306), marshal of England, was born in 1245, and was the son of Hugh Bigod [q. v.], the justiciar, and nephew of Roger, fourth earl [q. v.], whom he succeeded in 1270. The period of his life as a baron being nearly synchronous with the reign of Edward I, his career is closely identified with the constitutional struggle with the crown in which the baronage played so large a part. He was present in the Welsh campaign of 1282, and had the custody of the castles of Bristol and Nottingham, which, however, he afterwards surrendered. In 1288 he was found preparing to levy private war, but was repressed by Edmund of Cornwall, regent during the king's absence in Gascony. Edward's reforms had alarmed the barons, who foresaw the curtailment of their power under a strong and well-ordered government. In 1289 the spirit of opposition was manifested in the refusal of a subsidy. Then the wars with France, Wales, and Scotland, which are the principal events in the history of 1294–6, forced Edward to resort to measures of arbitrary taxation; and when, on 24 Feb. 1297, he summoned the baronage to meet at Salisbury with the view of making an effort for the invasion of France, the barons rebelled. Roger Bigod and Humphrey Bohun, earl of Hereford, were at the head of the opposition. When Edward called upon them to serve in Gascony while he took command in Flanders, they refused to go, on the plea that their tenure obliged them only to serve beyond seas in company with the king. Turning to Bigod Edward tried persuasion. 'With you, O king,' Bigod answered, 'I will gladly go; as belongs to me by hereditary right, I will go in the front of the host before your face.' 'But without me,' Edward urged, 'you will go with the rest.' 'Without you, O king,' was the answer, 'I am not bound to go, and go I will not.' Edward lost his temper, 'By God, earl, you shall either go or hang.' 'By God,' said Roger, 'O king, I will neither go nor hang' (HEMINGBURGH'S *Chronicle*, ii. 121; STUBBS'S *Const. Hist.* ii. 144). The council broke up, and Bigod and Bohun were joined by more than thirty of the great vassals and assembled a force, but were content with preventing the levy of money or seizure of wool and other commodities on their own domains. In answer to a general levy of the military strength of the kingdom, on 7 July, the two earls refused to serve their offices of marshal and constable, and were therefore deprived. The barons then drew up a list of grievances, in which they were joined by Archbishop Winchelsey, the clergy having also been taxed with undue severity. Edward, however, managed to effect a reconciliation with the archbishop, and promised to confirm the charters on condition of receiving a grant. The archbishop undertook to consult the clergy, and the king persuaded the chief men of the commons who had attended the military levy to grant him an aid. But the two earls still kept aloof. Finally, however, they presented their list of grievances. But Edward was now at the end of his patience. On 20 Aug. he laid a tax on the clergy, and two days after embarked for Flanders, leaving Prince Edward regent during his absence. The earls did not fail to use their opportunity. They protested against the exactions on wool, and prevented the collection of an aid until the charters should be confirmed. In these proceedings they were supported by the citizens of London. An assembly of the magnates and knights of the shires was summoned early in October. Bigod and Bohun appeared in arms and with an armed force, and the charters, with additional articles whereby the king was to renounce the right of taxation without national consent, were submitted to the regent for confirmation. By the advice of his counsellors the prince yielded, and the charters were confirmed on 10 Oct. Early in the following month this confirmation was ratified by Edward at Ghent.

The king returned to England in March 1298, and, having concluded a peace with France, proceeded in the summer to the invasion of Scotland. As the price of their attendance the earls demanded a confirmation of the charters by the king in person. The question of the limits and jurisdiction of the forests was the principal cause of contention,

and Edward hesitated long. At last, at the parliament of Lincoln, the charters were fully confirmed, 14 Feb. 1301.

Throughout these events Roger Bigod had been a prominent figure; but no sooner had the object of the struggle been attained than his power appears to have collapsed. Humphrey Bohun had died in 1298, and the loss of his support to Bigod no doubt made it easier for the king to deal summarily with the survivor. In 1301 the Earl of Norfolk made the king his heir, and gave up the marshal's rod; and on 12 April 1302 he surrendered his lands and title, receiving them back in tail on 12 July following. Seeking for a cause for this surrender, the chronicler Hemingburgh has ascribed it, not satisfactorily, to a quarrel between Roger and his brother John. Roger Bigod died on 11 Dec. 1306, without issue, and, in consequence of his surrender, his dignities vested in the crown. He married twice: first, Alina, daughter and coheir of Philip Basset, chief justiciar of England in 1261, and widow of Hugh le Despencer, chief justiciar of the barons; and, secondly, Alice, daughter of John II d'Avesne, count of Hainault.

[Chronicles of Rishanger and Hemingburgh; Dugdale's Baronage, i. 135; Foss's Judges of England, ii. 221; Anselme's Histoire Généalogique, ii. 783; Stubbs's Constitutional History and Early Plantagenets.] E. M. T.

BIGSBY, JOHN JEREMIAH (1792–1881), geologist, born at Nottingham 14 Aug. 1792, was the son of Dr. John Bigsby. He studied medicine at Edinburgh, where he took the degree of M.D. in 1814, and published a 'Disputatio de vi arsenici vitiosa.' Soon afterwards he joined the army as a medical officer, and served at the Cape in 1817. In the following year he was sent to Canada, where he chiefly developed his interest in geology. In 1819 he was commissioned to report on the geology of Upper Canada. In 1822 he became British secretary and medical officer of the Canadian boundary commission. Five years later he returned to England, and practised medicine at Newark, Nottinghamshire. There he remained until 1846, when he permanently settled in London. He was elected a fellow of the Geological Society in 1823, and of the Royal Society in 1869. In 1874 the former society presented him with the Murchison medal. In 1877 he presented to the Geological Society a sum of money to provide for a gold medal to be called after him, and to be awarded biennially to students of American geology under forty-five years of age. He died at Gloucester Place, London, 10 Feb. 1881.

Bigsby was the author of: 1. 'A Lecture on Mendicity,' Worksop, 1836. 2. 'Seaside Manual of Invalids and Bathers,' 1841. 3. 'The Shoe and Canoe,' 1850; a narrative of travel in Canada. 4. 'Thesaurus Siluricus: the flora and fauna of the Silurian period, with addenda from recent acquisitions;' a very laborious compilation, published with the aid of a Royal Society grant in 1868. 5. 'Thesaurus Devonico-Carboniferus: the flora and fauna of the Devonian and Carboniferous periods,' 1878. Bigsby had nearly completed a 'Permian Thesaurus' at the time of his death. The Royal Society's 'Catalogue of Scientific Papers' (1800–73) gives the names of twenty-seven by Bigsby, almost all treating of American geology. His earliest paper, 'Remarks on the Environs of Carthage Bridge, near the mouth of the Genesee River,' appeared in Silliman's 'American Journal' for 1820. His later papers were contributed to the 'Geological Society's Transactions,' to the 'Philosophical Magazine,' and to the 'Annals and Magazine of Natural History.'

[Memoir by Mr. Robert Etheridge, F.R.S., in Quarterly Journal of the Geological Society, xxxvii. 41; Cat. of Scientific Papers, vols. i. vii.; Brit. Mus. Cat.]

BIGSBY, ROBERT, LLD. (1806–1873), antiquary, was the only son of Robert Bigsby, registrar of the archdeaconry of Nottingham, which office, we are told, he held for upwards of thirty-one years. 'He had the honour,' according to his son, 'to be a frequent guest of the illustrious Washington while visiting America in 1787.' His son was born at Nottingham in 1806, and was educated at Repton school. Disappointed in the legal prospects to which he had been brought up, he turned his attention to the study of antiquities, and began to collect materials for a history of Repton. He was then residing at Wilfrid Cottage, Ashby-de-la-Zouche, having left Repton, where he had stayed for eleven years. The greater part of his life was spent in the accumulation and reproduction of archæologic material. He died 27 Sept. 1873 at 4 Beaufort Terrace, Peckham Rye, aged 67.

Bigsby distinguished himself as a virtuoso or collector of curiosities, 'relics and memorials,' as he calls them, of 'illustrious characters.' Amongst his most cherished possessions was Drake's astrolabe. This astrolabe, constructed for Captain (afterwards Sir Francis) Drake, prior to his first expedition to the West Indies in 1570, and subsequently preserved in a cabinet of antiques belonging to the Stanhope family, was pre-

sented in 1783 by Philip, earl of Chesterfield, on quitting England as ambassador to the court of Spain, to Bigsby's uncle, Rev. Thomas Bigsby, A.M., of Stanton Manor, Derbyshire, who had, in the preceding year, married the Hon. Frances Stanhope, widow, the earl's stepmother. In 1812 Thomas Bigsby gave it to Bigsby's father, who left it to his son. In 1831 Bigsby presented it to William IV, who, in his turn gave it to Greenwich Hospital. Other relics of a like interesting character were bestowed by Bigsby on the British Museum. Some, however, he retained in his own possession, and of these was Sir F. Drake's tobacco-box, constructed, he tells us, of the horn of a 'foreign animal,' and bearing the celebrated navigator's arms and name. He also kept a chain to which Drake suspended his compass and other nautical instruments. This chain, about twenty feet long, was worn by Drake round his neck in the manner of a cordon, passed, however, thrice round the body. A fine original portrait of William Burton [q. v.], the antiquary, æt. 29 (the brother of the author of the 'Anatomy'), painted in 1604, was presented in 1837 by Bigsby to the Society of Antiquaries.

Bigsby describes himself in his works as LL.D., F.S.A., F.R.S., and as member of a great number of foreign societies. The full titles of his books in the order of their publication are: 1. 'The Triumph of Drake, or the Dawn of England's Naval Power, a Poem,' London, 1839. 2. 'Miscellaneous Poems and Essays,' London, 1842. 3. 'Visions of the Times of Old, or the Antiquarian Enthusiast,' 3 vols., London, 1848. 4. 'Boldon Delaval, a Love Story;' also 'My Cousin's Story; The Man on the Grey Horse;' Derby and London, 1850. 7. 'Dr. Bigsby and the Evangelicals, a Vindication of Boldon Delaval,' 12mo, Derby, 1850. 8. 'A Supplement to the Rev. Jos. Jones's Appendix to the Vindication of Boldon Delaval,' 12mo, Derby, 1850. 9. 'Old Places revisited, or the Antiquarian Enthusiast,' 3 vols., London, 1851. 10. 'Scraps from my Note-Book, or Gleanings of Curious Facts connected with the Family——History (*sic*) of D——shire;' Part I. (1) 'The Lucky Lackey;' (2) 'A Tale of a Cask;' (3) 'The Dilemma,' London, 1853. 11. 'Ombo, a Dramatic Romance in twelve acts, with an historical introduction and notes,' London and Derby, 1853. 12. 'Historical and Topographical Description of Repton, in the County of Derby, comprising an incidental view of objects of note in its vicinity, with seventy illustrations on copper, stone, and wood,' London and Derby, 1854. 13. 'Remarks on the Expediency of founding a National Institution in honour of Literature.' 14. 'Irminsula, or the Great Pillar, a mythological research,' 1864. 15. 'A Tribute to the Memory of Scanderbeg the Great,' 1866. 16. 'National Honours and their Noblest Claimants,' London, 1867. 17. 'Memoir of the Orders of St. John of Jerusalem from the Capitulation of Malta till 1798,' 1869. He edited the 'History and Antiquities of the Parish Church of St. Matthew, Morley, in the County of Derby, by the late Rev. Samuel Fox, M.A., rector, with seventeen illustrations from original drawings by George Bailey,' London and Derby, 1872. He also contributed largely to various magazines and reviews.

[Times, 2 Oct. 1873; Men of the Time, 8th ed.; New Quarterly Review, July 1853; Brit. Mus. Catal.; the Freemason, 18 Oct. 1873.] J. M.

BILFRITH (*fl.* 750), anchorite of Lindisfarne, is referred to by Simeon of Durham as skilled in goldsmith's work, and as having, on that account, been employed by Æthelwold, bishop of Lindisfarne (724–40), to adorn with gold and gems the famous manuscript of the Gospels known as the 'Durham Book,' now in the Cottonian Library (Nero D. iv.) The entry made in the manuscript itself by the glossator Aldred in the tenth century, and recording the names of those who worked in its production, mentions Bilfrith the anchorite as the one who 'wrought in smith's work the ornaments that are on the outside, and adorned it with gold and gems,' &c. Bilfrith's name also appears among the 'nomina anchoritarum' in the 'Liber Vitæ' of the church of Durham (*Cotton MS.* Domitian A. vii.) His bones were removed to Durham, together with those of other saints, in the eleventh century.

[Simeon of Durham's Hist. Dunelm. Eccl., ed. Arnold (Rolls Series), vol. i. 1882, pp. 68, 88; Liber Vitæ Dunelm. (Surtees Soc.), 1841, p. 6, col. 2; Skeat, Gospel acc. to St. John in A.-Saxon and Northumbrian versions, 1878, p. viii; Cat. of Anct. MSS. in the Br. Museum, pt. ii. 1884, pp. 16, 82.] E. M. T.

BILL, ROBERT (1754–1827), an ingenious mechanician and inventor, was descended from an old Staffordshire family, the Bills of Farley Hall, and was born in 1754. His father and uncle had married coheiresses, Dorothy and Mary, the daughters of Hall Walton, a near relative of Izaak Walton, from whom they inherited the freehold estate of Stanhope in Staffordshire. Bill was designed for the army, and therefore did not enter the university; but instead of following the military profession he occupied himself with literary pursuits and experiments in

natural science. His ingenuity was first manifested in the invention of minor improvements in the details of domestic construction: he built his garden-walls on a plan fitted to increase the capability of the walls for retaining heat; he devised a new method of warming hothouses by means of iron cylinders; and introduced an ingenious contrivance for the heating of dwelling-houses. In a pamphlet 'On the Danger of a Paper Currency,' printed for private circulation in 1795, he incidentally and somewhat irrelevantly recommended the use of iron tanks for preserving water on shipboard, a plan which was afterwards followed with great benefit in the navy. On the introduction of gas for lighting houses and streets he joined one of the London companies, to whom he gave the advantage of his chemical and mechanical knowledge in erecting the apparatus and regulating its use; but he afterwards retired from the concern on account of some disagreement among the proprietors. He expended much time and money in promoting the introduction of Massey's logs for measuring a ship's way at sea, printing and circulating on this subject in 1806 'A short Account of Massey's Patent Log and Sounding Machine, with the opinions of certain captains in the navy, merchant service, and pilots who have made practical use or experimental trials with them.' He also exerted himself to promote the adoption of elastic springs in pianofortes, so as to keep them in tune for an indefinite time. In 1820 he took out a patent for making ship's masts of iron, but on trial they were not considered sufficiently strong, a defect he attributed to the fact that his instructions were not properly carried out. In his later years he was engaged in experiments for rendering inferior timber—such as elm, ash, beech, and poplar—harder and more durable than any other species of wood. He obtained permission from government to carry his experiment into practical effect in the construction of a ship at Deptford dockyard, but did not live to witness the result. He died on 23 Sept. 1827. By his marriage to Sarah Perks, the daughter of a solicitor, he left three daughters.

[Gent. Mag. xcvii. pt. ii. 466-8; Burke's History of the Landed Gentry, i. 128.] T. F. H.

BILL, WILLIAM (*d.* 1561), dean of Westminster, son of John Bill of Ashwell, Hertfordshire, and brother of Thomas Bill, M.D., of the same place, and of St. Bartholomew's, London, physician to Henry VIII and Edward VI, was educated at St. John's College, Cambridge, where he graduated B.A. in 1532-3, was elected fellow 7 Nov. 1535, took the degree of M.A. in 1536, that of B.D. in 1544, and that of D.D. in 1547, having (10 March 1546-7) been admitted master of the college. While an undergraduate he was a pupil of both Cheke and Smith, from whom he learned a more accurate mode of pronouncing Greek than that which was then in vogue. Strype (*Life of Cheke*, p. 8) says that it was only through the influence of Cheke and Parker, then (1535) one of the queen's chaplains, that Bill was able to raise sufficient funds to qualify himself for election to a fellowship by discharging his debts to the college. By an act passed in the year preceding Bill's election (26 Hen. VIII, cap. 3) the first year's income of a fellowship was payable to the crown as 'first-fruits;' but (s. 23) in the case of fellowships of the annual value of not more than eight marks not until the fourth year from election, security being given in the meantime. Bill's fellowship was only of the annual value of five marks, and John Bill of Ashwell, presumably his father, gave security for the payment of the first-fruits. Probably the amount was never paid, as an act (27 Hen. VIII, cap. 42) exempting the universities from the tax, which appears to have been retrospective, was passed in 1535-6. As fellow of St. John's, Bill was a contemporary of Ascham, in whose letters he is sometimes mentioned. At the date of his election to the mastership he held the Linacre lectureship in physic, which he retained for two years after. One of his first acts after his election was to give away two of the college leases, one to Cheke in consideration of his services to the college, the other to one Thomas Bill, doubtless his brother the physician, as a pure gratuity. In 1548-9, a year marked by the visit of a royal commission, he held the office of vice-chancellor. In November 1551 he resigned the mastership of St. John's to be elected master of Trinity, and in the following December he was appointed one of the king's itinerary chaplains, whose duty it was 'to preach sound doctrine in all the remotest parts of the kingdom for the instruction of the ignorant in right religion to God and obedience to the king.' For this service he seems to have received 40*l.* per annum. Next year (2 Oct.) he was placed on the committee to which the articles of religion were referred for consideration. Soon after her accession Queen Mary thought fit to deprive Bill of the mastership of Trinity. Her commands appear to have been executed in a rather brutal fashion, the master being forcibly removed from his stall in the chapel by two of the fellows, Boys and Gray. It is curious that we find him mentioned as chief almoner

under date 1 Jan. 1553–4. It seems likely that he held that office under Edward VI, but it is surprising that Mary should not have dismissed him immediately upon her accession. Probably she did so shortly afterwards, for he spent the greater part of her brief reign in retirement at Sandy, in Bedfordshire, of which one of his kinsmen, Burgoyne, was rector. On 20 Nov. 1558, the Sunday after the proclamation of Elizabeth as queen, he preached at St. Paul's Cross, striving to allay the popular excitement which was manifesting itself in brutal outrages upon the catholics. The same year he was appointed to assist Parker in revising the liturgy of Edward VI, and was reinstated in the office of chief almoner and in the mastership of Trinity. In Lent of the following year he preached before the queen, and (20 June) was appointed, with Sir W. Cecil, Parker, and others, visitor of Eton College and of the university of Cambridge, and on 5 July following was appointed provost of Eton College, having been elected fellow on 20 June. On 20 Sept. of the same year he instituted himself to the prebend of Milton Ecclesia, in the county of Oxford and church of Lincoln, the advowson of which had been devised to him by his brother Thomas, who died in 1551-2. He again preached before the queen on 6 March 1559-60, and in the same year was placed on a commission, of which Parker and the bishop of London were also members, for the revision of the prayer-book. On 30 June he was installed dean of Westminster. On his appointment he framed a set of statutes for the regulation of the collegiate church, which were adopted by his successor, Gabriel Goodman. In this year one of the hostages given by the Scots for the due fulfilment of their part of the treaty of Berwick (April 1560), Archibald, son of Lord Ruthven, was placed under his care. The boy was still with him at his death, which took place 15 July of the following year. He was buried on the 20th in the chapel of St. Benedict in Westminster Abbey, to which, as also to Trinity College, Cambridge, he was a donor by his will. Five couplets of Latin elegiac verse of no particular merit are still legible beneath his effigy in the abbey, and may also be read by the curious in Cooper's 'Athenæ Cantabrigienses' (i. 210), where also will be found an abstract of his will.

BILLING, ARCHIBALD (1791–1881), physician and writer on art, was the son of Theodore Billing of Cromlyn, in the county of Dublin, and was born there on 10 Jan. 1791. He entered Trinity College, Dublin, in 1807, graduated A.B. 1811, M.B. 1814, M.D. 1818, and was incorporated M.D. at Oxford on his Dublin degree on 22 Oct. 1818. He says himself that he spent seven years in clinical study at Irish, British, and continental hospitals before he sought a fee, but about 1815 must have settled in London, was admitted candidate (member) of the College of Physicians on 22 Dec. 1818, and fellow on 22 Dec. 1819. He was censor of the college in 1823, and councillor 1852–5. Billing was long connected with the London Hospital, to which foundation, after having been engaged in teaching there since 1817, he was elected physician on 2 July 1822. In 1823 he began a course of clinical lectures, the first course of that kind, combined with regular bedside teaching, given in London. He ceased to lecture in 1836, and resigned the post of physician on 4 June 1845. On the foundation of the university of London in 1836, Billing was invited to become a member of the senate, and occupied an influential position on that body for many years. He was also for a considerable time examiner in medicine. He was fellow of the Royal Society, and an active member of many other scientific and medical societies. After a long and distinguished professional career, he retired from practice many years before his death, which occurred on 2 Sept. 1881 at his house in Park Lane.

Billing was a physician of high general culture, and possessed of many accomplishments not professional. His acute and logical intellect served him well in embodying his large experience in a well-known manual, 'The First Principles of Medicine,' which, in its first issue in 1831 hardly more than a pamphlet, grew to a bulky text-book. It was at one time very popular, and ran to six editions, though now almost forgotten. He gave special attention to diseases of the chest, and was among the earliest medical

teachers in London to make auscultation, as introduced by Laennec, a part of regular instruction. His original views respecting the cause of the sounds of the heart, which have only partially been accepted, were first put forth in 1832. He restated them in the 'London Medical Gazette' (1840, xxvi. 64), and also in his 'Practical Observations on Diseases of the Lungs and Heart,' a work much less successful than the 'Principles of Medicine.' In all Billing's writings his avowed aim was to base medicine on pathology; their most striking feature is clearness of thought, and a striving after logical accuracy which sometimes appears overstrained. Beginning as an innovator, he came in the end to be conservative, and was much opposed to what he regarded as the teachings of the German school. He took great interest in art, was himself a fair amateur artist, and a keen connoisseur in engraved gems, coins, and similar objects. On this subject he published an elaborate text-book, illustrated with photographs, which has reached a second edition. Billing was a man of great physical as well as mental activity, and was perhaps the last London physician who occasionally visited his patients on horseback. No portrait of him appears to have been published, except a very poor woodcut in the 'Medical Circular,' 1852.

He wrote (all published at London in 8vo): 1. 'First Principles of Medicine,' 1st ed. 1831; 6th ed. 1868. 2. 'On the Treatment of Asiatic Cholera,' 1st ed. 1848. 3. 'Practical Observations on Diseases of the Lungs and Heart,' 1852. 4. 'The Science of Gems, Jewels, Coins, and Medals, Ancient and Modern,' 1867. Also 'Clinical Lectures,' published in the 'Lancet,' 1831, and several papers, &c., in the medical journals.

J. F. P.

BILLING, Sir THOMAS (*d.* 1481 ?), chief justice, is said by Fuller (*Worthies*, ii. 166) to have been a native of Northamptonshire, where two villages near Northampton bear his name, and to have afterwards lived in state at Ashwell in that county. Lord Campbell (*Lives of the Chief Justices*, i. 145) says he was an attorney's clerk; but this seems doubtful. He was, at any rate, a member of Gray's Inn. Writing to one Ledam, Billing says: 'I would ye should do well, because ye are a fellow of Gray's Inn, where I was fellow' (*Paston Letters*, i. 43, 53), and, according to a Gray's Inn manuscript, he was a reader there. His social position was sufficient to enable him to be on terms of intimacy with the families of Paston and of Lord Grey de Ruthin. In 1448 he was M.P. for London, and was made common serjeant 15 Oct. 1442, and recorder 21 Sept. 1450. He received the coif as serjeant-at-law 2 Jan. 1453–4, and in the Hilary term of that year is first mentioned as arguing at the bar. Thenceforward his name is frequent in the reports. Lord-chancellor Waynflete appointed him king's serjeant 21 April 1458, and Lord Campbell, citing an otherwise unknown pamphlet of Billing in favour of the Lancastrian cause, says that with the attorney-general and solicitor-general he argued the cause of King Henry VI at the bar of the House of Lords. The entry in the Parliamentary Rolls, however (v. 376), indicates that the judges and king's serjeants excused themselves from giving an opinion in the matter. About the same time Billing appears to have been knighted, and on the accession of Edward IV his patent of king's serjeant was renewed, and in the first parliament of this reign he was named, along with Serjeants Lyttelton and Laken, a referee in a cause between the Bishop of Winchester and some of his tenants. He is said by Lord Campbell to have exerted himself actively against King Henry, Queen Margaret, and the Lancastrians, and to have helped to frame the act of attainder of Sir John Fortescue, chief justice of the king's bench, for being engaged in the battle of Towton, and to have advised the grant of a pardon, on condition that the opinions of the treatise 'De Laudibus' should be retracted (see *Rot. Parl.* vi. 2629). At any rate, in 1464 (9 Aug.), Billing was added to the three judges of the king's bench, but by the king's writ only; and the question being thereupon raised, it was decided that a commission in addition to the writ was required for the appointment of a justice of assize. Baker in his 'Chronology,' and Hale in his 'Pleas of the Crown,' says that on the trial of Walter Walker for treason in 1460, for having said to his son, 'Tom, if thou behavest thyself well, I will make thee heir to the Crown'—i.e. of the Crown Inn, of which he was landlord—Billing ruled a conviction, and Lord Campbell accepts the story. But it would seem from the report of the judgment of Chief-justice Bromley in the trial of Sir Nicholas Throckmorton, 17 April 1554, that the judge at that trial was John Markham [q.v.], afterwards chief justice next before Billing, and that he directed an acquittal (see Stow, 415; Fabyan, 633).

Billing succeeded Markham as chief justice of the king's bench 23 Jan. 1468–9 (Dugdale

and Foss, arts. 'Billing' and 'Markham'), having precedence over Yelverton and Bingham, justices of the king's bench; and this office he retained in spite of political changes. For when Henry VI for a few months regained the throne new patents were at once issued, 9 Oct. 1470; and when Edward IV overthrew him, 17 June 1471 (DUGDALE, wrongly, 1472, and so CAMPBELL), he, along with almost all the other judges, was confirmed in his seat. It is suggested that he may have owed this less to his legal talents than to the support of the Earl of Warwick. In 1477 (not as Campbell, 1470; see HUME, iii. 261) Billing tried Burdet of Arrow, in Warwickshire, a dependent of the Duke of Clarence, for treason, committed in 1474, in saying of a stag, 'I wish that the buck, horns and all, were in the king's belly,' for which he was executed (1 *State Trials*, 275). Billing is also said to have been concerned in the trial of the Duke of Clarence himself (*Rot. Parl.* vi. 193). He continued to sit in court until 5 May 1481 (1482, CAMPBELL), when he died and was buried in Bittlesden Abbey. His tombstone is now in Wappenham Church, Northamptonshire. His successor was Sir John Hussey or Husee. He was twice married, first to Katerina, who died 8 March 1479, second to Mary, daughter and heir of Robert Wesenham of Conington in Huntingdonshire, who had previously been married to Thomas Lang, and then to William Cotton of Redware, Staffordshire. She died in 1499, and was buried in St. Margaret's, Westminster, which she and Sir Thomas Billing had rebuilt. By his first wife he had issue four daughters and five sons, one of whom, Thomas, his heir, died in 1500 without male issue, and was buried with his father and mother.

[Foss's Lives of the Judges; Campbell's Lives of the Lord Chief Justices; Dugdale's Origines Juridiciales; Coke's Institutes, preface; Gairdner's Paston Letters, i. 302; Close Roll, 13 Edw. IV, m. 5.] J. A. H.

BILLINGHAM or **BULLINGHAM**, RICHARD (*fl.* 1350), a schoolman, whose name appears on the rolls of Merton College, Oxford, between 1344 and 1356 (TANNER, *Bibl. Brit.* p. 100), is mentioned by Wood (*Antiquities of Oxford*, i. 447 *seqq.*) as having been concerned in a riot arising about an election to the chancellorship of the university in 1349. Tanner states that he became a priest of Sion, but as that religious house was not founded until 1414 we must suppose that he has confounded two different persons. Billingham's works, all of a theological and scholastic character, are enumerated by Bale, 'Script. Brit. Cat.' vi. 8. Among the numerous ways in which the name is spelled, the only one that calls for special notice is Gillingham, and this is easily accounted for as a palæographical blunder.

[Authorities cited above.] R. L. P.

BILLINGS, JOSEPH (*b.* 1758?), explorer, captain in the Russian navy, in 1776 entered on board the Discovery, one of the two ships that sailed under the command of Captain Cook on his last fatal voyage. He was rated as A.B., and in September 1779, after Cook's death, was transferred with the same rating to the Resolution. He is described in the pay-book of the Resolution as a native of Turnham Green, and at that time aged twenty-one. Some time after the return of the expedition to England Billings being at St. Petersburg, whither he had probably gone as mate of a merchant ship, was induced to enter into the Russian navy with the rank of lieutenant; and when, in 1784, the empress determined to send out an expedition to explore the extreme north-eastern parts of Asia, Billings, known by repute as the 'companion' of Cook, was judged a fitting man to command it. He was definitely appointed in August 1785, the objects of the expedition, as laid down in his instructions, being 'the exact determination of the latitude and longitude of the mouth of the river Kovima, and the situation of the great promontory of the Tchukchees as far as the East Cape; the forming an exact chart of the islands in the Eastern Ocean extending to the coast of America; and, in short, the bringing to perfection the knowledge of the seas lying between the continent of Siberia and the opposite coast of America.' He received at the same time the rank of captain-lieutenant, and was instructed, on arriving at certain definite points, to take the further rank of captain of the second class and captain of the first class. Early in September an officer, with a competent staff, was sent on to Ochotsk to make arrangements for constructing two ships; and the expedition, in several detachments, proceeded to Irkutsk, where it assembled in February 1786.

A very full account of the expedition was published by the secretary, Mr. Sauer. In the course of nine years it carried out the objects prescribed for it with such exactness as was then attainable. Of Billings personally we have no information beyond what is contained in Mr. Sauer's book. Mr. Sauer did not love his captain, and implies that he was greedy, selfish, ignorant, and tyrannical, but makes no definite charge. We can only say that Billings successfully commanded the expedition during the whole

time, and that by it were made many large additions to our knowledge of the geography of those inclement regions. Of his further life, or the date and manner of his death, we know nothing.

[An Account of a Geographical and Astronomical Expedition to the Northern Parts of Russia . . . performed . . . by Commodore Joseph Billings in the years 1785–1794, narrated from the original papers by Martin Sauer, Secretary to the Expedition, 1802, 4to; Boloe's Sexagenarian, ii. 10.] J. K. L.

BILLINGS, ROBERT WILLIAM (1813–1874), architect and author, was born in London in 1813, and became, at the age of thirteen, a pupil of John Britton, the eminent topographical draughtsman. During the seven years of his articles Billings imbibed a taste for similar pursuits, which he afterwards exemplified in a series of beautiful works, published at brief intervals for the space of fifteen years. In 1837 he was employed in illustrating, for Mr. George Godwin, a 'History and Description of St. Paul's Cathedral,' and two years later, with Frederick Mackenzie, the 'Churches of London,' in two volumes, of which the plates were chiefly engraved by John le Keux. He also assisted Sir Jeffery Wyatville on drawings of Windsor Castle, and prepared numerous views of the ruins of the old Houses of Parliament after the disastrous fire.

Among the works he undertook on his own account may be mentioned 'Illustrations of the Temple Church, London,' 1838; 'Gothic Panelling in Brancepeth Church, Durham,' 1841; 'Kettering Church, Northamptonshire,' 1843. Still greater efforts were the important works on Carlisle and Durham Cathedrals, published in 1840 and 1843, as also an excellent work of the Britton school, called 'Illustrations of the Architectural Antiquities of the County of Durham,' which appeared in 1846. But his greatest achievement in this style, and the one with which his name is chiefly associated, was the 'Baronial and Ecclesiastical Antiquities of Scotland,' 4 vols. 1845–52, a noble collection of 240 illustrations, with ample explanatory letterpress. His other works deal almost exclusively with the technicalities of his art, and are: 'An Attempt to define the Geometric Proportions of Gothic Architecture, as illustrated by the Cathedrals of Carlisle and Worcester,' 1840; 'Illustrations of Geometric Tracery, from the panelling belonging to Carlisle Cathedral,' 1842; 'The Infinity of Geometric Design exemplified,' 1849; 'The Power of Form applied to Geometric Tracery,' 1851.

After giving up authorship, Billings devoted himself entirely to his practice, which soon grew very considerable. He was employed upon the restoration of the chapel of Edinburgh Castle (a government commission), the Douglas Room in Stirling Castle, Gosford House, Haddingtonshire, for the Earl of Wemyss; the restoration of Hanbury Hall, Worcestershire; Crosby-upon-Eden Church, Cumberland; Kemble House, Wiltshire; and additions to Castle Wemyss, Renfrewshire, for Mr. John Burns, upon which he was engaged at the time of his death, having built the castle itself many years before. After 1865 Billings lived at Putney, where he purchased an old English residence, the Moulinère, which had once been occupied by the famous Duchess of Marlborough. He died there 14 Nov. 1874. During the latter years of his life, at intervals of leisure, he had again occupied himself upon one of his old and favourite themes—a view from the dome of the interior of St. Paul's Cathedral. In this drawing his endeavour was to modify the rendering of outlying portions according to strict rules, so as to bring them within the range of possible and undistorted vision. The drawing, which is on a very large scale, and was unfortunately left unfinished, has been lately (1884) deposited in the library of the dean and chapter.

[Information from Mr. J. Drayton Wyatt; Builder for 1874, xxxii. 982, 1035.] G. G.

BILLINGSLEY, SIR HENRY (*d.* 1606), lord mayor of London, and first translator of Euclid into English, was the son of Roger Billingsley of Canterbury. He was admitted a Lady Margaret scholar of St. John's College, Cambridge, in 1551. He is said to have also studied for several years at Oxford, although he never took a degree at either university. At Oxford he developed, according to Wood, a taste for mathematics under the tuition of 'an eminent mathematician called Whytehead,' at one time 'a fryar of the order of St. Augustine.' Billingsley was afterwards apprenticed to a London haberdasher, and rapidly became a wealthy merchant. He was chosen sheriff of London in 1584, and alderman of Tower ward on 16 Nov. 1585. He removed to Candlewick ward in 1592, and on 31 Dec. 1596 was elected lord mayor on the death, during his year of office, of Sir Thomas Skinner. He was apparently knighted during 1597. In 1594 he had been appointed president of St. Thomas's Hospital, and was from 1589 one of the queen's four 'customers,' or farmers of the customs, at the port of London. He sat as member for London in the parlia-

ment that met on 19 March 1603–4. He died 22 Nov. 1606, and was buried in the church of St. Catharine Coleman. To the poor of that parish he bequeathed 200*l.* In 1591 he had already founded three scholarships at St. John's College, Cambridge, for poor students, and had given to the college for their maintenance two messuages and tenements in Tower Street and in Mark Lane, Allhallows Barking (Baker, *St. John's College*, ed. Mayor, i. 434).

Billingsley published in 1570 the first translation of Euclid's 'Elements of Geometry' that had appeared in English. His original was the Latin version attributed to Campanus, which had been first printed in 1482, and again in 1509. A lengthy essay on mathematical science from the pen of Dr. John Dee prefaced the volume, and De Morgan has suggested that Dee, and not Billingsley, was the actual author of the translation. Dee, however, in his autobiographical tracts, distinctly states that, besides the introduction, he only contributed 'divers and many Annotations and Inventions Mathematicall added in sundry places of the foresaid English Euclide after the tenth booke of the same' (*Miscellanies of Chetham Soc.* i. 73). Wood asserts that Whytehead, Billingsley's Oxford tutor, who lived during his old age in Billingsley's house, bequeathed to his old pupil a valuable collection of manuscripts, which Billingsley utilised in his 'Elements of Geometrie.' In his prefatory address Billingsley makes no mention of assistance, but promises to translate, if his first effort is well received, 'other good authors both pertaining to religion (as partly I have already done), and also pertaining to Mathematicall Artes.' But this promise was never fulfilled. Two letters from Billingsley to Lord Burghley on matters connected with the London customs are among the Lansdowne MSS. (62 No. 19, 67 No. 88), and several documents at the Record Office dealing with his official duties between 1590 and the date of his death bear his signature. One of these papers, dated 11 Nov. 1604, consists of observations on the danger of decay in shipping, and in the exportation of English cloth (*Cal. State Papers*, 1603-10, p. 166). Billingsley was a member of the Society of Antiquaries founded by Archbishop Parker in 1572 (*Archæologia*, i. 20).

Billingsley was twice married, (1) in 1572 to Elizabeth Boorne, who died in 1577, aged 35, and (2) to Bridget, second daughter of Sir Christopher Draper, who was lord mayor in 1566. By his first wife he had a large family. His eldest son, Henry, was knighted by James I on 28 June 1603, and entertained Queen Anne in 1613 at his house at Liston, Gloucestershire, which his father had purchased in 1598 (Nichols, *Progresses of James I*, i. 192, ii. 647, 666).

[Cooper's Athenæ Cantab. ii. 442; Wood's Athen. Oxon., ed. Bliss, i. 762; Chalmers's Biog. Dict.; Cal. Dom. State Papers from 1590 to 1606.]

S. L.

BILLINGSLEY, JOHN, the elder (1625–1684), divine, was born at Chatham, Kent, on 14 Sept. 1625. Wood says 'he was educated mostly in St. John's College, Cambridge, but, coming with the rout to Oxon to obtain preferment on the visitation made by the parliament in 1648, he was fortunate to be supplied with a Kentish fellowship of Corpus Christi College, Oxford (as having been born in that county).' In 1649 he was 'incorporate' B.A., and ordained on 26 Sept. of that year in the church of St. Andrew Undershaft, London.

While in residence at Oxford he used to act as an evangelist in the neighbourhood, preaching with uncommon force. 'At length' (Calamy and Palmer tell us) 'he had a call into one of the remote and dark corners of the kingdom to preach the gospel.' This he did 'very assiduously, viz. at Addingham in Cumberland.' He instituted catechising, and joined a county association for revival of the 'scriptural discipline of particular churches.' Thence he removed to Chesterfield in Derbyshire, which Anthony à Wood thought to be his first charge. He had many disputations with the disciples of George Fox. He published 'Strong Comforts for Weak Christians, with due Cautions against Presumption. Being the substance of several lectures lately preached at Chesterfield in Derbyshire, 1656;' 'The grand Quaker prov'd a gross Liar; or a Short Reply to a little Pamphlet entitled A Dispute between James Naylor and the Parish Teacher of Chesterfield by a Challenge against him,' &c., printed with 'Strong Comforts.' George Fox himself replied to Billingsley in 'The great Mystery of the great Whore unfolded, and Anti-Christ's Kingdom revealed with Destruction,' 1659.

As his reputation grew, he 'had great temptations from (increased) secular advantages and the importunity of friends to have quitted' Chesterfield; but 'he would not yield to a thought of leaving that people, who were dear to him as his own soul, and it was in his heart to live and die with them.' He was one of the two thousand deprived in 1662. He continued to labour among his parishioners in private, as he found opportunity. He was silenced by the act of 1664 against conventicles. He retired to

Mansfield, which 'was to him and several others a little Zoar.' He went once a fortnight to Chesterfield, preached twice on each visit, 'and often expounded and catechised,' and visited the sick. Having to travel frequently at night, his health was greatly weakened. Though he was an avowed nonconformist, he lived 'in hearty love and concord with the worthy minister of the parish' at Mansfield, who, with reference to Billingsley, said that he 'counted it no schism to endeavour to help his people in their way to heaven.'

At the Restoration he was a zealous royalist. Bishop Hacket earnestly entreated him to conform, but in vain. 'He knew not,' were his words, 'how to mollify oaths by forced interpretations, or stretch his conscience to comply with human will, in cases wherein if he should happen to be in the wrong (as he strongly suspected he should be in this) he knew human power could not defend him.' He died 30 May 1684. 'Out of his great modesty' (Palmer's *Nonconf. Mem.* i. 401) 'he left an express order in his will that there was to be no sermon preached at his funeral; but a suitable consolatory discourse was addressed to the family on the Lord's day following by [Matthew] Sylvester' on Romans xii. 12. 'The Believer's Daily Exercise, or the Scripture Precept of being in the Fear of the Lord urged in Four Sermons,' 1690, ascribed to him, is by his son John. His two sons became well known as nonconformist ministers at Hull and London [see Billingsley, John, jun.]

[Wood's Athenæ, ed. Bliss, iv. 611–2; Palmer's Nonconf. Mem. i. 400–2; Calamy's Account; Billingsley's own writings.] A. B. G.

BILLINGSLEY, JOHN, the younger (1657–1722), nonconformist divine, son of John Billingsley [q. v.], was born at Chesterfield, Derbyshire, in 1657. First trained by his father, he proceeded to the university of Cambridge, being entered of Trinity College. Wilson (*History of Dissenting Churches*, i. 77) says: 'When neither his inclination nor circumstances allowed his longer continuance at the university, he was placed under the care of the famous Mr. Edward Baynes, of Lincoln.' On leaving Lincoln he completed his theological and classical preparations under his father, and under an uncle Whitlock of Nottingham. He was afterwards duly ordained.

He first preached at Chesterfield. On the death of his father—for whose monument he composed an elegant and pathetic Latin inscription (given by Calamy)—he appears to have served with the celebrated Rev. Edward Prime, of Sheffield. For seven years he was settled at Selston with 'a plain but serious auditory.' From this he removed to Kingston-upon-Hull, where he ministered for about ten years. About 1706 he was chosen colleague of Dr. William Harris at Crutched Friars, and accepting the call was thus placed practically in the foremost place among protestant dissenters. He was associated with Dr. Harris for fifteen years. 'I ever esteemed him,' says Dr. Harris, 'a great blessing to the congregation, and I believe he was thought so by every one in it. We lived together through that course of time in a most perfect uninterrupted friendship and endearment; his labours and his memory will be always precious in my account.'

Besides his work at Crutched Friars, he spent Sunday evening during the winter 'in a catechetical exercise to a numerous congregation at Old Jewry.' His text-book was 'The Larger and Shorter Catechisms' of the assembly of divines. He also went over the main points in the popish controversy.

When the unhappy controversy concerning the Trinity agitated England at the commencement of the eighteenth century, the protestant dissenters convened a synod at Salters' Hall in 1719. They split upon the rock of subscription. Billingsley sided with those who opposed subscription. This was the more honourable to him, as personally he was rigidly orthodox. He declined to approve of subscription on the broad principle of opposition to all tests in matters of religion. He died 22 May 1722, in his sixty-fifth year, and was buried in Bunhill Fields. He published a number of religious tracts. A son John, originally a dissenting minister at Dover, married a sister of Sir Philip Yorke, afterwards Lord-chancellor Hardwicke, conformed and accepted a good living in the national church with a prebend in Bristol Cathedral. It is to his honour that, notwithstanding his conformity, he remained 'moderate, and maintained friendly intercourse with the dissenters to the last.'

[Wilson's Hist. of Dissenting Churches, i. 77–82; Palmer's Nonconf. Mem. i. 402; Harris's Funeral Sermon for Billingsley; Le Neve's Fasti; and authorities on his father.] A. B. G.

BILLINGSLEY, MARTIN (*fl.* 1618–1637), writing-master, was born in 1591, as an inscription round his portrait, prefixed to his 'Pens Excellencie,' shows; but where he was born, or of whom, there is no evidence. He was residing in London, in Bush Lane, near London Stone, on 22 Dec. 1618, when he dedicated his first dainty little work, 'The Pens Excellencie, or the Secretarys Delight,' to Prince Charles. He would appear to have

been the prince's writing master from a sentence in his dedication: 'This humble worke . . . first devoted to y^r highness gratious regard and now . . . putt forth into the world,' and from another sentence in the preface, 'This little booke hath found gracious acceptation at the hands of him to whom it was first privately intended.' Copies set out in the book itself give ample testimony to Billingsley's skill. His portrait proves him to have been of good appearance, and represents him in huge pleated ruff and ornamented doublet. In 1623, there was another issue of the 'Pens Excellencie,' both issues being notable as early productions of the rolling-press (MASSEY, *Origin of Letters*, part ii. p. 24). In 1637, Billingsley published 'A Coppie Booke, containing Varieties of Examples of all the most curious Hands written.' This was printed and sold at the Globe and Compasses, at the west end of St. Paul's, towards Ludgate. It pronounces itself to be the second edition. In its few pages of directions it refers to a previous work, 'The Pens Transcendency,' 'wherein are directions for every particular letter.' On the back of the last page there is a list of works (including 'The Pens Transcendency')—'The Pens Celerity,' 'The Pens Triumph,' 'The Pens Paradise,' and 'The Pens Facility'—all of which were probably Billingsley's, and published between 1618 and 1637. An edition of 'The Pens Excellencie' seems to have been issued in 1641, 4to (WATT, *Bibl. Brit.*) No later fact concerning Billingsley is to be found.

Billingsley, like his immediate predecessor in his art, Peter Bales [q. v.], throws very interesting light on penmen and penmanship. 'Let not your breast lie on the desk you write on, nor your nose on the paper, but sit in as majestical a posture as you can,' he says (*A Coppie Book*, 1637). He speaks also (*The Pens Excellencie*, 1618) of London, 'this famous citie,' swarming with 'lame pen-men,' with 'a worlde of squirting teachers . . . botchers,' whose 'worke is such weake stuffe as he would rather imagine it to bee the scratching of a hen than the worke of a profest penman,' who yet 'clap bills upon every post . . . and make curriculer progresse over all places in this kingdom,' with 'audatious brags and lying promises . . . professing to teach any one a sufficient hand in a month, and some of them doe say in a fortnight.' The number of hands set out by Billingsley with examples was six, with some additional subdivisions. The six were the Secretary, 'the usuall hand of England' (yet getting its name from *secret*, he said); the Bastard Secretary, or Text; the Roman; the Italian, 'meere botching and detestable;' the Court (because used in the courts of King's Bench and Common Pleas); and the Chancery. The Roman hand, Billingsley said, was the hand 'usually taught to women, because they are phantasticall and humorsome.' He disagreed with those that 'affirme writing to be altogether unnecessarie for women,' and was of opinion that 'no woman surviving her husband, and who hath an estate left her, ought to be without the use thereof.'

[Billingsley's own Works; Massey's Origin and Progress of Letters, part ii. p. 24; Watt's Bibl. Brit.] J. H.

BILLINGSLEY, NICHOLAS (1633–1709), poet and divine, was a native of Faversham, Kent. He was probably son of Nicholas Billingsley, one of the masters of Faversham School and rector of Betteshanger from 23 Nov. 1644 till 4 July 1651. The parish register of Faversham has, under baptisms, the entry, '1633, 1 November, Nicholas, son of Nicholas and Letitia Billingsley.' It has been stated that in 1658, when he proceeded B.D. [? B.A.], he was in his sixteenth year; but this is a mistake caused by a misinterpretation of certain allusions in his poems. In his epistle before his 'Infancy of the World' to Francis Rous of Eton, he writes: 'It is now [1656] six years compleat since I was through your favour removed from my late reverend father's side and placed in that famous and flourishing school of Eaton; from whence, after some continuance there, having not the happinesse (nor was I alone) to be transplanted elsewhere in a college of the same foundation, whatever want of learning or somewhat else, of much (what if I say more?) looked upon by many now-a-days, or both, were impediments, I shall not now stand to determine;' and then he adds that his poetry was 'as good as the third lustrum of his age was then able to produce.' This epistle is dated from Canterbury, 29 Dec. 1656. But the mentioning of 'third lustrum' implies not that in 1656 he was about fifteen, but that he was so when the poetry first published in 1656 was composed or produced. Similarly one John Swan, among the prefixed commendatory poems, addresses him 'in his fifteenth year.'

In his 'Brachy-Martyrology' the young author styles himself of 'Merton College, Oxford.' But his academic attendances must have been interrupted by sickness, for he tells us that he composed 'Brachy-Martyrology' at his father's house when 'dispensed from college by illness.' The second part of 'Brachy-Martyrology' is dated from Wickham-Brook, 5 June 1657.

He was deprived of the living of Weobley in Herefordshire on the passing of the Act of Uniformity in 1662. He was then married to a daughter of Richard Hawes of Leintwardine (Herefordshire), who was ejected, and took up his residence with his son-in-law at Abergavenny. There Billingsley kept school until, 'by the good offices of Sir Edward Harley, he was settled at Blakeney in the parish of Awre in Gloucestershire.' The maintenance of this small living (50*l.* per annum) depended upon an impropriation, which, 'by the generosity of a gentleman, had been annexed to a chapel of ease' in the village. He was simultaneously offered the vicarage, but the principle and conscience which had made him give up Weobley constrained him to decline it. While Dr. Nicholson (*d.* 1670–1) was bishop (of Gloucester) and a Mr. Jordan, a moderate and pious man, was vicar of the parish, he was left in peace. But the vicar died in 1668, and two successive high-church vicars did all in their power to molest and ruin him. After the death of Bishop Pritchet in 1680–1, the succeeding bishop (Frampton) and the chancellor (Parsons) were his bitter opponents. The chancellor after hearing Billingsley preach a visitation-sermon, in which he reproved the vices of the clergy, so far forgot himself as in the open street to pluck the preacher by the hair, with these words: 'Sirrah, you are a rogue, and I'll bind you to your good behaviour.' After this disreputable incident Billingsley had many suspensions and pains and penalties for 'want of that conformity to which his place did not oblige him.' He complied so far as 'to read more or less of the Common Prayer, and to wear the surplice, after the bishop had given it under his hand that it was not required to be worn upon the account of any supposed holiness in the garment, but only for decency and comeliness.' Afterwards Frampton's chancellor satisfied his own long-nursed wrath by again suspending Billingsley. On this, in the anonymous 'Life of Frampton,' published for the first time so recently as 1876 (edited by T. Simpson Evans, M.A., pp. 174–7), the truculent writer denounces Billingsley (though he knew so little of him as to misname him Benjamin) as 'always of an anti-monarchical and rebellious temper, and if against the king no wonder against the bishop' (p. 174). When, however, Dr. Fowler succeeded as bishop, he blamed the chancellor and took steps to induce Billingsley to return, and kept the place open for a whole year. But, worn out by his many persecutions and sufferings, Billingsley respectfully declined to reconsider his decision finally to leave Awre. Thenceforward he exercised his ministry among the nonconformists in different places in Gloucestershire. He at length became very feeble, and died at Bristol in December 1709.

Anthony à Wood ignored his ministerial offices, whilst both Calamy and Palmer knew nothing of his poems. Richard Baxter had in his possession a manuscript of his entitled 'Theological Reflections on God's admirable Master-piece,' and he wrote on the fly-leaf as follows: 'The poetry of this book I leave to the judgment and relish of the reader; the philosophical and theological matter, as far as I had leisure to peruse it, is such as is agreeable to the authors that are most commonly esteemed.' Billingsley, in his 'Treasury of Divine Raptures,' dubs himself 'a private chaplain to the muse.' His books are: 1. 'Brachy-Martyrologia; or a Breviary of all the greatest Persecutions which have befallen the Saints and People of God from the Creation to our Present Times: Paraphras'd by Nicholas Billingsley of Mert. Coll. Oxon.,' 1657. 2. 'Κοσμοβρεφία, or the Infancy of the World; with an Appendix of God's Resting, Eden's Garden, Man's Happiness before, Misery after, his Fall. Whereunto is added, the Praise of Nothing; Divine Ejaculations; the Four Ages of the World; the Birth of Christ; also a Century of Historical Applications; with a Taste of Poetical Fictions. Written some years since by N. B., then of Eaton School, and now published at the request of his Friends,' 1658. 3. 'Thesauro-Phulakion, a Treasury of Divine Raptures, consisting of Serious Observations, Pious Ejaculations, Select Epigrams, alphabetically rank'd and fill'd by a Private Chaplain to the illustrious and renowned Lady Urania, the Divine and Heavenly Muse,' 1667. Various sub-title-pages are introduced and many dedications. He left two sons: Richard, who died minister of Whitchurch, Hampshire, father of the Rev. Samuel Billingsley (Palmer's *Nonconf. Mem.* i. 402), and Nicholas, minister of Ashwick, Somersetshire (*ib.* ii. 298).

[Wood's Fasti (Bliss), ii. 213; Calamy and Palmer, ii. 297–8, 477; Hunter's MS. Chorus Vatum in Brit. Mus.; Life of Robert Frampton, Bishop of Gloucester, deprived as a non-juror (an interesting but partisan book, 1876); local researches by Mr. Charles Smith, Faversham, Kent.] A. B. G.

BILLINGTON, ELIZABETH (1768–1818), the greatest singer England has ever produced, was probably born about 1768 in Litchfield Street, Soho. She was the daughter (according to the author of the scurrilous 'Memoirs' published in 1792, the illegitimate daughter) of Carl Weichsel, a native of Frei-

berg, in Saxony, principal oboist at the King's Theatre. Her mother, an English vocalist of some distinction, was a pupil of John Christian Bach, and sang at Vauxhall with success between 1765 and 1775. Elizabeth Weichsel received her earliest musical instruction, in company with her brother Charles (who afterwards was known as a violinist) from her father, under whom she studied the pianoforte with such assiduity that on 10 March 1774 she played at a concert at the Haymarket for her mother's benefit. In addition to her father's instruction she studied under Schroeter, and before she was twelve years old published two sets of pianoforte sonatas. She now began to turn her attention to the cultivation of her voice, and at the early age of fourteen appeared at a public concert in Oxford. On 13 Oct. 1783 she was secretly married (under the assumed name of 'Elizabeth Wierman') at Lambeth Church to James Billington, a double-bass player in the Drury Lane orchestra, from whom she had had lessons in singing. Immediately after their marriage the Billingtons went to Dublin, where she made her first appearance on the stage in the part of Eurydice. After singing at Waterford and other towns in Ireland she returned to London in 1786, and was offered an engagement at Covent Garden for three nights only, but she insisted on being engaged for twelve nights, at a salary of 12*l.* a week. On these terms she was announced to appear on 14 Feb. 1786, but the renown she had already won in Dublin had preceded her, and 'by command of their majesties' she appeared on the 13th as Rosetta in Arne's 'Love in a Village.' Her performance seems to have struck the public by its originality, and her success was enormous. At the end of the twelve nights she was engaged for the rest of the season at a salary of 1,000*l.* A contemporary account of her at this period says that her voice was of great sweetness, compass, and power, and that she possessed 'a great deal of genuine beauty and very unaffected and charming manners;' but the secret of her great success was the unremitting zeal with which she studied her art. Her brother-in-law, Thomas Billington [q.v.], says that she had originally 'a very indifferent voice and manner,' which she completely changed by the industry with which, throughout her public career, she pursued her studies. At the end of her first season she went to Paris, and had lessons from the veteran Sacchini, whose last pupil she was, and at different periods of her career she also studied with Morelli, Paer, and Himmel. She returned to London for the season of 1786–7, and continued to sing there, at Covent Garden, the Concerts of Ancient Music, the so-called Oratorios, and the Handel Commemorations, until the end of 1793. Shield wrote his operas of 'Marian' and 'The Prophet' for her, and in 1789 she appeared as Yarico in Dr. Arnold's long-popular compilation, 'Inkle and Yarico.' Others of her favourite parts were Mandane (in 'Artaxerxes'), and the heroines in 'Polly,' the 'Duenna,' the 'Castle of Andalusia,' 'Corali,' 'Clara,' the 'Flitch of Bacon,' &c.

Mrs. Billington was not happy in her marriage, and even before she had appeared on the London stage rumour had been busy with her fair fame. In 1792 there appeared an anonymous publication, which professed to contain her private correspondence with her mother. This work was of so disgraceful and scurrilous a description that Mrs. Billington was forced to take legal proceedings against the publishers. An answer to the 'Memoirs' appeared in due course; but it seems probable that the scandal induced Mrs. Billington to abandon her profession and retire to the Continent. Accompanied by her brother and her husband, she left England early in 1794, and travelled by way of Germany to Italy. At Naples she was induced by Sir William Hamilton, the English ambassador, to sing in private before the royal family. This led to her singing at the San Carlo, where she appeared in a new opera, 'Inez di Castro,' written expressly for her by Bianchi, on 30 May 1794. Her singing created an extraordinary impression, but her triumph was cut short by the sudden death of her husband, which took place the day after her first appearance, as he was preparing to accompany his wife to the theatre, after dining with the Bishop of Winchester. Her enemies did not hesitate to accuse Mrs. Billington of causing her husband's death; but frail as she undoubtedly was, there was no reason to lay such a crime to her charge. She stayed at Naples sixteen months, and then sang at Florence, Leghorn, Milan, Venice, and Trieste. In 1797, when singing at Venice, she was prostrated with a severe illness for six weeks. On her recovery the opera house was illuminated for three nights. At Milan she was received with much favour by the Empress Josephine, and here she met a young Frenchman, M. Felissent, to whom she was married in 1799. After her second marriage she went to live at St. Artien, an estate she had bought between Venice and Treviso; but her life was rendered so insupportable by the ill-treatment she received from her husband that in 1801 she left him and returned to England. Felissent, who, it was said, had been publicly flogged as an impostor

at Milan, followed her to London, but he was arrested and expelled the country as an alien. Mrs. Billington's return to London caused a great stir in the musical world, and the managers both of Covent Garden (Harris) and Drury Lane (Sheridan) were eager to secure her services. After some negotiation it was arranged that she should appear alternately at both houses, the terms she was to receive being 3,000 guineas for the season, together with a benefit guaranteed to amount to 500*l.*, and 500*l.* to her brother for leading the orchestra on the nights she appeared. Her reappearance took place at Covent Garden on 3 Oct. 1801, in Arne's 'Artaxerxes,' in which she sang the part of Mandane, Incledon singing that of Arbaces. During 1801 she made from 10,000*l.* to 15,000*l.*, and at one time her fortune is said to have amounted to 65,000*l.* In 1802 Mrs. Billington appeared in Italian opera at the King's Theatre, on the occasion of the farewell of Banti, when both these great artists sang in Nasolini's 'Merope.' A similar performance took place on 3 June of the same year, when she was induced to sing a duet with Mara, at the farewell concert of her great rival. From this time until her retirement in 1811 she continued to sing in Italian opera. Winter wrote his 'Calypso' (1803) expressly for her, and in 1806 she distinguished herself by producing, for her benefit, 'La Clemenza di Tito,' the first opera by Mozart performed in this country. During 1809–10 she suffered much from ill-health, and at length she retired from the profession, her last appearance being announced at her brother's benefit concert on 3 May 1811. She appeared, however, once more at Whitehall Chapel in 1814, at a concert in aid of the sufferers by the German war. After her retirement she lived in princely style at a villa at Fulham, where she was rejoined in 1817 by M. Felissent, who induced her to return with him to St. Artien in the following year. Here she died on 25 Aug. 1818, owing, it is sometimes said, to the effects of a blow she received from her worthless husband. Her child by her first husband had died in infancy; but it was believed that an adopted child, whom she had placed in a convent at Brussels, was her own daughter.

Contemporary opinions as to the merits of Mrs. Billington as a singer differ to a singular degree. It was always her misfortune to be forced into a position of rivalry with some other great artist, and thus partisanship often guided the judgments of her critics. As to the perfect finish of her singing all are agreed. The Earl of Mount Edgcumbe says that her voice was sweet and flexible, her execution neat and precise, her embellishments in good taste and judicious, but that she lacked feeling, and was no actress. Miss Seward writes of her: 'She has too much sense to gambol like Mara in the sacred songs;' but George III, who was no mean judge—by suggesting in a written memorandum (*Egerton MS.* 2159), that Lord Carmarthen 'if he can get her to sing pathetick songs, and not to over-grace them, will be doing an essential service to the court'—seems to imply that she had the great fault of the singers of that day, viz. the excessive and indiscriminate use of vocal embellishments. She was all through her life a finished pianist. Salomon used to say that 'she sang with her fingers,' and quite late in life she played a duet in public with J. B. Cramer. In person Mrs. Billington was very handsome, though inclined to stoutness. Her portrait was painted by Sir Joshua Reynolds as Saint Cecilia, and has been engraved by James Ward, Pastorini, and Cardon. The exhibition of old masters at Burlington House in 1885 contained a small portrait by Reynolds, said to be of Mrs. Billington in her youth, a statement which is probably inaccurate. Two miniatures of her were painted, one by Daniel, and there are engravings of her by T. Burke after De Koster, as Mandane by Heath after Stothard, by Bartolozzi after Cosway, by Dunkarton after Downman, and by Assen. A portrait of Clara in the 'Duenna,' painted and engraved by J. R. Smith in 1797, probably represents Mrs. Billington.

BILLINGTON, THOMAS (*d.* 1832), a native of Exeter, was a well-known harpsichord and singing master towards the close of the eighteenth century. On 6 April 1777 he was elected a member of the Royal Society of Musicians. His brother James (the husband of Mrs. Billington [q. v.]) was elected a member of the same society on 6 Jan. 1782. A third brother, Horace, was an artist, and

died at Glasshouse Street on 17 Nov. 1812. Billington was an industrious composer and compiler. His most remarkable productions are his settings of poems like Gray's 'Elegy,' Pope's 'Eloisa,' and parts of Young's 'Night Thoughts' to heterogeneous collections of his own and other composers' music. In one of these curious compilations he arranged Handel's Dead March in 'Saul' as a four-part glee, while Jomelli's 'Chaconne' figures as a song. Besides these works, Billington published several sets of instrumental trios, quartetts, and sonatas; and canzonets and ballads for one and more voices. During the greater part of his life he lived at 24 Charlotte Street, but towards 1825 he removed to Sunbury, Middlesex. He died at Tunis in 1832.

[Brit. Mus. Cat.; Records of Royal Society of Musicians; Gent. Mag. lxxxii. pt. ii. 501, cii. 382.] W. B. S.

BILLINGTON, WILLIAM (1827–1884), dialect writer, was born at the Yew Trees, Samlesbury, near Blackburn and was one of the three sons of a contractor for road-making. The father died when the boy was between seven and eight years of age, and in consequence he had little or no schooling, but as soon as possible entered upon factory life as a 'doffer.' In 1839 the family removed to Blackburn, and Billington passed through various stages of employment in the cotton mills, from 'doffer' to weaver and 'taper.' He was also for some time a publican. His intimate knowledge of the ways of thought and speech of Lancashire working people was turned to account in the period of the Lancashire cotton famine, when his homely rhymes were circulated in thousands of broadsides. Of the ballad of 'Th' Shurat Weyvur' 14,000 copies were sold in that time of distress. Another popular rhyme, 'Th' Tay and Rum Ditty,' usually attributed to him, was written by 'Adam Chester,' the pseudonym of Charles Rothwell. The most important of his sketches, in prose and verse, have been collected in two works, 'Sheen and Shade,' which appeared in 1861, and 'Lancashire Poems with other Sketches,' published in 1883, some copies of which have a photographic portrait. High literary merit cannot be claimed for Billington, but he is a faithful painter of the life of the district, and a certain philological value attaches to his representation of the East Lancashire dialect. He was twice married, and died on 1 Jan. 1884.

[Sutton's List of Lancashire Authors; Bibliographical List published by the English Dialect Society; private information.] W. E. A. A.

BILNEY or BYLNEY, THOMAS (*d.* 1531), martyr, was a member of a Norfolk family which took its name from the villages of the same designation in that county. Local historians (BLOMEFIELD'S *Norfolk*, iii. 199, ix. 461) assert that he was born either at East Bilney or Norwich; but these statements seem to rest on probability rather than definite evidence. The date of his ordination as priest makes it impossible for him to have been born before 1495, and as both his parents were alive at his death, it is improbable that he was born much earlier. When still very young he went to Trinity Hall, Cambridge. His ardent religious temperament drew him from legal studies towards an active clerical life. In the summer of 1519 he was ordained priest by Bishop West, at Ely, on the title of the Priory of St. Bartholomew, in Smithfield (*MS. Cole*, xxvi. 151, from West's Register; *MS. Add.* 5827). The absence of any reference to his status in Bishop West's Register proves that he did not take his degree of LL.B. or become a fellow of his college until some subsequent time.

The earlier period of Bilney's manhood seems to have been passed in a series of spiritual struggles analogous to those of Luther. He sought for relief in those mechanical theories of 'good works' which the reigning scholasticism inculcated. But fastings and watchings, penances and masses were powerless to relieve the sense of sin that weighed so heavily on his sensitive temperament. At last the fame of the great scholar's Latinity attracted Bilney to the edition of the New Testament which Erasmus had published in 1516. That Erasmus's Latin, rather than the Greek text, should have allured Bilney, suggests that he, whose early studies had been in the civil and canon laws, had little or no knowledge of the latter language. Like Luther, Bilney found in the teaching of St. Paul what he had so long sought for in vain in the arid tenets of the schoolmen. 'Immediately I felt,' he exclaims, 'a marvellous comfort and quietness, insomuch as my bruised bones leapt for joy.' Henceforward the scriptures were his chief study. A bible which once belonged to Bilney is still preserved in the library of Corpus College, Cambridge. Its frequent annotations and interlineations show how diligent he had been in its study. The doctrines of justification by faith, of the nothingness of human efforts without Christ, of the vanity of a merely external religion of rites and ceremonies, became for Bilney, as for so many others of his generation, the starting points of a new and brighter existence. Other young Cambridge men were groping on the same

path, and these earliest English protestants formed a sort of society, of which Bilney became one of the leaders. Barnes and Lambert ascribed their conversion to his influence. Matthew Parker, who, in 1521, had come up from Norwich to Corpus College, soon acquired an enthusiastic affection for one who was perhaps his fellow-townsman. In 1524 Hugh Latimer, then as ardent a conservative as he afterwards became a strenuous reformer, read for his B.D. thesis a violent philippic against Melanchthon. Bilney, who had perhaps studied Lutheran books in secret, and who had been present at the recital of the dissertation, visited Latimer the next day, and reasoned with him with such convincing subtlety that Latimer ended by completely accepting his position. From that day began a lifelong friendship between Bilney and Latimer. Henceforth they were constantly in each other's society, and in their daily walks on 'Heretic's Hill,' as the people called their favourite place of exercise, Bilney quite won over his new friend. 'By his confession,' said Latimer, 'I learned more than in twenty years before.' Their position had this in common, that with a burning zeal for righteousness and spiritual religion their unspeculative intellects were never seriously troubled with mere doctrinal and theological difficulties. To the last Bilney remained orthodox, after mediæval standards on the power of the pope, the sacrifice of the mass, the doctrine of transubstantiation and the powers of the church. Foxe is quite pitiful on his blindness and grossness on these points. Bilney remained where Luther started, and died too early to be influenced, like Latimer, by external changes of a later date.

The little band of Cambridge reformers were zealous in preaching and in works of charity, however opposed they were to the formal 'good works' of the schoolmen. Bilney and Latimer constantly visited together the foul lazar-house and equally foul prison of Cambridge. On one occasion they discovered a woman in gaol who had been unjustly sentenced to death for child-murder, and Latimer's influence with the king procured her pardon. This must have been at the very end of Bilney's career.

Though a zealous opponent of the ceremonial fastings of the church, Bilney set in his own life a rare example of abstinence and self-denial. He allowed himself little sleep. He generally contented himself with one meal a day, and distributed the rest of his commons to the prisoners and the poor. 'He could abide,' says Foxe, 'neither singing nor swearing.' The 'dainty singing' of the greater churches was to him mere 'mocking against God;' and whenever Thirlby, the future bishop, who had rooms beneath him, played upon his recorder, Bilney 'would resort straight to his prayer.' Latimer is always enthusiastic upon the simplicity, the unworldliness, and the transparent honesty of 'little Bilney,' as he affectionately calls him. He was 'meek and charitable, a simple good soul not fit for this world.'

In the propagation of his teaching, Bilney gave his small and spare frame no rest. Cambridge and London were not enough for him. The election of Stephen Gardiner to the mastership of Trinity Hall in 1525 may have made his college a less pleasant place of abode to him. On 23 July 1525 he obtained from Bishop West a license to preach throughout the whole diocese of Ely (*Cole MS.* as above, xxvi. 116). He also preached frequently in Norfolk and Suffolk, but his admission into so many churches almost proves that his general teaching seemed orthodox in character. But his denunciations of saint and relic worship, and of pilgrimages to Walsingham and Canterbury, his rejection of the mediation of saints, and of many other cherished portions of the popular religion, drew the attention of Wolsey to his case, who, as legate *a latere*, then exercised a jurisdiction that transcended both the diocesan and metropolitical authorities. Wolsey had been accused of remissness in dealing with heresy. He began to take a severer line. About 1526 he seems to have had Bilney before him and to have dismissed him on taking an oath that he did not hold, and would not disseminate, the doctrines of Luther (Foxe, iv. 622). But next year (1527) Bilney, in conjunction with his Cambridge friend Arthur, fell into more serious trouble. About Whitsuntide he preached a series of sermons in and near London. At St. Magnus's, near London Bridge, he exclaimed: 'Pray you only to God, and to noo saynts, rehersing the Litany, and when he came to Sancta Maria, ora pro nobis, he said Stay there.' He also said that 'Christen men ought to worship God only and not Saynts.' At Willesden, in Middlesex, he taught the same doctrines in the same Whitsun week, and declared that but for the idolatry of the Christians the Jews would long ago have been converted to the christian faith. At Newington, in Surrey, which was also in the diocese of London, he again denounced prayer to saints. A sermon at Christ Church, Ipswich, on 28 May, and a disputation in that town with Friar Brasiard against image worship, together with a previous 'most ghostly sermon' on 7 March, had excited general suspicion. Tunstal, who had obtained evidence of his Ipswich proceedings

(*Letters and Papers of Henry VIII*, vol. iv. pt. 2, No. 4396, Denham's confession), caused Bilney and Arthur to be arrested. They were confined in the Tower, where the society of a fellow-sufferer for his religion somewhat consoled Bilney. On 27 Nov. 1527 Wolsey, after solemn mass and sermon in the abbey, held a great court in the chapter house at Westminster. The Archbishop of Canterbury, yielding precedence to the legate *a latere*, the bishops of London, Norwich, and several other bishops, with a large number of theologians and jurists, were present. Bilney and Arthur were brought before them. Bilney was asked by the cardinal whether he had not, contrary to his oath, again taught the doctrines of Luther. He replied 'not wittingly,' and willingly swore to answer plainly the articles brought against him. In the afternoon witnesses were heard. Next day (28 Nov.) the court met at the house of Richard Nix, bishop of Norwich, who, with the bishops of London, Ely, and Rochester, heard the case as the legate's deputies. On 2 Dec. another meeting was held at the same place, and elaborate articles and interrogatories were laid before the two prisoners. In his answers Bilney, while assenting altogether to the majority of the articles, while admitting that Luther was 'a wicked and detestable heretic,' and accepting power of the pope, expressed a desire that at least some part of the scriptures should be in the vulgar tongue, and that pardons should be restrained, and, by his qualified and elaborate answers to other points, seemed not to be fully in agreement with his interrogators. Accordingly, when on 4 Dec. the court met again in the chapter house of Westminster, Tunstal, who had now taken the chief place in it, exhorted Bilney to recant and abjure. He replied, 'Fiat justitia et judicium in nomine Domini.' Then the bishop solemnly declared him convicted of heresy, but deferred sentence to the next day. Tunstal seems to have acted with much moderation and forbearance to Bilney, if, indeed, the very unsubstantial character of his heresies did not almost require his acquittal. On 5 Dec. Bilney was again brought up, and again refused to recant. Tunstal exhorted him to retire again and consult with his friends; but in the afternoon Bilney returned with a request that his witnesses might be heard, and said that if they could prove that he was guilty he would willingly yield himself. But the bishops resolved that it was irregular for him to renew the trial, and again pressed his abjuration. He refused point-blank, though petitioning again for more time. After some reluctance Tunstal gave him two days more, which he employed in consulting with his friends Farmer and Dancaster. On Saturday, 7 Dec., the court met finally, and in answer to the stereotyped request to abjure, Bilney said that by Dancaster's advice he was resolved to abjure, and trusted they would deal lightly with him. He then formally read and subscribed his abjuration, and the bishop, after absolving him, imposed as penance that he should the next day (Sunday) go before the procession at St. Paul's bareheaded with a faggot on his shoulder, that he should stand before the preacher at Paul's Cross all sermon time, and that he should remain in a prison appointed by the cardinal as long as the latter thought fit.

Bilney seems to have been kept in the Tower for more than a year. In 1529 he was released, and went back to Cambridge. Perhaps the influence of Latimer, which had been actively used to help him all through the proceedings, may have led to his release. But freedom brought no relief to Bilney. His sensitive temperament and scrupulous conscience were tormented with remorse for his apostasy. His friends did their best to console him, but to no purpose.

'The comfortable places of scripture,' says Latimer, 'to bring them unto him, it was as though a man should run him through the heart with a sword, for he thought the whole scriptures sounded to his condemnation.' Into such despondency did he fall, that his friends were afraid to leave him day or night. He endured this life of misery for more than two years. At last he resolved to go out again and preach the truth which he had denied. Late one night he took leave of his friends in Trinity Hall, and said 'that he would go to Jerusalem.' Forthwith he set out for Norfolk. At first he taught privately, but growing bolder he preached publicly in the fields, for, his license to preach having been withdrawn, the churches were no longer open to him. Ultimately he went to Norwich, where he gave 'the anchoress of Norwich' a copy of Tyndale's Testament. Soon after he was apprehended by the officers of the bishop.

Convocation was now assembled in London, and on 3 March it drew up articles against Bilney, Latimer, and Crome. Court favour made it easier for the latter two to escape, but Bilney's case as a relapsed heretic was now desperate. He seems to have taken up a bolder line in the last short period of field preaching in Norfolk, and even Latimer disavowed any sympathy with him if he were a heretic (*Letters and Papers of Henry VIII*, v. 607). Arraigned before Dr. Pellis, chancellor of the bishop, Bilney was degraded

from his orders, and handed over to the secular arm for execution. With great cheerfulness and fortitude he prepared for his end. He wrote a letter of farewell, that still survives (Nasmith, *Cat. MSS.* in *C. C. C. Cambridge*, p. 355), to his father and mother, and drew up two discourses (printed in Townsend's *Foxe*, vol. iv. ap. v.) that are almost wholly devotional in their character. He was constantly assailed by the arguments and entreaties of the chiefs of the four orders of friars who had houses in Norwich; and Dr. Pellis also pressed him to recant. Bilney's gentle and simple soul could hardly be unmoved by these efforts. Differing so little as he did from the church, it was doubtless a great consolation to him to hear mass, to confess, to receive the eucharist and absolution. The clergy and the Norwich townsmen were glad to see him so penitent. On the morning of his execution (19 Aug. 1531) he heard mass in the chapel of the Guildhall where he was imprisoned, and was exhorted to make a thorough recantation before the people at his execution. He was led through the Bishopsgate into a low valley called the Lollard's Pit under St. Leonard's Hill, which was thronged with the crowd assembled to witness his martyrdom. He spoke to the crowd, admitted his error in preaching against fasting, exculpated the anchoress and even the friars, but exhorted the people to believe in the church and eulogised chastity. Dr. Pellis then produced a bill, saying, 'Thomas, here is a bill; ye know it well enough.' 'Ye say truly, Mr. Doctor,' answered Bilney. He then read the bill, but apparently either to himself or in an inaudible voice, so that none knew what the tenor of the document was (Appendices to Foxe; *Letters and Papers of Henry VIII*, vol. v. No. 372-3, but cf. 522 and 560. Foxe's account seems the less trustworthy).

The flames were then lighted, and Bilney soon perished. A controversy as to the precise nature of his last utterances sprang up between Read the mayor and an alderman Curatt, and their contradictory depositions still remain. Sir Thomas More, relying upon Curatt, asserted in the preface to his pamphlet against Tyndale that Bilney recanted all his heresies. This the protestants denied. Foxe argues with much violence against More, but More had seen the depositions of which Foxe was ignorant, and Foxe's main argument is the denial of Matthew Parker, who was present at his old teacher's execution. The truth seems to be that Bilney was so little of a heretic, that a mere statement of his views would have borne the appearance of a recantation to those who, like More, regarded him as a thorough Lutheran. Had Bilney's over-scrupulous conscience allowed him to stay quietly at Cambridge a year or two more, he would have found all and more than he contended for accepted by the very men who hounded him on to death. The execution of a man so gentle and harmless as Bilney was peculiarly disgraceful to the government, even if, as most people then admitted, it was right to burn heretics and sacramentarians.

[Our main authority for Bilney's life is Foxe's Acts and Monuments, vol. iv. in Townsend's edition, which also gives valuable appendices of documents and state papers, all of which, with the other documents bearing on the subject, are summarised in Letters and Papers of the Reign of Henry VIII, vol. v., edited by Mr. Gairdner; Foxe's account can be verified and checked by comparison with the extracts from the register of Tunstal, MS. Baker xxi., and by Cole's transcripts from the register of West, MS. Cole xxvi.; Latimer's Sermons; Blomefield's Norfolk; Tanner's Bibliographia Britannica; an excellent modern summary is in Cooper's Athenæ Cantabrigienses, i. 42, a longer one in Dean Hook's Ecclesiastical Biography.] T. F. T.

BILSON, THOMAS (1546-7–1616), bishop of Winchester, was eldest son of Herman Bilson, grandson of Arnold Bilson, whose wife is said to have been a daughter of the Duke of Bavaria, 'natural or legitimate,' says Anthony à Wood, 'I know not.' He was born in the city of Winchester in 1546-7, and went to the school there. Thence he proceeded to Oxford and entered New College, where he passed B.A., 10 Oct. 1566; M.A., 25 April 1570; B.D., 24 June 1579; and D.D., 24 Jan. 1580-1. He became 'a most noted preacher' on taking holy orders, in 'these parts and elsewhere,' says Wood. He is also stated by some (adds the *Athenæ*) to have been a schoolmaster. He was installed a prebendary of Winchester on 12 Jan. 1576, and warden of the college there. He was consecrated bishop of Worcester on 13 June 1596, and translated to Winchester on 13 May 1597. 'He was,' continues Anthony à Wood, 'as reverend and learned a prelate as England ever afforded, a deep and profound scholar, exactly read in ecclesiastical authors and with Dr. Richard Field of Oxon (as Whitaker of Cambridge) a principal maintainer of the church of England, while Jo. Rainolds and Thomas Sparke were upholders of puritanism and nonconformity. . . . In his younger years he was infinitely studious and industrious in poetry, philosophy, and physics,' and also in ecclesiastical divinity. To the last, 'his geny chiefly inciting him, he became,' says the same authority, 'so complete in it, so well skill'd in languages, so read in the fathers

and schoolmen, so judicious in making use of his readings, that at length he was found to be no longer a soldier but a commander-in-chief of the spiritual warfare, especially when he became a bishop and carried prelature in his very aspect.' His 'True Difference between Christian Subjection and Unchristian Rebellion, where the Princes lawful power to command and bear the sword are defended against the Pope's censure and Jesuits' sophisms in their Apology and Defence of English Catholics; also a Demonstration that the Things reformed in the Church of England by the Laws of the Realm are truly Catholic against the Catholic Rhemish Testament' (Oxford, 1585), is a powerful answer to Dr. William Allen's 'Defence of English Catholics,' but otherwise shows want of judgment. Elizabeth had given him the task in view of her intended aid to protestant Holland; and, as was swiftly perceived by nonconformists, Bilson (in Wood's words) 'gave strange liberty in many cases, especially concerning religion, for subjects to cast off their obedience.' Historically, it is unquestionable that whilst this 'True Difference' served the queen's present purpose, it contributed more than any other to the humiliation, ruin, and death of Charles I. The weapons forged to beat back the king of Spain were used against the Stuart.

His 'Perpetual Government of Christ his Church' (1593), and his 'Effect of certain Sermons concerning the Full Redemption of Mankind by the Death and Blood of Christ Jesus' (1599), are superfluously learned and unattractive. His *magnum opus* was also assigned him by Elizabeth, who commanded him to answer Henry Jacob. It is entitled 'Survey of Christ's Sufferings and Descent into Hell,' and is, like Bilson's other works, halting in its logic and commonplace in its proofs. 'At length,' concludes Wood, 'after he had gone through many employments and had lived in continual drudgery as 'twere, for the public good, he surrendered up his pious soul, 18 June 1616,' and on the same date he was interred in Westminster Abbey. Curiously enough, John Dunbar (a Scottish poet) furnishes the only contemporary praise of him in an epigram which the Oxford historian deigns to allow might have been inscribed for his epitaph. It runs thus:—

Ad Thomam Bilsonum, episcopum Vintoniensem.

Castalidum commune decus, dignissime præsul
Bilsone æternis commemorande modis:
Quam valide adversus Christi inperterritus hostes
Bella geras, libri sunt monumenta tui.
His Hydræ fidei quotquot capita alta resurgunt,
Tu novus Alcides tot resecare soles.

Anthony à Wood possessed various manuscripts of his—Orationes, Carmina Varia, &c., &c. Besides 'occasional' sermons, there is among the Lambeth MSS. Bilson's 'Letter on the Election of Warden of Winchester and New College' (943, f. 149). There is also a 'Letter to the Lord Treasurer soliciting his Interest for the Bishoprick of Worcester' in Strype's 'Annals of the Reformation,' iv. 227, and there are letters of Bishop Bilson at Hatfield. Letters of administration were granted to his relict Anne on 25 June 1616. The baptism of a grandson on 5 Dec. 1616 is entered in Westminster Abbey Registers.

BINCKES, WILLIAM (*d.* 1712), dean of Lichfield, was educated at St. John's College, Cambridge, where he graduated B.A. in 1674, was elected to a fellowship at Peterhouse, and took the degree of M.A. in 1678. He was instituted to the prebend of Nassington, in the church of Lincoln, 2 May 1683, and to that of Basset Parva, in the church of Lichfield, 15 July 1697. In 1699 he took the degree of D.D. On 30 Jan. 1701, being then proctor of the diocese of Lichfield, he preached before the lower house of convocation a sermon on the martyrdom of Charles I, in which he drew a parallel between it and the crucifixion of Jesus Christ, maintaining that having regard to the superior dignity of a king of England in actual possession of his crown as compared with one who was merely an uncrowned king of the Jews, and moreover disclaimed temporal sovereignty, the execution at Whitehall was an act of greater enormity than was committed at Calvary. The sermon having been printed was brought to the notice of the House of Lords, and a suggestion was made that it should be publicly burned. The peers, however, contented themselves with resolving that it contained 'several expressions that give just scandal and offence to all Christian people.' In 1703 he was installed dean of Lichfield (19 June). In 1705 he was appointed prolocutor to convocation. He died 19 June 1712, and was buried at Leamington, of which place he had been vicar. Dean Binckes built the existing deanery at Lichfield. He published his sermons between 1702 and 1710.

BINDLEY, CHARLES, better known as HARRY HIEOVER (1795–1859), sporting writer, was born in 1795. His favourite topics were hunting and stable management. His first work of any importance was 'Stable Talk and Table Talk, or Spectacles for Young Sportsmen,' 2 vols. 8vo, the first published in 1845 and the second in 1846. His autograph was prefixed to the book under a life-like portrait of him which formed its frontispiece. A rollicking 'Hunting Song,' and 'The Doctor, a true Tale,' comically rhymed, helped to enliven his animated prose. His second venture was 'The Pocket and the Stud, or Practical Hints for the Management of the Stable,' 1848, 16mo, pp. 215, the frontispiece being here again a portrait of Harry Hieover 'on his favourite horse Harlequin.' His next book was 'The Stud for Practical Purposes and Practical Men,' 1849, 16mo, pp. 205. Two admirable illustrations in the volume, each engraved 'from a painting by the author,' represented respectively a well-shaped roadster, 'A pretty good sort for most purposes,' and a wicked-looking, unsightly hack, 'Rayther a bad sort for any purpose.' Another book from the same hand, similarly illustrated, was 'Practical Horsemanship,' 1850, 16mo, pp. 213, the engravings, again from paintings by the author, portraying the one 'Going like workmen,' and the other 'Going like muffs.' In the same year (1850) Harry Hieover brought out another book called 'The Hunting Field,' 16mo, pp. 221, with pictures of 'The Right Sort' and 'The Wrong Sort.' In 1852 Harry Hieover produced a new edition, carefully revised and corrected by him, of Delabere Blaine's 'Encyclopædia of Rural Sports, or complete account, Historical, Practical, and Descriptive, of Hunting, Shooting, Fishing, Racing, &c.,' 8vo, pp. 1246. His next works were: 'Bipeds and Quadrupeds,' 1853, 16mo, pp. 174; 'Sporting Facts and Sporting Fancies,' 1853, 8vo, pp. 452; 'The World: How to square it,' 1854, 8vo, pp. 290; and 'Hints to Horsemen: Shewing how to make Money by Horses,' 1856, 8vo, pp. 214. Harry Hieover had long been writing in several of the most important of the sporting periodicals. Essays from the 'Field' on such subjects as 'Bridles,' 'Martingals,' 'Buck-jumpers,' 'Kicking in Harness,' &c., were in 1857 reprinted under the title of 'Precept and Practice,' 8vo, pp. 267. Another collection from the 'Sporting Magazine' upon 'Red Coats and Silk Jackets,' 'Nobs and Snobs,' 'Hints on Coachmanship,' 'Imperturbable Jack,' and 'Dare-devils,' appeared in 1857, entitled 'The Sportsman's Friend in a Frost,' 8vo, pp. 416. In 1858 appeared 'The Sporting World,' 8vo, pp. 261, and in 1859 'Things worth knowing about Horses,' 8vo, pp. 266. His health had been seriously declining, and in November 1858, in hopes of improving it, he left London for Brighton, where he became the guest of his friend, Sir Thomas Barrett-Lennard, Bart., and died in his friend's house on 10 Feb. 1859, aged 63. In the number for that very month of the 'Sporting Review' and the 'Sportsman' appeared his last contribution to the magazine, 'Riding to Hounds, by Harry Hieover.' He was a sporting writer of the old school, and seemed to write under the same exhilaration of spirits as he might have felt when going across country.

[Times, 15 Feb. 1859; Field, 19 Feb. 1859, p. 137; Era, 20 Feb. 1859, p. 3; Sporting Review, March 1859, xli. 155.] C. K.

BINDLEY, JAMES (1737–1818), book collector, second son of John Bindley, distiller, of St. John Street, Smithfield, was born in London on 16 Jan. 1737. He was educated at the Charterhouse under Dr. Crusius, and then proceeded to Peterhouse, Cambridge, where he was elected fellow (B.A. 1759, M.A. 1762). (His elder brother John was secretary and afterwards commissioner of the board of excise.) In 1765 James became a commissioner of the stamp duties, and filled the post for upwards of 53 years. He was the senior commissioner from 1781 until his death, which occurred at his house in Somerset Place on 11 Sept. 1818. A fine monument was erected in the church of St. Mary-le-Strand. At the time of his decease he was the 'father' of the Society of Antiquaries, having been elected a fellow in 1765. Bindley devoted his leisure to literary pursuits, and formed a valuable collection of rare books, engravings, and medals, which were sold by auction after his death. He read every proof-sheet of Nichols's 'Literary Anecdotes,' which are dedicated to him, and of the subsequent 'Illustrations of the Literary History of the Eighteenth Century,' frequently suggesting useful emendations or adding explanatory notes. A similar service he rendered nearly at the close of his life to his friend Mr. Bray, in the publication of Evelyn's 'Diary.' The only work he himself published was 'A Collection of the Statutes now in force relating to the Stamp Duties,' London, 1775, 4to. His portrait is prefixed to the fourth volume of Nichols's 'Illustrations' (1822), and that volume is dedicated to his memory.

BINDON, FRANCIS (*d.* 1765), painter and architect, was born of a respectable family of Limerick, towards the close of the seventeenth century. He travelled on the continent, and acquired reputation in Ireland both as an architect and a painter. Bindon was more than once employed by the Duke of Dorset, lord lieutenant of Ireland, in 1734 to paint his portrait, and entries of the payments made to him appear in an unpublished account-book of that viceroy. In 1735 Bindon painted a portrait of Swift, who sat for it at the request of Lord Howth. This picture is of full length, and in it Wood, the patentee for the noted halfpence, is represented as writhing in agony at the feet of the dean. In 1738 Bindon painted for the chapter of St. Patrick's Cathedral, Dublin, another full-length portrait of Swift. The chapter paid 36*l.* 16*s.* for this picture, which is preserved at the Deanery House, St. Patrick's, Dublin. A contemporary mezzotinto of large size was published of it, and it was also engraved by Edward Scriven in 1818. In connection with this portrait an epistle, in Latin verse, was addressed to Bindon by William Dunkin, A.M., 'Epistola ad Franciscum Bindonum.' Of this an English poetical version was published in 1740, 'An Epistle to Mr. Bindon, occasioned by his painting a picture of the Rev. Dr. Swift, Dean of St. Patrick's.' From Swift's correspondence it appears that Bindon also painted a portrait of him for Mr. Nugent, subsequently Lord Clare. In a letter from Bath, in 1740, Nugent writes to Mrs. Whiteway: 'I must beg that you will let Mr. Bindon know I would have the picture no more than a head, upon a three-quarter cloth, to match one which I now have of Mr. Pope.' A bust-portrait of Swift, ascribed to Bindon, and formerly in the possession of the Rev. Edward Berwick, editor of the 'Rawdon Papers,' 1819, is now in the National Gallery, Dublin. Bindon executed a full-length portrait of Richard Baldwin [q. v.], provost of Trinity College, Dublin. Among the portraits by Bindon, of which contemporary engravings appeared, were those of the following: Hugh Boulter, primate of Ireland, 1742; Charles Cobbe, archbishop of Dublin, 1746; General Richard St. George, 1755; Henry Singleton, chief justice, Ireland; and Hercules L. Rowley. Bindon's chief architectural works were three mansions —one erected in the county of Wicklow for the Earl of Milltown, and two in Kilkenny for Lord Bessborough and Sir William Fownes respectively. Bindon was granted an annual pension of 100*l.* on the Irish establishment in 1750, about which time he retired from his profession, owing to age and failure of sight. He died on 2 June 1765, 'suddenly, as he was taking the air in his chariot.' In Sir Walter Scott's edition of Swift's works Bindon's christian name is erroneously given as Samuel.

[MSS. of Lionel Cranfield, Duke of Dorset; Establishments Ireland 1750, MS.; Dublin Journal, 1765; Mason's History of St. Patrick's, Dublin, 1820; Redgrave's Dictionary of Artists; Nichols's Lit. Illustr. v. 384–6. J. T. G.

BINGHAM, GEORGE (1715–1800), divine and antiquary, the sixth son of Richard Bingham, and Philadelphia, daughter and heir of John Potinger, by Philadelphia, daughter of Sir John Ernle, knight, chancellor of the exchequer, was born on 7 Nov. 1715 at Melcombe, Dorsetshire, where the family had resided for several centuries. He was brought up under the care of his maternal grandfather, Mr. Potinger. At twelve years of age he was sent to Westminster School, and in 1732 he was elected from the foundation to a scholarship at Trinity College, Cambridge, but entered as a commoner at Christ Church, Oxford. After taking his B.A. degree he was elected a fellow of All Souls, and there graduated M.A. in 1739 and B.D. in 1748. At All Souls he formed lasting friendships with Sir William Blackstone and Dr. Benjamin Buckler, whom he assisted in drawing up the 'Stemmata Chicheleana.' In 1745–6, during the rebellion, he served the office of proctor in the university, and acted with great spirit. On the death of the Rev. Christopher Pitt, the translator of the 'Æneid,' Bingham was instituted, on 23 May 1748, to the rectory of Pimperne, Dorsetshire. He resigned his fellowship on his marriage; but his wife, by whom he had a daughter and two sons, died in 1756 at the age of thirty-five. He had just been presented by Sir Gerard Napier to the living of More Critchell (1755), to which that of Long Critchell was annexed in 1774. He was elected proctor for the diocese of Salisbury in the convocations of 1761, 1768, 1774, and 1780. His eldest son, the senior scholar at Winchester, was accidentally drowned while bathing in the river Itchin in 1768. In 1781 Bishop Bagot offered him the Warburtonian lecture, but he declined to preach it, because he held that the church of Rome, though corrupt, was not chargeable, as Warburton meant to prove,

with apostasy. He died at Pimperne on 11 Oct. 1800, aged 85, and was buried in the chancel of the church, where a marble monument, with a long inscription in Latin, was erected to his memory.

Bingham enjoyed a considerable reputation for great abilities and profound learning; he was a good Hebrew scholar and an eminent divine. The only works he published in his lifetime are: 1. An anonymous essay on the Millennium, entitled 'Τὰ χίλια ἔτη,' 1772. 2. 'A Vindication of the Doctrine and Liturgy of the Church of England, occasioned by the Apology of the Rev. Theophilus Lindsey, M.A., on resigning the vicarage of Catterick, Yorkshire,' Oxford, 1774, 8vo. This was dedicated to Dr. Newton, bishop of Bristol, who made favourable mention of it in a charge to the clergy of his diocese in 1776. Both these works were reprinted in a collection of his 'Dissertations, Essays, and Sermons' (2 vols., London, 1804), edited, with a biographical memoir, by his son, Peregrine Bingham the elder [q. v.], rector of Edmondsham, Dorsetshire. The collection also includes: 3. 'Dissertationes Apocalypticæ,' in three parts. 4. 'Paul at Athens,' an essay. 5. 'Commentary on Solomon's Song.' 6. Four sermons.

Bingham was an able archæologist and rendered valuable assistance to the Rev. John Hutchins in the compilation of the 'History of Dorsetshire.' His 'Biographical Anecdotes' of Hutchins are printed in the 'Bibliotheca Topographica Britannica,' No. xxxiv., 2nd ed. London, 1813, 4to.

[Memoir by Rev. Peregrine Bingham; Gent. Mag. lxxiii. 1017-20, lxxiv. 117-120, 1041, lxxv. 423, 445, xcvi. (ii.) 91, 92; Hutchins's Dorsetshire, 2nd edit. i. liii, 177, ii. 492, iii. 107, 619, iv. 200-202; Welch's Alumni Westmon. (1852), 291, 297, 304, 306; Watt's Bibl. Brit.]

T. C.

BINGHAM, Sir GEORGE RIDOUT (1777–1833), major-general and colonel-commandant of 2nd battalion rifle brigade, was the son of Richard Bingham, colonel of the Dorset militia, by his second wife, Elizabeth, daughter of J. Ridout, and was born on 21 July 1777. He entered the army in June 1793 as ensign in the 69th foot, serving with it in Corsica and with one of the detachments embarked as marines under Admiral Hotham, in the Gulf of Genoa. Promoted to a company in the 81st foot in 1796, he served with that regiment at the Cape, and took part in the Kaffir war of 1800 on the Sundays River. In 1801 he became major in the 82nd foot, and was with it in Minorca until that island was finally restored to Spain at the peace of Amiens. In 1805 he was appointed lieutenant-colonel of the newly raised 2nd battalion 53rd foot in Ireland, and, proceeding with it to Portugal four years later, fought at its head throughout its distinguished Peninsular career, beginning with the expulsion of the French from Oporto in 1809, and ending with the close of the Burgos retreat in 1812. The battalion being then reduced to a skeleton, and having no home battalion to relieve or reinforce it (the 1st battalion was in India), was sent home, but four companies were left in Portugal, and these, with four companies of 2nd Queen's similarly circumstanced, were formed into a provisional battalion which, under the command of Colonel Bingham, performed gallant service in the subsequent campaigns in Spain and the south of France, including the victories at Vittoria, in the Pyrenees, and on the Nivelle. When it was decided to consign the Emperor Napoleon to St. Helena, Colonel (now Sir George) Bingham was senior officer of the troops sent thither, and continued to serve in the island with the rank of brigadier-general, as second in command under Sir Hudson Lowe, until 1819, when he returned home on promotion as major-general. Some unpublished memoranda of Bingham relating to St. Helena are among the British Museum Additional MSS. Sir George was afterwards on the Irish staff, and commanded the Cork district from 1827 to 1832, a most distracted period, when the discord fomented by the catholic emancipation debates was aggravated by agrarian crime, famine, and latterly by pestilence. In Ireland, as at St. Helena, Sir George Bingham's fine tact and kindliness of disposition appear to have won general esteem. He is described as having been a thorough gentleman as well as a brilliant soldier. He died in London on 3 Jan. 1833.

[Hutchins's Hist. of Dorset (ed. 1815, iv. 203); Cannon's Hist. Record 53rd (Shropshire) Regt. of Foot; Gent. Mag. ciii. (i.) 274; Ann. Biog. vol. xviii.]

H. M. C.

BINGHAM, JOHN (1607–1689), divine, was born at Derby, and as he was in his eighty-second year when he died in 1689, his birth-date must have been in 1606-7. He was educated at Repton school. Later he proceeded to Cambridge, and was entered of St. John's College. He ran the usual academical course, and left in his twenty-fourth year (1631-2) for London, 'for the cure of a foot which was hurt when he was a child.' After two years under the surgeons he was compelled to have his leg amputated. The pain caused by his injured foot had turned his hair white at twenty-six. He acted as domestic chaplain in

one of the county families. About 1640 he was chosen as what was called middle-master of the free school at Derby, and afterwards head-master. The school soon won under him more than a provincial fame. He had some scruples as to subscription, but the Earl of Devonshire having presented him to the vicarage of Marston-upon-Dove (Derbyshire), he was prevailed upon to accept it. He continued in his cure until his ejection in 1662. Having an intimacy of long standing with Sheldon, archbishop of Canterbury, that prelate condescended to write to him with his own hand to persuade him to conform, telling him 'that he lay so near his heart that he would help him to any preferment he desired.' The vicar acknowledged the personal kindness shown, but reminded the archbishop 'that they two had not been such strangers but that his grace might very well know his sentiments on the subject,' and added 'that he would not offer violence to his conscience for the best preferment in the world.'

Upon the passing of the Five Mile Act (1665) Bingham retired to Bradley Hall. For three years he was occupied in teaching sons of the gentry who boarded with him. Afterwards he lived for seven years at Brailsford. Here he met with much trouble. He was excommunicated by the church incumbent, though every one knew that the ejected vicar was a man of great moderation. He and his family used to attend their parish church every Lord's-day morning, but he was wont of an afternoon to preach at his own house, but only to the number allowed by the act. Upon the Indulgence he preached at Hollington, in rotation with other ejected ministers. The excommunication of Bingham made a great sensation in Brailsford parish, and therefore to avoid further uproar he removed, with all his household, to Upper Thurneston in the parish of Sutton.

Bingham was well acquainted not only with Latin and Greek, but with Hebrew, Syriac, and Arabic. He helped Walton with his great polyglot Bible. He was himself a subscriber to it, and by a wide correspondence rallied others around the illustrious scholar.

When he was about seventy he broke an arm by a fall from his horse. The next year he was taken with a quartan ague, which afflicted him seven years. He had an impression 'borne in upon him that, old and frail as he was, he should live to see a very great change.' He lived to welcome William and Mary, whose coming to the throne he regarded as the fulfilment of his impression. He died 3 Feb. 1689. His funeral sermon was preached by Crompton from Psalm xii. 1. He was interred at Upper Thurneston. He appears to have published nothing.

[Calamy's Account; Palmer's Nonconf. Mem. i. 415–17; Simpson's Hist. of Derby and Derbyshire; local researches show that so late as 1768 descendants occupied influential positions in Derby.] A. B. G.

BINGHAM, JOSEPH (1668–1723), author of the 'Origines Ecclesiasticæ,' or 'Antiquities of the Christian Church,' was born at Wakefield in September 1668, and educated in his native town until 1684, when he went to University College, Oxford. Even in his undergraduate days he devoted himself to the studies which afterwards made his name famous. He took his B.A. degree in 1688, and was elected fellow of University in 1689. In 1691 he was made a college tutor, and in that capacity developed the talents and directed the tastes of a fellow-townsman, John Potter, who had followed him from Wakefield to University, and afterwards became archbishop of Canterbury, and author of the well-known works on 'Church Government' and the 'Antiquities of Greece.' In 1695, when the Trinitarian controversy was at its height, Bingham preached a perfectly orthodox sermon on the subject at St. Mary's, in which he gave a most accurate sketch of the opinions of the early fathers on the terms 'person' and 'substance.' The Hebdomadal Board, however, charged him with having 'asserted doctrines false, impious, and heretical, contrary and dissonant to those of the catholic church.' This severe censure was followed by other charges in the public press, accusing him of Arianism, Tritheism, and the heresy of Valentinus Gentilis. The result was that he was obliged to resign his fellowship and withdraw from the university. The blunder does not appear to have been recorded in the books of the university, but the sad fact remains that Oxford drove from her walls one of her most distinguished sons, on charges of which he was perfectly innocent. Bingham was not left quite destitute; as soon as he resigned his fellowship he was presented by the well-known Dr. Radcliffe, without any solicitation, to the living of Headbourn-Worthy. It was worth only 100*l.* a year, but it had the advantage of being close to Winchester, where Bingham could make use of the excellent cathedral library founded by Bishop Morley. Soon after his appointment to Worthy, Bingham was invited to preach a visitation sermon in Winchester Cathedral, and he chose the same subjects and expressed the same sentiments which had given such deep offence at Oxford. The sermon gave so much satisfaction

that he was invited to preach again on a similar occasion in the following year, when he brought to a conclusion what he wished to say further on the subject of the Trinity. All the three sermons may be found in his published works, and every competent person must admit that they are not only a most orthodox, but also a most valuable contribution to the literature of this mysterious subject. In 1702 Bingham married Dorothy, daughter of the Rev. R. Pocock, rector of Colmer, and by her became the father of ten children. In 1708 the first volume of the 'Antiquities' was published, the tenth and last in 1722, the year before his death, and a large proportion of these fourteen years was occupied in the composition of this great work. In 1712 he was collated by the Bishop of Winchester to the living of Havant, near Portsmouth. As Havant was a better living than Worthy, and his writings began to bring him in a little money, he was for a time less straitened by poverty than he had hitherto been. But he foolishly embarked his money in the South Sea Bubble, and in 1720 the bubble burst. His constitution, which was naturally weak, was still further enfeebled by his sedentary habits, and after a long struggle with delicate health, anxiety, and poverty, he died 17 Aug. 1723, and was buried in his old parish of Headbourn-Worthy.

In one respect, at any rate, Bingham was fortunate, viz. in hitting upon a subject which wanted dealing with, and for dealing with which he was admirably adapted. 'He was the first,' says a German writer, 'that published a complete archæology [of the christian church] and one worthy of the name.' And, we may add, he will probably be the last. What he did he did so thoroughly and exhaustively, that he would be a bold man who should attempt again to go over ground so completely traversed. His object is thus stated by himself: 'The design which I have formed to myself is to give such a methodical account of the antiquities of the christian church as others have done of the Greek and Roman and Jewish antiquities, by reducing the ancient customs, usages, and practices of the church under certain proper heads, whereby the reader may take a view at once of any particular usage or custom of christians for four or five centuries.' Not a name, not an office, not a usage, not a law is omitted, or, indeed, left without the very fullest explanation. In ten substantial volumes, in which not a word is wasted, he completely exhausts his great subject, treating it with consummate learning and admirable impartiality. He is too full of matter to trouble himself much about style, but he writes naturally, and with a quiet, scholarly simplicity which is very attractive. The work was one not only for the church of England, but for every christian community; it was very fitting, therefore, that it should be translated into Latin; the universal language is the most suitable vehicle for a work which is of universal interest.

The 'Antiquities' is, of course, the one imperishable monument which Bingham has raised for himself; but his lesser works, though now forgotten, are written in the same exhaustive fashion. The largest of these is entitled 'The French Church's Apology for the Church of England,' which 'contains a modest vindication of the doctrine, worship, government, and discipline of our church from the chief objections of dissenters, and returns answer to them upon the principles of the reformed church of France.' The work was a very seasonable one, being written at a time when this country was flooded with French refugees, who were thought likely to swell the ranks of nonconformists. Bingham appeals to the refugees as well as to the English dissenters, urging them that, 'as they regarded the venerable authority of their own national synods, and of the avowed principles of that church, into which they were baptised, they should vigorously maintain and assert the cause of the church of England against all that set up distinct communions, &c.' He takes point by point, and works out each with extraordinary ingenuity and accuracy; but the subject is now quite out of date. Another of his lesser works is a 'Scholastical History of the Practice of the Church in reference to Administration of Baptism by Laymen.' This was at first intended to be only a single chapter in the 'Antiquities,' but the subject grew upon his hands (partly through the fact of a Mr. Lawrence taking up an opposite view, which Bingham felt bound to controvert), and he published it as a separate treatise. He contends that in extraordinary cases baptism by a layman in full communion with the church is valid, and he brings his inexhaustible store of learning to bear upon the case. Two long letters on 'Absolution,' addressed to the Bishop of Winchester, which are a sort of appendix to the treatise on lay baptism, and which finally dispose of Mr. Lawrence, and an excellent discourse 'On the Mercy of God,' intended for the use of persons troubled in mind, complete the list of this great writer's works. Though the list is not a long one, Bingham's literary industry must have been enormous; the 'Antiquities' alone is sufficient to prove this. The work bears on the face of it traces of many years' reading, before the writing began at all, and the labour

must have been all the more severe because he was sadly cramped for books in spite of his proximity to Bishop Morley's library. His family preserved a copy of Pearson 'On the Creed,' in which were eight pages neatly transcribed in his own hand, because he could not afford the few shillings requisite to purchase a new copy in the place of his own mutilated one. But never was literary industry less thrown away. Bingham has not only written an invaluable work, but he has secured for the English church the glory of supplying a serious deficiency in ecclesiastical literature. Even Romanists have been forced to confess that the 'Antiquities' is a most important addition to theological libraries, and the fact that it was translated into Latin by a German protestant (Professor Grischovius or Grischow) shows how highly it was appreciated by the reformed churches abroad. Bingham's reward was posthumous. His eldest son, Richard, was presented to the living of Havant in recognition of his father's merits, and the Bishop of London (Dr. Robert Lowth) bestowed a living on his grandson, saying: 'I venerate the memory of your grandfather. He was not rewarded as he ought to have been. I therefore give you this living as a small recompense of his great and inestimable merits.' His biographer tells us that 'his disposition was of the purest and mildest cast, and was never ruffled by the common accidents and occurrences of life.' He had every kind of wisdom but worldly wisdom. All pecuniary matters were managed by his wife, who, we are sorry to learn, was left dependent upon charity, for she died in 1755 in Bishop Warner's College for Clergymen's Widows at Bromley. The only occupation which diverted him from his studies was the care of his parish, to which he attended conscientiously. Within a short time of his death he was busy collecting materials for a new work, and revising the 'Antiquities' for a new edition. His second son, Joseph, was educated at the Charterhouse and Corpus College, Oxford. He was a scholar of great promise, and died of over-work at the age of 22.

The order of Bingham's works as published in his lifetime appears to have been as follows: 1. 'Three Sermons on the Trinity,' 1695–7. 2. 'The French Church's Apology,' &c., 1706. 3. The 'Origines Ecclesiasticæ,' published volume by volume at intervals between 1708 and 1722. 4. 'The Scholastical History of Lay Baptism,' &c., part i. in 1712, part ii. 1714, virtually concluded by the 'Dissertation upon the 8th Canon of the Council of Nice' (1716?). 5. The 'Discourse concerning the Mercy of God,' &c., about 1720. The first collective edition of his works was published in 2 vols. folio in 1726. The misfortunes which haunted Bingham during his life pursued him after death. This edition was not so perfect as it easily might have been made; for, in her poverty, 'Mrs. Bingham was induced to sell the copyright of her late husband's writings to the booksellers, who immediately republished the whole of his works without making any alteration whatever; and though the eldest son undertook the office of correcting the press, he did not insert any of the manuscript additions which his father had prepared; he was then so young that he probably had not the opportunity of examining his father's books and papers sufficiently to discover that any such preparations for a new edition had been made' (*Memoir*). Bingham also died just too soon to see the commencement of a work for which he had long been anxious. In 1724 appeared the first volume of the 'Origines,' published in Latin by J. H. Grischow at Halle. The other volumes followed in due course, and the whole appeared under the following title: 'Josephi Binghami Origines, sive Antiquitates Ecclesiasticæ. Ex Linguâ Anglicanâ in Latinam vertit J. H. Grischovius. Accedit Præfatio J. F. Buddæi. 10 tom. 4to. Halæ, 1724–1729.' Another edition of the same is dated 'Halæ Magdeburgicæ, 1751–1781.' The best edition of Bingham's full works, including the sermons on the Trinity, &c., was published by Bingham's lineal descendant in 9 vols. 8vo, 1821–9, with a short but interesting memoir prefixed to vol. i. by Bingham's great-grandson, Richard Bingham the elder [q. v.] Another edition of the above, with the quotations at length in the original languages, was published by the Rev. J. R. Pitman, 1838–40. And another edition of the same was published by the Clarendon Press, Oxford, in 10 vols., in 1855. A reprint of the 'Antiquities,' 2 vols. imp. 8vo, was issued by Bohn in 1845 and 1852. As early as 1722 'a summary of christian antiquities, abridged from Bingham's Antiquities,' entitled 'Ecclesiæ Primitivæ Notitia,' was published in 2 vols. 8vo by A. Blackamore.

[Article in Biog. Brit., communicated by his son Richard; Life in Works (1829), by his great-grandson, who was also author of the life in Chalmers's Biog. Dict.] J. H. O.

BINGHAM, MARGARET, Countess of Lucan (*d.* 1814), amateur painter—a lady who, according to Horace Walpole, 'arrived at copying the most exquisite works of Isaac and Peter Oliver, Hoskins, and Cooper, with a genius that almost depreciates those masters when we consider that they spent their lives

in attaining perfection; and who, soaring above their modest timidity, has transferred the vigour of Raphael to her copies in water colours'—was the daughter and coheir of James Smyth. In 1760 she married Sir Charles Bingham, bart. (1735–1799), created (1776) Baron Lucan of Castlebar, county Mayo, and in 1795 Earl of Lucan. There are frequent allusions to her in Walpole's letters, and in the memoirs of Mrs. Delany. 'Mrs. Delany used to admire and wonder at her talent for painting, and yet her want of eye for drawing, as she would often totally mistake the distance between one feature and another (till it was pointed out to her) and yet imitate colouring and finish to perfection.' Horace Walpole becomes somewhat silly upon the subject of her perfections, and is laughed at therefore by Peter Pindar. In one place he writes: 'Lady Bingham is, I assure you, another miracle;' in another: 'They are so amazed and charmed at Paris with Lady Bingham's miniatures, that the Duke of Orleans has given her a room at the Palais Royal to copy which of his pictures she pleases.' She seems, indeed, to have been a clever amateur, but of little originality, and not careful, as the above-quoted criticism would show, to be exact in her drawing. She spent much time upon a great work, the embellishment of Shakespeare's historical plays. Of this monumental labour an account is preserved in Dibdin's 'Ædes Althorpianæ' (i. 200): 'During sixteen years this accomplished lady pursued the pleasurable toil of illustration, having commenced in her fiftieth and finished in her sixty-sixth year. Whatever of taste, beauty, and judgment in decoration, by means of portraits, landscapes, houses and tombs, flowers, birds, insects, heraldic ornaments and devices, could dress our immortal bard in a yet more fascinating form, has been accomplished by a noble hand which undertook a Herculean task, and with a truth, delicacy, and finish of execution which have been very rarely imitated.' The work was completed in five volumes. The binding was by Herring, and was considered his best work. The colophon of the last volume has a portrait of Lady Lucan, with attendant virtues, drawn by her daughter, Lady Lavinia Spencer. This work is preserved in the library of Althorp. She died on 27 Feb. 1814, leaving five children: Lavinia, who married the second Earl Spencer in 1781; Eleanor Margaret, married Thomas Lindsay, Esq.; Louisa and Anne, both died unmarried; and Richard, second Earl Lucan, an only son and heir.

[Walpole's Letters, v., Gen. Index; Anecdotes of Painting, i., Introduction, pp. xviii, xix; Autobiography and Letters of Mrs. Delany, v., Gen. Index, vol. vi.; Lodge's Genealogy of the Peerage, 1859; Redgrave's Dict. of Artists of English School; Gent. Mag. lxxxiv (i.) 301, lxxxv. (i.) 280; Foster's Peerage, s.v. 'Lucan.'] E. R.

BINGHAM, PEREGRINE, the elder (1754–1826), biographer and poet, was son of George Bingham, B.D., rector of Pimperne, Dorsetshire [q. v.] He was educated at New College, Oxford (B.C.L. 1780); became rector of Edmondsham, Dorset, in 1782, and of Berwick St. John, Wiltshire, in 1817. At one time he was chaplain of H.M.S. Agincourt. He died on 28 May 1826, aged 72.

He wrote Memoirs of his father, prefixed to 'Dissertations, Essays, and Sermons, by the late George Bingham, B.D.,' 2 vols., 1804. These Memoirs, which are abridged in Hutchins's 'Dorset,' new edit. iv. 201, gave rise to a controversy between the author and the rector of Critchill (*Gent. Mag.* lxxv. 445). Bingham also wrote 'The Pains of Memory, a poem, in two books,' London, 1811, 12mo, 2nd edit., with vignettes, 1812.

[Biog. Dict. of Living Authors (1816), 27; Cat. of Oxford Graduates (1851), 59; Gent. Mag. xcv. (ii.) 91; Burke's Dict. of the Landed Gentry (1868), 100.] T. C.

BINGHAM, PEREGRINE, the younger (1788–1864), legal writer, was the eldest son of Peregrine Bingham the elder [q. v.], by Amy, daughter of William Bowles. He was educated at Winchester School and Magdalen College, Oxford (B.A. 1810), was called to the bar at the Middle Temple in 1818, and was for many years a legal reporter. He also took great interest in literature, and was one of the principal contributors to the 'Westminster Review,' which was established in 1824. John Stuart Mill in describing the appearance of the first number says: 'The literary and artistic department had rested chiefly on Mr. Bingham, a barrister (subsequently a police magistrate), who had been for some years a frequenter of Bentham, was a friend of both the Austins, and had adopted with great ardour Bentham's philosophical opinions. Partly from accident there were in the first number as many as five articles by Bingham, and we were extremely pleased with them.' He edited Bentham's 'Book of Fallacies.'

Bingham became one of the police magistrates at Great Marlborough Street, and resigned that appointment about four years before his death, which occurred on 2 Nov. 1864. His works are: 1. 'The Law and Practice of Judgments and Executions, including extents at the suit of the Crown,' London, 1815, 8vo. 2. 'The Law of Infancy and Coverture,'

London, 1816, 8vo, first American edition, Exeter, U.S., 1824, 8vo. 3. 'A Digest of the Law of Landlord and Tenant,' London, 1820, 8vo. 4. 'A System of Shorthand, on the principle of the Association of Ideas,' London, 1821, 8vo; a stenographic system of no practical value. 5. 'Reports of Cases argued and determined in the Court of Common Pleas and other Courts,' from Easter term 1819, to Michaelmas term 1840, 19 vols., London, 1821–40, 8vo. The first three volumes of these reports were compiled jointly with W. J. Broderip.

[Law Times, 5 Nov. 1864, p. 6; Addit. MS. 29539, f. 125; Burke's Dict. of the Landed Gentry (1868), 100; Gent. Mag. ccxvii. 806; Mill's Autobiography, 95, 114; Cat. of Oxford Graduates (1851), 59; Wallace's Reporters, 330; Clarke's Bibl. Legum, 258, 301; Marvin's Legal Bibliography, 109.] T. C.

BINGHAM or **BYNGHAM**, SIR RICHARD (1528–1599), governor of Connaught, was the third son of Richard Bingham, of Melcombe-Bingham, Dorsetshire, by his wife Alice, daughter of Thomas Coker. Born in 1528, he was trained as a soldier from youth, and apparently took part in the Protector Somerset's expedition to Scotland in 1547. He was one of the Englishmen serving with the Spaniards against the French at the battle of St. Quentin in 1557, and in October 1558, just before the death of Queen Mary, was engaged in a naval expedition against the 'Out-isles' of Scotland. In the early years of Elizabeth's reign he fought with the Spaniards and Venetians, under Don John of Austria, against the Turks, and seems to have taken part in the conquest of Cyprus and the battle of Lepanto (7 Oct. 1572). In 1573 and the following year Bingham was in the Low Countries, communicating to Burghley the details of the struggle with Spain. In 1576 he accompanied Sir Edward Horsey on an abortive mission to Don John of Austria to effect a peace between Spain and the States-General of Holland. On 17 March 1577–8 Elizabeth granted Bingham an annuity of fifty marks in recognition of his military and diplomatic services, and later in 1578 he fought with exceptional valour as a volunteer under the Dutch flag against the Spaniards. In 1579 he was sent to Ireland to aid in the repression of the Desmond insurrection. In September 1580 he was captain of the Swiftsure in the expedition sent under the command of Admiral Winter to dislodge the Spaniards and Italians from Smerwick, where they had landed to support the Irish rebels, and Bingham took part in the massacre of the invaders which followed the attack upon them by sea and land. A full account of the action, sent by Bingham to Walsingham, is now in the Public Record Office. On 30 Sept. 1583 a commission was issued to Bingham to apprehend pirates in the narrow seas, and the queen directed Burghley to instruct Bingham to seize Dutch ships for debts due to her, under colour of looking for pirates.

In the following year (1584) Bingham was appointed governor of Connaught, and knighted at Dublin Castle by Lord-deputy Perrot on 12 July. He was from the first resolved to make the Irish conform to English customs, but he administered the province in the early days of his government with sufficient fairness to satisfy most of his subjects as well as the home government. But during the Connaught rebellion of 1586 Bingham knew no mercy. At Galway early in 1586 he presided at the assizes, when seventy persons were condemned to death for disloyalty. In the same year he laid siege to Cluain-Dubhain or Cloonoon, in Clare, the strongest castle in Ireland, and had the owner, a reputed rebel (Mahon O'Briain) shot, and the garrison put to the sword. Later in 1586 the Bourkes of Mayo broke into open revolt, and Bingham reduced their castle of Lough Mask and hanged its occupants. He confiscated the greater part of the Bourkes' property, and defeated in August, with terrible slaughter, by the river Moy, a party of 3,000 Highlanders who had come over to the aid of the rebels. Sir John Perrot, the lord-deputy, visited Connaught after the suppression of the rebellion and was dissatisfied with Bingham's rigorous action. For the ten following years Perrot and Bingham were repeatedly in personal conflict, and appeal was frequently made to Walsingham to settle the various matters in dispute between them. Bingham was perpetually complaining to Walsingham of the smallness of his salary, and asserted that most of the expenses of government were defrayed out of his own purse. The lord-deputy represented that Bingham was in receipt of an official income of 1,941*l.* 12*s.* 1*d.*; but Bingham, in a detailed examination of his sources of revenue, showed that he never received more than 505*l.* a year. In 1587 Bingham was temporarily recalled from Ireland to take part in the war in the Netherlands, and Lord Willoughby, who highly respected Bingham, was anxious that he should take the command of the army at the close of 1587, when Leicester was ordered home (LADY G. BERTIE'S *Account of Bertie*, 132, 138, 143). In 1588 Bingham was frequently in consultation with Burghley and the other ministers as to the defence of the

country against the Spaniards. But before the close of 1588 he had resumed his post in Connaught, and in September he issued orders that all Spanish refugees landing on the coast of his province should be brought to Galway and there put to death. He afterwards claimed to have thus rid his country of 1,000 of the enemy. In 1590–1 Bingham was engaged in repressing the revolt of Sir Bryan O'Rourke, of Leitrim, who was captured, sent to England, and hanged at Tyburn on 28 Oct. 1591. Bingham's account of his proceedings against Rourke is printed in the 'Egerton Papers' (Camden Soc., pp. 144–57). In the following year Perrot formally complained to the queen of Bingham's habitual severity and insubordination, and in September 1596 Bingham, fearful that his adversaries would do him serious injury, hurriedly came to England to appeal (as he said) for justice. He left Ireland without leave, and on arriving in London was sent to the Fleet prison. On 2 Oct. 1596 he addressed a piteous letter to Burghley, praying for release. This petition was apparently granted soon afterwards, but Bingham was suspended from his office. The outbreak of O'Neill's rebellion in 1598 induced the authorities to reinstate him. His knowledge of Irish affairs was judged to be without parallel in England, and when the Cecils first suggested that Essex should command the expedition against the Irish rebels Bacon strongly urged Essex to take Bingham's advice (Spedding's *Bacon*, ii. 95–6). In September 1598 Bingham left England with five thousand men to assume the office of marshal of Ireland, vacated by the death in battle at Blackwater of Sir Henry Bagnall. But Bingham had scarcely entered on his new duties when he died at Dublin on 19 Jan. 1598–9.

A cenotaph was erected to his memory in the south aisle of the choir of Westminster Abbey by Sir John Bingley, at one time Bingham's servant. On it was inscribed a highly laudatory account of his military achievements. Sir Henry Docwra, afterwards commander of the forces in Ireland, drew up a 'relation' of Bingham's early services in Connaught, which was published for the first time by the Celtic Society in 1849. The manuscript is in the library of Trinity College, Dublin. Bingham was described by Sir Nicholas Lestrange as 'a man eminent both for spiritt and martiall knowledge, but of a very small stature' (Thom's *Anecdotes and Traditions* (Camden Society), p. 18).

Sir Richard was aided in his Irish administration by two younger brothers, George and John. Both were assistant commissioners in Connaught. John distinguished himself in the battle with the Highlanders by the Moy, and was granted by his brother Edmund Burke's castle of Castlebarry, near Castlebar. George was for many years sheriff of Sligo, took a leading part in the massacre of the Spaniards in 1588, and was killed by Ulrick O'Bourke in 1595. Bingham's memory was long execrated by the native Irish, but Sir Francis Walsingham and Sir Henry Wallop always held him in high esteem. Sir Richard married Sarah, daughter of John Heigham, of Gifford's Hall, Wickhambrook, Suffolk (by banns), 11 Jan. 1587-8. Lady Bingham survived her husband, and married after his death Edward Waldegrave, of Lawford, Essex. She died at Lawford, and was buried in the church there 9 Sept. 1634, aged 69. Sir Richard left no male issue, and he was succeeded in his Dorsetshire estates by Henry, the eldest son of his brother George, who had been killed in 1595. Henry was created a Nova Scotian baronet in 1634. Sir John Bingham, the fifth in descent from George, was governor of county Mayo, and contributed to William III's success in Ireland by deserting from James II at the battle of Aughrim (1691). He married a grand-niece of Patrick Sarsfield, earl of Lucan, and died in 1749. His second son Charles was created baron Lucan of Castlebar 24 July 1776, and earl of Lucan 6 Oct. 1795 [see Bingham, Margaret].

State Papers (Irish series), 1509–73, 1574–85, 1586–8; Notes and Queries, 1st ser. iii. 156; Celtic Soc. Miscellany (1849), ed. O'Donovan, 187–229; O'Flaherty's Corographical Description of Ireland, ed. Hardiman (1846), p. 394; Annals of the Four Masters, ed. Donovan, vol. vi.; Cal. State Papers (Dom.), 1581–90, 1591–4, 1595–7. Several of Bingham's letters to Burghley and to Sir Robert Cecil are at Hatfield.] S. L.

BINGHAM, RICHARD, the elder (1765–1858), divine, was born 1 April 1765. He was son of the Rev. Isaac Moody Bingham, rector of Birchanger and Runwell, Essex, and great-grandson of Joseph Bingham, author of the 'Origines Ecclesiasticæ.' He was educated successively at Winchester, where he was on the foundation, and at New College, Oxford, where he took the degrees respectively of B.A. 19 Oct. 1787 and B.C.L. 18 July 1801 (*Oxford Graduates*). He was married at Bristol to Lydia Mary Anne, eldest daughter of Rear-admiral Sir Charles Douglas, bart., 10 Nov. 1788, at which time he was a fellow of his college and in holy orders (*Gent. Mag.* November 1788). In

1790, or more probably in 1788 or 1789 (Preface to *Proceedings*, &c. 8vo, London, 1814, p. vi, and *Proceedings*, &c., p. 174 &c.), he was appointed to the perpetual curacy of Trinity Church, Gosport; in 1796 he became vicar of Great Hale, near Sleaford, Lincolnshire, and was appointed, 22 July 1807, in succession to his father, to the prebendal stall of Bargham in Chichester Cathedral. In 1813, being then a magistrate for Hampshire of twelve years' standing, he was convicted at the Winchester summer assizes of having illegally obtained a license for a public-house, when no such public-house was in existence, and of having stated, in the conveyance of such house, a false consideration of the same, with intent to defraud the revenue by evading an additional stamp duty of 10*l.* (*Annual Register*, 1813). On 10 Nov. 1813 a motion was made in the King's Bench for a new trial on behalf of the defendant. He was brought up for judgment on the 26th of the same month, and in spite of many affidavits to his character was sentenced to six months' imprisonment in the county gaol at Winchester. In an appeal to public opinion dated 23 Dec. 1813, Bingham asserted his innocence with the most vehement deprecations. The appeal is embodied in the Preface to 'Proceedings in a Trial, The King, on the Prosecution of James Cooper, against the Rev. Richard Bingham, and on a Motion for a new Trial, and on the Defendant's being brought up for Judgment. Taken in shorthand by Mr. Gurney. With explanatory Preface and Notes and an Appendix,' 8vo, London, 1814. In 1829 Mr. Bingham published, by subscription, the third edition of the 'Origines Ecclesiasticæ' of his ancestor. He reprinted all the contents of the old octavo and folio editions, introducing into the notes some further references from the author's manuscript annotations in a private copy of his own book, and adding for the first time an impression of the author's three 'Trinity Sermons,' besides prefixing a 'Life of the Author, by his Great-grandson.' The bankruptcy of the printer while the work was passing through the press caused much delay in its distribution (*Prolegomena*, &c. i. p. x). Bingham died at his residence of Newhouse on the beach at Gosport, on Sunday, 18 July 1858, and was buried on Tuesday, the 27th of the same month, in the vaults of Trinity Church, in the presence of a very large number of his friends and parishioners.

A. H. G.

BINGHAM, RICHARD, the younger (1798–1872), divine, was the eldest son of Richard Bingham the elder [q. v.] He was born in 1798, and was educated at Magdalen Hall, Oxford, where he became B.A. 1821, M.A. 1827. He was ordained deacon in 1821, and priest in 1822, and became curate to his father in his incumbency of Holy Trinity Church, Gosport. Here he remained for over twenty-two years. He married, 4 May 1824, 'Frances Campbell, daughter of the late J. Barton, Esq., of Mount Pleasant, Jamaica' (*Gent. Mag.* June 1824), and took pupils. He published by subscription two small volumes of sermons in 1826 and 1827, and in 1829 'The Warning Voice, or an awakening Question for all British Protestants in general, and Members of the Church of England in particular, at the present Juncture.' He seceded from the British and Foreign Bible Society, on account of its readiness to cooperate with Socinians, in 1831, and soon after published an account of the circumstances. He issued by subscription a volume of 'Sermons' in 1835, and in 1843 'Immanuel, or God with us, a Series of Lectures on the Divinity and Humanity of our Lord,' 8vo, London, 1843. The preface mentions his desire to bring out a new edition of his ancestor's book. Twelve years afterwards Bingham produced, at the expense of the delegates of the Oxford University Press, the standard edition of 'The Works of the Rev. Joseph Bingham, M.A.,' 10 vols. 8vo, Oxford, 1855. In 1844 he was presented by the trustees to the perpetual curacy of Christ Church, Harwood, Bolton-le-Moors, during his incumbency of which he lost (28 Feb. 1847) his eldest daughter, aged 21, and his youngest son. Miss Bingham had early published 'Hubert, or the Orphans of St. Madelaine, a Legend of the persecuted Vaudois,' London, 1845, and at the time of her death left a considerable number of pieces, which were published by her father in 1848 as 'Short Poems, religious and sentimental,' and passed through two editions. Bingham became in 1853 curate at St. Mary's, Marylebone, the rector of which was John Hampden Gurney, to whom he afterwards dedicated a volume of 'Sermons' in 1858. In 1856 he became vicar of Queenborough in the isle of Sheppey. He vacated this preferment in 1870, and took up his residence at Sutton, Surrey, where he died on Monday, 22 Jan. 1872, at the age of seventy-four. Bingham was a fervid advocate of liturgical revision, and a member of the council of the Prayer

Book Revision Society. In 1860 he published 'Liturgia Recusa, or Suggestions for revising and reconstructing the daily and occasional Services of the United Church of England and Ireland.' He supplemented this volume by an elaborate model of a liturgy, which he dedicated to Lord Ebury, 'Liturgiæ Recusæ Exemplar. The Prayer Book as it might be, or Formularies old, revised, and new, suggesting a reconstructed and amplified Liturgy,' 1863. Bingham also published 'The Gospel according to Isaiah, in a Course of Lectures,' &c. in 1870; and 'Hymnologia Christiana Latina, or a Century of Psalms and Hymns and Spiritual Songs, by various Authors, from Luther to Heber and Keble, translated into Latin Verse, either metrical or accentuated Rhyme,' 1871.

[Catalogue of all the Graduates in the University of Oxford, Oxford, 1857; Gent. Mag. June, 1824; Crockford's Clerical Directory, 1860–1872; Clergy List, 1841–1872; Guardian, 31 Jan. 1872; and various prefaces and introductions.] A. H. G.

BINGLEY, Baron. [See Benson, Robert, 1676–1731.]

BINGLEY, WILLIAM (1774–1823), miscellaneous writer, was born at Doncaster in 1774, and left an orphan at a very early age. His friends designed him for the law, but his own inclinations were for the church. In 1795 he was entered at St. Peter's College, Cambridge, and took the degree of B.A. in 1799, and of M.A. in 1803. Whilst an undergraduate he travelled in Wales, and 'A Tour round North Wales' was the subject of his first publication. For many years after his ordination he served the curacy of Christ Church in Hampshire, but in 1816 he was the minister of the proprietary chapel in London known as Fitzroy Chapel, Charlotte Street, and he was engaged in its ministry at the time of his death. He died in Charlotte Street, 11 March 1823, and was buried in a vault under the middle aisle of Bloomsbury Church. His life was devoid of incident; his days were passed in compilation. He was a prolific writer, and several of his works enjoyed great popularity. His 'Tour round North Wales,' the result of his college vacation of 1798, was published in 1800 in two volumes. He visited the same district in 1801, and in 1804 issued 'North Wales . . . delineated from two excursions.' A second edition appeared in 1814, and a third, with corrections and additions by his son, W. R. Bingley, in 1839. As a companion to these works there appeared a volume entitled 'Sixty of the most admired Welsh Airs, collected by W. Bingley,' arranged for the pianoforte by W. Russell, junior, in 1803, and again in 1810. One of the most popular of his compilations was 'Animal Biography' (1802), which was written with the object of creating a taste for natural history. The sixth edition appeared in 1824, and the work was translated into several European languages. A cognate volume from his pen, 'Memoirs of British Quadrupeds,' appeared in 1809. Mr. Bingley was a learned botanist and a fellow of the Linnean Society. His 'Practical Introduction to Botany' was published in 1817, and republished after the author's death in 1827. In 1814 he drew up a volume on 'Animated Nature,' and two years later he compiled a work on 'Useful Knowledge, an account of the various productions of nature, mineral, vegetable, and animal.' The last of these volumes was frequently reissued, the seventh edition appearing so recently as 1852. One set of his works was composed of 'biographical conversations' on eminent characters. In this manner he narrated the lives of 'British characters,' 'eminent voyagers,' 'celebrated travellers,' and 'Roman characters.' Another consisted of condensed accounts 'from modern writers' of the various continents of the world: Africa, South America, North America, South Europe, North Europe, and Asia were consecutively described by him, the six volumes appearing separately between 1819 and 1822, and being reproduced with a general title-page of 'Modern Travels.' His dictionary of 'Musical Biography' appeared anonymously in 1814; it was reissued with his name on the title-page, but without any other alteration, in 1834. Whilst at Christ Church he published (1805), from the originals in the possession of a Wiltshire lady, three volumes of 'Correspondence between Frances, Countess of Hereford, and the Countess of Pomfret, 1738–41.' Most of the copies of the second edition were destroyed by fire, but a few were saved. He was long engaged on a history of Hampshire, and in 1817, when the manuscripts amounted to 6,000 pages, explained in an address to his subscribers the causes which retarded and finally prevented its completion. Thirty copies of a small portion of it, however, entitled 'The Topographical Account of the Hundred of Bosmere,' were printed for private circulation. In addition to these works, Bingley was the author of a sermon, the 'Economy of a Christian Life' (1822), and a handbook to the Leverian museum.

[Gent. Mag. 1823; Biog. Dictionary of 1816; Memoir prefixed to his 'Roman Characters' (1824).] W. P. C.

BINHAM or **BYNHAM, SIMON** (*fl.* 1335), chronicler, a monk of the priory of Binham, Norfolk, one of the cells belonging to the abbey of St. Albans, upheld his prior, William Somerton, in resisting the unjust exactions of Hugh, abbot of St. Albans (1308–1326). The cause of the Binham monks was taken up by the gentry of the neighbourhood, and Sir Robert Walkefare, the patron of the cell, prevailed on Thomas, earl of Lancaster, to uphold them. Emboldened by this support, the prior and his monks refused to admit the visitation of the abbot, and the gentlemen of their party garrisoned the priory against him. The abbot, however, appealed to the king, Edward II, who ordered the prior's supporters to return to their homes. Simon and the other rebellious monks were brought to St. Albans and imprisoned. After a while they were released and admitted into the brotherhood, but as a mark of disgrace were sentenced to walk in fetters in all processions of the convent. Simon lived to become an influential member of the house, for in the time of Abbot Michael (1335–1349) he was chosen by the chapter as one of the three receivers or treasurers of the collections made for the support of scholars and needy brethren. In a notice of the historians of St. Albans, he is said to have written after Henry Blankfrount or Blaneforde [q.v.], and before Richard Savage. The works of Binham and Savage are lost, or at least are unidentified. It has, however, been suggested that Binham may have written some of the fragments published in the Rolls edition of the 'Chronicle of Rishanger.'

[Gesta Abbatum Mon. S. Albani, ii. 131, 305, Rolls ser.; Joh. Amundesham Ann. Introd. lxvi, 303, Rolls ser.; Tanner's Bibl. Brit. 144.]

W. H.

BINHAM or **BYNHAM, WILLIAM** (*fl.* 1370), theologian, was a native of Binham in Norfolk, where there was a Benedictine priory dependent on the abbey of St. Albans. Doubtless through this connection he entered the monastic profession at the abbey, and became ultimately prior of Wallingford, which was also a cell belonging to St. Albans. He had been a student at Oxford, of which university he is described as doctor of divinity, and had there come into close intimacy with John Wycliffe. Binham, however, remained true to the traditions of the church, and after a while separated himself from his friend, with whom at length he engaged in controversy, and proved, as the catholic Leland confesses, no match for his antagonist. His only recorded work was written on this occasion, 'Contra Positiones Wiclevi.' It is not known to be extant, but Wyclif's reply ('Contra Willelmum Vynham monachum S. Albani Determinatio') is preserved in a Paris manuscript, Lat. 3184, ff. 49-52 (Shirley, *Catal. of the original Works of Wyclif*, p. 20). The last notice of Binham's life occurs in 1396, when he, as prior of Wallingford, was detained by illness from attending the election of an abbot of St. Albans on 9 Oct. (*Gesta Abbatum Monasterii S. Albani*, iii. 426, ed. H. T. Riley, 1869).

R. L. P.

BINNEMAN, HENRY. [See Bynneman, Henry.]

BINNEY, EDWARD WILLIAM (1812–1881), geologist, was born at Morton in Nottinghamshire in 1812. Little is known of his early education; he appears, however, to have acquired strong scientific tastes, which continually betrayed themselves during his apprenticeship to a solicitor. He became a resident in Manchester in 1836; his legal knowledge and strong common sense soon gained for him many clients, and his practice as a lawyer was favourably established in that city. The interesting coal-field of Lancashire soon claimed his attention, and he directed most of his leisure to the study of the geological phenomena of the district around Manchester. Similar tastes soon drew together a circle of students, many of whom had been trained in experimental science by John Dalton, and others in mechanical and physical research by William Fairbairn. Out of these, principally by Binney's influence, a small select band was formed, and in October 1838 they founded the Manchester Geological Society, Lord Francis Egerton being the first president, and J. F. Bateman and Binney the first honorary secretaries.

The second article in the 'Transactions' of this society, after the president's address, was a 'Sketch of the Geology of Manchester and its Vicinity,' illustrated by coloured sections, contributed by Binney. The first volume of the 'Transactions' affords evidence of his industry, four papers connected with the geology of the Lancashire and Cheshire coal-field having been contributed by him. Binney was president of the Manchester Geological Society in 1857–9, and again in 1865–7. In 1853 he was elected a member of the Geological Society of London, and in 1856 a fellow of the Royal Society.

In 1858 Binney communicated to the local geological society a paper 'On Sigillaria and

its Roots,' which was his first contribution towards the solution of a problem of considerable interest, connected with the formation of our coal-beds. It had already been noticed by Sir William Logan that every seam of coal rests on a bed of rock usually known as 'seat-stone' and 'underclay;' that this was devoid of stratification, and frequently full of filaments, running in all directions, having a root-like appearance. These vegetable fibres were called 'stigmaria.' Binney discovered, in a railway cutting near St. Helen's in Lancashire, a number of trunks of trees standing erect as they grew, with the roots still attached to them, these being the so-called 'stigmaria.' M. Ad. Brongniart was disposed to regard these plants as gigantic tree ferns, but Dr. (now Sir J. D.) Hooker believed that those Sigillaria, as they were named, were cryptogamous, though more highly developed than any flowering plants now living. In May 1861 another paper bearing the above title was communicated by the author to the Manchester Geological Society, and we find in the sixth volume of the 'Quarterly Journal of the Geological Society of London' a memoir by him entitled 'Remarks on Sigillaria and some Spores found imbedded in the inside of its roots.' Thus Binney completed the proof that all coal seams rest on old soils which are constituted entirely of vegetable matter; this was the seat-stone of a seam of coal. The roots (Stigmaria) show that those soils supported a luxuriant vegetation (Sigillaria), which, growing rapidly in vast swamps, under a moist atmosphere of high temperature, formed by decomposition the fossil fuel, to which we owe the extent of our manufacturing industries.

At this time Binney was actively engaged in investigating the fossil shells of the lower coal measures. In April 1860 he read a paper on the results of his inquiry, asserting that two groups of the mollusca were occasionally found together in the same coal-bed; but some geologists venture to differ from one whom they call 'a keen-eyed observer,' expressing their belief that the specimens, thought to be obtained from the same bed, were derived from two closely adjoining layers.

Binney studied with much diligence the coal measure, Calamites, which he was led to consider as divisible into two perfectly distinct but outwardly similar types; one of these, Calamodendron, being a gymnospermous exogen, allied to our fir trees, while the true calamite is regarded as equisetaceous. In 1866 he read a paper 'On the Upper Coal Measures of England and Scotland,' and in 1871 one, being a 'Description and Specimens of Bituminous Shale from New South Wales.' These are immediately due to his connection with Mr. James Young, whose name is associated with the paraffin industry of Scotland. Binney's geological experience helped Mr. Young to the discovery of the Torbane Hill mineral, or Boghead cannel, a bituminous shale from which have resulted the enormous paraffin works at Bathgate. Between the years 1839 and 1872, Binney contributed thirty-three papers to the Manchester Geological Society, and some others to the Geological Society of London. He was also a zealous supporter of the Philosophical Society of Manchester, and rendered important aid to the Geological Survey of the United Kingdom, by furnishing the surveyors with the results of his long experience over the coal-fields of Lancashire and Cheshire.

On 25 October 1881 Binney presided at the council meeting of the Manchester Geological Society for the last time. He died in Manchester on 19 Dec. in the same year, especially regretted by his associates, who found that in him they had lost the man who possessed the most exact knowledge of the coal-fields of Lancashire and Cheshire, and of the geology of the whole district.

[Transactions of the Geological Society of Manchester; Quarterly Journal of the Geological Society of London; Ormerod's Classified Index of Transactions, &c.; Coal, its History and Use, edited by Professor Thorpe; Lyell's Principles of Geology; personal knowledge.] R. H-T.

BINNEY, THOMAS, D.D., LL.D. (1798-1874), a distinguished nonconformist divine, was born at Newcastle-upon-Tyne in the year 1798. After a period of tuition in an ordinary day school, he was apprenticed for seven years to a bookseller. In giving an account of his early life Binney stated that his hours with the Newcastle bookseller were for two years from seven in the morning until eight in the evening, and for five years from seven to seven. He was, however, sometimes engaged from six a.m. until ten p.m. Notwithstanding this pressure he found opportunities, especially from his fourteenth to his twentieth year, for considerable reading and much original composition. The elements of Latin and Greek he acquired by studying on two evenings in the week with a presbyterian clergyman. The elder Binney, who was of Scotch extraction, was an elder of the presbyterian congregation in the Wall Knoll, and the son took an active part in connection with a religious and intellectual institution attached to this church. It is not known

how he came to sever himself from the presbyterians and to connect himself with the congregationalists. He was recommended, however, to the theological seminary at Wymondley, Hertfordshire, an institution which was afterwards merged in New College, a well-known training establishment for congregational ministers. He remained here for three years, and while tradition states that he was not a very severe student, it appears that he excited no ordinary expectations.

After leaving college Binney was for about twelve months minister of the New Meeting, Bedford, of which John Howard was one of the founders. In August 1824 he accepted the pastorate of St. James's Street Chapel, Newport, Isle of Wight. Here he became acquainted with Samuel Wilberforce. Binney's first work, a 'Memoir of Stephen Morrell,' was published during his residence at Newport. He also prepared for the press a volume of sermons on 'The Practical Power of Faith.' In 1829 he removed to London, to take charge of the church assembling at Weigh House. In a short time he acquired a high reputation as a pulpit orator.

Binney was a strong controversialist, and he attacked the church of England with much vehemence. A furious paper war took place over a phrase which occurred in an address delivered by him at the laying of the foundation-stone of the new Weigh House Chapel on 16 Oct. 1833. He was affirmed to have said that 'the church of England damned more souls than she saved.' Several bishops, a great number of the clergy, and the entire religious press mingled in the fierce discussion which ensued. The actual words used by Binney were these: 'It is with me a matter of deep serious religious conviction that the established church is a great national evil; that it is an obstacle to the progress of truth and godliness in the land; that it destroys more souls than it saves; and therefore its end is devoutly to be wished by every lover of God and man. Right or wrong, this is my belief.' Binney was a voluminous writer on polemical subjects. He published a number of letters under the signature of 'Fiat Justitia,' which quickly went through six editions, and in 1834 he published 'The Ultimate Object of the Evangelical Dissenters,' a sermon preached in the Weigh House Chapel on the occasion of petitions to parliament for the removal of dissenters' grievances. In the following year he replied, by a discourse entitled 'Dissent not Schism,' to a charge by the Bishop of London which had been pronounced intolerant in many quarters. In 1841 a Mr. William Baines was imprisoned in Leicester Gaol for non-payment of church rates, and Binney, under the pseudonym of 'A. Balance, Esq., of the Middle Temple,' wrote a severe pamphlet dealing with the case and entitled 'Leicester Gaol.' In 1850 he wrote a series of papers on the 'Aspects of Baptismal Regeneration as taught in the Established Church,' suggested by the famous Gorham case. In 1853 he published a work for young men entitled 'Is it possible to make the Best of both Worlds?' The question was answered warmly in the negative by several writers, but its original propounder defended his propositions with considerable dialectical skill. This work was Binney's most successful venture as an author. For the first twelve months after its publication it sold at the rate of one hundred copies per day.

In 1857 Binney visited Australia. The Bishop of Adelaide having addressed to him a letter on the relations of the episcopal church in the colonies to nonconforming churches, and the possibility of an interchange of ministerial services, a correspondence followed. A memorial was addressed to the bishop by a number of episcopalian laymen, including the governor of the colony and the ministers of the state, requesting that Binney should be invited to preach in the cathedral. In the end, however, the bishop decided that he was not at liberty to comply with the request. The visitor then delivered an address from the presidential chair of the Tasmanian Congregational Union on 'The Church of the Future,' an address which was afterwards incorporated in a volume entitled 'Lights and Shadows of Australian Life,' published in 1862. The year just named being the year of the bicentenary commemoration of the ejection of the two thousand clergymen, Binney, who had some time before returned to England, preached and published two sermons entitled 'Farewell Sunday' and 'St. Bartholomew's Day.' In 1863 he published a pamphlet with the title 'Breakers on both Sides: Thoughts on Creeds, Subscriptions, Trust Deeds, &c., in relation to Protestantism and Dissent.' The rapid spread of the ritualistic movement in the church of England also led him to write and publish in 1867 a volume entitled 'Micah, the Priest Maker,' an enlargement of a course of lectures delivered at the Weigh House Chapel. Binney edited and published an American work on liturgies by the Rev. Charles W. Baird, D.D., of New York, being 'Historical Sketches of the Liturgical Forms of the Reformed Churches.' The editor prefixed an introduction and added an appendix on the question, 'Are Dissenters to have a Liturgy?' expressing a conviction

that something more was demanded in nonconformist services than had yet been witnessed. He was himself one of the first ministers to introduce into nonconformist churches the chanting of the rhythmical psalms of the Old Testament according to the authorised version, and he gave a great impetus to the movement for improved services, which afterwards spread through the nonconformist churches.

For many years before he died Binney was regarded as the Nestor of the denomination to which he belonged, and his influence spread to the other side of the Atlantic and also to the colonies. In 1852 he received the degree of LL.D. from the university of Aberdeen, and an American university subsequently conferred upon him the degree of D.D. He was twice elected chairman of the Congregational Union of England and Wales, and he preached a great number of special sermons before that body. In 1869 he retired from the pastorate at Weigh House Chapel after a ministry of forty years in that place. He subsequently undertook some professorial duties in connection with New College, and occasionally preached in London pulpits, his last sermon being delivered in Westminster Chapel in November 1873.

The closing months of his life saw him afflicted by a depressing and insidious disease. Dr. Allon states that he fell into a condition of great despondency, but it was a failure of the body rather than of the mind. Before the end the cloud lifted, and he died on 24 Feb. 1874. Dean Stanley was amongst the divines who took part in the funeral service at Abney Park Cemetery.

Binney was a voluminous writer of verse, chiefly of a religious character. His poetry, however, was distinguished rather for its devotional element than for any imaginative qualities. One of his hymns, 'Eternal Light! Eternal Light!' is widely known.

[Sermons preached in the King's Weigh House Chapel, London, 1829–69, by T. Binney, LL.D., 1st and 2nd series, edited, with a Biographical and Critical Sketch, by Henry Allon, D.D.; Thomas Binney, a Memorial, by the Rev. J. Stoughton, D.D.; Thomas Binney, his Mind, Life, and Opinions, by the Rev. E. Paxton Hood; Annual Register, 1874, and the journals of the time; the works of Dr. Binney.] G. B. S.

BINNING, Lord (1697–1733). [See Hamilton, Charles.]

BINNING, HUGH (1627–1653), Scotch divine, was son of John Binning of Dalvenan, Ayrshire, by Margaret M'Kell, daughter of Matthew M'Kell (or M'Kail), the parish clergyman of Bothwell, Lanarkshire, and sister to Hugh M'Kail, one of the ministers of Edinburgh, and uncle to one of the youthful martyrs of Scotland—Hugh M'Kail, who was hanged at Edinburgh on 22 Dec. 1666, for his alleged participation in the rising at Pentland. Binning was born at Dalvenan in 1627. His father had a considerable inherited landed estate, and Hugh was given a liberal education. He easily outstripped his schoolfellows of twice and thrice his years, and in his thirteenth and fourteenth years his gravity and piety were recognised with a kind of awe by all. Before his fourteenth year he proceeded to the university of Glasgow, entering himself for philosophy. The professors were startled by his premature learning and philosophical capacity. He took his degree of M.A. 'with much applause.' He then commenced the study of divinity, 'with a view to serve God in the holy ministry.' James Dalrymple (afterwards Lord Stair), who had been his professor of philosophy, having resigned in 1647, Binning was induced to become a candidate for the chair. All members of the universities in the kingdom who had 'a mind to the profession of philosophy' were invited to 'sist' themselves before the Senatus and 'compete for the preferment.' The principal of the university (Dr. Strang) had his candidate, and strenuous efforts were put forth to carry him, mainly on the ground that the candidate was a 'citizen's son,' and subsidiarily 'of competent learning,' and of 'more years.' An extempore disputation between the two candidates was suggested; thereupon Binning's rival withdrew, and left him to be unanimously elected before he was nineteen years of age. He delivered at once a brilliant course of lectures, and tried to rescue philosophy in Scotland from the 'barbarous terms and unintelligible jargon of the schoolmen.' He held the post with increasing influence for about three years. At the same time he pursued his theological studies, and having obtained license as a minister of the Gospel, he received a call to the parish of Govan near Glasgow on 25 Oct. 1649. On 8 Jan. following he was ordained at Govan, and resigned his professorship in the following year. Soon after he married Mary (sometimes erroneously given as Barbara), daughter of the Rev. James Simpson, parish minister of Airth (Stirlingshire), who has been wrongly described as an Irish minister. He still carried on his philosophical and other studies, but was duly attentive to his sermons and pastoral duties. Wherever he was announced as a preacher, vast crowds assembled. When in 1651 the unhappy division took place in the church into resolutioners and protesters, he sided with the latter. He then wrote and

published his 'Treatise on Christian Love' as an Eirenicon. He played a prominent part in the historical dispute before Cromwell at Glasgow (April 1651) between the independents and presbyterians. His learning, theological knowledge, and eloquent fervour bore down all opposition. The Protector was astonished, and, finding his party (of the independents) nonplussed, is said to have asked the name 'of that learned and bold young man,' and, when told it was Mr. Hugh Binning, to have replied, 'He hath bound well indeed, but' (putting his hand on his sword) 'this will loose all again.' Subsequently he still more publicly vindicated the church's rights as against the invasion of the state, from Deuteronomy xxxii. 4–5. He died of consumption in September 1653, when only in his twenty-seventh year. Patrick Gillespie —no common judge—pronounced him 'philologus, philosophus, et theologus eximius.' James Durham said 'There was no speaking after Mr. Binning.' The following are his chief books: 1. 'The common Principles of the Christian Religion clearly proved and singularly improved, or a Practical Catechism wherein some of the most concerning Foundations of our Faith are solidly laid down, and that Doctrine which is according to Godliness is sweetly yet pungently pressed home and most satisfyingly handled,' Glasgow, 1659. 2. 'The Sinner's Sanctuary, being xl. Sermons upon the Eighth Chapter of Romans from the first verse to the sixteenth,' Edinburgh, 1670. 3. 'Fellowship with God, being xxviii. Sermons on the First Epistle of John c. i. and ii. vv. 1, 2, 3,' Edinburgh, 1671. 4. 'Heart Humiliation, or Miscellany Sermons, preached upon choice Texts at several Solemn Occasions,' Edinburgh, 1671. 5. 'An Useful Case of Conscience . . . 1693.' 6. 'A Treatise of Christian Love on John xiii. 35,' 1651, but only 1743 ed. (Glasgow) now known. 7. 'Several Sermons upon the most important Subjects of Practical Religion,' Glasgow, 1760. The best collective edition of the works is that by Dr. Leishman, a successor at Govan, in one large volume (imperial 8vo), 3rd ed. 1851. Various of these books were translated into Dutch.

Binning's widow was afterwards married to the Rev. James Gordon, presbyterian minister of Comber, co. Down, Ireland. She died at Paisley in 1694. Binning's only son John inherited the family estate of Dalvenan on the death of his grandfather; but having been engaged in the affair of Bothwell Bridge in 1679, he was attainted and his property forfeited. But in 1690 forfeiture and fines and attainder were rescinded by parliament, with little advantage nevertheless to him, through the roguery of one Mackenzie, who claimed to have advanced money on the estate far beyond its value. There are pathetic glimpses of the younger Binning in the 'proceedings' of the assembly of the church of Scotland in 1704, when he sued for the assembly's approval of an edition of his father's works. The assembly recommended 'every minister within the kingdom to take a double of the same book, or to subscribe for the same.' The last application he made for procuring aid was in 1717.

[Scott's Fasti, ii. 67–8; Minutes Univ. Glasg.; Wodrow's Analecta; Reid's Presbyterianism of Ireland, i.; Edin. Christian Instructor, xxii.; Acts of Assembly; New Statistical Account, vi.; Chalmers's Biogr. Dict.; Scots Worthies, i. 205–10, ed. Macgavin, 1837.] A. B. G.

BINNS, JOHN (1772–1860), journalist and politician, was the son of an ironmonger in Dublin, and was born on 22 Dec. 1772. In his second year he lost his father, who left behind him a considerable property. After receiving a good education, first at a common school, and afterwards at a classical academy, he was in 1786 apprenticed to a soapboiler. At the request of his elder brother, who inherited the estate of his father, he accompanied him in 1794 to London, where for some months he acted as his assistant in the plumbing business. Shortly after his arrival in London he became a member of the London Corresponding Company, which was afterwards an influential political association. In 1797 he hired a large room in the Strand for political debates, a charge of one shilling being made for admission. On account of his connection with the schemes of the United Irishmen, the grand jury of the county of Warwick found a true bill against him, but after trial he was acquitted. On 21 Feb. 1798 he left London for France, but was arrested at Margate, and after an examination by the privy council he was committed to the Tower. At Maidstone he was tried, along with Arthur O'Connor, for high treason, but acquitted. Shortly afterwards he was arrested and confined in Clerkenwell Prison, whence he was transferred to Gloucester, where he remained till March 1801. In July following he embarked for America. Proceeding to Northumberland, Pennsylvania, he in March 1802 began there a newspaper, 'The Republican Argus,' by which he acquired great influence among the republican party, not only in Northumberland but in the neighbouring counties. In March 1807 he removed to Philadelphia to edit the 'Democratic Press,' which soon

became the leading paper in the state. In December 1822 he was chosen alderman of the city of Philadelphia, an office which he held till 1844. He died at Philadelphia on 16 June 1860.

T. F. H.

BINYON, EDWARD (1830?–1876), landscape painter, born about the year 1830, was a member of the Society of Friends. He painted both in oil and in water-colours, and his works show much power of colouring; one of them, 'The Bay of Mentone,' has frequently been reproduced. He contributed from 1857 to 1876 to the exhibitions of the Dudley Gallery and the Royal Academy, among the pictures which he sent to the latter being, in 1859, 'The Arch of Titus;' in 1860 'Capri;' in 1873 'Marina di Lacco, Ischia;' in 1875 'Coral Boat at dawn, Bay of Naples;' and in 1876 'Hidden Fires, Vesuvius from Capodimonte.' He lived many years in the island of Capri, where he died in 1876, from the effects of bathing while overheated.

[Bryan's Dictionary of Painters and Engravers, ed. Graves, 1884; Royal Academy Exhibition Catalogues, 1859–76.] R. E. G.

BIONDI, SIR GIOVANNI FRANCESCO (1572–1644), historian and romance writer, was born in 1572 at Lesina, an island in the Gulf of Venice off Dalmatia. Entering the service of the Venetian republic, he was appointed secretary to Senator Soranzo, the Venetian ambassador at Paris; but he soon afterwards returned to Venice, and at the suggestion of Sir Henry Wotton, the English ambassador there, came to England to seek his fortunes. Arriving in 1609 (*Cal. Dom. State Papers*, 1629–31, p. 347), with an introduction to James I, he was at first employed in negotiating with the Duke of Savoy marriages between his children and Prince Henry and Princess Elizabeth, but the scheme never reached maturity. He was settled in London in the latter half of 1612, when Prince Henry's death ended 'all hope of a Savoyan match,' and was well received by the king, who granted him a pension. Fifteen interesting Italian letters, written between 9 Oct. 1612 and 24 Nov. 1613, by Biondi in London to Carleton, who was then the English ambassador at Venice, are extant among the 'State Papers.' In one of them, dated 28 Oct. 1613, Biondi promises to follow Carleton's advice, and remain permanently in London; and in the latest of them he announces his intention of going to Paris with Sir Henry Wotton, should Wotton be appointed to the English legation there. He had been in early life converted to the protestant faith; but Archbishop Abbot informed Carleton (30 Nov. 1613) that, although he knew nothing to Biondi's disadvantage, he was as suspicious of him as of all 'Italian convertitos.' In 1615 Biondi proceeded to the general Calvinist assembly held at Grenoble as James I's representative, and he assured the assembly of the English king's protection and favour (MARSOLLIER, *Histoire de Henri, duc de Bouillon*, 1719, livre vii. p. 27). On 6 Sept. 1622 Biondi was knighted by James I at Windsor, and married about the same time Mary, the sister of the king's physician, Sir Theodore Mayerne, 'a very great lump or great piece of flesh,' as Chamberlain describes her (NICHOLS, *Progresses*, iii. 777; *Cal. Dom. State Papers*, 1619–23, p. 495). Soon afterwards Biondi became a gentleman of the king's privy chamber. On 22 Feb. 1625–6 he resigned two small pensions which he had previously held, and received in behalf of himself and his wife, during their lives, a new pension of 200*l.* On 13 June 1628 an exemption from all taxation was granted him. On 25 Sept. 1630 he sent to Carleton, who had now become Viscount Dorchester and secretary of state, a statement of his affairs, and desired it to be laid before the king. After giving an account of his early life, and of the loss which he had sustained in the death, in 1628, of his patron, William Cavendish, earl of Devonshire, he complained that his pension had been rarely paid, and prayed for its increase by 100*l.* and its regular payment. The justices of the peace for Middlesex reported (11 May 1636) that Biondi, with other 'persons of quality' residing in Clerkenwell, had refused to contribute 'to the relief of the infected' of the district. There is extant at the Record Office a certificate of payment of Biondi's pension on 7 May 1638. Two years later he left England for the house of his brother-in-law, Mayerne, at Aubonne, near Lausanne, Switzerland. He died there in 1644, and the epitaph on his tomb in the neighbouring church was legible in 1737. An admirable portrait of Biondi is given in 'Le Glorie de gli Incogniti,' p. 240. This book, published at Venice in 1647, is an account of deceased members of the Venetian 'Accademia de' Signori Incogniti,' to which Biondi belonged.

Biondi was the author of three tedious chivalric romances, which tell a continuous story, and of a work on English history. They were all written in Italian, but became very popular in this country in English

translations. They are entitled: 1. 'L'Eromena divisa in sei libri,' published at Venice in 1624, and again in 1628. It was translated into English as 'Eromena, or Love and Revenge' (fol., 1631), by James Hayward, and dedicated to the Duke of Richmond and Lennox. A German translation appeared in parts at Nuremberg between 1656 and 1659, and was republished in 1667. 2. 'La Donzella desterrada,' published at Venice in 1627 and at Bologna in 1637, and dedicated to the Duke of Savoy. The dedication is dated from London, 4 July 1626, and in it Biondi mentions a former promise to undertake for the duke a translation of Sidney's 'Arcadia.' James Hayward translated the book into English, under the title of 'Donzella desterrada, or the Banish'd Virgin' (fol.), in 1635. 3. 'Il Coralbo; segue la Donzella desterrada' (Venice, 1635). It was translated into English by A. G. in 1655, with a dedication to the (second) Earl of Strafford. The translator states that Coralbo was regarded by Biondi as the most perfect of his romances. 4. 'L'istoria delle guerre civili d'Inghilterra tra le due case di Lancastro e Iorc,' published in three quarto volumes at Venice between 1637 and 1644, with a dedication to Charles I. It was translated into English, apparently while still in manuscript, by Henry Cary, earl of Monmouth, and published in two volumes in London in 1641, under the title of 'An History of the Civil Warres of England between the two Houses of Lancaster and Yorke.' It is a laborious but useless compilation.

S. L.

BIRCH, JAMES (*fl.* 1759–1795), heresiarch, was born in Wales, but the date is unknown. He became a watch-motion maker in London, living in Brewer's Yard, Golden Lane, Old Street Road, afterwards in Little Moorfields. He was converted to the Muggletonians, his name first appearing in their records 1 July 1759; that of Mrs. Birch is mentioned 22 July 1759. He wrote in 1771 a rhythmical account of his conversion ('Travels from the sixth to the ninth hour'), fifteen stanzas of eight lines each, dated 5 Dec. (unprinted). In 1772 he rejected two points of Muggletonian orthodoxy: viz. the doctrine that believers have present assurance of salvation (this, Birch thought, was often withheld till death); and the doctrine that God exercises no immediate oversight in human affairs, and affords no present inspiration (on these points Birch reverted to the original views of John Reeve, the founder, along with Lodowicke Muggleton, of the sect). So far he only led a party within the Muggletonian body, which has always been liable to eruptions of Reevite heresy. But in 1778 Birch began to claim personal inspiration; this lost him ten followers, headed by Martha, wife of Henry Collier. The Collierites were regarded by Muggletonians as mistaken friends; the Birchites were known as the Anti-church. Birch was maintained in independence by his followers, his right-hand man being William Matthews, of Bristol. In 1786 there were some thirty Birchites in London, and a larger number in Pembrokeshire. In 1809 they are alluded to in a 'divine song' by James Frost as 'anti-followers;' at this time and subsequently they had a place of meeting in the Barbican. Whether Birch himself was living in 1809 is not known; the last occurrence of his name in the Muggletonian archives is in 1795; two of his London followers were surviving in 1871 in old age. Birch published, about the end of last century, 'The Book of Cherubical Reason, with its Law and Nature; or of the Law and Priesthood of Reason,' &c.; and 'The Book upon the Gospel and Regeneration,' &c. They bear no date, but were sold by T. Herald, 60 Portpool Lane, Gray's Inn Lane. Very incoherent, they are scarcely intelligible even to the initiated in the small controversies from which they sprang. One of Birch's opinions is curious: 'Not one of the seed of Faith dies in childhood' (*Cher. Reas.* p. 46).

[MS. Records of the Muggletonian Church; Birch's Works (Brit. Mus. 1114 i. 3, 1 and 2); paper Ancient and Mod. Muggletonians, Trans. Liverpool Lit. and Phil. Soc. 1870.]

A. G.

BIRCH, JOHN (1616–1691), presbyterian colonel during the civil war, belonged to a younger branch of the Birches of Birch, and was the eldest son of Samuel Birch of Ardwick, Lancashire, by Mary, daughter of Ralph Smith of Doblane House, Lancashire (Dugdale's *Visit. of Lancas.* 1664 in *Chet. Soc. Pub.* lxxxiv. (1872), p. 34). He was born 7 April 1616, not 1626, the date now inscribed on his tombstone (Wood, ed. Bliss, *Life*, cxviii). It was the general custom of his political opponents to refer to him as of ignoble origin, and the coarseness of his manners gave a colour of probability to the insinuation. In 'A more exact and necessary Catalogue of Pensioners than is yet extant' (Somers's *Tracts*, vii. p. 60), he appears as 'J. B., once a carrier, now a colonel;' and

Burnet states that when a member of parliament he 'retained still, even to affectation, the clownishness of his manner.' He also quotes a speech of Birch, in which he admits that he had 'been a carrier once.' Similar insinuations of the lowness of his origin occur in the traditions as to how he joined the army. According to the Barrett MSS. in the library of the Chetham Society, quoted in note by Thomas Heywood to Newcome's 'Diary' (p. 203), 'being of great stature,' he 'enlisted as a private trooper in the parliamentary army, which being known of Colonel Birch of Birch to be his namesake and countryman, was by him favoured and preferred in the army from post to post.' According to another account, while driving his packhorses along the road, he so resolutely resisted the attempt of some parliamentary soldiers under Cromwell to rob him, that he attracted the notice of that commander, who offered him a commission in his troop (TOWNSEND, *Hist. of Leominster*, p. 109). The pedigree above quoted sufficiently refutes the tradition of his ignoble birth, and his letters prove incontestably that he had received more than a 'clownish education.' That both of the above statements in regard to his early connection with the army are totally groundless, is also evident from his 'Military Memoir,' in which he makes his first appearance as captain of volunteers at the siege of Bristol. Either previously or subsequently he may have acted as 'a carrier,' and 'driven packhorses,' but when he joined the army he had a large business as a merchant in Bristol, and, according to the 'Visitation of Lancashire' above quoted, had married Alice, daughter of Thomas Deane, and widow of Thomas Selfe of Bristol, grocer. It is, however, not an improbable conjecture that Birch came into the possession of his business by marrying the widow of his master, whose goods he may previously have been in the habit of delivering to the customers. In any case, he inherited a combination of talents certain to bring him into prominence in troublous times such as those in which he lived: great personal strength, remarkable coolness in the most perplexing surroundings, an inborn capacity for military command, a rugged eloquence which rendered him one of the most formidable orators of his time, and a keen business instinct which let slip no opportunity of advancing his personal interests. After the surrender of Bristol to the royalists Birch went to London and levied there a regiment, with which he served as colonel under Sir William Waller in his campaigns in the west. In the assault of Arundel he was so severely wounded as to be left for dead; but the cold stopped the hæmorrhage, and thus accidentally saved his life. After obtaining medical assistance in London, he returned to his command, and was present at the battle of Alresford, the blockade of Oxford, and the prolonged skirmish at Cropredy Bridge. Waller's troops having deserted him in the subsequent aimless march towards London, Birch obtained the command of a Kentish regiment of newly levied troops, with which he assisted at the defence of Plymouth. The institution of the New Model was a serious blow to his hopes, for his presbyterian principles were even dearer to him than his own advancement. On its institution he was ordered to join the army of Fairfax and Cromwell near Bridgewater, and was entrusted with the care of Bath. It was in a great degree owing to his representations that in September 1645 it was decided to storm Bristol, and he assisted in its assault with a considerable command of horse and foot, receiving special commendation in the report of Cromwell to the parliament (CARLYLE, *Cromwell*, letter xxxi.) Notwithstanding this, he remained only a colonel of volunteers with the joint care of Bath and Bristol, a position with so few advantages to compensate for its difficulties that he contemplated resigning his commission, when, going to London in November 1645 to inform the committee of safety of his intention, he received a new commission along with Colonel Morgan, governor of Gloucester, to 'distress the city of Hereford.' Only a few months previously the city had successfully withstood the assaults of the Scotch army under Leven; but Birch, after obtaining secret information of the strength, disposition, and habits of the garrison, succeeded in devising a clever stratagem which enabled him to enter the gates before a proper alarm could be raised. Such a stroke of fortune was received with rejoicing in London, and formed the turning-point in Birch's career. He received the thanks of parliament, who voted 6,000*l.* for the payment of his men, and was made governor of Hereford. In 1646 he was chosen member for Leominster, but was excluded by Pride's Purge in 1648. With the capture of Goodrich castle his career as a soldier of the parliament closes. Throughout it, it is not difficult to trace the predominance of his schemes as a man of business. It was possibly to secure compensation for the loss of his property in Bristol that he first became a captain of volunteers. When forced to suspend his business as a merchant, he lent his money to the parliament at the high interest of 8 per cent., and his governorship of Hereford supplied him with admirable opportunities for speculating in

church lands, of which he took full advantage, purchasing Whitbourne, a county residence attached to the see of Hereford, for 1,348*l.*, and afterwards the palace of Hereford and various bishop's manors for 2,476*l.* (*Memoir*, 154-5). These purchases were of course nullified at the Restoration, and Richard Baxter mentions that Birch sought to persuade him to take the bishopric of Hereford 'because he thought to make a better bargain with me than with another' (KENNET, *Register*, 303). At the same time Birch made his worldly interests entirely subservient to his presbyterian principles. According to his own statement in the debate of 10 Feb. 1672-73, he suffered, on account of his opposition to the extreme measures of the Cromwellian party, as many as twenty-one imprisonments. When Charles II appeared in England as the champion of presbyterianism, Birch's wariness did not prevent him from being seen riding with Charles in Worcester the day before the battle. This was remembered against him when fears arose in 1654 of a rising in Hereford, and he suffered an imprisonment in Hereford gaol from March of that year to November 1655 (THURLOE, iv. 237). He was returned to the parliament which met in March 1656, but was excluded, and, with eighty others, signed a protest. Re-elected in 1658-9, he took a prominent part in the restoration of Charles II, being chosen in February 1659-60 a member of the new council of state, of which General Monk was the head (KENNET, *Register*, 66). Notwithstanding his dubious political action, he had held during the later years of the protectorship an important situation in the excise, and at the Restoration he was made auditor. That under the new régime his business instincts were still unimpaired is further shown by the entries in the State Papers (*Calendar*, Domestic Series (1664-5), pp. 361 and 383) regarding his rental, along with James Hamilton, ranger of Hyde Park, of 55 acres of land at the north-west corner of the park, at an annual rental of 5*s.*, to be planted with apple-trees for cider, one half of the apples being for the use of the king's household. In February 1660-61 he acted as commissioner for disbanding 'the general's regiment of foot,' and in March following as commissioner for disbanding the navy (KENNET, 389). In the convention parliament he sat for Leominster, Penryn (1661-78, 1678-9, 1680-1, 1688-9, and 1689-90), and for Weobly (1690-1), the property of Weobly and also that of Garnstone having been purchased by him in 1661. His practical business talents and his acquaintance with military affairs enabled him in the debates to make use of his oratorical gifts with remarkable effect. His plan for the rebuilding of London after the great fire indicated great practical shrewdness, and, had it been followed both then and thereafter up to the present time, the question of housing the poor would have been completely solved. He proposed that the whole land should be sold to trustees, and resold again by them with preference to the old owner, 'which,' as Pepys justly remarks, 'would certainly have caused the city to be built where these trustees pleased' (PEPYS, *Diary*, iii. 412). Burnet says of Birch: 'He was the roughest and boldest speaker in the house, and talked in the language and phrases of a carrier, but with a beauty and eloquence that was always acceptable. I heard Coventry say he was the best speaker to carry a popular assembly before him that he had ever known.' He died 10 May 1691, and was buried at Weobly, where a monument was erected to his memory, the inscription of which was defaced by the Bishop of Hereford. In the new inscription the year of his birth is wrongly given as 1626 instead of 1616.

BIRCH, JOHN (1745?-1815), surgeon, was born in 1745 or 1746, but where cannot now be traced. He served some years as a surgeon in the army, and afterwards settled in London. He was elected on 12 May 1784 surgeon to St. Thomas's Hospital, and held office till his death on 3 Feb. 1815. He was also surgeon extraordinary to the prince regent. Birch was a surgeon of much repute in his day, both in hospital and private practice, but was chiefly known for his enthusiastic advocacy of electricity as a remedial agent, and for his equally ardent opposition to the introduction of vaccination. He served the cause of medical electricity by founding an electrical department at St. Thomas's Hospital, and carrying it on with much energy. For more than twenty-one years, he says, he performed the manipulations himself, since he found it difficult to induce the students to take much interest in the subject. The kind of electricity employed was exclusively the frictional, which is now known to be of little use, the therapeutical value of galvanism being not at that time understood. Nevertheless his writings on the subject, which were widely circulated both in this country and abroad, must have

done much in keeping alive professional interest in investigations which have turned out to be remarkably fruitful in practical results.

Birch published several pamphlets in opposition to the practice of vaccination, and in favour of inoculation, for the small-pox. He also gave evidence before a committee of the House of Commons in the same sense. His objections have no longer much scientific interest, but the point of view from which he regarded the subject is probably fairly represented in his monumental epitaph, as follows: 'The practice of cow-poxing, which first became general in his day, undaunted by the overwhelming influence of power and prejudice, and by the voice of nations, he uniformly and until death perseveringly opposed, conscientiously believing it to be a public infatuation, fraught with peril of the most mischievous consequences to mankind.' Birch was buried in the church in Rood Lane, Fenchurch Street, where a monument was erected to his memory by his sister Penelope Birch. The epitaph, from which some of the dates given above are quoted, is printed in a posthumous edition of his tracts on vaccination. His portrait, painted by T. Phillips and engraved by J. Lewis, is rather commonly met with.

He wrote: 1. 'Considerations on the Efficacy of Electricity in removing Female Obstructions,' London, 1779, 8vo; 4th edition 1798 (translated into German). 2. 'A Letter on Medical Electricity,' published in George Adams's 'Essay on Electricity,' London, 1798, 4to (4th edition); also separately, 1792, 8vo. 3. 'An Essay on the Medical Applications of Electricity,' 1802, 8vo (translated into German, Italian, and Russian). 4. 'Pharmacopœia Chirurgica in usum nosocomii Londinensis S. Thomæ,' London, 1803. 12mo. 5. 'A Letter occasioned by the many failures of the Cow-pox,' addressed to W. R. Rogers. Published in the latter writer's 'Examination of Evidence relative to Cow-pox delivered to the Committee of the House of Commons by two of the Surgeons of St. Thomas's Hospital,' 2nd edition, 1805. 6. 'Serious Reasons for objecting to the Practice of Vaccination. In answer to the Report of the Jennerian Society,' 1806, 8vo. 7. 'Copy of an Answer to the Queries of the London College of Surgeons and of a Letter to the College of Physicians respecting the Cow-pox,' 1807, 8vo. The last two were reprinted by Penelope Birch, with the title 'An Appeal to the Public on the Hazard and Peril of Vaccination, otherwise Cow-pox,' 1817, 8vo. 8. 'The Fatal Effects of Cow-pox Protection,' 1808, 12mo (anonymous, but ascribed to Birch in the 'Dict. of Living Authors,' 1816). 9. 'A Report of the True State of the Experiment of Cow-pox,' 1810 (on the same authority).

[Biog. Dict. of Living Authors (1816); Callisen's Medicinisches Schriftsteller-Lexikon (Copenhagen, 1830–45), i. 264, and Appendix; Archives of St. Thomas's Hospital; Birch's Works.]

J. F. P.

BIRCH, JONATHAN (1783–1847), translator of 'Faust,' was born in Holborn, London, on 4 July 1783. When a lad he had a strong desire to become a sculptor, but in October 1798 he was apprenticed to an uncle in the city. In 1803 he entered the house of John Argelander, a timber-merchant at Memel, where he remained until Argelander's death, in 1812, much of his time being employed in travelling in Russia, Sweden, and Denmark. In 1807 the three eldest sons of Frederick William III of Prussia took refuge with Argelander for eighteen months, and became warmly attached to Birch, in whose company they took delight.

In 1812 Birch returned to England and turned to literary pursuits. In 1823 he married Miss Esther Brooke, of Lancaster, who bore him five children, of whom only two survived, a boy and a girl. His son, Charles Bell Birch, A.R.A., became a sculptor.

After many minor essays in literature he published 'Fifty-one Original Fables, with Morals and Ethical Index. Embellished with eighty-five original designs by Robert Cruickshank; also a translation of Plutarch's "Banquet of the Seven Sages," revised for this work,' London, 1833, 8vo. The preface is signed 'Job Crithannah,' an anagram of the author's name. The Crown Prince of Prussia accepted a copy, and renewed the friendship formed at Memel. Birch next produced 'Divine Emblems; embellished with etchings on copper [by Robert Cruickshank], after the fashion of Master Francis Quarles. Designed and written by Johann Albricht, A.M.' (another anagram of Jonathan Birch), London, 1838, 8vo; Dublin, 1839, 8vo. On sending the crown prince a copy he received in return a gold medal, of which only thirty were struck, and given by the prince to his particular friends. He now undertook a complete translation of Goethe's 'Faust,' being the first to attempt the two parts. The first was published in 1839, and dedicated to the crown prince, who, on coming to the throne in 1840 as Frederick William IV, sent him the 'great gold medal of homage.' In 1841 Birch was elected 'foreign honorary member of the

Literary Society of Berlin,' the only other Englishman thus honoured being Thomas Carlyle. The second part of 'Faust' was published in 1843, and dedicated to the King of Prussia. Birch also translated, from the German of Bishop Eylert, two works upon Frederick William III. In 1846 the King of Prussia offered him a choice of apartments in three of his palaces. He chose Bellevue, near Berlin, mainly for the sake of his son's artistic studies. At the end of 1846 he settled in Prussia, and completed his last work, a translation of the 'Nibelungen Lied,' Berlin, 1848, 8vo. He was greatly aided by Professor Carl Lachmann, whose text he mainly followed, and by the brothers Grimm. While his work was still in the press he was taken ill, and died at Bellevue on 8 Sept. 1847.

[Private information.] T. C.

BIRCH, PETER, D.D. (1652?–1710), divine, was son of Thomas Birch of the ancient family of that name settled at Birch in Lancashire. He was educated in presbyterian principles. In 1670 he and his brother Andrew went to Oxford, where they lived as sojourners in the house of an apothecary, became students in the public library, and had a tutor to instruct them in philosophical learning, 'but yet did not wear gowns.' After a time Peter left Oxford and entered the university of Cambridge, though no entry of his matriculation can be discovered. Subsequently he returned to Oxford, and, having declared his conformity to the established church, Dr. John Fell procured certain letters from the chancellor of the university in his behalf. These were read in the convocation held on 6 May 1672, with a request that Birch might be allowed to take the degree of B.A. after he had performed his exercise and to compute his time from his matriculation at Cambridge. On the 12th of the same month he was matriculated as a member of Christ Church, and being soon after admitted B.A. (1673–4) he was made one of the chaplains or petty canons of that house by Dr. Fell. He graduated M.A. in 1674, B.D. in 1683, and D.D. in 1688. For a time he was curate of St. Thomas's parish, Oxford, then rector of St. Ebbe's church and a lecturer at Carfax, and subsequently, being recommended to the service of James, duke of Ormond, he was appointed by that nobleman one of his chaplains. He became chaplain to the House of Commons and a prebendary of Westminster in 1689. King William III, just before one of his visits to Holland, gave the rectory of St. James's, Westminster, to Dr. Thomas Tenison, and after the advancement of that divine to the see of Lincoln, the Bishop of London, pretending that he had a title to the rectory, conferred it on Dr. Birch, 11 July 1692. The queen, being satisfied that the presentation belonged to the crown, granted the living to Dr. William Wake. These conflicting claims led to litigation between Birch and Wake in the court of king's bench, and eventually the House of Lords decided the case on appeal, 12 Jan. 1694–5, in favour of the latter. Shortly afterwards, on 19 March 1694–5, Birch was presented by the dean and chapter of Westminster to the vicarage of St. Bride's, Fleet Street. Abel Boyer, referring to the dispute about the rectory, states what was probably the real reason of Birch being ousted from it. He says Birch 'was a great stickler for the High-church party; and 'tis remarkable, that in King William's reign, and on the Prince's birthday, he preach'd a sermon in St. James's Church, of which he was then rector, on this text, "Sufficient to each day is the evil thereof;" which having given great offence to the court, he was removed from that church, and afterwards chosen vicar of St. Bride's' (*History of Queen Anne*, 1711, 421). In September 1697 'Dr. Birch was married to the lady Millington, a widdow, worth 20,000*l.*' (Luttrell, *Relation of State Affairs*, iv. 284). He died on 2 July 1710. His will, dated on 27 June in that year, is printed in the Rev. John Booker's 'History of the Ancient Chapel of Birch.' By his wife Sybil, youngest daughter and coheir of Humphrey Wyrley of Hampstead in Staffordshire, he had issue two sons, Humphrey Birch and John Wyrley Birch.

He published: 1. 'A Sermon before the House of Commons, 5 Nov.,' London, 1689, 4to. 2. 'A Sermon preached before the honourable House of Commons at St. Margaret's, Westminster, 30 Jan. 1694,' London, 1694, 4to. Some of the members took offence at some passages in this discourse, which elicited two replies, entitled respectively 'A Birchen Rod for Dr. Birch; or, some Animadversions upon his Sermon. . . . In a Letter to Sir T[homas] D[yke] and Mr. H[ungerford],' London, 1694, 4to, and 'A New-Year's Gift for Dr. Birch; or, a Mirror discovering the different opinions of some Doctors in relation to the present Government,' London, 1696, 4to. 3. 'A Funeral Sermon preach'd on the decease of Grace Lady Gethin, wife of Sir Richard Gethin, Baronet, on the 28 day of March 1700, at Westminster-Abby. And for perpetuating her memory a sermon is to be preach'd in Westminster-Abby, yearly, on Ash Wednesday for ever,' London, 1700, 4to. Reprinted in 'Reliquiæ Gethinianæ.'

BIRCH, Sir RICHARD JAMES HOLWELL (1803–1875), general, came of a well-known Anglo-Indian family, and was the son of Richard Comyns Birch, of the Bengal civil service, and afterwards of Writtle, Essex, who was a grandson of John Zephaniah Holwell, of the Bengal civil service, author of the famous account of his sufferings in the Black Hole of Calcutta. Birch was born in 1803, and received a commission as an ensign in the Bengal infantry in 1821. His numerous circle of relations in India insured his rapid promotion and almost continuous service on the staff, and after acting as deputy-judge advocate-general at Meerut, and as assistant secretary in the military department at Calcutta, he was appointed judge-advocate-general to the forces in Bengal in 1841. In the same capacity he accompanied the army in the first Sikh war (1845–6), was mentioned in despatches, and was promoted lieutenant-colonel for his services. In the second Sikh war (1849) he was appointed to the temporary command of a brigade after the battle of Chillianwallah. He distinguished himself at the battle of Goojerat, and was made a C.B. in 1849, and continued to serve as brigadier-general in Sir Colin Campbell's campaign in the Kohat pass in 1850. He then reverted to his appointment at headquarters, and in 1852 received the still more important post of secretary to the Indian government in the military department. He was promoted colonel in 1854, major-general in 1858, and still held the secretaryship when the Indian mutiny broke out in 1857. His services at this time were most valuable, though he never left Calcutta, for his thorough knowledge of the routine duties of his office and his long official experience enabled him to give valuable advice to Lord Canning, the governor-general, and to Sir Colin Campbell when he arrived to take up the command in chief. These services were recognised by his being made a K.C.B. in 1860, and in 1861 he left India. In the following year he was promoted lieutenant-general and retired on full pay, and on 25 Feb. 1875 he died at Venice, aged 72.

[Hart's Army List; Times, 10 March 1875; East India Register and Army List.] H. M. S.

BIRCH, SAMUEL (1757–1841), dramatist and pastrycook, was born in London 8 Nov. 1757. He was the son of Lucas Birch, who carried on the business of a pastrycook and confectioner at 15 Cornhill. This shop, though the upper portion of the house had been rebuilt, still (1908) retains its old-fashioned front, and is probably the oldest shop of the kind in the city. The business was established in the reign of George I by a Mr. Horton, the immediate predecessor of Lucas Birch. Samuel was educated at a private school kept by Mr. Crawford at Newington Butts, and upon leaving school was apprenticed to his father. Early in life, in 1778, he married the daughter of Dr. John Fordyce, by whom he had a family of thirteen children. He was elected one of the common council on 21 Dec. 1781, and in 1789 became deputy of the Cornhill ward. In May 1807 he was elected alderman of the Candlewick ward in the place of Alderman Hankey. When young he devoted much of his leisure time to the cultivation of his mental powers and the improvement of his literary taste; he was a frequent attendant of a debating society which met in one of the large rooms formerly belonging to the King's Arms Tavern, Cornhill, and there, in the winter of 1778, he made his first essay in public speaking. In politics he was a strenuous supporter of Pitt's administration, though he vigorously opposed the repeal of the Test and Corporation Acts. He became a frequent speaker at the common council meetings. When he first proposed the formation of volunteer regiments at the outbreak of the French revolution, not a single common councilman supported him. Subsequently, when the measure was adopted, he became the lieutenant-colonel commandant of the 1st regiment of Loyal London volunteers. The speech which he delivered in the Guildhall on 5 March 1805 against the Roman catholic petition was severely criticised in an article entitled 'Deputy Birch and others on the Catholic Claims,' which appeared in the 'Edinburgh Review' (x. 124–36). It was, however, highly commended by the king, and the freedom of the city of Dublin was twice voted him at the midsummer quarter assembly of the corporation of that city on 19 July 1805 and 18 July 1806, for his advocacy of the protestant ascendency in Ireland. In 1811 he was appointed one of the sheriffs of London, and on 9 Nov. 1814 Birch entered on his duties as lord mayor. Tory though he was, he opposed the Corn Bill of 1815, and presided at a meeting of the livery in common hall on 23 Feb. 1815, when he made a

vigorous attack upon the intended prohibition of the free importation of foreign corn. The course he took on this occasion is commemorated by a medal struck in his honour, on the obverse side of which is the bust of the lord mayor, and on the reverse a representation of a wheatsheaf, with the legend, 'Free Importation, Peace and Plenty.' During his mayoralty the marble statue of George III by Chantrey, the inscription on which was written by Birch, was placed in the council chamber of Guildhall. Almost his last act as lord mayor was to lay the foundation-stone of the London Institution in Finsbury Circus (then called the Amphitheatre, Moorfields) on 4 Nov. 1815. In 1836 Birch, who had for many years carried on his father's old business in Cornhill, disposed of it to Messrs. Ring & Brymer, the present proprietors. He retired from the court of aldermen Dec. 1839, and died at his house, 107 Guildford Street, London, on 10 Dec. 1841, aged 84. Birch was a man of considerable literary attainments, and wrote a number of poems and musical dramas, of which the 'Adopted Child' was by far the most successful. His plays were frequently produced at Drury Lane, Covent Garden, and Haymarket theatres. His varied activity was the subject of a clever skit, in which a French visitor to London meeting with 'Birch the pastrycook' in such different capacities as Guildhall-orator, militia-colonel, poet, &c., returned to France, believing him to be the emperor of London! His portrait, presented by his granddaughter in 1877, hangs in the Guildhall library.

He published the following works: 1. 'The Abbey of Ambresbury,' in two parts, 1788–9, 4to (a poem). 2. 'Consilia, or Thoughts on several Subjects,' 1785, 12mo. 3. 'The Adopted Child,' 1795, 8vo (a musical drama, first produced at Drury Lane 1 May 1795; music by Thomas Attwood). 4. 'The Smugglers,' 1796, 8vo (a musical drama, first produced at Drury Lane 13 April 1796; music by Thomas Attwood [q. v.]). 5. 'Speech in the Common Council against the Roman Catholic Petition,' 8vo, 1805. 6. 'Speech in the Common Council on the Admission of Papists to hold Commissions in the Army,' March 1807. He also wrote the following dramatic pieces, which were never published: 7. 'The Manners,' 1793 (a musical entertainment, first produced at the opera house in the Haymarket 10 May 1793). 8. 'The Packet Boat, or a Peep behind the Veil,' 1794 (a masque, first produced at Covent Garden 13 May 1794; music by Thomas Attwood). 9. 'Fast Asleep,' 1797 (a musical entertainment, produced at Drury Lane 28 Oct. 1795, and never acted again). 10. 'Albert and Adelaide, or the Victim of Romance,' 1798 (a romance first produced at Covent Garden 11 Dec. 1798).

[Baker's Biographia Dramatica, 1812, i. 41–3 Chambers's Book of Days, 1869, p. 64; Thornbury's Old and New London, 1st ed. i. 412–3, ii. 172; Era, 15 Jan. 1881, p. 7; Annual Register, 1841, appendix, p. 238.] G. F. R. B.

BIRCH, THOMAS, D.D. (1705–1766), historian and biographer, was born of quaker parents in St. George's Court, Clerkenwell, on 23 Nov. 1705. His father, Joseph Birch, was a coffee-mill maker. The son received the rudiments of a good education, and when he left school spent his spare time in study. He was baptised, 15 Dec. 1730, at St. James's, Clerkenwell, having been bred as a quaker (*Register of St. James's*, Harleian Soc. ii. 191). He is believed to have assisted a clergyman called Cox in his parochial duty, and he is known to have married, in the summer of 1728, Cox's daughter Hannah. His wife's strength had been undermined by a decline, but her death was caused by a puerperal fever between 31 July and 3 Aug. 1729. A copy of verses which the widowed husband wrote on her coffin on the latter day is printed in the 'Miscellaneous Works of Mrs. Rowe,' ii. 133–7, and in the 'Biographica Britannica.' Birch was ordained deacon in the church of England on 17 Jan. 1730, and priest on 21 Dec. 1731. Being a diligent student of English history and a firm supporter of the whig doctrines in church and state, he basked in the patronage of the Hardwicke family, and passed from one ecclesiastical preferment to another. The small rectory of Ulting in Essex was conferred upon him 20 May 1732, and the sinecure rectory of Llandewi-Velfrey in Pembroke in May 1743. In January 1744 he was nominated to the rectory of Siddington, near Cirencester, but he probably never took possession of its emoluments, as on 24 Feb. in the same year he was instituted to the rectory of St. Michael, Wood Street, London. Two years later he became the rector of St. Margaret Pattens, London, and on 25 Feb. 1761 he was appointed to the rectory of Depden in Suffolk. The last two livings he retained until his death. Birch never received the benefit of a university education, but in 1753 he was created D.D. of the Marischal College, Aberdeen, and of Lambeth. He was elected F.R.S. 20 Feb. 1735, and F.S.A. 11 Dec. 1735. From 1752 to 1765 he discharged the duties of secretary to the Royal Society. Whilst riding in the Hampstead Road he fell from his horse, it is believed in an apoplectic fit, and died on 9 Jan. 1766. He was buried in the chancel of the church of St. Margaret Pattens.

Horace Walpole, in a letter to his antiquarian friend Cole, makes merry over the insertion of a life of Dr. Birch in the edition of the 'Biographica Britannica' which was edited by Kippis, and styles the doctor 'a worthy good-natured soul, full of industry and activity, and running about like a young setting-dog in quest of anything new or old, and with no parts, taste, or judgment.' In another letter the newswriter of Strawberry Hill asks the question, 'Who would give a rush for Dr. Birch's correspondence?' Walpole's censure, though exaggerated, rests on a basis of truth, but the fact remains that, in spite of their wearisome minuteness of detail and their dulness of style, the works of Dr. Birch are indispensable to the literary or historical student. His principal books were: 1. 'Life of the Right Honourable Robert Boyle,' 1744. 2. 'An Inquiry into the Share which King Charles I had in the Transactions of the Earl of Glamorgan, afterwards Marquis of Worcester, for bringing over a body of Irish Rebels to assist that King,' 1747 and 1756, an anonymous treatise written in reply to Carte's account of the same transaction, and answered by Mr. John Boswell of Taunton, in 'The Case of the Royal Martyr considered with candour, 1758.' 3. Lives and characters written to accompany 'Heads of Illustrious Persons of Great Britain, engraven by Houbraken and Vertue,' 1747–52, and reprinted in 1756 and 1813. 4. 'Historical View of Negotiations between the Courts of England, France, and Brussels, 1592–1617,' 1749. 5. 'Life of Archbishop Tillotson,' 1752 and 1753, a whig memoir which provoked a thrice-issued pamphlet from the opposite camp of 'Remarks upon the Life of Dr. John Tillotson, compiled by Thomas Birch.' 6. 'Memoirs of reign of Queen Elizabeth from 1581 till her death [chiefly from the papers of Anthony Bacon],' 1754, 2 vols. 7. 'History of Royal Society of London,' 1756–7, 4 vols. 8. 'A Collection of Yearly Bills of Mortality from 1657 to 1758,' 1759, an anonymous publication. 9. 'Life of Henry, Prince of Wales,' 1760. 10. 'Letters between Colonel Robert Hammond and the Committee at Derby House relating to Charles I while confined in Carisbrooke Castle,' 1764, also anonymous. 11. 'Account of Life of John Ward, LL.D., Professor of Rhetoric in Gresham College,' which was published in 1766, after its author's death. These works, important and numerous as they are, by no means exhausted Dr. Birch's contributions to literature. He assisted, in common with the other members of the literary circle which was formed around the Hardwicke family, in composing the 'Athenian Letters . . . of an agent of the King of Persia residing at Athens during the Peloponnesian War;' he edited the 'State Papers of John Thurloe' in seven folio volumes, and corrected Murdin's 'State Papers of Queen Elizabeth,' 1759. When Dr. Maty was carrying on the 'Journal Britannique,' he obtained the aid of Dr. Birch, and when Cave was editing the 'Gentleman's Magazine' he sought the assistance of Birch both in the general articles and in the parliamentary debates. Most of the English lives in the 'General Dictionary, Historical and Critical,' which appeared in ten folio volumes (1734–41), were written by him, and his communications in the 'Philosophical Transactions' were numerous and valuable. His biographies were held in such high estimation that his memoirs of Chillingworth, Mrs. Cockburn, Cudworth, Du Fresnoy, Greaves, Rev. James Hervey, Milton, and Raleigh were prefixed to editions of their works, which appeared between 1742 and 1753, and his critical aid was sought for the superintendence of an edition of the works and letters of Bacon and of Spenser's 'Fairy Queen.' He bequeathed his books and manuscripts to the British Museum, together with a sum of about 500*l.* for increasing the stipend of the three assistant librarians. The manuscripts are numbered 4101 to 4478 in the 'Additional MSS.,' and are described in the catalogue of the Rev. Samuel Ayscough (1782). They relate chiefly to English history and biography. Among them were a series of letters transcribed from the originals at his expense and in course of arrangement for publication at his death. These were published in 1849 in four volumes, under the title of 'The Court and Times of James the First' and 'The Court and Times of Charles the First.' Numerous letters between Dr. Birch and the principal men of his age are printed in Nichols's 'Literary Anecdotes' and 'Literary Illustrations,' the 'Bibliotheca Topographica Britannica,' iii. 398–416, and in Boswell's 'Johnson.' Dr. Johnson acknowledged that Dr. Birch 'had more anecdotes than any man,' and is reported to have said that 'Tom Birch is as brisk as a bee in conversation, but no sooner does he take a pen in his hand than it becomes a torpedo to him and numbs all his faculties.' The justice of this condemnation of his writings is apparent to every one who consults them. The high estimation of his good qualities which was held by the tory and high-church Johnson in social life is confirmed by those who agreed with the political and religious opinions of Dr. Birch.

BIRCH, THOMAS LEDLIE (*d.* 1808), Irish presbyterian minister, was ordained minister of Saintfield, co. Down, on 21 May 1776. In 1794 he preached a sermon before the synod of Ulster, in which he specified 1848 as the date of the fall of the papacy. He was much opposed to the doctrines and ways of the seceders, and in 1796 published a pamphlet in which he tells how, by taking the bull by the horns, he kept them out of Saintfield. In 1798 he was mixed up with the insurrection, and, having been tried by court martial at Lisburn on 18 and 20 June, was permitted to emigrate to America, where he died on 12 April 1808. He published: 1. 'The Obligation upon Christians, and especially Ministers, to be Exemplary in their Lives; particularly at this important period when the prophecies are seemingly about to be fulfilled,' &c., Belfast, 1794 (synodical sermon, Matt. v. 16). 2. 'Physicians languishing under Disease. An Address to the Seceding or Associate Synod of Ireland upon certain tenets and practices,' &c., Belfast, 1796.

[Belfast News-Letter, June 1798; Witherow's Hist. and Lit. Mem. of Presbyterianism in Ireland, 2nd series, 1880.] A. G.

BIRCH, WILLIAM (1755–1834), enamel painter and engraver, was born in Warwick on 9 April 1755, and practised in London. In 1781 and the following year he exhibited enamels at the Royal Academy, and in 1785 received a medal from the Society of Arts for the excellence of his work in this kind. His one published work, 'Délices de la Grande Bretagne,' contains views of some of the principal seats and chief places of interest in England. There is one charming etching by Birch, 'The Porcupine Inn Yard, Rushmore Hill, etched upon the spot.' This little work is quiet, natural, balanced, and thoroughly picturesque. Unhappily we have not much more of this quality. In 1794 he went to America. He settled in Philadelphia, and painted a portrait of Washington. On the title of his work above referred to he describes himself as 'enamel painter, Hampstead Heath.' He died at Philadelphia, 7 Aug. 1834. His manuscript journal is in the possession of Mr. Charles H. Hart of Philadelphia.

[Birch's Délices de la Grande Bretagne, 1791; Redgrave's Dict. of Artists, 1878.] E. R.

BIRCHENSHA, JOHN (*fl.* 1664–1672), musician, was probably a member of the Burchinshaw, Burchinsha, Byrchinshaw, or Byrchinsha family, the senior branch of which were settled at Llansannan in Denbighshire, and the junior branch (in which the name John was of frequent occurrence) at Ryw, Dymeirchion, Flintshire, in the first half of the seventeenth century. Very little is known concerning him. In his early life he resided at Dublin in the family of the Earl of Kildare, but he left Ireland at the time of the rebellion, and after the Restoration lived in London, where he taught the viol. Hawkins adds that he was remarkable for his 'genteel behaviour and person.' In 1664 he published a translation of the 'Templum Musicum' of Johannes Henricus Alstedius, on the title-page of which work he designated himself as 'Philomath.' He occupied himself largely with the study of the mathematical basis of music, his theories as to which seem to have attracted some attention at that time. Birchensha's notion, according to a letter from John Baynard to Dr. Holder, dated 20 March 1693-4 (*Sloane MS.* 1388, f. 167 *a*), was 'That all musical whole-notes are equall; and no difference of half-notes from one another, and that the diversitie of keyes is no more than the musical pitch higher or lower, or will pass for that without any great inconvenience.' A manuscript volume of fragmentary calculations, made in all probability largely by Birchensha in 1665–6, is preserved in the British Museum (*Add. MS.* 4388), where may also be seen a copy of the prospectus, or 'Animadversion' as he called it, which he issued in 1672 requesting subscriptions to the amount of 500*l.* in order to enable him to publish the results of his investigations under the title of 'Syntagma Musicæ.' This work was to be published before 24 March 1674, and in it Birchensha promised that he would teach how to make 'airy tunes of all sorts' by rule, and how to compose in two parts 'exquisitely and with all the elegancies of music' within two months. The book was apparently never published, as no copies of it are known to exist. Birchensha's proposals are alluded to in a play of Shadwell's (quoted in Hawkins's *Hist. of Music* (1853), ii. 725), where it is said that he claimed to be able to 'teach men to compose that are deaf, dumb, and blind.' This seems to allude to some intended work, the manuscript title-page for which (in the British Museum manuscript quoted above) runs as follows: 'Surdus Melopæus, or the Deafe Composer of Tunes to 4 voices, Cantus, Altus, Tenor, Bassus. By helpe whereof a deafe man may easily compose good melo-

dies. Gathered by observation.' In 1672 Birchensha published Thomas Salmon's 'Essay to the Advancement of Musick,' for which he wrote a preface. He also printed a single sheet of 'Rules for Composing in Parts.' Of his music almost the only specimens extant are preserved in the Music School Collection, Oxford, where are some vocal pieces by him for treble and bass, with lute accompaniment, and twelve manuscript voluntaries in the Christ Church collection. John Evelyn in 1667 (Aug. 3) heard Birchensha play. He mentions him as 'that rare artist who invented a mathematical way of composure very extraordinary, true as to the exact rules of art, but without much harmonie' (*Diary*, ed. Bray, p. 297). The date of his death is unknown, but one John Birchenshaw, who may possibly have been the subject of this notice, was buried in the cloisters of Westminster Abbey 14 May 1681.

[Hawkins's Hist. of Music (1853), ii. 716, 725; Burney's Hist. of Music, iii. 472; Heraldic Visitations of Wales (ed. Meyrick, 1846), 300, 347; Add. MSS. 4388, 4910; Cat. Music School Collection; Chester's Registers of Westminster Abbey; information from the Rev. J. H. Mee.] W. B. S.

BIRCHINGTON, STEPHEN (*fl.* 1382), historical writer, probably derived his name from a village in the isle of Thanet. He became a monk of Christ Church, Canterbury, in 1382, though it is said that he was closely connected with that house before. For some time he held the offices of treasurer and warden of the manors of the monastery. The year of his death is not recorded. He wrote 'Vitæ Archiepiscoporum Cant.,' edited by Wharton in his 'Anglia Sacra,' and, according to his editor's belief, another and longer book on the 'Lives of the Archbishops,' which has not been preserved. In the same codex with the manuscript of the 'Vitæ' Wharton found three other histories, viz. 'De Regibus Anglorum,' 'De Pontificibus Romanis,' and 'De Imperatoribus Romanis,' which he also assigns to Birchington.

[Wharton's Anglia Sacra, Pref. i.] W. H.

BIRCHLEY, WILLIAM. [See AUSTIN, JOHN.]

BIRCKBEK, SIMON (1584–1656), divine, was born at Hornby in Westmoreland. At the age of sixteen he became a student of Queen's College, Oxford, where he was 'successively a poor serving child, tabarder, or poor child, and at length fellow, being then master of arts.' He proceeded B.A. in 1604, and B.D. in 1616. Entering holy orders about 1607, he became noted as a preacher and disputant, as well as for his extensive knowledge of the fathers and schoolmen. In 1616 he was admitted to the reading of the sentences, and the year after was made vicar of the church of Gilling in Yorkshire, and also of the chapel of Forcet, near Richmond, in the same county. He received these preferments 'by the favour of his kinsman, Humphrey Wharton.' During the troubles of the civil war he 'submitted to the men in power,' and therefore 'kept his benefice without fear of sequestration.' His most important work is entitled 'The Protestant's Evidence, showing that for 1,500 years after Christ divers Guides of God's Church have in sundry Points of Religion taught as the Church of England now doth,' London, 1635. The book is thrown into the form of a dialogue between a papist and a protestant, and was valued by Selden. A friend having forwarded to Birckbek a copy of his book covered with marginal glosses, which the annotator entitled 'An Antidote necessary for the reader thereof,' an elaborate 'Answer to the Antidotist' was appended to a second edition of the 'Evidence' in 1657. The 1657 edition, with this appendix, was published again in 1849 in the supplement to Gibson's 'Preservative from Popery,' by the Reformation Society, the Rev. John Cumming being the editor. Birckbek also wrote a 'Treatise of the Last Four Things' (death, judgment, hell, and heaven), London, 1655. He died 14 Sept. 1656, and was buried in Forcet Chapel.

[Wood's Athenæ Oxon. (Bliss), iii. 421, and Fasti, i. 302, 366; B. M. Catalogue.] R. B.

BIRD, CHARLES SMITH (1795–1862), theological writer, has written his own biography. He traces his descent from John Bird [q. v.], the first protestant bishop of Chester and prior of the Carmelite monks in the reign of Henry VIII. The father of Charles Smith Bird was a West Indian merchant, who was taken prisoner in one of his voyages during the war of American independence. He was of a highly religious character, objecting, for instance, to his children reading Shakespeare. He died in 1814. Charles Smith was the last but one of six children, born in Union Street, Liverpool, 28 May 1795. After attending several private schools, he was articled to a firm of conveyancing solicitors at Liverpool in 1812. His leisure time was spent at the Athenæum reading-room in the study of theology. He returned to school at Dr. Davies's, of Macclesfield, in 1815, and thence went to Trinity College, Cambridge, where he 'chose no companion unless there was

christianity in him.' He became a scholar of Trinity in 1818, was third wrangler in 1820, and elected a fellow of his college. He was then ordained and became curate of Burghfield, six miles from Reading. He took a house at Culverlands, near Burghfield, in 1823. He added to his income by taking pupils, a practice he continued for twenty years. One of them was Lord Macaulay. On 24 June of this year he was married to Margaret Wrangham, of Bowdon, Cheshire. He now frequently sent contributions to the 'Christian Observer,' edited by Mr. Cunningham. It was against the Irish educational measures that he wrote his 'Call to the Protestants of England,' now inserted among his poems. In 1839 Bird edited a monthly periodical called the 'Reading Church Guardian,' in the interests of protestant truth. The publication languished for a year and then died. In 1840 Bird became a sort of Sunday curate to a Mr. Briscoe at Sulhamstead. Having given up his house at Burghfield, he was glad to accept the curacy of Fawley, some three miles from Henley-on-Thames. In 1843 he secured the vicarage of Gainsborough, to which was attached a prebendal stall of Lincoln. In this old-fashioned market town Bird passed many happy years. His course of life was regular and tranquil. Occasionally he lectured at the Gainsborough Literary and Mechanics' Institute on natural history, English literature, and other subjects of interest. In the summer of 1844 he went to Scotland, and in the next year preached before Cambridge university four sermons on the parable of the sower. About this time the proposal for the admission of Jews into parliament aroused Bird's indignation. His 'Call to Britain to remember the Fate of Jerusalem,' one of his longer poems, may be read with interest. In 1849 the cholera ravaged Gainsborough. Bird assiduously and bravely administered to the wants of the sufferers. His conduct was marked by exemplary devotion to the wants of his parishioners, to his own great and abiding honour. In 1852 Bird suffered himself a severe illness. In 1859 he was appointed chancellor of the cathedral of Lincoln, and left Gainsborough. He died at the Chancery, aged 67, on 9 Nov. 1862. Friends at Gainsborough decorated the church with a painted window in his memory. He was buried in the country churchyard of Riseholme.

Bird was an ardent entomologist, and had managed to satisfy himself that insects were almost, if not entirely, destitute of feeling; yet he would not allow any to be killed by his children until he was convinced of their rarity. He became a fellow of the Linnean Society in 1828. There is an excellent article of his in the 'Entomological Magazine' for August 1833, and the Liverpool feather-horned *Tinea*, or Lepidocera Birdella, was honoured by Curtis with his name. As a proof of his conscientiousness we read in his 'Diary' that when young he embezzled 6*d.*, and spent it in pegtops and lollipops. His modesty prevented him from forming many acquaintances. Among his friends were Sir Claudius S. Hunter, bart., of Mortimer, Berkshire, Rev. G. Hutton, rector of Gate-Burton, Alfred Ollivant, D.D., regius professor of divinity at Cambridge, and the Rev. J. Jones, of Repton.

Besides sermons he published: 1. 'For Ever, and other Devotional Poems,' 1833. 2. 'The Oxford Tract System considered with reference to the principle of Reserve in Preaching,' 1838. 3. 'Transubstantiation tried by Scripture and Reason, addressed to the Protestant inhabitants of Reading, in consequence of the attempts recently made to introduce Romanism amongst them,' 1839. 4. 'A Plea for the Reformed Church, or Observations on a plain and most important declaration of the Tractarians in the "British Critic" for July,' 1841. 5. 'The Baptismal Privileges, the Baptismal Vow, and the Means of Grace, as they are set forth in the Church Catechism, considered in six Lent Lectures preached at Sulhamstead, Berks,' 1841; 2nd ed. 1843. 6. 'A Defence of the Principles of the English Reformation from the Attacks of the Tractarians; or a Second Plea for the Reformed Church,' 1843. 7. 'The Parable of the Sower, four Sermons preached before the University of Cambridge in May 1845.' 8. 'The Dangers attending an immediate Revival of Convocation detailed in a letter to the Rev. G. Hutton, rector of Gate-Burton,' 1852. 9. 'The Sacramental and Priestly System examined; or Strictures on Archdeacon Wilberforce's Works on the Incarnation and Eucharist,' 1854. 10. 'The Eve of the Crucifixion,' 1858.

[Gent. Mag. (1862), ii. 786; Brit. Mus. Catal.; Bird's Sketches, &c.] J. M.

BIRD, EDWARD (1772–1819), subject painter, was born at Wolverhampton, 12 April 1772, and educated himself. His father bound him apprentice to a maker of tea-trays in Birmingham. He is said to have embellished these articles with taste and skill, so that at the end of his apprenticeship he had very alluring offers from the 'trade.' Bird rejected all such offers, and went, without any definite prospect, to Bristol. He busied himself with painting, and there conducted a drawing school. In 1807 he sent some pictures to an exhibition at Bath, and

was fortunate in finding purchasers for them. 'The Interior of a Volunteer's Cottage' was the subject of one; some 'Clowns dancing in an Alehouse' that of another. In 1809 he sent to the Royal Academy a picture called 'Good News,' which at once made known his name, and established it. This was followed by other successful works—'Choristers rehearsing,' and the 'Will.' In 1812 he was made an associate of the Academy. Both in his early development and late departures, the history of Bird, as an artist, is curiously like that of Wilkie, and, although the genius of the latter was incomparably greater, Bird had yet talent enough to suggest to some interested people that he might be made to rival the too popular Scotchman. Of this little intrigue got up against Wilkie, in which Bird, it should be said, was innocent of playing a part, an interesting account is preserved in Haydon's 'Journals' (i. 142, 1st ed. 1853). After his election to the honours of the Academy, and under some delusion as to the quality of his genius, Bird turned his attention to religious and historical subjects. He painted successively the 'Surrender of Calais,' the 'Death of Eli,' and the 'Field of Chevy Chase.' The last of these is esteemed his greatest work. It was bought by the Marquis of Stafford for three hundred guineas; the original sketch for the same was sold to Sir Walter Scott. That this was indeed a powerful picture can be best understood by those acquainted with the fact that it moved Allan Cunningham to tears. The Marquis of Stafford also bought the 'Death of Eli' for five hundred guineas. The British Institution awarded the painter its premium of three hundred guineas in respect of this picture. In 1815 he was elected a full member of the Royal Academy. In the following three years he exhibited the 'Crucifixion,' 'Christ led to be crucified,' the 'Death of Sapphira,' and the 'Burning of Bishops Ridley and Latimer.' The 'Chevy Chase' procured for him the appointment of court painter to Queen Charlotte. His last historical work was the 'Embarcation of the French King.' For the completion of this painting many contemporary portraits were required, and, according to Cunningham's account, the painter's health was broken by the scant courtesy he received in his efforts to get them. The death of a son and daughter increased his trouble. His spirits forsook him, and he died. He was buried in the cloisters of Bristol Cathedral November 1819.

He was properly a *genre* painter, only occasionally and partially successful in other departments of art. Upon such paintings as the 'Good News,' the 'Country Auction,' the 'Gipsy Boy,' and others of this class, his reputation depends. 'He showed great skill in the conception of his higher class pictures, but he had not the power suited to their completion, and his colouring was crude and tasteless.'

School; Catalogue of Works of Ed. Bird exhibited the year after his death at Bristol; Brit. Mus. Gen. Cat. sub cap. 'Bird.'] E. R.

BIRD, FRANCIS (1667–1731), sculptor, was born in Piccadilly. He was sent when eleven years old to Brussels, and there studied (Walpole) under one Cozins, a sculptor who had been in England. From Flanders he found his way, on foot it is said, to Rome, and worked under Le Gros. At nineteen, 'scarce remembering his own language,' he came home, and studied under Gibbons and Cibber. Redgrave gives 1716 as the date of his return, which seems, however, to be a mistake. After another short journey to Rome, performed also on foot, he succeeded to Cibber's practice and set up for himself. The work which raised his reputation, and which alone maintains it now, was the statue of Dr. Busby for Westminster Abbey. Though not in itself superexcellent, it is yet a marvel of art if we compare it only with other works by the same hand. Bird secured the favour of Christopher Wren, and was largely employed upon the decoration of St. Paul's. He executed the group for the pediment of the west end, 'The Conversion of St. Paul,' of which Horace Walpole remarks: 'Any statuary was good enough for an ornament at that height, and a great statuary had been too good.' The same observation applies to the five figures of apostles which may be dimly descried upon the roof of either transept. For the statue of Queen Anne which confronts Ludgate Hill Bird received 1,130*l.* A public statue in London needs to be very bad to attract to its demerits any special attention. The fact, therefore, that our public took peculiar delight in mutilating this group may be attributed rather to the advantage of its position than to its undoubted meanness as a piece of art. It was removed in 1885, and is to be replaced. His monument of Sir Clowdisley Shovell in Westminster Abbey is one of the worst works in the world. It was to this that Pope applied the epithet 'the bathos of sculpture.' His work, Nagler says, is barbarous in style and devoid of any charm. He was, however, for a long period at the head of his profession

in England, and produced a vast number of statues. Many of these may be seen by the curious in Westminster Abbey. He died in 1731.

[Gent. Mag. vol. i.; Walpole's Anecdotes of Painting, ii. 636; Redgrave's Dict. of Artists of the Eng. School; Nagler's Allgemeines Künstler-Lexikon.] E. R.

BIRD, GOLDING (1814-1854), physician, was born on 9 Dec. 1814 at Downham, Norfolk. He was educated at a private school, where he occupied himself out of school hours with the study of chemistry and botany, and even undertook to give lectures on those subjects to his schoolfellows. These proceedings, however, met with the disapproval of his schoolmaster, and led to his being taken away from the school. In December 1829 he was apprenticed to William Pretty, an apothecary, of Burton Crescent, London, and remained his pupil till October 1833. In 1832 he entered as a student at Guy's Hospital, where his industry and scientific knowledge attracted the notice of his teachers, especially of Dr. Addison and Sir Astley Cooper, the latter of whom availed himself of his pupil's assistance in the chemical section of his work on diseases of the breast. He was also occupied in giving private tuition to some of his fellow-students. When barely twenty-one he went up for examination at Apothecaries' Hall; but the court of examiners, in consideration of the reputation he had already attained, declined to examine him, and gave him at once the license to practise, with the 'honours of the court,' on 21 Jan. 1836.

Bird started in general practice in London, but, not meeting with much encouragement, resolved to begin anew as a physician. He accordingly took the degree of M.D. at St. Andrews on 24 April 1838, as was then possible without residence, and on 18 April 1840 that of M.A. He became licentiate of the College of Physicians of London on 30 Sept. 1840, and was elected a fellow on 9 July 1845. In 1836 he was appointed lecturer on natural philosophy at Guy's Hospital, and in this capacity delivered the lectures which were the basis of his book on that subject. He afterwards lectured also on medical botany and on urinary pathology. His course on the latter subject appeared in the 'London Medical Gazette' in 1843 as a series of papers, which were twice translated into German, and were ultimately incorporated in the author's well-known work on urinary deposits. About the same time he became physician to the Finsbury Dispensary. After seven years' hard work he was in 1843 elected assistant physician to Guy's, and joint lecturer on materia medica in the medical school. In 1847 he was chosen for the triennial appointment of lecturer on materia medica at the College of Physicians, and gave some important lectures on the therapeutical uses of electricity, and the influence of researches in organic chemistry on therapeutics. While thus occupied in medical practice and teaching, Bird was keenly interested in the natural sciences, and published one or two short papers on natural history subjects. He belonged to the Linnean and Geological, and was a fellow of the Royal Society. He was also a corresponding member of several learned societies on the continent.

There can be little doubt that Bird did too much. His foible was perhaps ambition, which led him to overstrain his powers in the twofold effort to obtain a large practice, and also to make a name in science. An attack of rheumatism in early life had permanently damaged the heart; and the weakness thus induced, combined with overwork, caused a breakdown of his health in 1849. Two years later a still more serious warning compelled him to take rest. He resigned his appointments at Guy's Hospital on 4 Aug. 1853, and in June 1854 retired to Tunbridge Wells, where he died on 27 Oct. of the same year. He married in 1842, and left a widow with five children, one of whom, Mr. Cuthbert H. Golding Bird, is now (1885) a lecturer on physiology and assistant-surgeon at his father's hospital.

Bird was a remarkable instance of intellectual precocity. He was very successful in practice, and there are few instances of a London physician having earned as large an income as he did so early in life. But he was more especially known for his researches in scientific medicine, which, though not placing him in the first rank of investigators, still show considerable originality. He carried on the work of Prout in applying chemistry to medical practice, and in studying morbid conditions of the urine. Although some of the novelties on which he laid great stress, especially 'oxaluria,' have not turned out to be so important as he believed, the work on 'Urinary Deposits,' in its five editions from 1844 to 1857, had great influence on the development of medical chemistry in England. Bird's 'Elements of Natural Philosophy' was for many years a very popular text-book, especially with medical students, for whom its attractive style, and its comparative freedom from mathematical reasonings, alike fitted it; although, indeed, the writer's want of rigorous mathematical training con-

stituted, from a scientific point of view, its weakness. It was strengthened on the mathematical side, and otherwise enlarged, by Mr. Charles Brooke, under whose editorship the fourth, fifth, and sixth editions appeared. Bird's shorter papers exhibit considerable originality and inventive capacity. One of them (*London Medical Gazette*, 11 Dec. 1840) contains the description of a flexible stethoscope, an invention revived of late years. In another (1839) he suggests a method of printing figures of natural objects by sunlight on paper impregnated with the salt ferridcyanide of potassium, which anticipates some of the modern photographic processes. In private life Bird was a man of amiable disposition and winning manners. His earnest piety led him to take a deep interest in the religious welfare of medical students, and hence to become one of the founders of the 'London Christian Medical Association.' He wrote: 1. 'Urinary Deposits, their Diagnosis, Pathology, and Therapeutical Indications,' 1st ed. 12mo, London, 1844; 5th ed., edited by Dr. E. L. Birkett, 1857. 2. 'The Elements of Natural Philosophy,' 1st ed. 12mo, London, 1839, edited by Charles Brooke; 4th ed. 1854, also 5th ed. 1860, 6th ed. 1867, American edition, Philadelphia, 1848 (from the 3rd ed. London). 3. 'Lectures on Electricity and Galvanism in their Physiological and Therapeutical Relations,' 12mo, London, 1849. 4. Papers in 'Guy's Hospital Reports,' viz. 'Remarks on Cystine,' ser. I. i. 486; 'The Chemical Nature of Mucous and Purulent Secretions,' ser. I. iii. 35; 'Report on Electricity as a Remedial Agent,' ser. I. vi. 84; 'Report on Diseases of Children treated in Guy's Hospital,' 1843-4, ser. II. iii. 108; and others. 5. 'Lectures on Oxaluria,' 'London Medical Gazette,' July 1842, xxx. 637; 6. 'The Influence of Researches in Organic Chemistry upon Therapeutics' (being lectures at Royal Coll. Physicians), 'London Medical Gazette,' 1848, vols. xli. and xlii. 7. 'The Medico-Chemical History of Milk,' 'London Medical Gazette,' March 1840 (and in Sir Astley Cooper's work on the 'Anatomy of the Breast,' 4to, 1840); besides very numerous lectures and papers in medical journals, some of which are incorporated in the separately published works.

[Biographical notice by his brother, Dr. Frederic Bird, reprinted from Association Medical Journal, 5 Jan. 1855; Balfour's Biographical Sketch, Edinburgh, 1855; Lancet, 11 Nov. 1854; Medical Times and Gazette, 11 Nov. 1854; manuscript communications from family.] J. F. P.

BIRD, JAMES (1788-1839), poetical writer and dramatist, was the son of Samuel Bird, a farmer of Earl's Stonham, Suffolk, where he was born on 10 Nov. 1788. After receiving a scanty education he was apprenticed to a miller, and at the same time began to study by himself literature and the drama. The fame of John Kemble, the actor, reached his native village, and as a youth he made a romantic journey to London to witness his performance, returning on foot and penniless. About 1814 he was in a position to hire two windmills at Yoxford, but after five years of ill success in his trade he abandoned it, and opened early in 1820 a stationer's shop in the same place, which maintained him until his death in 1839.

Before Bird was sixteen years old he had written poetry, and later he contributed some of his early poems to the 'Suffolk Chronicle,' whose editor, Thomas Harral, became his most intimate friend. In 1819 he published his first long poem, 'The Vale of Slaughden,' a story of the invasion of East Anglia by the Danes. First issued by subscription, its success induced a London publisher, three months after its appearance, to undertake an edition for the public. In 1820 Dr. Nathan Drake in his 'Winter Nights' (ii. 184-244) reviewed it at length, and claimed for Bird the same rank in literature as that attained by Robert Bloomfield. Bird's second venture was a mock-heroic poem entitled 'The White Hats' (1819), in which he humorously attacked the radical reformers. His subsequent narratives in verse were: 1. 'Machin, or the Discovery of Madeira,' 1821. 2. 'Poetical Memoirs: the Exile, a tale in verse,' 1823, and second edition 1824; the first part of this volume is a spirited imitation of Byron's 'Don Juan.' 3. 'Dunwich, a Tale of the Splendid City, in four cantos,' 1828. 4. 'Framlingham, a Narrative of the Castle,' 1831. 5. 'The Emigrant's Tale and Miscellaneous Poems,' 1833 (cf. the review in *Gent. Mag.* ciii. pt. ii. p. 152, and Bird's good-humoured reply, p. 229). 6. 'Francis Abbott, the Recluse of Niagara [founded on Captain Alexander's 'Transatlantic Sketches,' ii. 147-55]: Metropolitan Sketches,' 1837. Bird also wrote two dramas, the one entitled 'Cosmo, Duke of Florence, a Tragedy,' published in 1822, and the other 'The Smuggler's Daughter, a Drama,' published in 1836. The first, it is stated, was performed several times at small London theatres, but the managers of the chief playhouses refused to examine it. The second was successfully produced at Sadler's Wells in October 1835. Bird edited 'A Short Account of Leiston Abbey' in 1823. Most of his verse indicates an intimate acquaintance with Dryden and Pope, and the influence of Byron and Campbell. But Bird has

an habitual command of forcible yet melodious language. Late in life he began with much success the study of Greek.

His portrait was exhibited at the Royal Academy in 1829. He was the father of sixteen children, of whom a son George became a surgeon of London and married a daughter of the poetical writer Edwin Atherstone [q. v.] After Bird's death, his friend Thomas Harral, in 1840, published with a memoir selections from his poems.

[Davy's MS. Suffolk Collections, in Addit. MS. 19118 ff. 289 et seq.; Harral's Selections with Memoir; Gent. Mag., new series, ii. 550; Brit. Mus. Cat.] S. L.

BIRD, JOHN, D.D. (*d.* 1558), bishop of Chester, is said by Wood to have been probably descended from the ancient Cheshire family of his name. He became a Carmelite friar, and appears to have studied in the houses of that order in both the universities of England. He proceeded B.D. at Oxford in 1510, and commenced D.D. there in 1513. Bishop Godwin states that he was D.D. at Cambridge, but this may be doubted. In 1516 he was, at a general chapter held at Lynn, elected the provincial of his order. He governed for the usual period of three years, when he was succeeded by Robert Lesbury, who held the office till 1522, when Dr. Bird was again elected thereto at a general chapter held at York. When the papal power began to decline in this country, he became a strenuous supporter of, and preacher for, the king's supremacy. His character was that of a temporiser, and he was engaged in state intrigues. He was one of the divines sent in 1531 to confer and argue with Thomas Bilney, the reformer, in prison; and in 1535 he, with Bishop Fox, the royal almoner, and Thomas Bedyl [q. v.], a clerk of the council, were sent by Henry VIII to his divorced queen, Katharine of Arragon, to endeavour to persuade her to forbear the name of queen, 'which nevertheless she would not do' (Strype, *Ecclesiastical Memorials*, i. 61).

On 24 June 1537 he was consecrated at Lambeth suffragan to the bishop of Llandaff, with the title of bishop of Penrith. In the beginning of the year 1539 we find him and Wotton on an embassy in Germany; and Cromwell, writing to him in or about April, desired him to get 'the picture of the lady,' meaning Anne of Cleves, whom the king was induced to marry on seeing her portrait. In July of the same year he was elected bishop of Bangor. He was present at the convocation of 1540, and subscribed the decree in favour of the divorce from Anne of Cleves, though he had probably been to a great extent instrumental in bringing about her marriage. By letters patent, dated Walden, 4 Aug. 1541, he was translated to the newly created bishopric of Chester, being also then, or soon afterwards, invested with archidiaconal powers over the whole diocese. An account by him of the sale and appropriation of church ornaments, plate, and jewels within his diocese is preserved in the Public Record Office (*State Papers, Dom. Edward VI*, vol. iii. art. 4). On 16 March 1553-4, when Queen Mary had succeeded to the throne, he was deprived of his bishopric by a royal commission on account of his being married (Strype, *Ecclesiastical Memorials*, iii. 99). At this time he owed the crown 1,087*l.* 18*s.* 0¾*d.* A 'Foxian MS.,' quoted by Strype, states that he at once repudiated his wife, whom he had, as he alleged, married against his will, and 'for bearing with the time;' and in fact he showed such signs of repentance, that soon afterwards Bonner, bishop of London, appointed him his suffragan, and on 6 Nov. 1554 presented him to the vicarage of Great Dunmow in Essex. The manuscript just cited says: 'This Dr. Byrd was well stricken in years, having but one eye; and though he, to flatter with the time, had renounced his wife, being made of a young Protestant an old Catholic; yet as Catholick as he was, such devotion he bare to his man's wife that he had them both dwelling with him in his own vicarage, she being both young, fair, and newly married, that either the voice of the parish lied or else he loved her more than enough.' He died in an obscure condition about the close of 1558, and was buried in Chester Cathedral according to Wood, but at Dunmow according to Le Neve. Bale, in his 'Exposition on the Revelations,' makes him one of the ten horns.

His works, none of which appear to have been printed, are: 1. 'De fide justificante.' 2. 'Contra missam papisticam ex doctoribus.' 3. 'Homeliæ eruditæ per annum.' 4. 'Lectures on St. Paul.' 5. 'Contra transubstantiationem.' 6. 'Epicedium in quendam Edmundum Berye obdormientem in Calisia.' 7. 'Conciones coram Henrico VIII contra papæ suprematum.'

[Godwin, De Præsulibus Angliæ, ed. Richardson, 776; Bale's Scriptorum Brytannie Cat. (1559), 724; Wood's Athenæ Oxon. ed. Bliss, i. 238, ii. 773; Tanner's Bibl. T. C.

BIRD, JOHN (1709-1776), mathematical instrument maker, was a native of the county of Durham, and by trade a cloth-weaver. Finding himself one day in a clockmaker's shop, he was struck with the irregularity of the divisions on a dial-plate, thought out a plan for improving them, and for some time engraved dial-plates for recreation. On the strength of a certain reputation thus gained he came to London about 1740, and was engaged by Sisson to cut the divisions on his instruments. Countenanced and instructed by Graham, he perfected his methods, and by 1745 was carrying on business independently. His well-known premises were situated in the Strand.

As the mechanical coadjutor of Bradley, he acquired European fame. An instrumental refit for the Royal Observatory was sanctioned towards the close of 1748. In February 1749 Bird received an order for a brass quadrant of 8-feet radius, which in June 1750 was ready for use. The construction of this instrument, by rendering possible the consummate accuracy of Bradley's observations, marked an epoch in practical astronomy. It was built with the utmost solidity, weighing about 8 cwt., and bore a double arc, one with ninety, the other with ninety-six divisions, accurately cut by Graham's method of 'continual bisections.' Its price of 300*l.* was compensated by sixty-two years of valuable service, and although replaced in 1812 (by which time it had become eccentric with use) by Troughton's circle, it is still reverently preserved at Greenwich. A half-size model was, by order of the commissioners of longitude, prepared by Bird in 1767, and deposited in the British Museum.

No sooner was the Greenwich quadrant completed than a duplicate was ordered for the observatory of St. Petersburg, another reached Cadiz, and a fourth was used by D'Agelet and Lalande at the École Militaire. With a similar instrument of 3-feet radius, Tobias Mayer made his lunar observations at Göttingen. Indeed, most of the chief continental observatories still possess a Bird's quadrant, valuable even now as affording a measure of the probable errors of earlier observations (Maedler, *Gesch. d. Himmelskunde*, i. 455). Of their necessarily imperfect kind, these instruments could scarcely be surpassed.

Bird further supplied Bradley, about 1750, with a new transit instrument, as well as with a 40-inch movable quadrant, and put a fresh set of divisions, in 1753, upon the great mural arc constructed by Graham for Halley. The extraordinary value attached to his work is evinced by the fact that a sum of 500*l.* was paid to him by the commissioners of longitude, on the conditions that he should during seven years instruct an apprentice in his methods, and deliver in writing, *upon oath*, a full and unreserved account of them. Such was the origin of the two treatises entitled respectively 'The Method of dividing Astronomical Instruments,' London, 1767, and 'The Method of constructing Mural Quadrants exemplified by a Description of the Brass Mural Quadrant in the Royal Observatory at Greenwich,' London, 1768, both published by order of the commissioners, and furnished each with a preface by the astronomer-royal (Maskelyne), setting forth the singular circumstances under which they had been composed. They were bound together, so as to form one work, were reissued in 1785, and supplemented by W. Ludlam's 'Introduction and Notes on Mr. Bird's Method of dividing Astronomical Instruments,' solemnly vouched for as accurate by Bird in June 1773, and published at the expense of Alexander Aubert [q. v.] in 1786.

The standard yards of 1758 and 1760, destroyed in the conflagration of the houses of parliament, 16 Oct. 1834, were both constructed by Bird (see Baily, *Mem. R. A. Soc.* ix. 80-1). He observed the transit of Venus, 6 June 1761, at Greenwich with Bliss and Green, and the annular eclipse of 1 April 1765, using on both occasions reflectors made by himself (*Phil. Trans.* lii. 175-6, liv. 142). He died, 31 March 1776, aged 67.

[Ludlam's Preface to Introduction and Notes on Mr. Bird's Method; Bradley's Miscellaneous Works, passim; Poggendorff's Biog.-Lit. Handwörterbuch; MS. Addit. 5728; Gent. Mag. xlvi. 192; Bromley's Catalogue of Engraved Portraits, p. 398.]

A. M. C.

BIRD, RICHARD, D.D. (*d.* 1609), canon of Canterbury, matriculated at Cambridge as a sizar of Trinity College in February 1564-5, was elected a scholar of that house in 1568, and took the degree of B.D. in 1568-9. He was subsequently elected a fellow, and in 1572 he commenced M.A. It appears probable that in 1576 he was serving a cure at, or in the neighbourhood of, Saffron Walden in Essex, where a new sect of dissenters, calling themselves 'pure brethren,' had arisen. 'A sort of libertines they were,' who considered that they were not bound to the observance of the moral law of the ten commandments, which they held to be binding only upon Jews; and we are told that

'one Bird' wrote to Dr. Whitgift soliciting his advice as to the best mode of answering certain questions which the sectaries had propounded (Strype, *Annals of the Reformation*, ii. 451). Bird proceeded B.D. at Cambridge in 1580. Subsequently he travelled as tutor with William Cecil, eldest son of Sir Thomas Cecil, eldest son of Lord Burghley. In France Cecil embraced the Roman catholic faith, and this led to Bird being subjected to harsh treatment by Sir Edward Stafford, the English ambassador at Paris. Bird protested that he had been 'robbed of the sowle of that young gentleman by wicked and treacherous men' (*MS. Lansd.* 46, f. 18).

On 21 March 1588-9 he was collated to the archdeaconry of Cleveland, and on 29 Sept. 1590 he became a canon of Canterbury. He resigned his archdeaconry in or before April 1601, was created D.D. in 1608, and, dying in June 1609, was buried in Canterbury Cathedral on the 19th of that month.

He is the author of: 1. 'Latin verses on Whitaker's translation of Jewel against Harding,' 1578. 2. 'Appeal to Lord Burghley against the cruel treatment of Sir Edward Stafford, ambassador in France' (*MS. Lansd.* 46, art. 9). 3. 'A communication dialogue wise to be learned of the ignorant,' London, 1595, 8vo. This seems to have been commonly known as 'Bird's Catechism.'

Antiq. ed. Herbert, 1305; Le Neve's Fasti Eccl. Anglic. i. 58, iii. 148; Hasted's Kent, xii. 98.] T. C.

BIRD, ROBERT MERTTINS (1788–1853), a Bengal civil servant, arrived in India on 9 Nov. 1808, and, commencing his service as an assistant to the registrar of the court of Sadr Diwáni Adálat, the company's chief court of appeal at Calcutta, was subsequently employed in the provinces in various judicial posts, from which in 1829 he was transferred to the appointment of commissioner of revenue and circuit for the Gorakhpur division. In the discharge of his duties as a judicial officer Bird acquired a remarkable insight into the landed tenures of the country and the effect upon them of the laws then in force, which 'referred to a state of things wholly distinct from that which existed among the people' (*Fourth Report from the Select Committee on Indian Territories*, 1853—*Minutes of Evidence*, p. 29). Upon his appointment as a revenue commissioner, the soundness and clearness of his views and his remarkable administrative capacity speedily stamped him as the ablest revenue officer in Bengal; and when it was determined in 1833 to revise the settlement of the land revenue of the north-western provinces, the governor-general fixed upon Bird as the fittest man in the service to undertake that task. In the previous year he had been appointed a member of the board of revenue, then newly constituted at Allahabad. Retaining his seat as a member of the board, he took sole charge of the settlement operations, which he brought to a completion at the close of 1841. The result was recorded in a report which he laid before government early in the following year, and in which he explained that the work had not been confined to 'such an accurate ascertainment of the resources of the land as would insure to government its full share of the rents or produce;' but that it 'included the decision and demarcation of boundaries, the defining and recording the separate possession, rights, privileges, and liabilities of the members of those communities who hold their land in severalty; the framing a record of the several interests of those who hold their land in common; the providing a system of self-government for the communities; the rules framed with their own consent according to the principles of the constitution of the different tenures; the preparation of the record of the fields and of the rights of cultivators possessing rights; and the reform of the village accounts and completion of a plan of record by their own established accountants, and according to their own method, by reference to which the above points of possession and right might, under the various changes to which property is subject, continue to be ascertained.' A corresponding system of accounts for the offices of the tahsíldárs, or native collectors, and for those of the collectors of districts, was also framed. The settlement was the most complete that had yet been made in India. It embraced an area of seventy-two thousand square miles, and a population of twenty-three millions. It is especially remarkable from the fact that it was designed and carried out by an officer whose duties during the greater part of his service had been judicial. Bird retired from the service in 1842, and spent the remainder of his life in England, where he became an active member of the committee of the Church Missionary Society, travelling on deputation and attending meetings in various parts of the country on behalf of the society. A few months before his death, which occurred at Torquay on 22 Aug. 1853, he gave evidence before the committee of the House of Commons on the renewal of the East India Company's charter.

[General Register of the Honourable East India Company's Civil Servants on the Bengal Establishment from 1790 to 1842, by the Hon. H. T. Prinsep, India Office; Marshman's History of India (1867), iii. 47, 48; Bird's Report on the Settlement of the North-West Provinces, 1859; Fourth Report from the Select Committee of the House of Commons on Indian Territories, 1853; Minutes of Evidence; private letters.] A. J. A.

BIRD, SAMUEL (*fl.* 1600), divine, was a native of Essex, and matriculated as a pensioner of Queens' College, Cambridge, in June 1566. He proceeded B.A. 1569-70, and commenced M.A. 1573. In November 1573 he was elected a fellow of Corpus Christi College, being admitted 30 April 1574. He vacated his fellowship in or before 1576. He described himself as having been fellow of Benet College in 1580 on his earliest title-page: 'A friendlie Communication or Dialogue betweene Paule and Demas, wherein is disputed how we are to vse the pleasures of this life. By Samuel Byrd, M.A., and fellow not long since of Benet Colledge,' 1580.

It is further known that Bird was minister of St. Peter's, Ipswich, which was at the time a perpetual curacy, very poorly endowed. Unfortunately the church-books at present extant date back only to 1667, whilst a list of the incumbents from the year 1604 commences with his successor. His perpetual curacy he must have filled for a quarter of a century—say 1580 to 1604. He vacated the living in 1604. It must have been by cession or resignation, as in 1604 he was admitted a student at the Bodleian Library, Oxford, and on 8 May 1605 was incorporated M.A. in that university. Nothing is known of him at a later date.

In Bacon's MSS. belonging to the corporation of Ipswich, which date 16 July 1595 (38 Elizabeth), is the following entry:—

'Exhibition of a poore scholler. Petition for exhibition for Mr. Bird's sonne at Cambridge. It's ordered the gift of Mr. Barney shall be considered and what money is laid out, and thereuppon order shall farther be made.' Then, on 14 Aug. (same year): 'It was ordered by the Great Court that 4 li. shall be given yearly to Samuel Bird, sonne of Mr. Bird, minister of St. Peter's, at Cambridge, to his maintenance in learning till 20 li. be laid out.'

Besides 'A Friendlie Communication,' published in 1580, Bird issued 'The Principles of the True Christian Religion briefly selected out of many good books. By S. B.' 1590; 'The Lectvres of Samvel Bird of Ipswidge vpon the 8 and 9 chapters of the Second Epistle to the Corinthians,' '1598; The Lectvres of Samvel Bird of Ipswidge vpon the 11 chapter of the Epistle unto the Hebrewes, and upon the 38 Psalme,' 1598 (an edition of 1594 is also recorded). The 'Hebrewes' is dedicated to M. Edward Bacon of Shrubland Hall. Finally Bird published 'Lectvres . . . on the Seventh Chapter of the 2nd Epistle to the Corinthians,' 1598.

C. (Lamb), 326; Wood's Fasti, ed. Bliss, i. 307; communications from Rev. Alexander Jeffrey, Ipswich.] A. B. G.

BIRD, WILLIAM, musician. [See BYRD.]

BIRDSALL, JOHN AUGUSTINE (1775–1837), president-general of the Benedictines in England, was born at Liverpool 27 June 1775. His father, a well-to-do grocer, sent him at an early age to the Dominican College of Bornhem in Flanders. He entered himself among the Benedictines at Lamspringe in Hanover in October 1795. He was there admitted to his solemn profession 6 Nov. 1796. On 30 May 1801 he was ordained priest at Hildesheim in Westphalia. During September 1802 he was appointed prefect of the students at Lamspringe, where Peter Baines [q. v.], afterwards bishop, was one of his pupils. On the suppression of the abbey of Lamspringe by the Prussians, 3 Jan. 1803, Father Birdsall had to return hurriedly to England. After remaining for a while at St. Lawrence's College, Ampleforth, he was sent on the mission in the south, or, as it was still called, the Canterbury province of the Benedictine order in this country. On 30 May 1806 he arrived at Bath, whither he had been despatched to assist the incumbent of St. John the Evangelist, where the Benedictines had long been established. In October 1809 he left, in order to establish a new mission at Cheltenham, and on 3 June 1810 opened the first catholic chapel known there since the Reformation. A French refugee, the Abbé Alexandre Cæsar, who had been saying mass on Sundays and holy days in the back room of a low public house, died in his eightieth year on 24 Sept. 1811. Many obstacles to the foundation of the mission were overcome by the untiring zeal of Father Birdsall. He remained in active charge of the mission for twenty-five years altogether. Twenty years after his arrival in Cheltenham he established a new mission at Broadway, in Worcestershire. On 15 May 1828 he began there the new chapel of St. Saviour's Retreat. That mission in

its completed form was publicly inaugurated in 1830, as an appendage to its founder's principal enterprise at Cheltenham. Four years afterwards, however, when he had at length succeeded in establishing at Broadway, in due collegiate organisation, something like his old community of Lamspringe, he withdrew altogether from Cheltenham in 1834, settling down thenceforth permanently in his new home, which he loved to call by its old Roman name of Vialta, in Worcestershire, and resided there till his death on 2 Aug. 1837, in the sixty-third year of his age.

Meanwhile he had been steadily advanced in his order as a Benedictine. In 1814 he was appointed one of the definitors of the southern province in England, and in 1822 was elected the provincial of Canterbury. Re-elected provincial of Canterbury in 1826, Father Birdsall was promoted in the same year to the highest office of all within his reach in this country, that, namely, of president-general of the English congregation of the order of St. Benedict. It proved an anxious and painful pre-eminence. It brought him into direct conflict with Bishop Baines, the vicar apostolic of the western district in England, whom he regarded from the outset as endeavouring to extend beyond due limits his episcopal jurisdiction to the prejudice of the exemptions enjoyed by the religious orders. The holy see eventually decided the dispute in favour of the Benedictines. Father Birdsall also saved from extinction the thenceforth flourishing Benedictine college of Ampleforth in Yorkshire.

Father Birdsall was made cathedral prior of Winchester in 1826, and in 1830 abbot of Westminster. His multifarious employments prevented his giving much attention to literary pursuits. Besides an unpublished account of Lamspringe, found among his papers after his death, the only work he is known to have produced was 'Christian Reflections for Every Day in the Year,' 1822, translated from the 'Pensées Chrétiennes,' &c., published anonymously at Paris in 1718, and attributed to the Sieur de Sainte-Beuve. Father Birdsall's mother wit rendered him a delightful as well as a powerful controversialist. He was one of the most valued correspondents of William Cobbett (between 29 Nov. 1824 and 9 July 1827) when the latter was writing his history of the Protestant Reformation. Father Birdsall occasionally in his catechetical instructions enforced his argument by humorous illustrations. 'We catholics are said to be idolaters of images,' he once remarked, adding, as he pointed to two carved angels that flanked the altar-steps of the chapel at Cheltenham: 'Now I gave 4*l.* 16*s.* for those two statues, and if anybody will send me a five-pound note for the pair I'll let him have them with pleasure. *That's* how I worship them!'

On 6 Nov. 1877 the homely old chapel built up by Father Birdsall at Cheltenham was replaced by the handsome Gothic church of St. Gregory; while on 7 Oct. 1850 the last mission established by him at Broadway was given up by the outgoing Benedictines to the Passionists from Woodchester. The tablet erected in his honour at Cheltenham has been removed in the transformation of the chapel, and is no longer discoverable; while the inscription on his tomb at Broadway can only be here and there deciphered.

BIRINUS, Saint (*d.* 650), bishop of Dorchester, was a Benedictine monk of Rome, who, receiving a mission from Pope Honorius to visit Britain, landed in Wessex in 634, having first received episcopal consecration at the hands of Asterius, bishop of Genoa. Preaching the gospel to the heathen people he succeeded in converting them to christianity, and in 635 baptised Cynegils, king of Wessex, Oswald, king of Northumbria, standing sponsor. Then was founded the see of Dorchester, Birinus being the first bishop settled at Dorcic or Dorchester, Oxfordshire, a city conferred upon him by the two kings. 'After many churches had been built and consecrated and many peoples called to the Lord by his pious labour' (Bædæ, *H. E.* iii. 7) Birinus died and was buried at Dorchester in the year 650, his body being afterwards removed to Winchester, and subsequently enshrined by Bishop Æthelwold (963–84). The influence obtained by Birinus, not only in Wessex but also in the neighbouring kingdom of Mercia, is indicated by the references made in the Anglo-Saxon Chronicle to the baptism by him of different princes.

Major Winton. in Wharton's Anglia Sacra, pt. i. 1691, p. 190; Kennett's Parochial Antiquities, Oxford, 1818, i. 36 sqq.; see also, for Birinus's Life as a Saint, Hardy's Catalogue of Materials for English History (Rolls Series), vol. i. 1862, p. 236.] E. M. T.

BIRKBECK, GEORGE, M.D. (1776–1841), the founder of mechanics' institutions, was the son of William Birkbeck, a banker and merchant of Settle, Yorkshire, where he was born 10 Jan. 1776. He studied medi-

cine at Edinburgh and London, taking his degree of M.D. in 1799 at the university of the former city. Among his friends and fellow-students at Edinburgh were Brougham and Jeffrey. Soon afterwards, when only twenty-three years old, he succeeded Dr. Garnett as professor of natural philosophy at the Andersonian University (now Anderson's College), Glasgow, and while holding that post he commenced his efforts at popular education. Having had his attention drawn to the difficulties in the way of intelligent artisans who were anxious to acquire information on scientific matters, he established in 1800 courses of lectures to which working men were admitted at a low fee. These lectures were for long a successful department of the university, but eventually the 'mechanics' class' became in 1823 the 'Glasgow Mechanics' Institution,' apparently the first genuine institution of the sort. In 1804 he left Glasgow for London, and here he established himself as a physician, first in Finsbury Square, then in Cateaton Street, and afterwards in Old Broad Street. For some years he seems to have devoted himself entirely to the practice of his profession, in which he attained a considerable reputation, but the foundation of the Glasgow Institution above mentioned led to his once more taking up the cause of popular education. On the suggestion being made in the 'Mechanics' Magazine' that a similar institution should be provided for London, Dr. Birkbeck at once assumed the lead in the movement. He lent 3,700*l.* for the building of a lecture-room, and, having been elected president, delivered the opening address 20 Feb. 1824. It was thus that the London Mechanics' Institution was founded, which many years afterwards, in honour of its first president, was called the 'Birkbeck Institution.' In the enterprise he was associated with Lord Brougham, both of them being amongst the first trustees. For some time the new enterprise had but a fluctuating success; it was, however, assisted by the capital as well as the influence of its founder, and neither the ridicule of its enemies nor the quarrels of its promoters sufficed to prevent its eventual establishment. Dr. Birkbeck took an active interest in the fortunes of the institution till his death, 1 Dec. 1841. The institution is now (1885) one of the most successful organisations of its class in existence. These foundations in Glasgow and London were soon imitated throughout the country, and thus was established an organisation which prepared the way for the existing system of popular scientific instruction, as it is carried out by the Science and Art Department.

Dr. Birkbeck also took his share in other popular educational movements besides the one in which he was principally interested. He was a founder and one of the first council of University College, London (1827); he took a prominent part in the agitation for the repeal of the tax on newspapers (1835–6); and he—many years before any change was effected—endeavoured (in 1827) to promote a reform in the patent laws. He was a frequent lecturer, not only at his own institution, but at the London Institution and elsewhere, and was always ready to do his best to promote whatever he thought a useful application of science to practical purposes.

[J. G. Godard's Life of Dr. Birkbeck, 1884.]

H. T. W.

BIRKENHEAD or BERKENHEAD, SIR JOHN (1616–1679), author of the 'Mercurius Aulicus' and satirical poems, is said by Anthony à Wood to have been son of Randall Birkenhead, of Northwich in Cheshire, saddler, and born there (*Athenæ Oxon.* ed. Bliss, iii. 1203), and T. W. Barlow (*Ches. Biogr.* 1852, pp. 20–1) says, 'he was born on the edge of Rudheath,' which is near Northwich, and partly in Davenham parish and partly in the chapelry of Witton, parish of Great Budworth. In accordance with this, the Witton register contains a number of entries of children of Randall Berchenhead (so spelled) from 1580 to 1631, with his own death, being then 'parish clarke,' in 1633; among these, under 24 March 1615-6, is 'Johes. fil. Randulphi Birchenhead.' Unluckily experts have pronounced this entry to be a comparatively modern forgery, but it gives nevertheless the correct date. Ormerod (under 'Northwich') states that Birkenhead 'descended possibly from the antient family of that name in this county (who first held property here in 1508), but of low immediate origin, being the son of a saddler.'

At the free grammar school of the town in the churchyard of Witton, John Birkenhead doubtless received his early education from the worthy schoolmaster, Thomas Farmer. In the beginning of 1632, aged 17 (which harmonises with the forged date in the Witton register), Wood informs us, he proceeded to Oxford, being entered at Oriel College as servitor, and under the tuition of Humphrey Lloyd, afterwards bishop of Bangor. He remained 'till B.A.' (*Athenæ Oxon.*) He was introduced to Laud and appointed his amanuensis, and Laud, 'taking a liking to him for his ingenuity, did by his diploma make him M.A.' in 1639. Nor was this all, for 'by his letters commendatory thereupon he was elected probation-fellow of All Souls College in 1640.' During the civil war, while the

king and court were at Oxford, Birkenhead was a leading spirit. The thick-coming events of the time compelled almost daily publication of news. The parliament had their 'Mercurius Britannicus' and others. The royalists were in need of a journal till Birkenhead devised, and was appointed to write, the 'Mercurii Aulici' (*Athenæ Oxon.*) The 'Mercurius Aulicus' communicated 'the intelligence and affairs of the court' at Oxford 'to the rest of the kingdom.' No. 1 is dated January 1642. It went on without break till 1645, and occasionally after, 'weekly in one sheet' (a small quarto). The 'Mercurius Aulicus' has not received that critical attention which it deserves. When it is remembered that, with very occasional help later by Dr. Peter Heylin and others, the burden of carrying on the 'Mercurius Aulicus' fell on Birkenhead, it must be recognised that he proved himself by this achievement alone a man of intellectual capacity and wit. The 'Mercurius Aulicus'—now extremely rare complete—has never been reprinted or edited. Its literary quality gives it a far superior interest to that attaching to the 'Mercurius Britannicus.'

The 'Mercurius Aulicus' having proved 'very pleasing to the loyal party, his majesty recommended him [Birkenhead] to the electors that they would chuse him for moral philosophy reader' (*Athenæ Oxon.*) His duties were discharged 'with little profit,' says Wood ambiguously.

The year 1648 found him in exile with the prince (afterwards Charles II). We have a glimpse of both in a letter from Birkenhead to John Raymond, worked into the preface of Raymond's 'Itinerary contayning a Voyage made through Italy in the Years 1646 and 1647' (1648). The letter is dated 'Amiens, 11 July 1648,' and is a characteristic specimen of his style.

After the 'parliamentary visitors' finally deprived him of his posts and fellowship, he appears to have gone and come between France, Holland, and England. Ultimately, according to Wood, having suffered several imprisonments, he lived at Oxford 'by his wits in helping young gentlemen out at dead lifts in making poems, songs, and epistles to their respective mistresses, as also in translating and writing several little things and other petite employments.' Of his own 'petite things' we have in 1647 (though not published till 1662-3), 'The Assembly Man, or the Character of an Assembly Man;' in 1648, 'News from Pembroke and Montgomery, or Oxford Manchester'd;' in 1649, 'Paul's Churchyard, Libri Theologici, Politici, Historici,' enlarged in 1653 as follows: 'Two Centvries of Paul's Churchyard. Unà cum Indice Expurgatorio in Bibliothecam Parliamenti, sive Librorum, qui prostant venales in vico vulgo vocato Little-Brittain. Done into English for the Benefit of the Assembly of Divines, and the two Universities;' in 1659, 'The Four-legg'd Quaker, a Ballad to the Tune of the Dog and Elder's Maid.' There were also 'A Poem on his staying in London after the Act of the Banishment for Cavaliers,' and 'The Jolt' on Cromwell's famous overturn of the coach. There is much drollery in these productions, and his language is always nervous and effective.

The Restoration brought Birkenhead to the winning side. On 22 Aug. 1649, at St. Germains, he received a grant of arms (*Harleian MS.* 1144, f. 82 *b*), and was knighted 14 Nov. 1662. On 6 April 1661, on the king's letters he was created D.C.L. by Oxford, and as such was one of the eminent civilians consulted by the convocation on the question 'whether bishops ought to be present in capital cases,' and with the rest on 2 Feb. 1661-2 said 'Yes.' He was returned M.P. for Wilton, was made a member of the Royal Society, and was appointed one of the masters of requests. But he failed to win the respect of even so ultra a royalist partisan as Anthony à Wood, who says of him: 'A certain anonymous ("A Seasonable Argument to persuade . . . for a New Parliament, 1677") says he was a poor ale-keeper's son, and that he got by lying and buffoonery at court 3,000*l*. . . . The truth is, had he not been given too much to bantering, which is now taken up by vain and idle people, he might have passed for a good wit. And had he also expressed himself grateful and respectful to those that had been his benefactors in the time of his necessity, which he did not, but rather slighted them (shewing thereby the baseness of his spirit), he might have passed for a friend and a loving companion.'

Except the 'Assembly-Man'—delayed from 1647—he gave to the press nothing of any extent after the Restoration. He has verses in the Beaumont and Fletcher folio (1675), and Latin lines under Fletcher's portrait. Probably the 'Miscellanies' of 'Wit and Loyalty' received contributions from him, but they remain unidentified. He died at Whitehall 4 Dec. 1679, 'leaving behind him a choice collection of pamphlets, which came into the hands of his executors, Sir Richard Mason and Sir Muddford Bramston' (*Ath. Oxon.*) He does not appear to have married.

[Wood's Athenæ, iii. 1203; Hunter's MS. Chorus Vatum in Brit. Mus.; letters from Mr. John Weston, The Heysoms, Hartford, North-

wich; Birkenhead's Works; the nuncupative will of Randall Birkenhead (in Probate Registry at Chester) leaves all his goods to his wife Margaret, not mentioning his occupation or children.]

A. B. G.

BIRKENSHAW, JOHN, musician. [See BIRCHENSHA.]

BIRKHEAD or **BIRKET, GEORGE** (*d.* 1614), archpriest, was a native of the county of Durham. He entered the English college at Douay in 1575, and was ordained priest 6 April 1577. In January 1578 he set out from Rheims, accompanied by the Rev. Richard Haddock and four students, and proceeded to the English college at Rome, which had just been founded by Dr. Allen under the auspices of Pope Gregory XIII. Returning to Rheims in 1580 he was sent in the same year to labour on the English mission, and we are told that he was 'well esteemed by all parties upon account of his peaceable and reconciling temper.' In 1583 he took relics of the jesuit Father Campion to Rheims. Dr. Allen, notifying this circumstance to Father Alfonso Agazzari, says: 'Nobis egregiam partem cutis, variis aromatibus ad durabilitatem conditam, Campiani nostri detulit ibidem P. Georgius' (*Records of the English Catholics*, ii. 202). On 22 Jan. 1607-8 Pope Paul V nominated him archpriest of England, from which office Dr. George Blackwell [q. v.] had been deposed in consequence of his acceptance of the oath of allegiance devised by the government of King James I. The new archpriest was admonished to dissuade catholics from taking the oath and frequenting the protestant worship (*State Papers, Domestic*, James I, vol. xxxi.) Birkhead retained the dignity till his death in 1614. From his deathbed he addressed farewell letters (5 April 1614) to his clergy and to the superior of the Jesuits. At different times he assumed the names of Hall, Lambton, and Salvin. He was succeeded as archpriest by the Rev. William Harrison. The catholic church historian of England states that 'Mr. Birket was a person of singular merit, studious of the reputation of the clergy, yet not inclinable to lessen that of others, as it appears from several original letters I have read between him and Father Parsons; wherein some controversies are handled between the Jesuits and clergy, which he toucheth with all tenderness and circumspection that things of that kind require, and with a due regard to the pretensions and passions of parties.'

[Dodd's Church Hist. (1737) ii. 377, 483-99; also Tierney's edit. iv. 77, App. 157, 159, 161, v. 8, 12, 13-30, 48, 60, App. 27, 57, 58, 103, 106, 117, 141, 158, 159, 160-4; Berington's Memoirs of Panzani; Morris's Troubles of our Catholic Forefathers, 2nd series, 53, 57, 408; Calendar of State Papers, Dom. Hierarchy, 9; Letters and Memorials of Cardinal Allen; Butler's Hist. Memoirs (1822), ii. 266.]

T. C.

BIRKHEAD, HENRY (1617?-1696), Latin poet, was born in the parish of St. Gregory, near St. Paul's Cathedral. Aubrey (*Tanner MS.* 24, f. 159) states that he was born in 1617, 'at the Paul's Head, which his father kept,' but Wood fixes the date of his birth four years earlier. Having been educated in grammar learning by the most famous schoolmaster of that time, Thomas Farnabie, he became a commoner of Trinity College, Oxford, in Midsummer term 1633, and was admitted scholar on 28 May 1635. Induced by the persuasions of a jesuit, he shortly afterwards entered the college of St. Omer. But he soon abandoned Romanism, and in 1638, by the influence of Archbishop Laud, was elected fellow of All Souls, being then bachelor of arts, 'and esteemed a good philologist.' After taking his master's degree (5 June 1641), he devoted himself to the study of law. In May 1648 he submitted to the authority of the visitors appointed by parliament. In 1653 he was allowed by the delegates of the university to propose a dispensation in convocation for taking the degree of doctor of physic by accumulation, provided that he should perform the necessary exercises; but it is uncertain whether he took the degree. He resigned his fellowship in 1657, and at the Restoration became registrar of the diocese of Norwich, an office which he continued to hold until 1681. He also had a chamber in the Middle Temple, where he frequently resided. In 1645 he issued at Oxford a quarto volume of 'Poemata,' printed for private circulation. In 1656 appeared 'Poematia in Elegiaca, Iambica, Polymetra Antitechnemata et Metaphrases membratim quadripertita,' Oxonii, 8vo. He joined with Henry Stubbe, of Christ Church, in publishing another volume of Latin verse in the same year, 'Otium Literatum sive Miscellanea quædam Poemata ab H. Birchead et H. Stubbe edita,' Oxon., 16mo. A second edition of this little volume appeared in 1658. Birkhead also edited, with a preface, some philological works of Henry Jacob in 1652; and wrote several Latin elegies, 'scatteredly printed in various books, under the covert letters sometimes of H. G.,' to persons who had suffered for their devotion to Charles I.

An unpublished allegorical play by Birkhead, 'The Female Rebellion,' is preserved among the Tanner MSS. (466); it has little merit. In 1643 there was published at Oxford a collection of 'Verses on the death of the right valiant Sir Bevill Grenvill, knight. Who was slaine by the rebells, on Lansdowne-hill neare Bath, July 5, 1643,' 4to. Birkhead was one of the contributors to this collection, which included elegies by Jasper Mayne, William Cartwright, Dudley Digges, and others. Forty-one years afterwards, in 1684, the collection was reprinted, and Henry Birkhead, the only survivor with one exception of the thirteen contributors, addressed a long 'Epistle Dedicatory' to the Earl of Bath, son of Sir Bevill Grenvill. Wood vaguely says that after the Restoration he 'lived . . . in a retired and scholastical condition,' adding that he 'was always accounted an excellent Latin poet, a good Grecian, and well vers'd in all human learning.' He died on Michaelmas Eve, 1696, and was buried at St. Margaret's Church, Westminster. The professorship of poetry at Oxford was founded in 1708 from funds bequeathed by Birkhead.

[Tanner MS. 24, f. 159; Wood's Athenæ Oxonienses, ed. Bliss, iv. 573–4; Wood's Hist. and Antiquities of the University of Oxford, ed. Gutch, ii. 434; Martin's Archives of All Souls, 381; Burrows's Register of the Visitors of the University of Oxford, 1647–58 (Camden Society), pp. 43, 117; Hazlitt's Handbook; Corser's Collectanea Anglo-Poetica, ii. 285–8.] A. H. B.

BIRKS, THOMAS RAWSON (1810–1883), theologian and controversialist, was born on 28 Sept. 1810 at Staveley in Derbyshire. His father was a tenant farmer under the Duke of Devonshire. The family being nonconformists, young Birks was educated first at Chesterfield and then at the Dissenting College at Mill Hill. Funds were provided to send him to Cambridge. He won a sizarship and a scholarship at Trinity, and in his third year gained the chief English declamation prize. As the holder of this prize he delivered the customary oration in the college hall. The subject chosen was 'Mathematical and Moral Certainty,' and, in a letter to Dr. Chalmers, Dr. Whewell spoke very highly of this oration. In January 1834 Birks came out as second wrangler and second Smith's prizeman.

Having joined the church of England on leaving the university, Birks settled at Watton as tutor and then curate to the Rev. Edward Bickersteth [q. v.] During his stay there he devoted much time to the study of the prophetic scriptures, and took the affirmative side in the warm controversy which arose on the subject of the premillennial theory of the Lord's return. In 1843–4 Birks won the Seatonian prize for the best English poem at Trinity. Some years before he had been elected a fellow of his college. He ardently engaged in many religious controversies, and one of these, on the future of the lost, led to the severance of private friendships and religious connections. In his views on this subject he was equally opposed to the universalists and the annihilationists. In the year 1844 Birks married Miss Bickersteth, the daughter of his friend, and accepted the living of Kelshall in Hertfordshire.

In 1850 Birks published his edition of Paley's 'Horæ Paulinæ,' with notes and a supplementary treatise entitled 'Horæ Apostolicæ.' Two years later the work was followed by 'Horæ Evangelicæ,' and in 1853 appeared his 'Modern Rationalism' and 'The Inspiration of the Scriptures.' In 1856 Birks lost his wife, and the severity of the affliction caused the suspension of his literary labours for several years.

The year 1861, however, witnessed the publication of another of his more important works, 'The Bible and Modern Thought,' at the request of the committee of the Religious Tract Society. The author subsequently enlarged his work by a series of notes on the evidential school of theology, the limits of religious thought, the Bible and ancient Egypt, the human element in Scripture, and Genesis and geology.

Birks left Kelshall in 1864, and in 1866 accepted the important charge of Trinity Church, Cambridge. In the latter year he married a second time. By his first marriage he had eight children, one of whom, his eldest son, also attained distinction, succeeding him as a fellow of Trinity. At the time of the disestablishment of the Irish church Birks came forward with a lengthy treatise on 'Church and State,' which was an elaboration of a treatise written thirty years before, and now republished as bearing upon the ecclesiastical change proposed by Mr. Gladstone and carried into effect by parliament. Birks was installed honorary canon of Ely Cathedral in 1871, and in 1872, on the death of the Rev. Frederick Denison Maurice, he was elected professor of moral philosophy at Cambridge. This appointment led to a stormy controversy. It was regarded as a retrograde step by the large body of liberal thinkers who sympathised with the views of Mr. Maurice. While pastor at Cambridge, Birks laboured assiduously in giving religious instruction to the undergraduates, to older members of the university, and also to the residents in the town. In the year of

his appointment he published his 'Scripture Doctrine of Creation' and 'The Philosophy of Human Responsibility.' His inaugural lecture as professor of moral philosophy was on 'The Present Importance of Moral Science.'

In 1873 appeared his 'First Principles of Moral Science,' being a course of lectures delivered during his professorship. This work was followed in 1874 by 'Modern Utilitarianism,' in which the systems of Paley, Bentham, and Mill were examined and compared. In 1876 Birks delivered the annual address to the Victoria Institute, his subject being 'The Uncertainties of Modern Physical Science.' Birks published in 1876 his work on 'Modern Physical Fatalism and the Doctrine of Evolution.' It contained the substance of a course of lectures devoted to the examination of the philosophy unfolded in Mr. Herbert Spencer's 'First Principles.' Birks held the views expressed by Mr. Spencer 'to be radically unsound, full of logical inconsistency and contradiction, and flatly opposed to the fundamental doctrines of Christianity and even the very existence of moral science.' To the strictures upon his 'First Principles' Mr. Spencer replied at length, and this led to the republication, in 1882, of Birks's treatise, with an introduction by Dr. Pritchard, F.R.S., Savilian professor of astronomy at Oxford, in which Mr. Spencer's rejoinder was dealt with, and the original arguments of Birks illustrated and further explained.

Birks resigned the vicarage of Trinity in 1877, and in the same year published a volume on 'Manuscript Evidence in the Text of the New Testament,' being an endeavour to bring 'mathematical reasoning to bear on the probable value of the manuscripts of different ages, with a general inference in favour of the high value of the cursive manuscripts as a class.' In the same year Birks issued his 'Supernatural Revelation,' being an answer to a work on 'Supernatural Religion,' which had given rise to much criticism. Birks's treatise was republished at a later period by Professor Pritchard, with a reply to objections that had been urged against it.

Early in 1875 Birks suffered from a paralytic seizure, and this was followed by a second stroke in 1877. He still took a deep interest in questions of the day, and was able to dictate various works, pamphlets, and letters bearing upon these questions. In April 1880, while residing in the New Forest, he was stricken for a third time, and fatally, with paralysis. He was conveyed home to Cambridge, where he lingered for three years, being incapacitated for intellectual effort. He died on 19 July 1883.

Birks was for twenty-one years honorary secretary to the Evangelical Alliance. He was an examiner for the theological examination at Cambridge in 1867 and 1868, and was a member of the board of theological studies. He took an active part in all university affairs during his connection with Cambridge, was appointed to preach the Ramsden sermon in 1867, and was frequently a select preacher before the university. In addition to the works named in the course of this article, Birks was the author of a considerable number of treatises on prophecy and other subjects connected with the older revelation, as well as of a 'Memoir of the Rev. Edward Bickersteth.'

G. B. S.

BIRMINGHAM, JOHN (1816–1884), astronomer, was a country gentleman residing at Millbrook, near Tuam, Ireland, whose attention was directed to astronomy by his discovery of a remarkable new star in Corona Borealis on 12 May 1866 (*Month. Not.* xxvi. 310). In 1872, at the suggestion of the Rev. T. W. Webb, he undertook a revision of Schjellerup's 'Catalogue of Red Stars,' and extended the scope of his task so as to include Schmidt's list from the 'Astronomische Nachrichten' (No. 1902), some ninety ruddy stars found by Webb and himself, with others pointed out by the late C. E. Burton —in all, 658 such objects reobserved with a 4½-inch refractor, and a magnifying power of 53. The spectra of several, as described by Secchi, D'Arrest, and others, were added. This valuable work was presented to the Royal Irish Academy on 26 June 1876, and published in their 'Transactions' (xxvi. 249, 1879). Its merit was acknowledged by the bestowal of the Cunningham medal early in 1884. Birmingham was engaged in revising and extending it at the time of his death, which occurred at Millbrook, from an attack of jaundice, on 7 Sept. 1884. He was unmarried, a pious catholic, liberal, kindly, and unassuming. He possessed considerable linguistic accomplishments, had travelled in most parts of Europe, and was in correspondence with several foreign astronomers, notably with Father Secchi of Rome. He held for some time the post of inspector under the board of works.

On 22 May 1881 he discovered a deep red star in Cygnus, which proved strikingly vari-

able, and became known by his name. The particulars of his observations on the meteor-showers of 12–13 Dec. 1866, and 27 Nov. 1872, on the transit of Venus of 6 Dec. 1882, on sun-spots and variables, were published in 'Monthly Notices,' 'Astronomische Nachrichten,' and 'Nature.' He communicated to the British Association in 1857 a paper on 'The Drift of West Galway and the Eastern Parts of Mayo' (*Report*, ii. 64), published *in extenso* in the 'Journal of the Geological Society of Dublin' (viii. 28, 111). The same volume contains (p. 26) his remarks on the 'Junction of the Limestone, Sandstone, and Granite at Oughterard, co. Galway.' His only separate publication was a small poetical work of a controversial character entitled 'Anglicania, or England's Mission to the Celt' (London, 1863).

[Athenæum, 20 Sept. 1884; Tuam News, 12 Sept. 1884; R. Soc. Cat. Scientific Papers, i. 388, vii. 178.] A. M. C.

BIRNIE, ALEXANDER (1826–1862), poet and journalist, was born in the north of Scotland, it is believed in Morayshire. The place and exact date of his birth are unknown; but he has himself left it on record that he was born in 1826. His life was erratic. At an early age he came to England, and was at one time a baptist minister in Preston. He was in that town when it passed through its great labour strikes, and he wrote letters to the local journals on the events of the day. In 1860 he arrived in Falkirk, footsore and penniless, having walked all the way from Lancashire. He obtained some employment, but, being dismissed from it, entered the Carron works, Falkirk, as a painter. He appears to have struck all with whom he came in contact by his brilliant powers. Birnie was ultimately dismissed from the Carron works for intemperance. While in Carron he began his journalistic notes under the signature of 'Cock of the Steeple.' He was ultimately taken upon the regular staff of the 'Falkirk Advertiser;' but several weeks before that journal ceased publication, he began the 'Falkirk Liberal,' which was published at one halfpenny per copy, and printed in Stirling. Although this journal was the recognised organ of the feuars of Falkirk, it speedily began to be apparent that it could not succeed. The printers lost by the speculation, and Birnie, 'sorrowing and penitent for his sins, went to his death, crushed in spirit that he could only raise 3*l.* 10*s.* to pay an account of 27*l.*' It is stated that his party promised to support him, but failed to do so.

Birnie's death was melancholy. One morning in March 1862, he was found in a straw stack near Stobhill brick works, Morpeth, where he had been concealed without food or drink for a fortnight. His statement to this effect was corroborated by a diary which he had carefully kept for some weeks. He was removed to the workhouse hospital; mortification of both feet set in, and he succumbed at the age of thirty-six years. It appears that Birnie made his way to Edinburgh, hoping to meet with employment there. In one of the dens of that city he was robbed of the whole of his little stock of money, and resolved to commit suicide. He obtained a large quantity of laudanum, which he swallowed; but his stomach being unable to retain the quantity of poison, which was far too large, his life was saved. He now started on foot for Newcastle, and made daily entries in a little journal which has been printed. Reaching Morpeth late in the evening, he spent his last penny on a roll. Mistaking his road, fatigue overpowered him, and he crept into a stack, with the intention of sleeping or starving to death, as the last entry in his diary testified. He requested in it that some kind hand might make a selection of his articles and speeches in this and in another diary at Chester-le-Street, as well as from the 'Chester-le-Street Liberal,' and 'Falkirk Advertiser and Liberal,' and publish them on behalf of his widow and family. A subscription was raised on behalf of Mrs. Birnie and her children, but it does not appear that the request for a collection from the deceased's writings was carried out.

[Gent. Mag. 1862; Falkirk Herald, March 1862; Newcastle Chronicle, March 1862; and other journals of the time.] G. B. S.

BIRNIE, SIR RICHARD (1760?–1832), police magistrate of Bow Street, London, was a native of Banff, Scotland, and was born about 1760. After serving his apprenticeship to a saddler he came to London, where he obtained a situation in the house of Macintosh & Co. in the Haymarket, saddlers and harness-makers to the royal family. Having on one occasion been accidentally called upon to attend on the Prince of Wales, he did his work so satisfactorily that the prince on similar occasions was accustomed to ask that the 'young Scotchman' might be sent to him. The patronage of the prince secured his advancement with the firm, and he was made foreman and eventually a partner in the establishment. Through his marriage with the daughter of a wealthy baker he also obtained a considerable fortune, including a cottage with adjoining land at Acton, Middlesex. After his marriage he

rented a house in St. Martin's parish, and immediately began to distinguish himself by his activity in parochial affairs, serving successively, as he himself said, 'every parochial office except that of watchman and beadle.' In 1805 he was appointed churchwarden, and, along with his colleague and the vicar, he established a number of almshouses for decayed parishioners in Pratt Street, Camden Town. He also gave proof of his public spirit by enrolling himself in the Royal Westminster Volunteers, in which he became a captain. At the special request of the Duke of Northumberland he was placed in the commission of the peace, and from this time he began to frequent the Bow Street police court, in order to obtain a practical acquaintance with magisterial duties. In the absence of the stipendiary magistrates he sometimes presided on the bench, and with such efficiency that he was at length appointed police magistrate at Union Hall, from which he was a few years afterwards promoted to the Bow Street office. In February 1820 he headed the police officers in the apprehension of the Cato-street conspirators. He took the responsibility, in the absence of the soldiers, who failed, as they had been ordered, to turn out at a moment's notice, of proceeding at once to attempt the capture of the band, before they were fully prepared and armed. In this dangerous enterprise he, according to a contemporary account, 'exposed himself everywhere, encouraging officers to do their duty, while the balls were whizzing about his head.' At the funeral of Queen Caroline in August 1821 he displayed similar decision and presence of mind in a like critical emergency, and when Sir Robert Baker, the chief magistrate, refused to read the riot act, took upon himself the responsibility of reading it. Shortly afterwards Baker resigned, and he was appointed to succeed him, the honour of knighthood being also conferred on him in September following. During his term of office he was held in high respect by the ministers in power, who were accustomed to consult him on all matters of importance relating to the metropolis. He also retained throughout life the special favour of George IV. He died on 29 April 1832.

[Gent. Mag. cii. pt. i. pp. 470–1; Ann. Reg. lxxiv. 198–9.] T. F. H.

BIRNIE, WILLIAM (1563–1619), Scotch divine, was only son of a fabulously ancient house, William Birnie of 'that ilk.' He was born at Edinburgh in 1563, entered student in St. Leonard's College, St. Andrews, 3 Dec. 1584, proceeded in his degree of M.A. in 1588, became a ship-master merchant, but sustaining heavy losses at sea returned to his studies, and attended divinity three years in Leyden. He is found in exercise at Edinburgh 25 Jan. 1596, and was presented to the vicarage of Lanark by James VI on 28 Dec. 1597. There had been internecine feuds in the parish for a number of years. But Birnie, a man of commanding presence, was able to wield a sword, and thus is said to have gradually reconciled parties. He was constituted by the king, 4 Aug. 1603, master and economus of the hospital and almshouse of St. Leonard's, and appointed dean of the Chapel Royal 20 Sept. 1612. Earlier he had shown sympathy with the brethren confined in Blackness Castle previous to their trial in 1606 at Linlithgow. He appears as a member of the general assembly of the kirk of Scotland in 1602, 1608, 1610. He was nominated 'constant moderator of the presbytery' by the assembly of 1606, and the presbytery were 'charged by the privy council 17 Jan. thereafter, to serve him as such within twenty-four hours after notice, under pain of rebellion.' He was also named on the court of high commission 15 Feb. 1610, and presented to the deanery of the Chapel Royal of Stirling, which was 'to be hereafter callit the Chapel Royal of Scotland,' 20 Sept. 1612. The acceptance of the 'constant moderatorship' showed episcopal leanings. In 1612 he was transferred from Lanark to Ayr, to 'parsonages *primo* and *secundo*, and vicarages of the same, and to the parsonage and vicarage of Alloway'—the scene of the Tam o' Shanter of Burns—on 16 June 1614. He was a member again of the high commission 21 Dec. 1615, and one of the commissioners for the suppression of popery agreed to by the assembly in 1616. He married Elizabeth, daughter of John Lindsay, parson of Carstairs. Their issue were three sons and two daughters. He died on 19 Jan. 1619 in the fifty-sixth year of his age and twenty-second of his ministry. A kind of doggerel epitaph runs:—

> He waited on his charge with care and pains
> At Air on little hopes, and smaller gains.

For generations stories were told of him all over the southern shires of Scotland. One represents him as so agile that he could make the salmon's leap 'by stretching himself on the grass, leaping to his feet, and again throwing them over his head.' He was the author of a prose book entitled 'The Blame of Kirk-bvriall, tending to perswade Cemeteriall Civilitie. First preached, then penned, and now at last propyned to the Lord's inheritance in the Presbyterie of Lanark by M. William Birnie, the Lord his minister in that ilk, as a pledge of his zeale and care of that

reformation. Edinburgh, printed by Robert Charteris, printer to the king's most excellent maiestie, 1606' (4to). This was reprinted in 1833, in one hundred copies, by W. B. D. Turnbull. Birnie here deprecates interment within the church. There is considerable learning in the book, but its lack of arrangement and an absurdly alliterative style make it wearisome reading.

[Scott's Fasti, ii. 86-7, 306; Reid's History of Presbyterianism in Ireland, i.; Blair's Autobiography; Stevenson's Hist. of Church of Scotland; Calderwood's History; Boke of the Kirke, 318; Orig. Letters; Melvill's Autob.; Nisbet's Heraldry, ii.; Anderson's Scottish Nation, for ancestry and descendants.] A. B. G.

BIRNSTAN. [See BYRNSTAN.]

BIRREL, ROBERT (*fl.* 1567–1605), diarist, was a burgess of Edinburgh. His 'Diary, containing Divers passages of Staite, and Uthers Memorable Accidents. From the 1532 yeir of our Redemption, till ye Beginning of the yeir 1605,' was published in 1798 in 'Fragments of Scottish History,' edited by Sir John Graham Dalyell. Extracts from the 'Diary' were also published in 1820. There is not much minuteness in the record of events till about 1567, when Birrel probably began to keep a note of them. There is no evidence in the 'Diary' regarding the political or religious views of the writer, facts being simply recorded as they happened, without comment or any apparent bias of opinion. There is some evidence that the work was intended for publication, the writer having apparently taken some trouble to collect his facts. A considerable part of it was incorporated by Sir James Balfour in his 'Annals.' The original manuscript is in the Advocates' Library.

[Diary as above.] T. F. H.

BISBY or BISBIE, NATHANIEL, D.D. (1635–1695), divine, son of the Rev. John Bisbie, of Tipton, Staffordshire, who was ejected from a prebend in Lichfield Cathedral about 1644, and of Margaret, daughter of Anthony Hoo, of Bradely Hall in the same county, was born 5 June 1635. He was elected student of Christ Church, Oxford, from Westminster School, in 1654, proceeded B.A. 1657 and M.A. 1660, and accumulated his degrees in divinity on 7 June 1668. At the Restoration he was presented to the rectory of Long Melford, Sudbury, Suffolk. He was then, says Anthony à Wood, 'esteemed an excellent preacher and a zealous person for the church of England.' He married Elizabeth, daughter of John Wall, of Radwater Grange, Essex, in 1672. He published a number of occasional sermons, entitled 'The Modern Pharisees,' 1673; 'Prosecution no Persecution, or the Difference between Suffering for Disobedience and Faction and Suffering for Righteousness and Christ's sake,' 1682; 'Mischiefs of Anarchy,' 1682; 'Korah and his Company proved to be the Seminary and Seed-plot of Sedition and Rebellion,' 1684; 'The Bishop visiting,' 1686. On the accession of William and Mary he refused to take the oath of allegiance, and as a nonjuror was deprived of his rectory of Melford in February 1690. His publications consist nearly wholly of violent invectives against the nonconformists. He died 14 May 1695, and was buried at Long Melford.

[Wood's Athenæ (Bliss), iv. 640; Walker's Sufferings; Rawlinson MSS., Bodleian Library; Fuller's Worthies; Welch's Scholars of Westminster (1852), 142-3.] A. B. G.

BISCHOFF, JAMES (1776–1845), author of works on the wool trade, was of a German family which settled in Leeds in 1718. He was born at Leeds about 1776, and was brought up there. His early mercantile pursuits were connected with the wool and woollen trades, and he took a lively interest in all measures likely to affect them. Being convinced that the restrictive laws relating to wool were bad, he used his utmost endeavours to bring about a change. He published some letters on the subject in 1816 in the 'Leeds Mercury' and the 'Farmer's Journal.' In 1819 he was appointed one of the deputies from the manufacturing districts to promote a repeal of the Wool Act, and wrote a pamphlet entitled 'Reasons for the Immediate Repeal of the Tax on Foreign Wool' (1819, 8vo, pp. 47). In the following year he published 'Observations on the Report of the Earl of Sheffield to the Meeting at Lewes Wool Fair, July 20, 1820.' In 1825 Huskisson, then president of the board of trade, invited the counsel of Bischoff with regard to some proposed alterations in commercial policy, particularly a reduction of the duty on foreign manufactured goods. Bischoff gave his opinion strongly in the direction of freedom of trade, and the reasons he advanced had great weight with the minister in the proposals which he subsequently made in parliament. He was examined in 1828 before the privy council on the subject of the wool trade, and in the same year published 'The Wool Question considered: being an Examination of the Report of the Select Committee of the House of Lords appointed to take into consideration the State of the British Wool Trade, and an Answer to Earl Stanhope's Letter to the Owners and Occupiers of Sheep Farms' (8vo, pp. 112). In 1832 he issued a 'Sketch of the History of

Van Dieman's Land,' 8vo, and in 1836 an essay on 'Marine Insurances, their Importance, their Rise, Progress, and Decline, and their Claim to Freedom from Taxation,' 8vo, pp. 34. Bischoff's most important work has the following title: 'A comprehensive History of the Woollen and Worsted Manufactures, and the Natural and Commercial History of Sheep, from the Earliest Records to the Present Period' (Leeds, 1842, 2 vols. 8vo). His last publication was a pamphlet on 'Foreign Tariffs; their Injurious Effects on British Manufactures, especially the Woollen Manufacture; with proposed remedies. Being chiefly a series of Articles inserted in the "Leeds Mercury" from October 1842 to February 1843' (1843, 8vo, pp. 69).

Bischoff, who married in 1802 Peggy, daughter of Mr. David Stansfeld of Leeds, carried on business as a merchant and insurance broker for many years in London, and died at his residence, Highbury Terrace, on 8 Feb. 1845, in his seventieth year.

Mount Bischoff, in the north-west corner of Tasmania, is said to derive its name from James Bischoff.

[Gent. Mag., April 1845, p. 443; Preface to Bischoff's Hist. of the Woollen and Worsted Manufactures; Stansfeld pedigree in Foster's Yorkshire Pedigrees.] C. W. S.

BISCOE, JOHN (*d.* 1679), puritan divine, was born at High Wycombe, Buckinghamshire, and educated at New Inn Hall, Oxford. In 'Athenæ Oxonienses' (ed. Bliss, iii. 1198) Wood states that he was born in 1646, which is probably a literal error for 1606. From the 'Fasti' we learn that he took his bachelor's degree on 1 Feb. 1626–7. He left the university about two years afterwards, and became a preacher at Abingdon. Having joined the puritan party he was appointed minister of St. Thomas's, Southwark. He served as assistant to the commissioners of Surrey appointed to eject 'scandalous and insufficient ministers.' At the Restoration, being ejected from his living, he preached in conventicles. He died at High Wycombe, where he was buried on 9 June 1679. Biscoe is the author of: 1. 'Glorious Mystery of God's Mercy, or a Precious Cordial for Fainting Souls,' 1647, 8vo. 2. 'The Grand Trial of True Conversion, or Sanctifying Grace appearing and acting first and chiefly in the Thoughts,' 8vo, 1655. 3. 'Mystery of Free Grace in the Gospel, and Mystery of the Gospel in the Law,' n.d.

BISCOE, RICHARD (*d.* 1748), divine, was educated at an academy kept by Dr. Benion at Shrewsbury, and on 19 Dec. 1716 was made a dissenting minister at a meeting-house in the Old Jewry. In 1727 he conformed and was made rector of St. Martin Outwich, London. He also held the living of Northwald, near Epping, was a minor canon of St. Paul's, a prebendary from 1736, and a chaplain to George II. He died in May 1748. He delivered the Boyle lectures in 1736, 1737, and 1738, and in 1742 published in two volumes the substance of his prelections under the title 'History of the Acts of the Holy Apostles confirmed from other authors; and considered as full evidence of the truth of christianity, with a prefatory discourse on the nature of that evidence.' The work is highly eulogised by Dr. Doddridge as showing 'in the most convincing manner how incontestably the Acts of the Apostles demonstrate the truth of christianity.' It was reprinted in 1829 and 1840. A German translation was published at Magdeburg in 1751. He was also the author of 'Remarks on a Book lately published entitled "A Plain Account of the Nature and End of the Sacrament of the Lord's Supper,"' 1735.

BISHOP, ANN (1814-1884), vocalist, was the daughter of a drawing-master named Rivière, and was born in London in 1814. As a child she showed talent for the pianoforte, and studied under Moscheles. On 12 June 1824 she was elected a student at the Royal Academy of Music, where she soon distinguished herself by her singing. On leaving the academy she became (in 1831) the second wife of Sir Henry Rowley Bishop, the composer, and in the same year appeared at the Philharmonic Concerts as a singer. Her reputation quickly increased, and for the next few years she took a prominent place at Vauxhall, the so-called 'Oratorios,' and the country festivals. At first Mrs. Bishop devoted herself to classical music, but she was induced to turn her attention to the Italian school by Bochsa, the harp-player, with whom she went on a provincial tour in the spring of 1839. On their return to London she sang at a benefit concert given by Bochsa, at which she achieved great success, although Grisi, Persiani, and Viardot were among the performers. A few days later she left her husband and eloped with Bochsa to the continent. From September 1839 to May 1843 she visited the principal towns of Europe, and sang at no less than 260 concerts. Among other places

she visited St. Petersburg, Novgorod, Odessa, and Kasan, in which latter town she is said to have sung in the Tartar language. From 1843 to 1846 she sang in Italy with great success; at the San Carlo at Naples she appeared in twenty operas, her engagement lasting for twenty-seven months. In 1846 she returned to England, together with Bochsa, and sang at several concerts. In 1847 Mrs. Bishop went to America, where she sang in the United States, Mexico, and California. In 1855 she went to Australia, where Bochsa died, and Mrs. Bishop returned to England by way of South America and New York, where she married a Mr. Schulz. She sang at the Crystal Palace in 1858, and, after a farewell concert on 17 Aug. 1859, returned to America, and sang with great success throughout Canada, the United States, Mexico, and at Havana. In 1865 she left New York and went to California, whence she sailed for the Sandwich Islands. In February 1866 the ship in which she was sailing from Honolulu to China was wrecked on a coral reef, and Mrs. Bishop lost all her music, jewels, and wardrobe. After forty days' privation the shipwrecked crew reached the Ladrone Islands, whence the indefatigable singer went to Manilla, and after singing there and in China arrived in India in 1867. In May 1868 she was once more in Australia, and after visiting London she went to New York, where the remainder of her life was spent. She died of apoplexy in March 1884. Mrs., or Madame Anna Bishop, as she was generally called, possessed a high soprano voice, and was a brilliant but somewhat unsympathetic singer. She was a member of many foreign musical societies, and her popularity in the United States was great.

[Times, 24 March 1884; Moore's Encyclopædia of Music; Cazalet's History of the Royal Academy of Music, p. 138; Men of the Time (10th ed.); Musical World, xii. 11, 179, 235; Add. MS. 29261.] W. B. S.

BISHOP, GEORGE (1785-1861), astronomer, was born at Leicester 21 Aug. 1785. At the age of eighteen he entered a British wine-making business in London, to which he afterwards, as its proprietor, gave such extension that the excise returns were said to exhibit half of all home-made wines as of his manufacture. His scientific career may be said to date from his admission to the Royal Astronomical Society in 1830. The amount and stability of his fortune by that time permitted the indulgence of tastes hitherto in abeyance. He took lessons in algebra from Professor De Morgan, with a view to reading the 'Mécanique Céleste,' and acquired, when near fifty, sufficient mathematical knowledge to enable him to comprehend the scope of its methods. In 1836 he realised a long-cherished desire by erecting an observatory near his residence at South Villa, Regent's Park. No expense was spared in its equipment, and the excellence of the equatorial furnished by Dollond (aperture, seven inches) confirmed his resolve that some higher purpose than mere amusement should be served by the establishment. 'I am determined,' he said when choosing its site, 'that this observatory shall do something.' He attained his aim by securing the best observers. The Rev. William Dawes conducted his noted investigations of double stars at South Villa 1839-44; Mr. John Russell Hind began his memorable career there in October of the latter year. From the time that Hencke's detection of Astræa, 8 Dec. 1845, showed a prospect of success in the search for new planets, the resources of Bishop's observatory were turned in that direction, and with conspicuous results. Between 1847 and 1854 Mr. Hind discovered ten small planets, and Mr. Marth one, making a total of eleven dating from South Villa. The ecliptic charts undertaken by Mr. Hind for the purpose of facilitating the search were continued, after his appointment in 1853 as superintendent of the 'Nautical Almanac,' by Pogson, Vogel, Marth, and Talmage successively, under his supervision. They embraced all stars down to the eleventh magnitude inclusive, and extended over a zone of three degrees on each side of the ecliptic. Seventeen of the twenty-four hours were engraved when the observatory was broken up on the death of its owner.

A testimonial was awarded to Bishop by the Astronomical Society, 14 Jan. 1848, 'for the foundation of an observatory leading to various astronomical discoveries,' and presented, with a warmly commendatory address, by Sir John Herschel, 11 Feb. (*Month. Not. R. A. Soc.* viii. 105). He acted as secretary to the society 1833-9, as treasurer 1840-57, and was chosen president in two successive years, 1857 and 1858, although the state of his health rendered him unable to take the chair. After a long period of bodily prostration, his mind remaining, however, unclouded, he died 14 June 1861, in his seventy-sixth year. His character, both social and commercial, was of the highest, and his discriminating patronage of science raised him to the front rank of amateurs. He was elected a fellow of the Royal Society 9 June 1848, was also a fellow of the Society of Arts, and sat for some years on the council of University College. He published in 1852, in one

quarto volume, 'Astronomical Observations taken at the Observatory, South Villa, Regent's Park, during the years 1839–51,' including a catalogue of double stars observed by Dawes and Hind, with valuable 'historical and descriptive notes' by the latter, observations of new planets and comets, and of the temporary star discovered by Hind in Ophiuchus 27 April 1848, besides a description of the observatory, &c. After Bishop's death the instruments and dome were removed to the residence of George Bishop, jun., at Twickenham, where the same system of work was pursued.

[Month. Not. R. A. Soc. xxii. 104; L'Astronomie Pratique, André et Rayet, i. 95; Ann. Reg. ciii. 402.] A. M. C.

BISHOP, Sir HENRY ROWLEY (1786–1855), musical composer, was the son of a London merchant whose family came from Shropshire, and was born in Great Portland Street on 18 Nov. 1786. He seems to have received all his instruction in music from Francesco Bianchi, an Italian who came to England in 1793, where he lived for the rest of his life, enjoying a great reputation, not only as a composer, but also as a teacher and theoretical musician. Bishop's earliest compositions are a set of twelve glees and several Italian songs, in all of which the influence of his master—an influence which remained with him throughout his life—is plainly discernible. In 1804 his first operatic work, 'Angelina,' was played at the Theatre Royal, Margate. He soon after began to write ballet music for the King's Theatre and Drury Lane. At the former house the success of his 'Tamerlan et Bajazet' (1806) led to his permanent engagement, and he began at once to write the immense mass of compilations, arrangements, and incidental music which for thirty years he continued to produce. In this manner he was more or less concerned in 'Armide et Renaud' (15 May 1806), 'Narcisse et les Grâces' (June 1806), and 'Love in a Tub' (November 1806). At Drury Lane he wrote or arranged music for 'Caractacus,' a pantomime-ballet (22 April 1808), 'The Wife of Two Husbands' (9 May 1808), 'The Mysterious Bride' (1 June 1808), 'The Siege of St. Quentin' (10 Nov. 1808), besides contributing some new music to 'The Cabinet.' Other works of this period are 'The Corsair, or the Italian Nuptials,' described as a 'pantomimical drama,' and 'The Travellers at Spa,' an entertainment of Mrs. Mountain's, for which Bishop wrote music. At the beginning of 1809 his first important opera, 'The Circassian Bride,' was accepted at Drury Lane, and was brought out with great success on 23 Feb., but on the following night the theatre was burnt down, and the score of the opera, which Bishop subsequently rewrote from memory, perished in the flames. On 15 June of the same year his ballet, 'Mora's Love,' was performed at the King's Theatre in the Haymarket, which was followed at the same house by 'The Vintagers' on 1 Aug. After the burning of Drury Lane the company of that house moved to the Lyceum Theatre, and here Bishop produced, on 13 March 1810, 'The Maniac, or Swiss Banditti,' which was acted twenty-six times. He was next engaged for three years as composer and director of the music at Covent Garden Theatre, where the first work upon which he was employed was the music to 'The Knight of Snowdoun,' a musical drama, founded on Sir Walter Scott's 'Lady of the Lake,' which was produced on 5 Feb. 1811, and was acted twenty-three times. This was followed in rapid succession by 'The Virgin of Sun' (31 Jan. 1812), 'The Æthiop' (6 Oct. 1812), new music for 'The Lord of the Manor' (22 Oct. 1812), 'The Renegade' (2 Dec. 1812), 'Haroun al Raschid,' a new version of 'The Æthiop,' produced on 11 Jan. 1813, and withdrawn after one performance, new music to 'Poor Vulcan' (8 Feb. 1813), 'The Brazen Bust' (29 May 1813), and 'Harry le Roy,' an 'heroic pastoral burletta' (2 July 1813). On the expiration of his first engagement at Covent Garden he was re-engaged for five years, during which his most noteworthy production was the music to the melodrama 'The Miller and his Men,' which was performed for the first time on 21 Oct. 1813, but received additions in 1814. In 1813, on the foundation of the Philharmonic Society, Bishop was one of the original members, but none of his compositions were performed by the new society until some years later. Indeed the whole of his energies at this time must have been devoted to his duties at Covent Garden, where he continued to produce in rapid succession a series of original compositions and compilations, which, though often of the slightest quality, must have kept him too fully occupied to devote himself seriously to the cultivation of his undoubted talent. 'The Miller and his Men' was followed on 15 Dec. 1813 by 'For England Ho!' and this (in collaboration with Davy, Reeve, and others) by 'The Farmer's Wife' (1 Feb. 1814), 'The Wandering Boys' (24 Feb. 1814), 'Hanover,' a cantata written for Braham and performed at the oratorios at Covent Garden in March 1814, 'Sadak and Kalastrade' (11 April 1814), fresh music to 'Lionel and Clarissa' (3 May 1814), 'The Grand Alliance,' announced as 'an allegorical

festival' (13 June 1814), 'Aurora' and 'Doctor Sangrado,' both ballets (September 1814), a compressed version of Arne's 'Artaxerxes,' with recitatives by Bishop, and 'The Forest of Bondy' (both on 30 Sept. 1814), additional music in 'The Maid of the Mill' (18 Oct. 1814), a compilation from Boïeldieu's 'John of Paris' (12 Nov. 1814), 'Brother and Sister,' in collaboration with Reeve (1 Feb. 1815), 'The Noble Outlaw' (7 April 1815), 'Telemachus' (7 June 1815), 'The Magpie or the Maid' (15 Sept. 1815), 'John du Bart' (25 Oct. 1815), additions to 'Cymon' (20 Nov. 1815), 'Comus' (same year), and 'Midsummer Night's Dream' (17 Jan. 1816), 'Guy Mannering,' a collaboration with Attwood, Whittaker, and others, Bishop's best work in it being the famous glee 'The Chough and Crow' (12 March 1816), 'Who wants a Wife' (16 April 1816), a version of Kreutzer's 'Lodoiska' (15 Oct. 1816), 'The Slave' (12 Nov. 1816), 'Royal Nuptials' (November 1816), 'The Humourous Lieutenant' (18 Jan. 1817), 'The Heir of Vironi' (27 Feb. 1817), 'The Apostate' (13 May 1817), 'The Libertine,' a very free adaptation of Mozart's 'Don Juan' (20 May 1817), 'The Duke of Savoy' (29 Sept. 1817), and 'The Father and his Children' (25 Oct. 1817). In 1816 and 1817, in addition to his post at Covent Garden, Bishop was director of the music at the King's Theatre in the Haymarket, where he wrote music for 'Exit by Mistake,' a comedy ballet (22 July 1816), and 'Teasing made Easy' (30 July 1817). But Covent Garden remained the chief scene of his labours, and here during the next few years he wrote or adapted music for the following plays and operas: 'The Illustrious Traveller' (3 Feb. 1818), 'Fazio' (5 Feb. 1818), 'Zuma,' in collaboration with Braham (21 Feb. 1818), additions to 'The Devil's Bridge' (11 April 1818), 'X Y Z' (13 June 1818), 'The Burgomaster of Saardam' (23 Sept. 1818), 'The Barber of Seville,' a version of Rossini's opera (13 Oct. 1818), 'The Marriage of Figaro,' a free adaptation from Mozart (6 March 1819), 'Fortunatus and his Sons' (12 April 1819), 'The Heart of Midlothian' (17 April 1819), 'A Roland for an Oliver' (29 April 1819), 'Swedish Patriotism' (19 May 1819), 'The Gnome King' (6 Oct. 1819), 'The Comedy of Errors' (11 Dec. 1819), 'The Antiquary' (25 Jan. 1820), 'Henri Quatre' (22 April 1820), 'Montoni' (3 May 1820), 'Bothwell Brigg' (22 May 1820), 'Twelfth Night' (8 Nov. 1820), 'Don John' (20 Feb. 1821), music to 'Henry IV,' part ii. (25 June 1821), 'Two Gentlemen of Verona' (29 Nov. 1821), 'Montrose' (14 Feb. 1822), 'The Law of Java,' which contains the well-known 'Mynheer van Dunck' (11 May 1822), 'Maid Marian' (3 Dec. 1822), 'The Vision of the Sun' (31 March 1823), 'Clari' (8 May 1823), in which Bishop introduced or composed (for the origin of the tune is a matter of dispute) the ever-popular 'Home, sweet Home,' 'The Beacon of Liberty' (8 Oct. 1823), 'Cortez' (5 Nov. 1823), 'The Vespers of Palermo' (12 Dec. 1823), 'Native Land' (10 Feb. 1824), 'Charles II' (9 May 1824), and 'As you like it' (10 Dec. 1824). With the last-named work Bishop's long connection with Covent Garden terminated. In 1819 he had entered into partnership with the management of the theatre in conducting the so-called 'oratorios,' concerts of the most heterogeneous description, which were given at the opera-houses during Lent, and in 1820 Bishop became the sole manager of these curious entertainments. His management, however, ceased after one season. In the autumn of the same year he went to Dublin, where he was received with great honour, the freedom of the city being unanimously voted and bestowed upon him (2 Aug. 1820). In 1825 Bishop was engaged by Elliston at Drury Lane, where he produced on 19 Jan. 1825 'The Fall of Algiers.' This was followed by versions of Auber's 'Masaniello' (17 Feb. 1825), and Rossini's 'Guillaume Tell' (11 May 1825). In the same year he brought out a revised version of his early work, 'Angelina,' and wrote (in collaboration with Cooke and Horn) music to 'Faustus' (16 May) and the 'Coronation of Charles X' (5 July). The year 1826 was memorable in the annals of music in England for the production of Weber's 'Oberon' at Covent Garden, under the composer's own direction. By way of a counter-attraction, the management of Drury Lane commissioned Bishop to write a grand opera on the subject of 'Aladdin.' He took more than usual pains over this work, the composition of which occupied him for at least a year, but the book was even worse than that of 'Oberon,' and the music, though written with much care, was found to be inferior to Bishop's best compositions, probably because, by attempting to meet Weber on his own ground, he had only succeeded in producing a weak imitation of the style of the German master. 'Aladdin,' which was produced on 29 April 1826, shortly after Weber's opera, was followed by several unimportant works, 'The Knights of the Cross' (29 May 1826), 'Englishmen in India' (27 Jan. 1827), 'Edward the Black Prince' (28 Jan. 1828), and 'Don Pedro' (10 Feb. 1828). Bishop's permanent connection with Drury Lane ceased about

this time, and his remaining writings for the stage were produced as follows: 'The Rencontre' (Haymarket, 12 July 1828), 'Yelva' (Covent Garden, 5 Feb. 1829), 'Home, sweet Home' (Covent Garden, 19 March 1829), 'The Night before the Wedding,' a version of Boïeldieu's 'Les Deux Nuits' (Covent Garden, 17 Nov. 1829), 'Ninetta' (Covent Garden, 4 Feb. 1830), 'Hofer' (Drury Lane, 1 May 1830), 'Under the Oak' (Vauxhall, 25 June 1830), 'Adelaide, or the Royal William' (Vauxhall, 23 July 1830), 'The Romance of a Day' (1831), 'The Tyrolese Peasant' (Drury Lane, May 1832), 'The Election' (Drury Lane, 1832), which was composed by Carter, but scored by Bishop, 'The Magic Fan' (Vauxhall, 18 June 1832), 'The Sedan Chair' (Vauxhall, 1832), 'The Bottle of Champagne' (Vauxhall, 1832), and 'The Demon,' a version of Meyerbeer's 'Robert le Diable,' in which he collaborated with T. Cooke and R. Hughes (Drury Lane, 1832). He also wrote music for 'Hamlet' at Drury Lane (1830), for Stanfield's diorama at the same theatre (1830), and for 'Kenilworth' (1832), 'Waverley' (1832), 'Manfred' (1834), 'The Captain and the Colonel' (1835), and 'The Doom Kiss' (1836). The long list of Bishop's writings for the stage is closed by 'Rural Felicity' (Haymarket, 9 June 1839), additions to 'The Beggars' Opera' (Covent Garden, 1839), music to 'Love's Labour's Lost' (1839), and the masque of 'The Fortunate Isles,' written to celebrate the marriage of Queen Victoria, and produced at Covent Garden under Madame Vestris's management on 12 Feb. 1840.

In 1830 Bishop left Drury Lane and was appointed musical director of Vauxhall Gardens, which post he occupied for three years. In 1832 he was commissioned by the Philharmonic Society to write a work for their concerts, in fulfilment of which he composed a sacred cantata, 'The Seventh Day,' which was performed in the following year, without, however, achieving any great success. Two years later (1836) another cantata of Bishop's, 'The Departure from Paradise,' was sung at the same concerts by Malibran. Other cantatas composed by him are 'Waterloo' (performed at Vauxhall in 1826), and a setting of Burns's 'Jolly Beggars.' In 1838, according to the 'Gentleman's Magazine' (1838, i. 539), he was appointed composer to her majesty; but this statement is proved to be inaccurate by the absence of any record of his appointment in the official documents of the lord steward's and lord chamberlain's offices, as well as by the fact that in 1847 he was desirous of obtaining the post on its becoming vacant. In the following year he received the degree of Mus. Bac. at Oxford. He was for some time professor of harmony and composition at the Royal Academy of Music, and in November 1841 was elected to the Reid professorship at Edinburgh, which appointment he continued to hold until December 1843, when he was succeeded by Henry Hugo Pierson. From 1840 to 1848 he conducted the Antient Concerts, and in 1842 he was knighted by the queen, this being the first occasion on which a musician had been so honoured. In 1848 he succeeded Dr. Crotch as professor of music at Oxford, where in 1853 he received the degree of Mus. Doc., his exercise being an ode performed on the installation of the Earl of Derby as chancellor of the university.

Between 1819 and 1826 Bishop had been occupied at various times with arranging different 'Melodies of Various Nations' and 'National Melodies' to English words, and in 1851 he began a similar undertaking, his collaborator in this case being Dr. Charles Mackay. Of these arrangements, which are extremely free and much altered from the originals, Bishop wrote that he was more proud than of any musical composition that he had ever produced. He also edited Handel's 'Messiah' and many other works. Though at one time Bishop must have been in receipt of a considerable income, he was extravagant in his habits and made no provision for his old age, in which he was harassed by pecuniary difficulties. In a letter (*Egerton*, 2159) written in 1840 he says: 'I have worked hard, and during many a long year, for fame! and have had many difficulties to encounter in obtaining that portion of it which I am proud to know I possess. I have been a slavish servant to the public; and too often, when I have turned each way their weathercock taste pointed, they have turned round on me and upbraided me for not remaining where I was! ... Had the public remained truly and loyally English, I would have remained so too! But I had my bread to get, and was obliged to watch their caprices, and give them an exotic fragrance if I could not give them the plant, when I found they were tired of, and neglecting the native production.' In writing these words Bishop doubtless had in mind the failure of his 'Aladdin,' but the reason why in his later years he suffered from neglect was perhaps not so much the fault of the public as he thought. Possessed of a wonderful wealth of melody and great facility in composition, during the best years of his life he frittered away his talents on compositions which were not strong enough to survive beyond the season which saw their production; and worse than this, he not only wrote down

to the level of the taste of the day, but in his adaptations from the works of great foreign musicians he altered and defaced them so as to bring them to a level with his own weak productions. If, as he complained, he suffered from the public taste veering round to the music of continental composers, it was in some sort a revenge brought about by the whirligig of time, for from no one did the works of the great masters receive worse treatment than they met with at the hands of Bishop himself. Amongst the manuscript scores in his handwriting which are preserved in the Liverpool Free Library there is a volume entirely consisting of 'additional accompaniments' (mostly for brass and percussion instruments), and alterations which he made in works by Beethoven, Mozart, Cherubini, Rossini, and many others, a volume which must ever remain a disgrace to the man who wrote it, and a record of the low state of musical opinion that could have allowed such barbarisms to be perpetrated without a protest. With regard to his original compositions, there is no doubt that his style was very much based upon that of his master Bianchi, as an examination of the somewhat rare compositions of the latter will show. But, though Bishop's music is in this respect less original than is usually supposed, he was possessed of a singularly fertile vein of melody, in which the national character can be perpetually recognised, although the dress in which it is presented is rather Italian than English. In this respect Bishop may be regarded as the successor of Arne, who in the latter part of his career came under the influence of the Italian school in which Bishop received his early training. In his glees Bishop was without a rival, and it is probable that it is on this form of composition that his future fame will rest; for his songs, with the exception of a very few, are even now but seldom heard, and it is safe to predict that the entire operas in which all his best glees and songs originally appeared will never bear revival.

Bishop was twice married. His first wife was a Miss Lyon, who came out as a singer at Drury Lane in 'Love in a Village' on 10 Oct. 1807, and to whom he was married soon after the production of 'The Circassian Bride,' in which opera and 'The Maniac' she sang small parts. By her he had two sons and a daughter. By his second wife [see Bishop, Ann] he had two daughters and a son.

During the greater part of his life he lived at 4 Albion Place and 13 Cambridge Street, Hyde Park. In his latter years he suffered much from cancer, and eventually died from the effects of an operation he underwent for that disease. His death took place at his house in Cambridge Street on Monday evening, 30 April 1855. He was buried on the Saturday following at the Marylebone Cemetery, Finchley Road, where a monument was erected to his memory by public subscription. The manuscript scores of most of Bishop's operas are preserved in the libraries of the British Museum, the Royal College of Music, and the Free Library of Liverpool. There are two portraits of him in the National Portrait Gallery, both by unknown painters. There are engravings of him (1) drawn by Wageman, engraved by Woolnoth, and published on 1 June 1820; (2) engraved by S. W. Reynolds from a painting by J. Foster, published in July 1822; and (3) engraved by B. Holl and published 1 April 1828.

Bell, and A. D. Coleridge.] W. B. S.

BISHOP, JOHN (1665–1737), musical composer, was born in 1665, and (according to Hawkins) educated under Daniel Roseingrave, but, as the latter was organist of Winchester Cathedral from June 1682 to June 1692, and Bishop only came to Winchester in 1695, this is probably an error. Between Michaelmas and Christmas 1687 he became a lay clerk of King's College, Cambridge, where in the following year he was appointed to teach the choristers. In 1695 he was appointed organist of Winchester College, on the resignation of Jeremiah Clarke, but he continued to receive his stipend at Cambridge until the Easter term of 1696. In November 1696 he was elected a lay-vicar of Winchester Cathedral in the place of Thomas Corfe, and on 30 June 1729 he succeeded Vaughan Richardson as organist and master of the choristers of the same cathedral. Bishop's rival for this post was James Kent, who was esteemed a better player, but the 'age and amiable disposition' of the former, coupled with the sympathy felt for some family misfortune he had suffered, induced the dean and chapter to give him the appointment. Bishop remained at Winchester until his death, which took place 19 Dec. 1737. He was buried on the west side of the college cloister, where his epitaph styles him 'Vir singulari probitate, integerrima vita, moribus innocuis, musicæque

scientiæ bene peritus.' Bishop published some collections of psalm tunes and anthems, copies of which are now but rarely met with. Manuscript compositions by him are preserved in the British Museum (*Add. MS.* 17841, and *Harl. MS.* 7341), and in the libraries of the Royal College of Music (1649), and of Christ Church, Oxford. In the latter collection is a complete copy of his 'Morning and Evening Service' in D, the Te Deum from which is to be found in other collections. Dr. Philip Hayes's 'Harmonia Wiccamica' (1780) also contains some Latin compositions by Bishop for the use of Winchester College. All his extant works are interesting as showing the manner in which the disregard of proper emphasis and the introduction of meaningless embellishments gradually corrupted the style of the school of which Purcell was the greatest ornament, and led to the inanities of writers like Kent. Hawkins, who has been followed by other biographers, says that Bishop was at one time organist of Salisbury, but this is inaccurate. The organists of Salisbury (and the dates of their appointments) during Bishop's life were as follows: Michael Wise (1668), Peter Isaacke (1687), Daniel Roseingrave (1692), Anthony Walkley (1700), and Edward Thompson (1718).

[Hawkins's Hist. of Music (ed. 1853), p. 767; Hayes's Harmonia Wiccamica (1780); Records of King's Coll. Cambridge (communicated by the Rev. A. Austen Leigh); Chapter Registers of Salisbury (communicated by the Rev. S. M. Lakin); Chapter Registers of Winchester; information from the Rev. J. H. Mee; Catalogues of the British Museum and Royal College of Music.] W. B. S.

BISHOP, JOHN (1797–1873), surgeon, was the fourth son of Mr. Samuel Bishop, of Pimperne, Dorsetshire. He was born on 15 Sept. 1797, and he received his education at the grammar school at Childe Okeford in Dorsetshire, where he remained for several years. Bishop was originally intended for the legal profession, but this intention was never carried out, and for many years he led the life of a country gentleman. When about twenty-five years of age Bishop was induced by his cousin, Mr. John Tucker of Bridport, to enter the medical profession. After a short preliminary practice, under the direction of his relative, at Bridport, he came to London and entered at St. George's Hospital under Sir Everard Home. While studying in this hospital Bishop attended the lectures of Sir Charles Bell, of Mr. Guthrie, and Dr. George Pearson, and he was a regular attendant at the chemical courses which were delivered at the Royal Institution. In 1824 he obtained the diploma of the Royal College of Surgeons, and entered regularly into his profession. He soon acquired a reputation as a careful and skilful observer. This secured for him the offices of senior surgeon to the Islington Dispensary, and surgeon to the Northern and St. Pancras dispensaries, and to the Drapers' Benevolent Institution. In 1844 Bishop contributed a paper to the 'Philosophical Transactions' of the Royal Society, on the 'Physiology of the Human Voice.' He was shortly afterwards elected a fellow of the Royal Society, and a corresponding member of the medical societies of Berlin and Madrid. The Royal Academy of Science of Paris awarded him two prizes for memoirs 'On the Human and Comparative Anatomy and Physiology of Voice.' He was the author of a work 'On Distortions of the Human Body,' another 'On Impediments of Speech,' and one 'On Hearing and Speaking Instruments.' These works were remarkable for the careful examinations which the author had made on the subjects under investigation, and for the mathematical demonstration given of each theory advanced by him. Bishop contributed several articles to Todd's 'Cyclopædia,' and many papers of more or less importance to the medical literature of the day. Bishop was a man of varied attainments; he was conversant with continental as well as English literature, and to within a few months of his death he was deeply interested in the progress of science. On 29 Sept. 1873 he died at Strangeways-Marshale, Dorsetshire, within a few miles of his birthplace.

[Proceedings of the Royal Society, xxi. 5 (1873); Catalogue of Scientific Papers, vol. i. (1877).] R. H-r.

BISHOP, SAMUEL (1731–1795), poet, was born in St. John Street, London, on 21 Sept. 1731, but his father, George Bishop, came from Dorset, and his mother from Sussex. He was entered at Merchant Taylors' School in June 1743, and soon became known among his fellow scholars for aptitude and knowledge. In June 1750 he was elected to St. John's College, Oxford, and became a scholar of that institution on 25 June, his matriculation entry at the university being '1750, June 28, St. John's, Samuel Bishop, 18, Georgii, Londini, pleb. fil.' Three years later (June 1753) he was elected a fellow of his college, and in the following April took his degree of B.A. Not long afterwards he was ordained to the curacy of Headley in Surrey, and resided either in that village or at Oxford until 1758, when he took his M.A. degree. On 26 July 1758 Bishop was appointed third under-master of his old school,

rose to the second under-mastership 11 Feb. 1772, became the first under-master 12 Aug. 1778, and the head-master 22 Jan. 1783. His preferments in the church were two, the first being the rectory of Ditton in Kent, and the second the rectory of St. Martin Outwich in London, 1 March 1789. He had married in 1763, at St. Austin's, Watling Street, Mary, daughter of Joseph Palmer, of Old Malling, near Lewes, and at her husband's death, on 17 Nov. 1795, she survived him with one daughter. Bishop was buried in St. Martin Outwich. Bishop published during his lifetime an anonymous 'Ode to the Earl of Lincoln on the Duke of Newcastle's retirement' 1762, an effusion said to have been prompted by the connection of his future wife's family with the duke; numerous essays and poems, signed S. and P. in a division of the 'Publick Ledger' for 1763 and 1764; a Latin translation of an ode of Sir Charles Hanbury Williams to Stephen Poyntz; a volume entitled 'Feriæ Poeticæ, sive Carmina Anglicana . . . Latine reddita,' 1766; and a sermon on the anniversary of Mr. Henry Raine's charity, 1 May 1783. After his death the Rev. Thomas Clare collected and printed a volume of 'Sermons chiefly upon Practical Subjects, by the Rev. Samuel Bishop, A.M.,' 1798, and two volumes of the 'Poetical Works of the Rev. Samuel Bishop, A.M.,' 1796, with a life of the author. A second edition was issued in 1800, a third in 1802, and the poems were embodied in Ezekiel Sanford's 'Works of British Poets,' vol. xxxvii., a collection printed at Philadelphia. The smaller poems are very graceful and pleasing; those to his wife on the recurring anniversaries of their wedding-day, and to their daughter on her various birthdays, breathe the purest affection. Southey said of Bishop that 'no other poet crowds so many syllables into a verse. . . . His domestic poems breathe a Dutch spirit—by which I mean a very amiable and happy feeling of domestic duties and enjoyments.' Bishop's widow subsequently married the Rev. Thomas Clare, who became the vicar of St. Bride's, Fleet Street.

W. P. C.

BISHOP, WILLIAM, D.D. (1554–1624), bishop of Chalcedon, the son of John Bishop, who died in 1601 at the age of ninety-two, was born of a 'genteel family' at Brailes in Warwickshire in or about 1554. 'Though always a catholic' (Dodd, *Church Hist.* ii. 361), he was sent to the university of Oxford in the seventeenth year of his age, 'in 1570, or thereabouts;' and Wood conjectures that he studied either in Gloucester Hall or Lincoln College, which societies were then governed by men who were catholics at heart. It has indeed been surmised, with some appearance of probability, that he was the William Bishop who matriculated at Cambridge, as a member of Trinity College, on 2 Dec. 1572, and who took the degree of B.A. in that university in 1585 (*MS. Addit.* 5863 f. 156 *a*), but the biography in Pits's work, 'De illustribus Angliæ Scriptoribus' (1619), the preface to which was written by Bishop himself, must be taken as conclusive evidence that he studied at Oxford. After remaining there three or four years he settled his paternal estate, which was considerable, upon his younger brother, and went over to the English college at Rheims, where he began his theological studies, which he subsequently pursued at Rome. He then returned to Rheims, was ordained priest at Loan in May 1583, and was sent to the English mission, but being arrested on his landing, he was taken before secretary Walsingham and was imprisoned in the Marshalsea with other priests. Towards the close of the year 1584 he was released, and proceeded to Paris, where he studied with great application for several years, and was made a licentiate of divinity. He returned to England upon the mission, 15 May 1591. After labouring here for about two years he returned to Paris to complete the degree of D.D., and then came back to England.

When a dispute arose between George Blackwell [q. v.], the archpriest, and a number of his clergy, who appealed against him for maladministration and exceeding his commission, Bishop and John Charnock were sent to Rome by their brethren to remonstrate against him. On their arrival they were both taken into custody by order of Cardinal Cajetan, the protector of the English nation, who had been informed that they were turbulent persons and the head of a factious party. They were confined in the English college under the inspection of Father Robert Parsons, the jesuit. After a time they regained their liberty and returned to England. [For the result of the dispute see Blackwell, George.] The catholics were greatly alarmed in King James's reign by the new oath of allegiance, and Bishop had his share in those troubles; he was committed prisoner to the Gatehouse, although he and twelve other priests had given ample satisfaction as to all parts of

civil allegiance in a declaration published by them in the last year of Queen Elizabeth's reign. He was examined on 4 May 1611, when he said he was opposed to the jesuits, but declined to take the oath of allegiance, as Blackwell and others had done, because he wished to uphold the credit of the secular priests at Rome, and to get the English college there out of the hands of the jesuits (*State Papers, James I*, Dom. vol. lxiii.) On being again set at liberty he went to Paris and joined the small community of controversial writers which had been formed in Arras College.

Ever since the death of Thomas Goldwell, bishop of St. Asaph, in 1585, when, according to the view taken by Roman catholics, the ancient hierarchy came to an end, the holy see had been frequently importuned to appoint a bishop for England. Some obstacle always intervened, but at length, after three archpriests had been appointed in succession to govern the secular clergy, the holy see acceded to the wishes of the English catholics, and nominated Bishop as vicar-apostolic and bishop elect of Chalcedon in February 1622–3. In the following month a bull issued for his consecration, and it was followed almost immediately by a brief, conferring on him episcopal jurisdiction over the catholics of England and Scotland. 'When thou shalt be arrived in those kingdoms,' says the brief, 'we give thee license, at the good will of ourselves and our successors in the holy see, freely and lawfully to enjoy and use all and each of those faculties committed by our predecessors to the archpriests, as also such as ordinaries enjoy and exercise in their cities and dioceses.' Thus Bishop had ordinary jurisdiction over the catholics of England and Scotland, but it was revocable at the pleasure of the pope, so that in the language of curialists he was vicar-apostolic with ordinary jurisdiction. In exercise of his power he instituted a dean and a chapter as a standing council for his own assistance, with power, during the vacancy of the see, to exercise episcopal ordinary jurisdiction, professing at the same time that 'what defect might be in his own power he would supplicate his holiness to make good from the plenitude of his own.' The appointment of this chapter occasioned many warm debates between the secular and the regular clergy. Bishop was consecrated at Paris on 4 June 1623, and he landed at Dover on 31 July. The summer he spent in administering the sacrament of confirmation to the catholics in and near London. He passed most of the winter in retirement, intending to visit the more remote parts of the kingdom in the spring, but falling sick at the residence of Sir Basil Brook, at Bishop's-court near London, he died on 13 April 1624. Wood is mistaken in supposing that Bishop was in his latter days a member of the order of St. Benedict.

His works are: 1. 'Reformation of a Catholic deformed by Will. Perkins,' 2 parts, 1604–7, 4to. 2. 'A Reproofe of M. Doct. Abbot's Defence of the Catholike Deformed by M. W. Perkins. Wherein his sundry abuses of Gods sacred word, and most manifold mangling, misaplying, and falsifying the auncient Fathers sentences, be so plainely discouered, euen to the eye of euery indifferent reader, that whosouer hath any due care of his owne saluation, can neuer hereafter giue him more credit, in matter of faith and religion,' 2 parts, Lond. 1608, 4to. 3. 'Disproof of Dr. R. Abbots counter-proof against Dr. Bishops reproof of the defence of Mr. Perkins' reform. Cath.,' Paris 1614, 4to, part i. 4. 'Defence of the King's honour and his title to the Kingdom of England.' 5. Several pieces concerning the archpriest's jurisdiction. 6. Preface to John Pits's book, 'De illustribus Angliæ Scriptoribus,' Paris, 1619. 7. 'An Account of the Faction and Disturbances in the Castle of Wisbech, occasioned by Father Weston, a Jesuit,' MS.

In the second part of Thomas Scot's 'Vox Populi, or Newes from Spayne' (1624), there is a curious picture of Bishop presiding at a meeting of the 'Iesuits and prists: as they vse to sitt at Counsell in England to further ye Catholicke Cause.'

BISLEY, GEORGE (*d.* 1591), catholic missioner. [See BEESLEY.]

BISSAIT or BISSET, BALDRED (*fl.* 1303), a native of the county of Stirling, became rector of Kinghorn, in the diocese of St. Andrews. When in 1300 and 1301 a discussion arose between the pope Boniface VIII, King Edward of England, and the Scottish government, with regard to the independence

of Scotland, Bisset was appointed one of the commissioners to the pope to represent the claims of Scotland. These commissioners were provided with 'instructions' on which to base their arguments, and from these instructions Bisset composed 'Progressus contra figmenta regis Angliæ.' Both are printed in the 'Scotichronicon.' It is in the 'Progressus' that we have the first mention of the coronation-stone of Scotland, which Bisset states Scota, daughter of Pharaoh, king of Egypt, brought to Scotland with her. W. F. Skene is of opinion that 'we owe the legend entirely to the patriotic ingenuity of Baldred Bisset.' Another writing of Bisset is also printed in the 'Scotichronicon:' 'Lamentatio pro rege S. Davidis.' He is also said to have written 'Contra Ecclesiam Anglicanam,' 'Pro Privilegiis Ecclesiæ Scoticanæ,' and 'Defensio Ecclesiæ Catholicæ.'

[Tanner's Bibl. Brit. p. 102; Skene's Chronicles of the Picts and Scots (1867), pp. lxi, lxx, 271–84; Skene's Coronation Stone (1869), pp. 19–21; Skene's edition of Johannis de Fordun Chronica in Historians of Scotland, i. pp. xxxv, 332, ii. 325, 394.] T. F. H.

BISSE, PHILIP, D.D. (1667–1721), bishop of St. David's and of Hereford, was a native of Oldbury in Gloucestershire—'a sacerdotum stemmate per quinque successiones deducto'—and received his education at Winchester School, whence he was sent to New College, Oxford, where he obtained a fellowship (B.A. 1690, M.A. 1693, B.D. and D.D. 1705). On 13 Feb. 1705-6 he was elected a fellow of the Royal Society. He was consecrated bishop of St. David's 19 Nov. 1710, and was translated to the see of Hereford 16 Feb. 1712-3. He died at Westminster 6 Sept. 1721, in the fifty-fifth year of his age, and was buried in his cathedral between two pillars above the episcopal throne, under a very sumptuous monument of fine marble. Dr. Bisse was 'a person most universally lamented, being of great sanctity and sweetness of manners; of clear honour, integrity, and steadiness in all times to the constitution in church and state; of excellent parts, judgment, and penetration, in most kinds of learning, and of equal discernment and temper in business; a great benefactor to his cathedral church, and especially to his palace, which last he in a manner rebuilt' (Boyer, *Political State of Great Britain*, xxii. 329). Noble states that Bisse was more indebted to his fine person than his fine preaching for preferment, and refers to a report that the Duchess Dowager of Northumberland gave him her hand because she had by mistake received the pressure of his lips in the dark in a kiss intended for her waiting woman (*Continuation of Granger*, ii. 100). In reality Bisse married in 1706 Bridget, third daughter of Thomas Osborne, duke of Leeds, and widow of Charles Fitz-Charles, earl of Plymouth [q. v.] (Luttrell, *Relation of State Affairs*, vi. 76).

The bishop published several of his sermons. One was preached before the House of Commons 15 March 1709–10, being the day appointed for a general fast, and another was delivered before the House of Peers 29 May 1711, being the day of public thanksgiving to Almighty God for having put an end to the great rebellion. There is a portrait of him engraved by Vertue from a painting by Thomas Hill. Another portrait of him will be found in the Oxford Almanac for 1738.

MSS. 6693, p. 163, 22136, f. 8; Cat. of Printed Books in Brit. Mus.; Historical Register (1721), Chronological Diary, 36; Nichols's Lit. Anecd. i. 120, 703, vi. 225, viii. 391; Luttrell's Relation of State Affairs, vi. 76, 548, 558, 643; Manby's Hist. of St. David's, 167; Jones and Freeman's Hist. of St. David's, 334; Notes and Queries, 2nd ser. ii. 53, 54; Cat. of Oxford Graduates (1851), 62; Le Neve's Fasti (Hardy), i. 304, 473; Cooke's Contin. of Duncumb's Herefordshire, iii. 223, 224; Britton's Cathedral Church of Hereford, 33, 61, 71.] T. C.

BISSE, THOMAS, D.D. (*d.* 1731), divine, was a younger brother of Dr. Philip Bisse, bishop of Hereford. He was educated at Corpus Christi College, Oxford, where he graduated B.A. in 1695, M.A. in 1698, B.D. in 1708, and D.D. in 1712. In 1715 he was chosen preacher at the Rolls Chapel, London, and in the following year, on the deprivation of Joseph Harvey, M.A., a nonjuror, he was collated to the chancellorship of Hereford on the presentation of his brother the bishop. He was made prebendary of Colwall in the church of Hereford in 1731, and he also held the rectories of Cradley and Weston in Herefordshire. His death occurred on 22 April 1731. He was a frequent and an eloquent preacher, and several of his occasional sermons were published. Those of most permanent reputation are: 1. 'The Beauty of Holiness in the Common Prayer, as set forth in four sermons preached at the Rolls Chapel,' London, 1716, 8vo. 2. 'A Rationale on Cathedral Worship or Choir-Service,' 1720; this and the preceding work have been frequently reprinted. A new edition of them in one volume appeared at Cambridge in 1842. 3. 'Decency and Order in Public Worship recommended, in three discourses preached

in the cathedral church of Hereford,' 1723. 4. 'A Course of Sermons on the Lord's Prayer, preach'd at the Rolls' [Oxford? 1740], 8vo; edited from the author's manuscripts by his relative Thomas Bisse, M.A., chaplain of All Souls College, Oxford. He was also the author of 'Microscopium,' a Latin poem, printed in 'Musarum Anglicanarum Analecta' (London, 1721), i. 266–79.

There is a portrait of him, engraved by Vertue from a painting by T. Hill.

[Nichols's Lit. Anecd. i. 120, 130, 139, 186, 193, 236, 328, 385, 392; Noble's Continuation of Granger, iii. 100; Gent. Mag. i. 174; Cat. of Oxford Graduates (1851), 62; Le Neve's Fasti (Hardy), i. 493, 499.] T. C.

BISSET, CHARLES, M.D. (1717–1791), physician and military engineer, was son of a lawyer of that name of some local repute for his attainments in Latin and in Scots law, and was born at Glenalbert, near Dunkeld, Perthshire, in 1717. He studied medicine at Edinburgh, and in 1740 was appointed second surgeon of the military hospital, Jamaica. He afterwards served on board Admiral Vernon's fleet, by some accounts as a naval surgeon, and by others as surgeon of one of the marine regiments subsequently disbanded. After spending five years in the West Indies and America he returned home in ill-health in 1745. In May 1746 he obtained an ensigncy in the 42nd Highlanders, then commanded by Lord John Murray, with which corps he served in the unsuccessful descent on the French coast near L'Orient in September the same year. After wintering with his regiment at Limerick, he accompanied it to the Low Countries, where it was first engaged at Sandberg, near Hulst, in Dutch Flanders, in April 1747. A military sketch of this affair, and another of the defences of Bergen-op-Zoom, drawn by him, having been submitted by Lord John Murray to the Duke of Cumberland, Bisset was ordered to the latter fortress to prepare reports of the progress of the siege. For his brave and skilful performance of this duty he was recommended by the Duke of Cumberland for the post of engineer-extraordinary in the brigade of engineers attached to the army, in which capacity he served with credit during the remainder of the war. At the peace of 1748 the engineer brigade was broken up, and Bisset was placed on half-pay as a lieutenant of the reduced additional companies of Lord John Murray's Highlanders, under which heading his name appeared in the annual army lists up to his death. After travelling in France he published his 'Theory and Construction of Fortifications,' with plans, 4to (London, 1751). He subsequently reverted to the medical profession, and went into practice at the village of Skelton, near Cleveland, Yorkshire, where he continued during the rest of his life. When war threatened in 1755, he published his 'Treatise on Scurvy, with remarks on Scorbutic Ulcers,' 8vo (dedicated to the lords of the admiralty); and in 1762 he brought out 'An Essay on the Medical Constitution of Great Britain, to which is added Observations on the Weather and the Diseases which appeared during the period from 1st January 1758 to the summer solstice of 1760. Together with an account of the Throat Distemper and Miliary Fever which were epidemic in 1760' (London, 8vo). This work, to which was also appended a paper on the properties of bearsfoot (hellebore) as a vermifuge, was translated into German by J. G. Moeller (Breslau, 1779). In 1766 the university of St. Andrews conferred on Bisset the degree of doctor of medicine, and the same year he published 'Medical Essays and Observations' (Newcastle-on-Tyne, 8vo), of which a German translation by Moeller was published in 1781, and an Italian one about 1790. Bisset wrote several minor works on medical subjects, and is stated to have likewise published a small treatise on naval tactics and some political essays. A manuscript treatise by him on 'Permanent and Temporary Fortifications and the Attack and Defence of Temporary Defensive Works,' which is dedicated to George, prince of Wales, and dated 1778, is preserved in the British Museum (*Add. MS.* 19695). Bisset presented to the Leeds Infirmary a manuscript of observations for his 'Medical Constitution of Great Britain,' extending over 700 pages, all traces of which are now lost (information supplied by Leeds Philosophical Society). A copy of Cullen's 'First Lines of Practice of Physic,' with numerous manuscript notes by him, is preserved in the library of the London Medical Society. An interesting medical correspondence between Drs. Bisset and Lettsom is published in Pettigrew's 'Memoirs and Correspondence of Dr. Lettsom.' Bisset, who is described as thin in person and of weakly habit, had a very extensive country practice in which he amassed an ample fortune. He died at Knayton, near Thirsk, on 14 June 1791, in his seventy-fifth year.

[Gent. Mag. lxi. i. p. 598, ii. p. 965 (particulars stated to be taken from memoranda in possession of Mrs. Bisset); Cannon's Hist. Record 42nd Highlanders; Watts's Cat. Printed Books; Rose's Biog. Dict. vol. iv.; Brit. Mus. Cat.] H. M. C.

BISSET, JAMES (1762?–1832), artist, publisher, and writer of verse, was born in the city of Perth about 1762. He received his early education at a dame's school, where the fee for him and his sister together was a penny a week, with 'a peat for firing every Monday morning during winter.' His love of art and literature received its first impulse from the perusal of several copies of the 'Gentleman's Magazine' and some old books with prints, the whole being purchased in early childhood at an old bookstall for a dollar given him by General Elliot, then on a visit to Perth. From his ninth year he began regularly to take in the magazine by the help of pocket-money supplied by an indulgent uncle. At the age of fifteen he became an artist's apprentice at Birmingham. In the 'Birmingham Directory' of 1785 his name appears as miniature painter, Newmarket, and in that of 1797 as fancy painter, New Street. In the latter premises he established a museum and shop for the sale of curiosities. He was also a coiner of medals, and was permitted to use the designation 'medallist to his majesty.' On the title-page of one of his books he advertises medallions of their majesties and of several leading statesmen, and a medal commemorating the death and victory of Nelson. He had great facility in composing amusing and grandiloquent verses on the topics of the day so as to hit the popular fancy, and, while he obtained a considerable profit from their sale, they served to attract customers to his 'museum' and to advertise his medals. Among his earlier volumes of verse were 'The Orphan Boy,' 'Flights of Fancy,' 'Theatrum Oceani,' 'Songs of Peace,' 1802, and 'The Patriotic Clarion, or Britain's Call to Glory, original Songs written on the threatened Invasion,' 1803. The last was dedicated by permission to the Duke of York, and the presentation copy to George III with Bisset's inscription is in the British Museum. The work, however, by which he will be longest remembered, and one quite unique in its kind, is his 'Poetic Survey round Birmingham, with a Brief Description of the different Curiosities and Manufactures of the place, accompanied with a magnificent Directory, with the names and professions, &c. superbly engraved in emblematic plates,' 1800. From the preface we learn that the charge for engraving single addresses in a general plate in the Directory was ten shillings and sixpence, and for half a plate ten guineas, and that various designs were inserted at one and two guineas each. 'Thus,' it is added with amusing *naïveté*, 'every gentleman had an opportunity of having his address inserted in the work at whatever price he pleased; and by paying for the engraving it has enabled the author to lay a magnificent work before the public for only five shillings, which otherwise would cost nearly fifty.' A second edition of the Directory appeared in 1808, with several additional plates, but without 'The Poetic Survey.' In 1804 he published 'Critical Essays on the Dramatic Essays of the Young Roscius.' In 1813 he removed to Leamington, where he had opened a museum, newsroom, and picture gallery in the preceding year. A 'Picturesque Guide to Leamington,' enlivened by stray scraps of verse, was published by him in 1814; 'Variorum, or Momentary and Miscellaneous Effusions,' 1823; and 'Comic Strictures on Birmingham's Fine Arts and Conversaziones, by an Old Townsman,' 1829. His verses also appeared occasionally in the 'Gentleman's Magazine.' He boasted that he had sold over 100,000 of his different works, and that many had reached the fifteenth and sixteenth editions. He died on 17 Aug. 1832, and was buried at Leamington, where a monument was erected by his friends to his memory. By his enterprise and public spirit he secured himself an honourable place in the annals both of Birmingham and Leamington. Widely known from his superficial eccentricities, he won general esteem by his amiability and good humour, while his social gifts rendered him highly popular among his own friends. In Birmingham he belonged to the Minerva Club, consisting of twelve members, nicknamed 'The Apostles,' whose meetings at the Leicester Arms to discuss political subjects may be regarded as the small beginnings of the political gatherings for which Birmingham is now so famous. A picture of the members was painted by Eckstein, a Prussian artist, to which Bisset, as the oldest surviving member, fell heir. Bisset's collection of pictures, which included several celebrated paintings, as well as some pieces by himself, were sold by auction after his death.

[Gent. Mag. cii. pt. ii. pp. 648–50; Langford's Century of Birmingham Life, ii. 118–22; Dent's Old and New Birmingham, pp. 212–13, 289–92.]

T. F. H.

BISSET, JAMES, D.D. (1795–1872), scholar, was son of George Bisset and Mary Adamson, his wife. He was born 20 April 1795 in the parish of Udny in Aberdeenshire, where his father was parish schoolmaster and head master of a private academy and boarding-school. James was the second son of a numerous family, one of whom became vicar of Pontefract, another incumbent of Upholland in Wigan, and a third attained

the rank of colonel in the East India Company's service. He was well trained by his father, and then proceeded to Marischal College and University, Aberdeen. At the early age of seventeen, in consequence of the death of his father, he was obliged to assume all the responsibilities of school teaching, and of educating his younger brothers and sisters. Like his father he developed remarkable teaching ability, and his private school became celebrated. Many of the local gentry were educated by him, and not a few of his pupils became men of mark, among them being Sir James Outram and Canon Robertson, the ecclesiastical historian. He was aided by very able assistants; Dr. James Melvin, afterwards rector of Aberdeen Grammar School, and Dr. Adam Thom, sometime recorder of Hudson's Bay Company, were both members of his staff. He qualified himself for the ministry of the church of Scotland, studying divinity at Aberdeen and Edinburgh. In 1826 he became minister of the small parish of Bourtrie, Aberdeenshire. The duties of his limited parochial charge left him leisure to continue his philological studies, as well as to educate his children. He was twice married: (1) in 1829 to Mary Bannerman, eldest daughter of Rev. Robert Sessel of Inverurie; (2) in 1840 to Elizabeth Sinclair, daughter of Rev. William Smith of Bowes. He had issue by both. In 1851 the degree of D.D. was conferred upon him by the university of Aberdeen.

Bisset became an ardent politician on what was designated the 'constitutional side,' and ecclesiastically was a prominent figure in the prolonged conflict within and without the church courts which terminated in the founding of the free church of Scotland. Bisset did not support the secession headed by Chalmers and Candlish and Guthrie. In 1862 he was chosen moderator of the general assembly of the church of Scotland. His repute as a scholar was unsustained by any publication of permanent value. He died on 8 Sept. 1872.

[Obituary notices; letters from son and son-in-law and other members of the family.] A. B. G.

BISSET, Sir JOHN (1777–1854), commissary-general, served in the commissariat at home from 1795 to 1800, in Germany from May 1800 to June 1802, at home from 1802 to 1806, in South America in 1806–7, and at the Scheldt in 1809. He was appointed commissary-general in Spain in 1811, and had charge of the commissariat of the Duke of Wellington's army at one of the most important periods of the Peninsular war, before and after the battle of Salamanca. Bisset, who was made a knight-bachelor and knight-commander of the Guelphic order in 1830, was the author of a small work entitled 'Memoranda regarding the Duties of the Commissariat on Field Service abroad' (London, 1846). He was made K.C.B. in 1850. He died at Perth, N.B., on 3 April 1854.

[War Office Records; Report Select Comm. on Army and Ordnance Expenditure (Commissariat), 1850; Perth Advertiser, April 1854.] H. M. C.

BISSET, BISSAT, or BISSART, PETER (*d.* 1568), professor of canon law in the university of Bologna, Italy, was a native of the county of Fife, and a descendant by a previous marriage of Sir Thomas Bisset, who after his marriage with the Countess Isabel, daughter and heiress of Duncan MacDuff, earl of Fife, received a charter from David II granting him the earldom, but left no issue by her. After completing his studies in grammar and philosophy at the university of St. Andrews, Bisset attended the classes of law at the university of Paris. Proceeding to Italy he received the degree of LL.D. from the university of Bologna, where he afterwards became professor of civil law. Tanner (*Bibliotheca Britannico-Hibernica*, 102), on the authority of Dempster (*Historia Ecclesiastica Gentis Scotorum*, ii. 95), states that he flourished in 1401, a palpable error. He assigns to him, also on the authority of Dempster, 'De Irregularitate liber unus,' and 'Lectiones Seriales liber unus,' and to a Petrus Bizarrus, who flourished in 1565, 'Orationes aliquot et poemata.' This Petrus Bizarrus he conjectures to have been possibly identical with Pietro Bizari [q.v.], called also Petrus Perusinus, but in reality Bizarrus here is a misspelt form of Bissartus, and Peter Bisset, the author of 'De Irregularitate,' is identical with the author of 'Orationes aliquot et Poemata.' Both works were included in the volume entitled 'Patricii Bissarti Opera omnia, viz. Poemata, Orationes, Lectiones Seriales, et Liber de Irregularitate,' published at Venice in 1565. Bisset died in the latter part of 1568.

[Dempster's Historia Ecclesiastica Gentis Scotorum, ii. 95; Tanner's Bibl. Brit. 102; Mackenzie's Lives of Scottish Writers, iii. 99, 101; Chambers's Biog. Dict. of Eminent Scotsmen, i. 129; Notes and Queries, 5th series, vi. 389–90.] T. F. H.

BISSET, ROBERT, LL.D. (1759–1805), biographer and historian, born in 1759, was master of an academy in Sloane Street, Chelsea. He published, in 1796, a 'Sketch

of Democracy,' 8vo, the aim of which was to show, by a survey of the democratic states of ancient times, that democracy is a vicious form of government. His next work was a 'Life of Edmund Burke, comprehending an impartial account of his Literary and Poetical Efforts, and a Sketch of the Conduct and Character of his most eminent Associates, Coadjutors, and Opponents,' 1798, 8vo. In 1800 he published a novel, entitled 'Douglas, or the Highlander,' 4 vols. 12mo. Another novel, entitled 'Modern Literature,' 3 vols, 12mo, appeared in 1804; and in the same year he published his 'History of George III to the Termination of the late War,' in six volumes, 8vo. He died in 1805, and his death is said to have been caused by 'chagrin under embarrassed circumstances.' An edition of the 'Spectator,' in eight volumes, was edited by Bisset in 1796. Two anonymous tracts in the library of the British Museum, (1) 'A Defence of the Slave Trade,' 1804, 8vo, (2) 'Essays on the Negro Slave Trade,' 8vo (1805 ?), are attributed, in manuscript notes on the title-pages, to Bisset.

A. H. B.

BISSET, WILLIAM (*d.* 1747), clergyman and pamphleteer, was a native of Middlesex. His father was, he says, a royalist, but was not rewarded for his devotion to the crown. After passing some years as a scholar of Westminster, he went in 1687 to Trinity College, Cambridge, where he took his B.A. degree in 1690. Having taken orders, he was for some time in charge of the parish of Iver. While there he married a wife who brought him some money. On this he set up a coach, which gave his enemies occasion to make many sneers at his foolish ostentation in the pamphlet war he afterwards engaged in. He defended himself by declaring that he bought this 'leathern conveniency' in order to enable himself to fulfil an engagement to preach three times a week in a neighbouring parish. During this period of his life he appears to have been industrious in his clerical work. He became rector of Whiston in 1697. Having been elected elder brother of St. Catherine's Collegiate Church in 1699, he resided much in London, leaving his wife and children at Whiston. As a low churchman and a whig he was much offended at Dr. Sacheverell's sermon at St. Paul's on 5 Nov. 1709, and at once preached and published a reply to it. He followed up this attack by a pamphlet entitled 'The Modern Fanatick,' which appeared in 1710. This pamphlet called forth many replies, and among them one by Dr. W. King. A second part of 'The Modern Fanatick' appeared in Feb. 1711, and a third in May 1714. Cole, in his manuscript 'Athenæ Cantabrigienses,' says that he was 'almost a madman:' the character of the pamphlets put forth by both sides in this controversy is little proof of the sanity of any of the parties concerned in it. Bisset was the champion of an unpopular cause. He fought with courage, and bad as his weapons were, they were of much the same kind as those used against him. There is no reason to doubt the truth of his assertion that he was constantly mobbed and insulted, especially by Sacheverell's 'female proselytes.' He also declares that his life was attempted three times. He deserves credit for having raised an indignant protest against the cruel floggings then often inflicted on soldiers. A revolting and probably exaggerated account of the flogging of a man and his wife is given in the collective edition of the 'Fanatick' tracts. He was made chaplain to Queen Caroline. He died 7 Nov. 1747 (*Gent. Mag.*) He published: 1. 'Verses on the Revolution,' 1689, in poems of Cambridge scholars. 2. 'Plain English, a Sermon for the Reformation of Manners,' 8vo, 1704, which reached a sixth edition. 3. 'More Plain English, two more Sermons for,' &c., 1704. 4. 'Remarks on Dr. Sacheverell's Sermon at St. Paul's,' 4to, 1709. 5. 'Fair Warning, or a Taste of French Government at Home,' 1710. 6. 'The Modern Fanatick, with a Large and True Account of the Life, Actions, Endowments, &c., of Dr. S——l,' 8vo, 1710. 7. 'The Modern Fanatick, pt. ii., containing what is Necessary to clear all Matters of Fact, &c., with a Postscript,' 1711. 8. 'The Modern Fanatick, pt. iii., being a further Account of the famous Doctor and his Brother of like renown, with a Postscript,' 1714. In the collective edition of these pamphlets part i. is stated to be the eleventh edition: it is a reprint, with the correction of a few typographical errors, from the first edition; it was reprinted as a twelfth edition in 1715. 9. 'A Funeral Sermon on Mrs. Catesby,' 1727. 10. 'Verses composed for the Birthday of Queen Caroline,' fol., 1728.

[The Modern Fanatick, 1710-14; Vindication of the Rev. Dr. H. S. from the False, &c.; Cole's Athenæ, B. 145; Addit. MSS.; Welch's Alumni Westmon. 209; Nichols's Lit. Anecd. i. 32.]
W. H.

BISSET, WILLIAM, D.D. (1758–1834), Irish bishop, was a member of the ancient family of Bisset of Lessendrum, Drumblade,

near Huntly, in Aberdeenshire. His father was the Rev. Alexander Bisset, D.D., chancellor of Armagh, who died in 1782. William Bisset, who was born 27 Oct. 1758, was, like his father, educated at Westminster, where he was admitted a king's scholar in 1771, and at Christ Church, Oxford, to which he was elected a scholar in 1775, and where he took his degree of B.A. 4 Nov. 1779, and proceeded M.A. 7 Feb. 1782 (*Cat. Oxford Graduates*). He was presented in 1784 to the rectory of Dunbin, in the county of Louth, which he resigned upon his collation, 31 Jan. 1791, to the prebend of Loughgall, or Levalleaglish, in the cathedral church of Armagh. In 1794 he became rector of Clonmore, and in 1804 was collated, 29 Sept., to the archdeaconry of Ross, in what had been, since 1583, the united episcopate of Cork, Cloyne, and Ross. In 1807 he resigned his prebendal stall of Loughgall in order to become rector of Donoghmore, and was appointed, 1812, to the rectory of Loughgilly. All his preferments, with the exception of the archdeaconry of Ross, were within the diocese of Armagh. A few years afterwards he was appointed to the chancellorship of Armagh, to which he was collated on 23 August 1817, thus succeeding his father after an interval of twenty-five years. As his final preferment, Bisset was promoted by the Marquis of Wellesley, lord-lieutenant of Ireland, 1821–1828, to the bishopric of Raphoe. His patent was dated 25 June 1822. He administered the affairs of the diocese with general approval. On the death of Dr. Magee, archbishop of Dublin, 19 Aug. 1831, Bisset was pressed to become his successor, but he declined on the ground of increasing infirmities. He built several churches in his diocese, and expended a considerable sum of money on the improvement of the palace at Raphoe; and when the parliamentary grant was withdrawn from the Association for discountenancing Vice, his lordship supplied the loss. Bisset died 5 Sept. 1834, whilst on a visit to his nephew at Lessendrum. His clergy erected to his memory a monument in the cathedral, with an inscription by W. Archer Butler. At his death the see of Raphoe became annexed to that of Derry. The authorship of a 'Life of Edmund Burke,' London, 1798, was erroneously claimed for him, the real author being Robert Bisset, LL.D. [q. v.]

BIX, ANGEL (*d.* 1695), Franciscan friar, after filling the office of confessor to the Poor Clares at Aire, and to the community at Princenhoff, Bruges, was sent to England, and became chaplain to the Spanish ambassador in London in the reign of James II. He died early in 1695 whilst guardian of his order at York. Bix preached 'A Sermon on the Passion of our Lord and Saviour Jesus Christ. Preach'd before her majesty the queen-dowager in her chapel at Somerset House, upon Good Friday, 13 April 1688;' published by royal authority, London, 1688, 4to, and reprinted in 'A Select Collection of Catholick Sermons,' 2 vols., London, 1741.

BIZARI, PIETRO (1530?–1586?), an Italian historian and poet, long resident in England, was born at Sassoferrato in Umbria, or, according to some writers, at Perugia, whence he is sometimes called Petrus Perusinus. When young he went to Venice, but having adopted the reformed faith he left that city for England. He describes himself as 'an exile from Italy, his native country, by reason of his confession of the doctrine of the gospel' (*Original Letters relative to the English Reformation*, ed. Robinson [Parker Soc.], 339). He was patronised by the Earl of Bedford, and on 4 July 1549 was admitted a fellow of St. John's College, Cambridge, by the royal commissioners for the visitation of the university, being incorporated there in the same degree which he had taken 'in partibus transmarinis' (Baker, *Hist. of St. John's College*, ed. Mayor, i. 285 *n*). It does not appear how he disposed of himself during the reign of Queen Mary. If he left England he returned in the reign of Elizabeth, for in 1567 Bishop Jewel, at the instance of Archbishop Parker, gave him the prebend of Alton Pancras in the church of Sarum, worth 20*l.* a year (Strype, *Life of Abp. Parker*, 255 fol.) Failing in his expectations of receiving church preferment in this country, he obtained, in 1570, a license from secretary Cecil to go abroad, partly for the purpose of printing his own works, and partly to collect news of foreign affairs for the English government. He passed some time at Genoa, though at what precise period it is difficult to determine, for he appears to have led a very migratory life on the continent, and the various statements which have been made respecting his place of abode cannot be easily reconciled with one another. Passing to Germany he

obtained, through the influence of the celebrated Hubert Languet, some employment from the elector of Saxony. On 20 Oct. 1573 he addressed from Augsburg a letter in Italian to Lord Burghley, containing several items of intelligence, chiefly relating to affairs at Rome (*MS. Cotton.* Titus B. ii. f. 386). Writing to Sir Philip Sidney from Vienna on 19 Nov. 1573, Hubert Languet says: 'I send you an epistle of Pietro Bizarro of Perugia, that you may have before your eyes his surpassing eloquence and make it your model. You will now perceive how unwisely you English acted in not appreciating all this excellence and not treating it with the respect it deserves. You judged yourselves unworthy of immortality, which he surely would have bestowed on you by his eloquence if you had known how to use the fortunate opportunity of earning the good will of such a man' (*Correspondence of Sidney and Languet*, 2). Soon after this Bizari went to Antwerp, where he formed an intimacy with the scholars who frequented the house of Christopher Plantin (*MS. Sloan.* 2764, f. 44). A letter of Justus Lipsius informs us that in 1581 Bizari, on passing through Leyden, left with him the manuscript of a 'Universal History' in eight volumes, with a request that he would seek for a publisher who would undertake to bring it out at his own expense (Burmann, *Sylloge Epistolarum*, i. 258, 259). Bizari was at Antwerp in December 1583. On 23 Nov. 1586 he addressed a Latin letter from the Hague to Lord Burghley, wherein he gives a detailed and interesting account of his literary labours, and alludes to certain verses which he had lately printed (Strype, *Annals*, iii. 448, fol.) Neither the place nor the time of his death appears to be recorded.

His works are: 1. 'Varia Opuscula,' Venice (Aldus), 1565, 8vo. Dedicated to Queen Elizabeth. This work is divided into two parts. The first comprises declamations in the manner of the ancient rhetoricians—'De optimo principe,' 'De bello et pace,' 'Pro philosophia et eloquentia,' 'Æmilii accusatio et defensio,' 'Pro L. Virginio contra Ap. Claudium.' The second part consists of poems, several of which are reprinted in Gherus's 'Delitiæ 200 Italorum Poetarum,' 236, and in 'Carmina illust. Poetarum Italicorum,' ii. 250. Wiffen, in his memoirs of the house of Russell, has given English metrical versions of two short poems addressed to members of that family. 2. 'Historia della guerra fatta in Ungheria dall' inuittissimo Imperatore de' Christiani, contra quello de' Turchi: con la Narratione di tutte quelle cose che sono auuenute in Europa, dall' anno 1564, insino all' anno 1568,' Lyons, 1568, 8vo, and, with a slightly different title, 1569. A Latin translation by the author himself was printed under the title of 'Pannonicum Bellum, sub Maximiliano II Rom. et Solymano Turcarum Imperatoribus gestum: cumque Arcis Sigethi expugnatione, iam pridem magna cura et studio descriptum. Vnà cum Epitome illarum rerum quæ in Europa insigniores gestæ sunt: et præsertim de Belgarum motibus, ab anno LXIIII usque ad LXXIII,' Basle, 1573, 8vo. The first treatise in this volume is included by Jacques Bongars in his 'Rerum Hungaricarum Scriptores varii,' Frankfort, 1600, and by Matthew Bell in his reprint, Vienna, 1746. 3. 'Cyprium Bellum inter Venetos et Selymum, Turcarum imperatorem, gestum,' Basle, 1573, 8vo. A French translation appeared with this title: 'Histoire de la Guerre qui s'est passée entre les Venitiens et la saincte Ligue contre les Turcs, pour l'Isle de Cypre, ès années 1570, 1571, & 1572, mise en Francoys par F. de Belleforest,' Paris, 1573, 8vo. 4. 'Senatus Populiq. Geneuensis Rerum domi, forisque, gestarum Historiæ atque Annales: cum luculenta variarum rerum cognitione dignissimarum, quæ diversis temporibus, & potissimùm hac nostra tempestate contigerunt, enarratione,' Antwerp, 1579, fol. Grævius has printed two pieces from this work in the first volume of his 'Thesaurus Antiquitat. Italicar.' 5. 'Rerum Persicarum historia, initia gentis, resque gestas ad hæc usque tempora complectens: accedunt varia opuscula diversorum scriptorum ad historiam Persicam recentiorem spectantia,' Antwerp, 1583, fol.; Frankfort, 1601, fol. The Frankfort edition contains some opuscula not to be found in the other. 6. Universal History. MS. in 8 vols. 7. 'De Principe tractatus; ad reginam Elizabetham,' Royal MS. in Brit. Mus. 12 A, 48. This differs slightly from the printed treatise 'De optimo principe' in the 'Varia Opuscula.' The dedication of the manuscript is dated 5 Dec. 1561. Bizari also brought out a new edition of 'La Santa Comedia' of Mario Cardoini, Venice, 1566, 8vo.

[Lamb's Cambridge Documents, 119; Saxius, Onomasticon Literarium, iii. 413, 414; Murdin's State Papers, 287; Tanner's Bibl. Brit. 595; MS. Addit. 5864, f. 38; MS. BLAAUW, WILLIAM HENRY (1793–1870), antiquary, was born in London 25 May 1793. He was educated at Eton and Christ Church, Oxford, where, after taking a first class in classics, he graduated B.A. in 1813, and M.A. in 1815. He was elected a fellow of the Society of Antiquaries in 1850; was treasurer of the Camden Society for many years, and member of many other learned societies. Blaauw resided at Newick, near Lewes, Sussex, and under his guidance the Sussex Archæological Society was founded in 1846. He was the editor of the society's collections till 1856, when the eighth volume was issued, and was its honorary secretary until 1867. He died 26 April 1870.

Blaauw's chief work was a history of the barons' war of Henry III's reign, which was first published in 1844. It is a very careful production, is especially valuable in its topographical details, and forms the chief modern authority on its subject. Its author was engaged at the time of his death in preparing a revised edition, and this was issued under Mr. C. H. Pearson's editorship in 1871. Between 1846 and 1861 Blaauw contributed nearly thirty papers on Sussex archæology to the 'Sussex Archæological Collections.' He communicated a paper on Queen Matilda and her daughter to the 'Archæologia' (xxxii. 108) in 1846, and he exhibited many archæological treasures at meetings of the Society of Antiquaries and of the Archæological Institute in London. A portrait of Blaauw is prefixed to vol. xxii. of the 'Sussex Archæological Collections.'

[Sussex Archæological Collections, xxii. 9–11; index to vols. i.–xxv. supplies list of Blaauw's papers.] S. L.

BLACADER or BLACKADER, ROBERT (*d.* 1508), archbishop of Glasgow, was son of Sir Robert Blacader of Blackader, co. Berwick. His brother, Sir Patrick Blackader, of Tulliallan, married Elizabeth, daughter and coheiress of Sir James Edmestone. Robert is first mentioned as prebendary of Glasgow and rector of Cardross. On 23 June 1480 he sat among the lords of council as bishop elect of Aberdeen. He was translated to the see of Glasgow previously to February 1484. The see was erected into an archbishopric 9 Jan. 1492. A bitter rivalry ensued between him and the archbishop of St. Andrews, and the estates had to intervene to silence their quarrels. Archbishop Blacader was frequently employed in the public transactions with the English, especially in 1505. Along with the Earl of Bothwell and Andrew Foreman, prior of Pittenweem, he negotiated a marriage between King James IV and Margaret, eldest daughter of Henry VII. In 1494 the archbishop sent up thirty persons from the district of Kyle, in Ayrshire, who had been convicted of the Lollard heresy by the ecclesiastical judicatories, for punishment by the civil power; but nothing further was done in the matter. He died 8 July 1508 (*Regist. Episcop. Glasg.* ii. 616). According to Knox (*Works*, i. 12) and Bishop Lesley (*Hist.* ed. 1830, p. 78), the latter of whom gives the date of his death as 26 July, he died in the Holy Land, during a pilgrimage to Jerusalem. The Venetian, Maria Sanuto, describes in his diary the reception by the doge of Venice of the 'rich Scottish bishop,' who arrived there in May 1508 on his way to Jerusalem. This diary also states that the 'rich bishop' was one of twenty-seven pilgrims who died on the return voyage to Venice (cf. DAVID LAING in *Proc. Scottish Soc. Antiq.* ii. 222).

[Keith's Scottish Bishops, ed. 1824, pp. 254–5; Gordon's Eccles. Chron. of Scotland, ii. 512–4; Knox's Works, ed. Laing, i. 7, 10, 12, vi. 663–4.] T. F. H.

BLACATER, ADAM (*fl.* 1319), was descended from a family of good position in Scotland, and after studying at several universities on the continent became successively professor of philosophy at Cracow in Poland, professor of the same subject at Bologna, and rector of one of the colleges of the university of Paris. He wrote 'Dissertatio pro Alexandro M. contra T. Livii locum ex decade i. lib. ix.,' which was published at Lyons.

[Dempster's Hist. Eccles. Scot. Gent. (1627), 124; Tanner's Bibl. Brit. 102; Mackenzie's Scottish Writers, i. 420–2.]

BLACHFORD, LORD. [See ROGERS, FREDERIC, 1811–1889.]

BLACK, ADAM (1784–1874), politician and publisher, was the son of a builder in Edinburgh, and was born 20 Feb. 1784 in Charles Street, a few doors from the birthplace of Lord Jeffrey. He was educated at the High School of Edinburgh, and during one session attended the Greek class at the university. After serving an apprenticeship of five years to a bookseller in Edinburgh, he went to London, where he was for two years assistant in the house of Lackington, Allen, and Co., the 'Temple of the Muses,' Finsbury. In 1808 he returned to Edinburgh, where, after carrying on a bookselling business for

some years in his own name, he took his nephew into partnership, and established the house of Adam and Charles Black. On the failure of Archibald Constable & Co. in 1827 the firm acquired the copyright of the 'Encyclopædia Britannica,' the seventh and eighth editions of this important work being undertaken while he was head of the firm. In 1851 they purchased from the representatives of Mr. Cadell, for 27,000*l.*, the copyright of Sir Walter Scott's Waverley novels and other works, which they immediately began to issue in editions suited to all classes of the community with remarkable success.

Very soon after he settled in Edinburgh he began, at considerable risk to his business prospects, to take a prominent part in burgh and general politics as a liberal politician. As a member of the Merchant Company, of which he was elected master in 1831, his energetic advocacy of a thoroughgoing measure of burgh reform was of great assistance in hastening the downfall of close corporations, and in regard to the Corporations and Test Acts his procedure was equally uncompromising. Having become a member of the first town council of Edinburgh after the passing of the Reform Bill in 1832, he was chosen treasurer of the city at the time of its liquidation, and materially assisted in arranging its affairs. He was twice elected lord provost, and on account of his successful administration of the affairs of the city at this critical period, 1843-8, received the offer of knighthood, which he declined. In all prominent public schemes connected with the city he took an active interest, and on the foundation of the well-known Philosophical Institution in 1845 was elected its first president. He was instrumental in introducing Macaulay to the electors of Edinburgh, and, when the latter was elevated to the peerage in 1856, succeeded him as member for the city, which he continued to represent till 1865. His practical shrewdness and straightforward honesty secured him the special confidence of the leaders of the liberal party in parliament, by whom he was much consulted in matters relating to Scotland. He died in Edinburgh, in his ninetieth year, 24 Jan. 1874. By his wife, the sister of William Tait, of 'Tait's Magazine,' he left issue, and he was succeeded by his sons in the business of A. & C. Black. In recognition of his services to Edinburgh a bronze statue was in 1877 erected to his memory in East Prince's Street Gardens.

[Scotsman, 26 Jan. 1874; Men of the Time, 8th ed.; Crombie's Modern Athenians, ed. Scott Douglas (1882), pp. 179-83; Trevelyan's Life of Lord Macaulay; Nicolson's Memoirs of Adam Black (1885).] T. F. H.

BLACK, ALEXANDER, D.D. (1789-1864), Scottish theologian, was born in Aberdeen in 1789, where his father, John Black, owned a few fields and carried on the business of a gardener. He was educated at the grammar school and Marischal College, and after studying medicine devoted himself to preparation for the ministry. His abilities and application to study were so remarkable that, when a vacancy occurred in the chair of divinity in King's College, Aberdeen, he offered himself as a candidate, and went through the examinations prescribed to the applicants. His fellow-candidates were the late Dr. Mearns, then minister of Tarves, who was successful, and the late Dr. Love, of Glasgow. Young Black, though unsuccessful, attracted the attention of the Earl of Aberdeen, who on the promotion of Dr. Mearns to the chair presented him to the parish of Tarves, and there Black was ordained in 1818. From Tarves Black was transferred to Aberdeen in 1832 as professor of divinity in Marischal College. His great powers as a linguist and his very large and particular acquaintance with rabbinical literature caused him to be selected in 1839 by a committee of the general assembly, along with the Rev. Dr. Keith, St. Cyrus, Rev. R. M. McCheyne, Dundee, and Rev. A. A. Bonar, Collace, to go to the East to make inquiries as to the expediency of beginning a mission to the Jews. After a good many difficulties and trials Black and his brethren returned to Scotland, and an interesting report of their mission was presented to the general assembly. At the disruption in 1843, joining the Free church, he gave up his chair at Aberdeen and removed to Edinburgh, where he was connected with the New College. Referring to the linguistic powers of Black and his colleague, Dr. John Duncan (*Colloquia Peripatetica*), Dr. Guthrie used to say that 'they could speak their way to the wall of China;' yet no corresponding products of their learning were given to the public. Black published a 'Letter on the Exegetical Study of the Scriptures to the Moderator of the General Assembly of the Free Church.' He also contributed a discourse to the volume on the 'Inauguration of the New College.' He died at Edinburgh in January 1864.

BLACK, JAMES (1788?-1867), physician, was born in Scotland about 1788. He was admitted a licentiate of the Edinburgh

College of Surgeons in 1808, and then entered the royal navy. At the end of the war he retired on half-pay and began practice at Newton Stewart, but shortly afterwards removed to Bolton, where he resided until 1839. From that date to 1848 he practised at Manchester, and again at Bolton until 1856. He eventually removed to Edinburgh, where he died on 30 April 1867, aged 79. Dr. Black was an M.D. of Glasgow, 1820; a licentiate of the Royal College of Surgeons, 1823; and F.R.C.P., 1860. He was for some time physician to the Bolton Infirmary and Dispensary, and to the Manchester Union Hospital; president of the British Medical Association, 1842; and of the Manchester Geological Society. His contributions to medical literature include: 1. 'An Inquiry into the Capillary Circulation of the Blood and the intimate Nature of Inflammation,' London, 1825, 8vo. 2. 'A Comparative View of the more intimate Nature of Fever,' London, 1826, 8vo. 3. 'A Manual of the Bowels and the Treatment of their principal Disorders,' London, 1840, 12mo. 4. 'Retrospective Address in Medicine,' 1842. 5. 'Observations and Instructions on Cold and Warm Bathing,' Manchester, 1846, 8vo. Dr. Black published several papers on geological subjects, and communicated to the Literary and Philosophical Society of Manchester 'Some Remarks on the Seteïa and Belisama of Ptolemy, and on the Roman Garrison of Mancunium' (2nd edition, Edinburgh, 1856, 8vo). In 1837 he published a paper of 100 pages in the 'Transactions of the Provincial Medical and Surgical Association,' entitled 'A Medico-Topographical, Geological, and Statistical Sketch of Bolton and its Neighbourhood.' On the establishment of a free library in Bolton, Dr. Black was chosen as a member of the committee, and he published 'A few Words in aid of Literature and Science, on the occasion of opening the Public Library, Bolton,' 1853.

BLACK, JOHN (1783–1855), journalist, editor of the 'Morning Chronicle,' was born in a poor cottage on the farm called Burnhouses, four miles north of Dunse in Berwickshire. His father, Ebenezer Black, had been a pedlar in Perthshire, of the stamp of Wordsworth's hero in the 'Excursion.' In the decline of life he accepted employment at Burnhouses, and married Janet Gray, another worker on the farm. Four years afterwards Janet was left a widow with one daughter and a son, John, and before the latter had reached his twelfth year mother and sister died. The orphan was sheltered and fed by his mother's brother, John Gray, a labourer on the same farm, who sent him to the parish school at Dunse, four miles off. Black gained at Dunse a knowledge of English, Latin, and Greek. He became the friend of James Gray, scholar, poet, and missionary, of Adam Dickenson, of James Cleghorn, of Jock M'Crie, brother of the biographer of Knox, and others. At the age of thirteen Black was articled by his uncle to Mr. Turnbull, a writer of Dunse, with whom he remained four years. During this time he read all the books of the subscription library in the town, and formed a very creditable collection of his own. He accepted a well-paid clerkship in the branch bank of the British Linen Company, but was obliged to leave the town on account of a practical joke played upon one of the 'respectabilities.'

Black found a situation in Edinburgh in the office of Mr. Selkrig, an accountant, who, in addition to an adequate salary, allowed his clerk time to attend classes at the university. His official duties were strictly performed, his attendance in the lecture-rooms never failed, and he undertook any remunerative work that offered, notably some translations from the German for Sir David Brewster's 'Edinburgh Cyclopædia.' He met with an intellectual companion in William Mudford, the son of a London shopkeeper. 'Cobbett's Political Register' was then a popular serial, and there Black and Mudford engaged in another 'battle of the books,' the former defending ancient classical study, the latter insisting on the acquisition of modern learning as better. 'Doctor Black, the feel-osopher,' seemed to be at a rather later time Cobbett's favourite aversion.

In Edinburgh Black is reported to have delivered a dozen challenges before he was thirty years old. His schoolfellow James Gray was now classical master at Edinburgh High School, and exercised a moderating influence upon him. In 1809 he was in the way of making a happy marriage with a lady from Carlisle, but the engagement was broken off by him because he was disappointed of an expected increase of income. The failure of this engagement seems to have had a demoralising effect upon Black. He fell into the coarse indulgences of low dissipation, quarrelled with his employer, from whom he was receiving a salary of 150*l.* a year, and distressed his best friends. His friend

Mudford was then in London and editor of a 'Universal Magazine,' to which Black contributed articles on the Italian drama and on German literature in 1807–8–9.

By Mudford's persuasion he left Edinburgh for London in 1810. Dr. C. Mackay gives as a doubtful statement of Black himself, that he walked with a few pence in his pocket all the way from Berwickshire to London, subsisting on the hospitality of farmers. He carried a letter of introduction to Mr. Cromek, engraver and publisher, who received him at once into his friendly home. Three months after his arrival in London he was engaged as a reporter by James Perry, an Aberdonian, who, with another Scotsman named Gray, had in 1789 become proprietors of the 'Morning Chronicle.' Besides reporting Black had to translate the foreign correspondence. As a reporter he was considered to be very rapid, but Mr. Proby, the manager of the paper, used to say that Black's principal merit consisted in the celerity with which he made his way from the House of Commons to the Strand. He was already, in 1810, engaged in translating into English 'Humboldt's Political Essay on New Spain,' which was published in four volumes (1811–12). In 1813 Black completed the translation of a quarto volume of 'Travels in Norway and Lapland, by Leopold von Buch,' and, in 1814, 'Berzelius on a System of Mineralogy.' In 1814 he translated 'Schlegel's Lectures on Dramatic Literature,' and the 'Memoirs of Goldoni.'

At the house of one of his London friends Black was introduced, in the autumn of 1812, to his friend's mistress, who was not averse to a marriage which her old lover seemed anxious to promote. Black fell into the snare, and five days later, in the month of December 1812, they were married. The union was a most unhappy one. His wife made no pretence of love for him. In the space of two months she had involved him in debt, sold some of his furniture, and clandestinely renewed acquaintance with her former lover. Black bore patiently with her whims. Before the beginning of March 1813 she left him altogether, and Black knew how much she and their common friend had befooled him. He challenged the betrayer. But the spell was not broken. His wife had only to write him a penitent letter to obtain from him the money supplies she demanded. In 1814, however, he sought a divorce. An arrangement was made that the wife should go to Scotland and be domiciled there long enough to sue for a divorce on *her* petition. The project, however, failed, the proof of domicile of both parties not being deemed adequate by the court. Black, in full expectation of a divorce, had offered marriage to an old friend, who became his housekeeper and bore the name of Mrs. Black. The undivorced wife did not fail to extract money from her husband. This pertinacious persecution went on for many years.

This episode in Black's career explains the disorganisation of his official labours which led to a quarrel with Mr. Perry. Due explanation being given the breach was healed. In 1817 Mr. Perry's health was giving way, and the functions of editor gradually devolved on Black.

The 'Morning Chronicle' was the most uncompromising of all the opposition papers, and Black maintained its position, being much assisted by the counsels of Mr. James Mill. At one time there was scarcely a day that they did not walk together from the India House giving and receiving political inspiration. John Stuart Mill wrote of Black: 'He played a really important part in the progress of English opinion for a number of years which was not properly recognised. I have always considered Black as the first journalist who carried criticism and the spirit of reform into the details of English institutions. Those who are not old enough to remember those times can hardly believe what the state of public discussion then was. People now and then attacked the constitution and the boroughmongers, but no one thought of censuring the law or the courts of justice, and to say a word against the unpaid magistracy was a sort of blasphemy. Black was the writer who carried the warfare into these subjects, and by doing so he broke the spell. Very early in his editorship he fought a great battle for the freedom of reporting preliminary investigations in the police courts. He carried his point, and the victory was permanent. Another subject on which his writings were of the greatest service was the freedom of the press on matters of religion. All these subjects were Black's own' (*Private Letter*, 1869). At the outset of his editorial career he attracted much public attention by his determined condemnation of the authorities in their conduct at Manchester in the affair long known as the Peterloo massacre (16 Aug. 1819). In the matter of the queen's trial the 'Chronicle' leaned to the unpopular side, deeming her majesty guilty, and the circulation of the paper was greatly diminished.

In 1821 Mr. Perry died, and his executors sold for 42,000*l.* the newspaper which thirty years before had been bought for 150*l.* Black retained his post of editor, but the new proprietor, Mr. Clement, owner also of the 'Ob-

server' and of 'Bell's Life,' had not the public spirit of his predecessor, and the paper began to decline in a commercial sense. In 1834 it was again sold for the sum of 16,500*l.* to Sir John Easthope and two partners. The 'Times' had distanced the 'Chronicle,' when, by a sudden change in its politics in 1835, it caused numbers of its whig subscribers to abandon it and support the 'Chronicle.' Black was so elated by this turn of fortune that he exclaimed, 'Now our readers will follow me anywhere I like to lead them!'

In 1835 Black fought a duel with John Arthur Roebuck. The latter had published a pamphlet in which cowardice was attributed to the editor of the 'Chronicle.' A meeting took place at which the principals fired twice, and the seconds nearly engaged in mortal combat.

When Lord Melbourne returned to office (8 April 1835) he found a useful ally and a congenial companion in Black. A story is told of the prime minister having vowed he would make Black a bishop on an occasion when he was foiled of his intention to confer that dignity on Sydney Smith. Black supported the ministry with all his powers, and wrote some specially vigorous articles against Sir Robert Peel in 1839. Melbourne during his next administration professed a desire to serve Black, who declined the offer on the ground that he 'lived happily on his income.' 'Then by —— I envy you,' said the peer, 'and you're the only man I ever did.' With Lord Palmerston he did not get on quite so well. He once vexed the soul of the busy foreign secretary by launching out into half an hour's dissertation on the ethnological peculiarities of the yellow-haired races of Finland, when the business of the interview was simply to know what the government meant to do at a certain crisis in foreign affairs. Lord Brougham was very intimate with 'Dear Doctor,' as he styled Black, a title derisively applied by Cobbett, and not agreeable to Black's ears. It was Black's great pleasure to encourage the budding talents of the young writers around him, and among others that of Charles Dickens, who began his literary career as a reporter for the 'Chronicle.' Latterly there was thought to be a decline of energy in the management of the paper, and Black, in 1843, received an intimation that his resignation would be accepted. Black, who was now sixty years old, had saved no money, and had to part with his beloved books, some 30,000 volumes. Friends and admirers rallied round him, and a sum, to which the proprietors of the 'Chronicle' contributed, was raised sufficient to buy him an annuity of 150*l.* His old friend Mr. Walter Coulson placed a comfortable cottage at Snodland, near Maidstone, at his disposal, and there Black passed the remaining twelve years of his life in the study of his favourite Greek, chiefly the Septuagint version of the Scriptures, and in the assiduous practice of gardening. Black's Newfoundland dogs, Cato and Plutus, were as well known as himself. One of them rescued from the Thames a boy who subsequently attained a seat on the judicial bench. Mr. James Grant describes Black in his latter years as having 'the blunt and bluff appearance of a thickset farmer . . . never seen in the streets without being accompanied by a large mastiff (? Newfoundland), and a robust stick in his hand.' He died 15 June 1855.

[Hunt's Fourth Estate; Mackay's Forty Years' Recollections; Grant's Newspaper Press; Black's Private Papers.] R. H.

BLACK, JOSEPH, M.D. (1728–1799), an eminent chemist, was born in 1728 at Bordeaux, where his father, John Black, carried on the business of a wine-merchant. John Black was a native of Belfast, but of Scottish extraction, and married a daughter of Robert Gordon, of the Gordons of Hillhead in Aberdeenshire, like himself engaged in the Bordeaux wine trade, by whom he had eight sons and five daughters. The worth of his sterling character and well-informed mind obtained for him the friendship of Montesquieu. At the age of twelve Joseph Black was placed at a grammar school in Belfast, and in 1746 proceeded thence to the university of Glasgow. There he chose medicine as his profession, and became enamoured of chemistry through the teachings of William Cullen, the first in Great Britain to raise the science to its true dignity. Cullen noted Black's aptitude, promoted him from the class-room to the laboratory, and imparted to him, as his assistant, his own singular dexterity in experiment.

When Black went to Edinburgh to complete his medical education in 1750 or 1751, he found an active controversy in progress as to the mode of action of the lithontriptic medicines then recently introduced into the pharmacopœia. He took up the subject, and finding himself, in 1752, on the brink of an important discovery, he postponed taking his degree until its proofs were assured. There is, perhaps, no other instance of a graduation thesis so weighted with significant novelty as Black's 'De humore acido à cibis orto, et Magnesia alba,' presented to the faculty 11 June 1754. Developed and perfected, it was read before the Medical Society of Edinburgh 5 June 1755, published in the second

volume of 'Essays and Observations' (1756), with the title 'Experiments upon Magnesia alba, Quicklime, and some other Alkaline Substances,' and subsequently twice reprinted (1777 and 1782).

As a model for philosophical investigation this essay was, by Brougham and Robison, placed second only to the 'Optics' of Newton. Its importance in chemical history is twofold. By setting an example of the successful use of the balance, it laid the foundation of quantitative analysis; and by the distinction of qualities conveyed in it between 'fixed' and common air, it opened the door to pneumatic chemistry. Up to that time the causticity of alkalis after exposure to strong heat had been universally attributed to an acrid principle derived from fire. Black showed that they lost instead of gained in weight by calcination; and that what they lost was a kind of 'air' previously 'fixed' in them, and neutralising, by its acid qualities, their native causticity. The effervescence of 'mild' and non-effervescence of 'caustic' alkalis when dissolved in acids were alleged in countenance of the new theory, which, nevertheless, encountered a vigorous, though futile, opposition in Germany. It was pointed out in the same remarkable treatise that magnesia, until then generally held to be a variety of lime, formed, with the same acids, wholly different salts, and was consequently to be regarded as a distinct substance.

Black was fully aware of the vastness of the field of research thrown wide by the discovery (or rather individualisation) of fixed air, named by Lavoisier in 1784 'carbonic acid' (*Mém. de l'Acad.* 1781, p. 455). In 1757 he ascertained its effects upon animals, and its production by respiration, fermentation, and the burning of charcoal (*Lectures*, ii. 87–8). He also inferred its invariable presence, in small quantities, in the atmosphere. Here, however, he stopped, leaving the path which he had struck out to be pursued by Cavendish, Priestley, and Lavoisier.

On the removal of Cullen to Edinburgh, Black was appointed in 1756 to replace him in the chair of anatomy and chemistry in the university of Glasgow; but dissatisfied with his qualifications for the former post, he exchanged duties with the professor of medicine, and lectured during the ensuing ten years with much care and success on the institutes of medicine. He was at the same time in large practice as a physician, and devoted the most anxious care to the welfare of his patients. Nevertheless he found time to complete the second achievement in science with which his name remains associated. This is the discovery of what is termed 'latent heat.' In 1756 he began to meditate on the perplexing slowness with which ice melts, and water is dissipated in boiling. He divined the cause in 1757, and ascertained it in 1761. A large quantity of heat, he found, is consumed in bringing about these changes in the state of aggregation, and is thus rendered insensible to the thermometer. The cause of this disappearance, according to modern theory, is the employment of the absorbed heat in doing work—that is, conferring 'potential energy' on material particles; in Black's view it was the formation of a quasi-chemical combination between those particles and the subtle fluid of heat. But this erroneous conception in no way detracted from the importance of his discovery. The decisive experiment of obtaining from water during congelation an amount of heat equal to that expended or rendered 'latent' in its liquefaction was performed in December 1761. This quantity he measured at rather more than would have sufficed to raise the temperature of the same weight of water 140° Fahrenheit (accurately 143°). He, however, considerably underestimated the latent heat of steam, fixing it, with his pupil Irvine's assistance, 9 Oct. 1764, at 750° (later at 810°) instead of 967°. The results of this brilliant investigation not only formed the basis of modern thermal science, but gave the first impulse to Watt's improvements in the steam-engine, and thereby to modern industrial developments. Black read an account of his successful experiments before a literary society in Glasgow, 23 April 1762, and from 1761 downwards carefully taught the doctrine of latent heat in his lectures, dwelling with sedate eloquence on the beneficent effects of the arrangement in checking and regulating the processes of nature. But he published nothing on the subject, and was thus scarcely entitled to complain if his ideas were appropriated with little or no acknowledgment. To the same society he detailed, 28 March 1760, a series of experiments instituted with the object of testing the validity of thermometrical indications. He originated, moreover, the theory of 'specific heat,' or of the various thermal 'capacities' of different bodies, but committed it to Irvine to work out.

Still treading in his master's footsteps, Black became, on Cullen's advancement to a higher post in 1766, professor of medicine and chemistry in the university of Edinburgh. His career thenceforward was exclusively that of a teacher. Restricting his medical practice to a narrow circle of friends, and abandoning all thought of original research, he concentrated his powers upon the effective discharge of his official duties. His success was con-

spicuous. During above thirty years he inculcated the elements of chemistry upon enthusiastic and continually growing audiences. 'It could not be otherwise,' Robison wrote in 1803. 'His personal appearance and manner were those of a gentleman, and peculiarly pleasing. His voice in lecturing was low, but fine; and his articulation so distinct that he was perfectly well heard by an audience consisting of several hundreds. His discourse was so plain and perspicuous, his illustrations by experiment so apposite, that his sentiments on any subject never could be mistaken, even by the most illiterate; and his instructions were so clear of all hypothesis or conjecture, that the hearer rested on his conclusions with a confidence scarcely exceeded in matters of his own experience' (Black's *Lectures*, preface, lxii). His lectures had thus a powerful effect in popularising chemistry; and attendance upon them even came to be a fashionable amusement.

Black was a prominent member of the intellectual society by which Edinburgh was then distinguished. Amongst his intimates were his relative and colleague Adam Ferguson, Hume, Hutton, A. Carlyle, Dugald Stewart, and John Robison. Adam Smith, with whom he knit a close friendship at Glasgow, used to say that 'no man had less nonsense in his head than Dr. Black.' He was one of James Watt's earliest patrons, and kept up a constant correspondence with him. Though grave and reserved, Black was gentle and sincere, and it is recorded of him that he never lost a friend. He was at the same time gifted with a keen judgment of character, and with the power of expressing that judgment in an 'indelible phrase.' In person he is described as 'rather above the middle size; he was of a slender make; his countenance was placid, and exceedingly engaging' (Thomson). As he advanced in years, Robison tells us, he preserved a pleasing air of inward contentment. Graceful and unaffected in manner, 'he was of most easy approach, affable, and readily entered into conversation, whether serious or trivial.' Nor did he disdain elegant accomplishments. In his youth he both sang and played tastefully upon the flute. He had talent for painting, and 'figure of every kind excited his attention . . . even a retort or a crucible was to his eye an example of beauty or deformity.' But love of propriety, the same authority informs us, was his leading sentiment. Indeed, his mind was so nicely balanced as to be deficient in motive power. He had all the faculties of invention, but lacked fervour to keep them at work. Hence the slackness with which he pursued discoveries which his genius, as it were, compelled him to make.

A perhaps more prevailing reason for his inaction was the weakness of his constitution. The least undue strain, whether physical or mental, produced spitting of blood, and it was only by the most watchful precautions that he maintained unbroken, though feeble, health. From 1793, however, it visibly declined, and he led, more and more completely, the life of a valetudinarian. In 1795 Charles Hope was appointed his coadjutor in his professorship; in 1797 he lectured for the last time. The end came 6 Dec. 1799 (Dr. G. Wilson, in *Proc. Royal Soc. Edinburgh*, ii. 238), just in the way he had often desired. 'Being at table,' Ferguson relates, 'with his usual fare, some bread, a few prunes, and a measured quantity of milk diluted with water, and having the cup in his hand when the last stroke of the pulse was to be given, he appeared to have set it down on his knees, which were joined together, and in the action expired without spilling a drop, as if an experiment had been purposely made to evince the facility with which he departed.' The provisions of his will curiously illustrated the just but cold precision of his modes of thought. He divided his property, without specification of its amount, into 10,000 portions, 'parcelled to a numerous list of relatives, in shares, in numbers or fractions of shares, according to the degree in which they were proper objects of his care or solicitude.' He was never married, but lived on the best terms with his family. His morals were irreproachable, his habits abstemious, his frugality was free from parsimony. Indifferent to fame, he disliked the publicity of authorship, and never could be induced to vindicate claims which his friends held to be, in many quarters, encroached upon. He enjoyed, nevertheless, a unique reputation. Fourcroy called him 'the Nestor of the chemistry of the eighteenth century' (Hoefer, *Hist. de la Chimie*, ii. 353); Lavoisier acknowledged himself his disciple. Black, on his side, while professing the highest admiration for Lavoisier's genius, and admitting his discoveries, intensely disliked what he regarded as his premature generalisations. 'Chemistry,' he observed, 'is not yet a science. We are very far from the knowledge of first principles. We should avoid everything that has the pretensions of a full system' (*Lectures*, note xxvi.) This philosophic caution was eminently characteristic.

Amongst other honours Black was elected member of the Paris and St. Petersburg Academies of Sciences, of the Society of Medicine of Paris, as well as of the Royal Society

of Edinburgh, and of the Royal College of Physicians. He was, besides, first physician to his majesty for Scotland. It is worth notice that he made, in 1767, the first attempt to inflate a balloon with hydrogen (*Ed. Encycl.* iii. (pt. ii.) 553). His lectures were published by Robison in 1803 from notes found after his death, eked out by those of his hearers, in two quarto volumes, entitled 'Lectures on the Elements of Chemistry, delivered in the University of Edinburgh.' A German translation by Crell appeared at Hamburg in 1804–5, and again in 1818, in four vols. 8vo. Black communicated to the Royal Society of London a paper 'On the supposed Effect of Boiling upon Water in disposing it to freeze more readily, ascertained by Experiment' (*Phil. Trans.* lxv. 124), and to that of Edinburgh 'An Analysis of the Waters of some Hot Springs in Iceland' (*Trans. R. Soc. Ed.* iii. 95). Two letters by him on chemical subjects were published, one by Lavoisier in the 'Annales de Chimie,' the other by Crell in his 'Collections' for 1783.

Grant's University of Edinburgh, ii. 395; Bibl. Britannique, xxviii. 133, 324 (1805); Phil. Mag. x. 157 (1801); Ann. Phil. iii. 324; Bromley's Cat. of Engraved Portraits, 383.] A. M. C.

BLACK, PATRICK, M.D. (1813–1879), physician, was son of Colonel Patrick Black, of the Bengal cavalry, and like his father was called after his ancestor, Sir Patrick Dun, president of the Irish College of Physicians in 1681. He was born at Aberdeen in 1813, was sent to Eton in 1828, matriculated at Christ Church in 1831, and graduated M.D. at Oxford in 1836. In 1842 he was elected assistant physician to St. Bartholomew's Hospital, in 1851 warden of its college, in 1860 physician to the hospital, and somewhat later lecturer on medicine in the school. Black was a tall and handsome man, and the trust which his open countenance encouraged was never disappointed. He was a careful observer, a just reasoner, well read in medicine, a scholar who enjoyed literature, a physician who, as one of his patients remarked, hastened no one into the grave, yet he never attained a large practice. That he was a man of considerable property perhaps stood in his way, but another reason was that he had so little belief in treatment that both students and patients perceived that he regarded his own prescription as a ceremonial observance rather than as a practical measure. He even questioned the value of quinine as a remedy for ague. In 1855 Black wrote a short treatise: 'Chloroform; how shall we ensure safety in its administration?' In 1867 he revised the Latin part of the 'Nomenclature of Diseases' for the College of Physicians, of which he was a fellow and three times censor. In 1876 he published a popular lecture on 'Respiration,' a pamphlet on 'Scurvy,' and an 'Essay on the Use of the Spleen.' His sceptical turn of mind is noticeable in all: he doubts whether chloroform ever causes death except by simple suffocation, doubts whether lime juice prevents scurvy, and doubts whether the spleen does anything but regulate the current of the blood. His scepticism was an infirmity which prevented his accumulated observation from yielding its proper fruit, but it did not affect his personal relations with mankind. He was sound in his judgment of character, firm in his friendship, and universal in his kindness. He died on 12 Oct. 1879. His colleague, Dr. Reginald Southey, wrote his memoir in the St. Bartholomew's Hospital Reports, vol. xv., and his former house physician, Dr. R. Bridges, published in 1876 a Latin poem dedicated to Dr. Black, and describing in Ovidian verse his personal appearance, character, and manner of teaching.

[Southey's Memoir; personal knowledge.] N. M.

BLACK, ROBERT, D.D. (1752–1817), Irish presbyterian minister, was born in 1752, the eldest son of Valentine Black, a farmer at Mullabrack, co. Armagh. In 1770 he entered the class of ethics under Dr. Thomas Reid at Glasgow. He was licensed by the Armagh presbytery, declined in 1776 a call to Keady, co. Armagh, and in the following year, on the death of Alexander Colville, M.D., the non-subscribing minister of Dromore, co. Down, he accepted the call of this congregation, which returned to the jurisdiction of the general synod of Ulster. Black was ordained at Dromore by the Armagh presbytery on 18 June 1777. On 15 Feb. 1782 he attended the convention of Irish volunteers at Dungannon as Captain Robert Black, and seconded the resolution adopted in favour of catholic emancipation. Like other ministers of that date, he sometimes preached in regimentals, and with drumhead for book-rest. He attended also the second great Dungannon convention on 8 Sept. 1783, when his eloquence attracted the attention of Frederick Augustus, earl of Bristol and bishop of Derry, and of Robert Moore of Molenan near Derry. Hence his call to First Derry, where he was installed

by the Derry presbytery on 7 Jan. 1784 as colleague to David Young. On 2 Dec. 1788 he was elected synod agent for the *regium donum*, in succession to James Laing. He delivered an applauded oration at the centenary commemoration (7 Dec. 1788) of the closing of the gates of Derry. As agent for the royal bounty, he exerted himself to secure its augmentation; in 1792, by help of the Earl of Charlemont, Henry Grattan, and Colonel Stewart of Killymoon, the Irish parliament passed a favourable resolution, and 500*l.* a year was added to the grant, thus increasing the dividend from about 10*l.* to 32*l.* (Irish currency). In gratitude for his services the synod in 1793 presented Black with a piece of plate. The seditious tendencies now beginning to appear in the volunteer movement excited his alarm, and he delivered a solemn warning against them in a speech at a meeting of the parishioners of Templemore held in Derry Cathedral on 14 Jan. 1793 (see abstract in *Belfast News-Letter*, 25 Jan. 1793). He never, however, receded from the positions he had taken in favour of parliamentary reform and catholic emancipation. In the rebellion of 1798 he was strongly on the side of constituted authority, and had great influence as the friend and correspondent of Castlereagh. One form in which this influence was exercised was a further increase of the *regium donum*, which from 1804 was distributed in three classes (100*l.*, 75*l.*, and 50*l.*), the agent being henceforth appointed not by the synod but by the government. Black held this office till his death, and did not scruple to use the power it gave him. Opponents called him 'the unmitred bishop' and 'chief consul of the general synod.' In 1800 or 1801 the degree of D.D. was sent him by an American college. As a speaker he had no equal in his day. In theology he was strongly suspected of heresy, a view which is countenanced by the fact that in 1804 he endeavoured to secure as his colleague William Porter, whose Arianism was openly known. His local prestige was impaired by the circumstances of Castlereagh's defeat at the county Down election of 1805, but his influence at Dublin Castle was equally strong with all ministries. In 1809 the synod publicly thanked him for his exertions in procuring the act of parliament incorporating the widows' fund. In 1813 his controversy with William Steele Dickson, D.D. [q. v.], one of the chief victims of the rebellion of 1798, was ended by a synodical resolution declaring that words in a previous resolution (1799), complained of by Dickson, had been 'inaccurately used;' but Black's influence was still powerful enough to cause the expulsion of an elder who, in the course of debate, had laid charges against him in connection with the bounty. Black was a strong opponent of the establishment of the Belfast Academical Institution (opened 1814); at the synod of 1815, in Black's absence from ill-health, a resolution was passed in its favour; in the same year government made the institution an annual grant of 1,500*l.* Next year the grant was withdrawn on political grounds, but Black vainly endeavoured, in two successive years, to procure the rescinding of the synod's resolution. His defeat was softened by a not very successful public dinner, given by his admirers in Belfast. Black was a man whose ambition could not brook repulses; his temperament alternated between geniality and gloom. Loss of leadership unhinged his spirit. He threw himself over the railing of Derry Bridge, and was drowned in the Foyle, on the evening of 4 Dec. 1817. His body appears to have been filched from its grave. There is a curious caricature engraving of Black in 'The Patriotic Miscellany,' 1805, a collection of squibs relating to the Down election of that year. It represents him as a short corpulent man, with a large head and strong profile. He had married his cousin, Margaret Black (who died in April 1824), and left three sons and two daughters. He published: 1. 'A Catechism.' 2. 'Substance of Two Speeches delivered at the Meeting of Synod in 1812, with an Abstract of the Proceedings relative to the Rev. Dr. Dickson,' Dublin, 1812.

A. G.

BLACK, WILLIAM (1749–1829), physician, was born in Ireland; studied medicine (according to Munk, *Coll. Phys.* iii. 367) at Leyden, and took his degree as M.D. there 20 March 1772 with an inaugural dissertation 'De diagnosi, prognosi, et causis mortis in febribus.' He received the license of the College of Physicians 2 April 1787, and afterwards practised in London, residing in Piccadilly. He appears to have retired from practice before his death, which occurred at Hammersmith in December 1829.

Black did not attain any remarkable eminence in his profession, but wrote some books which are not without value as illustrating the application of the statistical method to medicine. He was one of the first writers, at least in England, who

showed that statistics, which had been previously employed chiefly in political and commercial matters, might be of great service to the progress of medicine.

Being invited to deliver the 'annual oration' before the Medical Society of London, he expanded this lecture into an octavo volume, entitled 'A Comparative View of the Mortality of the Human Species at all Ages, and of Diseases and Casualties, with Charts and Tables,' published in 1788. Before half the first edition was sold he cancelled the remainder and brought out a second and corrected edition, as 'An Arithmetical and Medical Analysis of the Diseases and Mortality of the Human Species,' 8vo, London, 1789. In this his design was to exhibit births, mortality, diseases, and casualties as being subject to arithmetical proof, to construct in fact a 'medical arithmetic,' a phrase evidently suggested by the 'Political Arithmetic' of Sir W. Petty. Although the efforts of Black have long been eclipsed by the brilliant results of Louis, Quetelet, and others in the same field, they had considerable importance in their day. The 'Dissertation on Insanity' is an expansion of a chapter in this book, and was based on observations furnished by an official of Bethlehem Hospital. His 'Sketch of the History of Medicine' is a slight work, but was translated into French by Coray.

He wrote: 1. 'A Historical Sketch of Medicine and Surgery from their Origin to the Present Time, with a Chronological Chart of Medical and Surgical Authors,' 8vo, London, 1782. In French, Paris, an vi. (1798). 2. 'A Dissertation on Insanity, illustrated with tables from between two and three thousand cases in Bedlam,' 8vo, London, 1810; second edition 1811. 3. 'Observations, Medical and Political, on the Smallpox, the Advantages and Disadvantages of General Inoculation, and on the Mortality of Mankind at every age,' 8vo, London, 1781. 4. 'Reasons for preventing the French, under the mask of Liberty, from trampling on Europe,' 8vo, 1792. 5. 'Observations on Military and Political Affairs by General Monk,' new edition, 8vo, 1796 (the last on authority of *Biog. Dict. of Living Authors*, 1816). His portrait, engraved by Stanier, was published by Sewell, 1790.

[Munk's Coll. Physicians, ii. 367; Biog. Dict. of Living Authors (1816).] J. F. P.

BLACK, WILLIAM HENRY (1808–1872), antiquary, was the eldest son of John Black of Kintore, in Aberdeenshire, and was born 7 May 1808. From his mother, who came of a good family (the Langleys), possessing estates in Oxfordshire and Buckinghamshire, he imbibed his love of religion, and also his thirst for antiquarian knowledge. He was educated at a private school, and at seventeen years of age became himself a tutor among families residing at Tulse Hill and neighbourhood.

As a reader at the British Museum he became acquainted with many literary men, through whose influence he obtained a situation in the Public Record Office, attaining at last to the position of assistant keeper. It was during the time he filled this post that he corrected the errors in Rymer's 'Fœdera.' He was a prolific writer, especially on antiquarian subjects. He prepared an edition of the British part of the 'Itinerary of Antoninus' (never issued), and contributed to Samuel Bentley's 'Excerpta Historica.' He catalogued the manuscripts of the Ashmolean Museum at Oxford, the Arundel MSS. in the library of the College of Arms, and Colfe's library at Lewisham, and left behind him a monograph on the Roman mile, which still awaits editing and publication.

At the time of his death he was in nomination for, and would have been elected on, the council of the Society of Antiquaries. He was one of the earliest members of the British Archæological Society, the Surrey, London and Middlesex, and Wiltshire Archæological Societies, and the founder of the Chronological Institute of London, Palestine Archæological Association, and Anglo-biblical Institute, besides being a member of the Camden Society.

His religious views were somewhat peculiar. He was the pastor of a small sect called the Seventh Day Baptists, whose chapel is in Mill Yard, Leman Street, Whitechapel, and maintained that Saturday was the Sabbath. Black died 12 April 1872. As a conscientious and painstaking antiquary, he has had few equals in the present century.

[Private information.] J. A.

BLACKADDER, ADAM (*fl.* 1674–1696), covenanter, was second son of the elder John Blackadder [q. v.], brother of Dr. William Blackadder [q. v.], physician to William III, and of Lieutenant-colonel John Blackadder [q. v.] He was born about 1659. He was bred to the mercantile profession in Stirling, and in November 1674, while still an apprentice, he was, along with several others, apprehended, because he had not subscribed the 'Black Bond' of history, and for attending conventicles. The entire household remained steadfast to their father. His eldest brother (Dr. Blackadder) presented a petition to the privy council, and obtained his temporary re-

lease. He was at least twice subsequently imprisoned, once in Fife, and once in Blackness Castle. In the latter his and Welsh's dungeons are still shown. His seizure and imprisonment in Blackness was for having been present at his father's preaching near Borrowstownness(Linlithgowshire), on which occasion no fewer than twenty-six children were baptised. Compelled by persecution to be an exile, Blackadder is found next in Sweden. He was a merchant in Sweden for nine years. Having married a Swedish lady, whom he had converted from Lutheranism to presbyterian Calvinism, they were obliged to fly the country. The penalty at the time for a Swede who changed to catholicism or Calvinism was death. About the close of 1684 he was settled in Edinburgh. Twelve years later his name is found in the Darien Papers (Bannatyne Club, 1849) among the subscribers to the Darien Company—'26 March 1696. Adam Blackader, merchant in Edinburgh, as factor for his brother, Captain John Blackader, in Flanders, 100*l*.' He wrote a narrative of his father's sufferings, worked into Dr. Crichton's full 'Life,' which he submitted to Wodrow. He is also known to have written a number of political tractates on the state of parties and the Darien scheme. The date of his death is not discoverable.

A. B. G.

BLACKADDER, JOHN the elder (1615-1686), Scotch divine, was son of John Blackadder, of the families of Blackadder of Blairhall and Tullialan, whose ancestry were famous in border story, and joined in the wars of the Roses. He was born in December 1615, but where is not known. According to Scott (*Fasti*, i. 604), he was born in 1623. He studied at Glasgow under Principal Strang, his uncle. He was early distinguished for his scholarship—Oriental, Latin, and Greek. He took his degree of M.A. in 1650. Having received license he was unanimously called to the parish of Troqueer in 1652, 'one of the kirks of Galloway within the presbytery of Dumfries,' and was ordained 7 June 1653. The condition of his parish and of the county was deplorable. Bastardy and profanity were everywhere. The Bible was practically unknown. Blackadder worked hard to correct these evils. Upon the 'intrusion' of episcopacy on presbyterian Scotland in 1662, the minister of Troqueer was 'extruded' from his church and temporarily imprisoned at Edinburgh. He afterwards retired with wife and family to Caitloch, Corsack Wood, and other places. But holding his clerical orders to be indefeasible and the enforcement of episcopacy a violation of the Act of Union, as well as the imposition of a non-scriptural form of church government, he preached eloquently to forbidden conventicles among the mountains and in the moors and glens and caves. Warrants were again and again issued against him, but he contrived to escape imprisonment, and with Welsh, Peden, Cargill, and other covenanters, continued to preach.

In 1666, 1674, 1677, the records of the privy council show that letters for his apprehension were issued. On one particular occasion, when he delivered a sermon at Kinkell, the people crowded to hear him, notwithstanding the absolute commands, with threats, of Archbishop Sharp. When the irate prelate—a renegade presbyterian—ordered the provost to march out the militia to disperse the congregation, he was told it was impossible, 'as the militia had gone there as worshippers.' In 1674 Blackadder was outlawed, and a heavy reward offered for his body. He fled to Rotterdam in 1678, and there aided in 'healing differences' between the presbyterian ministers, Fleming and M'Ward. He was again in Edinburgh in June 1679. On 5 April 1681 he was 'made prisoner in his house at Edinburgh,' and after a form of examination was sent to the Bass Rock. After four years of rigid imprisonment his health finally gave way. The privy council, in hot haste, gave permission to him to leave, on condition of confining himself to Edinburgh. But it was too late, and he died on the Bass in January 1686.

Blackadder succeeded to, but never assumed, a baronetcy which had been conferred on a member of an elder branch of his family in 1626. He married, in 1646, Janet Haining, daughter of Homer Haining of Dumfries. She died 9 Nov. 1688. Their issue were five sons (of whom Adam, John, and William are separately noticed) and two daughters.

A. B. G.

BLACKADDER, JOHN the younger (1664-1729), lieutenant-colonel of the Cameronian regiment, was the fifth son of John Blackadder the elder [q. v.], and was born

in the parish of Glencairn, Dumfriesshire, 14 Sept. 1664. Notwithstanding the persecutions to which the father was subject, the son, after receiving from him the rudiments of classical learning, attended the courses of humanity and philosophy in the university of Edinburgh. Accustomed from infancy to frequent conventicles and communions, he acquired at an early period strong Calvinistic convictions and strict and stern views of conduct and duty. When the regiment raised by the covenanting Cameronians (now the 26th of the line) was embodied by the Earl of Angus in 1689, he volunteered into it as a cadet at the pay of sixpence a day. Probably through his intimacy with the commander, Colonel Cleland, who was an old college acquaintance, he was in a few months promoted lieutenant. The regiment, by the remarkable stand it made against the Highlanders at Dunkeld, did service of the highest importance in quelling the rebellion. After the reduction of the Highlands he embarked with the regiment for Flanders, and took part in the principal sieges and battles in the campaigns of the Prince of Orange until the peace of Ryswick in 1697. On the resumption of the war in 1702, Blackadder, who had previously obtained his captain's commission, served with his old regiment in the campaigns of Marlborough. In December 1705 he was promoted major, and in October 1709 raised to the command of the regiment. Shortly before the peace of Utrecht he sold his commission, and taking up his residence at Edinburgh, and afterwards at Stirling, he occupied much of his attention with ecclesiastical affairs, becoming a member of the Society for Propagating Christianity, and also of the general assembly of the church of Scotland. Upon the news of a rising in the north in 1715 in behalf of the Pretender, he was appointed colonel of the regiment raised by the city of Glasgow, which he posted at the bridge of Stirling to guard against an attack of the highlanders, who, however, were defeated at the battle of Sheriffmuir. In consideration of his services during the rebellion he was, in March 1717, appointed deputy governor of Stirling Castle. He died 31 Aug. 1729, and was buried in the West church of Stirling, where a marble tablet was erected to his memory.

[Life and Diary of Lieut.-col. J. Blackader, ed. Crichton, 1824.] T. F. H.

BLACKADDER, WILLIAM, M.D. (1647–1704), physician to William III, the eldest son of the elder John Blackadder [q. v.], was born in 1647. He was sent to the university of Edinburgh in 1665, and he graduated in medicine at Leyden in 1680. In Holland he made the acquaintance of some principal political refugees of England. He accompanied the Earl of Argyle to Scotland in 1685, and being apprehended in Orkney was sent for examination to Edinburgh. After landing at Leith he signalled to his sister in the crowd to burn papers among the luggage forwarded to his lodgings. A search therefore revealed nothing compromising; but he was in prison for more than a year until, through a clever device of his brother, he obtained writing materials, and wrote to Fagel, the pensioner of Holland, who caused the British envoy to induce King James to order his liberation. Returning to Holland, he in 1688 was sent to Edinburgh on behalf of the Prince of Orange. Having ventured into the castle, he was seized by order of the governor and committed for trial; but on the landing of the Prince of Orange he was set at liberty. After the revolution he was appointed physician to King William. He died about 1704.

[Crichton's Memoirs of Rev. John Blackadder, 2nd ed. pp. 295–301, and of Lieut.-col. J. Blackader, pp. 28–31; Wodrow's Church of Scotland, ed. Burns, iv. 231, 285, 313.] T. F. H.

BLACKADER, CUTHBERT or ROBERT (*d.* 1485), a chieftain of the Scottish border, belonged to the family of Blackader which owned the barony of that name in co. Berwick as vassals of the earls of March through the fourteenth century. Charters of full ownership were granted to Robert Blackader of Blackader on 20 Jan. 1426 and 4 July 1452 by James I and James II of Scotland respectively (*Scottish Reg. of Great Seal*). Robert Blackader, the grantee of 1452, seems to have been carelessly misnamed 'Cuthbert' in Crichton's 'Memoirs' of John Blackadder the elder. He achieved success in repelling the English marauders on the Scottish frontier. By his prowess he earned for himself the title of the 'chieftain of the south.' He and his seven sons who accompanied him on his expeditions were also named, from the darkness of their complexions, the 'Black band of the Blackaders.' When Scotland was placed in a posture of defence against Edward IV, the Blackaders raised a force of two hundred and seventeen men, and also planted their castle with artillery, and left in it a strong garrison. During the wars of York and Lancaster Blackader and his sons took service in England, and fought under the banner of the red rose. In the fatal battle of Bosworth, 22 Aug. 1485, he and three of his sons were slain.

[Crichton's Memoirs of the Rev. John Blackadder (2nd ed. 1826), pp. 2–4.] T. F. H.

BLACKADER, ROBERT. [See BLACADER.]

BLACKALL, JOHN, M.D. (1771–1860), physician, sixth son of the Rev. Theophilus Blackall, a prebendary of Exeter cathedral, by his wife Elizabeth Ley, and grandson of Bishop Offspring Blackall [q. v.], was born in St. Paul's Street, Exeter, 24 Dec. 1771. He was educated at the Exeter grammar school, whence he proceeded to Balliol College, Oxford, as a member of which he graduated B.A. 1793, M.A. 1796, M.B. 1797, and M.D. 2 March 1801. Immediately after taking his first degree he applied himself to the study of medicine at St. Bartholomew's Hospital, and it was in its wards, while working as the clinical clerk of Dr. John Latham, that he made the observations on albuminuria which were afterwards stated and enlarged in his treatise on dropsies. In 1797 he settled in his native city, and on 1 June in that year was chosen physician to the Devon and Exeter Hospital. At this period, however, the medical practice of Exeter was engrossed by Dr. Hugh Downman, Dr. Bartholomew Parr, and Dr. George Daniell, and in 1801 Dr. Blackall resigned his appointment at Exeter, and settled at Totness, where he became the physician of the district. His reputation increased, and in 1807 he returned to Exeter, where he was a second time elected physician to the Devon and Exeter Hospital, and in 1812 was appointed physician to St. Thomas's Lunatic Asylum. In 1813 he published his well-known and admirable 'Observations on the Nature and Cure of Dropsies,' London, 8vo, of which there are four editions, and which entitles its author to a position among medical discoverers. Dropsy is the morbid effusion of the serum of the blood into the cavities of the body and into the meshes of its tissues. It had been observed from the beginning of medicine, but up to the time of Lower (1669) nothing was known of its morbid anatomy. He made the first step, which was the demonstration that dropsy of a limb always follows direct obstruction of its veins. Blackall's discovery came next, and was that dropsy is often associated with the presence of albumen in the urine. His treatise states clearly the relation between albuminuria and dropsy, and shows that he suspected that the kidneys were diseased in these cases. The further discovery of Bright (1836) of the constant relation between renal disease and albuminuria is based upon the observations first made by Blackall. Blackall also published (1813) some observations on angina pectoris, a disease then much discussed, owing to Heberden's writings upon it. Blackall was admitted a candidate of the College of Physicians, 22 Dec. 1814, and a fellow, 22 Dec. 1815. His progress from this period was rapid and uninterrupted, and for a long series of years he had a great practice in the west of England. He was famed for his skill in diagnosis, and it was based upon a thorough method of clinical examination. He used no complicated remedies, was patient in waiting for results, and was justly confident in the conclusions to which he had attained with so much care.

Dr. Blackall retained his strength and faculties to an advanced age, and he did not relinquish private practice till he was eighty. He died at Southernhay, Exeter, 10 Jan. 1860, and was followed to the grave in the burial-ground of Holy Trinity Church by a large body of relations and friends and the whole of the medical profession resident within the city.

[British Medical Journal (Memoir by Thomas Shapter, M.D.), 1860, pp. 75–6; Munk's Roll of College of Physicians (1878), iii. 138–41.]

G. C. B.

BLACKALL or BLACKHALL, OFFSPRING (1654–1716), bishop of Exeter, did not come into public notice until he was a middle-aged man, and of his early years little is known. He was born in London, and in due time became a member of St. Catherine's Hall, Cambridge, where, it may be presumed, he lived a strictly religious life, for he is mentioned as one of the intimate college friends of the saintly James Bonnell [q. v.], who chose none but the godly for his companions. In 1690 he became rector of South Okenden or Ockenden in Essex, and in 1694 rector of St. Mary Aldermary in London; with this latter preferment he also held successively two lectureships in the city. He was next made chaplain to King William III, although he was so strongly suspected of inclining to the exiled dynasty that he was charged in a pamphlet of 1705 with having continued a nonjuror for two years after the revolution. A sermon preached before the House of Commons on 30 Jan. 1699 first brought him into notice as a controversialist. The sermon is really a very moderate one, in comparison with many which were wont to be preached on such occasions, but in it the preacher made a passing reference—it only takes up about a twentieth part of the sermon—to John Toland, against whom everybody was then preaching. In 1698 Toland in his 'Life of Milton' disputed the royal authorship of the 'Icon Basilike,' and took occasion, *more suo*, to insinuate that, as people were mistaken on this point, so they might be about the authenticity of many of the early writings

about christianity. Blackhall not unnaturally supposed that Toland referred to the New Testament, and hinted to the House of Commons that their pious designs to suppress vice and immorality would not be of much effect if the foundations of all revealed religion were thus openly struck at. Toland replied in his well-known 'Amyntor,' declaring that he had not referred to the holy scriptures at all. Blackhall rejoined, and the controversy brought him into such notice that the next year (1700) he was chosen Boyle lecturer. The subject he chose was 'The Sufficiency of a standing Revelation,' and the seven sermons, preached at St. Paul's, which formed the lecture, may be found in his published works. On 8 March 1704, the anniversary of Queen Anne's accession, Blackhall preached at St. Dunstan's, and on the same occasion in 1708 at St. James's, before the queen, sermons which called forth the wrath of the whigs. In 1709 Benjamin Hoadly attacked him, and a long and rather warm controversy ensued. Pamphlet after pamphlet poured forth from the press. Among the supporters of Blackhall one is supposed to have been the famous Charles Leslie, and the pamphlet with the curious title 'The best answer ever was made, and to which no answer ever will be made (not to be behind Mr. Hoadly in assurance), &c.,' bears strong internal evidence of having been written by Leslie. Among the supporters of Hoadly were the wits of the 'Tatler.' Blackhall had by this time become a bishop. In January 1707–8 Queen Anne, on the recommendation of her spiritual director, Archbishop Sharp, conferred upon him the see of Exeter, to the great annoyance of the low-church party. Burnet, while admitting that Blackhall was 'a man of value and worth,' strongly reprobates the appointment because 'his notions were all on the other side,' and declares that 'he [Blackhall] seemed to condemn the Revolution and all that had been done pursuant to it' (*Own Times*, book vii.) Blackhall also, as we learn from Le Neve (*Fasti Ecclesiæ Anglicanæ*, vol. i.), held with his bishopric the archdeaconry of Exeter until his death. Little is known of Blackhall's management of his diocese, except that he took a deep interest in the newly formed scheme of charity schools, and endeavoured to rouse his clergy into activity on their behalf. But he had a great reputation in his day both as a preacher and a writer. His friend and editor, Sir William Dawes, tells us in the posthumous edition of Blackhall's sermons that he had 'universally acquired the reputation of being one of the best preachers of his time,' and the published sermons bear out this reputation. They are 105 in number, no less than eighty-seven of them being an exposition of the sermon on the Mount. These eighty-seven, in especial, are remarkably clear and exhaustive; they are written in the homely style which became fashionable soon after the Restoration. Unlike the sermons of an earlier date, they contain no quotations from foreign languages, no fine words, no similes or metaphors, but they thoroughly grapple with the difficulties, never diverge from the subject in hand, and are full of weighty matter. We are not surprised to learn that 'vast numbers both of clergy and laity flocked to hear them,' and that he was importuned by many friends to print them. He intended to do so, but a long sickness, which terminated in his death (29 Nov. 1716), prevented him from carrying out his intention, so the task was left for his friend and brother prelate, Sir William Dawes, who executed it with fidelity and judgment. The drawback to the series (not to the individual sermons, for each would take not more than half an hour in delivery) is its inordinate length. It fills no less than 939 folio pages, and this, perhaps, is the reason why it has not been accepted as a standard exposition of the sermon on the Mount. Many of the other sermons have been published separately. Writing from a literary point of view, Felton, in his 'Classics,' describes Blackhall as 'an excellent writer,' and De la Roche, in his 'Memoirs of Literature,' calls him 'one of those English divines who, when they undertake to treat a subject, dive into the bottom of it and exhaust the matter.' As to his personal character, his friend Sir W. Dawes thus describes it, in language which evidently came from the heart: 'I, who had the happiness of a long and intimate friendship with him, do sincerely declare that in my whole conversation I never met with a more perfect pattern of a true christian life in all its parts than in him.' He showed such 'primitive simplicity and integrity, such constant evenness of mind, such unaffected and yet most ardent piety towards God.' His son Theophilus (*d.* 1737) was the father of Samuel Blackall [q. v.], and his grandson, also Theophilus (*d.* 1781), was father of John Blackall [q. v.]

[Authorities indicated in the text.] J. H. O.

BLACKALL, SAMUEL (*d.* 1792), divine, was the son of the Rev. Theophilus Blackall, chancellor of the diocese of Exeter, and a grandson of Dr. Offspring Blackall, bishop of Exeter. He received his education at Emmanuel College, Cambridge, of which he became a fellow and mathe-

matical tutor (B.A. 1760, M.A. 1763, B.D. 1770). Cole, in his manuscript 'Athenæ Cantabrigienses,' says: 'This gent. in 1771, on Mr. Hubbard, a fellow of his college, and one to whom he had great obligations, preparing a Grace, or voting for it, contrary to the inclination and disposition of this person, publicly hissed him in the Senate House, which was a method so unusual and thought so indecent, that even he himself was, or pretended to be, ashamed of it, and made excuses about it. On the petitioners against the Liturgy and Thirty-nine Articles applying to parliament for relief, he was a busy and active petitioner and . . . wrote a spirited pamphlet against Dr. Hallifax's three sermons. He is a little black man, of no humane aspect, and carries his malignancy in his forehead: he is lame of one leg by some accident, and a great rower on the water; a lively and ingenious man, plays well on the harpsichord, sings well, and draws and etches not amiss. He is son to a dignitary of Exeter, and probably a degenerate grandson to a quondam bishop of that see. I think the Grace Mr. Hubbard opposed was that brought in by Mr. Jebb to abolish subscription in the university.' Blackall is mentioned in a silly poem called 'Pot Fair' (1780). On 12 July 1786 he was admitted to the valuable rectory of Loughborough in Leicestershire on the presentation of his college. He died there on 8 May 1792, and a monument to his memory was placed in the parish church of Sidmouth, Devonshire. Besides publishing some detached sermons he took part in the 'confessional controversy' by addressing 'A Letter to Dr. Hallifax upon the subject of his three discourses preached before the University of Cambridge, occasioned by an attempt to abolish subscription to the Thirty-nine Articles,' 1772.

T. C.

BLACKBOURNE, JOHN (1683-1741), nonjuror, was born in 1683, and educated at Trinity College, Cambridge, where he became B.A. in 1700, and M.A. in 1705. His refusal to recognise the revolutionary settlement excluded him from clerical preferment. According to Dr. Bowes, who 'waited on him often in Little Britain, where he lived almost lost to the world and hid amongst old books,' Blackbourne 'lived a very exemplary, good life, and studied hard, endeavouring to be useful to mankind, both as a scholar and divine. To keep himself independent, he became corrector of the press to Mr. Bowyer, printer, and was, indeed, one of the most accurate of any that ever took upon him that laborious employ' (Nichols, *Literary Anecdotes*, i. 252). He was powerfully recommended to 'King James III' by Lord Winchelsea and other nobles of his faction, and was consecrated bishop of the nonjurors 11 June 1725 (Blunt, *Theological Dictionary*, 1872) by the nonjuring prelates, Spinckes, Gandy, and Doughty, with the last two of whom he took part in the consecration of Richard Rawlinson, 25 March 1728, and subsequently with Gandy and Rawlinson in the consecration of George Smith. Blackbourne belonged to that section of the nonjurors which, in respect to the 'usages,' adhered to the practice of the English church as it stood at the time of the separation, and who were known as 'nonusagers,' in contradistinction to the 'usagers,' who wished to introduce chiefly into their eucharistic liturgy certain catholic practices. The two parties remained separate, each consecrating several bishops, from the year 1718 to 1733, when a reconciliation took place on the basis of a general adoption of the catholic 'usages;' but Blackbourne still refused, though almost alone, to relinquish the use of the communion office of the Anglican church. Blackbourne published an edition of Johan Bale's 'Brefe Chronycle concernynge the Examinacyon and Death of the Blessed Martyr of Christ, Syr Johan Oldecastell the Lorde Cobham. To which is added an Appendix of original Instruments,' 8vo, London, 1729; and an edition of 'The Works of the Lord Bacon. Francisci Baconi, Baronis de Verulamio, Vicecomitis Sancti Albani, Magni Angliæ Cancellarii, Opera omnia, quatuor Voluminibus comprehensa; hactenus edita, ad autographorum maxime fidem, emendantur; nonnulla etiam ex MSS. Codicibus deprompta, nunc primum prodeunt,' fol. London, 1730. He is also credited with editing the 'Castrations to Holinshed's Chronicle,' 1728, fol. Blackbourne died 17 Nov. 1741, and his library was sold by auction in February 1742. He was buried in Islington churchyard. His widow, Philadelphia, after having contracted a second marriage with Richard Heybourne, a citizen of London, died 10 Jan. 1750, at the age of 70, and was buried by the side of her first husband.

[Graduati Cantab. 1787; Nichols's Literary Anecdotes; Lathbury's History of the Nonjurors, London, 1845; Blunt's Dictionary of Theology, London, 2nd ed. 1872; Lee's Glossary of Liturgical and Ecclesiastical Terms, London, 1877.]

A. H. G.

BLACKBURN, WILLIAM (1750–1790), surveyor and architect, was born in Southwark. His father was a tradesman of St. John's parish, and his mother a native of Spain. His limited education was derived from a common school, and at a proper age he was placed under a surveyor—one, however, of so little note that few advantages could be obtained in the knowledge of his profession. But his intelligence and perseverance soon overcame these early drawbacks, and he managed to make the acquaintance of men of reputation, several of whom belonged to the Royal Academy. Encouraged and assisted by them, he became a student in that institution, and worked so industriously that in 1773 he was presented with the medal for the best drawing of the interior of St. Stephen's church, Walbrook, 'the chef d'œuvre of Sir Christopher Wren,' as Pennant has justly called it; and on receiving the prize, Sir Joshua Reynolds, the president, highly eulogised his abilities and prognosticated his future success.

Soon after entering into business on his own account in Southwark, his reputation steadily increased, until at length his name was brought into public notice by the following circumstance. An act of parliament had passed in 1779 declaring that 'if any offenders convicted of crimes for which transportation had been usually inflicted were ordered to solitary confinement, accompanied by well regulated labour and religious instruction, it might be the means, under Providence, not only of deterring others from the commission of the like crimes, but also of reforming,' &c. &c. By this act his majesty was authorised to appoint three supervisors of the buildings to be erected, who were to fix upon any common, heath, or waste in Middlesex, Essex, Kent, or Surrey, on which should be built two plain strong edifices, to be called 'Penitentiary Houses,' one for six hundred males the other for three hundred females. In the same year three supervisors were appointed: John Howard (who had been strongly solicited by Sir William Blackstone, a great friend of the scheme), John Fothergill, M.D. (a friend of Howard's), and George Whatley, treasurer of the Foundling Hospital. This commission, however, was soon dissolved, for Dr. Fothergill died in 1780, and Mr. Howard, not being able to coalesce with his remaining colleague, resigned shortly afterwards. In 1781 a new commission was formed, consisting of Sir Gilbert Elliot, bart., Sir Charles Bunbury, bart., and Thomas Bowdler. These gentlemen being desirous that the penitentiary houses should be constructed in the manner most conducive to the ends of solitary confinement, useful labour, and moral reform, proposed premiums for the best plans for such buildings; and the highest premium of one hundred guineas was unanimously awarded to Blackburn in March 1782. In due course he was appointed to the office of architect and surveyor of the proposed buildings. But after the plan of a penitentiary for male offenders had been arranged, and a great part of the work contracted for, the attention of public men was diverted from this important social scheme, and the designs of government were not carried into execution. Popular feeling had become so strongly stimulated in favour of the erection of prisons in conformity to his plans, that many gaols and other structures throughout the country were built under Blackburn's inspection. But before he had reached his fortieth year, he died suddenly at Preston, in Lancashire, on 28 Oct. 1790, while on a journey to Scotland, taken at the instance of the Duke of Buccleuch and the lord provost of Glasgow, with a view to erect a new gaol in that city. His body was removed to London, and interred in the Bunhill Fields burial-ground.

During Blackburn's short career his labour had been very extensive. The gaol of Newgate in Dublin was indebted to him for many of its improvements; the plan of a new prison for Limerick was his design, and, shortly before his death, negotiations had commenced for the erection of a penitentiary house for Ireland; he constructed the tank in Cornhill and the prison at Oxford. His abilities were employed also in preparing designs of churches, houses, villas; and of three elegant designs for a new church at Hackney, one had been selected for early execution, when his untimely death set aside the undertaking. It was at one time intended to have engraved and published a series of his principal drawings, which displayed great taste and a thorough mastery of his favourite study of architecture, but we cannot find that this project was ever carried out.

Blackburn belonged to the presbyterian denomination, and was intimate with the most prominent members of that persuasion both in town and country. The most agreeable association connected with his memory is his intimate friendship with John Howard, whose benevolent designs he endeavoured to promote. Howard used to say that Blackburn was the only man who was capable of delineating to his mind upon paper his ideas of what a prison ought to be. In person he was of middle stature, and from his early youth was very corpulent. A widow, Lydia, daughter of Joshua Hobson, a well-known builder of Southwark, whom he had married

in 1783, and four young children survived him.

[Gent. Mag. xlix. 567, lv. 325, lx. 1053; Aikin's Life of Howard.] J. W.-G.

BLACKBURNE, ANNA (*d.* 1794), botanist, daughter of John Blackburne [q.v.] of Orford, was accomplished in natural history, and formed a large and varied collection. She was a friend and constant correspondent of Linnæus. She died at Fairfield, near Warrington, in 1794.

[Gent. Mag. lxiv. 180.] G. T. B.

BLACKBURNE, FRANCIS (1705–1787), divine, was born at Richmond, Yorkshire, on 9 June 1705. He was educated at Kendal, Hawkshead, and Sedbergh, and was admitted (May 1722) at Catherine Hall, Cambridge, where he seems to have already shown his liberal principles. 'Young man,' said a worthy old lay gentleman to him, 'let the first book thou readest at Cambridge be Locke upon government.' Blackburne thoroughly assimilated Locke's politics and theology, and, though the only qualified candidate, was refused a fellowship in consequence. He was ordained deacon 17 March 1728, and became 'conduct' of his college. He left it on being refused a fellowship, and lived with an uncle in Yorkshire till 1739, when he was ordained priest to take the rectory of Richmond in Yorkshire, which had been promised to him on the first vacancy. He resided there till his death. In 1744 he married a widow, Hannah, formerly Hotham, who had (in 1737) married Joshua Elsworth. He was collated to the archdeaconry of Cleveland in July 1750, and in August 1750 to the prebend of Bilton, by Archbishop Hutton of York; but his principles prevented any further preferment, and he early made up his mind never again to subscribe the Thirty-nine Articles. In 1749 John Jones, vicar of Alconbury, published his 'Free and Candid Disquisitions relating to the Church of England,' which made some noise at the time, by proposing modifications of the church services and ritual with a view to meeting difficulties of the latitudinarian party. Blackburne had read the book in manuscript, but denied that he had any share in the composition. Its phraseology was too 'milky' for his taste. He defended it in an apology (1750). In 1752 he published anonymously an attack upon Bishop Butler's well-known charge (1751), called 'A Serious Inquiry into the Use and Importance of External Religion,' and accusing Butler of deficient protestantism. This was first printed with his name in 1767 in the 'Pillars of Priestcraft and Orthodoxy shaken,' a collection by R. Baron. He supported the semi-materialist theory of the 'sleep of the soul' of his college friend Bishop Law, in a tract called 'No Proof in the Scriptures of an Intermediate State,' &c., 1755; and in 1758 he argued against the casuistry which would permit subscription to the articles to be made with considerable latitude of meaning, in 'Remarks on the Rev. Dr. Powell's Sermon in Defence of Subscriptions.' This controversy led to his best known work. He had reconciled himself with some difficulty to the subscriptions necessary for his later preferments, but his doubts had increased when the prospect of a further appointment led to a fresh consideration. He then studied the history of the tests imposed by protestant churches, and his studies resulted in the composition of 'The Confessional, or a full and free inquiry into the right, utility, and success of establishing confessions of faith and doctrine in protestant churches.' The manuscript remained unpublished for some years, when the one confidential friend who had seen it mentioned it to the republican Thomas Hollis, through whom Millar, the well-known bookseller, was introduced to the author, and published the book anonymously in May 1766; a second edition appeared in June 1767. The 'Confessional' argues, as a corollary from Chillingworth's principle—'The Bible is the religion of protestants'—that a profession of belief in the scriptures as the word of God, and a promise to teach the people from the scriptures, should be the sole pledges demanded from protestant pastors. This is supported by historical considerations, and the device of lax interpretation of the articles is denounced as a casuistical artifice of Laud's in defence of Arminianism. A lively controversy arose. A list of the pamphlets is given in the 'Gentleman's Magazine,' xli. 405, xlii. 263, and in a 'Short View of the Controversy' (by Dr. Disney), 1773. A third edition of the 'Confessional' appeared in 1770. In 1772 a meeting was held at the Feathers Tavern, and a petition signed by 200 persons for giving effect to Blackburne's proposal. It was rejected by 217 to 71 after a speech in condemnation by Burke, published in his Works.

Theophilus Lindsey, who married a stepdaughter of Blackburne's, and Dr. Disney, who married his eldest daughter, joined in this agitation, and both of them afterwards left the church of England to become unitarians. Blackburne was naturally supposed to sympathise with their views. On Disney's secession he drew up a paper called 'An Answer to the Question, Why are you not a Socinian?'

He declares his belief in the divinity of Christ, though he confesses to certain doubts and guards his assertions. He had qualified for his preferment by subscribing tests to which he would not again submit, but we are told that his preferments produced only 150*l.* a year, and that he declined an offer to succeed S. Chandler at the Old Jewry at a salary of 400*l.*

He had made some preparations for a life of Luther, but abandoned his plan in order to write the memoirs of his friend Thomas Hollis [see HOLLIS, THOMAS]. These appeared in 1780. In 1787 he performed his thirty-eighth visitation in Cleveland, and died, 7 Aug. 1787, a few weeks later. He left a widow (died 20 Aug. 1799) and four children: Jane, married to Dr. Disney; Francis, vicar of Brignal; Sarah, married to the Rev. John Hall, vicar of Chew Magna; and William, a physician in London. A son, Thomas, a physician, died, aged thirty-three, in 1782. His 'Works, Theological and Miscellaneous, including some pieces not before printed,' with a memoir, were published by his son Francis in 1804, in seven volumes. The 'Confessional' occupies the fifth volume. The third volume contains 'A Historical View of the Controversy concerning an Intermediate State,' of which the first edition appeared in 1765, and the second, much enlarged, in 1772. It brought him into collision with Bishop Warburton. His 'Remarks on Dr. Warburton's Account of the Sentiments of the Jews concerning the Soul' is said to be his masterpiece. The fourth volume of the Works contains his charges, as archdeacon, in 1765, 1766, 1767, 1769, 1771, and 1773. They show that he was not prepared to extend full toleration to catholics. The other volumes contain miscellaneous pamphlets.

[Life by himself and his son, prefixed to Works.] L. S.

BLACKBURNE, FRANCIS (1782–1867), lord chancellor of Ireland, was born at Great Footstown, county Meath, on 11 Nov. 1782. In 1792 he was sent to school at the village of Dunshaughlin, where he remained a year and a half. At this time the effects of the French revolution were severely felt in some parts of Ireland. A conspiracy was discovered for an attack upon the house at Footstown, and the family removed to the village of Kells, and ultimately to Dublin. After some time spent in the school of the Rev. William White in the Irish capital, Blackburne entered Trinity College, Dublin, in July 1798, where he acquired numerous distinctions.

Blackburne kept the usual terms at King's Inn, Dublin, and subsequently proceeded to Lincoln's Inn, London. He was called to the bar in 1805, and went the home circuit. In the course of four years he was able to clear off the charges upon the paternal property to which he had succeeded. In 1809 he married the daughter of Mr. William Martley of Ballyfallon, by whom he had fourteen children. Five only of these survived him. The condition of Ireland in 1822 was very turbulent, and it was necessary to renew the Insurrection Act. Blackburne, now called within the bar, administered the act in the county and city of Limerick for two years, and he effectually restored order in the district. In 1824 Blackburne was examined on the state of Ireland before committees of both houses of parliament. Two years later he was appointed serjeant. Although Blackburne's political opinions were distinctly conservative, on the accession of Earl Grey to power in 1830 he became attorney-general for Ireland, and speedily achieved a legal victory over Daniel O'Connell, who had threatened to teach him law. A conspiracy was formed in 1831 for the purpose of resisting the payment of tithe, and riots and murders took place in several of the disturbed districts. The government failed to obtain convictions against the agitators, in spite of the evidence accumulated by Blackburne. After the anti-tithe meetings in Ireland were suppressed, the condition of the country grew more alarming. A new coercion act was considered to be necessary and passed in March 1833.

Blackburne was called upon to draw up a report to the lord-lieutenant on the condition of the country at about the same time. His activity was very distasteful to O'Connell and his followers, who fiercely attacked him in a series of letters to Lord Duncannon, the home secretary. On Melbourne's return to power in April 1835, Blackburne resigned. Post after post on the bench became vacant during the premiership of Lord Melbourne, but Blackburne was overlooked. It is said that Lord Melbourne was not a free agent in this matter, being bound to O'Connell and his followers, who were bitterly hostile to Blackburne.

In 1841 Sir Robert Peel again appointed Blackburne attorney-general for Ireland. Upon the death of Sir Michael O'Loghlen in 1842 he became master of the rolls in Ireland. Soon afterwards he assisted the lord-chancellor in preparing a code of general orders for the court of chancery. In January 1846 Blackburne was appointed chief justice of the queen's bench. He presided with conspicuous

ability at the assizes during the critical period of 1847–8. He delivered the charge in the prosecution of Smith O'Brien and his confederates, who were convicted of high treason. Referring to this charge, Lord Brougham said: 'I never in the course of my experience read a more able and satisfactory argument in every respect than that of Chief-justice Blackburne' (*House of Lords' Cases*, ii. 496). Blackburne also delivered an important charge to the grand jury at Monaghan in 1851, in connection with the outbreak of Ribbonism.

When Lord Derby came into office in February 1852, Blackburne was made chancellor of Ireland, but he resigned the post on the formation of a coalition government under Lord Aberdeen in December of the same year.

In 1852, at the wish of the government, Blackburne became one of the commissioners of national education, but he retired from it in the following year along with Archbishop Whately and Baron Greene. In 1854 Blackburne, when examined at great length before a committee of the House of Lords as to the circumstances which led to his retirement, stated that he joined the board under the conviction that it would afford a large amount of religious, combined with secular, instruction, but that a substantial part of the religious instruction had been subtracted from the course (*Report of the Select Committee of the House of Lords, &c.*)

In 1856 Blackburne was appointed by Lord Palmerston lord justice of appeal in Ireland. Two years later he was invited by Lord Derby again to become lord chancellor, but he declined on account of his advanced age and failing health. On the accession to power of Lord Derby in 1866 he consented, however, to accept the appointment, but being warmly attacked he was ultimately induced to resign. In May 1867 Blackburne declined Lord Derby's offer of a baronetcy. He died on 17 Sept. 1867, in the eighty-fifth year of his age. Blackburne was for some years vice-chancellor of Dublin University.

In private character Blackburne was generous and urbane. As a lawyer he possessed extraordinary power of mental concentration, wide experience, and profound acquaintance with every branch of law and equity. He had a dignified and courteous manner, a style nervous, terse, and perspicuous, a distinct and melodious voice, and a fluent delivery. His mind was clear to the last.

[Life of the Right Hon. Francis Blackburne, late Lord Chancellor of Ireland, by his son Edward Blackburne, Q.C., 1874; Annual Register, 1867.] G. B. S.

BLACKBURNE, JOHN (1690–1786), botanist, of Orford, near Warrington, maintained an extensive garden, including very many exotic species. A catalogue was published by his gardener, Adam Neal, at Warrington, in 1779.

[Gent. Mag. lvii. 204.] G. T. B.

BLACKBURNE, LANCELOT (1658–1743), archbishop of York, was the son of Richard Blackburne of London, whom the archbishop claimed to have been connected with the Blackburnes of Marricke Abbey, and after being educated at Westminster School matriculated at Christ Church, Oxford, on 20 Oct. 1676, aged 17. At the close of 1681, shortly after his ordination, he went to the West Indies, the sum of 20*l.* appearing in the record of 'Moneys paid for Secret Services' (Camden Soc. 1851) to have been paid 'to Launcelott Blackburne, clerk, bounty for his transportation to Antego.' On 28 Jan. 1683 he proceeded M.A., and having attached himself to Bishop Trelawny on his appointment to the see of Exeter, received considerable preferment in that diocese. He became a prebendary in June 1691 and sub-dean in January 1695. Among the correspondence of John Ellis in the British Museum, 'Additional MSS.' 28880–88, occur several letters from Blackburne, and among them (28880, f. 169) is one requesting the influence of Ellis on behalf of his appointment to the duchy rectory of Calstock in Cornwall (29 May 1696). This preferment Blackburne obtained, and during his tenure of it he built the old rectory house. A letter from Blackburne to Bishop Trelawny, describing the evidence given in a trial at Exeter for witchcraft in September 1696, was printed in 'Notes and Queries,' 1st series, xi. 498–9 (1855), and reprinted in the 'Western Antiquary,' iii. 226–7 (1884). Rumours injurious to his reputation were freely circulated during his lifetime, and in 1702 they forced him to resign his sub-deanery. In July 1704, however, he was reinstated, and from that time his rise was rapid. He became the dean of Exeter on 3 Nov. 1705, archdeacon of Cornwall in January 1715, and bishop of Exeter in January 1717. This preferment he retained until 1724, and it is stated that he desired to hold it *in commendam* with the deanery of St. Paul's, but that he was prevailed upon to accept the archbishopric of York, a piece of preferment which, according to scandal, was bestowed upon him for having united George I in marriage with his mistress, the Duchess of Munster. Two ballads, printed in 1736, represented him as contending with Hoadly and Gibson for the primacy of Canterbury, but that prize was

missed by all three. Blackburne's rise in the church was originally due to the patronage of Bishop Trelawny, but it was probably accelerated through his marriage, at the Savoy Chapel, 2 Sept. 1684, with Catherine, daughter of William Talbot, of Stourton Castle, Staffordshire, and widow of Walter Littleton of Lichfield. From her brother, William Talbot, bishop of Durham, father of lord-chancellor Talbot, is descended the present Earl of Shrewsbury, and her issue by her first husband was a direct ancestor of Lord Teynham. She was older than the archbishop, and predeceased him. He died at a time of extreme cold, 23 March 1743, and was buried at St. Margaret's, Westminster, on 1 April.

Archbishop Blackburne was gay and witty. His enemies repeated the story that he acted as chaplain on board one of the ships engaged in buccaneering, and that he shared the booty, the joke running that one of the buccaneers on his arrival in England asked what had become of his old chum Blackburne, and was answered that he was archbishop of York. The freeness of his manners is shown by two anecdotes: (1) That on a visitation at St. Mary's, Nottingham, he ordered pipes and tobacco and some liquor to be brought into the vestry 'for his refreshment after the fatigue of confirmation;' whereupon the vicar, Mr. Disney, remonstrated with the archbishop for his conduct, and, with the remark that the vestry should not be turned into a smoking-room, forbad their introduction. (2) That he applauded the conduct of Queen Caroline in not objecting to the king's new mistress. It was at one time insinuated that Francis Blackburne, the archdeacon [q. v.], was a natural son of the archbishop, but this was a slander. Horace Walpole more than once asserted that Bishop Hayter of Norwich was an illegitimate son of the archbishop, but this assertion is refuted in the 'Quarterly Review,' xxvii. 186. One of Walpole's sentences combines all the reckless charges which were repeated by the prelate's slanderers: 'The jolly old archbishop of York, who had all the manners of a man of quality, though he had been a buccaneer and was a clergyman; but he retained nothing of his first profession except his seraglio.' The popular opinion concerning the character of Blackburne's life may be gathered from a poem entitled 'Priestcraft and Lust, or Lancelot to his Ladies, an Epistle from the Shades,' 1743, fo. Hayter was one of Blackburne's executors, and with two Talbots was residuary legatee to the estate. In a charge to the clergy of the archdeaconry of York (1732) he pays a warm tribute to the archbishop, styling him 'my indulgent benefactor.' Archbishop Blackburne was the author of a sermon in Latin to convocation, three sermons before Queen Anne, and one before the House of Commons. When Queen Caroline inquired whether Butler, the author of the 'Analogy,' was not dead, a ready remark of the witty prelate—'No, madam, he is not dead, but buried,' an allusion to his retirement at Stanhope—led to Butler's appointment as clerk of the closet, and to the queen's recommendation of him to Archbishop Potter when she was on her deathbed. A fine engraving of the archbishop by Vertue, from a painting by Zeeman, is dated 'Aged 68, 10 Dec. 1726.'

[Walpole's Last Ten Years of George II (1822), i. 75; Letters, i. 235, 250; Atterbury's Correspondence, i. 253; Bliss's Wood, iv. 661; Rawlinson MSS. 4to, i. 299, Bodleian Library; Noble's Continuation of Granger, iii. 68–9; Granger's Letters, 199; Polwhele's Devon, i. 313; Life of F. Blackburne, i. p. viii (1805); Notes and Queries, 4th ser. ix. 226, 289, 396; Oliver's Bishops of Exeter, 161, 273, 277, 296; Bartlett's Life of Bp. Butler, 38; Welch's Westminster Scholars, 178–9; Sir C. Hanbury Williams's Works (1822), ii. 133–5.] W. P. C.

BLACKBURNE, RICHARD, M.D. (*b.* 1652), physician, was born in London in 1652, and was educated at Trinity College, Cambridge, where he took his degree of B.A. in 1669. 'He was entered on the physic line at Leyden, 23 May 1676, being then twenty-four years of age, and he graduated doctor of medicine in that university' (Munk's *Roll*, i. 451), where his thesis was published as 'Disputatio medica inauguralis de Sanguificatione,' &c., 8vo, Lugduni Batavorum, 1676. About the year 1681 Dr. Blackburne co-operated with John Aubrey, who says that he was 'one of the College of Physicians, and practiseth yearly at Tunbridge Wells,' to bring into public repute for their curative properties the chalybeate springs discovered by Aubrey in 1666 at Seend, near Devizes, and which Dr. Blackburne declared 'to be of the nature and virtue of those at Tunbridge, and altogether as good;' but 'it was about 1688 before they became to be frequented' (Britton, *Memoir of Aubrey*, p. 17). Blackburne was admitted an honorary fellow of the Royal College of Physicians of London, 25 June 1685, and, being created a fellow of the college by the charter of King James II, was admitted as such at the extraordinary comitia of 12 April 1687, and was censor in 1688. The time of his death is unknown. Dr. Blackburne had a great regard and admiration for Thomas Hobbes of Malmesbury, and it is probable that he wrote the short Latin memoir sometimes re-

ferred to Hobbes himself, entitled 'Thomæ Hobbes Angli Malmesburiensis Philosophi Vita.' This short 'Life' of the philosopher has also been attributed to Ralph Bathurst, dean of Bath. Dr. Blackburne certainly wrote a Latin supplement to the short 'Life,' entitled 'Vitæ Hobbianæ Auctarium,' the first sentence of which supplies the chief evidence of his authorship of the 'Life.' Both these works would seem to have been derived from a larger and fuller 'Life' in manuscript written in English by John Aubrey, and used with the knowledge and consent of the latter, and possibly with the assistance of Hobbes himself. The 'Vita,' the 'Auctarium,' and the autobiographic Latin verses, 'Thomæ Hobbes Malmesburiensis Vita Carmine expressa, Authore Seipso,' were issued together in a volume inscribed to William, earl of Devonshire, and bearing on its title-page the mystifying imprint 'Carolopoli: Apud Eleutherium Anglicum, sub signo Veritatis, MDCLXXXI.' The penultimate page gives the place of production, 'Londini: Apud Guil. Cooke, ad Insigne Viridis Draconis juxta portam vulgò dictam Temple Bar.' These productions form the basis of the 'Life' prefixed to the first collection of 'The Moral and Political Works of Thomas Hobbes of Malmesbury,' &c., fol. London, 1750.

[Graduati Cantab. 1787; Britton's Memoir of John Aubrey, 1845; Munk's Roll of the College of Physicians.] A. H. G.

BLACKBURNE, Sir WILLIAM (1764–1839), major-general, an Indian officer, entered the Madras army as a cadet of infantry in 1782, and in 1784 served with the force employed under Colonel Fullarton in the reduction of the Poligars in Madura and Tinnevelly. He subsequently served in the campaign which ended in the defeat of Tippoo Sultan in 1792. His proficiency as a linguist led to his being employed in 1787 as Mahratta interpreter at Tanjore, on the occasion of an inquiry into the right of succession to the Tanjore Raj, and he afterwards held for some years the post of Mahratta interpreter under the British resident at Tanjore. In 1801, having then attained to the military rank of captain, he was appointed resident at the Tanjore court, and held that office until he left India in 1823.

Very shortly after his appointment as resident, Blackburne was called upon to take the field at the head of his escort and of the raja's troops, to repel two invasions of the province by insurgents from the adjoining districts. This duty was successfully performed, and the neighbouring province of Ramnad was recovered. In 1804 Blackburne, having brought to light extensive frauds and oppression on the part of the native officials in Tanjore, the civil administration of which was under officers independent of the resident, was employed by the Madras government to remodel the administration both in Tanjore and in the native state of Pudukota. He was twice sent on special missions to Travancore. His political services elicited the high approval of Lord Wellesley, and also of successive governors of Madras. On his retirement from the residency of Tanjore, Sir Thomas Munro recorded a minute testifying to the value of Blackburne's services and influence in Tanjore. Blackburne, being then a major-general, received the honour of knighthood in 1838, and died 16 Oct. in the following year.

BLACKER, GEORGE (1791–1871), antiquary, elder son of James Blacker, a Dublin magistrate, was born in 1791, was elected a scholar of Trinity College, Dublin, in 1809, and proceeded B.A. in 1811 and M.A. in 1858. He was for several years curate of St. Andrew's, Dublin, chaplain of the city corporation, and rector of Taghadoe. In 1840 he became vicar of Maynooth and a prebendary in St. Patrick's Cathedral. He died at Maynooth on 23 May 1871, and was buried in the Leinster mausoleum, by the parish church. Blacker wrote (for private circulation): 1. 'Castle of Maynooth,' 1853; 2nd edition 1860. 2. 'Castle of Kilkea,' 1860. 3. 'A Record of Maynooth Church,' 1867.

[Irish Ecclesiastical Gazette (June 1871), xiii. 731; Cotton's Fasti Eccles. Hibern. ii. 168; information from Rev. B. H. Blacker.]

BLACKER, VALENTINE (1778–1823), historian of the Mahratta war of 1817-18-19, born 19 Oct. 1778, obtained his commission in the Madras cavalry in 1798, and served as a cornet in the Mysore campaign of 1799, with a troop of cavalry of the Nizam's contingent. A year later he was employed in Wainád as aide-de-camp to Colonel Stevenson, and subsequently served with his regiment in the southern provinces of the Madras presidency under Colonel Agnew, by whom he was thanked in despatches for having surprised a party of the enemy, and for a successful charge with the troop of cavalry under his command. The remainder of his military service was in the quartermaster-

general's department, to the head of which he was raised in 1810. In 1815 he served with the army of reserve under Lieutenant-general Sir Thomas Hislop, and in 1817 under the same commander with the army of the Deccan at the battle of Mahidpur, and the other operations in the Deccan. His services at Mahidpur and the reconnaissances made by him before the battle were specially brought to the notice of the governor-general.

Lieutenant-colonel Blacker was subsequently appointed surveyor-general of India, and on returning to Europe in 1821 was thanked in general orders by the commander-in-chief of the Madras army for his 'eminent and scientific services as quartermaster-general of the army of Fort St. George during a period of ten years.' He died at Calcutta in 1823.

He was appointed a companion of the Bath in 1818.

BLACKERBY, RICHARD (1574-1648), puritan, was born in 1574 at Worlington, Suffolk. He was the second son of Thomas Blackerby, a man of 'good estate and quality.' Of their nine sons Richard was by his parents designed from his birth for the ministry. After attending school at St. Edmundsbury, in his fifteenth year he was entered of Trinity College, Cambridge, where he continued nine years, and was renowned for his Latin, Greek, and Hebrew scholarship. Perkins was the great preacher of Cambridge at the time, and Blackerby came under his spell. From the university—where he proceeded B.A. and M.A.—he went as chaplain to Sir Thomas Jermin of Rushbrook in Suffolk, father of the Earl of St. Albans. Leaving Rushbrook he 'removed to the house of the renowned and pious knight Sir Edward Lewknor, of Denham in Suffolk.' Here he married Sarah, eldest daughter of the Rev. Timothy Prick, alias Oldman, 'which alias Oldman was assumed by the family in the days of Queen Mary, the father of the said Timothy being forced then to abscond and to change his name, being prescribed for the protestant religion.' He resided with his father-in-law at Denham for two years. Thence he was called to Feltwell in Norfolk, 'where he continued without institution or induction for some time; but then, by reason of his nonconformity, he was forced to remove and hired a house at Ashen (Ashdon) in Essex.' He here received as boarders for their classical and theological education a select number of young men, many of whom became subsequently eminent clergy of the church of England. Dr. Bernard, the biographer of Ussher, was one, and Samuel Fairclough another. Blackerby never saw his way to take orders in the established church. But he was constantly preaching wherever opportunity was afforded, although, being unable to subscribe conscientiously, he could take no benefice. There are many extant testimonies to his power as a preacher. Daniel Rogers of Wethersfield 'told another divine that he could never come into the presence of Mr. Blackerby without some kind of trembling upon him, because of the divine majesty and holiness which seemed to shine in him.' It is much to be lamented that three diaries which he kept—in Latin, Greek, and English respectively—were lost in a fire.

In his fifty-fifth year his son-in-law, Christopher Burrell, having been presented to the rectory of Great Wrating (Suffolk), Blackerby went with him. Afterwards he was called to a congregation at Great Thurlow, where he died in 1648, in his seventy-fourth year. Another of his daughters was married to Rev. Samuel Fairclough. Blackerby printed nothing.

[Clark's Lives; Brook's Puritans, iii. 96-100; local researches.] A. B. G.

BLACKET, JOSEPH (1786-1810), poet, was born, according to his own testimony, at an obscure village called Tunstill, in the north of Yorkshire, two miles from Catterick, and about five from Richmond. His father was a day labourer, and had for many years been employed in the service of Sir John Lawson, bart., whose goodness and humanity to the neighbouring poor rendered him, according to Blacket's account, universally beloved. Joseph was the youngest but one—not the youngest, as is commonly stated—of a dozen children. Up to the age of eleven he received an elementary education; in 1797 his brother, a ladies' shoemaker in London, offered him work as his apprentice, with provision for seven years. He reached the metropolis by wagon in ten days. Young Blacket was addicted to books, and before he was fifteen had read Josephus, Eusebius's 'Ecclesiastical History,' Foxe's 'Martyrs,' and a number of other religious works. A visit to the theatre to see Kemble play Richard III turned his attention to Shakespeare. He married in 1804, and in 1807 his wife died of consumption. He suffered much from poverty, but sought consolation in composing poetry, and especially in attempting dramatic verse.

Blacket's first patron was his printer, William Marchant, who set up his poetry for

nothing, and introduced him to his second patron, Mr. Pratt. 'In the autumn of 1808,' says this gentleman, 'I received a variety of manuscripts, with a request that I should read and give my opinion of them.' Mr. Pratt was at once struck by Joseph's genius. He drew a detailed parallel between Blacket and Bloomfield, whose muse had been cherished by Capel Lofft. Mr. Pratt took Blacket under his protection, and introduced him to the public with pride as a literary rarity. Meanwhile, however, Blacket was not inattentive to his trade, but ill-health compelled him to relinquish it. Friends enabled him to take a sea voyage. He embarked, and arrived at the house of his brother-in-law, John Dixon, gamekeeper of Sir Ralph Milbanke, at Seaham, Sunderland, in August 1809. Milbanke, his wife and daughter, interested themselves in him. He is satirically noticed in Byron's 'English Bards and Scotch Reviewers.' The Duchess of Leeds troubled herself to obtain subscriptions towards 'Specimens' of his poetry. But he died on 23 Aug., and was buried in Seaham churchyard. A plain monument bears the concluding lines of his own poem, 'Reflections at Midnight,' written in 1802, when he was but sixteen.

The 'Dying Horse,' in blank verse, is supposed to best exhibit Blacket's power of moral declamation. Of his dramatic skill 'The Earl of Devon, or the Patriots,' a tragedy in five acts, is quoted as a leading and conspicuous example. Mr. Pratt collected and published his 'Remains' with a memoir. As, however, he knew him little more than eighteen months, he has fallen back upon the poet's letters to his brother, mother, &c., in writing his life. The letters are arranged in seven distinct series. Thus Joseph Blacket becomes his own biographer. He corresponded with the author of the 'Farmer's Boy.'

The full titles of his works are: 1. 'Specimens of the Poetry of Joseph Blacket,' London, 1809 (a private edition for limited circulation). 2. 'The Remains of Joseph Blacket, consisting of Poems, Dramatic Sketches, and the "Times," an ode, and a Memoir of his Life, by Mr. Pratt,' 2 vols. London, 1811.

[Gent. Mag. lxxx. ii. 544; Monthly Review (1811), lxvi. 392, (1809) lix. 100; Pratt's Remains, &c.; Brit. Mus. Cat.; Watt's Bibl. Brit.] J. M.

BLACKHALL, GILBERT (*fl.* 1667), catholic missioner, is believed to have been a native of the diocese of Aberdeen. He entered the Scotch college at Rome in 1626, was ordained priest, and returned to Scotland in 1630, but encountered so much opposition from the Jesuits that he withdrew to Paris, where he became confessor to Lady Isabella Hay, eldest daughter of Francis, Earl of Errol. In 1637 he returned to Scotland, where he performed the duties of a missionary in the shires of Aberdeen and Banff, acting at the same time as chaplain to the Countess of Aboyne at Aboyne castle. After her death he returned to France in 1643, with the view of inducing the Marchioness of Huntly to withdraw from Scotland her young granddaughter, the only child of the Countess of Aboyne, and bring her to France to be educated. Having failed in this purpose he applied to the queen of France to use her influence in accomplishing his object, in which he was ultimately successful. He wrote his autobiography in Paris in 1666 or 1667, but how long the author survived the composition of it is unknown. It contains accounts of his relations with Lady Isabella Hay, with the Countess of Aboyne, and with her daughter. The title is 'A breiffe Narration of the Services done to three noble Ladyes, by Gilbert Blakal, Preist of the Scots Mission in France, in the Low Countries, and in Scotland. Dedicated to Madame de Gourdon, one of the forsaid three, and now Dame d'Attour to Madame.' This work is a valuable addition to the history of the eventful times in which Blackhall lived. It was edited by Mr. John Stuart from the original manuscript in the possession of Bishop Kyle, and printed at Aberdeen for the Spalding Club in 1844, 4to.

[Stuart's preface to the Breiffe Narration; Gordon's Roman Catholic Mission in Scotland, introd. v. 523.] T. C.

BLACKHALL, OFFSPRING. [See BLACKALL.]

BLACKLOCK, THOMAS (1721–1791), poet, was born at Annan, Dumfriesshire, in 1721. His parents were natives of Cumberland, poor but well educated. His father was a bricklayer. When six months old he lost his sight by an attack of smallpox. His misfortune and his gentle disposition won much sympathy. His friends read poetry to him, especially Spenser, Milton, Prior, Addison, Pope, and A. Ramsay. He acquired a little Latin, and at the age of twelve attempted to write poetry himself. His father was killed by an accident when the son was nineteen. Meanwhile his manuscripts were handed about and gained some attention. Dr. Stevenson, an eminent physician at Edinburgh, brought him to that city in 1741, and supported him entirely at the grammar school for four years. Upon the rebellion of 1745

he retired to Dumfries, and lived with a Mr. McMurdo, who had married his sister; he afterwards returned to Edinburgh to study at the university. In 1746 he had published an octavo volume of poems. A second edition of these was published in the winter of 1753–4. Blacklock had meanwhile become known to David Hume, who exerted himself to serve the young man by circulating his poems and recommending their author for tutorships or similar employments. In December 1754 Hume, who had been appointed librarian in 1752 by the Faculty of Advocates at a salary of 40*l.*, had a dispute as to the management of the library. He was unwilling to give up his right to use the books, and therefore showed his indignation by giving to Blacklock a 'bond of annuity' for the salary, whilst retaining the office. Hume resigned the office two years afterwards (Burton's *Hume*, i. 393, ii. 18). Meanwhile he had written a long and interesting account of Blacklock to Joseph Spence, the friend of Pope (printed in Burton, i. 388, and Spence's *Anecdotes*, 448). Blacklock, we learn from this, had been patronised by Stevenson and Provost Alexander; he had learnt Latin and Greek, and would have been made professor of Greek at Aberdeen but for a timidity which disqualified him for managing boys. He had made 100 guineas by the last edition of his poems; he had a bursary of 6*l.* a year; and Hume with some friends had allowed him 12 guineas a year for five years. Thirty pounds a year, added Hume, would make this 'man of fine genius' easy and happy. Spence had already seen Blacklock's poems, Hume having sent some copies to Dodsley for distribution among men of taste, and had undertaken to bring out an edition by subscription. An 'Account of the Life, Character, and Poems of Mr. Blacklock, Student of Philosophy in the University of Edinburgh,' written by Spence, appeared in 1754, and was prefixed to an edition of the poems in 1756. All reference to Hume is avoided in the account; and Spence insisted upon the omission of a complimentary mention of Hume in an ode on 'Refinements in Metaphysical Philosophy.' Blacklock resisted, but Hume, accidentally hearing of the controversy, authorised Spence to make the omission (Burton, i. 436). 'That foolish fellow, Spence,' said Johnson to Boswell (5 Aug. 1763), 'has laboured to explain philosophically' how Blacklock achieved an impossibility, viz. to describe visible objects without sight. The explanation, indeed, is easy, for Blacklock's poems are mere echoes of the poetical language of his time, and show little more than a facility for stringing together rhymes. He would, we are told, dictate thirty or forty verses as fast as they could be written down. Whilst doing so he acquired a trick of nervous vibration of his body which became habitual.

By Hume's advice Blacklock abandoned a project of lecturing on oratory, and studied divinity. He was licensed as a preacher in 1759. In 1762 he married Miss Sara Johnston, daughter of a surgeon in Dumfries, and about the same time was presented by the crown, on the application of Lord Selkirk, to the ministry of Kirkcudbright. The parishioners objected to him on account of his blindness, and Blacklock, whose nervous timidity was much tried by the controversy, retired after two years' legal dispute, receiving a small annuity from the parish. He returned to Edinburgh in 1764, and took pupils to board in his house. Amongst them was Joseph, eldest son of Hume's elder brother, John Hume of Ninewells (Burton, ii. 399). For some unexplained reason Blacklock became alienated from Hume, who at this time was still trying to help him. In 1770 he published in the 'Edinburgh Courant' a brief analysis of Beattie's 'Essay on Truth,' directed against Hume's principles (Forbes's *Beattie*, i. 173, 218). He continued to take pupils till growing infirmity caused his retirement in 1787.

In 1767 the university and Marischal College of Aberdeen conferred upon him the degree of D.D. at the suggestion of his friend Beattie. He wrote a letter (4 Sept. 1786) upon the first appearance of Burns's poems to George Lawrie, who sent it Gavin Hamilton, who sent it to the poet. Burns says that this letter led him to give up his intended emigration and to go to Edinburgh, where Blacklock received him kindly and introduced him to many friends. Some complimentary poems afterwards passed between the two. He died 7 July 1791, after a week's illness. He seems to have been very amiable, playful, and kindly to the young, though subject to nervous depression. A curious story is told by Anderson (*British Poets*, vol. xi.) of his joining a party in a state of somnambulism. He was fond of music and carried a flageolet in his pocket, the use of which he said had been suggested to him in a dream. A 'Pastoral Song,' set to music by him, appeared in 1774.

Besides the above works he published: 1. 'Paraclesis, or Consolations deduced from Natural and Revealed Religion; two dissertations, the first (erroneously) supposed to have been composed by Cicero, now rendered into English, the last originally written by Dr. Blacklock,' 1767. 2. Translation from the French of Armand of two discourses on

the Spirit and Evidences of Christianity, with a dedication from his own pen, 1768. 3. 'The Graham, an heroic ballad in four cantos,' 1774. This poem, intended to promote harmony between Scotch and English, was thought unworthy of a place in his works. He wrote an article on blindness for the 'Encyclopædia Britannica,' and perhaps one on poetry. A conversation with Johnson is given in the 'Tour to the Hebrides,' and a letter of Blacklock's to Boswell in regard to it is given in an appendix to later editions. He also wrote, in 1756, an 'Essay towards Universal Etymology,' in verse; and in 1773 a satire called 'A Panegyric upon Great Britain.' An edition of his poems was published in 1793, with a life by Henry Mackenzie, the 'man of feeling.' He left a translation (never published) of the Abbé Haüy's work on the education of the blind.

[Lives by Spence (1756) and Anderson; Forbes's Life of Beattie; Burton's Life of Hume; Kerr's Memoirs of W. Smellie (1811), ii. 14–30.]

L. S.

BLACKLOCK, WILLIAM JAMES (1815?–1858), landscape painter, was born at Cumwhitton, near Carlisle, about 1815, and as a youth was apprenticed to a bookseller of Carlisle. He had always been remarkable for his love of drawing, and so strong did this predilection become that he determined to adopt art as a profession, and accordingly proceeded to London, where he at once began to exercise his talent. In the year 1836 he sent his first pictures to the Royal Academy and continued to exhibit there, as well as at the British Institution and Society of British Artists, until 1855, in which year he contributed to the Royal Academy exhibition four pictures: 'Hermitage Castle,' 'The Border Keep,' 'Elter Water, and the Langdale Pikes,' and 'Belted Will's Tower, Naworth Castle.' He resided principally in London for about fifteen years, when declining health compelled him to return to his native county, where he continued to follow his profession until within a year or two of his decease, when the malady with which he was afflicted obliged him to relinquish its pursuit. He died at Dumfries on 12 March 1858, at the age of 42, and was buried at Cumwhitton. His works are principally views of the landscape scenery of the north of England, and their chief characteristics are picturesqueness and truthfulness. Lonely border towers, deeply embosomed in waving foliage, and bathing in the light of a golden sunset; remote and almost inaccessible tarns, surrounded by rough mountains, upon whose sides the shadows of the light clouds danced merrily; brawling brooks with overhanging rocks and waving trees were the scenes which he admired and loved to paint.

[Carlisle Journal, 19 March 1858; Royal Academy Exhibition Catalogues, 1836–55; Art Journal, 1858, p. 157; Athenæum, 1858, p. 439.]

R. E. G.

BLACKLOE, THOMAS. [See WHITE, THOMAS.]

BLACKMORE, SIR RICHARD (*d.* 1729), physician and voluminous writer in verse and prose, son of Robert Blackmore, an attorney-at-law, was born at Corsham, in Wiltshire, and educated at Westminster School. He entered St. Edmund Hall, Oxford, in 1668, took his B.A. degree on 4 April 1674, and proceeded M.A. on 3 June 1676. His necessities compelled him to temporarily adopt the profession of schoolmaster. With this fact his enemies frequently taunted him in later years.

> By nature form'd, by want a pedant made,
> Blackmore at first set up the whipping trade.
> Next quack commenced; then fierce with pride he swore
> That toothache, gripes, and corns should be no more;
> In vain his drugs as well as birch he tried,
> His boys grew blockheads and his patients died.

After abandoning school work Blackmore spent some time abroad, visited France, Germany, and the Low Countries, and took the degree of M.D. at Padua. On his return to England he was admitted fellow of the Royal College of Physicians, under the charter of James II, at the Comitia Majora Extraordinaria of 12 April 1687, became censor of the college in 1716, and was named an elect on 22 Aug. 1716, which office he resigned on 22 Oct. 1722. In 1695 he published 'Prince Arthur, an Heroick Poem in X books,' fol., which reached a second edition in 1696, and a third in 1714; an enlarged edition, in twelve books, appeared in 1697. The writer tells us that his work was written in such scant moments of leisure as his professional duties afforded, 'and for the greatest part in coffee-houses, or in passing up and down the streets.' Shortly after its appearance the poem, if so it must be called, was attacked by John Dennis in a criticism which Dr. Johnson pronounced to be 'more tedious and disgusting than the work which he condemns.' Far from resenting the attack, Blackmore took occasion in a later work to praise Dennis as 'equal to Boileau in poetry, and superior to him in literary abilities.' When Dr. Johnson wrote his 'Life of Black-

more,' the poem was completely forgotten; but at the time of its publication 'Prince Arthur' found an admirer in no less distinguished a person than John Locke. In 1697 Blackmore was appointed physician in ordinary to William III, and received the honour of knighthood. On the latter circumstance Pope has some lines in the 'Imitations of Horace' (*Epistles*, ii. 1)—

The Hero William and the Martyr Charles,
One knighted Blackmore and one pension'd Quarles;
Which made old Ben and surly Dennis swear,
'No Lord's anointed, but a Russian Bear.'

Blackmore was strongly attached to the principles of the Revolution, and may perhaps have owed his advancement to some political services rendered to King William. He was afterwards one of the physicians to Queen Anne. In 1699 he published a 'Short History of the Last Parliament,' fol., which was followed in 1700 by a 'Satyr against Wit.' The publication of the 'Satyr,' in which the wits of the time were attacked on the score of grossness and irreligion, raised up a swarm of enemies against the writer. Sir Richard had for some time past been residing in Cheapside; his friends belonged chiefly to the City, and he had little acquaintance with men of letters. Immediately after the publication of the 'Satyr' there appeared a collection of satirical 'Commendatory Verses on the Author of the two Arthurs and the Satyr against Wit. By some of his particular friends,' fol. The verses were by various hands, but the chief contributor was Tom Brown. Blackmore lost no time in replying with 'Discommendatory Verses on those which are truly commendatory on the Author of the two Arthurs, &c.,' fol. Dryden, who had previously castigated Blackmore in the preface to his 'Fables,' assailed him very vigorously in the Prologue to the 'Pilgrim' (1700). Garth attacked him in the 'Dispensary' (iv. 172, &c.), bidding him 'learn to rise in sense and sink in sound.' Sedley, Steele, and others had their fling. But ridicule was powerless to check Blackmore's literary aspirations. In 1700 he was before the public with a book of 'Paraphrases on Job,' &c., fol. But when he launched another epic in 1705, 'Eliza, an Epic Poem in X books,' fol., the portentous folio was received in absolute silence by an indifferent public. 'I do not remember,' says Dr. Johnson, 'that by any author, serious or comical, I have found "Eliza" either praised or blamed.' In 1711 appeared the 'Nature of Man; a poem in three books,' 8vo, and in 1712 'Creation; a philosophical Poem demonstrating the Existence and Providence of God,' 8vo. The last-named work, which to modern readers presents few attractions, was warmly praised by Addison in the 'Spectator' (No. 339). Dr. Johnson prophesied that this poem alone, 'if he had written nothing else, would have transmitted him to posterity as one of the first favourites of the English Muse.' Even the splenetic John Dennis was excited to admiration. In beauty of versification, according to this critic, the long-defunct 'Creation' equalled the 'De Rerum Natura' of Lucretius, while in solidity and strength of reasoning the august Roman was far excelled by Sir Richard. A volume of 'Essays on several Subjects,' 8vo, appeared in 1716, a second edition (in two vols. 8vo) following in 1717. One of the essays contained an allusion to a 'godless author' who had burlesqued a psalm. The charge was understood to refer to Pope, who afterwards avenged himself by including his critic in the 'Dunciad' (ii. 259–68). In No. 45 of the 'Freeholder,' Addison says, 'I have lately read with much pleasure the essays upon several subjects published by Sir Richard Blackmore,' on which statement Swift, (*Works by Scott*, ed. 2, xii. 140) makes the remark, 'I admire to see such praises from this author to so insipid a scoundrel, whom I know he despised.' After publishing in 1716 a volume of 'Poems on several Subjects,' 8vo, the indefatigable writer turned his attention to controversial divinity, and in 1721 was ready with 'Just Prejudices against the Arian Hypothesis,' 8vo (2nd edition 1725), which was immediately followed by 'Modern Arians unmasked,' 1721, 8vo. Having thrown off in the same year a 'New Version of the Psalms of David,' 8vo, he lost no time in issuing 'Redemption, a Divine Poem in VI books,' 1722. Never was a man afflicted with a *scribendi cacoëthes* more incurable. No sooner was he delivered of 'Redemption' than he was at work on 'Alfred, an Epic Poem in XII books,' which was published in 1723, 8vo. In the same year appeared 'History of the Conspiracy against the Person and Government of King William the Third in the year 1695,' 8vo. During the next few years he employed his leisure in writing medical treatises, but in 1728 he reverted to divine studies, and published 'Natural Theology, or Moral Duties considered apart from Positive,' 8vo. This was the last work published in his lifetime. He died on 9 Oct. 1729, and was buried at Boxted, Essex, whither he had retired in 1722. There is a monument in the church at Boxted bearing an inscription to the memory of his wife, Dame Mary Blackmore,

and of himself. To the very last he continued writing, and left at his death 'The Accomplished Preacher; or an Essay on Divine Eloquence,' which was edited in 1731, 8vo, by the Rev. John White, of Nayland, in Essex, who had administered to him on his deathbed the last spiritual consolation. It remains to mention Blackmore's medical treatises. These are: 1. 'Discourse on the Plague,' 1720, 8vo. 2. 'Treatise on the Small Pox,' 1723, 8vo. 3. 'Treatise on Consumptions,' &c. 1724, 8vo. 4. 'Treatise on the Spleen,' &c. 1725, 8vo. 5. 'Critical Dissertation on the Spleen,' 1725, 8vo. 6. 'Discourses on the Gout, Rheumatism, and King's Evil,' 1726, 8vo. 7. 'Dissertations on a Dropsy,' &c. 1727, 8vo. A portrait of Sir Richard Blackmore by Colsterman hangs in the hall of the Royal College of Physicians. It was presented to the college in 1863 by Richard Almack, Esq. Swift gives a ludicrous rhyming list of Blackmore's writings in a copy of verses 'to be placed under the picture of England's Arch-Poet,' &c.

[Munk's College of Physicians, i. 467-9; Johnson's Lives of the Poets; Scott's Dryden, i. 417-22, viii. 442-5; Scott's Swift, ed. 2, xii. 140, xiii. 374-5; Wood's Fasti, ed. Bliss, ii. 380.]

A. H. B.

BLACKMORE, THOMAS (1740?-1780?), mezzotint engraver, was born in London about 1740, and from the dates upon his prints, which range from 1769 to 1771, he appears to have practised his art for a very limited period of time. There are by him several well-drawn and brilliantly executed plates, which include portraits after Sir Joshua Reynolds of Samuel Foote, the actor, Mrs. Cholmondeley, Mrs. Anne James, as a Madonna, and, as a youth, Henry William Bunbury, the caricaturist, who afterwards married Miss Catharine Horneck, the 'Little Comedy' of Goldsmith. Among his other plates are 'Sigismonda,' after Cosway; a 'Dutch Lady,' after Frans Hals; a 'Man in a Cloak,' after Van Dyck; and 'Innocence;' as well as subjects after Molenaer and other painters. He died about 1780.

R. E. G.

BLACKMORE, WILLIAM (*d.* 1684), ejected minister, came of an Essex family, and was the second son of William Blackmore of London, a member of the Fishmongers' Company, whose elder son, Sir John Blackmore, knight, was in the confidence of Cromwell, and became governor of St. Helena after the Restoration. William was a member of Lincoln College, Oxford, and graduated M.A. there, although he is not mentioned by Wood. Having been ordained deacon he was appointed in December 1645 to the rectory of Pentloe, Essex, sequestered from Edward Alston. On 1 Sept. 1646 his resignation of Pentloe was accepted by the committee for plundered ministers, and he removed to London, and became curate to Thomas Coleman ('Rabbi' Coleman, who died March 1647) at St. Peter's, Cornhill. He was ordained presbyter by the Fourth London Classis on 20 April 1647, but did not take the covenant, and was duly presented to the rectory of St. Peter's by the corporation of London on 13 May 1656, after the death in 1655 of William Fairfax, D.D., sequestered in August 1643. On 1 Dec. 1646 the London presbyterians published a defence of their system, 'Jus Divinum Regiminis Ecclesiastici,' &c., of which Blackmore wrote the part relating to ordination. Hetherington (*Hist. West. Assemb.* p. 288) describes the book as 'the most complete and able defence of presbyterian church government that has yet appeared.' In 1648 Blackmore was one of the scribes to the London provincial assembly. He signed (probably on 20 Jan. 1649) the presbyterian remonstrance to Cromwell on the meditated death of the king. He was one of the thirteen clergy arrested on a charge of complicity in Christopher Love's plot in 1651; being liberated through the influence of his brother Sir John, he rendered great assistance to Love during his trial. In 1662 Blackmore seceded with the nonconformists, and retired into Essex, where he lived on his ample means and gathered a small flock. In April 1672 he was licensed as 'a presbyterian teacher in his own house' in Hornchurch, near Romford. He died at Hare Street, a hamlet within a mile of Romford, in 1684, and was buried at Romford on 18 July. He married (1) on 1 May 1660 Mary Chewning, from Leeds, Kent, who died in November 1678, and (2) before 1681, Sarah Luttrell, who survived him. His only son, CHEWNING BLACKMORE, born on 1 Jan. 1663, was educated for the ministry at the Rev. John Woodhouse's academy, Sheriff-Hales, near Shifnall, Salop, settled at Worcester in 1688 as assistant to Thomas Badland (ejected in 1663 from Willenhall, Staffordshire, and died 1689), and remained there till his death on 2 Aug. 1737. He married in 1694 Abigail (died in April 1734), daughter of Edward Higgins, and left two sons: (1) Francis, presbyterian minister at Evesham (1728-30), Coventry (1730-42), and Worcester (1743-61), and (2) Edward Chewning, presbyterian minister at Stoke, near Malvern.

BLACKNER, JOHN (1770–1816), author of a history of Nottingham, was born at Ilkeston, Derbyshire, about 1770. After serving an apprenticeship to a stocking-maker in his native place, he migrated to Nottingham. He did not receive even the rudiments of education, but being possessed of strong natural abilities, a facility for making rhymes, and a readiness of speech, he became a great favourite with his associates. His ardent radical sympathies afterwards brought him into prominence as a leader of a section of local politicians, and he acquired such literary ability and reputation as to obtain in 1812 the editorship of the radical daily paper 'The Statesman,' published in London. Through failure of health he held this post only a short time. Soon afterwards he took the editorship of the 'Nottingham Review.' He published several pamphlets, including one in 1805 on the 'Utility of Commerce,' and in 1815 he issued his 'History of Nottingham' (4to, pp. 459), a work which displays much industry and research, though later writers complain of its bombast and party spleen. He was the landlord for some years of the Rancliffe Arms, Sussex Street, Nottingham, and died there on 22 Dec. 1816, in his forty-seventh year.

[Bailey's Annals of Nottinghamshire, 1853–5, iv. 285; Wylie's Old and New Nottingham, 1853, p. 232; Orange's Hist. and Antiq. of Nottingham, 1848, ii. 939.] C. W. S.

BLACKRIE, ALEXANDER (*d.* 1772), apothecary, was a native of Scotland, and for nearly forty years carried on his business at Bromley, Kent, where he died 29 May 1772. In October 1763 he contributed a letter to the 'Scots Magazine,' in which he exposed the secret of Dr. Chittick's cure for gravel. This letter was expanded into a volume, and published in 1766 under the title, 'A Disquisition on Medicines which dissolve the Stone; in which Dr. Chittick's Secret is considered and discovered.' A second edition, enlarged and improved, appeared in 1771.

[Gent. Mag. xlii. 295; Scots Mag. xxxiv. 278; Watt's Bibl. Brit. i. 118.]

BLACKSTONE, JOHN (*d.* 1753), botanist, was a London apothecary. He published 'Fasciculus Plantarum circa Harefield (Middlesex) sponte nascentium,' London, 1737; 'Plantæ rariores Angliæ,' London, 1737; 'Specimen Botanicum quo Plantarum plurium rariorum Angliæ indigenarum loci naturales illustrantur,' London, 1746, to which a number of other botanists contributed. In it several species were added to the British flora. The author intended to publish a second volume of the 'Specimen,' for which he had collected materials, but he died in 1753 before its completion.

BLACKSTONE or BLAXTON, WILLIAM (*d.* 1675), one of the earliest episcopal clergymen resident in New England as distinguished from the puritan founders of New England, must, according to the records of Massachusetts, have arrived in the colony between 1620 and 1630. In the 'Literary Diary' of President Stiles he is called 'an episcopal clergyman'—his name being variantly spelled Blackstone, Blackston, and Blaxton. He was found by the Massachusetts Bay colony, on their arrival in 1630, settled on the peninsula of Shawmut, where the city of Boston now stands. He had had a pleasant cottage built and a garden planted. Difficulties beset him with the new-comers. As a consequence he sold his property and removed to the more tolerant colony of Roger Williams in 1631, observing that 'he had left England to escape the power of the lord bishops, but he found himself in the hands of the Lord's brethren.' According to Stiles's 'Diary' he 'removed to Blaxton river, and settled six miles north of Providence.' Elsewhere in the same diary we learn that he was 'a great student with a large library,' that he 'rode a bull for want of a horse,' and 'preached occasionally,' and that his home and library were burnt in King Philip's war. He married, 4 July 1659, widow Sarah Stephenson, who died in June 1673. Blackstone died 26 May 1675. 'He was buried,' says the 'Massachusetts Historical Collections' (2nd series, x. 710), 'in classic ground, on Study Hill, where it is said a white stone marks his grave.' President Stiles visited his grave in 1771, and left a careful map of the whole region, marking the homes of Blackstone, Roger Williams, and Samuel Gorton, the patriarchs of New England (local) history. The high ground on which his second New England home was built—about six miles from Providence—still bears the name of 'Study Hill,' because it was on this hill that Blackstone pursued his studies which gave him a wide reputation. The Blackstone river (formerly Pawtucket) and the Blackstone canal also preserve his name.

Dr. Samuel Hopkins speaks of Blackstone as 'a man of learning,' and doubtfully adds: 'He seems to have been of the puritan persuasion, and to have left his country for his nonconformity.' He tells us also that 'he used to come to Providence and preach, and to encourage his hearers gave them the first apples they ever saw'—his orchard having been as celebrated as his library. Lechford, who wrote in 1641, thus mentions him: 'One Mr. Blackstone, a minister sent from Boston, having lived there nine or ten years, because he would not join the church; he lives with Mr. [Roger] Williams, but is far from his opinions.'

[Massachusetts Historical Collections, iv. 202, x. 710; Johnson's Wonder-working Providence, where is to be found a notice of one who sympathised with Blackstone: 'Mr. Samuel Maverick, living on Noddle's Island in Boston Harbour . . . an enemy to the reformation in hand, being strong for the lordly prelatical power;' Holmes's Annals, i. 377; Savage's Winthrop, i. 44; Everett's Address, Second Century, 29; Sprague's Annals of the American Pulpit, v. 1–3.] A. B. G.

BLACKSTONE, Sir WILLIAM (1723–1780), legal writer and judge, was born in Cheapside, London, on 10 July 1723. He was the posthumous son of Charles Blackstone, who is described as 'a silkman, and citizen and bowyer of London,' and who came of a Wiltshire family. His mother, a daughter of Lovelace Bigg of Chilton Foliot in Wiltshire, died before he was twelve years of age, leaving him to the care of his brother, a London surgeon. Through being thus early left an orphan, he was saved, it has been reasonably suggested, from passing through life as a prosperous tradesman. He had already gone to Charterhouse School, and after his mother's death was, on the nomination of Sir Robert Walpole, admitted on the foundation. When he left for Oxford in 1738, he was head of the school; and perhaps from the fact that he gained a gold medal for some verses on Milton, we may gather that his mind had already received its strong literary bent. At Pembroke College, which he entered at the age of fifteen, his studies were chiefly in classical learning. Among his contemporaries was Shenstone the poet; and doubtless at this time were written most of the 'originals and translations' which he is said to have afterwards collected in an unpublished volume. From the pieces which can still be traced to him, and which are full of the strained and stilted mannerisms of the period, we can judge that nothing has been lost to English literature by Blackstone's seeking in poetry only a relaxation. In 1741 he entered himself at the Middle Temple, solemnly marking the change in his life by a poem entitled 'The Lawyer's Farewell to his Muse,' wherein English law is figured, in the spirit of his 'Commentaries,' as a complex yet harmonious whole. The poem has been often reprinted, e.g. in Dodsley, vol. iii., Southey's 'Specimens of English Poetry,' Irving Browne's 'Law and Lawyers in Literature.' Of his legal studies we know nothing except from a letter written by him in 1745 (see *Law Stud. Mag.* ii. 279), in which he describes himself as following the plan sketched out by C. J. Reeve (see *Coll. Jurid.* i. 79), and as having already finished one book of Littleton without experiencing much difficulty. 'In my apprehension,' he says, again anticipating the 'Commentaries,' 'the learning out of use is as necessary to a beginner as that of every day's practice.' The vow of exclusive attachment to law was not rigorously kept. Before completing his twentieth year he had written a treatise on the 'Elements of Architecture,' which has never been published, but which was highly spoken of by those to whom it was shown. He became a careful student of Shakespeare; Malone tells us that 'the notes which he gave me on Shakespeare show him to have been a man of excellent taste and accuracy, and a good critick' (Prior, *Life of Malone*, 431. The notes are initialed '—E' in Malone's supplement). Even verse was not abandoned, though he had to write in secret. His friends particularly admired a poem written by him in 1751 on the death of Frederick, prince of Wales; but it has now little interest except to collectors of literary parallels, who will compare with 'the cock's shrill clarion' of Gray's 'Elegy' (published in the same year)

The bird of day
'Gan morn's approach with clarion shrill declare.

It appeared under the name of Blackstone's brother-in-law, Clitherow, and is reprinted in 'Gent. Mag.' li. 335. This interest in literature never left him. Thus in his last years, when he sat on the bench, we find him carefully discussing, as if it were an important legal case, the quarrel between Pope and Addison, and criticising by the light of Pope's letters the account of the quarrel given in Ruffhead's 'Life.'

He had already been elected a fellow of All Souls (1744) and had taken the degree of B.C.L. (1745), when, after the usual period of probation, then five years, he was called to the bar in 1746. For a long time he made little way, 'not being,' it is said, 'happy in a graceful delivery or a flow of elocution (both of which he much wanted),

nor having any powerful friends or connections to recommend him.' Perhaps his lack of friends is exaggerated, for only three years after his call he succeeded one of his uncles as recorder of Wallingford. Still his practice must have been small. He attended the courts assiduously, but in the notes which he took of important cases his own name occurs only twice in the period from 1746 to 1760. He was busy, however, at Oxford. He assisted in bringing to completion the Codrington Library, and as bursar of his college and steward of its manors, he had an opportunity of exercising his almost excessive love of order and regularity, 'applying his legal mind,' says Professor Burrows, 'to the examination of all the documents bearing on the college property, re-arranging its archives, and leaving . . . a characteristic record of the labour he had bestowed on its accounts in a special manuscript book for the benefit of his successors' (*Worthies of All Souls*, p. 400; CHALMERS, i. 179). With the same earnestness he entered into the question of founder's kin, which then agitated the college. Claims had been made by remote collateral descendants to the privileges which Archbishop Chichele declared in favour of his kin. The college held that some bounds should be put to the meaning of kindred, but their decisions in particular cases were uniformly overruled by the visitors. Blackstone defended the college in a tract on 'Collateral Consanguinity' (1750, reprinted in 'Law Tracts'), arguing that if there were no collateral limit all men would be founder's kin, and concluding in favour of the limit of the canon law, namely the seventh degree. It was probably due in great part to the assistance which he thus gave that in his lifetime a regulation was made limiting the number of privileged fellows. He found fresh work in an attempt to reform the administration of the Clarendon Press. On being appointed a delegate in 1755 he saw the Press 'languishing in a lazy obscurity,' and set himself to discover the cause. He studied the charters, statutes, and registers relating to it, and 'had repeated conferences,' he says, 'with the most eminent masters, in London and other places, with regard to the mechanical part of printing.' His recommendations, many of which were carried into effect, he set out in a letter to Dr. Randolph, the vice-chancellor, which still retains some interest from its details as to the cost of printing. Blackstone himself gave an example of admirable printing in his edition of 'Magna Charta,' published by the Clarendon Press in 1758, under the direction of Dr. Prince (THOMSON, *Magna Charta*).

He had meanwhile been led to the chief work of his life. Murray, the solicitor-general (afterwards Lord Mansfield), had recommended him to the Duke of Newcastle for the professorship of civil law at Oxford, which fell vacant in 1752; but owing, it is said, to his want of readiness to promise that he would give the duke his political support at the university, he was passed over (see an account of his interview with the duke in HOLLIDAY'S *Life of Mansfield*, i. 88). The disappointment was great, but Murray, who seems even then to have understood where Blackstone's strength lay, advised him to go to Oxford and read lectures on English law. As it turned out, he could not have had better advice. Not only were his lectures received with great favour, but they suggested to Mr. Viner the idea of founding a chair of English law (HOLLIDAY, p. 89). Mr. Viner, who had himself done useful work in compiling his 'Abridgment of Law and Equity,' bequeathed a sum of 12,000*l.* for the purpose; and so clear were his directions that in 1758, only two years after his death, his scheme was carried to completion, and Blackstone, as the first professor, began his lectures (see an account of Viner's benefaction in BLACKSTONE'S *Commentaries*, i. 28*n*). Among his hearers at one time was Bentham, who claims to have even then detected the fallacies that were to appear in the 'Commentaries,' and who describes him as 'a formal, precise, and affected lecturer—just what you would expect from the character of his writings; cold, reserved, and wary—exhibiting a frigid pride' (BOWRING, *Bentham*, x. 45). The subject was a novel one in an English university; and Blackstone's lectures, which showed the skill of the man of letters quite as much as the learning of the lawyer, attracted considerable attention, and quickly led to a bettering of his own prospects. He took up law once more, and for several years lived a twofold life: in London, practising at Westminster, taking silk (1761), and sitting in parliament as member for Hindon in Wiltshire (1761); and at Oxford, holding not only his professorship, but also the principalship of New Inn Hall, to which he was appointed in 1761. From this time onward his name occurs frequently in his own reports of cases; and, seeing that in 1761 he was offered and that he declined the chief justiceship of the Common Pleas in Ireland, and that two years later he was made solicitor-general to the queen, he must have rapidly risen to a high place in his profession. Through his published works, too, he was becoming known as a careful student of legal history. He had been counsel in the

case of the Oxfordshire election in 1754, when one of the questions raised was whether tenants holding by copy of court roll according to the custom of the manor, though not at the will of the lord, were freeholders qualified to vote in elections for knights of the shire. The case exciting great interest, Blackstone elaborately discussed the question in his 'Considerations on Copyholders,' tracing the history of the tenures in dispute, and arguing that they could not confer the freehold vote. The matter was settled by the passing of the act 31 Geo. II, cap. 14, which declared all tenants holding by copy of court roll incapable of voting. Apart from its own value, Blackstone's tract shows that he had made a far more careful study of the history of English tenures than his 'Commentaries' would lead one to imagine. But here, as elsewhere, he accepted too readily the conclusions of previous writers, never questioning, for instance, the theory, afterwards repeated in a balder form in the 'Commentaries,' and still almost universally received as true, that copyholders were originally villeins in a state of bondage, who after the Conquest, by the 'good-nature and benevolence' of their lords, had been permitted to hold their lands without interruption till finally they got fixity of tenure according to the custom of the manor. (Blackstone is not to blame for originating the theory; see Coke's *Compleat Copyholder*, sect. xxxii.; Bacon's *Use of the Law*; Wright's *Tenures*, 3rd ed. p. 220; Gilbert's *Tenures*, p. 155. A great part of the passage in the 'Commentaries,' in fact, is in Wright's words). In 1759 Blackstone brought out his first important work, an edition of the Great Charter and the Charter of the Forest. It contains the Articles of the Barons, the issues of the Great Charter in 1215, 1216, and 1217, with several charters of confirmation, the Charter of the Forest, and the Statute of Marlebridge. In a long introduction he traces the history of the charter up to the 29 Edw. I, and gives an account of the various manuscripts known to him, most of which he had himself examined (see in the Introd. to *Statutes of the Realm* the results of later research compared with Blackstone's work).

Some imperfect reports of his lectures having been circulated, and some having 'fallen,' as he says, 'into mercenary hands, and become the object of clandestine sale,' Blackstone determined to prepare them for publication in the form of a general survey of English law. The manuscript notes of his lectures, in his own handwriting, are in the library of the Incorporated Law Society. They are in four volumes, written with great neatness, and with scarcely a single erasure. He produced the first volume of the 'Commentaries' in 1765, and the other three volumes at intervals during the next four years. The work begins with his first Vinerian lecture on the study of the law, an elegant plea, once much admired, 'that a competent knowledge of the laws of that society in which we live is the proper accomplishment of every gentleman and scholar' (cf. the preface to Wood's *Institutes*). He goes on, by way of introduction, to discuss the nature of laws in general (in a chapter which, says Sir H. Maine, 'may almost be said to have made Bentham and Austin into jurists by virtue of sheer repulsion'), the sources of English law, the countries subject to that law, and the legal divisions of England. In the exposition of the law he follows the arrangement of which he had published the outline on beginning his lectures (*Analysis of the Law*, 1754), and which in substance he adopted from Hale's 'Analysis of the Civil part of the Law.' He treats first of the rights commanded or recognised by the law, and secondly of the wrongs which it prohibits; rights again he divides, accepting Hale's unfortunate translation from Roman law, into rights of persons and rights of things (or property), and wrongs into private wrongs, or civil injuries, and public wrongs, or 'crimes and misdemeanors.' To each of these four divisions is allotted a volume (see a table representing in detail 'the arrangement which seems to have been intended by Sir William Blackstone' in Austin, ii. 1018). The work closes with a chapter on the rise, progress, and gradual improvements of the laws of England, which is interesting as having suggested to Reeves the utility of a history of English law filled up with some minuteness upon the outline there drawn. The work thus covers the field of law, and though its critics have remarked some disproportion in its parts, such subjects as public law, equity, ecclesiastical law, and the constitution and jurisdiction of the courts receiving less than their due attention, yet there is a singular completeness in the whole.

Few books have been more successful than the 'Commentaries.' From his lectures, and from the sale of the work, he is said to have made altogether about 14,000*l.* (Prior, *Malone*, p. 431; in Böhmer's *Litteratur des Criminal-Rechts* the sum is said to have been 16,000*l.*) Eight editions appeared in the author's lifetime, and the ninth edition was ready for publication. For sixty years after his death editions continued to follow

one another almost as quickly; editors were found in men like Burn, Christian, Coleridge, and Chitty, who felt that they were rendering a service to their profession in annotating Blackstone with minute and almost tender care; and laymen turned to him to find for the first time English law made readable. So great have been the growth and the changes of law during the last century that to keep the work up to date by means of footnotes is now an almost hopeless task. The attempt is not abandoned in America (see Cooley's edition, 1884), but Blackstone's text has not been reprinted in England since the edition of 1844. As an institutional treatise, however, it still stands alone. When annotation grew too cumbersome, less reverent editors came who laid hands on the text itself, and by mechanically inserting corrections and additions adapted it to modern use. In most cases, from a strange desire for uniformity, they have even removed from the lecture on the study of the law the form of oral address and all the references which it contains to the circumstances of its delivery, and have given it thus maimed as a formal introductory chapter; while Blackstone's worn-out theories on the origin and nature of law and government have been considered to need only abridgment and not revision. The best known of the adaptations, in point of arrangement and otherwise composed with a freer hand than the rest (the poor laws, for example, being no longer treated under the head of overseers of the poor), is Stephen's 'New Commentaries on the Laws of England,' first published in 1841. It reached a ninth edition in 1883, and is now the recognised text-book by which solicitors are introduced to law. It is still to Blackstone, in some form or other, that English law students turn who seek a general view of the subject. The 'Commentaries' has had a yet higher legal fame, having almost, but not quite, reached the distinction accorded to those treatises which, as Blackstone himself says, 'are cited as authority . . . and do not entirely depend on the strength of their quotations from older authors.' (But see Lord Redesdale's protest against the citing of the 'Commentaries' as an authority, 1 Sch. and Lef. 327.) His name is constantly heard in our courts, and to this day judges fortify their decisions by quoting his statement of the law. 'If he has fallen into some minute mistakes in matter of detail,' said Lord Campbell, in the famous case of the Queen *v.* Mills, 'I believe that upon a great question like this, as to the constitution of marriage, there is no authority to be more relied upon' (10 *Cl. and Fin.* 767). How wide his influence has been may be judged on the one side from the fact that throughout Digby's 'History of the Law of Real Property' his work is referred to 'as at once the most available and the most trustworthy authority on the law of the eighteenth century,' and on the other side from the publication in 1822 of Sir J. E. Eardley-Wilmot's Abridgment, 'intended for the use of young persons, and comprised in a series of letters from a father to his daughter,' and from the existence of a 'Comic Blackstone.' His reputation is not confined to England. (See translations in bibliography.) It was made, indeed, matter of reproach to French jurists that they incessantly cited Blackstone as a great authority, rating him even higher than did his own countrymen; and it is still to the 'Commentaries' that most continental writers refer on points of English law. Nowhere has his work been more widely read than in America. 'I hear,' said Burke, in 1775, 'that they have sold nearly as many of Blackstone's Commentaries in America as in England.' It has been edited and abridged in America nearly as often as in England; it suggested to Chancellor Kent the idea of writing his 'Commentaries on American Law;' and there, as here, it has shaped the course of legal education.

Yet while edition after edition was appearing the work had many hard things said about it. There were some who looked with apprehension on an attempt to make smooth the path of the student of law. President Jefferson is reported to have doubted the propriety of citing in America English authorities after the period of emigration, and still more after the declaration of independence, and to have said that the consequence of excluding them would be 'to uncanonise Blackstone, whose book, although the most eloquent and best digested of our law catalogue, has been perverted more than all others to the degeneracy of legal science. A student finds there a smattering of everything, and his indolence easily persuades him that if he understands that book he is master of the whole body of the law' (Tucker, *Life of Jefferson*, ii. 361. See a similar opinion in Ritso's *Introduction to the Science of Law*). Blackstone sustained more vigorous attacks at home. In 1769, when the publication of the first edition was completed, Dr. Priestley wrote what Blackstone called 'a very angry pamphlet' on some passages in the 'Commentaries' relating to dissenters. Blackstone replied in a conciliatory tone, admitting that the passages needed some revision in point of expression, but confessing to no material change of opinion; and Priestley wrote a second letter of explanation, in which,

as one of his friends said, 'there is rather too much submission for the honour of having been noticed.' (RUTT, *Memoirs of Priestley*, i. 73). The same part of the work was subjected to a more careful examination in certain letters on the Toleration Act, addressed to Blackstone by Dr. Furneaux, who not only condemned its illiberal spirit, but found grave fault with it as an incomplete statement of the law. These criticisms were so far successful that in subsequent editions the obnoxious passages were considerably modified; the doubt, for example, being no longer expressed whether, as compared with those of the papists, 'the spirit, the doctrines, and the practice of the sectaries are better calculated to make men good subjects.' A few years later (1776) came Bentham's famous 'Fragment on Government,' directed against the digression on the legislative power of government which occurs (pp. 47–50) in Blackstone's chapter on the nature of laws in general, where he states his quaint proof of the perfection of the British constitution. Bentham did not notice, nor did Blackstone acknowledge, that much of this chapter comes from Burlamaqui, the very words being sometimes reproduced. Even the digression, which to Bentham seemed to be made without any reason, occurs in Burlamaqui with the same context (*Droit de la Nature*, part i. ch. 8. Evidently Blackstone had before him Nugent's translation published in 1748). In the preface to the tract Bentham summed up his opinion of the 'Commentaries' as a whole, and while frankly recognising Blackstone's merits, 'who, first of all institutional writers, has taught jurisprudence to speak the language of the scholar and the gentleman,' urged that the work is thoroughly vitiated by its tone of intolerance and of blind admiration. We have only Bentham's own account of the way in which Blackstone received the criticism; when asked if he would answer it, he said, 'No, not even if it had been better written.' (For Bentham's opinion of Blackstone see also the very strongly worded remarks extracted from his commonplace book in BOWRING'S *Bentham*, x. 141.) The judgment of Austin was not less severe. To him Blackstone's arrangement is a slavish and blundering copy of Hale's; in the whole work ('the far too celebrated Commentaries' he calls it) there is not a single particle of original or discriminating thought; its flattery of English institutions is 'a paltry but effectual artifice' which has made it popular; and its style, for which other critics have only one voice of admiration, is 'a style which is fitted to tickle the ear, though it never or rarely satisfies a severe and masculine taste' (i. 71). There should be mentioned one other critic, long ago forgotten, Sedgwick, the editor of Gilbert's 'Law of Evidence,' who, with strong dissent, yet in a spirit of great fairness and with minute care, discusses Blackstone's first volume, chapter by chapter (*Remarks Critical and Miscellaneous on the Commentaries of Sir W. Blackstone*, 1800; 2nd ed. 1808). A weak reply to Sedgwick was made by W. H. Rowe in a 'Vindication of Blackstone's Commentaries' (1806).

The criticisms of Bentham and of Austin had weight enough to bring Blackstone into undue discredit. To read the 'Commentaries' ceased to be considered an essential part of the liberal education of gentlemen and scholars, and it grew the fashion to speak lightly of the work. There seems now to be the beginning of a more just appreciation. Most of the specific charges against Blackstone were indeed well founded. His was not a mind of much analytical power, nor in any high sense was he an original thinker. His philosophy of law was but a confused mingling of the theories of Puffendorf, Locke, and Montesquieu; and its importance now consists only in its having created, by repulsion, the later English school of jurisprudence. Of the spirit of intellectual independence he had very little. Partly by nature, partly through his political sympathies, partly also, it must be remembered, from a truly worthy admiration of a great system of law and government, he was conservative almost to rigidity. In a characteristic passage he declared that the legal restraints to which Englishmen were subject in his day were 'so gentle and moderate . . . that no man of sense or probity would wish to see them slackened' (i. 144); and, with not less boldness, speaking of the time of Charles II, and drawing a distinction between the theoretical perfection of law and its practical working, he said that '*by the law*, as it then stood, . . . the people had as large a portion of real liberty as is consistent with a state of society' (iv. 439; see AMOS'S *The English Constitution in the Reign of Charles II*, which is a detailed examination of this opinion; it is discussed also in FOX'S *History*, in ROSE'S *Observations*, and in HEYWOOD'S *Vindication*; and see also how Blackstone himself explains his habit of defending legal anomalies, i. 172). The extent of his learning, moreover, has been often exaggerated. He never knew the civil law otherwise than superficially, and frequently states it inaccurately; and even in English law his work is not more remarkable for original research than for the singular skill which it shows in making a happy use of the labours of previous text-writers.

As Lord Ellenborough suggested, he made himself a learned lawyer by writing the 'Commentaries' (see the discussion on Blackstone's merits in 23 *Parl. Hist.* 1078). But within his own sphere of exposition his merits are very great. 'It requires, perhaps,' says Coleridge, in the preface to his edition of the 'Commentaries,' 'the study necessarily imposed upon an editor to understand fully the whole extent of praise to which the author is entitled; his materials should be seen in their crude and scattered state; the controversies examined, of which the sum only is shortly given; what he has rejected, what he has forborne to say should be known; before his learning, judgment, taste, and, above all, his total want of self-display can be justly appreciated.' To this just eulogy one need only add that Blackstone had formed the true conception of an institutional work, which not merely should state the principles of existing law, but by means of 'the learning out of use' should explain their growth. And so well did he carry out his plan that in the 'Commentaries' there is still to be found the best general history of English law, needing comparatively little correction, and told with admirable clearness and spirit. To his style Austin did less than justice. It lacks variety and restraint; but, except amid the loose generalities of the introductory chapters, it is never obscure, and at its best it rises to considerable dignity. Fox thought it 'the very best among our modern writers, always easy and intelligible; far more correct than Hume, and less studied and made up than Robertson' (Trotter, *Memoirs*; see also Fox's speech on Lord Ellenborough's admission to the cabinet).

In 1766 Blackstone, with a growing practice and failing health, resigned both his professorship and his principalship. He still continued to sit in the House of Commons, being returned for the new parliament of 1768 as member for Westbury, in Wiltshire. But beyond a slight connection with Dr. Musgrave's report on the peace of 1763 (16 *Parl. Hist.* 763), his political career was marked by only a single incident. In the exciting debates on Wilkes he played an unfortunate part. On the motion to declare Luttrell elected, Blackstone gave it as his opinion that Wilkes was by common law disqualified from sitting in the house. Grenville retorted by quoting from the 'Commentaries' (i. 162) the causes of disqualification, none of which applied to Wilkes. 'It is well known,' says Philo-Junius, describing the scene, 'that there was a pause of some minutes in the house, from a general expectation that the doctor would say something in his own defence; but it seems his faculties were too much overpowered to think of those subtleties and refinements which have since occurred to him.' The matter gave rise to a prolonged paper controversy, in which Sir W. Meredith, Blackstone, Junius, Dr. Johnson, and others took part. Blackstone, who argued that the expulsion of a member creates in him an incapacity of being re-elected, had certainly the worst of the controversy, maintaining without great dignity an indefensible position (see May's *Parliamentary Practice*, p. 63). Without allowing himself to have been in the wrong, he took pains in his next edition to state the causes of disqualification so as to include such a case as that of Wilkes (i. 162–3; the last sentence of the paragraph does not occur in the first edition). Hence came the toast at opposition banquets: 'The first edition of Dr. Blackstone's "Commentaries on the Laws of England"' (Mahon, *Hist.* v. 352).

After this experience, Blackstone was no doubt glad to retire from parliament. He was invited to be solicitor-general, but he declined the office, as hopes of a judgeship were at the same time held out to him. In February 1770 he was made a justice of the Common Pleas, but he immediately exchanged places with Mr. Justice Yates, and for a few months sat with Lord Mansfield in the court of King's Bench. On Yates's death in the same year he returned to the Common Pleas. He acquired the reputation of being a painstaking judge, and nothing more. Although he had now unquestionably made himself a learned lawyer, his excessive caution and a scrupulous adherence to formalities stood sadly in his way. What Malone tells us of him is in keeping with his general character: 'There were more new trials granted in causes which came before him on circuit than were granted on the decisions of any other judge who sat at Westminster in his time. The reason was that, being extremely diffident of his opinion, he never supported it with much warmth or pertinacity in the court above if a new trial was moved for' (Prior, *Malone*, p. 432; see the chief cases in which he took part in his own reports, vol. ii., also in Burrow's and in Wilson's reports. His most famous judgment is that delivered in Perrin *v.* Blake, in which he discussed the reason, the antiquity, and the extent of the rule in Shelley's case. He took part also in the leading case of Scott *v.* Shepherd, where he differed from the rest of the court in holding that the action was not maintainable; and in the case of Crosby, the lord mayor, reported also in 8 *St. Tr.* 31, and 19 *St. Tr.* 1137). In his later years he suc-

ceeded in procuring an increase in the salaries of judges; and he devoted much of his time to advocating a reform in the system of criminal punishment. He strongly supported the penitentiary system, and it was mainly owing to him and Eden (Lord Auckland) that the act 19 George III c. 74 was passed.

He died 14 Feb. 1780, and was buried in the parish church of Wallingford, where he had spent much of the latter part of his life. He had married in 1761 Sarah Clitherow, and of his nine children one followed so far in his footsteps as to become a fellow of All Souls, principal of New Inn Hall, Vinerian professor, and assessor in the vice-chancellor's court. Henry Blackstone, the law reporter, was his nephew.

In personal character he ever showed that almost oppressive spirit of orderliness which kept him busy at Oxford, and which exhibited itself throughout his life in habits of scrupulous punctuality. He was both languid and hot-tempered. So languid was he, it is said, that in writing the 'Commentaries' he required a bottle of port before him, being 'invigorated and supported in the fatigue of his great work by a temperate use of it' (Croker, *Boswell*, iv. 465); and Lord Stowell, who is the authority for the story, also said that Blackstone was the only man he had ever known who acknowledged and lamented his bad temper. Physically as well as mentally he was lethargic; he grew stout, and came more and more to dislike all forms of exercise, and he seems really to have died from the want of it.

His statue by Bacon, representing him with his right hand on the 'Commentaries,' and with Magna Charta in his left, stands in the Codrington Library. His works are: 1. 'Essay on Collateral Consanguinity,' 1750 (reprinted in 'Law Tracts'). See the other side of the question put in 'An Argument in favour of Collateral Consanguinity' in Wynne's 'Law Tracts.' 2. 'Analysis of the Laws of England,' 1754; 6th ed. 1771; 3rd, 4th, and 5th editions contain the discourse on the study of the law (reprinted in 'Law Tracts'). 3. 'Letter to the Rev. Dr. Randolph, Vice-Chancellor of Oxford,' 1757. 4. 'Considerations on Copyholders, &c.,' 1758 (reprinted in 'Law Tracts'). 5. 'A discourse on the study of the law,' 1758. 6. 'The Great Charter and Charter of the Forest, with other authentic instruments, to which is prefixed an introductory discourse, containing the history of the Charters,' 1759 (reprinted in 'Law Tracts'). 7. 'A treatise on the law of descents in fee-simple,' 1759. 8. 'Reflections on the opinions of Messrs. Pratt, Morton, and Wilbraham, relating to Lord Leitchfield's disqualifications,' 1759. 9. 'A case for the opinion of counsel on the right of the university to make new statutes,' 1759. (For these two pamphlets see life by Clitherow; they are not mentioned elsewhere.) 10. 'Tracts, chiefly relating to the antiquities and laws of England,' 2 vols. 8vo, 1762 (tracts on collateral consanguinity, copyholders, laws of descent, and a reprint of his Great Charter); 3rd ed. 1771, 1 vol. 4to (same tracts, except that on laws of descent; in addition his 'Analysis' and the letter to Dr. Randolph); German translation, 1779. 11. 'Commentaries on the Laws of England,' 4 vols. Editions: 1st, 1765–9, 4to; 2nd, 1768, 4to (see Lowndes); 3rd, 1768, 4to (the 2nd and 3rd seem to be editions of only vols. i. and ii.); 4th, 1770, 4to; 5th, 1773; 6th, 1774, 4to (Dublin edition, 1775, 12mo); 7th, 1775 (this edition and all the subsequent ones are 8vo); 8th, 1778; 9th (by Burn), 1783; 10th and 11th (Burn and Williams), 1787, 1791; 12th, 13th, 14th, and 15th (Christian), 1793–5, 1800, 1803, 1809 (the 12th edition was published in numbers, with portraits of sages of the law, which were inserted by the bookseller without the editor's sanction); 'a new edition' (Archbold), 1811; another edition not numbered (J. Williams), 1822; 16th (Coleridge), 1825; 'a new edition' (Chitty), 1826; 17th ('enlarged and continued by the editor of "Warton's History of English Poetry,"' Price, 1830); 18th (Lee, Hovenden, and Ryland), 1829; 19th (Hovenden and Ryland), 1836; 20th (adapted by Stewart), 1837–41; 21st (Hargrave, Sweet, Couch, and Welsby), 1844; 22nd (adapted by Stewart), 1844–9; 23rd (adapted by Stewart), 1854. Other adaptations: (by Stephen, 'partly founded on Blackstone') 1st ed. 1848–9; 9th ed. 1883; (by Kerr) 1st ed. 1857, 4th ed. 1876; (by Broom and Hadley) 1869. The abridgments and volumes of selections are numerous. Among them are Curry's, 1796 and 1809; Gifford's, 1821; Bayly's, 1840; Warren's, 1855 and 1856. Also 'The Comic Blackstone,' by G. A. à Beckett, 1867. The American editions nearly equal in number the English. The first edition is the Philadelphia reprint of 1771–2; the last and best are Sharswood's, 2 vols. 1878, and Cooley's, 2 vols. 1884. There are also American adaptations, including an edition of Broom and Hadley, by Wait (1875), and abridgments, the last being Ewell's (1883). Translations (French): From the 4th ed. by D. G . . . (de Gomicourt), 6 vols. 1774–6, a translation 'qui n'est ni exacte ni française' (Camus, *Biblioth. des livres de droit*); it omits the notes and references. From the 15th ed. by N. M. Chompré, 6 vols. 1822. 'Commentaires sur le code criminel,' by the

Abbé Coyer, 2 vols. 1776, is a free translation of Blackstone's 4th volume. Other translations of parts of the same volume appeared at the end of the century (see QUÉRARD's *La France littéraire*). (German): A translation of Giffard's abridgment by H. F. C. von Colditz, with preface by Falck, 2 vols. 1822–3. (Italian): The first 2 vols. of 'Classici Criminalisti' (1813) contain Blackstone's 4th vol. (Russian): Catherine II is said to have caused a Russian translation to be made (NICHOLS, *Lit. Anecd.* ii. 553), but it is mentioned in no catalogue of foreign law-books. (See bibliographies of MARVIN, SOULE, LOWNDES, BRUNET, &c. and *Cat. of Brit. Mus.*) 12. 'A Reply to Dr. Priestley's Remarks on the fourth volume of the "Commentaries on the Laws of England." By the author of the Commentaries,' 1769 (reprinted in a volume called 'An interesting Appendix to Sir William Blackstone's Commentaries, &c.,' Philadelphia, 1773, another edition of which appeared in 1774 with the further title of the 'Palladium of Conscience.' Besides Blackstone's reply, it contains Priestley's and Furneaux's letters, and 'The case of the late election, &c.') 13. The Wilkes Case. 'An answer to the question stated,' 1769; published anonymously in answer to 'The question stated,' a pamphlet attributed to Sir W. Meredith. To a new edition Blackstone added 'A Postscript to Junius' (see JUNIUS's letters of 29 July and 8 Aug. 1769). 'The case of the late election of the County of Middlesex considered on the principles of the constitution and the authorities of law,' probably by Blackstone (reprinted in 'The Interesting Appendix, &c.'). 'A speech without-doors upon the subject of a vote given on the 9th day of May, 1769;' it appeared in the 'Public Advertiser' of 28 July 1769 (see letter of PHILO-JUNIUS of 1 Aug. 1769). 14. 'Reports of cases determined in the several courts of Westminster Hall from 1746 to 1779,' 2 vols. fol. 1781; Dublin edition, 2 vols. 8vo, 1781; with notes by Elsley, 2 vols. 8vo, 1828. His reports have never been held in high esteem (see WALLACE's *Reporters*, but see the testimony of Best, C. J., to their accuracy, 1 *Moore and Payne*, 553). 15. 'A memoir in answer to the late Dean of Exeter, now Bishop of Carlisle;' read before Society of Antiquaries in 1762. When Blackstone was preparing his edition of the Great Charter, Dean Lyttelton lent him an ancient parchment roll containing the Great Charter and Charter of the Forest of 9 Henry III. Blackstone considered it a copy, and now, in answer to a communication made by the dean to the society, he gives his reasons in detail (in GUTCH's *Collect. Cur.* ii. 357, and in *Biog. Hist. of Blackstone*). 16. 'A letter from Sir William Blackstone Knt., to the Hon. Daines Barrington, describing an antique seal, &c.;' read before Society of Antiquaries in 1775. He discusses the seals directed by 1 Edward VI, cap. ii. to be used by persons having ecclesiastical jurisdiction, and the circumstances of their disuse (in *Archæol.* iii. 414, and in *Biog. Hist.* of BLACKSTONE). 17. 'Account of the Quarrel between Pope and Addison' (in *Biog. Brit.* 2nd ed. i. 56 n.). 18. 'An Argument in the Exchequer Chamber on giving judgment in the case of Perrin and another *v.* Blake' (in HARGRAVE'S *Law Tracts*, p. 487).

[Life by Clitherow, prefixed to reports; The Biographical History of Sir W. Blackstone, &c., by a gentleman of Lincoln's Inn (Dr. Douglas), 1782—a rambling expansion of Clitherow's Life; Life in Law. Mag. vol. xv., reprinted in Welsby's Judges; article by Marquardsen in Bluntschli-Brater's Staats-Wörterbuch; Glasson's Hist. du Droit et des Instit. de l'Angleterre; Burrow's Worthies of All Souls; Prior's Malone; Chalmers's Oxford; Junius.]

G. P. M.

BLACKWALL, ANTHONY (1674–1730), classical scholar, was born at Blackwall, a hamlet for many generations the seat of his family in the parish of Kirk Ireton, and the hundred of Wirksworth, Derbyshire, in 1674, educated at Derby grammar school, admitted sizar at Emmanuel College, Cambridge, on 30 Sept. 1690, took the degree of B.A. in 1694, and that of M.A. in 1698, and was shortly afterwards appointed headmaster of the Derby School, and lecturer of All Saints' Church, Derby.

In 1706 he distinguished himself in his first literary venture by the publication of 'Θεόγνιδος Γνῶμαι: Theognidis Megarensis Sententiæ Morales'—the original Greek, with a Latin translation, notes, &c., 8vo, to which was prefixed an address in Greek to Joshua Barnes [q.v.], the well-known Greek professor. In 1718 he published 'An Introduction to the Classics, containing a short discourse on their Excellencies, and Directions how to study them to advantage; with an Essay on the Nature and use of those Emphatical and beautiful figures which give strength and ornament to Writing,' London, 12mo. This work gives the beauties of the ancient writers in a clear and concise manner, illustrated from the author's rich stores of knowledge, and with sound criticism. In 1719 appeared the second edition, with additions and an index, London, 12mo, and there were other London editions in 12mo (3rd ed. 1725, 4th ed., 5th ed. 1737, 6th ed. 1746), issued both be-

fore and after the author's death in 1730; and Dr. William Mavor, while at Woodstock in 1809, reissued the work as 'Blackwall's Introduction to the Classics,' London, 12mo, with an 'Essay on Rhetoric,' and a 'Bibliography of the best English Translations of Greek and Roman Classics,' and describes it as a work most invaluable to those who have not received a sound education.

In 1722 Blackwall was appointed head master of the grammar school of Market Bosworth, Leicestershire, a school founded in the time of Henry VIII, but much increased in revenue by endowments of the Dixie family. Here, in the quiet of a thoroughly pastoral district, he produced his most celebrated work, 'The Sacred Classics defended and illustrated, or an Essay humbly offered towards proving the Purity, Propriety, and True Eloquence of the Writers of the New Testament;' in two parts, 4to, London, 1725; 2nd ed. 8vo, London, 1727. 'Not without very great labour and pains, though accompanied with pleasures,' as he says, he completed the second and last volume of this work a few weeks before his death in 1730, and it was published under the same title in 1731, London, 8vo, with his portrait by Vertue. The two volumes were reprinted at Leipsic by Christopher Wollius, 4to, 1736, with Bernigeroth's copy of the portrait. The third London edition appeared in 2 vols. 8vo, 1737. This work is chiefly on the plan of Raphelius, and is of very fair merit in its fund of general learning and its useful observations. Words and phrases in the New Testament long considered to be barbarisms or solecisms are shown to have been used by the old Greek writers of the best reputation, but the critics thought he had failed to prove the general purity and elegance of the language of the Testament. Orme, Bickersteth, Dr. Williams, and especially his great opponent, Dr. Clarke, make light of his work; while, on the other hand, Dr. Doddridge and T. H. Horne speak highly of its value. In any case, his work can claim the merit of leading the way to sounder biblical criticism.

At both Derby and Bosworth he had the happiness to bring up a number of excellent scholars, among whom were the well-known Richard Dawes, author of 'Miscellanea Critica,' and Budworth, the master of Bishop Hurd. One of his pupils, Sir Henry Atkins, presented him to the rectory of Clapham, Surrey, on 12 Oct. 1726. About this time he went up for ordination and waited upon Dr. Gibson, then bishop of London, when a young chaplain of the bishop began to examine Blackwall in the Greek Testament. The bishop, whom Blackwall had known well in the see of Lincoln, on entering the room, good-naturedly asked what the chaplain was about. 'Mr. B. knows more of the Greek Testament than you do, or I to help you.' The Latin grammar which Blackwall made use of in the Derby and Market Bosworth schools was of his own composition, and he was prevailed upon to publish it, but anonymously, as he did not wish to appear to prescribe rules to other instructors of youth. It was entitled 'A new Latin Grammar, being a short, clear, and easy introduction of young Scholars to the Knowledge of the Latin Tongue, &c.,' London, 12mo, 1728.

Although the Clapham living was the only preferment received by 'the good old schoolmaster,' as Gilbert Cooper calls him in his 'Letters on Taste,' he relinquished it by 1729, when he was again master of Bosworth grammar school, with an income of less than a third of that yielded by the clerical living. About this time Samuel Johnson became his 'usher,' but the dates of the association are very difficult to unravel. Blackwall returned to Bosworth early in 1729; Johnson left college about December 1729, and even if he went direct to assist Blackwall it could only have been for a few months, as the latter died at the schoolhouse on 8 April 1730. After the master's death, the usher may have continued to teach, and when we study Johnson's history, and read of his going on foot to the school in a forlorn state of circumstances on 16 July 1732, that can only refer to his last attendance at Bosworth, probably at the close of the summer holidays. He left the house of Sir Wolstan Dixie, a patron of the school, eleven days after, and thus we may conclude he taught in the school for two and a half years, of which only a few months were under Blackwall. The distressing experiences of which we read so much in Boswell's memoir and elsewhere must therefore be referred to the time subsequent to Blackwall's death, and when the control of the Dixies as 'patrons of the school' seems to have weighed very heavily upon Johnson. The present writer, when under-master of this school, 1854–1863, was unable to find any records of the association of Johnson with Blackwall.

Blackwall was twice married. The only child by the first wife, named Toplis, was Anthony, who was B.A. of Emmanuel College in 1721; by the second wife, who was widow of — Cantrell, his predecessor in the Derby school, and mother of Henry Cantrell [q.v.], he had four sons: Henry, B.A. Emmanuel College 1721; Robert, a dragoon; John, attorney at Stoke Golding, near Bosworth, who died in 1762; and William, who died

young. He had also one daughter, who married Mr. Pickering. The daughter of John Blackwall married William Cantrell, bookseller, Derby.

BLACKWALL, JOHN (1790–1881), zoologist, was born at Manchester 20 Jan. 1790. After some years' partnership with his father, an importer of Irish linen, he retired in 1833 to North Wales, settling ultimately at Llanrwst. As early as 1821 he published, in Thomson's 'Annals of Philosophy,' observations on diurnal mean temperature, and in 1822 some notes by him on migratory birds appeared in the 'Memoirs of the Manchester Philosophical Society.' This was followed by observations on the notes of birds. Fifteen of his first twenty-five papers were ornithological. Being attracted to the study of spiders and their webs, he was surprised to find scarcely any available authorities, and this determined his choice of a principal lifework. His first paper on spiders appeared in 1827 in the 'Transactions of the Linnean Society,' on the means by which gossamer spiders effect their aërial excursions. In 1830 he published, in the 'Zoological Journal,' a paper on the manner in which the geometric spiders construct their nets. His papers were collected in 'Researches in Zoology,' 1834; the second edition, 1873, was not brought up to date. Blackwall pursued the study of the spiders of his own neighbourhood and their habits with extreme painstaking, almost wholly unaided by any British or foreign worker. His great work, 'A History of the Spiders of Great Britain and Ireland,' 1861–4, published by the Ray Society, was unfortunately in the hands of the society ten years before its publication. It is full of minute detail, giving an almost photographic picture of the object. Nearly all his work was done without any aid but that of a pocket lens. Some of his type-specimens are lost, owing to their having been kept indiscriminately with others. His writing for the press was most remarkably clear, and scarcely a single correction was needed in his proof-sheets. He died 11 May 1881.

[Obit. notice in the Entomologist, xiv. 145–50, by Rev. O. Pickard-Cambridge; see also xiv. 190, and Entomologist's Monthly Mag. xviii. 45.] G. T. B.

BLACKWELL, ALEXANDER (*d.* 1747), was an adventurer, whose career is for the most part enveloped in mystery and contradiction. It is admitted that he was born in Aberdeen early in the eighteenth century; Fryxell, the Swedish historian of the intrigue which brought him to the scaffold, says in 1709, but this seems too late. According to a contemporary memoir, his father was a petty shopkeeper; but this production, although professedly written at Stockholm, was to all appearance fabricated in London to serve a political object; and there seems no reasonable doubt that he was the brother of Dr. Thomas Blackwell [q. v.], and consequently the son of another Thomas Blackwell [q. v.] According to the anonymous biography referred to, he studied medicine at Leyden, under Boerhaave, and he may very probably have represented himself to have done so. As, however, we find him practising the trade of a printer in London about 1730, there is far more probability in the statement of an apparently well-informed correspondent of the 'Bath Journal,' abstracted in 'The Gentleman's Magazine' for September 1747, that Blackwell, urged by ambition and restlessness, left the university of Aberdeen without taking a degree, and came up to seek his fortune in the metropolis. Having obtained employment from the printer Wilkins as corrector of the press, he married an excellent wife with a considerable portion, and set up as a printer on his own account. He seemed on the high road to prosperity, when he was ruined by a combination of the London printers, who opposed him as an interloper who had never been apprenticed to the trade. He spent two years in a debtor's prison, from which he was delivered by the enterprise of his wife [see BLACKWELL, ELIZABETH]. He then took up the study of medicine and agriculture, and was frequently consulted respecting the management of estates. Being introduced to the Duke of Chandos, he obtained employment as the director of that nobleman's improvements at Cannons, which situation he forfeited under circumstances not explained, but apparently little to his credit. 'It kept him,' says the editor of the 'Gentleman's Magazine,' annotating the article in the 'Bath Journal,' 'from other employment.' The printer of the magazine was probably one of Blackwell's persecutors, yet this may have been the reason why, as stated in Chalmers's 'Dictionary,' 'Mr. Blackwell's family were not very desirous of preserving his memory,' and allowed the circulation of erroneous statements which have hitherto entirely misled his biographers. In 1741,

while still in the duke's service, he had published 'A New Method of improving Cold, Wet, and Clayey Grounds,' of which there is no copy in the British Museum or the Bodleian. It may have attracted attention abroad, for the indomitable adventurer next turns up in Sweden in 1742. Here he represented himself as a physician, prescribed successfully for the king, and was actually appointed one of his physicians in ordinary, but soon incurred the suspicion of quackery, and fell back upon his old trade of practical agriculturist. He published in 1745 'An Essay on the Improvement of Swedish Agriculture,' which was suspected of being a translation from the English; and was entrusted with the direction of a model farm at Allestad. This was alleged to have deteriorated under his management, and the precariousness of his appointment may perhaps have driven him to engage in political intrigue. Sweden, under the weak rule of King Frederick, was at the time distracted by the contending factions of the 'Hats' and the 'Caps,' the former under French influence, the latter inclining to England. An unquiet spirit like Blackwell would be prone to fish in these troubled waters, and as his political relations were chiefly with the English party, the representatives of his own country might well seek to make a tool of him. In March 1747 he presented himself to the king with a mysterious verbal communication purporting to come from the Queen of Denmark (Louisa, George II's daughter), vaguely hinting at a large sum of money to be bestowed on condition of altering the succession to the exclusion of the infant crown prince. The king at first referred Blackwell to two of his confidants, but on the following day, becoming alarmed, disclosed the incident to his ministers, who immediately arrested Blackwell. The latter admitted making the communication, and declared that he had been prompted to do so by an anonymous letter which he had destroyed, and the source of which was unknown to him. To extract further revelations he was cruelly tortured. He long withstood his sufferings with the greatest constancy, and although he ultimately succumbed, he revoked his confession, and it is difficult to ascertain what it really was. It certainly implicated no other person, for no one else was proceeded against. The sentence of his judges, if correctly cited, condemned him for 'designing to alter the present constitution, and to render the crown absolute; to set aside the present established succession; and to procure large sums of money to enable him to execute these schemes.' It was insinuated that Adolphus Frederick, the next heir, was to have been poisoned, that 'a certain young prince,' the Duke of Cumberland, was to have been set upon the throne, and that Adolphus Frederick's son, afterwards Gustavus III, was to have been indemnified by a principality in Germany. On these charges, of most if not of all of which he was unquestionably innocent, Blackwell was condemned without any public trial to be broken on the wheel, a punishment commuted into decapitation. He met his fate on 9 Aug. 1747 with remarkable fortitude, apologising for laying his head on the wrong side of the block on the ground that it was the first time he had ever been beheaded. The speech he endeavoured to address to the bystanders was drowned in the roll of drums, and a paper published in his name is probably spurious. The real object and secret springs of his intrigue remain a mystery. Some have thought that it was a device of his own to gain the king's favour and magnify his own importance, and that the alleged anonymous letter was a figment. Others deem him the instrument of a foreign court, probably England. The 'Hats' regarded him as an agent of their adversaries; the 'Caps' insisted that he had been made the stalking-horse of a fictitious plot. Not a few suspected that he had been ensnared by the minister Tessin, who was supposed to be jealous of his influence, and certainly took the leading part in his torture and execution. Blackwell is universally represented as meddlesome, pragmatical, and loquacious, and the theory that his plot was wholly concocted by himself would appear the most plausible, but for the evident pains taken by the English government to vindicate itself at his expense. According to the correspondent of the 'Bath Journal' Blackwell was an excellent scholar in his youth. His eminent talents were marred by want of principle and unsoundness of judgment, but he must have possessed enterprise, courage, and versatility.

[Gent. Mag. 1747, pp. 424–6; A Genuine Copy of a Letter from a Merchant in Stockholm to his Correspondent in London (London, 1747); Chalmers's Dictionary, art. 'Blackwell (Elizabeth);' Credercreutz, Sverige under Ulrica, Eleonora, och Fredric I (1821); Fryxell, Berättelser ur Svenska Historien, pt. xxxvii., Stockholm, 1868. The proceedings of the tribunal which condemned Blackwell were sealed up by order of Count Tessin, and remained unexamined for thirty-three years, when Gustavus III deposited them in the public archives. Their contents were first divulged in 1846, in an essay contributed to the newspaper Frey, by N. Arfvidsson, upon which Fryxell's circumstantial and interesting narrative is mainly founded.] R. G.

BLACKWELL, ELIZABETH (*fl.* 1737), wife of Alexander Blackwell [q. v.], is positively asserted by James Bruce (*Lives of Eminent Men of Aberdeen*, p. 307) to have been the daughter of a stocking merchant in Aberdeen, and to have eloped with her husband to London before he found employment as a corrector of the press. No authority is given for these statements. Blackwell's biographer in the 'Bath Journal,' who seems to write with a knowledge of the family, asserts on the other hand that the marriage took place subsequently, and describes Elizabeth as 'a virtuous gentlewoman, the daughter of a worthy merchant,' who gave his daughter a handsome portion. 'Virtuous' and 'worthy' were unquestionably epithets applicable to Elizabeth herself, who extricated her husband from his pecuniary difficulties by applying her talent for painting to the delineation of medicinal plants with the colours of nature. She was encouraged by Sir Hans Sloane, Dr. Mead, and Mr. Rand, curator of the botanical garden at Chelsea. By his advice she took lodgings close by the garden, where she was supplied with plants, which she depicted with extreme skill and fidelity, while Blackwell himself supplied the scientific and foreign nomenclature, and, with the original author's consent, abridged the descriptions in Philip Miller's 'Botanicum Officinale.' After finishing the drawings, Elizabeth engraved them on copper herself, and coloured the prints with her own hands. The work at length appeared in 1737, in 2 vols. folio, under the title of 'A Curious Herbal, containing five hundred cuts of the most useful plants which are now used in the practice of Physic.' It was accompanied by laudatory certificates from the College of Physicians and College of Surgeons, and dedications to Drs. Mead, Pellet, and Stuart. As a monument of female devotion it is most touching and admirable, and its practical value was very great. 'If,' says a writer in Chalmers's 'Dictionary,' 'there is wanting that accuracy which modern improvements have rendered necessary in delineating the more minute parts; yet, upon the whole, the figures are sufficiently distinctive of the subject.' Rousseau complains of its want of method, but it was not designed to accompany treatises on botany. Its merits received the most substantial recognition from the fine republication undertaken by Trew (Nüremberg, 1757–73), with the addition of a sixth century of plants, and a preface pointing out its superiority to the more scientific work of Morandi alike in accuracy and delicacy of colouring and in the copiousness of representations of exotic plants. Having performed her task of delivering her husband and temporarily re-establishing his affairs, Elizabeth Blackwell disappears from observation. According to the contemporary pamphlet on her husband's execution, she was then in England, but had been upon the point of joining him in Sweden. The date of her death is not recorded. She must have left children if, as has been stated, descendants from her exist at the present day.

R. G.

BLACKWELL, GEORGE (1545?-1613), archpriest, was born in Middlesex in or about 1545. A secular priest, in a controversial letter addressed to him, says: 'Your father was indeed a pewterer by Newgate in London, a man of honest occupation it is most true, but not the best neighbour to dwell by.' He was admitted scholar of Trinity College, Oxford, 27 May 1562, graduated B.A. in 1563, became probationer of his college in 1565, perpetual fellow in the following year, and M.A. in 1567. 'But his mind being more addicted to the catholic than to the reformed religion he left his fellowship and retired to Gloucester Hall for a time, where he was held in good repute by Edm. Rainolds and Thomas Allen, the two learned seniors' (Wood, *Athenæ Oxon.* ed. Bliss, ii. 122). Leaving the university he went over to the English college at Douay, where he was admitted in 1574, and being already far advanced in learning was ordained priest in 1575. He took the degree of B.D. the same year in the university of Douay, and returned to England upon the mission in November 1576.

As early as 1578 he was in prison (*Douay Diaries*, 147). To this occasion perhaps the secular priest already mentioned refers when he says: 'About twenty years since, to my remembrance, you were imprisoned in London; but your brother, being the bishop of London's register, procured your release very shortly after.' Blackwell lodged for seven or eight years in the house of Mrs. Meany in Westminster, and was constantly in fear of arrest and imprisonment. Once he owed his deliverance from impending danger to the intervention of the Countess of Arundel and Surrey, whose anonymous biographer informs us that 'he being forced for his own and the gentlewoman's security he liv'd with to hide himself in a secret place of the house when search was made after [him] by the hereticks: and being in great danger of being taken or famish'd by reason that all the catholicks of the house were carry'd away to prison, and heretick watchmen put into the house to keep it and hinder any from helping him. She

haveing notice of his distress dealt so with the officer who had the principal charge of that business that after three dayes he was content two of her servants should come to that house at the time when the guard was chang'd, take Mr. Blackwell out of the hideing-place, and convey him away, as they speedily did, bringing him betwixt them, he not being able to go alone, to their lady's house, where, after some dayes for refreshing he had stay'd, she sent him safe to the place he desir'd to go' (*Lives of Philip Howard, Earl of Arundel, and of Anne Dacres, his wife*, 216, 217). It would seem that he sometimes visited the continent, as he is said to have formed a personal acquaintance with Cardinal Bellarmin and other eminent writers, who give an excellent character of his learning and capacity which they discovered while he had occasion to reside in Rome (Dodd, *Church Hist.* ii. 380).

After the decease of Cardinal Allen the affairs of the English catholic clergy fell into a state of confusion, owing to the absence of any means of enforcing regular discipline. The petitions for the appointment of a bishop were not favourably received at Rome, but on 7 March 1597-8 Cardinal Cajetan, the protector of the English nation, addressed a letter to Blackwell, announcing to him the command of the pope, Clement VIII, that he should be archpriest over the secular clergy. Unlimited power was given to Blackwell to restrain or revoke the faculties of the clergy, to remove them from place to place at his pleasure, and to punish the refractory by deprivation or censures. The cardinal named six persons to be his assistants, and empowered him to appoint six others. 'The Jesuits,' the cardinal continues, 'neither have nor pretend to have any jurisdiction or authority over the clergy, or seek to disquiet them; it seemeth, therefore, a manifest subtlety and deceit of the devil, complotted for the overthrow of the whole English cause, that any catholic should practice or stir up emulation against them.' This letter was accompanied by private instructions, which prohibited the archpriest and his twelve assistants from determining any matter of importance without advising with the superior of the Jesuits and some others of the order.

The appointment of Blackwell gave rise to serious and protracted dissensions among the clergy, which were secretly fomented by the English government (Foley, *Records*, i. 12 et seq.) Thirty-one secular priests, headed by Dr. Bishop, sent an appeal to Rome, and on 6 April 1599 the pope issued a bull, fully recognising and sanctioning the letter of Cardinal Cajetan, and the appointment of the archpriest and his acts, declaring the letter to have been valid from the first, and explicitly ordering it to be obeyed and its regulations to be complied with. The appellant priests at once submitted to the bull without any limitation. It was contended, however, that the actual submission of the appellants did not undo or atone for the criminality of their former appeal, and on this ground the archpriest and his adherents continued to treat them as schismatics. They again appealed to Rome, and the pope addressed to the archpriest a brief (17 Aug. 1601), recommending him to temper severity with mildness, and exhorting all parties to a general oblivion of the offence. This letter, however, did not entirely pacify the troubles; the clergy sent a third deputation to Rome, and a second letter was addressed by the pope to the archpriest (6 Oct. 1602). His holiness blamed him for proceeding by suspension and censures against the appellant priests, and commanded him to communicate no business of his office to the provincial of the Society of Jesus, or to any members of the society in England, lest it should be a cause of animosity and discord between the society and the appellants; and with the same view he revoked the contrary injunctions given by Cardinal Cajetan. Thus the matters in dispute were finally settled by papal authority.

For some time after this Blackwell exercised his authority as archpriest without opposition; but he eventually got entangled in a controversy of another kind, and drew upon himself the censures of the holy see. In 1606 the government of King James I imposed on catholics a new oath, which was to be the test of their civil allegiance. The wording of the oath was entrusted to Archbishop Bancroft, who, with the assistance of Sir Christopher Perkins, a 'renegado Jesuit,' so framed it as to give to the designs of the ministry the desired effect, 'which was first to divide the catholics about the lawfulness of the oath; secondly, to expose them to daily prosecutions in case of refusal, and, in consequence of this, to misrepresent them as disaffected persons, and of unsound principles in regard of civil government' (Dodd, *Church Hist.* ii. 366). Blackwell told his clergy by a circular letter, dated 22 July 1606, that it was his holiness's pleasure that they should behave themselves peaceably with regard to all civil matters. 'Sua sanctitas nullo modo probat, tales tractatus agitari inter catholicos: imò jubet, ut hujusmodi cogitationes deponantur.' Previously, on 28 Nov. 1605, he had written a similar letter to the catholic laity. At several meetings of the secular and regular clergy, convened to consider the oath, Blackwell advised them to take it. Cardinal

Bellarmin wrote to him an admonitory letter on this subject, to which he replied. Being apprehended near Clerkenwell on 24 June 1607, he was committed prisoner to the Gatehouse in Westminster, and thence was removed to the Clink prison in Southwark, where he was frequently examined upon several articles, especially concerning the oath of allegiance. In fine, he took the oath, and several of the clergy and laity followed his example, notwithstanding the fact that the oath had twice been formally condemned by Pope Paul V in 1606 and 1607. Blackwell's conversion being despaired of, the sovereign pontiff deprived him of the office of archpriest in 1608, and appointed George Birket [q. v.] to supply his place.

Blackwell died on 12 Jan. 1612-13, persisting to the last in his approbation of the oath. On being taken suddenly ill some priests attended him, and he assured them that he deemed it to be a lawful oath, and that in taking it he had done nothing contrary to conscience (WIDDRINGTON, *Disputatio Theologica de Juramento Fidelitatis*, 393-5).

A large number of books were published against him, chiefly by Watson, Colleton, Dr. Bishop, Dr. Champney, and other catholic divines. The principal other works relating to the controversies in which he was engaged are: 1. 'The Hope of Peace, by laying open such doubts and manifest untruthes as are devulged by the Archpriest in his letter or answere to the Bookes which were published by the priestes,' Frankfort, 1601, 4to. 2. 'Mr. George Blackwel (made by Pope Clement 8, Archpriest of England), his Answeres vpon sundry his Examinations: together with his Approbation and taking of the Oath of Allegeance: and his Letter written to his assistants and brethren, moouing them not onely to take the said Oath, but to aduise all Romish Catholikes so to doe,' London, 1607, 4to. 3. 'A large Examination taken at Lambeth, according to his Maiesties direction, point by point, of M. George Blakwell, made Archpriest of England, by pope Clement 8. Vpon occasion of a certaine answere of his, without the priuitie of the State, to a Letter lately sent vnto him from Cardinall Bellarmine, blaming him for taking the Oath of Allegeance. Together with the Cardinals Letter, and M. Blakwels said answere vnto it. Also M. Blakwels Letter to the Romish Catholickes in England, as well Ecclesiasticall as Lay,' London, 1607, 4to; also printed in French at Amsterdam, 1609. 4. 'In Georgium Blackvellum Angliæ Archipresbyterum à Clemente Papa Octavo designatum Quæstio bipartita: Cuius Actio prior Archipresbyteri iusiurandum de Fidelitate prestitum, Altera eiusdem iuramenti Assertionem, contra Cardinalis Bellarmini Literas, continet,' London, 1609, 4to. 5. 'Relatio compendiosa turbarum quas Iesuitæ Angli, vna cum D. Georgio Blackwello Archipresbytero, Sacerdotibus Seminariorum populoq; Catholico cõciuêre ob schismatis & aliorum criminum inuidiam illis iniuriosè impactam sacro sanctæ inquisitionis officio exhibita, vt rerum veritate cognitâ ab integerrimis eiusdem iudicibus lites & causæ discutiantur et terminentur,' Rouen, 4to.

BLACKWELL, JOHN (1797-1840), Welsh poet and prose writer, was born at Mold, in Flintshire, in 1797, and for many years followed the trade of a shoemaker in his native town. From an early age he showed the greatest avidity for books, and he carried off several prizes offered for poems and essays in the Welsh language. By the liberality of friends he was enabled to enter Jesus College, Oxford, in 1824, and he took the degree of B.A. in 1828. In the autumn of the latter year, at the Royal Denbigh Eisteddvod, a prize was adjudged to him for his beautiful Welsh elegy on the death of Bishop Heber. In 1829 he was ordained to the curacy of Holywell. During his residence there he contributed largely to the columns of the 'Gwyliedydd,' a periodical conducted on the principles of the established church, and in 1832 he was presented with a prize medal at the Beaumaris Eisteddvod. In 1833 he was presented by Lord-chancellor Brougham to the living of Manor Deivy, in Pembrokeshire. Soon afterwards he became editor of an illustrated magazine in the Welsh language, entitled 'Y Cylchgrawn,' and he conducted this periodical with remarkable ability. He died on 14 May 1840, and was buried at Manor Deivy. His poems and essays, with a memoir of his life, were edited by the Rev. Griffith Edwards of Minera, in a volume entitled 'Ceinion Alun,' Ruthin, 1851, 8vo.

[Williams's Eminent Welshmen, 554; Gent. Mag. (New Ser.), xiv. 100.] T. C.

BLACKWELL, THOMAS, the elder (1660?–1728), a learned Scotch minister, is sometimes confounded with his more celebrated son of the same name. He was called to the charge as presbyterian minister at Paisley, Renfrewshire, on 5 April 1693, but his ordination was delayed to 28 Aug. 1694 for various reasons, one being his own 'unclearness' about accepting the call. He was translated to Aberdeen on 9 Oct. 1700, and in 1710 he was elected professor of divinity in the Marischal College of the university of Aberdeen. In the same year he published 'Ratio Sacra, or an appeal unto the Rational World about the reasonableness of Revealed Religion . . . directed against the three grand prevailing errors of Atheism, Deism, and Bourignonism,' Edin. 12mo. The same year his second work appeared: 'Schema Sacrum, or a Sacred Scheme of Natural and Revealed Religion, making a Scriptural-Rational Account of these Three Heads . . . of Creation . . . of Divine Predestination . . . and of the Wise Divine Procedure in accomplishing the Scheme,' Edin. 8vo, pp. 340. A second edition in 12mo was published at Paisley in 1800. An American edition was brought out by a New Hampshire minister, with a list of over 700 names of subscribers, under the altered title of 'Forma Sacra, or a Sacred Platform of Natural and Revealed Religion . . . by the pious and learned Thomas Blackwell' (with a lengthy introduction on the position and prospects of religion in America), by Simon Williams, M.A., 12mo, Boston, 1774. The latter was minister of the gospel at Wyndham, New Hampshire, and he speaks of Blackwell as 'a minister much esteemed in Peasley, North Britain,' his informant, the Rev. Dr. Withersnoon, then president of the college in the Jerseys, having been one of his successors in the church at Paisley. Blackwell appears to have taken a prominent part in the disturbed affairs of the Scottish church. The first of the 'Tracts concerning Patronage by some eminent Lairds; with a candid inquiry about the constitution of the Church of Scotland in relation to the Settlement of Ministers,' 8vo, Edin. 1770, is entitled, 'Representation by Mr. William Carstairs, Thomas Blackwell, and Robert Baillie, Ministers of the Church of Scotland, offered by them in the name and by appointment of the General Assembly against the bill for restoring patronages,' 1712. Another work of his was published in 1712 entitled 'Methodus Evangelica,' 8vo, London.

Blackwell's appointment as professor of divinity in the Marischal College was by presentation vested in the Marischal family—George Keith, fifth Earl Marischal, being the founder—but on the forfeiture of their rights consequent upon their adherence to the cause of the Stuarts, the patronage in 1715 was vested in the crown; and the office of principal being vacant in 1717, George I recognised the merits of Blackwell by appointing him to the same, a position which, along with his previous professorship, he held until his death in 1728. The names associated with this famous institution in Blackwell's time and during his son's career, or early in the eighteenth century, are of great eminence. Among many others, there occur to us those of Bishop Burnet, Dr. Arbuthnot, Dr. Reid, the poet Beattie, Bishop Keith, Dr. Turnbull, the Fordyces (his grandsons), Gibbs the architect, and Professors Maclaurin, Duncan, Stewart, Gerard, and George Campbell.

Blackwell married a sister of Dr. Johnston, many years professor of medicine in the university of Glasgow, and by her had two sons, Alexander [q. v.] and Thomas [q. v.]; and one daughter, married to Provost Fordyce of Aberdeen, by whom she had nineteen children, some of whom became well known: David Fordyce the professor, James Fordyce the popular preacher, and Sir William Fordyce the physician.

[Blackwell's works; Williams's Forma Sacra; New Statist. H. of Scotland, vii. 235, xii. 11, 1190; Nichols's Lit. Anecd. ii. 93] J. W.-G.

BLACKWELL, THOMAS, the younger (1701–1757), classical scholar, born on 4 Aug. 1701 in the city of Aberdeen, was the son of the Rev. Thomas Blackwell [see BLACKWELL, THOMAS, the elder]. He was educated at the grammar school of Aberdeen, and studied Greek and philosophy in the Marischal College of the university of the same city, of which his father occupied the chair of divinity from 1710, and had become principal in 1717. He took the degree of M.A. in 1718, a remarkable instance of proficiency in a young man of seventeen, and in recognition of his ability he was presented on 28 Nov. 1723 to the professorship of Greek in the same college, and took office on 13 Dec. following. He soon made his mark as a successful teacher of the Greek language. It was not in his favourite Greek literature only, but also in the Latin classics, that he exerted himself. He was held in high estimation by the celebrated Berkeley, who selected him as a professor in the projected college at Bermuda.

In 1735 Blackwell published in London an octavo volume, without bookseller's or

author's name, 'An Enquiry into the Life and Writings of Homer,' arranged in twelve sections, as an answer to the question, 'By what fate or disposition of things it has happened that no poet has equalled him for 2,700 years, nor any that we know ever surpassed him before?' A second London edition in octavo, and also anonymous, came out in 1736, followed soon after by 'Proofs of the Enquiry into Homer's Life and Writings, translated into English; being a Key to the Enquiry....' With a curious Frontispiece, 8vo, London, 1747. This was merely a translation of the learned and copious notes originally given in Greek, Latin, Spanish, Italian, and French. The 'Enquiry' was considered a remarkable book at the time, and opinions on its merits have varied considerably. Gibbon, without any explanation of his assertion, speaks of it as 'by Blackwell of Aberdeen, or rather by Bishop Berkeley, a fine, though sometimes fanciful, effort of genius!'

In 1748 appeared another work by Blackwell, 'Letters concerning Mythology,' 8vo, London, without his name or the bookseller's (Andrew Millar) imprint. The preface intimates that some of the first letters 'passed in correspondence written by a learned and worthy man, whose death prevented his prosecuting his plan,' the additions to the seventh and eighth letters, and all following, being by the author of 'An Enquiry.... Homer,' &c. No clue is afforded to the original writer, whose letters are given in a very pleasant and lively style, and chiefly refer to the Homeric 'Enquiry.' The later writer continues throughout in the same vein, and makes a very readable book. The second edition, 8vo, London, 1757, appeared soon after the author's death, and gives his name. In the first volume of the 'Archæologia' there is a letter, dated 18 Aug. 1748, addressed by Dr. T. Blackwell to Mr. Ames, with an explanation of an ancient Greek inscription on a white marble found in the Isle of Tasso by Captain Hales.

On 7 Oct. 1748 George II appointed Blackwell principal of the Marischal College in Aberdeen, a position which he held, along with the Greek chair, till his death. Blackwell is the only layman ever appointed principal of this college since the patronage was vested in the crown. When the well-known Glasgow printers, Robert and Andrew Foulis, projected an edition of Plato, Blackwell proposed to furnish them with critical notes, together with an account of Plato's life and philosophy; his terms being too high, the design was relinquished. He then published in the 'Gentleman's Magazine' for 1751 a Latin advertisement of a similar venture of his own. This work was never published, however, and his manuscripts, after death, offered no traces of such a scheme.

On 30 March 1752 he took the degree of doctor of laws, and in the following year appeared the first volume of his 'Memoirs of the Court of Augustus,' 4to, Edinburgh. The second volume was published, 4to, Edinburgh, in 1755, and the third volume, which was posthumous and left incomplete by the author (whose text reached to p. 144 only), was prepared for the press, with additional pages, by Mr. John Mills, and published in 4to, London, 1764 (seven years after his death), along with the third edition of the two former volumes. This work contains fine impressions of heads of great personages from genuine antiques. It had a good reception, but unfortunately it was written with so much parade and in such a peculiar style that it offered a wide field for adverse criticism. Johnson reviewed it sarcastically in the 'Literary Magazine,' 1756, but concludes: 'This book is the work of a man of letters; it is full of events displayed with accuracy and related with vivacity.' A French translation by M. Feutry of this work was published in 12mo, 3 vols., Paris, 1781.

Several years before his death Blackwell's health began to decline, and compelled him to take assistance in his Greek class. Eventually he was forced to travel, and in February 1757 he reached Edinburgh, but could proceed no further. In that city he died on 8 March, in his fifty-sixth year. During a protracted illness he had displayed an equable flow of temper, endearing him to all. Before he started on his journey he drew together all the professors of the college and spent two hours of pleasant conference with them, and on the day of his death he wrote letters to several of his friends, and took leave of them in a cheerful and contented strain. In private life his habits were very agreeable; his conversation ever instructive and affable, accompanied with a flow of good humour, even when provoked to some display of passion.

Soon after his appointment as principal of his college he married Barbara Black, daughter of an Aberdeen merchant, by whom he had no children. This lady survived him many years and died in 1793. She bequeathed her estates, partly to found a chair of chemistry in the college with which the names of her husband, her father-in-law, and the Fordyces (her nephews) had been so long associated, and partly for the premium of an English essay and for the augmentation of the professorial salaries.

Mag. xvii. 298, xxi. 283; Lit. Mag. 1756; Johnson's Works, 1835, vi. 9; Warburton's Pamphlets; Blackwell's Works, &c.] J. W.-G.

BLACKWOOD, ADAM (1539–1613), Scottish writer, was descended from a family in good circumstances, and was born at Dunfermline in 1539. His father, William Blackwood, was slain in battle before the son reached his tenth year, and his mother did not long survive the loss of her husband. Thereupon he was taken in charge by her uncle, Robert Reid, bishop of Orkney, who, recognising his exceptional abilities, sent him to the university of Paris, where he enjoyed the tuition of the two celebrated professors, Turnebus, and Auratus or Dorat, from the latter of whom he acquired an ambition to excel in Latin poetry. After the death of Bishop Reid in 1558, Blackwood went to Scotland; but finding, on account of the disquiet of the times, no prospect of continuing his studies, he returned to Paris, where, through the munificence of Queen Mary, then residing with her first husband, the dauphin, at the court of France, he was enabled to resume his university course. After prosecuting the study of mathematics, philosophy, and oriental languages, he passed two years at Toulouse, reading civil law. On his return to Paris he began to employ himself in teaching philosophy. In 1574 he published at Paris a eulogistic memorial poem on Charles IX of France, entitled 'Caroli IX Pompa Funebris versiculis expressa per A. B. J.C.' (Juris Consultum), and in 1575, also at Paris, a work on the relation between religion and government, entitled 'De Vinculo; seu Conjunctione Religionis et Imperii libri duo, quibus conjurationum traducuntur insidiæ fuco religionis adumbratæ.' A third book appeared in 1612. The work was dedicated to Queen Mary of Scotland, and, in keeping with his poem commemorating the author of the massacre of St. Bartholomew, was intended to demonstrate the necessity laid upon rulers to extirpate heresy as a phase of rebellion against a divinely constituted authority. The work was so highly esteemed by James Beaton, archbishop of Glasgow, that he recommended Queen Mary to bestow on him the office of counsellor or judge of the parliament of Poictiers, the province of Poitou having by letters patent from Henry III been assigned to her in payment of a dowry. Some misunderstanding regarding the nature of this office seems to have given rise to the statement of Mackenzie and others that Blackwood was professor of civil law at Poictiers. He now collected an extensive library, and, encouraged by the success of his previous work, he set himself to the hard and ambitious task of grappling with George Buchanan, whose views he denounced with great bitterness and severity in 'Apologia pro Regibus, adversus Georgii Buchanani Dialogum de Jure Regni apud Scotos,' Pictavis, 1581; Parisiis, 1588. During Queen Mary's captivity in England he paid her frequent visits, and was untiring in his efforts to do her all the service in his power. After her death he published a long exposure of her treatment in imprisonment, interspersed with passionate denunciations of her enemies, especially Knox and Elizabeth. The work bears to have been printed 'à Edimbourg chez Jean Nafield, 1587,' but the name is fictitious, and it was in reality printed at Paris. It was reprinted at Antwerp in 1588, and again in 1589, and is also included in the collection of Jebb 'De Vita et Rebus gestis Mariæ Scotorum Reginæ Autores sedecim,' tom. ii., London, 1725. The title of the work is 'Martyre de la Royne d'Escosse, Douairiere de France; contenant le vray discours des traïsons à elle faictes à la suscitation d'Elizabet Angloise, par lequel les mensonges, calomnies, et faulses accusations dressées contre ceste tresvertueuse, trescatholique et tresillustre princesse son esclarcies et son innocence averée.' At the end of the volume there is a collection of verses in Latin, French, and Italian, on Mary and Elizabeth. A fragment of a translation of the work into English, the manuscript of which belongs to the end of the sixteenth or beginning of the seventeenth century, was published by the Maitland Club in 1834. The work contains no contribution of importance towards the settlement of the vexed question regarding the character of the unhappy queen, but is of special interest as a graphic presentment of the sentiments and feelings which her pitiable fate aroused in her devoted adherents. In 1606 Blackwood published a poem on the accession of James VI of Scotland to the English throne, entitled 'Inauguratio Jacobi Magnæ Britanniæ Regis,' Paris, 1606. He was also the author of pious meditations in prose and verse, entitled 'Sanctarum Precationum Procœmia, seu mavis, Ejaculationes Animæ ad Orandum se præparantis,' Aug. Pict. 1598 and 1608; of a penitential study, 'In Psalmum Davidis quinquagesimum, cujus initium est *Miserere mei Deus*, Adami Blacvodæi Meditatio,' Aug. Pict. 1608; and of miscellaneous poems, 'Varii generis Poemata,' Pictavis, 1609. He died in 1613, and was buried in the St. Porcharius church at Poictiers, where a marble monument was erected to his memory. By his marriage to Catherine

Courtinier, daughter of the 'procureur de roi' of Poictiers, he left four sons and seven daughters. His collected works in Latin and French appeared at Paris in 1644, with a life and eulogistic notice by Gabriel Naudé. The volume contains a portrait of the author by Picart, in his official robes.

[Life by Naudé in collected ed. of his Works; Mackenzie's Writers of the Scots Nation, iii. 487–513; Irving's Scottish Writers, i. 161–9; Chambers's Biog. Dict. of Eminent Scotsmen, i. 142–3.] T. F. H.

BLACKWOOD, GEORGE FREDERICK (1838–1880), major, was second son of Major William Blackwood, of the Bengal army, and grandson of the founder of the publishing firm [see BLACKWOOD, WILLIAM]. He was born in 1838; was educated at the Edinburgh academy and at Addiscombe; and was gazetted a second lieutenant in the Bengal artillery on 11 Dec. 1857. He arrived in India in the midst of the Indian mutiny, and was at once appointed to command two guns in Colonel Wilkinson's Rohilcund movable column. He was promoted first lieutenant on 27 Aug. 1858, and filled the post of adjutant first to the Bareilly and Gwalior divisions, and then to the twenty-second and nineteenth brigades of royal artillery from 1859 to 1864. He was promoted captain on 20 Feb. 1867, and in 1872 was appointed to command the artillery attached to General Bourchier's column in the Looshai expedition. In that capacity he was present at the attacks on Tipar-Mukh, Küng-Nüng and Taikooni, and he gave such satisfaction that his services were specially mentioned in the general's despatch of 19 March 1872, and he was promoted major by brevet on 11 Sept. following. He gave further evidence of his ability as an artillery officer by his very able report on the use of guns in such country as that in which he had been recently engaged, with hints on the calibre best suited for mountain guns, which was printed by the Indian government and circulated by it among its officers. Blackwood was promoted major on 10 Feb. 1875, and after temporarily commanding a battery of royal horse artillery came to England on sick leave. He thus missed the first Afghan campaign of 1878–79, but was in India when on the news of Cavagnari's death it was determined to once more occupy both Cabul and Candahar. Blackwood was posted to the command of the E battery B brigade of royal horse artillery, and ordered to join the force destined for Candahar. While stationed there the news arrived of the advance of Ayoub Khan, and a column was ordered out under the command of Brigadier-general Burrows to assist the wali placed in command by Abdur-rahman Khan, and to investigate the strength of the enemy. To that column Blackwood's battery was attached; the column was cut to pieces in the terrible battle of Maiwand on 27 July 1880, where Blackwood was killed and two of his guns lost.

[Times, 2 Oct. 1880.] H. M. S.

BLACKWOOD, HELEN SELINA (1807–1867). [See SHERIDAN.]

BLACKWOOD, HENRY, M.D. (*d.* 1614), physician, was son of William and brother of Adam Blackwood [q. v.], judge of the parliament of Poitiers. He was born at Dunfermline, and after studying belles lettres and philosophy was sent by his uncle, Robert Reid, bishop of Orkney, to the university of Paris, where he taught philosophy about 1551. Having afterwards studied medicine he graduated M.D., was incorporated a member of the College of Physicians of Paris, and ultimately became dean of the faculty. He died in 1614. He edited 'In Organum Aristotelis Commentaria,' 'Collatio Philosophiæ atque Medicinæ,' and 'De Claris Medicis;' and left in manuscript 'Animadversio in omnes Galeni libros,' 'Hippocratis quædam cum MSS. collata,' 'In Alexandrum Trallianum Comment.,' and 'Locorum quorumdam Plinii explicatio.' Mackenzie also attributes to him 'Hippocratis Coi Prognosticorum libri tres, cum Latina interpretatione, ad veterum exemplarium fidem emendati et recogniti,' Paris, 1625, but the work was really edited by his son Henry, professor of medicine and surgery at Paris, who died at Rouen, 17 Oct. 1634. George Blackwood, a brother of the father, taught philosophy at Paris about 1571, took holy orders, and obtained preferment in France.

[Dempster's Hist. Eccles. Scot. 116–17; Moreri's Dictionnaire Hist. ii. 489; Mackenzie's Writers of the Scots Nation, iii. 479–87; Irving's Scottish Writers, i. 168–9.] T. F. H.

BLACKWOOD, SIR HENRY (1770–1832), vice-admiral, fourth son of Sir John Blackwood, bart., of Ballyleidy, co. Down, and of Dorcas, Baroness Dufferin, and Claneboye, was born on 28 Dec. 1770. In April 1781 he entered the navy as a volunteer on board the Artois frigate, with Captain Macbride, and in her was present at the battle on the Doggerbank. He afterwards served with Captains Montgomery and Whitshed, and for four years in the Trusty with Commodore Cosby in the Mediterranean. In 1790 he

was signal midshipman on board the Queen Charlotte with Lord Howe, by whom he was made lieutenant 3 Nov. 1790. In 1791 he was in the Proserpine frigate with Captain Curzon, and towards the close of that year obtained leave to go to France in order to improve himself in the French language. During the greater part of 1792 he was in Paris, and on one occasion was in considerable danger, having been denounced as a spy, and eventually had to fly for his life. He was almost immediately appointed to the Active frigate, from which, a few months later, he was transferred to the Invincible at the special request of Captain Pakenham. Of this ship Blackwood was first lieutenant on 1 June 1794, and as such was promoted, along with all the other first lieutenants of the ships of the line, on 6 July. He was immediately appointed to the Megæra, and continued in her, attached to the fleet under Lord Howe and afterwards Lord Bridport, until he was promoted to the rank of captain 2 June 1795. After a few months in command of the guardship at Hull he was appointed to the Brilliant frigate, of 28 guns, which for the next two years was attached to the North Sea fleet under the command of Admiral Duncan. Early in 1798 the Brilliant was sent out to join Admiral Waldegrave on the Newfoundland station; and on 26 July, whilst standing close in to the bay of Santa Cruz in quest of a French privateer, she was sighted and chased by two French frigates of the largest size. By admirable seamanship, promptitude, and courage, Blackwood succeeded in checking the pursuit and in escaping (James, *Naval History*, ed. 1860, ii. 250). His conduct at this critical time was deservedly commended. Early in 1799 the Brilliant returned to England, and Blackwood was appointed to the Penelope frigate, of 36 guns, in which, after a few months of Channel service, he was sent out to the Mediterranean, and employed during the winter and following spring in the close blockade of Malta. On the night of 30 March 1800 the Guillaume Tell, of 80 guns, taking advantage of a southerly gale and intense darkness, weighed and ran out of the harbour. As she passed the Penelope, Blackwood immediately followed, and, having the advantage of sailing, quickly came up with her: then—in the words of the log—'luffed under her stern, and gave him the larboard broadside, bore up under the larboard quarter and gave him the starboard broadside, receiving from him only his stern-chase guns. From this hour till daylight, finding that we could place ourselves on either quarter, the action continued in the foregoing manner, and with such success on our side that, when day broke, the Guillaume Tell was found in a most dismantled state' (*Log of the Penelope*, kept by Lieutenant Charles Inglis). At five o'clock the Lion, of 64 guns, and some little time afterwards the Foudroyant, of 80 guns, came up, and after a determined and gallant resistance the Guillaume Tell surrendered; but that she was brought to action at all was entirely due to the unparalleled brilliancy of the Penelope's action. Nelson wrote from Palermo (5 April 1809) to Blackwood himself: 'Is there a sympathy which ties men together in the bonds of friendship without having a personal knowledge of each other? If so (and I believe it was so to you), I was your friend and acquaintance before I saw you. Your conduct and character on the late glorious occasion stamps your fame beyond the reach of envy. It was like yourself; it was like the Penelope. Thanks; and say everything kind for me to your brave officers and men' (*Blackwood's Magazine*, xxxiv. 7).

On the peace of Amiens the Penelope was paid off; and in April 1803, when war again broke out, Blackwood was appointed to the Euryalus, of 36 guns. During the next two years he was employed on the coast of Ireland or in the Channel, and in July 1805 was sent to watch the movements of the allied fleet under Villeneuve after its defeat by Sir Robert Calder. On his return with the news that Villeneuve had gone to Cadiz, he stopped on his way to London to see Nelson, who went with him to the Admiralty, and received his final instructions to resume the command of the fleet without delay. Blackwood, in the Euryalus, accompanied him to Cadiz, and was appointed to the command of the inshore squadron, with the duty of keeping the admiral informed of every movement of the enemy. He was offered a line-of-battle ship, but preferred to remain in the Euryalus, believing that he would have more opportunity of distinction; for Villeneuve, he was convinced, would not venture out in the presence of Nelson. When he saw the combined fleets outside, Blackwood could not but regret his decision. On the morning of 21 Oct., in writing to his wife, he added: 'My signal just made on board the Victory—I hope to order me into a vacant line-of-battle ship.' This signal was made at six o'clock, and from that time till after noon, when the shot were already flying thickly over the Victory, Blackwood remained on board, receiving the admiral's last instructions, and, together with Captain Hardy, witnessing the so shamefully disregarded codicil to the admiral's will

(*Nelson Despatches*, vii. 140). He was then ordered to return to his ship. 'God bless you, Blackwood,' said Nelson, shaking him by the hand; 'I shall never speak to you again.' 'He' (and it was Blackwood himself that wrote it) 'not only gave me the command of all the frigates, for the purpose of assisting disabled ships, but he also gave me a latitude seldom or ever given, that of making any use I pleased of his name in ordering any of the sternmost line-of-battle ships to do what struck me as best' (*ibid.* vii. 226).

Immediately after the battle Collingwood hoisted his flag on board the Euryalus, but after ten days removed it to the Queen, and the Euryalus was sent home with despatches and with the French admiral. Blackwood was thus in England at the time of Lord Nelson's funeral (8 Jan. 1806), on which occasion he acted as train-bearer of the chief mourner, Sir Peter Parker, the aged admiral of the fleet.

After this Blackwood was appointed to the Ajax, of 80 guns, in which he joined Lord Collingwood off Cadiz on the first anniversary of Trafalgar, and early in the following year was detached with the squadron under Sir John Duckworth in the expedition up the Dardanelles. At the entrance of the straits, on the night of 14 Feb., the Ajax caught fire through the drunken carelessness of the purser's steward, and was totally destroyed, with the loss of nearly half the ship's company. Blackwood himself was picked up hanging on to an oar, well nigh perished with the cold, after being nearly an hour in the water. During the following operations in the straits he served as a volunteer on board the flagship, and arrived in England in May. He was now offered the situation of pay-commissioner at the navy board, which he declined, preferring to be appointed to the command of the Warspite, of 74 guns. In this, after some uneventful service in the North Sea, he again went out to the Mediterranean, where the principal duty of the fleet was the very harassing blockade of Toulon. Here, for some time during the summer of 1810, Blackwood had command of the inshore squadron, and on 20 July had the credit of driving back a sortie made by a very superior French force. He returned to England at the end of 1812, but remained in command of the Warspite for another year. In May 1814, on the occasion of the visit of the allied sovereigns, he was appointed captain of the fleet under the Duke of Clarence, a special service which was nominally rewarded by a baronetcy. On 4 June 1814 he attained the rank of rear-admiral, and in August 1819 was nominated a K.C.B., and appointed commander-in-chief in the East Indies, from which station he returned in December 1822. He became vice-admiral in May 1825, and from 1827 to 1830 he commanded in chief at the Nore; and still in the full vigour of life he died after a short illness, differently stated as typhus or scarlet fever, on 17 Dec. 1832, at Ballyleidy, the seat of his eldest brother, Lord Dufferin and Clanboye.

He was married three times, and left a large family, the descendants of which are now numerous. His portrait, presented by one of his sons, is in the Painted Hall at Greenwich.

[Blackwood's Magazine, xxxiv. 1; Marshall's Royal Naval Biog. ii. (vol. i. part ii.) 642.]

J. K. L.

BLACKWOOD, JOHN (1818–1879), publisher, editor of 'Blackwood's Magazine,' sixth surviving son of its founder [see BLACKWOOD, WILLIAM], was born at Edinburgh on 7 Dec. 1818. Educated at the high school and university of Edinburgh, he early displayed literary tastes, which procured for him the nickname of 'the little editor.' At the close of his college career he spent three years in continental travel. Soon after his return, his father having meanwhile died and been succeeded by two of his elder brothers, he entered, in 1839, to learn business, the house of a then eminent London publishing firm. In 1840 he was entrusted with the superintendence of the branch which his brother's Edinburgh house was establishing in London. He occupied this position for six years, during which his office in Pall Mall became a literary rendezvous, among his visitors being Lockhart of the 'Quarterly Review,' Delane of the 'Times,' and Thackeray, with the last two of whom he formed an intimate friendship. One of his functions was to procure recruits for 'Blackwood's Magazine,' then edited by his eldest brother, and to him was due the connection formed with it by the first Lord Lytton, who began in 1842 to contribute to it his translation of the poems and ballads of Schiller. In 1845 he returned to Edinburgh on the death of his eldest brother, whom he succeeded in the editorship of 'Blackwood's Magazine.' In 1852, by the death of another elder brother, he became virtual head of the publishing business also, and he retained both positions until his death. As an editor he was critical and suggestive, as well as appreciative. As a publisher he preferred quality to the production of quantity; in both capacities he displayed hereditary acumen and liberality. He quickly discerned the genius of George Eliot, forthwith

accepting and publishing in his magazine the first instalment of her earliest fiction the 'Scenes of Clerical Life,' which had been sent to him without the name of the author, for whom thus early he predicted a great career as a novelist. This commencement of a business connection was soon followed by a personal acquaintance between author and publisher, which ripened into intimacy. In her husband's biography of George Eliot there are many indications of her readiness to accept Blackwood's friendly criticisms and suggestions, and of her grateful regard for him. On hearing of the probably fatal termination of his last illness she wrote: 'He will be a heavy loss to me. He has been bound up with what I most cared for in my life for more than twenty years, and his good qualities have made many things easy to me that without him would often have been difficult.' All her books, after the 'Scenes of Clerical Life,' were, with one exception, first published by his firm. Although Blackwood was a staunch conservative and the conductor of the chief monthly organ of conservatism, he always welcomed, whether as editor or publisher, what he considered to be literary ability, without regard to the political or religious opinions of its possessors. A genial and convivial host and companion, he delighted to dispense, at his house in Edinburgh, and his country house, Strathtyrum, near St. Andrews, a liberal hospitality to authors with whom he had formed a business connection. To his magazine he contributed directly only occasional obituary notices of prominent contributors. A fragmentary paper of his, entitled 'Sutherlandia,' described as 'racy,' was published in Mr. Clark's work on 'Golf,' a game to which he was devoted. He died at Strathtyrum on 29 Oct. 1879.

[A selection from the Obituary Notices of the late John Blackwood, editor of Blackwood's Magazine, printed for private circulation, Edinburgh, 1880; George Eliot's Life, as related in her Letters and Journals, arranged and edited by her husband, J. W. Cross, 1885.] F. E.

BLACKWOOD, WILLIAM (1776–1834), publisher, founder of 'Blackwood's Magazine,' was born at Edinburgh in November 1776. The circumstances of his parents were very moderate, but he received a sound education. Intelligent and fond of reading, he was apprenticed at fourteen to a bookselling firm in Edinburgh, and while in their service was a diligent student of the historical and archæological literature of Scotland. At the early age of twenty he was thought worthy by an Edinburgh publishing firm of some eminence to be entrusted with the management of a branch of their business which they were establishing in Glasgow. There he remained a year, and then resumed for another year his connection with his first employers. Entering afterwards into partnership with an Edinburgh bookseller and auctioneer, he found this conjunction of vocations distasteful, and migrating to London he completed his bibliographical education in the antiquarian department of a bookseller noted for his catalogues of old publications. Having acquired through industry and frugality some capital, he returned to Edinburgh in 1804 and began business on his own account, dealing chiefly in old books. He soon became the head of that branch of the trade in Scotland, and his catalogue of old books, published in 1812, is said to have been the first in which classification was attempted, and to have long remained a standard authority. Meanwhile he had begun to exhibit some enterprise and judgment as a publisher. In or about 1810 he took a principal part in founding the elaborate and costly 'Edinburgh Encyclopædia,' edited by Mr. (afterwards Sir) David Brewster. In 1811 he published what remains the standard biography of John Knox by Dr. McCrie, and it was, it is said, at Blackwood's instance that the university of Edinburgh conferred on its author, though not a minister of the Scottish establishment, the degree of D.D. Having become the Edinburgh agent of the first John Murray of Albemarle Street, Blackwood published, in conjunction with him, the first series of Sir Walter Scott's 'Tales of my Landlord.' In this transaction he showed his reliance on his own literary judgment by suggesting an alteration in the finale of the 'Black Dwarf.' Scott indignantly rejected the suggestion, in making which, it must be added, Blackwood had been fortified by the opinion of Murray's chief literary adviser, William Gifford.

In 1816 Blackwood took what was considered the bold step of removing his business from the old town of Edinburgh to Prince's Street, at that time a fashionable thoroughfare of the new town. Soon afterwards he resolved to establish a monthly periodical which would combat the influence, in politics and literature, of the 'Edinburgh Review,' then still published in the city from which it derived its name. On 1 April 1817 he issued No. 1 of the 'Edinburgh Monthly Magazine.' But, probably through precipitancy in his selection of its two editors [see CLEGHORN, WILLIAM; PRINGLE, THOMAS], the tone and tenor of the new periodical were calculated to strengthen instead of to counteract the influence of the 'Edinburgh Review.' The June number accordingly contained an intimation that in

three months from that date it would be discontinued; but on 1 Oct. following was issued as No. 7 'Blackwood's Edinburgh Magazine.' Its publisher was, and until his death continued to be, its sole editor. John Wilson and John Gibson Lockhart were the chief contributors to the magazine under its new name. Its first issue produced a considerable sensation from the appearance in it of the Chaldee Manuscript, which was chiefly their composition. In style and phraseology a somewhat audacious imitation of the Old Testament, this piece satirised the chief contributors to and the publisher of the 'Edinburgh Review,' and the leading Edinburgh whigs, while giving a glowing description of the parentage and prospects of 'Blackwood's Magazine.' Probably its apparent profanity offended in presbyterian Scotland many who would have relished its personalities. With the caution which, as well as enterprise, characterised him, Blackwood excluded the Chaldee Manuscript from the second edition, immediately called for, of the number in which it had appeared.

With Wilson and Lockhart among its principal contributors, and its sagacious publisher to edit it, 'Blackwood's Magazine' prospered and took a leading position among British periodicals. New contributors of mark or likelihood were always welcomed and liberally treated. Blackwood was the first to recognise the merits of John Galt as a novelist: his 'Ayrshire Legatees,' the earliest published of his prose fictions, was at once accepted, and speedily appeared in the magazine. While encouraging and rewarding his contributors, Blackwood kept in check the exuberance of some of them. The restraining influence which he exercised over Wilson himself, the most powerful and prolific of them all, is shown in those of Blackwood's letters to him published in Mrs. Gordon's 'Christopher North.' Among the latest and most telling of his editorial acquisitions was Samuel Warren's 'Diary of a Late Physician,' the first chapter of which, declined by the editors of the principal London magazines, was at once accepted by Blackwood.

As a publisher Blackwood was largely, but by no means exclusively, occupied with the reissue, in book form, of prominent contributions to his magazine. In 1818 he published 'Marriage,' the earliest of Miss Ferrier's fictions. He lived to see completed in 1830 the publication, begun by him twenty years before, of the 'Edinburgh Encyclopædia.' The publication of the voluminous and valuable 'New Statistical Account of Scotland' he undertook more from patriotic motives than with a view to profit. One of the latest and most spirited of his enterprises he did not live to see completed, Alison's 'History of Europe,' which he at once undertook to publish on a perusal of the first volume in manuscript, though he foresaw that it would be a voluminous work. In spite of his engrossing business avocations he found time to attend, as an active member of the town council of Edinburgh, to the interests of his native city, and, while as a staunch tory opposed to parliamentary reform, he is said to have been a zealous promoter of all civic improvements. He died at Edinburgh on 16 Sept. 1834, after an illness of some months, during which he was attended by D. M. Moir, poet and physician, the 'Delta' of his magazine. To the last John Wilson was a visitor to his sick room. In 'Peter's Letters to his Kinsfolk' Lockhart has described him in his prime among the literary loungers in his Prince's Street shop as 'nimble, active-looking, with a complexion very sanguineous.' 'Nothing,' it is added, 'can be more sagacious than the expression of his whole physiognomy—the grey eyes and eyebrows full of locomotion.' He is said to have contributed three papers to his magazine, but their subjects and dates have not been specified.

[Obituary Notice (by Lockhart) in Blackwood's Magazine for October 1834; Christopher North, a Memoir of John Wilson, by his daughter Mrs. Gordon (edition of 1879); Chambers's Biographical Dictionary of Eminent Scotsmen; Histories of Publishing Houses: the House of Blackwood, in (London) Critic for July-August 1860.] F. E.

BLADEN, MARTIN (1680–1746), soldier and politician, was the son of Nathaniel Bladen of Hemsworth, Yorkshire, by Isabella, daughter of Sir William Fairfax of Steeton, and was born in 1680. He is said to have passed a short time at a small private school in the country, and from 1695 to 1697 was at Westminster School. He went into the army, and served in the low countries and in Spain, becoming aide-de-camp to Henri de Massue de Ruvigny [q. v.], earl of Galway, and rising to the rank of lieutenant-colonel. When he determined upon adopting a parliamentary career, he contested the Cornish constituency of Saltash in 1713 and 1715 in the whig interest, but was rejected on both occasions. He sat for Stockbridge in Hampshire 1715–34, for Maldon in Essex 1734–41, and for Portsmouth from 1741 until his death. In the Irish House of Commons he was M.P. for Bandon 1715–27. In 1714 he was appointed comptroller of the mint, and was a commissioner of trade and plantations 1717 to 1746. So complete a sinecure was the latter post

that when the colonel applied himself to the business, such as it was, of his office, he went by the name of 'trade,' while his colleagues were called the 'board.' He refused in 1717 the appointment of envoy extraordinary to Spain, but accepted the post of first commissary and plenipotentiary to the conference at Antwerp in 1732 for drawing up the tariffs between this country, the Emperor of Germany, and the States General. He ranked among the steadiest supporters of Sir Robert Walpole, and often spoke in the debates on fiscal, naval, or military matters, his adherence being so marked that Horace Walpole says (*Letters*, i. 130) that it was proposed to impeach him for his share in the Antwerp conference. Bladen died 15 Feb. 1746, and was buried in the chancel of Stepney Church, the inscription on the tomb being preserved in Lysons's 'Environs.' His first wife was Mary, daughter of Colonel Gibbs; the second, whom he married in 1728, was Frances, niece and heir of Colonel Joseph Jory, and widow of John Foche of Aldborough Hatch, Essex. With her he acquired a considerable estate, and on it he built a new house, now destroyed, at a considerable cost. She died 14 Aug. 1747. His sister was the mother of Lord Hawke, the great admiral, in whose advancement he materially aided. The colonel composed a dull tragi-comedy, 'Solon, or Philosophy no Defence against Love. With the masque of Orpheus and Euridice' (1705), and translated 'Cæsar's Commentaries of his Wars in Gaul, and Civil War with Pompey, with supplement commentaries and life.' The latter work, which was dedicated to the Duke of Marlborough, originally appeared in 1712, and the seventh edition was published in 1770. To an issue which was brought out in 1750, Bowyer, the learned printer, added many notes signed 'Typogr.' These were included, with many additional observations, in Bowyer's 'Miscell. Tracts' (1785), pp. 189–222. A person of the name of Bladen is satirised in the fourth book of Pope's 'Dunciad,' line 560, and this is sometimes supposed to have referred to Martin Bladen.

[Welch's Westminster Scholars, p. 230; Lysons's Environs, iii. 430–1, iv. 86; Nichols's Lit. Anecdotes, ii. 222–3; Morant's Essex, i. 7; Blore's Rutland, 180–1; Burrows's Lord Hawke, 77, 110–32; Notes and Queries, 3rd series, vii. 326, 1865.] W. P. C.

BLAGDEN, SIR CHARLES (1748–1820), physician, was born on 17 April 1748. In 1768 he graduated M.D. at the university of Edinburgh, selecting as the subject of his thesis for the occasion 'De Causis Apoplexiæ.' This treatise was afterwards published. Bladen then entered the army as a medical officer, and remained in the service till 1814, in which year he was present in Paris with the allied armies, as a physician of the British forces. During his military career he is said to have acquired a considerable fortune, and this was augmented by a legacy of 16,000*l.* bequeathed to him by the celebrated chemist, Cavendish, with whom he was on intimate terms. Bladen also enjoyed for fifty years the friendship of Sir Joseph Banks, president of the Royal Society, and to this circumstance he owed his election as secretary of the society at a disturbed period in its history. Bladen was elected fellow on 25 June 1772, and was admitted 12 Nov. of the same year. In 1784 arose the quarrel between Banks and his opponents [see BANKS, SIR JOSEPH], in consequence of which Mr. Maty resigned the secretaryship, and Sir Joseph Banks proposed Bladen for the vacant post. In the result he was elected on 5 May 1784 by a large majority in a crowded meeting. Bladen was a careful worker in physical research, and contributed many papers to the 'Philosophical Transactions,' besides publishing several papers on medical subjects. Perhaps the most noteworthy of his physical papers is that on the 'Cooling of Water below its Freezing Point,' read on 31 Jan. 1788.

He would seem also to have interested himself to some extent in antiquarian matters, as we find him mentioned in a letter of the Rev. Sam. Denne (1799) as inspecting, in company with Lord Palmerston, the ancient Clausentum at Southampton (NICHOLS'S *Illustrations of Literature*, vol. vi.) Among the 'Johnsoniana' which Langton communicated to Boswell is the statement that, talking of Bladen's copiousness and precision of communication, Dr. Johnson said: 'Bladen, sir, is a delightful fellow' (BOSWELL'S *Johnson*, vii. 377). Hannah More describes him as so modest, so sensible, and so knowing, that he exemplifies Pope's line: 'Willing to teach, and yet not proud to know' (*Life*, ii. 98).

Bladen travelled a good deal abroad, and for the last six years of his life always passed six months of the year in France. He was elected in 1789 a correspondent of the Académie des Sciences of Paris. He died suddenly on 26 March 1820 at the house of his friend Berthollet, the renowned chemist, at Arcueil, near Paris.

Bladen was author of the following: 1. 'Experiments and Observations in a Heated Room' (Phil. Trans. 1775). 2. 'On the Heat of the Water in the Gulf Stream' (*ib.* 1781). 3. 'History of the Congelation of Quicksilver' (*ib.* 1783). 4. 'An Account of

some late Fiery Meteors' (Phil. Trans. 1784). 5. 'On the Cooling of Water below its Freezing Point' (*ib.* 1788). 6. 'On the Effect of various Substances in lowering the Point of Congelation of Water' (*ib.* 1788). 7. 'Report on the best Method of proportioning the Excise on Spirituous Liquors' (*ib.* 1790). 8. 'On the Tides of Naples' (*ib.* 1793). 9. 'On Vision' (*ib.* 1813). 9. 'Sur la chaleur des rayons solaires' (*Bullet. Soc. Philomat.*, Ann. viii.) 10. 'Sur la production de la lumière solaire' (*ib.* x.) 11. 'Letters to Crell,' published in Crell's Annals, 1786, 1787, 1788.

R. H.

BLAGGE or BLAGE, ROBERT (*d.* 1522?), judge, was of a Suffolk family, and was son of Stephen Blagge of Broke Montague in Somersetshire, by Alice, his wife. In 1502 (6 Dec.) he received a grant for life of the office of king's remembrancer in the exchequer, with the same fees as John Fitz-Herbert, his predecessor, had, and on 27 June 1511 was raised to the bench as third baron of the exchequer, having a deputy in the office of remembrancer. On 28 Oct. 1511 he was, with four others, appointed on a commission of inquiry into the death of William Lymster of London. On 23 May 1514 he received a patent of succession on his death or the first vacancy to the office of remembrancer, to be held for life, for his son Barnaby. This patent, however, was annulled on the ground that at its date and from and after Blagge's appointment as baron he had no legal estate in the remembrancership (DYER'S *Reports*, 3 Eliz., Easter Term, 47). In 1514 (1 Feb.) he is mentioned as receiving, with others, a pardon for the alienation of the manor of Halton, and was repeatedly in the commissions of the peace for Kent and Middlesex. On 2 June 1515 he received a grant to himself during pleasure of 80 marks annually out of the tonnage and poundage of London. His salary was fixed in 1516 at 46*l.* 13*s.* 4*d.* as baron of the exchequer, and 55*l.* 17*s.* 4*d.* as king's remembrancer, all during the king's pleasure. In 1515, along with Sir Edward Bealknap of the privy council and Baron Westby of the exchequer, he was appointed a surveyor of crown lands, pursuant to the act of 6 Hen. VIII, and is found as such advising a lease of the manor of Bewmaner 6 Oct. 1515, and of Staunford, part of 'Warwick's lands.' He was reappointed 30 Sept. 1517, and was acting as such also in 1518. He had also been appointed one of the general purveyors of the king's revenues 22 May 1515. He was a commissioner of sewers in Cambridgeshire and Lincolnshire in 1515, in Middlesex, Essex, and Hertfordshire in 1516, and in Kent in 1517. On 6 May 1518 he is found appointed to be guardian of William, son and heir of George Carleton. He was still acting as surveyor of crown lands on 29 Nov. 1520 and 21 March 1522. In May 1520, being seized of the manor of Peddon, and other land in Stone, in Kent, to the use of Sir Roger Cholmley, license was given him to have free warren in his lands in Stoynye. Foss says he was alive in 1524; but it seems more probable that he died in London 13 Sept. 1522, and was buried near his wife in St. Bartholomew's Church. In a grant, however, of 1532, he is mentioned as deceased, but not apparently so long as ten years previously. His will was dated 8 Sept. 1522. He was twice married, first to Katherine, sole daughter and heiress to Thomas Brune or Brown, who brought him Horsman's Place, near Dartford, and estates in Kent, and bore him two sons, Barnaby and Robert (or John), neither of whom had issue. He married for the second time, on the feast of St. Matthew 1506, Mary, daughter of John, Lord Cobham, who survived him, and was appointed his administratrix cum testamento annexo. She bore him in 1512 a son George, said to have been afterwards gentleman of the bedchamber to Henry VIII, and a knight, who married a maid of honour, Dorothy, daughter of William Badby of Essex, and died at Stanmore in Middlesex 17 June 1551.

J. A. H.

BLAGRAVE, DANIEL (1603-1668), the regicide, was a nephew of John Blagrave of Reading, the mathematician [q.v.] He was born in 1603, and was bred for the bar. He was elected 8 May 1648 M.P. for the borough of Reading, and three years before was recorder of the same town, being dismissed the office in 1656, but reinstated in 1658. During the trial of Charles I he attended the high court of justice, and was one of those who signed the king's death-warrant. He was appointed by the parliament to the office of exigenter

of the court of common pleas, said to have been worth 500*l.* per annum, and also became a master in chancery. He was also parliamentary treasurer for the county of Berkshire, and in 1654 was named one of the commissioners for the ejection of scandalous and inefficient ministers, in which capacity he is accused by his enemies of using undue severity and of proving a vexatious persecutor of the clergy. By the means which he had acquired from his different offices he was able to purchase the fee-farm rent of the manor of Sunning, Berkshire, and other estates, as it is said, on easy terms. He sat in the parliaments of 1656 and 1658; but on the Restoration he fled the kingdom and settled at Aachen, where he died in 1668.

[Wood's Athenæ Oxon. (ed. Bliss), ii. 97; Noble's Lives of English Regicides, i. 95; Coates's Hist. of Reading, 1802, p. 433.] E. M. T.

BLAGRAVE, JOHN (*d.* 1611), mathematician, was the son of John Blagrave of Bullmarsh, near Sunning, Berkshire, by Anne, daughter of Sir Anthony Hungerford of Down-Ampney, Gloucestershire, knight. He was born at Reading, but the date of his birth is unknown. He received his early education in his native town, and afterwards entered St. John's College, Oxford. He did not, however, take a degree, but retired to his patrimony at Southcote Lodge, Reading, and devoted himself to his favourite study of mathematics, being esteemed, as Anthony Wood declares, 'the flower of mathematicians of his age.' He published four works, viz.: 1. 'The Mathematical Jewel, shewing the making and most excellent use of a singuler instrument so called, in that it performeth with wonderfull dexteritie whatever is to be done either by Quadrant, Ship, Circle, Cylinder, Ring, Diall, Horoscope, Astrolabe, Sphere, Globe, or any such like heretofore devised,' 1585. 2. 'Baculum Familliare Catholicon sive Generale: a booke of the making and use of a Staffe newly invented by the Author, called the Familiar Staffe, as well for that it may be made usually and familiarlie to walke with, as for that it performeth the Geometrical mensurations of all Altitudes,' &c., 1590. 3. 'Astrolabium Uranicum Generale: a necessary and pleasaunt solace and recreation for Navigators in their long jorneying,' 1596. 4. 'The Art of Dyalling, in two parts,' 1609.

In private life Blagrave was distinguished for his charity. His father settled upon him in 1591 the lease for ninety-nine years of lands in Southcote, which he in turn bequeathed to his nephews and their descendants, of whom as many as eighty are said to have benefited. To his native town of Reading he left certain legacies, one of which provided annually the sum of twenty nobles to be competed for by three maid servants of good character and five years' service under one master, to be selected by the three parishes of the town. The whimsical conditions of this bequest required that the maids should appear on Good Friday in the town-hall before the mayor and aldermen, and there cast lots for the prize. The losers had the right of competing a second and third time.

Blagrave died on 9 Aug. 1611, and was buried, in the same grave as his mother, in the church of St. Lawrence, wherein an elaborate monument of himself, surrounded by allegorical figures, was erected. He married a widow, whose daughter is named in his will, but he left no issue.

[Wood's Athenæ Oxon. (ed. Bliss), ii. 96; Ashmole's Antiq. of Berkshire, 1723, ii. 371; Coates's Hist. of Reading, 1802, p. 430; Biog. Britannica; Chalmers's Biog. Dict.] E. M. T.

BLAGRAVE, JOSEPH (1610–1682), astrologer, was born in the parish of St. Giles, Reading, in 1610; he was probably a nephew of John Blagrave, the mathematician [q. v.], from whom he appears to have inherited a small estate in Swallowfield, five miles from his native town. Of his personal history we have no knowledge beyond what is to be gleaned from a perusal of his books. His youthful years were spent in the study of astronomy and astrology, afterwards in philosophy and the practice of physic, upon which he writes: 'Without some knowledge in astronomy one can be no astrologer, and without knowledge in astrology one can be no philosopher, and without knowledge both in astrology and philosophy one can be no good physician, the practice of which must be laid upon the five substantial pillars of time, virtue, number, sympathy, and antipathy' (*Astrological Practice of Physick*, Preface). His first appearance as an author was in a series of: 1. 'Ephemerides, with Rules for Husbandry for the years 1658, 1659, 1660, and 1665,' London, 8vo; no copy of the 'Ephemeris' for 1658 is now preserved to us, as we learn from the volume for 1660 that 'it came into but few hands, by reason of the slackness of the printer before it came forth.' Copies for the years 1659 and 1660 are in the British Museum library, and one for the year 1665 in the Bodleian library at Oxford. The next work ascribed to him, and probably with justice, is (2) 'The Epitome of the Art of Husbandry, by J. B., gent.,' London, 1669, 8vo. That this work is by Blagrave seems to be proved by the fact that it was edited by his nephew, Obadiah Blagrave, a bookseller in St. Paul's Churchyard, who

published this and all the subsequent works of his uncle, two of which were posthumous. This was followed by (3) 'Blagrave's Astrological Practice of Physick,' London, 1671, 8vo, already referred to. That it first saw the light in Trinity term for this year is certain; the copies usually met with bear date 1689, being reprints published in Hilary term 1689-90 (cf. CLAVEL, *infra*). His next was (4) 'Supplement or Enlargement to Mr. Nich. Culpepper's English Physitian, to which is annexed a new Tract for the Cure of Wounds by Gunshot,' London, 1674, 8vo. The preface to this work is dated 'From my house called Copt Hall, upon the seven bridges in Reading.' (5) Blagrave's latest and posthumously published work is his 'Introduction to Astrology,' in three parts, London, 1682, 8vo. The interest attached to this work is that it contains an engraved portrait of our author at the age of seventy-two years, and is dedicated to his friend Elias Ashmole the antiquary. Lowndes ascribes to Joseph Blagrave 'Planispherium Catholicum.' This is certainly an error, for the work referred to is a revised version of the 'Mathematical Jewel' of John Blagrave, edited by J. Palmer, and published in London in 1658, 4to (cf. GRANGER, i. 274). Another work also ascribed to Blagrave is a manuscript, now lost, 'A Remonstrance in favour of Antient Learning against the Proud Pretensions of the Moderns, more especially in respect to the Doctrine of the Stars,' about 1669-70. It was never published; but from the account of it preserved (*Biog. Brit.* ii. 804) we should infer from its wide range of subjects, and in point of style, that it was superior to anything that could have been produced by Blagrave. His character appears to have been a curious mixture of earnest piety with a profound belief in the virtues of astrology. Of the various cures which he claims to have effected, one of the most curious is that of casting out a dumb devil from a maid at Basingstoke, where we are quaintly informed that, after invoking the name of the Tetragrammaton with that of the blessed Trinity, 'the devil came forth, but invisible, with a great cry and hideous noise, raising a sudden gust of wind, and so vanished' (*Astrological Practice of Physick*, p. 124). The whole story is a curious study in the demonology of the seventeenth century.

[Allibone's Dict. Eng. Literature, 1859, i. 200; Biog. Brit. Lond. 1747, fol.; Clavel's Mercurius Librarius, or Cat. of Books from 1668 to 1700, fol. Nos. 6 and 35; Coates's Hist. of Reading, 1802, p. 234; Granger's Biog. Hist. of England, 1775; Lowndes's Bibl. Manual, ed. Bohn, 1864, i. 214; Lysons's Mag. Brit. i. pt. 2, Berkshire, 1813, fol. p. 545.] C. H. C.

BLAGRAVE, THOMAS (*d.* 1688), musician, was a member of an old Berkshire family. Dr. Rimbault and Colonel Chester state that he was the eldest son of Richard Blagrave (eldest son of John Blagrave [q. v.] of Bullmarsh and Reading, Berkshire) by his third wife Anne, daughter of Thomas Mason of Northwood, Isle of Wight; but it is difficult to reconcile this statement with the very detailed family tree of the Blagraves in Berry's 'County Genealogies of Berkshire' (145-8). Blagrave's name occurs amongst the gentlemen of the chapel at the coronation of Charles II (23 April 1661), and about 22 Oct. in the following year he was appointed clerk of the cheque. He was also a member of Charles II's private band, and Wood says that he was 'a player for the most part on the cornet-flute, and a gentill and honest man.' Blagrave's name occasionally occurs in Pepys's 'Diary.' On 7 March 1662 by his means Pepys obtained admission to the Chapel Royal, Whitehall, and on 11 Sept. 1664 the same chronicler records that he had been 'with Mr. Blagrave, walking in the Abbey, he telling me the whole government and discipline of White Hall Chapel, and the caution now used against admitting any debauched persons.' Blagrave is also mentioned as one of the king's 'musick' at whom Pelham Humphreys laughed on his return from France in 1667, saying 'that they cannot keep time nor tune, nor understand anything.' On 14 Oct. 1645 Blagrave was married, at St. Margaret's, Westminster, to Margaret Clarevell or Clairvox of Parson's Green. He died 21 Nov. 1688, and was buried in the north cloister of Westminster Abbey on 24 Nov. By his will (dated 14 May 1686) he left to his widow his house and lands at Teddington, and bequeathed various sums to his kinsmen, among whom were another Thomas Blagrave, and John Blagrave, 'my brother Anthony Blagrave's youngest sonne.' A portrait by J. V. Souman of a Thomas Blagrave, which is preserved in the Music School at Oxford, has always been said to represent the subject of this biography; but this clearly cannot be the case, as the picture represents a boy, and bears the inscription 'æt. 12, 1702.' A few songs by him may be found in the publications of Playford and other contemporary collections.

[Chester's Registers of Westminster Abbey; Old Cheque Book of the Chapel Royal (ed. Rimbault); Probate Registers; Egerton MS. 2159; Hawkins's Hist. of Music (1853), ii. 767; Pepys's Diary (ed. 1848), i. 332, ii. 375, iv. 263.] W. B. S.

BLAGROVE, HENRY GAMBLE (1811-1872), musician, was born at Nottingham 20 Oct. 1811. He was the eldest son of

a professor of music, from whom, when only four years old, he received his earliest instruction in the violin. At the age of five he played in public, and in 1817 he appeared as a violinist at Drury Lane Theatre in an entertainment called 'The Liliputians,' as well as in a succession of concerts at the Exhibition Rooms in Spring Gardens. In 1821 he studied with Spagnoletti, and two years later, on the opening of the Royal Academy of Music, he entered that institution, where he became the pupil of Dr. Crotch and F. Cramer. In 1824 Blagrove was awarded a silver medal for his violin-playing, and in 1830 he received the appointment of solo-violinist in the royal private band, a post he held until 1837. Queen Adelaide took great interest in his career, and at her wish he went (in 1832) to Cassel, where he spent two years studying with Spohr. Subsequently he travelled on the continent for some time, playing with great success at Vienna and elsewhere. On his return to England he appeared as a soloist at the Philharmonic concerts, and in 1836 assumed the leadership of a string quartett party, the other members of which were H. Gattie, J. B. Dando, and C. Lucas, who gave a series of admirable concerts at the Hanover Square Rooms. At the coronation of Queen Victoria he led the State band, with which he was connected until his death. At about the same time he gave lessons on the violin to the Duke of Cambridge. On 17 Aug. 1841 Blagrove married Etheldred, daughter of Mr. Henry Combe, by whom he had three children. In the course of his long and brilliant professional career he was successively principal violin in Jullien's band, at both opera houses, at most of the provincial festivals, the Handel celebrations at the Crystal Palace, and the leading musical societies in London, besides teaching the violin at the Royal Academy of Music. In 1858 he was for a short time in Germany, and a few years later he played at the Lower Rhine Festival at Düsseldorf. On 8 Jan. 1869 Mrs. Blagrove died, and before long Blagrove began to show signs of declining health. He still, however, continued occasionally to perform, and in 1872 was presented with a public testimonial in recognition of his merits. In the December following he was seized with paralysis while playing at a private concert, and on the 15th of the same month died at his house, 224 Marylebone Road. He was buried at Kensal Green. Blagrove's published works comprise some valuable exercises and studies for the violin and a few solos. As a performer he ranked among the best of Spohr's pupils, his tone and execution being alike admirable. Personally he was very popular with all with whom he came in contact, and he was a most persevering and successful teacher.

[Information from Mrs. Murray; Grove's Dict. of Music, i. 246; Musical Directory for 1874, 8.]

W. B. S.

BLAGUE or BLAGE, THOMAS (*d.* 1611), dean of Rochester, was of Queens' College, Cambridge. He was undoubtedly the author in early life of 'A Schoole of wise Conceytes. Wherein as euery conceyte hath wit, so the most haue much mirth, set forth in common places by order of the alphabet. Translated out of diuers Greeke and Latin wryters by Thomas Blage, student of the Queenes Colledge in Cambridge. Printed at London by Henrie Binneman. Anno 1572. Cvm Privilegio' (12mo). He was admitted, 9 Sept. 1570, to the rectory of Braxted Magna in Essex. Local inquiries prove that he was non-resident. On 2 Sept. 1571, being A.B., he was presented to the church of St. Vedast, Foster Lane, London. Again, on 20 July 1580, he is found 'presented by the queen' to Ewelme, Oxfordshire, which he resigned in 1596. On 2 April 1582, at Oxford, being described as 'student in divinity and one of the chaplains in ordinary to the queen,' he 'supplicated for D.D., but whether admitted appears not' (Wood, *Fasti*, i. 222). On 1 Feb. 1591–2, being then D.D., he was installed dean of Rochester in the place of John Coldwell, M.D. Wood erroneously states that at the time he was master of Clare Hall, confounding him with another dean of Rochester (Dr. Scott). In 1602 he, as dean, presented John Wallis (or Wallys), father of the more famous Dr. John Wallis, to the living of Ashford, Kent. In 1603 he printed and published a sermon on Psalm i. 1–2, which had been preached at the Charter House. In 1604 he was appointed rector of Bangor, but never resided. He died 11 Oct. 1611. Wood, in recording the above solitary sermon, adds, 'and perhaps others;' but all appear to have perished. He had a son named John, who, in his father's lifetime, was a commoner of Oriel College, Oxford (*Fasti*, i. 222). Later a Colonel John Blague was the person by whom Isaac Walton restored to Charles II his 'George' that had been lost. Another Thomas Blague—perhaps another son—wrote the following tractate: 'A great Fight at Market Harborough in Leicestershire betwixt the Presbyterians and Independents, some declaring for his Excellency Sir Thomas Fairfax, others for the late elected Generals Maine and Poynts. With the number that were slain and wounded, and the manner how the Presbyterians were put to flight. By Thomas Blague,' 1647

(4to). He casually names a 'cosen Blague the surgeon' as 'attending on the wounded.'

[Le Neve's Fasti, i. 577; Reg. Abbot; Wood's Fasti, ii. 184; Reg. Whitgift, 3, 269; Reg. Grindall et Bancroft, Kennet; Wood's Fasti, i. 222, 227; communications from present Dean of Rochester, rectors of Bangor, Ewelme, Great Braxted, &c. &c.; Newcourt's Repertorium, ii. 91-2.] A. B. G.

BLAIR, HUGH (1718-1800), divine, was born in Edinburgh 7 April 1718. His father, John Blair, was an Edinburgh merchant, son of Hugh and grandson of Robert Blair, 1593-1666 [q.v.], chaplain to Charles I. Hugh Blair was educated at Edinburgh, and entered the university in 1730. An essay *περὶ τοῦ καλοῦ*, written whilst he was a student, was highly praised by Professor Stevenson and always cherished by its author. Boswell says (*Johnson*, 1760) that Blair with his cousin, G. Bannatyne, composed a poem on the resurrection, which was published as his own by a Dr. Douglas. He graduated as M.A. in 1739, and printed a thesis, 'De fundamentis et obligatione legis naturæ.' On 21 Oct. 1741 he was licensed to preach by the presbytery of Edinburgh. A sermon in the West church procured him the favour of Lord Leven, through whose interest he was ordained minister of Colessie, Fife, 23 Sept. 1742. In July 1743 he returned to Edinburgh, where he was elected as second minister of the Canongate after a contest. On 11 Oct. 1754 he was appointed by the town council and general sessions to Lady Yester's, one of the city churches; and on 15 June 1758 was appointed, at the request of the lords of council and session, to the High church, a charge which he retained during life. On 11 Dec. 1759 he began to read lectures upon composition in the university; in August 1760 the town council made him professor of rhetoric; and on 7 April 1762 a regius professorship of rhetoric and belles lettres was founded, to which Blair was appointed with a salary of 70*l.*

These appointments indicate the general estimate of Blair's merits as preacher and critic. He was one of the distinguished literary circle which flourished at Edinburgh throughout the century. He was a member, with Hume, A. Carlyle, Adam Ferguson, Adam Smith, Robertson, and others, of the famous Poker Club (Tytler's *Kames*, iii. 78). He was on very friendly terms with Hume, whose house he occupied during its owner's stay in France. Their friendship was not disturbed by Blair's sympathy with Hume's theological opponents, as Hume judiciously avoided discussions of such matters (Burton, i. 427, ii. 116). He defended Kames, his intimate friend, when Kames's 'Essays on Morality' exposed their author to a charge of infidelity, and brought Campbell's answer to Hume's essay upon Miracles under the notice of Hume (Tytler's *Kames*, i. 198, 266). He was intimate with Henry Dundas, afterwards Lord Melville, and through him had some influence upon Scotch patronage. He declined to use it in order to succeed Robertson as principal of the university, but is said to have been annoyed at being passed over in favour of Dr. Baird. Blair encouraged MacPherson to publish the 'Fragments of Ancient Poetry' in 1760, and eulogised their merits with more zeal than discretion in 'A Critical Dissertation on the Poems of Ossian, the son of Fingal,' 1763. In an appendix to a third edition (1765) he adduces some external testimony to their authenticity. The essay was much admired at the time; the substance had been given in his lectures. These were not published till 1783, when he resigned the professorship. He states in a note that he had borrowed some ideas from a manuscript treatise upon rhetoric (afterwards destroyed) by Adam Smith, who had given the first lectures in Scotland on the same subject in 1748-51. Smith and his friends seem to have thought the acknowledgment insufficient (Hill, p. 266). The lectures expressed the canons of taste of the time in which Addison, Pope, and Swift were recognised as the sole models of English style, and are feeble in thought, though written with a certain elegance of manner. A tenth edition appeared in 1806, and they have been translated into French. The same qualities are obvious in the sermons, which for a long time enjoyed extraordinary popularity. The first volume was declined by Strahan. Strahan, however, showed one of them to Johnson, who said that he 'had read it with more than approbation; to say it is good is to say too little.' Strahan hereupon bought it for 100*l.*, and upon its success doubled the price. For a second volume he paid 300*l.*, and for a third and fourth 600*l.* each. The first appeared in 1777; a nineteenth edition of the first volume and a fifteenth of the second appeared in 1794. A fifth volume, with an account of Blair's life by the Rev. Dr. Finlayson, appeared in 1801. A pension of 200*l.* a year was conferred upon the author in 1780, which he enjoyed till his death. The sermons were translated into many languages, and until the rise of a new school passed as models of the art. They are carefully composed; he took a week over one (Boswell's *Tour*, ch. iii.), and they are the best examples of the sensible, if unimpassioned and rather

affected, style of the moderate divines of the time. They have gone through many editions. Johnson seems to have had a warm esteem for Blair, who had been introduced to him shortly before Boswell's first introduction in 1763, and had been told by the doctor that 'many men, many women, and many children' could have written Ossian (Boswell's *Johnson*, 24 May 1763). Blair omitted from his published lectures a passage in which he had censured Johnson's pomposity (Boswell, 1777). Blair is described by Hill and A. Carlyle as very amiable, ready to read manuscripts of young authors, full of harmless vanity and simplicity, and rather finical in his dress and manners. He had considerable influence in the church, and was reckoned as one of the leading men amongst the 'moderate' divines. But his diffidence disqualified him from public speaking, and he declined to become moderator of the general assembly. He married his cousin, Katharine Bannatyne, in April 1748, who died long before him. He had a son who died in infancy, and a daughter who died at the age of twenty-one. He preached his last sermon before the Society for the Benefit of the Sons of the Clergy in the seventy-ninth year of his age (1797). He died, after an illness of three days, on 27 Dec. 1800. Besides the writings above mentioned, Blair contributed to the short-lived 'Edinburgh Review' of 1755 a review of Hutcheson's 'Moral Philosophy,' and of Dodsley's collection of poems. His early system of notes led to the 'Chronological Tables' published by his relative, John Blair. A collection of the 'sentimental beauties' in his writings was published in 1809, with a life by W. H. Reed.

[Life by Finlayson; Life by John Hill, 1807; Burton's Life of Hume; A. Carlyle's Autobiography, pp. 291–4; Tytler's Life of Kames.]

L. S.

BLAIR, JAMES, D.D. (1656–1743), episcopalian divine, was born in Scotland (it is believed in Edinburgh) in 1656. He was educated in 'one of the Scottish universities,' but none of the notices of him specifies which it was. He obtained a benefice in the revived episcopal church in Scotland, but where does not appear. He retreated to England before the tempest which threatened the episcopal church after 1679. There, having been introduced to Dr. Compton, bishop of London, he was sent as a missionary to Virginia, where he arrived in 1685. He soon secured the confidence of the provincial government and of the planters, and proved himself far in advance of his contemporaries on the question of slavery. In 1689, when Sir Francis Nicholson was appointed lieutenant-governor of Virginia, Blair was appointed commissary, the highest ecclesiastical office in the province. By this office he had a seat in the council of the colonial government, presided over the trials of clergymen—a strangely mixed class at the period—and pronounced sentence upon conviction of 'crimes or misdemeanours.'

Being 'deeply affected with the low state of both learning and religion' in Virginia, he endeavoured to establish a college, and set on foot a subscription with this object, which, being headed by the lieutenant-governor and his council, soon amounted to 2,500*l.* The project was warmly supported in the first assembly held by Sir Francis Nicholson in 1691, and was recommended to the sovereigns, William and Mary, in an address prepared for the assembly by Blair, which he was unanimously appointed to present. He accordingly proceeded to England; William and Mary favoured the plan; on 14 Feb. 1692 a charter for the college was granted, the Bishop of London being appointed chancellor and Blair president, and the college was named 'William and Mary.' Among the most liberal contributors to the college was Robert Boyle.

On Blair's return to Virginia the opening of the college was repeatedly deferred, although Blair's enthusiasm never waned. In 1705 a destructive fire practically reduced the college buildings to ruins. Under the loyal support of the new lieutenant-governor, Spotiswoode, the edifice was re-erected, and classes were afterwards commenced. But, according to the records of the college, it was not until 1729 that Blair entered formally on the duties of his office as president. Blair was for some time president of the council of Virginia and rector of Williamsburgh.

In 1722 he published his one work: 'Our Saviour's Divine Sermon on the Mount, contained in the fifth, sixth, and seventh chapters of St. Matthew's Gospel, explained, and the practice of it recommended in divers Sermons and Discourses,' 4 vols. 8vo. A second edition was published in 1732, under the supervision of Dr. Daniel Waterland, who prefixed a 'commendatory notice.'

Blair died on 1 Aug. 1743, aged 87. He bequeathed his library to his college. Two portraits of him are preserved in the college, one taken in youth and the other in later life. Bishop Burnet (*History of his Own Times*) calls him 'a worthy and good man.' George Whitefield wrote in his journal for 15 Dec. 1740: 'Paid my respects to Mr. Blair, commissary of Virginia. His discourse was savoury, such as tended to the use of edifying.

He received me with joy, asked me to preach, and wished my stay were longer.'

[Preface to his Sermon on the Mount, 1st, 2nd, and 3rd editions; Dr. Miller's Retrospect, ii.; Bishop Burnet's History of his Own Times; Hawks's Ecclesiastical Contributions; History of Virginia; Dr. Totten MS.; Sprague's Annals of the American Pulpit, v. 7–9.] A. B. G.

BLAIR, SIR JAMES HUNTER (1741–1787), was the son of John Hunter, a merchant in Ayr, where he was born 21 Feb. 1741. In 1756 he was apprenticed in the house of the brothers Coutts, bankers in Edinburgh, where he made the acquaintance of Sir William Forbes, and the two being admitted to a share in the business on the death of the senior partner of the firm, they gradually rose to the head of the copartnery. In 1770 he married Jane, eldest daughter of Mr. John Blair of Dunksey, Wigtonshire, and on his wife succeeding to the family estate in 1777, he assumed the name of Blair. On his estate he effected remarkable improvements, introducing to his tenants the most approved modes of farming, and nearly rebuilding the town of Portpatrick, at which he established larger and better packet-boats on the passage to Donaghadee in Ireland. In 1781 he was chosen to represent the city of Edinburgh in parliament, and again in 1784, but on account of the claims of his professional duties he resigned a few months afterwards. In the same year, however, he consented, at the urgent request of the town council, to accept the lord-provostship. It was chiefly due to his energy and public spirit during his term of office that several important schemes for the improvement of the city were successfully carried out. He did much to further the rebuilding of the university, and contrived a plan for obtaining funds to erect the South Bridge over the Cowgate. Chiefly by his strenuous perseverance against opposition the scheme was carried out, thus opening up communication between the southern suburbs and the city. He was made a baronet in 1786. He died of a putrid fever at Harrogate, Yorkshire, 1 July 1787, and was buried in the Greyfriars churchyard. Hunter Square and Blair Street, Edinburgh, are named after him. He held the appointment of king's printer.

Robert Burns, whose special regard for Blair was increased by his enlightened interest in agriculture, wrote an elegy on his death, a performance he acknowledged to be 'but mediocre,' although his grief was sincere. 'The last time,' says Burns, 'I saw the worthy, public-spirited man, he pressed my hand and asked me with the most friendly warmth if it was in his power to serve me.' In a letter to Robert Aiken of Ayr, enclosing the poem, Burns also wrote, 'That I have lost a friend is but repeating after Caledonia.'

[Gent. Mag. lvii. pt. ii. 641–2; Edinburgh Magazine, vi. 43–4; Kay's Edinburgh Portraits, 1838, i. 62–4; Arnot's History of Edinburgh, pp. 256, 264; Works of Robert Burns.] T. F. H.

BLAIR, JOHN (*fl.* 1300), chaplain of Sir William Wallace, was a native of Fife, and is said to have been educated at Dundee in the same school with Wallace. After continuing his studies at the university of Paris he entered holy orders, and under the name of Arnoldus became a monk of the order of St. Benedict at Dunfermline. When Wallace became governor of the kingdom, Blair was appointed his chaplain. According to Henry the Minstrel, Blair, along with Thomas Gray, parson of Liberton, 'oft one, oft both,' accompanied Wallace in almost all 'his travels,' and one or the other kept a record of his achievements. From these notes Blair 'compiled in dyte the Latin book of Wallace life,' from which Henry the Minstrel professed to derive the principal materials for his poem on the 'Acts and Deeds of Sir William Wallace.' The work of Blair is supposed to have been written in 1327. A professed fragment of it from a manuscript in the Cottonian Library was published with notes by Sir Robert Sibbald in 1705 under the title 'Relationes quædam Arnoldi Blair Monachi de Dumfermelem et Capellani D. Gulielmi Wallas militis,' 1327, and was also reprinted along with the poem of Henry the Minstrel in 1758. These so-called 'Relationes' are, however, nothing more than a plagiarism from the 'Scotichronicon.' He is said to have been also the author of a work entitled 'De liberata tyrannide Scotia,' which is now lost.

[The Acts and Deeds of Sir William Wallace, by Henry the Minstrel, especially Book V., chap. i., lines 525–50; Dempster's Hist. Eccl. Scot. Gent. (1627), p. 86; Mackenzie's Writers of the Scots Nation, i. 247–8, 264; Ross's Scottish History and Literature (1884), p. 60.] T. F. H.

BLAIR, JOHN, LL.D. (*d.* 1782), chronologist, erroneously said to have been a descendant of the Rev. Robert Blair (1593–1666) [q. v.], really belonged to the Blairs of Balthayock, Perthshire. The date of his birth is unknown, but he was born and educated in Edinburgh. Leaving Scotland as a young man, he became usher of a school in Hedge Lane, London, in succession to Andrew Henderson, author of a well-known history of the rebellion of 1745. In 1754 he

published, after elaborate preparations, his *magnum opus*, which he designated 'The Chronology and History of the World, from the Creation to the Year of Christ 1753, illustrated in fifty-six tables.' It was modestly dedicated to the lord chancellor (Hardwicke), and was published by subscription. In the preface he acknowledged great obligations to the Earl of Bute, and announced certain supplementary dissertations, which never appeared. The plan and scope of the work originated with Dr. Hugh Blair's scheme of chronological tables. The 'Chronology' was reprinted in 1756, 1768, and 1814. It was 'revised and enlarged' by Willoughby Rosse in Bohn's 'Scientific Library,' 1856. In 1768 Blair published 'Fourteen Maps of Ancient and Modern Geography, for the illustration of the Tables of Chronology and History; to which is prefixed a dissertation on the Rise and Progress of Geography.' The dissertation was separately republished in 1784.

Blair's first book was well received. In 1755 he was elected a fellow of the Royal Society, and in its 'Transactions' appeared a paper by him on the 'Agitation of the Waters near Reading' (*Phil. Trans.* x. 651, 1755). He had previously obtained orders in the church of England, and in September 1757 was appointed chaplain to the Princess-dowager of Wales and mathematical tutor to the Duke of York. In March 1761, on the promotion of Dr. Townshend to the deanery of Norwich, Blair was given a prebendal stall at Westminster. Within a week the dean and chapter of Westminster presented him to the vicarage of Hinckley. In the same year he was chosen fellow of the Society of Antiquaries. In September 1763 he left with the Duke of York on a tour on the continent, and was absent until 1764. In 1771 he was transferred, by presentation of the dean and chapter of Westminster, to the vicarage of St. Bride, London, and again to the rectory of St. John the Evangelist, Westminster, in April 1776. He was also rector of Horton (Milton's Horton) in Buckinghamshire. He died on 24 June 1782. The statement that his last illness was aggravated by the sad death of his gallant brother, Captain Blair [see BLAIR, WILLIAM, 1741–1782], is erroneous. They were only cousins. Blair's 'Lectures on the Canons of the Old Testament, comprehending a Dissertation on the Septuagint Version,' 1785, was a posthumous publication.

BLAIR, PATRICK, M.D. (*fl.* 1728), botanist and surgeon, was born at Dundee, where he practised as a doctor, and in 1706 dissected and mounted the bones of an elephant which had died in the neighbourhood, and of which he contributed a description, under the title of 'Osteographia Elephantina,' to the Royal Society of London, published in 1713. Being a nonjuror and Jacobite, he was imprisoned as a suspect in 1715. He subsequently removed to London, and delivered some discourses before the Royal Society on the sexes of flowers. But he soon settled at Boston, Lincolnshire, where he published 'Miscellaneous Observations on the Practice of Physick, Anatomy, and Surgery' in 1718, 'Botanick Essays' in 1720, and 'Pharmaco-botanologia' in 1723–8, which closed with the letter H, it is presumed through his death. His 'Botanick Essays' formed his most valuable work. In them he clearly expounded the progress of the classification of plants up to his time, and the then new views as to the sexual characters of flowering plants, which he confirmed by his own observations.

[Pulteney's Progress of Botany in England, 1790, ii. 134–140; Chalmers's Biog. Dict.] G. T. B.

BLAIR, ROBERT (1593–1666), divine, a native of Irvine, Ayrshire, was born in 1593. His father was a merchant-adventurer, John Blair of Windyedge, a younger brother of the ancient family of Blair of that ilk; his mother was Beatrix Muir (of the house of Rowallan), who lived for nearly a century.

From the parish school at Irvine Blair proceeded to the university of Glasgow, where he took his degree of M.A. He is stated to have acted as a schoolmaster in Glasgow. In his twenty-second year he was appointed a regent or professor in the university. In 1616 he was licensed as a preacher of the gospel in connection with the established church (presbyterian) of Scotland. In 1622 he resigned his professorship, 'in consequence,' it is alleged, 'of the appointment of Dr. Cameron, who favoured episcopacy, as principal of the university' (ANDERSON, *Scottish Nation*). This reason seems improbable, for having gone over to Ireland he was called to Bangor there and ordained by the Bishop of Down on 10 July 1623. But he was suspended in the autumn of 1631, and deposed in 1632 for nonconformity. By the interposition of the king (Charles I) he was restored in May 1634. Yet the former sentence was renewed, with excommunication, by Bramhall, bishop of Derry, the same year.

It would appear that even in Scotland [see WILLIAM BIRNIE] and in Ireland presbyterians were received into the episcopal church without subscription.

Excommunicated and ejected, Blair, along with a company of others, 'fitted out a ship,' intending to go to New England in 1635. But the weather proved so boisterous that they were beaten back, and, returning to Scotland, he lived partly in that country and partly in England. Orders were issued in England for his apprehension in 1637, but he escaped to Scotland, and preached for some time in Ayr. He was invited to go to France as chaplain to Colonel Hepburn's regiment, but after embarking at Leith he was threatened by a soldier whom he had reproved for swearing, and thereupon went ashore again. He also petitioned the privy council 'for liberty to preach the gospel,' and received an appointment at Burntisland in April 1638. He was nominated to St. Andrews in the same year, and was admitted there on 8 Oct. 1639. In 1640 he accompanied the Scottish army into England on its famous march. He assisted in the negotiations for the treaty of peace presented by Charles I, 8 Nov. 1641. After the Irish rebellion of 1641 he once more proceeded to Ireland with several other clergymen of the 'kirk,' the Irish general assembly (presbyterian) having petitioned for supplies for their vacant charges. He afterwards returned to St. Andrews. In 1645 he attended the lord president (Spottiswoode) and others to the scaffold. In the same year he was one of the Scottish ministers who went to Newcastle to speak very plainly to the king. In 1646 he was elected to the highest seat of honour in his church, that of moderator of the general assembly (3 June 1646). Later, on the death of Henderson, he was appointed chaplain-in-ordinary to the king, 'being paid by the revenues of the Chapel Royal.' The commission of the general assembly, in 1648, named him one of those for 'endeavouring to get Cromwell to establish a uniformity of religion in England.' The endeavour was a valorous one to impose presbyterianism on England. At the division of the church, in 1650, into resolutioners and protesters, he leaned to the former, 'but bitterly lamented the strife.' Summoned with others to London in 1654, that 'a method might be devised for settling affairs of the church,' he pleaded ill-health and declined to go. In the same year he was appointed by the council of England 'one of those for the admission to the ministry in Perth, Fife, and Angus.'

At the Restoration he came under the lash of Archbishop Sharp. He had to resign his charge in September 1661, and was confined to certain places, first of all to Musselburgh, afterwards to Kirkcaldy (where he remained three and a half years), and finally to Meikle Couston near Aberdour. As a covenanter he preached at the hazard of life in moor and glen. He died at Aberdour on 27 Aug. 1666, and was buried in the parish churchyard. He left behind him a manuscript commentary on the book of Proverbs, and manuscripts on political and theological subjects. None were printed, and they appear to have perished. Fortunately his 'Autobiography' was preserved, and has been published by the Wodrow Society (1848); fragments were published in 1754. He married first Beatrix, daughter of Robert Hamilton, merchant, in right of whom he became a burgess of Edinburgh on 16 July 1626; she died in July 1632, aged 27. Their issue were two sons and a daughter: James, one of the ministers of Dysart, Robert, and Jean, who married William Row, minister of Ceres. His second wife was Katherine, daughter of Hugh Montgomerie of Braidstane, afterwards Viscount Airds. Their issue were seven sons and a daughter. One of these sons, David, was father of Robert Blair [q. v.], the poet of the 'Grave,' and another, Hugh, grandfather of Dr. Hugh Blair [q. v.]

[Autobiography, 1593-1636; Reed's Presbyterianism of Ireland, i.; Row and Stevenson's Hist.; Rutherford's and Baillie's Letters; Kirkcaldy Presb. Reg.; Connolly's Fifeshire; Chambers's Biogr.; Scott's Fasti, ii. 91; Hill's Life of Hugh Blair.] A. B. G.

BLAIR, ROBERT (1699-1746), author of the 'Grave,' was born in Edinburgh in 1699, the eldest son of the Rev. David Blair, a minister of the old church of Edinburgh, and one of the chaplains to the king. His mother's maiden name was Euphemia Nisbet, daughter of Alexander Nisbet of Carfin. Hugh Blair, the writer on oratory, was his first cousin. David Blair died in his son's infancy, on 10 June 1710. Robert was educated at the university of Edinburgh, and took a degree in Holland. Nothing has been discovered with regard to the details of either curriculum. From about 1718 to 1730 he seems to have lived in Edinburgh as an unemployed probationer, having received license to preach, 15 Aug. 1729. In the second part of a miscellany, entitled 'Lugubres Cantus,' published at Edinburgh in 1719, there occurs an 'Epistle to Robert Blair,' which adds nothing to our particular information. He is believed to have belonged to the Athenian Society, a small literary club in Edinburgh, which published in 1720 the 'Edinburgh

Miscellany.' The pieces in this volume are anonymous, but family tradition has attributed to Robert Blair two brief paraphrases of scripture which it contains, and Callender, its editor, is known to have been his intimate friend. In 1728 he published, in a quarto pamphlet, a 'Poem dedicated to the Memory of William Law,' professor of philosophy in Edinburgh. This contained 140 lines of elegiac verse. In 1731 Blair was appointed to the living of Athelstaneford in East Lothian, to which he was ordained by the presbytery of Haddington on 5 Jan. of that year. In 1738 he married Isabella, the daughter of his deceased friend, Professor Law; she bore him five sons and one daughter, and survived him until 1774. He possessed a private fortune, and he gave up so much of his leisure as his duties would grant him to the study of botany and of the old English poets. Before he left Edinburgh he had begun to sketch a poem on the subject of the 'Grave.' At Athelstaneford he leisurely composed this poem, and about 1742 began to make arrangements for its publication. He had formed the acquaintance of Dr. Isaac Watts, who had paid him, he says, 'many civilities.' He sent the manuscript of the 'Grave' to Dr. Watts, who offered it 'to two different London booksellers, both of whom, however, declined to publish it, expressing a doubt whether any person living three hundred miles from town could write so as to be acceptable to the fashionable and the polite.' In the same year, however, 1742, Blair wrote to Dr. Doddridge, and interested him in the poem, which was eventually published, in quarto, in 1743. It enjoyed an instant and signal success, but Blair was neither tempted out of his solitude nor persuaded to repeat the experiment which had been so happy. His biographer says: 'His tastes were elegant and domestic. Books and flowers seem to have been the only rivals in his thoughts. His rambles were from his fireside to his garden; and, although the only record of his genius is of a gloomy character, it is evident that his habits and life contributed to render him cheerful and happy.' He died of a fever on 4 Feb. 1746, and was buried under a plain stone, which bears the initials R. B., in the churchyard of Athelstaneford. Although he had published so little, no posthumous poems were found in his possession, and his entire works do not amount to one thousand lines. His third son, Robert [q. v.], was afterwards judge.

The 'Grave' was the first and best of a whole series of mortuary poems. In spite of the epigrams of conflicting partisans, 'Night Thoughts' must be considered as contemporaneous with it, and neither preceding nor following it. There can be no doubt, however, that the success of Blair encouraged Young to persevere in his far longer and more laborious undertaking. Blair's verse is less rhetorical, more exquisite, than Young's, and, indeed, his relation to that writer, though too striking to be overlooked, is superficial. He forms a connecting link between Otway and Crabbe, who are his nearest poetical kinsmen. His one poem, the 'Grave,' contains seven hundred and sixty-seven lines of blank verse. It is very unequal in merit, but supports the examination of modern criticism far better than most productions of the second quarter of the eighteenth century. As philosophical literature it is quite without value; and it adds nothing to theology; it rests solely upon its merit as romantic poetry. The poet introduces his theme with an appeal to the grave as the monarch whose arm sustains the keys of hell and death (1–10); he describes, in verse that singularly reminds us of the seventeenth century, the physical horror of the tomb (11–27), and the ghastly solitude of a lonely church at night (28–44). He proceeds to describe the churchyard (45–84), bringing in the schoolboy 'whistling aloud to bear his courage up,' and the widow. This leads him to a reflection on friendship, and how sorrow's crown of sorrow is put on in bereavement (85–110). The poetry up to this point has been of a very fine order; here it declines. A consideration of the social changes produced by death (111–122), and the passage of persons of distinction (123–155), leads on to a homily upon the vain pomp and show of funerals (156–182). Commonplaces about the devouring tooth of time (183–206) lead to the consideration that in the grave rank and precedency (207–236), beauty (237–256), strength (257–285), science (286–296), and eloquence (297–318) become a mockery and a jest; and the idle pretensions of doctors (319–336) and of misers (337–368) are ridiculed. At this point the poem recovers its dignity and music. The terror of death is very nobly described (369–381), and the madness of suicides is scourged in verse which is almost Shakespearian (382–430). Our ignorance of the after world (431–446), and the universality of death, with man's unconsciousness of his position (447–500), lead the poet to a fine description of the medley of death (501–540) and the brevity of life (541–599). The horror of the grave is next attributed to sin (600–633), and the poem closes somewhat feebly and ineffectually with certain timid and perfunctory speculations about the mode in which the grave will respond to the Resurrection trumpet.

[The 'Grave' was constantly reprinted after Blair's death, but with no authoritative details about the author. Dr. William Anderson, in 1796, exactly half a century after Blair's death, collected from surviving members of his family such particulars as could still be recovered, and prefixed them to an edition of the 'Grave' published that year in a prefatory biography which contains all of a biographical nature which has been preserved about Robert Blair. Various brief accounts of his life which had appeared previous to that date had been entirely apocryphal.] E. G.

BLAIR, ROBERT, of Avontoun (1741–1811), judge, was the third son of the Rev. Robert Blair, the author of the 'Grave' [q. v.], and Isabella his wife, the daughter of Mr. William Law of Elvingston, East Lothian. He was born in 1741 at Athelstaneford, where his father was the minister. Young Blair commenced his education at the grammar school at Haddington, where he formed a friendship with Henry Dundas, afterwards Viscount Melville, which only ended with their lives. From Haddington he was removed to the high school at Edinburgh, and thence was transferred to the university. In 1764 he was admitted a member of the Faculty of Advocates, and soon obtained a considerable practice at the bar, where he and Henry Erskine were often pitted against each other. In 1789 Blair was appointed by his friend Dundas one of the depute advocates, which office he continued to hold until 1806. For some years also he was one of the assessors of the city of Edinburgh. In 1789, at the age of forty-seven, Blair became solicitor-general for Scotland. This post he continued to occupy until the change of ministry which was occasioned by Pitt's death in 1806. During this period he twice refused the offer of a seat on the judicial bench, and both in 1802 and 1805 declined to accept the office of lord advocate. In 1801 he was elected dean of the faculty of advocates. Upon the return of his friends to power in 1807 he refused the offices of solicitor-general and lord advocate, but in the next year, upon the resignation of Sir Ilay Campbell, he accepted the presidency of the college of justice. This dignity, however, he did not long enjoy. He died suddenly on 20 May 1811. His old friend, Viscount Melville, who came to Edinburgh purposely to attend the funeral, was taken ill, and died on the very day the president was buried. This singular coincidence gave rise to a 'Monody on the Death of the Right Hon. Henry Lord Viscount Melville, and Right Hon. Robert Blair of Avontown, Lord President of the College of Justice' (Edinburgh, 1811), written by an anonymous author. Blair married Isabella Cornelia, the youngest daughter of Colonel Charles Craigie Halkett of Lawhill, Fifeshire. His widow, one son, and three daughters, survived him; but he left them so badly off that a pension was granted by the crown to his widow and daughters through the instrumentality of Mr. Perceval. He was a man of a very powerful understanding, with a thoroughly logical mind and a firm grasp of legal principles, but without any gift of eloquence or even of fluency of speech. He had such 'an innate love of justice and abhorrence of iniquity,' and took so liberal and enlarged a view of law, that he was eminently qualified to fill the post which he held for so short a time. It is somewhat remarkable that Blair never sat in parliament. As a recreation he took much pleasure in agricultural pursuits, and he brought his small estate at Avontoun, near Linlithgow, to the highest state of cultivation. His statue by Chantrey stands in the Parliament Hall at Edinburgh.

Two portraits of him were taken by Kay of Edinburgh, one in 1793, and the other in 1799, etchings of which will be found in vol. i. of Kay's 'Portraits,' Nos. 127–8.

[Law Review, ii. 341–52; Kay's Original Portraits and Caricature Etchings, 1877, i. 313–6; Edinburgh Review, lxix. 31–2, 281–3; Scots Magazine, 1811, pp. 403–7.] G. F. R. B.

BLAIR, ROBERT, M.D. (*d.* 1828), inventor of the 'aplanatic' telescope, was born (there is reason to believe) at Murchiston, near Edinburgh. He was, in all probability, identical with the Robert Blair who wrote 'A Description of an accurate and simple Method of adjusting Hadley's Quadrant for the Back Observation,' appended to the 'Nautical Almanac' for 1788 (published 1783), and printed separately by order of the commissioners of longitude. But the first fact authentically known about him is his appointment by a royal commission, dated 25 Sept. 1785, to the chair of practical astronomy erected for his benefit in the university of Edinburgh, with a yearly salary of 120*l*. Being unprovided with instruments or an observatory, he held the post as a complete sinecure for forty-three years, eight of which he is said to have spent in London, where his only son, Archibald Blair, was established as an optician. When in Edinburgh he rarely entered the Senatus Academicus, and his name was even omitted from the list of professors furnished to the university commission, which began its sittings in 1826. In 1787 Blair undertook, with a view to finding a substitute for flint glass, the first systematic investigation yet attempted of the dispersive powers

of various media, the results of which were lengthily detailed in a paper read before the Royal Society of Edinburgh 3 Jan. and 4 April 1791. He was the first to attempt the removal of the 'secondary spectrum,' and succeeded in his attempt by a triple combination of two essential oils, such as naphtha and oil of turpentine, with crown glass; but his discovery of fluid media possessing the same relative, though a different absolute dispersion from glass, gave a far more brilliant prospect of practical success. This valuable optical property he found to belong to metallic solutions, especially of antimony and mercury, mixed with chlorhydric acid, and to the absolutely colourless refraction thus rendered possible he gave the name of 'aplanatic,' or 'free from aberration' (*Ed. Phil. Trans.* iii. 53). 'Could solid media of such properties be discovered,' Sir John Herschel remarked (*Encycl. Metr.* iv. 429), 'the telescope would become a new instrument.' Blair constructed object-glasses upon this principle, of which the performance was highly praised, in one case, at least, venturing successfully upon the unexampled feat of giving to an aperture of three inches a focal length of only nine. He took out a patent for his invention, and entrusted the fabrication of the new instruments to a London optician, George Adams the younger [q. v.]; but they never came into general use. An equally fruitless effort to establish a regular manufacture and sale of them in Edinburgh was made by Archibald Blair, under his father's directions, in 1827 (*Ed. Journ. of Science*, vii. 336). The fluid used in the lenses appears, in course of time, to have lost its transparency by evaporation or crystallisation, and the difficulty offered by the secondary spectrum is, by modern art, rather evaded than overcome.

Sir David Brewster relates (*Encycl. Brit.* art. 'Optics,' p. 586, eighth edition) that an instrument for magnifying by means of prisms, similar to the 'teinoscope' invented by himself in 1812 (*Ed. Phil. Journ.* vi. 334), was shown him by Archibald Blair as having been constructed by his father at an unknown date. The principle of the contrivance was arrived at independently by Amici of Modena in 1821.

Blair became a fellow of the Royal Society of Edinburgh in January 1786, and at one period held the appointment of first commissioner of the board for the care of sick and wounded seamen. In this capacity he was instrumental in banishing scurvy from the navy by introducing the use of lime-juice, a method of preserving which for an indefinite time at sea he had previously ascertained (*Ed. Journ. of Science*, vii. 341). In 1827 he published at Edinburgh a small volume, entitled 'Scientific Aphorisms, being the outline of an attempt to establish fixed principles of science, and to explain from them the general nature of the constitution and mechanism of the material system, and the dependence of that system upon mind.' The large promise of the title-page is but imperfectly fulfilled by the contents. Extending Lesage's machinery for producing the effects of gravitation, he divided matter into three classes, distinguished by the size of the constituting 'projected,' 'jaculatory,' and 'quiescent' particles, in the mutual collisions of which he sought a universal explanation of phenomena of the material order, all motion being, however, in the last resort, referred to the action of mind. His health was by this time much broken, and he died at Westlock, in Berwickshire, 22 Dec. 1828.

An abridgment of his 'Experiments and Observations on the unequal Refrangibility of Light,' originally published in the 'Transactions of the Royal Society of Edinburgh' (iii. 3–76, 1794), appeared in Nicholson's 'Journal of Natural Philosophy' with the title, 'The Principles and Application of a new Method of constructing Achromatic Telescopes' (i. 1, 1797), and, in a German translation, in Gilbert's 'Annalen der Physik' (vi. 129, 1800). The best account of the principle of his 'fluid lens,' or aplanatic telescopes, will be found in Sir John Herschel's article on Light in the 'Encyclopædia Metropolitana' (pars. 474–7).

[Sir Alexander Grant's Story of the University of Edinburgh (1884), i. 339, ii. 361; Cat. of Scientific Papers, i. 1867.] A. M. C.

BLAIR, WILLIAM (1741–1782), captain in the royal navy, was the son of Daniel Blair of Edinburgh, collaterally related to the Blairs of Balthayock. He became a lieutenant in the navy on 9 Oct. 1760, but did not attain his commander's rank till 6 Dec. 1777. He was posted on 18 April 1778, and commanded the Dolphin, of 44 guns, in the stubborn battle on the Doggerbank, 5 Aug. 1781. Notwithstanding her small force, the exigencies of the case compelled the Dolphin to take her place in the line of battle. Blair's conduct was worthy of the distinction thrust upon him, and won for him the special approval of the admiralty, and his appointment to the Anson, a new 64-gun ship, then fitting for service in the West Indies. In the January following Blair sailed in company with Sir George Rodney, and on 12 April, when the French were completely defeated to leeward of Dominica, the Anson was in the leading squadron under the immediate command of Rear-admiral

Drake, and was warmly engaged from the very beginning of the battle. Her loss was not especially great in point of numbers, but one of her killed was Captain Blair. A monument to his memory, jointly with his brother officers, Captains Bayne and Lord Robert Manners, was erected in Westminster Abbey at the public expense.

[Beatson's Memoirs, v. 405, 475, 479; Gent. Mag. (1782), lii. 337; Notes and Queries, 6th ser. vii. 122.] J. K. L.

BLAIR, WILLIAM (1766–1822), surgeon, youngest son of William Blair, M.D., and Ann Gideon, his wife, was born at Lavenham in Suffolk 28 Jan. 1766. He qualified himself for surgical practice in London under Mr. J. Pearson of Golden Square, by whom he was introduced to the Lock Hospital, and on a vacancy was elected surgeon to that charity. Blair was a master of arts, but it is not stated at what university he graduated. He became very eminent in his profession, and was surgeon to the Asylum, the Finsbury Dispensary, the Bloomsbury Dispensary in Great Russell Street, the Female Penitentiary at Cumming House, Pentonville, and the New Rupture Society. He was a member of the Royal College of Surgeons, London, and of the medical societies of London, Paris, Brussels, and Aberdeen. For some time he was editor of the 'London Medical Review and Magazine.' Blair was a very earnest protestant of the methodist persuasion, and laboured zealously in the cause of the British and Foreign Bible Society, to which he presented his valuable collection of rare and curious editions of the Bible, and many scarce commentaries in different languages. Once or twice he attempted lectures on anatomy and other subjects, but with little success. On his wife's death in March 1822 he resolved to give up professional practice, and to retire into the country. He accordingly took a house in the neighbourhood of Colchester, but before the preparations for removing were completed he was seized with illness, and died at his residence in Great Russell Street, Bloomsbury, 6 Dec. 1822.

His works are: 1. 'The Soldier's Friend, containing familiar instructions to the loyal volunteers, yeomanry corps, and military men in general, on the preservation and recovery of their health,' London, 1798, 12mo, 2nd edition 1803, 3rd edition 1804. 2. 'Essays on the Venereal Disease and its concomitant Effects,' London, 1798, 8vo, 3rd edition 1808. 3. 'Anthropology, or the Natural History of Man, with a comparative view of the structure and functions of animated beings in general,' London, 1805, 8vo. 4. 'The Vaccine Contest, being an exact outline of the arguments adduced by the principal combatants on both sides respecting Cow-Pox inoculation, including a late official report by the medical council of the Royal Jennerian Society,' London, 1806, 8vo; written in defence of vaccination in answer to Dr. Rowley. 5. 'Hints for the consideration of Parliament in a letter to Dr. Jenner on the supposed failure of vaccination at Ringwood, including a report of the Royal Jennerian Society, also remarks on the prevalent abuse of variolous inoculation, and on the exposure of out-patients attending at the Small-pox Hospital,' London, 1808, 8vo. 6. 'Prostitutes Reclaimed and Penitents Protected, being an answer to some objections against the Female Penitentiary,' 1809, 8vo. 7. 'Strictures on Mr. Hale's reply to the pamphlets lately published in defence of the London Penitentiary,' 1809, 8vo. 8. 'The Pastor and Deacon examined, or remarks on the Rev. John Thomas's appeal in vindication of Mr. Hale's character, and in opposition to Female Penitentiaries,' 1810, 8vo. 9. 'The Correspondence on the Formation, Objects, and Plan of the Roman Catholic Bible Society,' 1814; this engaged him in a controversy with Charles Butler of Lincoln's Inn (vide *Gent. Mag.* lxxxiv. pts. i. and ii.). 10. A long and elaborate article on 'Cipher,' in Rees's 'Cyclopædia' (1819), vol. viii. The engraved illustrative plates are erroneously inserted under the heading of 'Writing by Cipher' in the volume of 'Plates,' vol. iv. This article is incomparably the best treatise in the English language on secret writing and the art of deciphering. It includes a cipher method invented by Blair, which he declared to be inscrutable; but the key was discovered by Michael Gage, who published at Norwich in 1819 (though it is by a typographical error dated 1809) 'An Extract taken from Dr. Rees's New Cyclopædia on the article Cipher, being a real improvement on all the various ciphers which have been made public, and is the first method ever published on a scientific principle. Lately invented by W. Blair, Esq., A.M.; to which is now first added a Full Discovery of the Principle,' 8vo. 11. An article on 'Stenography' in Rees's 'Cyclopædia,' vol. xxxiv. 12. 'The Revival of Popery, its intolerant character, political tendency, encroaching demands, and unceasing usurpations, in letters to William Wilberforce,' London, 1819, 8vo. 13. 'A New Alphabet of Fifteen Letters, including the vowels,' in William Harding's 'Universal Stenography, 2nd edit. 1824. 14. Correspondence respecting his method of Secret Writing, containing original letters to him on the subject from the Right Hon. W. Windham, G. Canning, the

Earl of Harrowby, J. Symmons of Paddington, and Michael Gage of Swaffham, with the whole of his system of ciphers. Manuscript sold at the dispersion of William Upcott's collection in 1846.

BLAK or BLACK, JOHN (*d.* 1563), a Dominican friar of Aberdeen, wrote 'De reali præsentia Christi in Sacramento Altaris;' 'Acta colloquii cum Willoxio symmysta;' 'Conciones piæ;' and 'Monita ad Apostatas.' His public disputation with John Willox took place in Edinburgh in the summer of 1561. Bishop Lesley gives the three heads of their disputation, and adds that in the end nothing was agreed. Indeed it would seem that the only important result of such discussions was to exasperate the temper of the people, for Blak was stoned to death by a protestant mob in Edinburgh on 7 Jan. 1562–3.

BLAKE, CHARLES, D.D. (1664–1730), divine and poet, was born at Reading, Berkshire, being the son of John Blake, 'gent.,' of that town, and educated at the Merchant Taylors' School and St. John's College, Oxford, of which he was scholar and afterwards fellow (B.A. 1683, M.A. 1687–8, D.D. 1696). He was domestic chaplain to Sir William Dawes, afterwards bishop of Chester and archbishop of York, who was his close friend. Among his preferments were the rectory of St. Sepulchre's, London, of Wheldrake in Yorkshire, and of St. Mary's, Hull, and he was successively a prebendary of Chester, a prebendary of York (1715), and archdeacon of York (1720). He died 22 Nov. 1730. He published a small collection of Latin verses, consisting of a translation into Latin of the poem of Musæus on Hero and Leander, and of part of the fifth book of Milton's 'Paradise Lost;' and two original poems, one called 'Hibernia Plorans,' written in 1689, the year of the siege of Londonderry, deploring Ireland's woes, in the style of Virgil's Eclogues, and the other an elegy on the death, in 1688, of Frederick, the Great Elector of Brandenburg. These were all published together in a little sixpenny pamphlet, under the title of 'Lusus Amatorius, sive Musæi de Herone et Leandro carmen; cui accedunt Tres Nugæ Poeticæ,' at London in 1693.

BLAKE, SIR FRANCIS (1708–1780), first baronet, mathematician, born 1708, was descended from the house of Menlough, co. Galway. His father, Robert Blake, by his marriage with Sarah, third daughter of his kinsman, Sir Francis Blake, knight, of Ford Castle, Northumberland, became possessed of the Twisell estate, in the county of Durham. The son rendered active support to the government during the rebellion of 1745, and was created a baronet 3 May 1774. He devoted much of his time to mechanics and experimental philosophy, and upon becoming a fellow of the Royal Society, in 1746, wrote some papers in the 'Philosophical Transactions.' Sir Francis died at Tilmouth 29 March 1780, and was buried at Houghton-le-Spring.

[Raine's North Durham, pp. 314, 316; Betham's Baronetage, iii. 439.] G. G.

BLAKE, SIR FRANCIS (1738?–1818), second baronet, political writer, was the eldest surviving son of Sir Francis, the first baronet [q. v.], by Isabel, his wife, second daughter and coheiress of Mr. Samuel Ayton of West Herrington, Durham. He was educated at Westminster, whence he removed to Trinity Hall, Cambridge, and proceeded LL.B. in 1763. He died at Twisell Castle 2 June 1818, at the age of 81. He wrote: 1. 'The Efficacy of a Sinking Fund of One Million per annum considered,' 8vo, 1786. 2. 'The Propriety of an Actual Payment of the Public Debt considered,' 8vo, 1786. 3. 'The True Policy of Great Britain considered,' 8vo, 1787. These, with other pieces, were republished collectively under the title of 'Political Tracts,' 8vo, Berwick, 1788, and again at London in 1795. His eldest son and successor, Francis, represented Berwick in several parliaments. He published some severe criticisms on the action of the House of Lords in regard to the corn laws, and died 10 Sept. 1860, aged 85.

[Raine's North Durham, pp. 313–14, 316–17; Cooper's Biog. Dict. p. 234; Biog. Dict. of Living Authors (1816), p. 29; Gent. Mag. lxxxviii. i. 641 (1860), ix. 445–6.] G. G.

BLAKE, JAMES (1649–1728), also known as JAMES CROSS, jesuit, born in London in 1649, entered the Society of Jesus at Watten, in Belgium, in 1675, and was admitted a professed father 1 July 1675. He is named in Titus Oates's list of jesuits in 1678 as Mr. Blake, *alias* Cross, living in Spain. On 3 April 1701 he was declared provincial of his brethren in England, and he held that office for nearly four years. He was chaplain at Mr. Mannock's, Bromley Hall, Colchester, from 1720 till his death, on 29 Jan. 1728. His only published work is 'A Sermon of the Blessed Sacrament, Preach'd in the Chappel of his Excellency the Spanish Embassador on Corpus Christi day, June 3, 1686,' London, 1686, 4to, reprinted in vol. ii. of 'A Select Collection of Catholick Sermons,' London, 1741, 8vo.

[Foley's Records, v. 98, 108, 161, 537, vii. 64; Oliver's Collections S. J.; Backer's Bibl. des Écrivains de la Compagnie de Jésus (1869), i. 653.] T. C.

BLAKE, JOHN BRADBY (1745–1773), naturalist, son of John Blake of Great Parliament Street, Westminster, was born in Great Marlborough Street, London, on 4 Nov. 1745, and received his education at Westminster School. In 1766 he was sent out to China as one of the East India Company's supercargoes at Canton. There he devoted all his spare time to the advancement of natural science. His plan was to procure the seeds of all the vegetables found in China which are used in medicine, manufactures, or food, or which are in any way serviceable to mankind, and to send to Europe not only such seeds, but also the plants by which they are produced. His idea was that they might be propagated in Great Britain and Ireland, or in some of our colonies. His scheme was attended with success. Cochin-China rice was grown in Jamaica and South Carolina; the tallow-tree prospered in Jamaica, in Carolina, and in other American colonies; and many of the plants the seeds of which he transmitted were raised in several botanical gardens near London. He likewise forwarded to England some specimens of fossils and ores. By attending too closely to these pursuits he contracted a disease, of which he died at Canton on 16 Nov. 1773, when he had just entered the twenty-ninth year of his age.

BLAKE, MALACHI (1687–1760), dissenting minister, was born at Blagdon, near Taunton, and was the son of the Rev. Malachi Blake. The family, a collateral branch of that of Admiral Blake, descends from William Blake of Pitminster (died 1642), whose second son was John (1597–1645), the father of John (1629–1682), the father of Malachi (born 1651). This last-named, the presbyterian minister of Blagdon, and founder of the dissenting cause at Wellington, Somersetshire, was implicated in Monmouth's rebellion, and fled to London in disguise. His second son Malachi, born in 1687, was presbyterian minister of Blandford, where he died in 1760. He published: 'A Brief Account of the dreadful Fire at Blandford Forum in the county of Dorset, which happened 4 June 1731. With sermons [4 June 1735] in remembrance, and serious address to the inhabitants of the town,' London [1735]. His younger brother, William (1688–1772), a woolstapler, was father of Malachi (1724–1795), presbyterian minister of Whitney and Fullwood, and of William (1730–1799), presbyterian minister of Crewkerne [see BLAKE, WILLIAM, 1773–1821].

[Blake pedigree, MS.; Murch's Hist. Presb. and Gen. Bapt. Churches in West of England, 1835, p. 244.] A. G.

BLAKE, ROBERT (1599–1657), admiral and general at sea, of a family formerly of Bishop's Lydiard, near Taunton, and afterwards merchants of Bridgwater, was born at Bridgwater in August 1599, the eldest of the twelve sons of Humphrey Blake and of Sarah, daughter and coheiress of Humphrey Williams of Plansfield. He received his early education at the grammar school of the town, and in 1615 was sent up to Oxford, where he matriculated as a member of St. Alban Hall, whence he removed shortly afterwards to Wadham College, then recently founded. Here he remained for nearly ten years, graduating in due course, and standing for a fellowship at Merton, though without success. According to the tradition, the cause of his failure was his short, squat, ungainly figure, which offended the artistic sense of the warden. In 1625 he left Oxford. His father had died intestate and far from wealthy. When Plansfield had been sold, and all available property had been realised, there was little more than 200*l.* a year. Two of the elder brothers went to push their fortunes in London, the younger ones were still at school; Robert, with his second brother Humphrey, would seem to have continued the business, and not without success, for a few years later, and through the rest of his life he was in

easy circumstances. It is perhaps probable that at this time he himself made voyages to distant seas; to do so was almost the common course for a pushing merchant. It is said that once, when Humphrey, as churchwarden, was censured by the bishop for conniving at certain irregularities in the service of the church, Robert signed a remonstrance against the bishop's conduct. The story is, however, very vague and uncertain. He was returned as member for his native place in the short parliament of 1640, but in the election of the following autumn he was unsuccessful; he was not a member of the Long parliament till 1645, when he was again returned for Bridgwater.

As a young man at Oxford Blake is said to have professed republican sentiments; he undoubtedly held republican opinions in his later years. But these were, in the main, theoretical preferences, which do not seem to have dictated his course of action; that was ruled by his judgment of passing events, which, as he interpreted them, gave him but the choice between submission to arbitrary tyranny and a manly resistance. Even before the appeal to arms his mind was fully made up, and amongst the very first he joined the army raised by Sir John Horner in 1642. In July 1643 he commanded an important post in Bristol when it was besieged by the royalists; the town, however, was surrendered by Colonel Fiennes, the governor, after a very feeble defence, and though Blake, unwilling to believe this, held his post for twenty-four hours after the capitulation, he was at last compelled to accede to its terms. It is said, but without probability, that Rupert was with difficulty persuaded not to hang him. Blake's resolute conduct was warmly approved by the parliamentary leaders; he was named one of the Somerset committee of ways and means, and was appointed lieutenant-colonel of Popham's regiment, fifteen hundred strong, in which also his brother Samuel, born 1608, had a company. With a detachment of this regiment he made a dash at Bridgwater, hoping to surprise the castle. He failed in doing so, and, being quite unprepared for a more formal attack, at once drew off. There had been no fighting in the town, but straggling down the river Samuel Blake was killed in an accidental skirmish. We are told that when the loss was reported to the colonel, he said calmly, 'Sam had no business there;' but presently, retiring to a private room, he wailed aloud in a transport of grief, crying 'Died Abner as a fool dieth.' Samuel left a son Robert, whose fortunes were afterwards very closely linked with those of his uncle and godfather.

After the fall of Bristol the royalists swept the west of England, and there were but few places which still held out for the parliament. One of these was Lyme in Dorsetshire, little more than a fishing village; and though it was protected by a few earthworks hastily thrown up, Prince Maurice had no expectation of resistance when, at the head of some five thousand men, he summoned it to surrender. It happened, however, that Blake had been stationed there with a detachment of about five hundred men, and had prepared himself as he best could to hold the post, had raised volunteers in the neighbourhood, and had strengthened the defences. The summons was rejected, and the assault which immediately followed was bloodily repulsed. Maurice found that the place could not be taken without attacking in form, and accordingly sat down before it; but the defences grew as the siege went on, and 'after he had lain before it a month it was much more like to hold out than it was the first day he came before it' (Clarendon); so that when, on 23 May 1644, the garrison was relieved by the fleet under Warwick, and Maurice had tidings of the near approach of the Earl of Essex, he hastily retired to Exeter, 'with some loss of reputation for having lain so long, with such a strength, before so vile and untenable a place, without reducing it' (*ibid.*)

The stand at Lyme had been of very great service to the parliamentary cause, and had given time for Essex to come into that part of the country. But Essex, by marching into Cornwall, lost the opportunity, and committed a mistake which, had it not been for Blake's prompt action, might have been fatal. Among the many places in Somersetshire held by the royalists Taunton was one; it was quite unfortified, and the garrison was small; but it was the point on which all the main roads of the county converged, it commanded the lines of communication, and had thus a peculiar strategic importance, which Blake alone seems to have understood. He had been promoted after his brilliant defence of Lyme, and had an independent command, with which, 8 July 1644, he suddenly threw himself on Taunton. It was held by only eighty men, who made no opposition, and in Blake's hands the place 'became a sharp thorn in the sides of all that populous country.' The position was one of extreme peril, for it was quite isolated; and when Essex's army was overwhelmed in August no relief could be expected. Blake, however, determined to hold his ground as long as possible; the roads were barricaded, breastworks thrown up, guns planted, houses loopholed, and when the royalists advanced on the place, which they had

judged it madness to defend, they received so rude a check that they contented themselves with investing it and waiting for famine to do their work. From time to time more energetic attempts were made, but through all, against sword and famine and repeated bombardments, the place was held for nearly a year, till after the battle of Naseby, 14 June, 1645, had left the parliament free to undertake the subjugation of the west. When the siege was finally raised, Blake continued to act as governor of Taunton. The town was little more than a heap of rubbish, the land round about was desolate, the people were impoverished. Money was granted by the parliament to meet the immediate necessities, and public collections were made for rebuilding the ruined houses; but through the autumn and winter Blake was fully occupied with the task of administering relief and restoring order, and though returned to parliament he did not at that time take any part in the parliamentary proceedings. His reputation in Somerset stood extremely high, and has been supposed to have excited the jealousy of Cromwell himself. Of this there is no evidence; but it appears certain that Blake was not of Cromwell's party, and, unlike a large majority of the foremost men of the time, he was neither relation nor connection of Cromwell. It is said that he openly declared that 'he would as freely venture his life to save the king as ever he had done it to serve the parliament' (*History and Life*, 28). This is utter nonsense, and would, had he said it, have been a strong condemnation of Blake, a dark stain on his character; for it is perfectly certain that he took no active measures, either in word or deed, to stay the king's execution. It is probable enough that he considered it as a blunder; but his appointment 27 Feb. 1648–9, a very few days after the king's death, to share in the chief command of the fleet, is a proof that the dominant faction had neither doubt of his goodwill nor jealousy of his reputation. The events of 1648 had indeed shown that it was necessary to have in command of the fleet a man whom the council of state could trust [see BATTEN, SIR WILLIAM]; and it is very probable that some familiarity with ships and maritime affairs, gained as a merchant of Bridgwater, may have directed the appointment of Blake, as one of the admirals and generals at sea, to command the fleet during the summer of 1649. The duty immediately before them was to suppress Prince Rupert, who, with the revolted ships and some others, had begun a naval war against the parliament on a system scarcely, if at all, distinguishable from piracy (WARBURTON, *Prince Rupert*, iii. 275*n.*), and had meantime established his headquarters at Kinsale. Here Blake blockaded him, and the summer of 1649 slipped away without his being able to stir out of the port; but so far was Cromwell from the jealousy with which he is commonly credited, that he suggested and procured for Blake the offer of a command with himself in the army in Ireland as major-general of foot. The choice was left with Blake (*Calendar S. P.*, Dom. 2 Oct. 1649), who preferred the more adventurous service, and continued in command of the fleet.

Towards the end of October a gale of wind blew Blake's squadron off shore, and Prince Rupert, taking hasty advantage of the chance, made good his escape to the coast of Portugal and the straits of Gibraltar, where he was on the main line of all foreign trade, and his piracies rapidly filled his treasury. A winter fleet was at once ordered to be got ready, and, Deane being sick, the sole command was, in the first instance, given to Blake (*ibid.* 4 Dec.), who was ordered to reside at Plymouth to expedite matters, and to get to sea as soon as possible; while Popham, the third of the generals, was to follow with reinforcements. He was directed to hunt down the princes as public enemies, to seize or destroy them wherever he should come up with them, and to treat as enemies any foreign powers who might support them (17 Jan. 1649–50; THURLOE, *State Papers*, i. 136). It was not till the beginning of March that Blake got to sea, and when he arrived at the mouth of the Tagus he found that the princes were in the river, and had obtained a promise of support from the king of Portugal. The English resident in vain urged that these were pirates, in vain demanded satisfaction for the insults they received from the princes, whose men fought with, and even killed, the English sailors on shore; whilst Rupert, always distinguished for his mechanical genius, attempted to shorten matters by sending, 23 April, a species of torpedo—not very dissimilar from those of our own time—on board the vice-admiral, in hopes to set fire to his ship (WARBURTON, iii. 305; THURLOE, i. 146). Suspicion was excited, and the thing was not received on board; but though the attempt was patent enough, and though the murder of some of the English seamen was publicly known, the king refused to give the English any satisfaction. The case was provided for in Blake's instructions, and was rendered more pressing by the belief that a French squadron was expected, which was to act in concert with the princes. Accordingly, on 21 May, he seized nine ships going out of the river, bound for the Brazils with rich cargoes. These ships were English, hired by the Por-

tuguese; and Blake, taking out their officers and strengthening their crews, converted them into men-of-war. Five days later his fleet was reinforced by Popham with several large ships, and definite instructions to seize or destroy any ships or goods belonging to the king of Portugal or his subjects. The king, on the other hand, was enraged at the injury which had been done him, and still more when the homeward-bound Brazil fleet ran ignorantly in amongst the blockading squadron, and was captured; he went on board Prince Rupert's ship, and besought him to go out at once, with his own squadron and all the Portuguese fleet, and drive away the English. Rupert was nothing loth to attempt this; but a foul wind in the first place, and afterwards a want of cooperation on the part of the Portuguese, prevented his gaining any distinct success, though Blake had with him but a very small force, his ships being apparently distributed at Cadiz and along the coast (Warburton, iii. 313; Thurloe, i. 157). All the same, the blockade was raised; and the Portuguese, determined to make peace with the parliamentary government, desired the princes to leave the Tagus. The latter accordingly set sail from Lisbon on 29 Sept. 1650, and ran through the straits into the Mediterranean, plundering as they went. They had already made several captures when, in the early days of November, Blake came up with the greater part of their squadron, which had been separated from the ships in which the princes sailed in a storm off Cape Gata. Blake chased the detached ships into Cartagena, and, without standing on any close observance of the rights of a neutral port, followed them in, drove them ashore, and set fire to them (Warburton, iii. 317; Heath, 275). The princes, with three ships only, got to Toulon, and thither Blake followed them; he at once sent in a protest against their being allowed the succour of a French port, and when this produced no effect he ordered reprisals against French ships. These measures of retaliation cooled the warmth of the French welcome, and the princes thought it best to quit the port, and to make what haste they could out of the Mediterranean. They did, in fact, sail to the West Indies, where, some eighteen months later, Maurice was lost in a hurricane (Warburton, iii. 324, 382). And meantime Blake, having instructions that Penn was on his way to relieve him [see Penn, Sir William], returned to England, where he arrived towards the middle of February 1650–1. On his passage down the Mediterranean he met, it is said, a French ship of war, mounting forty guns, 'whose captain he commanded on board, and asked him if he was willing to lay down his sword. The captain answered No! Then Blake bade him return to his ship and fight it out as long as he was able, which he did; and after two hours' fight he came in and submitted, and kissing his sword delivered it to Blake, who sent him and his ship with the rest into England' (Whitelocke's *Memorials*, 16 Jan. 1650–1). The story is so evidently absurd in every particular that it would not be worth repeating were it not that it is strictly contemporary, and, though resting on no authority beyond mere gossip, is, so far, evidence of the peculiarly chivalrous character which popular opinion attributed to Blake. The official approval is better attested: the thanks of parliament were given him 'for his great and faithful service,' and a sum of 1,000*l.* as a mark of the parliament's favour (*Calendar*, 13 Feb. 1651). He was shortly afterwards (15 March) appointed to command the squadron designed for the Irish seas and the Isle of Man, and on news of a powerful Dutch fleet, commanded by Tromp, being in the neighbourhood of the Scilly islands, he was ordered (1 April) to proceed thither, with all his force, to demand of Tromp for what purpose he had come, and with what intentions; and if the explanation should not be satisfactory, then to require him to desist, and, if necessary, 'to use the best ways and means to enforce him, and in all things to preserve the honour and interest of this nation.' The threatened collision with the Dutch passed over for the time, but the alarm was sufficient to point out to the parliament the necessity of subjugating the Scilly islands, which were held as strongholds of the royalist privateers. Blake was accordingly ordered to reduce them —no easy task, for the navigation was difficult, the fortifications strong, and the garrison numerous. Negotiations proved unavailing; but Blake, by seizing on Tresco, succeeded in establishing a strict blockade of St. Mary's, and having brought some of his smaller ships in front of the castle he effected a practicable breach, and compelled the governor to surrender on easy terms (*Calendar*, 23 May, 6 June). There were indeed murmurings at the leniency shown to these very stiff-necked malignants; but the council of state was quite well aware of the importance of the capture, and approved of the whole business (28 June).

Blake continued in the west, taking measures for the security of the Scilly islands and refitting his ships. In August he received a commission 'to command in chief, in the absence of Major-general Disbrowe, all forces in the counties of Cornwall, Devon, Somerset, and Dorset' (19 Aug.), a commission which was cancelled only three days later; for Popham had just died, Deane was with the army,

and Blake received pressing orders 'forthwith to go to sea in person, to keep those affairs in good order, and prevent any impressions that may be made on the seamen by misrepresentation of affairs,' and also 'to prevent any supplies being sent from foreign parts to the king of Scotland' (22 Aug.) Accordingly, with his flag in the Victory, he took his station in the Downs, whence he effectually prevented any foreign assistance being sent to the king, or to any of the king's supporters. The hopes of the king were crushed at Worcester on 3 Sept.; but all through the autumn attempts were made to carry arms and stores to his partisans in Ireland, and the watch from the Downs was continued till well into the winter. In September Colonel Heane was ordered to reduce Jersey, held, as the Scilly islands had been, by an enterprising and piratical body of cavaliers. Blake was ordered to accompany him 'with such ships as he thought fit, and to give his best advice and assistance for its reduction' (20 Sept.) Against an attack in force, Jersey, now completely isolated, could do very little, and before October was out this last of the royalist strongholds had surrendered to the parliamentary army.

On 1 Dec. 1651 the council of state for the year began its sittings. Blake was for the first time a member, and during the next months attended with some regularity (*Calendar*, 1651–2, Introd., p. xlvii), which was brought abruptly to an end by the imminence of war with Holland. On 10 March 1651–2 he attended the council for the last time; only eleven members were present, when, probably at his own suggestion, he was ordered to repair to Deptford, Woolwich, and Chatham, to hasten forth the summer fleet, 'for which there is extraordinary occasion' (11 March). The war broke out in May, and though there had been an accidental collision off the Start some days earlier, the first brunt of it fell on the fleet which had been got together in the Downs. Blake, with the bulk of his force, had gone along the coast to Rye, leaving Bourne, his rear-admiral, with only nine ships in the Downs, when, on 18 May, Tromp, with a large fleet, appeared outside, blown over, as he said, by stress of weather, from Dunkirk. His professions were amicable, but his bearing was most insolent; he anchored off Dover, did not salute the castle, and during the rest of the day exercised his men with small arms, firing repeated volleys. The next day about noon Blake was seen approaching from the westward; but the wind was foul, and his progress slow. Tromp weighed and stood over towards the French coast, but afterwards, on getting news of the encounter off the Start, he bore up and ran down towards the English, his fleet following without further signal. Blake, observing this sudden alteration of course, at once understood that Tromp meant to attack him, and prepared for battle. As the Dutchman drew near and came within musket-shot, without striking flag or lowering topsails, he ordered a gun to be fired as a summons. This was done and repeated; the third shot Tromp answered with a broadside, and made the general signal to engage. The Dutch fleet consisted of between forty and fifty ships. Blake had with him only fifteen; but these were, as a rule, larger and more powerful than the Dutch. On either side there was no attempt at formation; Tromp's fleet had come on in a straggling line, which would have closed round Blake's squadron had not Bourne, with his division, arrived in the nick of time, and fallen heavily on the Dutch rear. Thus reinforced the English fully held their own. The battle raged for four hours, and ended only with the day, when Tromp, having lost two ships, drew off, and the English anchored off Hythe. The next day the Dutch were seen steering towards the coast of France, and Blake, having collected his fleet at Dover, went into the Downs. The exact history of this battle and the transactions which preceded it is to be found in an official pamphlet, entitled 'The Answer of the Parliament of the Commonwealth of England to three papers delivered in to the Council of State by the Lords Ambassadors Extraordinary of the States General of the United Provinces.' It contains the letters of Blake, Bourne, and Tromp, as well as a number of depositions and other papers. The popular story, which has been repeated by Mr. Dixon, is absurdly incorrect. It is unnecessary to examine it in detail, but it may be well to point out that Tromp's attack was certainly not a surprise to Blake; that as his ship, the James, was lying to, whilst Tromp's, the Brederode, was coming down before the wind, the first broadside could not have been fired into the James's stern; that as the James was cleared for action she had, for the time, neither cabin nor cabin windows; that it is in the highest degree improbable that Blake, whilst ordering shotted guns to be fired on an insulting enemy, was below, either reading or drinking; and lastly, that as, according to every picture, tradition, and the custom of the age, he had a smooth, clean-shaven face, it is quite impossible that he could curl his whiskers in his anger.

On the news of this battle the parliament took immediate measures for strengthening the fleet; but during the summer of 1652 Blake was alone in his office of general at sea,

Sir George Ayscue being subordinate to him, although employed in a distinct command. In the North Sea nothing of importance occurred, and after the check which Ayscue sustained from De Ruyter, 16 Aug., Blake, with the main fleet, cruised in the Channel, hoping to intercept De Ruyter on his homeward voyage. Bad weather and fog, however, enabled the Dutch fleet to escape without any serious difficulty, and De Ruyter joined De With off Dunkirk on 22 Sept. He was closely followed by Blake, and the two fleets, each numbering about sixty-five ships, met off the mouth of the Thames on 28 Sept. The battle began about four o'clock in the afternoon, and raged with great fury where De Witt, De Ruyter, or Evertsen was actually present; but political intrigue had, for the moment, destroyed the usual spirit of the Dutch officers, and the approach of evening permitted them to draw off. No decisive advantage was gained, but the next morning the Dutch were at some distance and would not renew the battle; in the afternoon the wind was favourable, but on the English standing towards them they turned and fled. The victory was undoubted, but it was misunderstood; even Blake appears to have supposed that the battle had been fought out, and to have been led into something very like contempt for the enemy. The batteries which had been constructed to protect the anchorage in the Downs were dismantled and the fleet dispersed, either on different detached services or to refit; Blake was left with not more than thirty-seven ships for the guard of the Channel. In Holland, meanwhile, great exertions had been made. It was necessary for the life of the country that the trade which had been stopped for several months by the English fleet should be liberated, and towards the end of November Tromp, again in command, put to sea with some eighty ships of war and a convoy of about three hundred merchantmen. This last he left astern till he had cleared the way, and on the morning of 29 Nov. appeared with his fleet at the back of the Goodwin, standing towards the southward. Blake, who was then lying in the Downs, held a hasty council of war, weighed, and stood out to meet him. It is impossible now to say what induced the council to recommend, or Blake to adopt, this extraordinary step, which, to us, seems rash to the verge of madness. All that can be said with certainty is that the commonly received story is incorrect, and that he was not influenced by any idea of covering the approach to London, which indeed he left exposed, if Tromp had had any design against it. It is perhaps most probable that he had not fully recognised the enemy's great superiority until he was well under way; for the wind, which had been at south-west, veered almost suddenly, and blew very hard from the north-west. The Dutch were swept down to the southward, the English avoided being carried in amongst them only by hugging the shore, slipping close round the Foreland, and anchoring off Dover; whilst Tromp, unable to withstand the force of the gale, anchored a couple of leagues dead to leeward. The next morning, 30 Nov., the two fleets weighed nearly together, and with a fresh wind at from N. to N.N.W. stood to the westward along the coast, Tromp unable, Blake, it may be, unwilling, to attack. But as they came near Dungeness the English were forced to the southward by the trend of the coast; with or without their will they were obliged to close, and their leading ships were thus brought to action. Amongst the first the Triumph, carrying Blake's flag, supported by Lane in the Victory, and Mildmay in the Vanguard, was closely engaged by De Ruyter and Evertsen. The Garland and Bonaventure attacked Tromp himself in the Brederode; but other ships came up to their admiral's support, and the English ships were overpowered and taken after a gallant resistance, in which both their captains were slain. By those ships that did engage, the fight was stoutly maintained, though against tremendous odds; but a great many, whether fearing the superiority of the enemy, or corrupted, as it was thought, by the emissaries of the king in Holland, persistently remained to windward; whilst fortunately, on the side of the Dutch, several which had fallen too far to leeward were unable to get into the action. Towards evening the English had lost, besides the Garland and Bonaventure, one ship burnt and three blown up; the Triumph had lost her foremast, and was unmanageable; the other ships that had engaged had suffered severely, and those that had not engaged still kept aloof. With a sorrowful heart Blake drew back, and under cover of the darkness anchored off Dover; the next day he went into the Downs. Tromp, unable by the force and direction of the wind to follow him in, crossed over to the French coast, and anchored off Boulogne, whence he sent word to the convoy to pass on. For the next three weeks the Channel was alive with Dutch ships, and Tromp, having remained at Boulogne till the trade had all passed, proceeded to the rendezvous in the Basque roads. It was at this time that, according to the popular story, he wore the broom at the masthead, as signifying that he had swept, or was going to sweep, the English from the seas. There is no reason to believe that he ever did anything of the

sort; the statement is entirely unsupported by contemporary evidence; not one writer of any credit, English or Dutch, mentions it even as a rumour; but months afterwards an anonymous and unauthenticated writer in a newspaper wrote: 'Mr. Trump, when he was in France, we understand, wore a flag of broom' (*Daily Intelligencer*, No. 113, 9 March 1652-3). The story was probably invented as a joke in the fleet, without a shadow of foundation.

Blake had meantime written to the council of state a narrative of his defeat, complaining that 'there was much baseness of spirit, not among the merchant men only, but many of the state's ships.' He was sick at heart, and prayed that he might be discharged from his employment, but before everything he made it his earnest request that commissioners might be sent down to take an impartial and strict examination of the deportment of several commanders.' The council, however, refused to supersede him, although they associated two others with him as generals of the fleet, his old colleague, Deane, and Monck, now for the first time appointed to a naval command. Blake they thanked for his conduct, and instituted the commission he had desired, to investigate both the conduct of the officers and the internal economy of the fleet. Many improvements were ordered, and the organisation of the navy began to approach more nearly to that which afterwards prevailed; but most of all were efforts made to increase the number and effective force of the ships. It was determined that Tromp should not return through the Channel unchallenged, and every nerve was strained to get together a fleet equal to the work before it. By the middle of February 1652-3 a fleet of between seventy and eighty ships was assembled at Portsmouth, and sailed to cruise to the westward; it was known that Tromp was approaching with a fleet about equal in point of numbers, and a convoy of some 200 merchant ships. On the morning of the 18th they were sighted coming up Channel with a leading wind. Blake was then off Portland and standing to the south; his fleet in no formation, but gathered in squadrons according to the several flag-officers. Penn, with the blue squadron, was well to the southward; Monck, with the white squadron, was a long way to leeward; neither of them was in a position to help the red squadron, commanded by Blake and Deane together on board the Triumph. Tromp was not slow to understand this, though it seems altogether to have escaped Blake; he saw that it was impossible for him to pass without doing battle or endangering his convoy, and, at once taking advantage of Blake's gross tactical blunder, threw himself in force on the red squadron. The Triumph was the very centre of the attack, and round her the battle raged fiercely. Blake was severely wounded; Ball, her captain, was killed; so also was Sparrow, the admiral's secretary, and very many other brave men. The fight seemed likely to prove disastrous to the English, when Penn with the whole blue squadron, and Lawson with the van of the red, who had struggled to windward and tacked, bore in amongst the Dutch. Later on, too, Monck with the white squadron came up, and the battle continued on equal terms till nightfall, when Tromp, seeing some of the English threatening his convoy, drew off to its support. Neither side could as yet claim the victory, and the loss of both, though very great, was fairly equal. During the night Tromp passed with his whole convoy; when morning dawned they were off St. Catharine's, and running freely up Channel. The English followed; but Tromp ranged his fleet astern of the merchant ships, so that they could not be got at but by passing through the ships of war; and though many severe partial actions occurred, nothing very decisive was done. The chase continued during that day and the next; five Dutch ships of war were sunk, four were captured, and some thirty or forty merchant ships; but Tromp kept up a semblance of order and protection to the last, and got the remainder away safely. The advantage was very markedly with the English; but the Dutch, though worsted, were not dismayed, and immediately began preparing for a further struggle.

Blake's wound proved more serious than was at first expected. He was put on shore at Portsmouth, but his recovery was slow, and a month afterwards his surgeon, Dr. Whistler, wrote: 'General Blake, I hope, mends, but my hopes are checked by the maxim "De senibus non temere sperandum." I trust the Great Physician's protection may be on him and on all public instruments of our safety' (21 March). A few weeks later he went to London, where he attended to admiralty business (*Cal.* 12 May); but it was only the news of the Dutch fleet being again at sea that impelled him, weak as he was, to resume the command. He hoisted his flag on board the Essex, then in the river (*Cal.* 2 June), but before he could get to the fleet the great battle of 3 June 1653 had been fought. He, with his squadron, did not arrive till late in the afternoon, and, coming fresh on the field, contributed largely to render the victory more complete. Deane had been slain in the battle, and for the next few weeks Blake shared the

command with Monck; but his health gave way under the strain, and he was compelled to go on shore at Southwold. 'We found him,' wrote the secretary of the admiralty, who had visited him, 'in a very weak condition, full of pain both in his head and left side, which had put him into a fever, besides the anguish he endures by the gravel, insomuch that he has no rest night or day, but continues groaning very sadly. This place affords no accommodation at all for one in his condition, there being no physician to be had hereabouts, nor any to attend him with necessary applications' (6 July). He had thus no share in the final victory of the war, 31 July, but equally with Monck was presented with a gold chain worth 300*l.* 'as a mark of favour for his services against the Dutch' (6 Aug.); Penn and Lawson were also at the same time presented each with a chain of 100*l.* value; and all four with a large gold medal (Van Loon, *Hist. Met.* ii. 367). One of these medals, believed to be Blake's, was bought for William IV in 1832 (*Gent. Mag.* cii. i. 352), and is now kept at Windsor. The junior flag officers received chains of value 40*l.*, and smaller medals, one of which is now in the British Museum.

A few weeks' rest happily restored Blake's health so far as to permit him to return to the fleet (*Cal.* 20 Sept.); but the press of work was over, and during the winter his time was divided between admiralty business in London and his executive duties at Portsmouth (*Cal.* 19 Nov.; 2, 31 Dec; 4, 25 Feb., &c.) After the peace with Holland in April 1654, he still continued the senior commissioner of the admiralty, and in July was appointed to command the fleet, which sailed on 29 Sept. for the Mediterranean, where, during the war, English interests had been very inadequately represented. His instructions seem to have been to carry on reprisals against the French, to repress the African pirates, to demand redress for injuries done to English ships, and, in general terms, to visit the different ports of the Mediterranean, in order—as it is now called—to show the flag. In this way he visited Cadiz, Gibraltar, Alicant, Naples, and Leghorn (14 March 1654–5, *Add. MS.* 9304); but his earlier letters have unfortunately not been preserved, and there is no authentic account of his proceedings at this time. It is said that he also visited Malaga, and that whilst there he compelled the governor to make reparation for an outrage inflicted on an English seaman. The man had committed a gross offence: he had insulted the procession of the host. If complaint had been made, he should have been punished; 'but,' said Blake, 'I will have you know, and the whole world know, that none but an Englishman shall chastise an Englishman.' The story is extremely doubtful. It rests only on the evidence of Bishop Burnet (*Hist. of Own Times* (Oxford edit.), i. 137), whose testimony is by no means unimpeachable; it is told in a very hearsay sort of manner, without any date; and it is difficult to believe that had any such thing occurred, it would not be referred to in some of the existing official correspondence. It is, however, a story which has been very generally accepted, and, together with that of his capture of the French frigate already referred to, has perhaps done more than the whole of his historical career to fix the popular idea of Blake's character. At Leghorn he is said (Ludlow's *Memoirs*, ii. 507) to have demanded and obtained from the Grand Duke of Tuscany and from the pope reparation for the countenance shown to Prince Rupert, and for the loss sustained at the hands of Van Galen (see Appleton, Henry; Badiley, Richard); and 60,000*l.* is said to have been actually paid (Campbell, ii. 43). The statement is, however, entirely unsupported by exact evidence, and is virtually contradicted by Blake's silence in his extant letters from Leghorn, and his reference to others from the same place, as of little importance (12 Jan. 1654–5, *Add. MS.* 9304).

From Leghorn he went on to Tunis, where, according to his instructions, he demanded restitution or satisfaction for piracies committed on English subjects. This was positively refused, and finding negotiations vain and the Turks insolent, Blake finally resolved to reduce them by force to terms of civility. On the morning of 4 April 1655, his fleet sailed into Porto Farina, and anchored under the castles. As the fight began, a light wind off the sea blew the smoke over the town and shielded the English, so that after some hours' cannonade, having set on fire all the ships, to the number of nine, they retreated into the roadstead with no greater loss than twenty-five killed and about forty wounded. Blake was doubtful whether, in thus attacking the Tunis pirates in their stronghold, he had not exceeded his instructions, and in his official report expressed a hope that 'his highness will not be offended at it, nor any who regard duly the honour of our nation' (18 April; Thurloe, iii. 232). Cromwell's reply was most gracious (13 June; *ibid.* iii. 547); at the same time he sent orders to proceed off Cadiz, and carry on hostilities against Spain, with an especial view to intercept the Plate ships, or to prevent reinforcements being sent to the West Indies. In May Blake had visited Algiers, where the

dey, convinced by the arguments put in force at Tunis, entered into a friendly agreement; and, in anticipation of his later instructions, he was, by the beginning of June, at Cadiz, off which he cruised during the rest of the summer. The strain on his ships and the health of his ships' companies was very great; and as winter approached he determined, in accordance with the discretion entrusted to him (THURLOE, i. 724) to return to England, where he arrived on 9 Oct.

In the following spring, as soon as the season permitted, he returned to the same cruising ground in company with Colonel Edward Mountagu, appointed also general at sea. Mountagu remained during the summer, and with Blake and the bulk of the fleet had gone to Aveiro in September, when Stayner [see STAYNER, SIR RICHARD], in command of the light squadron, fell in with, captured, and destroyed the Plate fleet (8 Sept.), with a loss to Spain estimated at nearly two millions sterling in treasure alone, exclusive of the ships and cargoes (*Narrative of the late Success, &c.*, published by order of parliament, 4 Oct. 1656). After this severe blow to the enemy, several of the larger ships, with Stayner and Mountagu, went home for the winter. Blake continued on the station, and early in April 1657 he had news that a large fleet from America had arrived at Santa Cruz of Teneriffe. In a council of war he announced his resolution of going thither and attacking it. They sailed on the 13th, made the land on the 18th, and on the morning of the 20th by daybreak were off Santa Cruz. By signal from a frigate ahead they learned that the West India fleet was still in the bay. 'Whereupon,' says the official report, 'after a short conference how to order the attempt and earnest seeking to the Lord for his presence, we fell in amongst them, and by eight of the clock were all at an anchor, some under the castle and forts, and others by the ships' sides, as we could berth ourselves to keep clear one of another and best annoy the enemy. They had there five or six galeons and other considerable ships, making up the number of sixteen; most of them were furnished with brass ordnance, and had their full companies of seamen and soldiers, kept continually on board. They were moored close along the shore, which lies in a semicircle, commanded as far as the ships lay by the castle, and surrounded besides with six or seven forts, with almost a continued line for musketeers and great shot.' This was the position which Blake, with a fleet barely superior in nominal force to that of the enemy, had attacked at the very closest quarters, with the result that before evening every Spanish ship was burnt, blown up, or sunk, and by seven o'clock the English ships had all drawn off; not one was lost. 'We had not above fifty slain outright and 120 wounded, and the damage to our ships was such as in two days' time we indifferently well repaired for present security. Which we had no sooner done, but the wind veered to the south-west, which is rare among those islands, and lasted just to bring us to our former station near Cape Santa Maria, where we arrived 2 May following' (*Narrative, &c.*, by order of parliament, 28 May 1657). The news of this great victory, of the daring and success of this extraordinary attack, which compares with the most brilliant of naval achievements, excited the greatest enthusiasm in England. A public thanksgiving was ordered for 3 June, and the Protector wrote (10 June): 'We cannot but take notice how eminently it hath pleased God to make use of you in this service, assisting you with wisdom in the conduct and courage in the execution; and have sent you a small jewel as a testimony of our own and the parliament's good acceptance of your carriage in this action' (THURLOE, vi. 342). The jewel referred to was a portrait set in gold and diamonds, the cost of which amounted to 575*l.* (*Notes and Queries*, 5th ser. vi. 444). We may suppose that it reached Blake in safety, but nothing further is known of it. A story has been told and repeated that Blake's brother, Benjamin, commanded a ship at Santa Cruz, was there guilty of cowardice, was tried by court martial at Blake's order, was sentenced to death, with a recommendation to mercy, to which the general yielded, and sent the culprit home with an order 'he shall never be employed more.' The story is utterly false. Benjamin Blake went out to the West Indies with Penn, and was appointed by him vice-admiral of the fleet left there, under Goodsonn as commander-in-chief. Between these two a quarrel arose, apparently as to the right of command. The details are not known, but the result was that Goodsonn sent his second in command home (25 June 1656; THURLOE, v. 154). From beginning to end the general had nothing to do with the matter, except indeed that, out of respect to him, the case was not pressed as it otherwise might have been.

With the destruction of the Spanish fleet, Blake's work before Cadiz was finished. He was ordered to return to England. He did not live to reach it. His health had long been extremely feeble; and worn out by the fatigues and excitement of the campaign and by what the doctors called 'a scorbutic fever,' he died on board his ship, the George, at the

very entrance of Plymouth Sound, 7 Aug. 1657. His body was embalmed; was carried round by sea to Greenwich, where it lay in state for some days; was taken in procession up the river on 4 Sept. and placed in a vault in Henry VII's chapel in Westminster Abbey. Out of this royal burial-place it was removed after the Restoration, and, with a score of others, was cast into a pit dug on the north side of the abbey (STANLEY, *Historical Memorials of Westminster*, 5th edit., 209).

The peculiar and especial distinction which attaches to the name of Blake is by no means due solely to the brilliance of his achievements in the command of fleets, nor yet to that exceeding care and forethought in their organisation and government to which his constant success must be mainly attributed. Where he led or ordered them his men were willing and able to go; the work was done heartily and well; but the tactics of a fleet were still in their infancy, and in this respect Blake was unquestionably inferior to his great Dutch rival, Martin Tromp. But more even than by his glory and by his success, the memory of Blake is dear to the English people by the traditions of his chivalrous character and of his unselfish patriotism. These cannot be proved by historical evidence, but all indications tend to the same purpose, and compel us to believe that his object was, before everything, to uphold the honour and the interests of England. It is said that when urged to declare against Cromwell's assumption of supreme power, he replied, 'It is not for us to mind state affairs, but to keep foreigners from fooling us.' The reply is traditional; but its sentiment agrees with what he wrote on hearing of the dissolution of parliament, 22 Jan. 1654–5: 'I cannot but exceedingly wonder that there should yet remain so strong a spirit of prejudice and animosity in the minds of men who profess themselves most affectionate patriots as to postpose the necessary ways and means for the preservation of the Commonwealth' (THURLOE, iii. 232). It is in this spirit that he commanded our fleets even to the end. Except by tradition we know nothing of his political bias; but if in truth opposed to the government and the usurpation of Cromwell he never allowed his opposition to become manifest, and, irrespective of party, devoted his life to the service of his country.

No undoubted portrait of Blake is known to exist. The portrait at Wadham College, and that formerly in the possession of Joseph Ames, are possibly originals; but the evidence is defective. The same must be said of the picture by Hanneman, which in 1866 was exhibited at South Kensington, lent by Mr. Fountaine of Narford Hall; it may be Blake, but proof is quite wanting. The picture in the Painted Hall at Greenwich is a work of modern imagination, based apparently on a memory of the Ames portrait.

[Calendars of State Papers, Domestic, 1649–1657; Granville Penn's Memorials of Sir William Penn; Thurloe's State Papers. There are many so-called lives of Blake: in Lives English and Foreign (1704), ii. 74—the author of which claims to have known some of the members of Blake's family; by Dr. Johnson—a paraphrase of the preceding; by Campbell, in Lives of the Admirals, ii. 62; History and Life, &c., by a Gentleman bred in his Family—an impudent and mendacious chap-book; and by Mr. Hepworth Dixon (1852). From the historian's point of view they are all utterly worthless. Mr. Dixon's notices of Blake's family, so far as they are drawn from parish and private records, may possibly be correct, but his account of Blake's public life is grossly inaccurate, and much of it is entirely false; he betrays throughout the most astonishing ignorance of naval matters, and a very curious incapability of appreciating or interpreting historical evidence.] J. K. L.

BLAKE, THOMAS (1597?–1657), puritan, was a native of Staffordshire. As he entered Christ Church College, Oxford, in 1616 in his nineteenth year, he must have been born about 1597. He proceeded B.A. and M.A., and having obtained orders, Wood tells us, he had 'some petit employment in the church bestowed on him.' 'At length,' continues the historian, 'when the presbyterians began to be dominant, he adhered to that party,' and 'subscribed to the lawfulness of the covenant in 1648 among the ministers of Shropshire, and soon after, showing himself a zealous brother while he was pastor of St. Alkmond's in Shrewsbury, he received a call to Tamworth in Staffordshire and Warwickshire, where also being a constant preacher up of the cause, he was thought fit by Oliver and his council to be nominated one of the assistants to the commissioners of Staffordshire for the ejecting of such whom they called ignorant and scandalous ministers and schoolmasters.'

Blake published a large number of books on puritan theology, but his attacks on Richard Baxter damaged his reputation with many nonconformists. His arguments indicate a narrow, if subtle, intellect. The following are his chief works: 1. 'Birth Privilege, or the Right of Infants to Baptism,' 1644. 2. 'Infant's Baptism freed from Antichristianisme. In a full Repulse given to Mr. Ch. Blackwood in his Assault of that Part of Christ's Possession which he holds in his Heritage of Infants, entitled "The Storming of

Antichrist,"' 1645—Wood misnames Blackwood 'Charles' for 'Christopher.' 3. 'A Moderate Answer to the Two Questions: (1) Whether there be sufficient Ground from Scripture to warrant the Conscience of a Christian to present his Infants to the Sacrament of Baptism; (2) Whether it be not sinful for a Christian to receive the Sacrament in a Mixt Assembly,' 1645. 4. 'An Answer to Mr. Tombes his Letter in Vindication of the Birth-priviledge of Believers and their issue,' 1646. 5. 'Testimony of the Ministers of Stafford to Solemn League,' 1648. 6. 'Vindiciæ Fœderis, a Treatise of the Covenant of God with Mankind,' 1653. 7. 'Infant Baptism maintain'd in its Latitude,' 1653. 8. 'The Covenant Sealed, or a Treatise of the Sacrament of both Covenants,' 1655. 9. 'Postscript to the Rev. and Learned Mr. Richard Baxter,' 1655—trenchantly answered by Baxter. 10. 'Mr. Jo. Humphrey's Second Vindication of a Disciplinary Anti-erastian, Orthodox, Free Admission to the Lord's Supper, taken into consideration,' 1656; and other pamphlets and occasional sermons. 'Ebenezer, or Profitable Truths after Pestilential Times,' 1666, which is assigned to him by Wood and by Brook, was not his, but by another Thomas Blake, who was ejected from East Hoadley, Sussex (Palmer, iii. 320).

Blake died at Tamworth, and was interred in his own church on 11 June 1657. His funeral sermon was preached by Anthony Burgesse, and was published in 1658, along with an oration by Samuel Shaw, then schoolmaster at Tamworth. It is entitled 'Paul's Last Farewell, or a Sermon preached at the Funerall of that godly and learned Minister of Jesus Christ, Mr. Thomas Blake, by Anthony Burgesse: appended, A Funerall Oration at the death of the most desired Mr. Blake, by Mr. Samuel Shaw, then Schoolmaster at the Free School at Tamworth,' 1658. In the 'Oration' Blake is thus described: 'His kindness towards you could not be considered without love, his awfull gravity and secretly commanding presence without reverence, nor his conversation without imitation. To see him live was a provocation to a godly life; to see him dying might have made any one weary of living. When God restrained him from this place (which was always happy in his company but now), he made his chamber a church and his bed a pulpit, in which (in my hearing) he offered many a heavenly prayer for you.'

[Wood's Athenæ, ed. Bliss, iii. 431–3; Brook's Puritans, iii. 269–71; local researches; Blake's Works.] A. B. G.

BLAKE, WILLIAM (1773–1821), dissenting minister, was born at Crewkerne on 29 March 1773, and was the second son of the Rev. William Blake (born on 7 July 1730, died on 29 March 1799), who had been a pupil of Doddridge at Northampton (1749), and who was presbyterian minister at Crewkerne from 1754 (ordained 11 May 1757) till 29 July 1798. His son William, also educated at Northampton in 1790 under Horsey, preached first at Yeovil in 1793, and, on his father's resignation, succeeded him at Crewkerne, where he remained till his death on 18 Feb. 1821. Rev. William Blake, jun., of Crewkerne, was the last presbyterian minister of his name, from a family conspicuous in the ministry of West of England dissent [see Blake, Malachi]. By his time the original Calvinism of the race had changed to Arianism, and he himself became humanitarian in his Christology. He was a man of wealth and influence. He published: 1. 'Devotional Services for the Public Worship of the One True God,' &c., Sherborne, 1812 (anonymous; eight services, with occasional and family prayers and 250 hymns). 2. 'Private Judgment,' Taunton, 1810 (sermon before Southern Unitarian Society). Like his father and grandfather he was twice married, and left descendants (the Blake pedigree is puzzling to trace from the constant recurrence of the same baptismal names). His elder brother, Malachi Blake, M.D., of Taunton, survived till 1843; his portrait is in the Taunton and Somerset Hospital, where the 'Blake Ward' is called from him.

[Blake pedigree, MS.; Monthly Repository, 1821; Murch's Hist. Presb. and Gen. Bapt. Churches in West of England, 1835, pp. 217, 245.] A. G.

BLAKE, WILLIAM (1757–1827), poet and painter, was born on 28 Nov. 1757, at 28 Broad Street, Golden Square. His father was a hosier in sufficiently comfortable circumstances to give some furtherance to his son's bent for art. At ten he was sent to Par's drawing school in the Strand—the best of its day, where he drew from the antique. His father also bought him casts and gave him occasional small sums of money to make a collection of prints for study, and the auctioneer (Langford) would sometimes knock down a cheap lot to 'his little connoisseur' with friendly haste in those days of 'threepenny bids.' Raphael, Michael Angelo, Giulio Romano, Dürer, &c. were the objects of the boy's choice at a time when Guido and the Caracci were the idols of the connoisseur. Blake began to write original verse in his twelfth year, some of which was afterwards

printed in the 'Poetical Sketches.' One of the most beautiful of these, 'How sweet I roam'd from field to field,' was certainly written before fourteen (MALKIN). At that age Blake was apprenticed to James Basire, engraver to the Society of Antiquaries, a liberal-minded and kind master, but his style of engraving was flat, formal, mechanical, but with solid excellence of drawing. It was adhered to in the main by Blake till late in life, when his mode of handling the graver was advantageously modified by the study of the work of Bonosoni, &c., and, though redeemed by the qualities of his genius, was an obstacle to his acceptance by a public accustomed to the soft and fascinating manner of Wollett, Strange, and Bartolozzi. In summer time Basire set Blake upon the congenial task of drawing the monuments in the old churches of London and above all in Westminster Abbey, where, rapt and happy, he worked for some years acquiring a knowledge and a fervent love of Gothic art which profoundly influenced him through life. During winter he engraved his summer's work for Gough's 'Sepulchral Monuments,' one of the best plates in which, a 'Portrait of Queen Philippa, from her monument,' though it has Basire's name affixed, is, on the authority of Stothard, from Blake's hand. In the evenings he began to make drawings of subjects from English history or from his own already teeming fancy. A noteworthy example—'Joseph of Arimathea among the rocks of Albion'—he engraved so early as 1773.

The seven years' apprenticeship ended, in 1778 Blake became for a short time a student in the newly formed Royal Academy. Moser, the first keeper, had little to teach Blake, who tells how he was once looking over prints from Raphael and Michael Angelo in the library when Moser said to him, 'You should not study these old, hard, stiff, dry, unfinished works of art; I will show you what you should study.' 'He took down Le Brun and Rubens' "Galleries." How did I secretly rage! I said "These things you call finished are not even begun; how then can they be finished?"' Here Blake drew for a short time from the living figure, but early conceived a dislike to, and quickly relinquished, academic modes of study. 'Natural objects always did and do now weaken, deaden, and obliterate imagination in me,' he said in after life. As a mere child he gave evidence of that visionary power, that faculty of seeing the creations of his imagination with such vividness that they were as real to him as objects of sense, which, sedulously cultivated through life, became a distinguishing feature of his genius. Returning from a ramble over the hills round Dulwich, he said he had seen a tree filled with angels, bright wings bespangling every bough like stars; or, again, that he had beheld angelic figures walking amongst some haymakers; and only through his mother's intercession did he escape a flogging from his father, who regarded the story as a deliberate lie. As a boy, he perhaps believed these were supernatural visions: as a man, it must be gathered from his explicit utterances that he understood their true nature as mental creations.

Blake now supported himself mainly by engraving for the booksellers. For Harrison's 'Novelists' Magazine' he engraved those early and beautiful designs by Stothard which first brought the latter into notice, viz. two illustrations to 'Don Quixote,' one to the 'Sentimental Journey,' one to 'David Simple,' one to 'Launcelot Greaves,' and three to 'Grandison.' Already he had made Stothard's acquaintance, who introduced him to Flaxman, soon to prove an influential and staunch friend. Of original work belonging to this early date (1780) may be mentioned the scarce engraving 'Glad Day,' and a drawing, 'The Death of Earl Godwin,' which Blake contributed to the Royal Academy's first exhibition in Somerset House. In this year he found himself an involuntary participator in the Gordon riots, having become entangled in the mob and been carried along by it to witness the storming of Newgate and the release of the prisoners.

In 1782 he married Catherine Boucher, daughter of a market-gardener at Battersea, who proved herself one of the best wives that ever fell to the lot of a man of genius; and they set up housekeeping in lodgings at 23 Green Street, Leicester Fields.

In 1784 he opened a printseller's shop in Broad Street, in partnership with a fellow engraver, Parker; and Robert, Blake's youngest brother, between whom and himself there was the strongest sympathy and affection, lived with them. In this year he exhibited at the Royal Academy 'War unchained by an Angel, Fire, Pestilence, and Famine following,' and 'Breach in a City, the Morning after a Battle.' In 1787 Robert died, the shop was given up, and Blake removed to 28 Poland Street. Unable to find a publisher for his 'Songs of Innocence,' he adopted a plan of reproducing them himself, revealed to him in a dream by his dead brother Robert, he used to tell. Next morning Mrs. Blake went out with their last half-crown to buy the necessary materials. The verse was written, and the design and marginal embellishments outlined on copper with an

impervious liquid, and then the remainder of the plate was eaten away with aquafortis, so that the letters and outlines were left prominent as in stereotype and could be printed off in any tint required as the basis of his scheme of colour. He then worked up the pages by hand with great variety of detail in the local hues. Mrs. Blake learned to take off the impressions with delicacy, to help in tinting them, and to do up the pages in boards. Thus the little book was literally made by husband and wife, with a result of unique beauty; and so far as the poems are concerned, taken in conjunction with the companion 'Songs of Experience' by which they were supplemented five years later, they are the most perfect Blake ever achieved. For whilst his powers of design steadily developed and his last completed work, the 'Inventions to the Book of Job,' was also his grandest, as a poet his inspiration lapsed more and more into the formless incoherence of the so-called 'Prophetic Books,' which were all engraved and coloured by hand in the above manner. Indeed, the main, if not the whole, value of these 'Prophetic Books,' of which a list is given below, consists in the frequent splendour of the designs interwoven with the text. For here the fullest scope is given to the two antagonistic tendencies of Blake's mind, on the one hand as artist to embody in human forms of terror, sublimity, beauty, or grotesqueness the most abstract ideas, and on the other, as poet and theosophic dreamer, to resolve into shadowy symbolism the realities of human life and the visible world, and to express in the most crude manner his favourite tenet, that 'all things exist in the human imagination alone.'

In 1791 bookseller Johnson employed him to design and engrave six plates to 'Original Stories for Children,' by Mary Wollstonecraft, and some to 'Elements of Morality,' translated by her from the German. At Johnson's weekly dinners he met Drs. Price, Priestley, Godwin, Fuseli, Tom Paine, &c., with whom he sympathised ardently in political, but not at all in religious, matters. He was the only member of the group who donned the *bonnet rouge* and actually walked the streets in it. About this time, too, he made the acquaintance of Mr. Thomas Butts, a steady buyer at moderate prices for thirty years of his drawings, temperas, and 'frescoes.'

In 1793 Blake removed to Hercules Buildings, Lambeth, where he spent seven productive years, the most important fruits of which, in design, were 537 illustrations to Young's 'Night Thoughts' for Edwards's edition. Of these only forty-seven, to the first four books, were engraved, the book not proving successful (see description by F. J. Shields in GILCHRIST'S *Blake*, vol. ii. 2nd edit.) Blake's industry throughout life was unceasing, and the mass of work accomplished by the rare union of exhaustless patience with a fiery, restless, creative imagination exceeds belief (see catalogues by W. M. Rossetti in GILCHRIST'S *Blake*). He literally never paused. 'I don't understand what you mean by the want of a holiday,' he would say. Writing and design were his recreation after the tedious toil of engraving.

Flaxman in 1800 introduced Blake to Hayley, who invited him to come and settle at Felpham while engraving the illustrations for the 'Life of Cowper.' Here, in a cottage by the sea, he spent three years, during which he executed eighteen tempera heads of the poets for Hayley's library; a miniature of Cowper's cousin, Johnson; two very sweet designs to 'Little Tom the Sailor,' a broadsheet ballad by Hayley; a series of illustrations to Hayley's 'Ballads on Animals,' besides more engraved books and drawings for Butts. It was not to be expected, however, that Blake could long continue to breathe freely in the atmosphere of elegant triviality and shallow sentiment which surrounded the literary squire. Kindly as he was, and unwearied in endeavours to serve, his entire incapacity to understand the artist's genius or appreciate his work except as an engraver, made the constant intercourse between them blighting to Blake's inner life and to the exercise of his creative faculty. After three years' patient endurance, therefore, he determined to return to London at whatever pecuniary sacrifice, that he might 'be no longer pestered with Hayley's genteel ignorance and polite disapprobation.' An absurd charge of sedition was brought against him, just before he finally quitted Felpham, by a drunken soldier whom he had turned out of his garden. The case was tried at Chichester, and Blake was acquitted. On his return he settled at 17 South Molton Street. Cromek, Blake's next employer, purchased of him that fine series of designs to Blair's 'Grave' by which he is most widely known. Never has the theme of death been handled in pictorial art with more elevation and beauty than in some of these, notably in 'Death's Door' and the 'Soul departing from the Body.' Fuseli, always a warm friend of Blake (paying him the naïve tribute of remarking that 'he was d——d good to steal from'), wrote a laudatory notice of the designs for the preface. But it was a bitter disappointment to Blake that, contrary to the original agreement, he was not permitted to engrave his own designs. They were put

into the hands of Schiavonetti, by whom they were rendered with a mingled grace and grandeur which won for them a wider popularity than Blake's austere style could have achieved. The breach of contract and the consequent loss of his copyright were injuries which Blake deeply resented; and Cromek's conduct in relation to his next enterprise enhanced the sense of injustice. For, having seen a design of Blake's from the 'Canterbury Pilgrimage' and vainly endeavoured to negotiate for its publication on the same terms, Cromek went to Stothard and suggested the subject to him, who, ignorant that Blake was already engaged upon it, accepted the offer, and thus was occasioned a breach between the friends which was never closed. Blake having completed his 'Canterbury Pilgrimage' as a 'fresco'—a word which he applied to a method of his own of painting in water-colour on a plaster ground of glue and whiting laid on to canvas or board—appealed to the public by opening an exhibition of this and other of his works. The 'Descriptive Catalogue' written for the occasion interprets his pictures, expounds his canons of art, and contains some admirable writing on the characters in Chaucer's 'Prologue.' Lamb preferred Blake's to Stothard's 'Pilgrimage,' and called it 'a work of wonderful power and spirit, hard and dry, yet with grace.' In 1808 Blake, for the last time, exhibited at the Royal Academy. He then sent 'Christ in the Sepulchre guarded by Angels' and 'Jacob's Dream,' one of his most poetic works; and also executed for Mr. Butts 'The Whore of Babylon,' now in the British Museum; and for the Countess of Egremont 'The Last Judgment,' from one of the Blair drawings, of which, towards the close of life, he painted a replica containing some thousand figures highly finished and with much splendour of colour.

To John Linnell, with whom Blake first became acquainted in 1818, is due all honour for having been the stay of the neglected artist's declining years, and for having commissioned his noblest work. Through him, too, there gathered round a circle of friends and disciples—John Varley, George Richmond, Samuel Palmer, Oliver Finch, and others. John Varley, who gave a very materialistic interpretation to Blake's visionary power, would sit by him far into the night and say 'Draw me Moses' or 'Julius Cæsar,' straining his own eyes in the hope of seeing what Blake saw, who would answer 'There he is,' and draw with alacrity, looking up from time to time as if he had a flesh-and-blood sitter before him, sometimes suddenly leaving off and remarking, 'I can't go on, it is gone,' or 'it has moved, the mouth is gone.' Thus were produced the famous visionary heads, or 'Spiritual Portraits'—some forty or fifty slight pencil sketches, all original, many full of character and power. One of the most curious—the 'Ghost of a Flea'—was engraved in Varley's 'Zodiacal Physiognomy' and in the 'Art Journal' for August 1858. The original drawings all passed into the hands of Mr. Linnell. Blake was wont to say to his friends respecting these 'visions,' 'You can see what I do if you choose. Work up imagination to the state of vision, and the thing is done.'

In 1820 Blake designed and executed his first and last woodcuts to illustrate Thornton's school Virgil (the 'Pastorals'). Rude in execution, but singularly poetic and beautiful, these prints were at the time so much ridiculed by the engravers that some of them were recut by another hand. The obscure little book is now much prized for their sake. Samples of both styles were given to illustrate an article on the principles of wood engraving in the 'Athenæum,' 21 Jan. 1843. Blake made his last move in 1820, to 3 Fountain Court, Strand, where, amid increasing poverty and neglect, he executed and engraved for Linnell those sublime 'Inventions to the Book of Job' on which his highest claim as an artist rests. And whilst they were in progress the same friend, himself still a struggling artist, commissioned a series of drawings from the 'Divina Commedia,' to be also engraved, paying him on account the two or three pounds a week necessary for subsistence. A hundred designs were sketched in, some finished, but only seven engraved and published in 1827. For Blake's labours were drawing to a close. His strength had been for some time declining, but he worked on with the old ardour to within a few days of the end. 'I cannot think of death as more than the going out of one room into another,' he had said in speaking of Flaxman's death; and in that spirit, not serene merely, but joyous and full of radiant visions, he gently, almost imperceptibly, drew his last breath, 12 Aug. 1827.

The following is a list of Blake's writings, all engraved and coloured by hand, except those marked * which are type-printed and unillustrated: 1. *'Poetical Sketches,' 1783. 2. 'Songs of Innocence,' 1789. 3. 'Book of Thel,' 1789. 4. 'Marriage of Heaven and Hell,' 1790; consisting partly of aphorisms or proverbs, mostly vigorous and profound, that condensed form of expression proving singularly favourable to Blake; partly of five 'memorable fancies' in which Swedenborg's influence upon him, very potent through

life, though he was never a Swedenborgian, is first discernible. 5. *'The French Revolution,' Book i. 1791 (not thought worth reprinting by any of Blake's editors). 6. 'Gates of Paradise,' 1793, engraved but not coloured, consisting of seventeen plates of emblems, each with a title or motto and rhymed 'Keys of the Gates,' described by Allan Cunningham as 'a sort of devout dream, equally wild and lovely.' 7. 'Songs of Experience,' 1794. His 'Prophetic Books' are: 8. 'Visions of the Daughters of Albion,' 1793. 9. 'America,' 1793. 10. 'Europe: a Prophecy,' 1794. 11. 'The Book of Urizen,' 1794 (containing Asia and Africa). 12. 'The Song of Los,' 1795. 13. 'The Book of Ahania,' 1795. 14. 'Jerusalem,' 1804. 15. 'Milton,' 1804. (There are different degrees of beauty in the samples of all these engraved books; not only because Blake himself bestowed different degrees of finish and richness but also because Mrs. Blake worked upon some. There are copies, indeed, which appear to have been entirely coloured by her after her husband's death. For descriptions and interpretations see SWINBURNE'S *William Blake: a Critical Essay*, 1868.) 16. *'Descriptive Catalogue,' 1809. 17. 'Prospectus,' 1793. 18. Four undated 'Sibylline Leaves,' viz. 'The Laocoon,' 'Ghost of Abel,' 'On Homer's Poetry,' 'On Virgil.' 19. 'There is no Natural Religion' (eight? leaves with design). 20. 'Outhoon,' of which there appears to be no copy in existence. 21. 'Tiriel,' first printed in W. M. Rossetti's 'Aldine British Poets.' 22. 'Ideas of Good and Evil,' from Blake's note-book, first printed in Gilchrist's 'Blake,' vol. ii. 23. Prose from the same, viz. 'Public Address' and 'Vision of the Last Judgment.'

Reprints of Blake's works include the following: 'Songs of Innocence and Experience,' edited by Dr. G. Wilkinson (much altered), 1839. 'Selections,' emendated, comprising nearly everything except 'Prophetic Books,' edited by D. G. Rossetti, forming vol. ii. of Gilchrist's 'Life of Blake,' 1863 and 1880. 'Songs of Innocence and Experience, with other Poems' (verbatim), 1866. 'Poetical Sketches,' edited by R. H. Shepherd (verbatim), 1868. 'Poetical Works, Lyrical and Miscellaneous,' edit., with memoir, by W. M. Rossetti, 1874 (verbatim). Works, poetic, symbolic, critical, ed. E. J. Ellis and W. B. Yeats, 1893 (3 vols.) 'Jerusalem,' ed. E. R. D. Maclagan and A. G. B. Russell, 1904. Poetical Works, ed. J. Sampson (with bibliography), 1905. Among reproductions may be also mentioned 'Illustrations to the Book of Job,' with memoir by C. E. Norton, Boston, 1875, and 'Etchings from Blake's Works,' with descriptive text by William Bell Scott, 1878.

[Malkin's Father's Memoirs of his Child (Introduction to), 1806; Smith's Nollekens and his Times, comprehending Memoirs of several Contemporary Artists, vol. ii. 1828; Cunningham's Lives of the most eminent British Painters, &c., 1830. Gilchrist's Life of William Blake, with Selections from his Writings, &c., 1863, contains impressions from some of Blake's original plates, 2nd edit. 1880, with additional letters, and illustrations. See also memoirs by A. T. Story, 1893, and F. Tatham, 1906, and sale catalogue of Blake's drawings belonging to the Earl of Crewe sold at Sotheby's 30 March 1903.] A. G—T.

BLAKELY, FLETCHER (1783–1862), Irish remonstrant minister, was born on 13 May 1783 at Ballyroney, county Down. He was the youngest son of Joseph Bleakly, a farmer, and was named after the Rev. William Fletcher, presbyterian minister of Ballyroney (*d.* 1824), who gave him his early training; both his parents died when he was very young. In 1799 he entered Glasgow College (at which time he spelled his name Bleakly), where he graduated. On 19 Sept. 1809 he was ordained by Bangor presbytery as minister of Moneyrea, county Down, in succession to Samuel Patton. Fletcher had trained him in Calvinism, but he did not long retain this form of theology. He became by degrees a unitarian of what was then a very advanced type in Ireland, being the first avowed humanitarian preacher in Ulster (after 1813; see *Mon. Rep.* 1813, p. 515). Under his influence Moneyrea was so marked a home of heterodox opinion that it passed into a proverb, 'Moneyrea, where there is one God and no devil.' When, in 1821, the English unitarians sent John Smethurst (1792–1859) on a mission to Ulster, the Moneyrea meeting-house was the first that was opened to him; the Arian pulpits were (with five exceptions) refused to him. In 1829 Blakely, with his whole congregation, joined the remonstrant secession from the synod of Ulster; he had throughout the previous synodical debates been one of the most powerful coadjutors of Henry Montgomery, the leader of the New Light party, and assisted him in forming the remonstrant synod. On 27 April 1836 a public testimonial bore witness to his 'successful advocacy of the rights of conscience and human freedom.' In his own neighbourhood he did much for popular education, for the cause of tenant right, and for the promotion of the flax industry. He was a joint-editor (1830–3) of the 'Bible Christian,' and published two or three tracts and sermons, especially: 1. 'A Dialogue,' Belf. 1817, 8vo (anon.), on the bible and other standards of faith (not seen; it was answered by a covenanting minister, not Paul). 2. 'The

Battle of the Two Dialogues, being a conversation between a Rev. Covenanter and a Rev. Presbyterian on the impropriety of adhering to any standard of faith except the Bible,' Belf. 1818, 8vo (also anon.; in reply to it John Paul, then covenanting minister of Loughmourne, afterwards of Carrickfergus and D.D. (died 17 March 1848, aged 71), published his first work, 'Creeds and Confessions defended,' &c., Belf. 1819, 8vo, which is one of the most caustic pieces of satire ever contributed on the orthodox side of the religious controversies in Ulster). 3. 'The Doctrine of the Trinity not comprised in the Faith which was once delivered unto the Saints' (Jude 1-3), London, 1846, 8vo. 4. 'An Explicit Avowal of Truth the best mode of teaching it' (Romans i. 16), Belfast, 1853, 8vo (preached as president of the Association of Irish Nonsubscribing Presbyterians). He resigned his charge on 22 Sept. 1857, but continued to preach till the installation of his successor, John Jellie, on 27 Sept. 1859. He died on 25 Feb. 1862 at Cradley, Worcestershire, the residence of the Rev. William Cochrane, who had married his eldest child. He was buried at Moneyrea. He married Margaret Lindsay (1783–1825), and had four children: Jane, as above; Sarah (1814–1844); David Lindsay, inspector of Irish National Schools (1816–1854); and William Joseph (born 17 April 1818), unitarian minister at Billingshurst, Sussex, in 1839, ordained on 15 Dec. 1840 by Bangor remonstrant presbytery as minister of York Street, Belfast, and died on 19 March 1842.

Synod, 1841, 1858, 1860, 1862; tombstones at Moneyrea.] A. G.

BLAKELY, JOHNSTON (1781–1814), commander in the United States' navy, was born in Dublin in October 1781. While he was still an infant, his parents emigrated to America and settled in North Carolina. In 1800 Blakely entered the States' navy, and, when the war with England broke out in 1812, had attained the rank of lieutenant. In the early months of 1813 he commanded the brig Enterprise on the east coast, but was promoted from her to the command of the Wasp, a new, large, and heavily armed sloop. In this he sailed from Portsmouth (New Hampshire) on 1 May 1814, and, crossing the Atlantic, ran boldly into the entrance of the English Channel, where, on 28 June, he fell in with and, after a short but severe action, captured the English brig Reindeer, commanded by Captain Manners, whose gallant conduct against an enemy of immensely superior force has called forth the admiration of both English and American writers. The Reindeer was so much damaged, and the risk of her recapture so great, that Blakely ordered her to be set on fire, after which he made the best of his way to Lorient, where he arrived on 8 July. For this important service congress voted him a gold medal, which, however, he did not live to receive. As soon as the Wasp was refitted he sailed from Lorient (27 Aug.) on another cruise. Within the next three days he made two prizes; and on 1 Sept., having fallen in with a convoy of ten sail under the escort of a 74-gun ship, succeeded in the course of the afternoon in cutting off and capturing one of the convoy laden with military stores of great value. The same evening, after dark, he met the English brig Avon, commanded by Captain the Hon. James Arbuthnott. The force of the Avon was very inferior to that of the Wasp, and the inferiority in her gunnery practice was almost more marked. After a running fight of about three-quarters of an hour, during which the Wasp had two men killed and one wounded, the Avon having lost forty-two men killed and wounded, and being in a sinking condition, hailed that she surrendered. The Castilian brig, of the same force as the Avon, now came up, and the Tartarus sloop was made out in the distance; so the Wasp, having her rigging a good deal cut, ran down to leeward to gain time. The Castilian at first followed her, but gave up the chase on the Avon's making urgent signals of distress; she was indeed sinking fast, and her men were scarcely out of her before she went down. The Wasp after this sailed for the south. Making two or three prizes as she went, on 21 Sept. she was in latitude 33° 12′ N.; and on 9 Oct. in latitude 18° 35′ N., longitude 30° 10′ W., she spoke a Swedish brig. This was the last known of her; she was never heard of again.

The Americans have formed a very high estimate of Blakely; and though the great superiority of the Wasp over both the Reindeer and the Avon may perhaps be considered as leaving little room for the display of any extraordinary courage, his conduct of these actions, and of his venturesome cruise in the chops of the Channel, then swarming with English men-of-war, and his successful raid on the Gibraltar convoy, all tend to show that the American estimate is not exaggerated.

[Ripley and Dana's American Cyclopædia; Roosevelt's Naval War of 1812.] J. K. L.

BLAKENEY, SIR EDWARD (1778–1868), field-marshal, was the fourth son of Colonel William Blakeney, of Newcastle-upon-Tyne, and M.P. for Athenry in the Irish parliament, 1781–83 and 1790–1800. He was born at Newcastle-upon-Tyne in 1778, and entered the army, 28 Feb. 1794, as a cornet in the 8th light dragoons. Accompanying the expedition under Major-general White to the West Indies, he was present at the capture of Demerara, Berbice, and Essequibo in 1796; in the course of this service he was three times taken prisoner by privateers and suffered severe hardships. In 1799 he went with the expedition to Holland, and was present in the actions of 10 and 19 Sept., and also in those of 2 and 6 Oct. In 1807 he sailed with the 7th regiment of foot, the Royal Fusiliers, to the Baltic, joined Lord Cathcart's expedition, and took part in the capture of the Danish fleet and the surrender of Copenhagen. He was present at the capture of Martinique in 1809. Obtaining the command of the 7th foot, 20 June 1811, he proceeded in charge of his regiment to Lisbon, and during the campaigns of the years 1811–14 he served in the battles of Busaco and Albuera (where he was severely wounded through the thigh), the action at Aldea de Ponte, the sieges of Ciudad Rodrigo and Badajoz (where he was severely wounded through the arm in the assault), battles of Vittoria, Pampeluna, Pyrenees, and Nivelle, besides various minor actions. He joined the army in Belgium in 1815, and was present at the capture of Paris. For those and other services he received the gold cross and a silver war medal, and was made a knight of the Tower and Sword of Portugal in 1812. Having retained the command of his regiment until 2 June 1825, the first brigade of the army sent to Portugal was then entrusted to his charge. On 20 Sept. 1832 he was rewarded with the colonelcy of his old regiment, the 7th foot, which he did not resign until 21 Dec. 1854. In the meantime, however, he was not idle, as he served in Ireland as commander-in-chief of the troops from 1836 to 1855. On 21 Dec. in the previous year he was nominated colonel of the 1st foot, and retained the appointment to his decease. After his return from Ireland he became lieutenant-governor of Chelsea Hospital, 6 Feb. 1855, and on 25 Sept. 1856 the governor of that establishment. His general's commission dates from 20 June 1854, and the high honour of a field-marshalship was conferred on him 9 Nov. 1862. In consideration of his long and valuable services to his country, he was also made colonel-in-chief of the Rifle Brigade, 28 Aug. 1865. Long previous to this period he had been gazetted K.C.B. 2 Jan. 1815, and G.C.B. 7 May 1849, and a privy councillor in Ireland 7 May 1836. His death took place at Chelsea Hospital 2 Aug. 1868, and he was buried at Twickenham on 8 Aug.

He married in 1814 Maria, a daughter of Colonel Gardiner of the East India Company's service. She died at Chelsea Hospital 21 Jan. 1866, aged 76.

G. C. B.

BLAKENEY, RICHARD PAUL (1820–1884), canon of York, was descended from an old Norfolk family, which had removed to Ireland before his birth. He was educated at Trinity College, Dublin, where he graduated B.A. in 1842, taking high honours in theology. In 1852 he proceeded LL.B. and LL.D. He became curate of St. Paul's, Nottingham, in 1843, vicar of Hyson Green, Nottinghamshire, in 1844, vicar of Christ Church, Claughton, Birkenhead, in January 1852, vicar of Bridlington in 1874, rural dean of Bridlington in 1876, and canon of York in 1882. The university of Edinburgh conferred on him the degree of D.D. in 1868. Blakeney died at Bridlington on 31 Dec. 1884. He was well known as a vigorous champion of evangelical doctrines in the church of England, and was the author of a large number of controversial books and tracts, which attained a wide circulation. The chief of these are: 1. 'Translation of the Moral Theology of Alphonsus Liguori,' 1845, 2nd ed. 1852. 2. 'A Manual of Romish Controversy, being a complete Refutation of the Creed of Pope Pius IV,' 1851 (this work is stated to have passed through ten editions). 3. 'Protestant Catechism, or Popery refuted and Protestantism established by the Word of God,' 1854. 4. 'History and Interpretation of the Book of Common Prayer,' 1865, 3rd ed. 1878.

S. L.

BLAKENEY, WILLIAM, LORD BLAKENEY (1672–1761), the defender of Minorca, was an Irishman of English descent, and was born at Mount Blakeney in the county of Limerick in 1672. His father was a fairly wealthy country gentleman, and represented the borough of Kilmallock in the Irish House of Commons for many years, and expected his eldest son to lead the same life as himself. But young William Blakeney caught the martial enthusiasm of the Revolution period, and organised a small

military force in 1690, when only eighteen, out of his father's tenants, with which he kept the Rapparees at bay, and defended the paternal estate. He was permitted to join the army in Flanders as a volunteer, and won his ensigncy at the siege of Venloo in 1702. He served throughout the campaigns of Marlborough as adjutant of his regiment, and is said to have first exercised regiments by the beating of drums and the waving of colours, and even to have once exercised the whole allied army in this way before certain German princes. After the peace of Utrecht came a long period of peace, during which promotion went by favour and by court or parliamentary influence, which Blakeney did not possess, so that he was an old man of sixty-five when he was at last promoted colonel in 1737. During this long period he always remained with his regiment, taking a fatherly interest in both officers and men, and never going on leave or running after promotion. This long neglect was said to be due to the misrepresentations of Lord Verney; but the Duke of Richmond, when appointed colonel of his regiment, at last took notice of him, and obtained him a command in the expedition to Carthagena, with the rank of brigadier-general, in 1741. His services were highly appreciated, and by the aid of the same powerful patron he was promoted major-general in 1744, and made lieutenant-governor of Stirling Castle. The Scottish insurrection of 1745 gave him his opportunity. The highlanders besieged Stirling Castle, and Blakeney, to keep them from joining the main body, allowed them to raise siege works for some weeks. When, however, these siege works became formidable, he ordered a sudden attack on the highlanders, who were utterly defeated and lost three hundred men. His good service was not forgotten by George II, who promoted him major-general in 1745, lieutenant-general in 1747, and lieutenant-governor of the island of Minorca.

He at once went to Minorca, and as Lord Tyrawley, the governor, preferred stopping at home, Blakeney was left in chief command for ten years. He earnestly pressed for more men, and for money for repairs. But the ministry of Pelham and Newcastle grudged money not spent in maintaining their parliamentary majority, and neglected his entreaties. On the breaking out of the Seven Years' War in 1756 an expedition was hurriedly despatched from France under the debauchee Duc de Richelieu and Admiral la Galissonnière against Minorca. The French government well knew how the defences of Minorca had been neglected, and that a rapid attack before reinforcements could reach the garrison must be successful. Blakeney knew also that without reinforcements he could not hold out long, but determined to wait resolutely for those reinforcements. When Admiral Byng retreated all hope was lost, and Blakeney, after seventy days' defence of an almost indefensible fortress, surrendered on the honourable terms that his garrison was to be transported to Gibraltar, and not made prisoners of war. The gallant defence of Minorca had greatly excited the minds of the English people, and the veteran of eighty-four, who had never gone to bed for seventy days, was as popular as Admiral Byng was execrated. After giving truthful evidence at Byng's trial as to the state of Minorca, Blakeney received great honours from George II, and was made a knight of the Bath, colonel of the Enniskillen regiment of infantry, and finally Lord Blakeney of Mount Blakeney in the peerage of Ireland. He was M.P. for Kilmallock 1725–57. His popularity continued unabated; a statue of him by Van Most was erected in Dublin; and when he died, on 20 Sept. 1761, at the age of eighty-nine, he was buried, amidst general mourning, in Westminster Abbey.

Blakeney was a soldier of the soldiers, always living among them, enjoying his punch as well as any of them, and beloved by them. In his family relations he was always exemplary; he used to live on his pay, and to allow his brothers to live on his estate of Mount Blakeney. One brother swindled him grossly; but he made no change in his arrangements, and merely transferred his estate to another brother.

[Memoirs of the Life and Actions of General William Blakeney (anon.), London and Dublin, 1757; Letter to the Right Honourable Lord B——y, being an Inquiry into the merit of his Defence of Minorca, London, 1757; Full Answer to an Infamous Libel intituled a Letter to the Right Honourable Lord B——y, 1757.]

H. M. S.

BLAKESLEY, JOSEPH WILLIAMS (1808–1885), dean of Lincoln, was born at 38 Coleman Street, in the city of London, on 6 March 1808, and baptised privately 22 April. His parents were Jeremiah George and Elizabeth Blaksley, as the name was then spelt. His father, who was a factor, died before his son had attained his tenth year. Young Blakesley entered St. Paul's School 3 Oct. 1819, whence, after a distinguished school career, he passed as captain, with a Stock scholarship and a special exhibition in consideration of his merits, to Corpus Christi College, Cambridge, 3 Nov. 1827. Here he immediately took a leading position, and

obtained admission to the highest intellectual society among the younger residents. Among his intimate friends were R. Chenevix Trench (subsequently archbishop of Dublin), R. Monckton Milnes (Lord Houghton), Dean Alford, the two Speddings, Alfred Tennyson, and his brothers. So large an acquaintance among Trinity men, together with other considerations, led to Blakesley's removal from Corpus to Trinity in Lent 1830. Dr. Wordsworth, brother of the poet and father of the bishops of Lincoln and St. Andrews, was then master of Trinity, and among the tutors were Dr. Whewell, Dr. Wordsworth's successor, and Dr. Peacock, afterwards dean of Ely. Blakesley joined the 'youthful band of friends' (commemorated by Lord Tennyson, himself a member of the body) forming the celebrated 'Apostles' Club.' The club had recently begun its new phase of existence under the influence of its 'second father,' Professor F. D. Maurice, the 'creator not of its form but of its spirit' (*Maurice's Life and Letters*, i. 56, 110), and it greatly influenced Blakesley. He was the

> Clear-headed friend, whose joyful scorn,
> Edged with sharp laughter, cuts atwain
> The knots that tangle human creeds,

to whom Lord Tennyson addressed one of his first published poems.

The year (1830) of Blakesley's removal to Trinity witnessed his election to a foundation scholarship. He graduated B.A. in 1831, M.A. in 1834, and B.D. 5 April 1849; he was a wrangler in the mathematical tripos, and was placed third in the classical tripos, where his chief strength lay, subsequently obtaining the senior chancellor's medal. He was elected a fellow of Trinity in 1831, and became assistant tutor in 1834, and tutor in 1839. Among his pupils were Lord Lyttelton, Lord Frederick Cavendish, Mr. Justice Denman, Mr. Beresford Hope, and Professor Cayley. Blakesley had originally intended to adopt the law as his profession, for which he was well fitted in many ways; but delicacy of health led him to change his destination. He was ordained deacon in 1833, and priest in 1835. He held his tutorship till 1845. From 1845 to 1872 he held the college living of Ware. In 1850 he was appointed classical examiner in the university of London. As vicar of Ware Blakesley became widely known as the 'Hertfordshire Incumbent,' whose letters occupied a leading place in the 'Times' newspaper for some years. In these letters he directed the dry light of an acute practical mind, free from enthusiasm or sentiment, to some of the chief social and political subjects of the day. The letters greatly increased Blakesley's reputation, and in 1863 he received a canonry at Canterbury from Lord Palmerston, with whose political views he fully sympathised. He became proctor in Convocation for his chapter, and was an influential, although very independent, member of the lower house till his death. Although no scientific theologian, Blakesley took much interest in theological studies, especially in the critical and evidential department. He twice occupied the university pulpit, in 1840, and again in 1843; the sermons then delivered, on the 'Dispensation of Paganism' and on 'Christian Evidences,' were subsequently published under the title of 'Conciones Academicæ.' Delicacy of health drove him to Algiers in the winter of 1857–8. On his return he published an account of his sojourn under the title of 'Four Months in Algiers, with a Visit to Carthage.' In 1872 he succeeded Dr. Jeremie as dean of Lincoln on Mr. Gladstone's recommendation. As dean he made Lincoln his home, and devoted himself to the interests of his cathedral and of the city of Lincoln. If not an ideal dean according to the modern type, for which his tone of mind and line of thought, essentially non-ecclesiastical, entirely unfitted him, he conscientiously fulfilled the duties of his office. In the city itself he helped to promote all well-considered measures for the welfare of the community. Blakesley was a whig of the old school as opposed to the modern radical. He was master of the court of the Mercers' Company in 1861. As one of the governors he took a warm interest in the welfare of St. Paul's School. Blakesley's chief work was an edition of Herodotus for the 'Bibliotheca Classica.' The annotations, though always characterised by sound sense and accurate scholarship, are not of the highest order, and are chiefly devoted to geographical and historical questions. He contributed articles to the 'Quarterly' and 'Edinburgh Reviews' and other periodicals, and in addition to the already mentioned 'Letters of a Hertfordshire Incumbent' he wrote many reviews of books for the 'Times' newspaper. He was an active member of the committee for the revision of the translation of the New Testament. On leaving college he married Margaret Wilson Holmes, the daughter of Thomas Holmes of Brooke, in the county of Norwich. Mrs. Blakesley predeceased her husband in 1880. He was the father of seven sons and four daughters, all of whom survived him. He died 18 April 1885.

The following is a list of his printed works:

1. 'Thoughts on the Recommendations of the Ecclesiastical Commission,' London, 1837.
2. 'Commemoration Sermon in Trinity Col-

lege,' 1836. 3. 'Life of Aristotle,' Cambridge, 1839. 4. 'Commemoration Sermon in Trinity College,' 1842. 5. 'Conciones Academicæ,' London, 1843. 6. 'Where does the Evil lie?' (a pamphlet upon private tuition at Cambridge), London, 1845. 7. 'The Way of Peace,' a sermon, 1852. 8. 'Herodotus with a Commentary,' 2 vols., forming part of Macleane's 'Bibliotheca Classica,' 1852-54. 9. 'History of Greek and Roman Philosophy and Science,' part of the article in the 'Encyclopædia Metropolitana,' ed. 2, London, 1853. 10. 'Four Months in Algeria, with a Visit to Carthage,' Cambridge, 1859. 11. 'Real Belief and True Belief,' a sermon, 1862. 12. 'A Prælection as Candidate for the Regius Professorship,' on 1 Cor. xi. 17-31 (privately printed).

[Saturday Review, 25 April 1885; Guardian, 22 April 1885; private information.]
E. V.

BLAKEWAY, JOHN BRICKDALE (1765–1826), topographer, was the eldest son of Joshua Blakeway, of Shrewsbury, by Elizabeth, sister of Matthew Brickdale, M.P. in several parliaments for the city of Bristol. He was born at Shrewsbury on 24 June 1765, and educated in the free school there. In 1775 he was removed to Westminster, at which school he remained till 1782, when he proceeded to Oriel College, Oxford (B.A. 1786, M.A. 1795). On leaving the university he entered at Lincoln's Inn, and was called to the bar in 1789. He followed the law more as an amusement than as a necessary means of support, and began to go the Oxford circuit. Suddenly he found his hereditary expectations destroyed, and he was compelled to provide himself with an income by his own exertions. In these circumstances the expensive profession of the law was no longer to be thought of. He resolved to enter the church, and was ordained in 1793.

In 1794 he was presented by his uncle, the Rev. Edward Blakeway, to the ministry of the Royal Peculiar of St. Mary's, Shrewsbury, and on his uncle's death he became official of the peculiar, and also succeeded him in the vicarage of Neen Savage, Shropshire, and in the rectory of Felton, Somersetshire. In 1800 he was presented to the vicarage of Kinlet. He was elected a fellow of the Society of Antiquaries in 1807. From 1800 till 1816 he divided his time between Kinlet and Shrewsbury, but, finding it inconvenient to keep up two houses, he gave up Felton and Kinlet in that year, and thenceforward resided exclusively in his native town. He died at the council house, Shrewsbury, on 10 March 1826, and was buried in St. Mary's Church, where a fine Gothic monument, executed by John Carline, was erected to his memory by his parishioners.

His works are: 1. 'An Attempt to ascertain the Author of the Letters published under the signature of Junius,' Shrewsbury, 1813, 8vo. He ascribes the authorship of these famous letters to Horne Tooke. 2. 'The Sequel of an Attempt to ascertain the Author of the Letters published under the signature of Junius,' London, 1815, 8vo. 3. 'A History of Shrewsbury,' 2 vols., London, 1825, 4to. Written in collaboration with the Ven. Hugh Owen, F.S.A., archdeacon of Salop. 4. 'The Sheriffs of Shropshire, with their armorial bearings, and notices, biographical and genealogical, of their families,' Shrewsbury, 1831, fol. 5. Single sermons, and a tract on the subject of Regeneration.

[Salopian Journal, 15, 22, and 29 March 1826; Gent. Mag. xcvi. (i.) 277, 369; Leighton's Guide through the Town of Shrewsbury, 72, 73, 182; Cat. of Printed Books in Brit. Mus.] T. C.

BLAKEY, NICHOLAS (*fl.* 1753), designer and engraver, was a native of Ireland, but resided chiefly in Paris, and died there. The dates of his birth and death are not recorded. He enjoyed a considerable reputation about the middle of the last century as an illustrator of books, and, amongst other works, designed and engraved the plates to Jonas Hanway's 'Travels in Persia,' 1753, and those to an edition of Pope's works. Blakey was associated with Francis Hayman, R.A., in the production of a set of prints of subjects from English history, of which the following bear his name only as the designer: 'The Landing of Julius Cæsar,' 'Vortigern and Rowena,' and 'Alfred in the Island of Athelney receiving News of a Victory over the Danes;' these were engraved respectively by S. F. Ravenet, G. Scotin, and F. Vivares. One of Blakey's most graceful compositions is a vignette in the manner of Boucher, representing nymphs dancing under the influence of Love, engraved by John Ingram.

[Redgrave's Dictionary of Artists (1878); MS. notes in British Museum.] L. F.

BLAKEY, ROBERT (1795–1878), miscellaneous writer and professor of logic and metaphysics at Queen's College, Belfast, was the son of a mechanic, and was born at Morpeth 18 May 1795. Losing his father when only nine months old, he was taken charge of by his grandmother. From his ninth to his thirteenth year he assisted his

uncle in gardening, after which he was apprenticed to the fur trade at Alnwick. Much of his spare time was devoted to reading, and in the evenings he received private instruction from a schoolmaster in geometry, physical geography, and astronomy. At an early period he acquired a strong love of abstract speculation, and latterly this absorbed his chief interest. In 1815 he left Alnwick for Morpeth, and soon afterwards began to contribute to the 'Newcastle Magazine,' the 'Black Dwarf,' 'Cobbet's Register,' and the 'Durham Chronicle.' In 1831 he published a 'Treatise on the Divine and Human Wills,' and in 1833, in two volumes, a 'History of Moral Science.' In the beginning of 1838 he purchased the 'Newcastle Liberator,' which, in 1840, was amalgamated with the 'Champion,' a London weekly paper under the title of 'The Northern Liberator and Champion,' and published both at Newcastle and London. For the publication in his paper of an essay on the natural right of resistance to constituted authorities, he was prosecuted by the government, and bound over to keep the peace. Shortly afterwards he sold the paper at a considerable loss, and on the failure of an attempt to start in London a paper called 'The Politician,' he went to France with the resolution to devote 'all his time and energies to philosophical literature.' In order to obtain a more thorough knowledge of the scholastic and middle-age literature, he visited the principal libraries of Belgium. The earliest results of his studies were seen in 'Christian Hermits,' published in 1845. For some time he also, for a stipulated sum, assisted a gentleman in preparing a work on the 'History of Social and Political Philosophy from the time of Charlemagne to the French Revolution.' The work never appeared, but the line of research into which it led him was of great service in the preparation of his 'History of Political Literature from the Earliest Times,' two volumes of which were published in 1855. Previous to this he had brought out his principal work, 'History of the Philosophy of Mind, embracing the opinions of all Writers on Mental Science from the Earliest Times to the Present Day,' four vols. 1848; and 'Historical Sketch of Logic from the Earliest Times to the Present Day,' 1851. In philosophical speculation he was an orthodox follower of the intuitive school, and his works are popular rather than profound, but they are characterised by close reasoning, clear and correct statement, and comprehensive knowledge. In 1848 he was appointed professor of logic and metaphysics in Queen's College, Belfast, and in 1860 he received a pension of 100*l.* from the civil list. The later years of his life were spent in London, where he died 26 Oct. 1878.

In addition to the more elaborate treatises above mentioned, Blakey was the author of a number of minor works, including, along with the Rev. Daniel Paterson, a 'Life of Dr. James Beattie,' the poet; 'Cottage Politics, or Letters on the New Poor Law Bill,' 1837; 'Temporal Benefits of Christianity,' 1849; 'Old Faces in New Masks,' 1859; and, under the pseudonym of Nathan Oliver, 'A few Remarkable Events in the Life of Rev. Josiah Thompson,' a fictitious biography intended to illustrate the evils and inconveniences of dissent. It is, however, by his books on angling that he will be remembered with pleasure and gratitude by the largest circle of readers. In early life he found opportunity to become a great proficient in the art, and it was his chief recreation till his infirmities made it no longer possible for him to follow it. In 1846 he published, under the pseudonym of Hackle Palmer, 'Hints on Angling, with suggestions for angling excursions in France and Belgium, to which are appended some brief notices of the English, Scotch, and Irish waters;' in 1853, 'The Angler's Complete Guide to the Rivers and Lakes of England;' in 1854 a similar work on Scotland; in the same year 'Angling, or How to angle and where to go;' in 1855, 'Historical Sketches of the Angling Literature of all Nations;' and in the same year 'The Angler's Song Book.' The knowledge he obtained in early life of the kindred branch of sport, through the liberality of the Duke of Northumberland of that day, who allowed any one who chose to shoot over a large extent of his property, he also turned to account by publishing, in 1854, 'Shooting; a Manual of practical Information on this Branch of British Field Sports.'

[The Memoirs of Dr. Robert Blakey, edited by the Rev. H. Miller, and published in 1879, contain interesting reminiscences of many of the most eminent persons of his time.] T. F. H.

BLAKISTON, JOHN (1603–1649), regicide, was the son of Marmaduke Blakiston, prebendary of Durham. He was baptised on 21 Aug. 1603, and married in November 1626 Susan Chamber. He became a mercer in Newcastle, and prospered so well in his business that he was able to subscribe 900*l.* for the reconquest of Ireland (1642). Although his father was a strong high churchman, the friend and father-in-law of Cosin, and a noted pluralist (see COSIN'S *Correspondence*, i. 185), John Blakiston became a puritan, and was, in 1636, cited before the High Commission Court for nonconformity, and for defaming the vicar of Newcastle (*Records of*

High Commission Court in the Diocese of Durham (Surtees Society), p. 155). He was fined 100*l.* and excommunicated till he submitted. On 30 Jan. 1641 he was voted member for Newcastle in place of Sir J. Melton, whose election was annulled. When the Scots captured Newcastle he was also appointed mayor, in place of Sir John Marlay (BRAND, p. 469). He suffered losses during the war, and was accordingly, on 3 June 1645, voted an allowance of 4*l.* a week, which was continued till 20 Aug. 1646. According to Noble he was also granted the sum of 14,000*l.* and given the post of coal meter at Newcastle, worth 200*l.* a year. Holles in his 'Memoirs' describes Blakiston as one of the 'little northern beagles' set on to stir up public feeling against the Scots by exaggerating the contributions they had levied on the country. He was appointed one of the king's judges, was present at every sitting during the trial, and signed the death-warrant. In April 1649 the corporation of Newcastle found it necessary to write to the speaker to vindicate their representative from the charges brought against him in the 'humble remonstrance' of George Lilburn. They praise Blakiston as 'unapt to cram himself with the riches of his ruined country, or seek after great things' (*Tanner MSS.* lvi. 22). He died shortly afterwards, for his will is dated 1 June 1649, and he is spoken of as deceased in the Commons Journals of 6 June. On 16 Aug. 1649 the house voted 3,000*l.* to provide for his widow and children.

[Brand's History of Newcastle; Surtees' History of Durham, iii. 165-402; Noble's account in his Lives of the Regicides is full of errors.]

C. H. F.

BLAMIRE, SUSANNA (1747-1794), the 'Muse of Cumberland,' was the daughter of a Cumberland yeoman, and was born in 1747 at Cardew Hall, about six miles from Carlisle. At the age of seven she lost her mother, and on her father's second marriage was committed to the charge of her widowed aunt, Mrs. Simpson of Thackwood. Mrs. Simpson seems to have been an excellent example of the qualities engendered by the life of a yeoman farmer. With an independent character, strongly marked individuality, and great practical sense, she led a busy life in the management of her farm and household. Susanna Blamire's education was conducted according to these principles. She went to the village school at Raughton Head, where the fee was a shilling a quarter. There she learned the rudiments of knowledge, and her own taste for reading enabled her to grow up with a cultivated mind. She was fond of poetry, and began to write in imitation of her favourite authors. Her earliest poem, written at the age of nineteen, was suggested by Gray's 'Elegy,' as is shown by its title: 'Written in a Churchyard, on seeing a number of cattle grazing in it.'

Susanna Blamire's life was uneventful, and there are scarcely any records of it left. She lived in an obscure part of England amongst her own relatives, and her correspondence has not been preserved. Her poems were fugitive pieces, some of which appeared in magazines, but were never signed by her name. They were not collected till long after her death, when her memory had almost faded away, and personal details were vague. She is described as of 'graceful form, somewhat above the middle size, and a countenance, though slightly marked with the smallpox, beaming with good nature; her dark eyes sparkled with animation.' Her country neighbours called her a 'bonnie and varra lish young lass.' She lived among the rustics, entered into their enjoyments, and sympathised with their troubles. She was fond of society, and was in great request at the 'merrie-neets,' or social gatherings, where she mixed with every class. A good farmer said sadly after her death: 'The merrie-neets won't be worth going to since she is no more.' The genuine gaiety and sprightliness of her disposition may be judged by the fact that if she met a wandering musician on the road she was known to dismount from her pony, ask for the music of a jig, and dance, till she was weary, on the grass.

Susanna's eldest sister married Colonel Graham, of Gartmore, in 1767. A Graham of Gartmore was the author of the song, 'Oh, tell me how to woo thee,' and the traditions of culture were common to the family of Graham. Through her sister's marriage Susanna was introduced into a circle which sympathised with her poetical tastes. She often paid visits to Scotland. Once she went to see a relation who lived at Chillingham, and while there she attracted the attention of Lord Tankerville and his family. At his request she wrote one of her most characteristic sketches of rustic life, a dialogue beginning, 'Why, Ned, man, thou luiks sae downhearted.' Her poems were mostly written in this way, on the spur of the moment, and very few were revised with a view to publication. Her poetical gift was, in fact, regarded by her as an accomplishment which she sometimes used to please her friends. It was the custom for the wealthier families in Cumberland to take lodgings in Carlisle for the winter months. There Susanna Blamire made the acquaintance of one like-minded with herself,

Catharine Gilpin of Scaleby Castle, a member of the family which produced Bernard Gilpin, the apostle of the north. Catharine Gilpin was also a poet. The two ladies lodged together in Carlisle, and wrote poems in common, so that it is difficult in all cases to distinguish the authorship. What little else is known about Susanna Blamire is gathered from her poems. 'Stoklewath, or the Cumbrian Village,' a poem which recalls Goldsmith's 'Deserted Village,' gives a faithful picture of the surroundings of her ordinary life. A poetical 'Epistle to Friends at Gartmore' describes the homely occupations of her days at Thackwood. In it she speaks of keen suffering from rheumatism, and her poems bear increasing signs that they were written in the intervals of bodily pain. Her ailments gained upon her, and she died in Carlisle on 5 April 1794 in her forty-seventh year.

Susanna Blamire was a true poet, and deserves more recognition than she has yet received. Her sphere is somewhat narrow, but everything that she has written is genuine and truthful. She has caught the peculiar humour of the Cumbrian folk with admirable truth, and depicts it faithfully so far as was consistent with her own refinement. As a song-writer she deserves to rank very high. She preferred to write songs in the Scottish dialect, and three at least of her songs are exquisite, 'What ails this heart o' mine?' 'And ye shall walk in silk attire,' and 'The Traveller's Return.' Another beautiful song, 'The Waefu' Heart,' is, with great probability, attributed to her. Susanna Blamire did not write for fame, and fame was slow in coming to her. Her song, 'The Traveller's Return,' or 'The Nabob,' as it was sometimes called, was printed with her name in various collections of Scottish songs. It fell into the hands of a gentleman in India, Mr. Patrick Maxwell, and fascinated him by its appropriateness to his own thoughts. When he returned to England he devoted himself to the discovery of Miss Blamire's writings. In 1829 he found that Robert Anderson, the author of 'Cumberland Ballads,' possessed a few of her poems in manuscript and a few materials for a memoir. He continued his search among the members of Susanna Blamire's family and the families of her friends. He filled with like enthusiasm a medical student whom he met in Edinburgh, Dr. Lonsdale, a native of Carlisle. By their combined energy what remained of Susanna Blamire's manuscripts were gathered together, and such records of her life as still survived were collected. The fruit of their labours was at length published: 'The Poetical Works of Miss Susanna Blamire, "The Muse of Cumberland," now for the first time collected by Henry Lonsdale, M.D., with a preface, memoir, and notes by Patrick Maxwell,' Edinburgh, 1842. To this collection a few additions have been made in 'The Songs and Ballads of Cumberland,' edited by Sidney Gilpin, London, 1866.

[Authorities cited above.] M. C.

BLAMIRE, WILLIAM (1790-1862), tithe commissioner, was the nephew of Susanna Blamire [q. v.], being the only son of her brother William, who, in his early days, was a naval surgeon, but later in life settled down on his ancestral estate, The Oaks, near Dalston, in Cumberland. The vicar of Dalston was the famous William Paley, and by him William Blamire was baptised. In later life he attributed to his early intercourse with Paley, and his consequent knowledge of Paley's 'Moral and Political Philosophy,' the origin of those ideas which he was enabled to carry out in practical politics. He received a good education, first at Westminster School, and afterwards at Christ Church, Oxford, where he graduated in 1811. To the disappointment of his father he refused to follow any of the learned professions, and preferred to settle on one of his father's farms at Thackwood Nook, about three miles distant from his home. On his mother's side William Blamire was a nephew of John Christian Curwen [q. v.], of Workington Hall, who was the great promoter of agricultural improvements in Cumberland. William Blamire imbibed his uncle's zeal for agricultural science, and made many experiments in the breeding of stock, which cost him dear; but his experience was always at the service of his neighbours. He was well known at agricultural dinners, where his wise advice and his personal geniality made him deservedly popular amongst the sturdy and independent yeomen of his county. When, in 1828, he was nominated high sheriff of Cumberland, the yeomanry of the neighbourhood, to the number of several hundred, mounted their horses and escorted him to Carlisle, as a token of their desire to do him honour.

In politics William Blamire was a strong whig, and had taken an active part in parliamentary elections in behalf of his uncle, John Christian Curwen, who, in 1820, was elected both by the city of Carlisle and by the county of Cumberland. In the excitement about the Reform Bill the whigs in Cumberland resolved to run two candidates for the election of 1831. The personal popularity of William Blamire marked him out as the colleague of Sir James Graham against Lord Lowther, who sat as a conservative. The Cumberland election of 1831 is one of the most exciting in the annals of parliamentary

contests. The sole polling-place was at Cockermouth, at one corner of the county, in the neighbourhood where the Lowther interest was strongest. It needed the personal enthusiasm which Blamire inspired to induce voters to incur the expense of so long a journey. But his yeoman friends rode in such an imposing cavalcade towards Cockermouth that Lord Lowther felt it better to retire on the third day's polling than to be ignominiously defeated.

In 1834 Blamire married his cousin, Dorothy Taubman. In parliament he showed great knowledge of matters concerning land tenures, and was useful on committees; but his reputation was made by a speech on the Tithe Commutation Bill, which was introduced by Lord John Russell in 1836. He was complimented by Sir Robert Peel on his consummate knowledge of the subject. His suggestions were listened to by the government, and the adoption of a seven years' average of the price of corn as the basis of commutation was the result of his practical experience in farming matters. When the bill became law, Blamire was appointed the chief commissioner for carrying it into effect. He resigned his seat in parliament and devoted himself exclusively to the adjustment of details which concerned every landowner and every clergyman in England. He had able colleagues in Colonel Wentworth Buller and Rev. R. Jones. The work was enormous in its extent, and beset with difficulties. First, the sum to be paid in lieu of tithe had to be fixed for each parish, then the rent-charge so fixed had to be apportioned on the different properties in the parish. There was need of strong common sense and great power of conciliation to carry out so complicated a process. The absence of proper maps was another difficulty, and the commissioners had frequently to investigate and decide upon the exact boundaries of parishes. It was owing to Blamire's suggestion while engaged in this work that the ordnance survey was undertaken in 1842, in accordance with the report of a committee of which Blamire was a chief member. The work of the tithe commission lasted from 1836 to 1851, when it was practically completed. Few reforms of such magnitude, involving so many interests, have given such universal satisfaction, and have stood the test of time so well. The work of the tithe commissioners has needed no amendment.

Blamire's energies, however, were not entirely absorbed by the work of tithe commutation. He was interested in all questions affecting land tenure, and his suggestions were of great use to Lords Lansdowne and Brougham in framing their 'Copyhold Enfranchisement Act.' When this act came into force in 1841, Blamire was made a commissioner for the purpose of carrying it out. At first the enfranchisement was voluntary, but the commissioners pressed that it should be made compulsory, which was practically done by the acts of 1852 and 1858. Moreover, Blamire was of great service to the government in preparing the 'Commons Enclosure Act,' passed in 1845, by means of which large tracts of waste land were divided and enclosed, so that they could be brought under cultivation. The evidence given by Blamire before the committee of the House of Commons on 'Commonable Lands and Enclosure Acts' (1843) is one of the most important sources of information concerning the tenure and incidents of commons. After the passing of the act it was felt that the tithe commissioners could not be saddled with any fresh duties; but Blamire's assistance was considered to be so necessary that he was requested to assume the post of enclosure commissioner without any salary. It was at his suggestion that the act embodied clauses allowing the exchange of lands of equal value by a simple process. In 1846 the scope of the labours of the enclosure commissioners was still further extended by an 'Act authorising the Advance of Public Money to promote the Drainage and Improvement of Land in Great Britain.'

Besides attending to these important administrative measures Blamire was constantly consulted by ministers on all matters concerned with farming, such as the remedy for the potato blight, and the measures necessary to check the cattle plague. He prepared, in 1846, a Highway Act, which was postponed at the time; but his labours prepared the way for future legislation, and his principles practically prevail at present in regard to the administration of the highways. In all this work Blamire was unsparing of himself, and often was in his office till midnight. For months his horse was brought daily to the office door, in hopes that he might find time for a ride; but the horse was never used. His stalwart frame enabled him to endure much hard work; but in 1847 he was affected by paralysis of the right arm. He soon recovered, and worked as hard as before. His wife's death in 1857 took him back to Cumberland, where he had not visited his home for seventeen years. His last work was the completion of the Drainage Act by an 'Outfall Bill,' which was necessary to enable the drainage of low-lying and swampy ground. In the summer of 1860 his health entirely broke down. His mental and bodily powers slowly declined, and he died at Thackwood Nook on 12 Jan. 1862. Blamire is a conspicuous example of

practical capacity in an official position. His thorough knowledge of agriculture, combined with his good education and sound sense, enabled him to suggest practical solutions for many questions of complicated detail. His labours are of a kind that meets with small recognition; they are embodied in statutes and official reports. The working of the English parliamentary system put him in a position where his voice could be heard. He became an official without any previous training, and devoted to the public service remarkable powers of business and untiring industry.

[Lonsdale's Life of William Blamire in the Worthies of Cumberland, vol. i. 1867.] M. C.

BLANCHARD, SAMUEL LAMAN, commonly known as LAMAN BLANCHARD (1804–1845), author, born at Great Yarmouth on 15 May 1804, was the only son of Samuel Blanchard, by his wife Mary Laman, the widow of a Mr. Cowell. His father settled in Southwark in 1804 as a painter and glazier, and in 1809 young Blanchard entered St. Olave's School, where he made rapid progress. His parents declined the offer of the school trustees to send him to a university, and he became clerk to Mr. Charles Pearson, a proctor of Doctors' Commons. His tastes from an early period were literary, and the occupation proved distasteful to him. He made the acquaintance of Douglas Jerrold, then a youth of about his own age, and through Jerrold of Buckstone, the actor. After abandoning a notion of going to fight under Lord Byron in Greece, Blanchard resolved to devote himself to the stage. He contributed dramatic sketches, after Barry Cornwall's example, to a paper called the 'Drama,' and joined for a very short time a travelling troop of actors formed by the manager of the Margate theatre. Subsequently he became a proof-reader in the printing office of Messrs. Bayliss, of Fleet Street, and contributed prose and verse to the 'Monthly Magazine.' In 1823 he married Miss Ann Gates. In 1827, by means of N. A. Vigors, afterwards M.P. for Carlow, a relation of his wife, he was appointed secretary to the Zoological Society. He held the post for three years, and in that interval largely increased his literary acquaintance and influence. In 1828 William Harrison Ainsworth, then a publisher in Old Bond Street, published for him his 'Lyric Offerings,' a collection of verse, which he dedicated to Charles Lamb. The volume was highly praised by Lamb and Allan Cunningham. In 1831 Blanchard became acting editor of the 'Monthly Magazine' under Dr. Croly, and during the next year he began to edit the 'True Sun,' a daily liberal paper. But the 'True Sun' failed in 1836, and Blanchard was appointed editor of the 'Constitutional,' an advanced liberal organ, which soon died. During 1837 Blanchard edited the 'Court Journal,' and from 1837 to 1839 he edited the 'Courier,' a liberal evening newspaper, which under his management proved of service to his party. He retired from the paper in 1839 in consequence of a change in its proprietorship and politics, and a vain attempt was made by Sir Edward Bulwer and other friends to obtain for Blanchard a government clerkship or the editorship of the 'London Gazette.' From 1841 till his death he was closely connected with the 'Examiner.' In 1842 he edited a monthly magazine called 'George Cruikshank's Omnibus,' to which he contributed several poems. In February 1844 Mrs. Blanchard was seized with paralysis, and, after a painful illness, died on 15 Dec. following. Blanchard's health, long weakened by his uninterrupted journalistic work, gave way under the shock, and he died by his own hand in a fit of delirium on 15 Feb. 1845. He left three children, his eldest son being Sidney Laman Blanchard.

Blanchard's personal character was singularly attractive, and his friends were very numerous. Douglas Jerrold, J. B. Buckstone, E. Chatfield, and John Ogden he came to know in very early life, and in later years he was on terms of intimacy with Serjeant Talfourd, Charles Dickens, Leigh Hunt, John Forster, B. W. Procter, Robert Browning, George Cruikshank, and W. C. Macready. In 1831 he directed, at the father's request, the arrangements for the funeral of William Godwin's only son, who died of cholera. He was the firm friend of L. E. L.[andon] throughout her literary life, and published her 'Life and Literary Remains' in 1841. With William Harrison Ainsworth, the novelist, he was long in intimate relations, and he contributed a laudatory memoir of Ainsworth to the 'Mirror' in 1842, which has been frequently reprinted as a preface to Ainsworth's collected works. In 1832 he made the acquaintance of Sir Edward Bulwer Lytton, who had reviewed his 'Lyric Offerings' very favourably in the 'New Monthly Magazine,' and the friendship lasted till Blanchard's death.

Blanchard was in his own day a very popular writer of light literature, but he wrote nothing of lasting merit. His 'Sonnets' and his 'Lyric Offerings' show the influence of Wordsworth, but are commonplace in sentiment and versification. His *vers de société* run easily, but are less readable now than those of many of his contemporaries. His

prose essays take an invariably cheerful view of life, but they are not to be classed in the same category as the 'Essays of Elia,' which Blanchard clearly took as his model. Bulwer-Lytton warned Blanchard in early life that 'periodical writing is the grave of true genius,' and Blanchard's literary career proves the wisdom of the warning.

Bulwer-Lytton collected many of Blanchard's prose essays in 1846 under the title of 'Sketches of Life' (3 vols.) His poetical works were collected in 1876 by Blanchard Jerrold. The former work contains a portrait after a drawing by Maclise, and wood engravings by George Cruikshank, Kenny Meadows, and Frank Stone. The latter contains a portrait from a miniature by Louisa Stuart Costello. A series of amusing essays by Blanchard entitled 'Corporation Characters,' illustrated by Kenny Meadows, was published in 1855.

[Bulwer-Lytton contributed a memoir of Blanchard to his edition of the 'Sketches from Life,' 1846, which embodies some interesting reminiscences by J. B. Buckstone. Blanchard Jerrold wrote a memoir in the Poetical Works, 1876, and printed a series of interesting letters from many well-known literary men to Blanchard. Thackeray contributed an article on Blanchard to Fraser's Magazine, March 1846, which is reprinted in vol. xxv. of the Standard edition of Thackeray's Works, pp. 103–19.] S. L.

BLANCHARD, WILLIAM (1769–1835), comedian, was born at York 2 Jan. 1769, and for a few years was educated at a private school in that city. Losing both his father, John Blanchard, and his mother, whose maiden name was Clapham, while he was yet a child, he was left to the care of his uncle, William Blanchard, long well known as the proprietor of the 'York Chronicle,' by whom he was reared with a tenderness seldom displayed even by a parent. In 1782 he was placed in his uncle's office. He took such delight in Shakespeare that in 1785 he resolved to become an actor. He joined Mr. Welsh's company of travelling comedians at Buxton. His first appearance was as Allan-a-Dale in M'Nally's 'Robin Hood.' For four years he played under the name of Bentley, but from 1789 in his own name. He took the parts of Achmet, Douglas, and even Romeo. Asperne, of the 'European Magazine,' wrote of him at that period: 'I knew John Kemble in 1779, and he was not then half so promising a performer as William Blanchard appeared to me in 1790. Blanchard had more fire, more nature, and more knowledge of the stage.' He next became a manager, opening theatres at Penrith, Hexham, Barnard Castle, and Bishop Auckland. He lost money, and joined Mr. Brunton's company of players on the Norwich circuit, and took to comic parts. His first appearance in London was made at Covent Garden 1 Oct. 1800 as Bob Acres, in which he succeeded remarkably, and as Crack in the musical farce of the 'Turnpike Gate.' By the middle of his second season Mr. Harris cancelled the original arrangement for five years by re-engaging him for seven, with an increased salary. In certain classes of character he secured a position of recognised pre-eminence. Oxberry (p. 278) calls him 'unquestionably the best drunken man on the stage.' At Covent Garden Theatre, saving only for a brief professional visit to America in 1832, Blanchard remained continuously for thirty-four years. He was especially noted for his Shakespearian impersonations of Fluellen, Sir Hugh Evans, Menenius, and Polonius. According to Leigh Hunt, his best performance was the Marquis de Grand-Château in the musical toy show of the 'Cabinet.' Leigh Hunt also praises highly his Russett in Colman's 'Jealous Wife.' Similar testimony to his skill is borne by all the best dramatic critics of the time. The last character created by him was that of Counsellor Crowsfoot in Douglas Jerrold's comedy of 'Nell Gwynne,' produced at Covent Garden Theatre 9 Jan. 1833, which was warmly spoken of in the 'Athenæum,' 12 Jan. 1833. Blanchard's death occurred very suddenly on 8 May 1835. He died in his sixty-sixth year, and was buried in the graveyard of St. Luke's Church, Chelsea. His widow, Sarah Blanchard, who was left with two sons, survived her husband nearly forty years, dying at the age of eighty-nine on 15 Feb. 1875. Among the best known portraits of Blanchard in character are two by De Wilde, one representing him as Sir Andrew Aguecheek in 'Twelfth Night,' and the other as the Marquis de Grand-Château. Better known, through engravings of them, are two famous theatrical paintings. In the 'Scene from Love, Law, and Physic,' by George Clint, A.R.A., the original of which is preserved at the Garrick Club, lifelike portraits are introduced of Liston as Lubin Log, Mathews as Flexible, Blanchard as Dr. Camphor, and John Emery as Andrew; while in the scene from the 'Beggar's Opera' the same artist has given all but speaking likenesses of William Blanchard as Peachum, of Mrs. Davenport as Mrs. Peachum, and of Miss Maria Tree as Polly. Exactly a year and a day after Blanchard's death his uncle died on the very day on which he completed his eighty-seventh year, after having honourably conducted the 'York Chronicle' for sixty years as editor and proprietor.

Blanchard, March 1884; Geneste, vii. 509, passim through the rest of that and vols. viii. and ix.; Annual Register, 1835, p. 221; Croker's Walk from London to Fulham, 1860, p. 81; Hunt's Critical Essays on the Performers of the London Theatres, pp. 122–4.] C. K.

BLANCHARD, WILLIAM ISAAC (*d.* 1796), stenographer, was the grandson of a French refugee, who resided in England. He became a professional shorthand writer, and practised his art in Westminster Hall from 1767 till his death in 1796. His offices were at 4 Dean Street, Fetter Lane, and 10 Clifford's Inn. He was the inventor of two separate and distinct systems of stenography, the first of which he published under the title of 'A Complete System of Shorthand, being an improvement upon all the authors whose systems have yet been made public; is easy to be attained, and may be read again at any distance of time with the greatest certainty; it being properly adapted to the Latin tongue, and all sorts of technical terms, will make it extremely useful for law, physic, or divinity,' Lond. 1779, 8vo, 16 pp. and two plates. This was followed by the explanation of a much more elaborate system in 'The Complete Instructor of Shorthand, upon principles applicable to the European languages; also to the technical terms used by anatomists, and more comprehensive and easy to write and to read than any system hitherto published,' Lond. 1786, 4to. The method of stenography described in this last work was never practised to any extent, and it certainly does not deserve the extravagant praise bestowed upon it by the author of the 'Historical Account of Shorthand,' which passes under the name of James Henry Lewis. Several trials taken in shorthand by Blanchard were published between 1775 and 1791, including the trials of Admiral Keppel and Horne Tooke.

Jones (1783), 77; Shorthand (1883), ii. 11.] T. C.

BLAND, ELIZABETH (*fl.* 1681–1712), celebrated for her knowledge of Hebrew, was the daughter and heiress of Robert Fisher, of Long Acre, and was born about the time of the Restoration. Her Hebrew teacher is said to have been Francis van Helmont, commonly known as Baron van Helmont. She was married on 26 April 1681 at St. Mary-le-Savoy to Mr. Nathaniel Bland, then a merchant of London and freeman of the Glovers' Company, but who in 1692 succeeded his father, Richard Bland, as lord of the manor of Beeston, near Leeds, Yorkshire, where he thenceforward resided. Of their six children all but two, Joseph and Martha, died in infancy. It appears from Thoresby's 'Ducatus Leodiensis' that Mrs. Bland was alive in 1712. She is known only by a phylactery in Hebrew written at Thoresby's request for his 'Musæum Thoresbianum,' to which she also presented a 'Turkish Commission.' Dr. Nathaniel Grew describes the phylactery as a scroll of parchment ¼ in. broad and 15 in. long, with four sentences of the law (Exod. xiii. 7–11, 13–17; Deut. vi. 3–10; and Deut. xi. 13–19) 'most curiously written upon it in Hebrew.' She taught Hebrew to her son and daughter.

[Ballard's Memoirs of Celebrated Ladies, ed. 1752, p. 416; Thoresby's Ducatus Leodiensis, p. 207; catalogue of his museum, pp. 59, 128; Dr. Grew's Rarities preserved at Gresham College, ed. 1681, p. 377.] R. H. B.

BLAND, HUMPHREY (1686?–1763), of Bland's Fort, Queen's County, Ireland, general and colonel of the King's dragoon guards, and military writer, belonged to a family originally of Yorkshire, settled in Ireland about 1664. According to fragmentary notices in the published records of regiments of which he was colonel, he obtained his first commission on 4 Feb. 1704; made several campaigns under Marlborough as lieutenant and captain in some regiment of horse; and was wounded at the battle of Almanara in 1710, whilst serving in Spain with the Royal dragoons. The authority for these statements is uncertain. In 1715, when Honeywood's dragoons, the present 11th hussars, were raised in Essex, Bland was appointed major in the regiment, and served with it in the north of England during the Jacobite disturbances of that year, in which he appears to have been conspicuous by his zeal and activity. Among the Duke of Marlborough's MSS. are lists of 'gentlemen and noblemen of distinction taken at Preston and carryed to London by Major Bland,' which evidently refer to this period (see *Hist. MSS. Comm. 8th Report*). Subsequently he became lieutenant-colonel of the King's regiment of horse, now the King's dragoon guards, and while so employed brought out his 'Treatise on Discipline,' a work which went through many editions, and for the greater part of the century was the recognised text-book of drill and discipline in the British army. His

staunch loyalty to the reigning house, no less than his undoubted military ability, appears to have gained him favour, and he was appointed, in succession, colonel of 36th foot (1737) and of 13th dragoons (1741), both on the Irish establishment, and afterwards of the 3rd King's Own dragoons, which regiment was long known as Bland's dragoons. He became quartermaster-general at head-quarters in 1742, and in the same capacity made the campaigns in Flanders, in which he had a horse shot under him at Dettingen, and much distinguished himself at Fontenoy. He was governor of Fort William 1743-52. He held a major-general's command under the Duke of Cumberland in the Culloden campaign. In 1749 he was appointed governor of the town and garrison of Gibraltar, in succession to Lieutenant-general Hargreaves, and proceeded thither with a special mission 'to redress the civil grievances of which the inhabitants of the city had complained' (*Lansd. MSS.* 1234). About the same time General Bland and the master of the rolls were nominated to assess the costs and damages ordered to be paid by General Anstruther in respect of matters in the island of Minorca (Doddington's *Memoirs*, p. 119). In 1752 General Bland was transferred to the colonelcy of the King's dragoon guards, and in the same year (Feb. 15) he was appointed governor of Edinburgh Castle, an office which he retained till his death. On 17 Nov. 1753 he was appointed commander-in-chief of the forces in Scotland. The remainder of his life appears to have been chiefly passed on his Irish property at Bland's Fort. He died in London in 1763, without issue, aged seventy-seven. There is a letter in the British Museum, addressed by his wife, Mrs. Elizabeth Bland, to Lord Bute about the year 1762, which shows that some attempt was made to influence the political views of the veteran general by measures then only too common. 'I abhor the thought of shocking Mr. Bland with the mean and indelicate proposal mentioned,' writes the lady; 'and if it should please his majesty to deprive him of the employments he has the honour to hold, which I flatter myself, from the king's infinite goodness and humanity and Mr. Bland's long and well-intended services, will not be the case, I will not expose my reputation to the censure of the world by accepting any mercenary consideration for the purpose' (*Add. MSS.* 5726 C. f. 45). On 12 Jan. 1755 he was married at Edinburgh to Elizabeth (*b.* 31 Jan. 1721-2), eldest sister of John Dalrymple, fifth earl Stair [q. v.] She survived her husband many years, and died at Isleworth on 14 Oct. 1816, the same day as her late husband's nephew and coheir, General Thomas Bland, colonel 5th dragoon guards (see Cannon, *Hist. Rec. 5th Drag. Gds.*)

Bland's 'Treatise on Discipline' was first published in 1727; in the preface the author describes it as intended to record the practice followed in the recent campaigns, personal knowledge of which even then was fast dying out, and as being the only work on the subject of military discipline which had appeared in the English language since the publication, fifty years before, of the Earl of Orrery's treatise, which by that time had become obsolete. The latest edition appeared in 1762, and is marked on the title-page as the ninth. It contains, amongst other corrections and additions, some curious instructions for the drill and manœuvre of the light troops of regiments of horse and dragoons, by Mr. Fawcett, an officer of Elliot's light horse, afterwards General Sir W. Fawcett, adjutant-general of the forces.

In a miscellaneous volume preserved among the Lansdowne MSS. in the British Museum, there is an autograph book of some forty pages, which appears to have escaped the notice of historians of Gibraltar. It is described as 'An Account of Lieutenant-general Bland's Conduct during the time he was governor of Gibraltar, showing the methods he took to establish his majesty's revenue, the property of the inhabitants, and the civil police of the town in all its branches. With the methods taken by him to cultivate a good understanding with his neighbours the Spaniards and Moors. Written by himself for the information of those who may succeed to this command. Given at Gibraltar 3rd day of May 1751' (*Lansdowne MS.* 1234, p. 91). The work evinces a very comprehensive grasp of administrative detail, civil as well as political, and was written, the author states, 'that his successors may not labour under the same disadvantage as himself, to find everything in confusion, and no information of any kind left to guide them.'

[Carlisle's Collections for a Hist. of Ancient Family of Bland (London, 1826); Cannon's Hist. Records 1st Drag. Gds., 3rd, 11th, 13th Drags., 36th Foot; Lansdowne and Add. MSS. *ut supra*; Home Office, Mil. Entry Books, 1700-50; Bland's Treatise on Discipline, various eds.; Scots Mag. 1749, 1752, 1753, 1754.] H. M. C.

BLAND, JOHN (*d.* 1555), Marian martyr, was born at Sedbergh on the north-west border of Yorkshire, was educated by Dr. Lupton, provost of Eton, and took the degree of M.A. at Cambridge University. He was for some time a 'bringer-up of youth,' perhaps in the school of Furness Abbey, one of his pupils being Edwin Sandys, afterwards

archbishop of York. Eventually he entered the ministry and became rector of Adisham in Kent. On Mary's accession his churchwarden, heading the papists in his parish, procured in December 1553 a priest from a neighbouring parish to say mass. Bland interfered before the celebration, and explained to the people the 'misuse of the sacrament in the mass.' He was immediately arrested, and in May 1554, having spent ten weeks in prison, was examined before Harpsfield, archdeacon of Canterbury, and Collins, the commissary of Cardinal Pole. This examination and many others led to no result, and for some ten months Bland was kept in close confinement 'within the bar amongst the felons, and irons upon our arms.' His chief enemy was Thorneden, suffragan bishop of Dover, who superseded him in his living. Both Collins and Thorneden had turned with the times, and Bland was able to remind them both to their faces publicly how he had heard them make profession of the opinions they were now persecuting. After many and tedious examinations, in which Bland gallantly held his foes at bay, he finally, in June 1555, confessed his denial, firstly, of the corporal presence; secondly, of the legality of administration of the sacraments in an unknown tongue; and, thirdly, of the legality of administration of the eucharist in one kind; he was consequently condemned, and on 12 July 1555 burned at Canterbury, along with John Sheterden, vicar of Rolvenden, and two laymen, John Frankish and Humfrey Middleton.

[Foxe's Acts and Monuments; Strype's Memorials, iii. 211; Allen's History of Yorkshire, iii. 357.] R. B.

BLAND, JOHN (1702-1750), writing-master, was born 17 Aug. 1702 in Crutched-friars, London, his father being a clerk in the Victualling Office, Tower Hill (Massey, *Origin and Progress of Letters*, part ii. p. 25). About 1710 John Bland was put to Westminster School, where he stayed four years, and then, returning to the city, he became a pupil of a Mr. Snell, Foster Lane. About 1717 he took a clerkship in the Custom-house (his own *Essay on Writing*, 1730, preface), where he stayed nine years, and where he acquired his knowledge of ship-marks, invoices, bill-headings, applications, petitions, &c., which form the matter of his published copy-plates. In 1726 he became writing-master in Mr. William Watts's Academy in Little Tower Street, and thence, in 1730, he issued the 'Essay on Writing,' his preface being dated 13 Jan. 1729-30. About the same time Bland prepared five elaborately flourished pieces of penmanship for George Bickham's 'Universal Penman' (Massey, part ii. p. 27). In 1739, after thirteen years with Mr. Watts, he established himself in Birchin Lane as an accountant and a writing-master. In 1740 another writing-master, Joseph Champion, issued a work, 'Penmanship,' &c., in which some specimens by Bland appeared. In 1744 Bland relinquished his office in Birchin Lane, and opened an academy in Bishopsgate Street, and he continued at the head of that till he died, 21 Jan. 1749-50, aged 47. He was buried in St. Martin Outwich Church, at the end of Threadneedle Street. Bland's 'Essay on Writing' was republished in 1803.

[Massey's Origin and Progress of Letters, part ii., article 'John Bland;' Preface to Bland's own Essay on Writing, 1730; Preface to Joseph Champion's Penmanship, 1740.] J. H.

BLAND, JOHN (*d.* 1788), dramatist, is the author of a solitary dramatic production, the 'Song of Solomon,' in seven scenes, printed in 8vo in 1750. He is therein styled a gentleman, and is described as living in Portpool Lane, Gray's Inn Lane, where he is prepared to give lessons in the art of punctuation by the accent points in the Hebrew code. The 'Biographia Dramatica' asserts that he died at his house at Deptford about November 1788.

[Baker's Biog. Dramat.; Egerton's Theatrical Remembrancer, 1788; Gilliland's Dramatic Mirror, 1808.] J. K.

BLAND, MARIA THERESA (1769-1838), vocalist, was the daughter of Italian Jews named Romanzini. Her parents came to London soon after their daughter's birth, and in the spring of 1773, through the influence of a hairdresser named Cady, obtained an engagement for their child at Hughes's Riding School. Her vocal talent developed at a very early age, and after singing at the Royal Circus she was engaged by Daly for the Dublin Theatre, where she sang with great success. In 1782, on the retirement of Mrs. Wrighten, she was engaged at Drury Lane to take her parts, which were those known as 'singing chambermaids.' Miss Romanzini's first appearance at Drury Lane took place on 24 Oct. 1786, when she played Antonio in an English version of Grétry's 'Richard Cœur-de-Lion.' In 1789 she went to Liverpool, and sang there with such success, both on the stage and at concerts, that she refused to return to Drury Lane unless her salary were raised. The management declining to grant her request, after waiting a few weeks, she came back to London and resumed her

place at Drury Lane. On 21 Oct. 1790 she was married to Bland, a brother of Mrs. Jordan of Drury Lane Theatre, and an actor of no great distinction. Mrs. Bland remained attached to the Drury Lane company for the greater part of her life, but she also sang at the Haymarket under Colman's management, where her first appearance took place in 1791, as Wowski in Arnold's 'Inkle and Yarico.' She also sang for several seasons at Vauxhall. In 1824 she began to exhibit symptoms of imbecility, which developed into a kind of melancholy madness. On 5 July 1824 a performance was given for her benefit at Drury Lane, which produced (together with a public subscription) about 800*l*. The money was handed over to Lord Egremont, who allowed her an annuity of 80*l*. She lived for the rest of her life with a family named Western, at the Broadway, Westminster, where she died of a fit of apoplexy on 15 Jan. 1838. She was buried at St. Margaret's, Westminster, on 25 Jan. Her husband, whom it was said that she had treated badly, left her some years earlier and went to America, where he died. Mrs. Bland's voice was a mezzo-soprano of very sweet quality. Her powers were limited, but as a singer of English ballads she was singularly perfect and free from any blemish of style or taste. In person she was short and dark, but her acting was very bright and vivacious. The following is a list of the principal engraved portraits of her: 1, in the 'Thespian Magazine,' vol. i., by J. Condé (published 1 Aug. 1792); 2, as Miss Notable in the 'Lady's Last Stake,' by De Wilde (published 23 June 1795); 3, as Nina in the 'Prisoner' (published 1 Feb. 1796); 4 and 5, as Mary Ann in the 'School for Guardians,' by Graham (published 21 Jan. 1797); 6, 'The Little Bland Melodist' (coloured) (published 12 March 1805); 7, as Madelon in the 'Surrender of Calais' (n. d.); and 8, as Sally in the 'Shipwreck,' by De Wilde (n. d.) Mrs. Bland had two sons: Charles, a tenor singer, who was the original Oberon in Weber's opera, and James, a bass, who began life as an opera singer, but was afterwards better known as an actor of burlesque, and who died at the Strand Theatre on 17 July 1861.

BLAND, MILES (1786–1867), mathematician, born in 1786, was educated at St. John's College, Cambridge, where he graduated B.A. in 1808, as second wrangler and Smith's prizeman. He was afterwards elected fellow (5 April 1808) and tutor of his college, and acted as moderator (1814, 1815, 1816) and public examiner (1817–1818) in mathematics. He became rector of Lilley, Hertfordshire, in 1823, and a prebendary of Wells Cathedral in 1826, when he proceeded D.D. Bland was a fellow of the Royal Society, of the Society of Antiquaries, and of the Astronomical Society. He died 27 Dec. 1867. His chief works are: 1. 'Geometrical Problems . . . from the first six books of Euclid . . . with the elements of Plane Trigonometry,' Cambridge, 1819, 2nd edit. 1821, 3rd edit. 1827. 2. 'Algebraical Problems,' a very popular schoolbook, first published in 1812, 9th edit. 1849. 3. 'The Elements of Hydrostatics,' 1824, 1827. 4. 'Annotations on the Historical Books of the New Testament;' vol. i. St. Matthew's Gospel (1828), vol. ii. St. Mark's Gospel (1829). 5. 'Mechanical and Philosophical Problems,' 1830.

[Men of the Time, 7th edit.; Brit. Mus. Cat.; Baker's Register of St. John's College, ed. Mayor, i. 312, 314; Notes and Queries, 6th ser. ix. 218.]

BLAND, ROBERT (1730–1816), the elder, physician, was the son of an attorney at King's Lynn, and was educated at the London hospitals. He received the degree of M.D. from the university of St. Andrews in 1778, and was admitted licentiate of the College of Physicians on 30 Sept. 1786. He obtained an extensive practice as an accoucheur in London, and in this department acquired so high a reputation that he was engaged to write all the articles on midwifery for Rees's 'Cyclopædia.' To the 'Philosophical Transactions' he contributed in 1781 a paper on 'Some Calculations of the number of Accidents or Deaths which happen from Parturition; Proportion of Male and Female Children born; of Twins, Monstrosities, &c.;' and in the same year a 'Table of the Chances of Life from Infancy to Twenty-six years of age.' He published in 1794 'Observations on Human and Comparative Parturition,' and he was also the author of 'Proverbs chiefly taken from the Adagia of Erasmus, with Explanations; and illustrated by Examples from the Spanish, Italian, French, and English Languages,' 2 vols., 1814. He died at Leicester Square on 29 June 1816.

[Gent. Mag. lxxxvi. part ii. 186; Munk's Roll Coll. of Phys. (1878), ii. 365; Watt's Bibl. Brit. i. 120.]

BLAND, ROBERT (1779?–1825), the younger, classical scholar, son of Robert Bland [q. v.], was born about 1779. He was educated

at Harrow and at Pembroke College, Cambridge, where he graduated B.A. in 1802. On leaving Cambridge he entered holy orders, and became an assistant-master at Harrow. After some years he resigned his mastership, and was engaged as reader and preacher at some London chapels. Later he was appointed minister to the English church at Amsterdam; but 'the circumstances of the times not permitting him to fulfill the objects of his appointment,' he came back to England, and received, in 1813, the curacy of Prittlewell, Essex, which he exchanged in 1816 for the curacy of Kenilworth. He died at Leamington 12 March 1825, leaving a widow and nine children. As a classical scholar and teacher he was much esteemed in his day. His 'Elements of Latin Hexameters and Pentameters,' which has been frequently reprinted, is still a useful manual of instruction; and his 'Translations, chiefly from the Greek Anthology, with Tales and Miscellaneous Poems,' 1806, 8vo, attracted considerable notice. Bland's other works are: 1. 'Edwy and Elgiva, poems,' 1808, 8vo. 2. 'The Four Slaves of Cythera, a Poetical Romance,' 1809, 8vo. 3. 'A Collection of the Most Beautiful Poems of the Minor Poets of Greece,' 1813, 8vo. 4. 'Collections from the Greek Anthology,' &c. 1813, 8vo. 5. A translation, made in conjunction with Miss Plumptre, of the 'Memoirs of Baron de Grimm' and 'Diderot,' 2 vols. 1813, 8vo. Byron complimented Bland in 'English Bards and Scotch Reviewers.' Some interesting letters of Bland's are printed in 'Memoirs of Francis Hodgson,' i. 232–249.

[Gent. Mag. xcv. 646; Hodgson's Memoirs; Watt.] A. H. B.

BLAND, TOBIAS (1563?–1604), divine, born in or about 1563, matriculated as a sizar of Pembroke Hall, Cambridge, in December 1576, and took his bachelor's degree in 1580–1. He migrated to Corpus Christi College in 1581, and was shortly afterwards accused of composing a libel against the master of that college, Dr. Norgate. The libel was entitled 'A Necessary Cathecisme to be red every Sunday morninge.' It began thus: 'In the name of the father, the sonn, and the old wiffe.' Certain passages of the libel were strongly suspected to refer to Sir Francis Walsingham. Bland confessed his fault before the master, fellows, and scholars, whereupon he was 'put to shame of sytting in the stocks,' and was afterwards expelled from the college. In 1584 great opposition was shown when he wished to take his master's degree. Among the Lansdowne MSS. is a Latin letter against Bland addressed to Lord Burghley, and signed by fifty members of the senate; but the opposition failed. In 1589 he was chaplain to John, Lord St. John, baron of Bletsoe. In 1591 he proceeded B.D., about 1594 became sub-almoner to Queen Elizabeth, and on 29 Oct. 1602 was collated to a canonry in the church of Peterborough. He died at the end of 1604, and was buried at King's Cliffe, Northamptonshire. He published in 1589 a sermon on 1 Timothy iv. 1–2, under the title of 'A Baite for Momus, so called upon occasion of a sermon at Bedford iniuriously traduced by the factions. Now not altered but augmented. With a briefe Patrocinie of the lawfull use of Philosophie in the more serious and sacred studie of diuinitie. By Tobie Bland, Chaplaine to the right Honourable John, Lord Saint John, Baron of Bletsoe,' 4to, black letter. In a marginal note the author makes mention of his 'larger Apologie of Philosophie in a former treatise.' But the 'former treatise' is not extant, and perhaps was not published. Some quaint proverbs occur in the 'Baite for Momus.'

[Lansdowne MS. 45, art. 65–7; Bridge's Northamptonshire, ii. 564; Le Neve's Fasti, ed. Hardy, ii. 543; Cooper's Athenæ Cantabrigienses, ii. 395; Baite for Momus, 1589; Ames's Typog. Antiq. (Herbert), 1176.] A. H. B.

BLAND, WILLIAM (1789–1868), Australian statesman, was born in London 5 Nov. 1789. He was son of Robert Bland the elder [q. v.], and brother of Robert Bland, classical scholar [q. v.] Bland is said to have been educated at the Merchant Taylors' School, but his name does not appear in the Rev. C. J. Robinson's register of that institution. His father was his instructor in medicine and surgery; when scarcely nineteen he was admitted, at an examination held by the Royal College of Surgeons for the naval medical services, a surgeon 5th rate 6 Jan. 1809, and soon after received an appointment in the royal navy. The vessel to which he was assigned sailed for Bombay. During the voyage, some misunderstanding having arisen between Mr. Bland and the purser, it culminated in a quarrel when the ship neared the Persian Gulf, and a duel took place as soon as they reached the land, in which the purser was fatally wounded. An insinuation of unfairness on the part of Lieutenant William Randall led to a second duel, in which neither principal was hurt; but both were arrested, and subsequently tried at Calcutta and sentenced to seven years' transportation. Bland was exiled to Sydney, where he ar-

rived in 1814, and seven or eight months later began to practise his profession, a free pardon having in the meantime been granted to him. Whilst smarting under domestic affliction, Bland libelled Governor Lachlan Macquarie, was tried, fined 50*l.* and imprisoned for twelve months in Paramatta gaol. On his release he devoted himself in Australia to public affairs and philanthropic projects. He appears to have been in England after this period, as he was passed by the Royal College of Surgeons as a naval assistant surgeon 2 May 1823, and as a naval surgeon 7 July 1826. Next to William Charles Wentworth, Australia is indebted to Bland for the political institutions she now enjoys. His energetic action as a member of the Patriotic Association, his letters to Charles Buller, M.P., on the indefeasible rights of the colonists, and his attention to the public charities, gained for him a deserved popularity, which resulted in his return 15 June 1843 as one of the members for Sydney to the first elective legislature in New South Wales. On his retirement in 1848, consequent on his defeat by Mr. Lowe (afterwards Viscount Sherbrooke), he devoted himself to the practice of his profession, and to those philanthropic labours which endeared him to hundreds of his fellow-colonists. He died suddenly at his residence, 28 College Street, Sydney, 21 July 1868, and was buried in the necropolis.

[Heaton's Australian Dictionary of Dates (1879), pp. 18–19; Illustrated News of the World, iv. 68 (1859), with portrait; Carlisle's History of the Family of Bland (1826), pp. 235–47.]

G. C. B.

BLANDFORD, WALTER, D.D. (1619–1675), bishop successively of Oxford and Worcester, was the son of Walter Blandford, and was born at Melbury Abbas, Dorsetshire, in 1619. He became a servitor of Christ Church, Oxford, in 1635, was admitted a scholar of Wadham College in 1638, took the degrees in arts, and was in 1644 admitted a fellow of the latter college. The fact that he was not ejected by the parliamentary visitors in 1648 shows, in Wood's opinion, 'that he did either take the covenant or submit to them.' About this time he was appointed chaplain to John, Lord Lovelace of Hurley, Berkshire. In 1659 he was elected warden of Wadham College, and in the following year created D.D. At this period he was chaplain to Sir Edward Hyde, afterwards earl of Clarendon, who obtained for him a prebend in the church of Gloucester and a chaplainship in ordinary to the king. In 1662–3 he served the office of vice-chancellor of the university. He was consecrated bishop of Oxford in 1665, was nominated dean of the Chapel Royal soon afterwards, and in 1671 was translated to the see of Worcester, where he died 9 July 1675. It is related that when the Duchess of York (daughter of his patron, Lord Clarendon) was dying, Dr. Blandford went to see her. The duke (afterwards James II) meeting the bishop in the drawing-room told him that she had been reconciled to the Roman catholic church, when the bishop said he made no doubt but that she would do well, since she was fully convinced, and did it not out of any worldly end; and he afterwards went into the room to her, and made her a short christian exhortation, suited to the condition she was in, and then departed (*Life of James II*, ed. Clarke, i. 452, 453).

[Wood's Athenæ Oxon. (Bliss), iii. 1229, 1258, iv. 514, 829, 851, 897, and Life of Wood, p. xliv; Godwin, De Præsulibus (Richardson), 474, 547; Egerton MS. 806; Lansd. MS. 986 ff. 120, 121; Chambers's Worcestershire Biography, 184; Le Neve's Fasti, i. 449, ii. 506, iii. 67, 478, 578.]

T. C.

BLANDIE or BLANDY, WILLIAM (*fl.* 1580), author, born at Newbury, Berkshire, was educated at Winchester College; was elected a probationer fellow of New College, Oxford, on 8 June 1563, and was admitted B.A. 3 July 1566. Soon afterwards he was removed from his fellowship by the Bishop of Winchester on account of his strong popish leanings. He then went to London and joined the Middle Temple, where he became 'fellow.' He appears to have served in the Low Countries with the English army in 1580. He was the author of: 1. 'The Five Books of the Famous, Learned, and Eloquent Man, Hieronimo Osorius [Osorio da Fonseca, bishop of Silves], contayning a discussion of Ciuill and Christian Nobilitie,' 1576, dedicated 'at Newberie, 6 day of April,' to the Earl of Leicester. 2. 'The Castle or Picture of Pollicy, shewing forth most liuely the face, body, and partes of a commonwealth, the duety .... of a perfect .... souldiar, the martiall feates late done by our .... nation, under the conduct of .... J. Noris, Generall of the army of the states in Friesland. ... Handled in manner of a Dialogue betwixt Gefferay Gate and William Blandy, souldiars,' 1581, dedicated to Sir Philip Sidney. An undated volume on ancient chronology, by Adam and William Blandy, fellows of Pembroke College, Oxford, has been erroneously ascribed to this William Blandy. The book was certainly published early in the eighteenth century. Adam Blandy proceeded B.A. at Oxford in

1704 and M.A. in 1707. William proceeded B.A. in 1708 and M.A. in 1711, and died in 1739. They were probably descendants of the earlier William Blandy, and sons of Adam Blandy of Letcombe Regis, Berkshire (BERRY'S *Berkshire Genealogies*, 144).

[Wood's Athenæ Oxon. (Bliss), i. 428; Oxford Register (Oxf. Hist. Soc.), i. 264; Brit. Mus. Cat.; see Notes and Queries, 8th ser., iii. 67, 119; Hunter's MS. Chorus Vatum.] S. L.

BLANDY, MARY (*d.* 1752), murderess, was the only child of Francis Blandy, attorney, of Henley-on-Thames, who had said that he could leave her a fortune of 10,000*l.* An officer in the marines, named William Henry Cranstoun, son of William, fifth Lord Cranstoun, proposed to marry her. The father objected, suspecting Cranstoun to be already married. He had, in fact, married Anne Murray in 1745. Hereupon Cranstoun induced Miss Blandy to administer arsenic in small doses to her father. He died after some months on 14 Aug. 1751. Miss Blandy was tried at Oxford on 3 March 1752, convicted upon strong evidence, including that of her father's physician, Anthony Addington [q. v.], and hanged on 6 April 1752. Much attention was aroused at the time, especially by the pathetic circumstance that the father, when he knew himself to be dying by his daughter's hands, only pitied her and tried to prevent her committing herself. He appears to have thought that she mistook the poison which she received from Cranstoun for a potion intended to win his favour to the match. This view was suggested at the trial and solemnly asserted by Miss Blandy at her death, but is inconsistent with many facts brought out in evidence. Cranstoun escaped, but died 2 Dec. 1752. It was remarked as a strange coincidence that a banker in the Strand, named Gillingham Cooper, received, as lord of the manor at Henley, the forfeiture of two fields belonging to Miss Blandy and of a malthouse belonging to Miss Jefferys, who on 28 March 1752 was hanged for the murder of her uncle at Walthamstow.

[Tryal of Mary Blandy for the Murder of her Father, &c., 1752, reprinted in Howell's State Trials, xviii. 1118-1194; Annual Register for 1768, p. 77; Gent. Mag. for 1752, pp. 108, 152, 188; Universal Magazine for June 1752; Letter from a Clergyman to Miss Blandy, with her own Narrative, 1752; Miss Blandy's own Account, &c., London, 1752; An Answer to Miss Blandy's Narrative; A Candid Appeal to the Public concerning, &c., 1752; Horace Walpole's Letters (Cunningham), ii. 281, 285, 290, 306, 312, 346; Notes and Queries, 5th ser., iii. 67, 119; Douglas's Scotch Peerage, i. 368.] L. S.

BLANE, SIR GILBERT (1749-1834), physician, was the fourth son of Mr. Gilbert Blane of Blanefield, Ayrshire, where he was born on 29 Aug. (O. S.) 1749. At the age of fourteen he was sent to the university of Edinburgh, being at first intended for the church, but was ultimately led to study medicine. After spending five years in the faculty of arts, and five more in that of medicine at Edinburgh, he took the degree of M.D. in the university of Glasgow on 28 Aug. 1778. During his studentship he was elected one of the presidents of the (Students') Medical Society of Edinburgh. On leaving Edinburgh Blane came to London furnished with introductions from his teacher, Dr. Cullen, to Dr. William Hunter, who recommended him as private physician to Lord Holdernesse, and afterwards in the same capacity to Admiral Rodney, who was then sailing on his notable expedition to the West Indies in 1779. Blane won Rodney's good opinion by his professional skill and also by his personal bravery, which was shown in conveying the admiral's orders under fire in a dangerous emergency to the officers at the guns. Rodney at once placed him in the important position of physician to the fleet, which he occupied till the close of the war, returning to England with Admiral Francis William Drake in the spring of 1783. He was present at six general engagements, and wrote an account, which was published, of the great victory over the French fleet commanded by the Comte de Grasse on 12 April 1782. He also furnished materials for Mundy's 'Life of Rodney,' and took part in a controversy which subsequently arose respecting that great admiral's originality in introducing into naval warfare the manœuvre of 'breaking the line.' These, with many other circumstances, show the intimate friendship which existed between Blane and his commander. The officers of the West India fleet also marked their appreciation of Blane's services by unanimously recommending him to the admiralty for a special recompense, which he received in the form of a pension from the crown. In 1781, when Rodney was compelled by the state of his health to come home for a time, Blane accompanied him, and took the opportunity of being admitted as licentiate of the College of Physicians on 3 Dec. 1781, but returned to the West India station early in 1782.

The services which Blane rendered while in medical charge of the West India fleet, and the reforms which, firmly supported by Rodney, he was able to introduce, were indeed of the most signal importance, not only to the efficiency of that fleet, but as inaugurating a new era in the sanitary condition of the

navy. Before his time scurvy prevailed to a lamentable extent among seamen, so that important naval operations often failed from this cause alone. Fevers and other diseases arising from infection and the unhealthy state of ships also caused great mortality. Blane, in a memorial presented to the admiralty on 13 Oct. 1781, showed that one man in seven died from disease on the West India station in one year. He suggested certain precautions, especially relating to the supply of wine, fresh fruit, and other provisions, adapted to prevent scurvy, and also advocated the enforcement of stricter discipline in sanitary matters on board ship. In a second memorial (16 July 1782) he points out the great improvement effected by the carrying out of these suggestions, the annual mortality being reduced to one in twenty. The health of the fleet during the latter part of Rodney's command was indeed remarkably good, and greatly contributed to its successes, as was generously acknowledged by the commander himself in the following words:—'To his (Dr. Blane's) knowledge and attention it was owing that the English fleet was, notwithstanding their excessive fatigue and constant service, in a condition always to attack and defeat the public enemy. In my own ship, the Formidable, out of 900 men, not one was buried in six months.'

In 1780 Blane brought out a small book 'On the most effectual means for preserving the Health of Seamen, particularly in the Royal Navy.' Later on, in 1793, his recommendation of lemon-juice as a preventive of the scurvy to Admiral Sir Alan Gardner, one of the lords of the admiralty, produced such good results as led to the issuing in 1795 of regulations for the universal use of this article in the navy. Though Blane was by no means the discoverer of this remedy, which had been known for more than a century, and had been strongly recommended by Dr. Lind and others, he was the means of introducing those regulations which have entirely banished scurvy from the queen's ships.

Shortly after Blane's return to England a vacancy occurred for a physician at St. Thomas's Hospital, and as he was now resolved to practise in London, he became a candidate. The influence of Lord Rodney, who after his brilliant victories was one of the most popular men in England, was warmly exerted on his behalf. In a letter to one of the governors Rodney bore the generous testimony to Blane's merits which has already been quoted. After a sharp contest Blane was elected, on 19 Sept. 1783, by 98 votes to 84. He held this office for twelve years, resigning it in 1795.

In 1785 Blane was appointed physician extraordinary to the Prince of Wales, on the recommendation of the Duke of Clarence, with whom he had become acquainted in his naval career; and afterwards became physician to the prince's household and his physician in ordinary. In 1785 also he produced the first edition of his work on the diseases of seamen, which passed through several editions and attained the position of a medical classic.

His court and hospital appointments, with other connections, appear to have procured Blane a large practice, but he was more especially known for his services in public affairs, naval, military, and civil.

In 1795 he was appointed one of the commissioners for sick and wounded seamen, a body which was virtually the medical board for the navy, and held this position till the reduction of the naval and military establishments after the peace of Amiens in 1802, when his services were rewarded with a doubling of his former pension.

His advice was frequently sought by the government and other authorities on sanitary and medical matters. Thus in 1799 the Turkey Company, which then controlled the whole of the Levant trade, consulted him about the quarantine regulations for the prevention of the importation of plague from the Mediterranean, and he was called upon by the government to draw up, in conjunction with other eminent physicians, the rules which formed the basis of the Quarantine Act of 1799. When the army returned from Egypt, it was transported under regulations drawn up by Blane to guard against the danger of introducing the plague into this country. The Home Office consulted him on a variety of subjects: on the means of keeping contagious fevers out of prisons, on the mortality which arose from the same cause in ships which carried convicts to Botany Bay, &c. The board of control sought his aid in framing improved regulations for the medical service in India. Hardly any department of state failed to resort to Blane's advice on one occasion or another. But the most important emergency on which he was called upon to advise the government was in connection with the disastrous Walcheren expedition. It was felt that the critical situation of the army, owing chiefly to the ravages of disease, was eminently a question requiring medical knowledge and experience. The army medical board (consisting of the physician-general, the surgeon-general, and the inspector-general) had lost the confidence of the government, first through having failed to foresee the dangers arising

from the unhealthiness of the seat of war, and then by their supineness in meeting the crisis, each member of the board excusing himself on various pretexts from proceeding to the scene of action (see report of evidence given before a committee of the whole House of Commons, 1810). Under these circumstances the War Office sent out Blane to report; and when it was decided, chiefly on medical grounds, to recall the expedition, he was charged with the arrangements for bringing home the sick and wounded.

This perhaps unprecedented instance of employing a naval medical officer in the work of the army department undoubtedly raised Blane's reputation, whether or no (which does not appear) it may have given rise to any jealousy. He was at once liberally rewarded and thanked, and received the honour of a baronetcy from the prince regent on 26 Dec. 1812.

On the accession of George IV Blane became one of his physicians in ordinary, and filled the same office in the next reign. Consultations on medico-political questions and compensatory honours flowed in upon Blane from foreign countries. The emperor of Russia, the king of Prussia, and the president of the United States sought his advice and acknowledged his services. In 1821 the medical officers of the navy presented him with a piece of plate. In 1829 he founded a prize medal for the best journal kept by the surgeons of the royal navy. He was a fellow of the Royal Society, a member of the Institute of France, and other learned bodies. In 1821 Blane's health began to fail, but not seriously till 1834. He died on 26 June 1834 at his house in Sackville Street. An unfinished portrait of him by Sir M. A. Shee is in the College of Physicians. He married, 11 July 1786, the only daughter of Mr. Abraham Gardiner, and had six sons and three daughters. He was succeeded in the title by his third son, Hugh Seymour Blane; the two elder died previously.

Blane was undoubtedly a man of great original force of character, and he became a very completely equipped physician. He united in an uncommon degree adequate scholarship and considerable dialectical skill with scientific acumen and great administrative capacity. He does not appear to have made any reputation as a hospital teacher, but his books are well written and full of original observations. Although there is no one subject in which he made any striking discovery, the general body of fact and argument in his writings constitutes an important contribution to medicine and to the science of health. His tract entitled 'Medical Logic,' intended to show the fallacies which beset medical inquiries, contains a good deal of common sense with some philosophical pedantry. Of his other dissertations the most important are: 'On the Comparative Health of the British Navy from 1779 to 1814 ('Medico-Chirurgical Transactions,' vol. vi. 1815); 'Observations respecting Intermittent Fevers, the cause of the sickness of the army in Walcheren, &c.' (*ib.* vol. iii. 1812); 'On the Comparative Prevalence and Mortality of different Diseases in London' (*ib.* vol. iv. 1813). He wrote also: 'Observations on the Diseases of Seamen,' London, 8vo, 1st ed. 1785, 2nd ed. 1790, 3rd ed. 1803 (with a pharmacopœia for the naval service). 'Elements of Medical Logick,' London, 1819, 8vo, 2nd ed. 1821, 3rd ed. 1825. 'Select Dissertations on Medical Science collected,' London, 1822, 8vo, 2nd ed. 2 vols. 1833, including those quoted above with others, namely: 'On Muscular Motion' (the Croonian Lecture read before the Royal Society, 18 and 20 Nov. 1788); 'On the True Value and Present State of Vaccination' (also in 'Med.-Chir. Trans.' vol. x. 1819); 'On the Mechanical Compression of the Head in Hydrocephalus;' 'On the Yellow Fever,' &c., &c. 'Statement of the Progressive Improvement in the Health of the Royal Navy at the end of the eighteenth and beginning of the nineteenth century,' London, 1830, 8vo. 'Warning to the Public on the Cholera of India,' London, 1831, 8vo. 'Reflections on the Present Crisis of Public Affairs,' 1831, 8vo, &c.

[Authentic Memoirs of Physicians and Surgeons, 2nd ed. 1818, p. 135; London Medical Gazette, 1834, xiv. 459, 483; Gent. Mag. 1835, p. 93; Mundy's Life of Rodney, 2 vols. London, 1830; Munk's Coll. of Phys. (1878), ii. 325; Archives of St. Thomas's Hospital; Blane's Works.]

J. F. P.

BLANEFORDE, HENRY (*fl.* 1330), chronicler, was a monk of St. Albans. A fragment of his chronicle has been preserved. Beginning with the year 1323 he possibly intended to continue the work of Trokelowe, which ends at 1330. What we have of his chronicle, however, ends in 1324, though it contains a reference to an event of 1326. The only manuscript of Blaneforde now known to exist is in the British Museum (*Cotton MSS.*, Claudius, D. vi.) In this Blaneforde's chronicle follows the 'Annals of Trokelowe' without break. From this manuscript Hearne printed the work in his 'Annales Edwardi II,' Oxford, 1729; it has been edited by H. T. Riley in the 'Chronica Monasterii S. Albani,' Rolls Ser. From a reference to this writer as Blankforde in Walsingham's 'History,' i. 170, Mr.

Riley believes that he took his name from Blanquefort, near Bordeaux, called Blanckeforde in the 'Annals of Waverley,' p. 404. Blaneforde's name is mentioned in a notice of the historians of St. Albans in a fragment printed in the Rolls edition of the 'Annals of John Amundesham.' For a Blaneford, evidently in Somerset, see a charter of Edward II in Dugdale's 'Monasticon,' vi. 415.

[Chron. Monas. S. Albani, Trokelowe, Blaneforde, 131–152 (Rolls Ser.), see Preface; Walsingham's Historia Anglorum, i. 170 (Rolls Ser.); Joh. Amundesham Ann. 303 (Rolls Ser.); Annales Monastici, ii. 404 (Rolls Ser.); Descriptive Catalogue of Hist. MSS. iii. 386 (Hardy).] W. H.

BLANKETT, JOHN (*d.* 1801), admiral, served as volunteer and midshipman in the Somerset with Captain (afterwards Sir Edward) Hughes, and was present in her at the reduction of Louisbourg, 1758, and of Quebec, 1759. He was thus led to consider the possible existence of a north-west passage, concerning which, on his return to England, he presented a report to the admiralty. In 1761 he was made lieutenant, and after the peace in 1763 obtained leave to go to Russia in quest of exact information concerning the then recent discoveries on the east coast of Asia. In 1770 he was lieutenant of the Albion, with Captain Barrington, and in 1778 was first lieutenant of the Victory, then carrying the flag of Admiral Keppel, and was made commander 30 Jan. 1779. He was then appointed to the Nymph sloop, and sent out to the East Indies to join Sir Edward Hughes, by whom he was posted into the Ripon on 23 Jan. 1780. The ship was shortly afterwards ordered home, and Blankett held no further appointment during that war. After the peace of 1783 he commanded the Thetis frigate in the Mediterranean, where he was specially noticed by the King of Naples, who at different times accompanied him on a cruise, and presented him with his portrait set in diamonds. In July 1790 he sailed for China in the Leopard in command of convoy, and on his return was appointed to the America as commodore of a small squadron sent to the Cape of Good Hope. There, in August 1795, he was joined by the squadron under Sir George Elphinstone (afterwards Lord Keith), under whom he served at the reduction of that settlement (JAMES, *Naval History* (ed. 1860), i. 333–6). In June 1798 he was appointed to the Leopard, with orders to proceed to India. On his arrival on the station he was sent as senior officer to the Red Sea, where he commanded during the subsequent operations in Egypt. He became rear-admiral in Feb. 1799. In August 1800 he went for a short time to Bombay, and had the good fortune on the passage to pick up the Clarisse, a very active French privateer, which, a few months before, under the command of Robert Surcouf, had been the terror of the commerce of the Indian seas. By January he was back in the Red Sea, and in the Gulf of Suez from April to June. His constitution had been already severely tried, and the terrible heat of the Red Sea summer proved fatal to him. He died on board the Leopard near Mocha on 14 July 1801. He is described as an unusually good linguist, having a perfect mastery of French, Italian, and Portuguese; and as being universally esteemed, not only as a good officer, but as an accomplished and amiable gentleman, notwithstanding a certain irritability induced by gout.

[Gent. Mag. (1802), lxxii. i. 25 (the writer of this notice claims to have known Blankett for more than thirty years, but he is very confused in his dates and inaccurate in his details); official letters, &c. in the Record Office.] J. K. L.

BLANTYRE, LORDS. [See STEWART, WALTER, first lord, *d.* 1617; STEWART, ALEXANDER, fifth lord, *d.* 1704.]

BLAQUIERE, JOHN, BARON DE BLAQUIERE (1732–1812), politician, the fifth son of John Blaquiere, a French emigrant, who settled in London as a merchant, was born 5 May 1732. He was for some time in the counting-house of a London merchant, and then entered the army. His first official employment was as secretary of legation in France with Lord Harcourt, 1771–2, and when that nobleman went to Ireland in 1772 as lord lieutenant, Blaquiere accompanied him as his chief secretary (1772–7). He represented a number of constituencies in the Irish parliament: Old Leighlin 1773 to 1783, Carlingford from 1783 to 1790, Charleville 1790–7, and Newtownards from 1797 until the extinction of the Irish parliament. In 1801 he was elected for Rye in the parliament of the United Kingdom, and in June 1803 he was returned for Downton in Wiltshire. One of Blaquiere's first experiences on Irish soil was a duel with a Mr. Beauchamp Bagenal in 1773, but he soon received considerable advancement. He was sworn of the privy council, invested in 1774 with the military order of the Bath, created a baronet 5 July 1784, and raised to the Irish peerage Baron de Blaquiere on 30 July 1800. He became bailiff of Phœnix Park, alnager of Ireland, and commissioner of the paving board. Many of the chief improvements in Dublin were effected under his care. A gourmet with social and convivial tastes,

possessed of much good sense, with 'no small fund of useful and various knowledge, heightened by many strokes of art,' he enjoyed greater popularity than most of his predecessors and successors in his difficult office. His advocacy in 1773 of the imposition of a tax on absentee landlords caused some excitement among the Irish gentry and peers who habitually lived away from their estates, but did not tend to diminish his popularity among the majority of his neighbours. When he ceased to be in power, it was generally remarked that he was the only secretary who was known to have resided in Ireland when he no longer drew the pay of office. He died at Bray, county Wicklow, on 27 Aug. 1812. By his wife, Eleanor, only daughter of Robert Dobson of Cork, whom he married 24 Dec. 1775, he had numerous children. An engraved portrait of this genial politician is in Barrington's 'Historic Memoirs.'

[Walpole's Letters, vi. 6, 11; Warden Flood's Henry Flood, 85–8, 343; Sir Jonah Barrington's Personal Sketches (1869), i. 101–3, 111–13; Barrington's Hist. Memoirs (1833), i. 216; Correspondence of Rt. Hon. John Beresford, i. 7, 125–7, 151–4, ii. 64, 290; Gent. Mag. 1812, pt. ii. 288; Froude's English in Ireland, ii. 145–87, 394, 490, iii. 29–32, 137, 150, 240–3.]

W. P. C.

BLATHWAYT, WILLIAM (1649?–1717), politician, the only son of William Blathwayt of St. Martin's-in-the-Fields, and a member of the Middle Temple, who married on 19 Oct. 1648 Anne, daughter of Justinian Povey, was born, it is believed, in 1649. His first appointment was as one of Sir William Temple's secretaries at the Hague in 1668, and his correspondence shows that he was engaged at Rome in some kind of public business in 1672. A few years later he seems to have been stationed at Stockholm and Copenhagen. In August 1683 he purchased from Matthew Locke the post of secretary-at-war, a position which before the revolution of 1688 seems to have been synonymous with a clerkship of a committee of council, and, according to Luttrell, he became clerk of the privy council on 22 Oct. 1686, being re-gazetted at the opening of the next reign. He was in attendance on the privy council when the seven bishops were called in, and he was one of the chief witnesses at their trial. As secretary-at-war he attended James II to Salisbury, November 1688, with his forces. From a memorandum drawn up by Lord Palmerston on the duties of that office, it appears that Blathwayt, whilst holding it, regulated almost the whole of the business connected with the army (Bulwer and Ashley's *Lord Palmerston*, i. 387–90). His skill in languages made him a great favourite with William III. He attended that monarch during his campaign in Flanders, and whilst abroad discharged the duties of secretary-at-state, his place at home being filled by a substitute. From May 1696 to 1706 he was a commissioner of trade, and he remained secretary-at-war until 1704. He represented the constituency of Newtown in the Isle of Wight from 1685 to 1687, and his re-election received royal sanction in September of the following year, but he was not a member of the Convention parliament of 1689. On 20 Nov. 1693 he was returned by the city of Bath, and sat for that constituency uninterruptedly until 1710. He had married on 23 Dec. 1686 Mary, the only surviving daughter and heir of John Wynter of Dyrham, Gloucestershire, an estate which still belongs to his descendants. The present house of Dyrham Park, planned by Talmen, was completed at the cost of Blathwayt in 1698, and the gardens were at the same time laid out by Le Notre in the approved Dutch style. Views of it are in Campbell's 'Vitruvius Britannicus,' and in Sir R. Atkyns's 'Gloucestershire.' His house at Bath was fitted up for Queen Anne when she went to drink the waters in July 1702. It was rumoured in December 1700 that, 'in consideration of his services to his majestie,' Blathwayt would have been created earl of Bristol, but he was never raised to the peerage. He was a strong whig in politics, and was pitted as the whig champion against Harley on the points of precedent which arose in parliamentary debate. He retired from active life in 1710, and died at Dyrham in August 1717, being buried in its parish church on 30 Aug. Numerous letters to and from him are preserved at Dyrham Park, among the manuscripts in the British Museum, at the Bodleian Library, and in many of the collections described among the reports of the Historical MSS. Commission.

[Narcissus Luttrell's Brief Relation, passim; Bigland's Gloucestershire, p. 533; Atkyns's Gloucestershire, 216; Macaulay's History, ii. 378–81; Pepys's Diary (ed. 1849), v. 331, 389, 453.]

W. P. C.

BLAYNEY, ANDREW THOMAS, Lord Blayney (1770–1834), a distinguished officer, was born at Blayney Castle, county Monaghan, on 30 Nov. 1770. His father, the ninth Lord Blayney of Monaghan in the peerage of Ireland, lieutenant-general in the army and colonel of the 91st (1761–3) and of the 38th regiment from 1766, represented an ancient Welsh family, which had been seated

in Ireland since the reign of Elizabeth, when Sir Edward Blayney had won a great estate for himself and been created a peer in 1621. Andrew Blayney succeeded his brother as eleventh Lord Blayney in 1784, and entered the army as an ensign in the 32nd regiment in 1789. He became a lieutenant in the 41st regiment in 1791, and captain in the 38th in 1792. In 1794 he raised part of the 89th regiment, which was being recruited in Ireland, and was gazetted a major in the new regiment, whose fortunes he shared for the next fifteen years. With it he landed with Lord Moira at Ostend, and marched to join the Duke of York in Flanders, and with it he shared the dangers of the horrible retreat through Holland in the winter of 1794–5, and distinguished himself in every encounter, and especially in the affair of Boxtel. His regiment was then ordered to accompany Abercromby to the West Indies; but the terrible storm, known as 'Christian's storm' from the name of the admiral, drove the transports back. In the following year, 1796, he was promoted lieutenant-colonel on half pay, and married Lady Mabella Alexander, daughter of the first earl of Caledon.

In 1798 he purchased the lieutenant-colonelcy of his old regiment, the 89th, and took command of it in Ireland. He was at once appointed by Lord Carhampton, the commander-in-chief in Ireland, to the command of one of the flying camps, by means of which that able general, though fanatical nobleman, attempted to terrify the Irish; and he managed to perform his disagreeable functions to the satisfaction of Lord Cornwallis, and without awakening the animosity of the Irish peasantry themselves. In 1799 the 89th was ordered to form part of the garrison of Minorca, which had just been captured by Sir Charles Stuart, and when Lord Nelson recommended the despatch of troops to Sicily to preserve that island from the army of Championnet, Lord Blayney was sent thither in command of the 89th and 90th regiments. He assisted Sir Alexander Ball in reducing the island of Malta; he was present with Suwarrof's army in his continental campaign, of which he sent home an admirable account; and he was again in Malta in time to plant the English flag on the ramparts of Ricasoli. His regiment was next ordered from Malta to co-operate in Sir Ralph Abercromby's Egyptian expedition, and he was present at all the engagements in Egypt. His conduct gained him the approbation of Lord Hutchinson, who succeeded Abercromby; and on the surrender of Cairo he received the command of the two regiments, the 30th and the 89th, which were to form the garrison.

After the rupture of the treaty of Amiens the 89th was ordered first to the West Indies and then to the Cape of Good Hope, and was engaged in the recapture both of the French sugar islands and the Dutch colony in Africa. On its return from Africa it formed part of Lord Cathcart's tardy and useless expedition to Hanover, and was then sent to Buenos Ayres in General Whitelocke's luckless army. Lord Blayney was only one of the numerous excellent officers who had to pay the penalty of the incompetence of their general in the immense havoc made in their fine regiments. After the disgraceful capitulation of Buenos Ayres the 89th was again sent to the Cape, and in such badly found ships that it had to land many miles from Capetown, and to make a long and toilsome march, during which many men fell down dead from thirst and fatigue, and which was at last terminated successfully, owing to the capacity of the colonel. Lord Blayney soon found that there was no more fighting to be expected at the Cape; so he hurried home, and begged the government to employ him in the Peninsula, for which his knowledge of Spanish peculiarly fitted him. He was accordingly sent to Cadiz, and promoted major-general, in July 1810. He worried General Campbell, the governor of Gibraltar, into sending him with a mixed force of 300 English, 800 Spaniards, and 500 German and Polish deserters from the French army, to make a descent on Malaga. As might have been expected, the expedition utterly failed. At the first encounter with a part of General Sebastiani's corps d'armée, while besieging the fort of Fuengirole, the Spaniards ran away, the deserters misbehaved themselves, and Lord Blayney himself, 'whose dispositions betrayed the utmost contempt of military rules' (Napier), was taken prisoner.

Lord Blayney's passage as a prisoner of war through Spain, and his imprisonment in France at Verdun, Bitche, and Guéret, gave him a novel experience. In his 'Narrative of a forced Journey through Spain and France as a Prisoner of War in the Years 1810 to 1814' he shows great powers of observation, and makes up a most interesting book. In it he describes vividly how the Spanish people lived when the French armies were occupying their country, and how they amused themselves as usual. Lord Blayney was directly instructed by the ministry to see to the relief of the poorer English prisoners, and entrusted with funds for that purpose. His book was published on his return to England in 1814, and had, as it deserved, considerable success; but his

health was impaired, and he saw no further military service. He was M.P. for Old Sarum 1806–7; was promoted lieutenant-general in 1819, and died suddenly in Dublin on 8 April 1834, leaving one son, Cadwallader Davis Blayney, M.P. for Monaghan, who became twelfth Lord Blayney, and a representative peer for Ireland, and on whose death, in 1874, the peerage of Blayney became extinct.

[Royal Military Calendar, ed. 1820, vol. iii.; Napier's History of the Peninsular War, book xii. chap. i.] H. M. S.

BLAYNEY, BENJAMIN, D.D. (1728–1801), Hebrew scholar, was first a member of Worcester College, Oxford, where he graduated B.A. in 1750 and M.A. in 1753. He afterwards became fellow, and eventually vice-principal, of Hertford College, and took the degree of B.D. in 1768. He was employed by the Clarendon Press to prepare a corrected edition of the authorised version of the Bible. This edition, which has received very high praise for its accuracy, appeared in 1769. Unfortunately a large part of the impression was destroyed in a fire which took place at the Bible Warehouse in Paternoster Row, and copies are now scarce. Blayney received much assistance in his Hebrew studies from the celebrated William Newcome, afterwards archbishop of Armagh, who was also a fellow of Hertford, and to whom he dedicated several of his works. In 1775 he published 'A Dissertation by way of Inquiry into the true Import and Application of the Vision related, Dan. ix. 24 to the End, usually called Daniel's Prophecy of Seventy Weeks.' This work attracted considerable attention, and was translated into German by the celebrated J. D. Michaelis. A corrected edition was published by the author in 1797. In 1784 Blayney published a new translation of Jeremiah and Lamentations, and in 1786 and 1788 two sermons on 'The Sign given to Ahaz,' and on 'Christ the greater Glory of the Temple.' He was appointed regius professor of Hebrew in 1787, and in the same year was made canon of Christ Church and received the degree of D.D. In 1790 he published an edition of the Hebrew-Samaritan Pentateuch, transcribed in ordinary Hebrew characters, with critical notes. His last production was a new translation of the prophecy of Zechariah, 1797. Dr. Blayney's writings, though deficient in literary ability, display what for their time and country may be considered a high degree of Hebrew scholarship. Like his friend Archbishop Newcome, and many other eminent biblical scholars of the period in England, he did not escape the imputation of heterodoxy, and was the object of several very acrimonious attacks, from which he defended himself with exemplary fairness and courtesy. He died at his rectory of Poulshot, Wiltshire, on 20 Sept. 1801, aged 73. By his will he directed that his unpublished writings, after being submitted to the judgment of his friend and patron, Dr. Barrington, bishop of Durham, should be deposited in the archiepiscopal library at Lambeth. Amongst these manuscripts may be mentioned: 1. 'A New Version of the Psalms,' 2 vols. 4to. 2. 'Critical Comment on the Psalms,' 3 vols. 3. 'Notes on Isaiah,' 3 vols.

[Gent. Mag. lxxi. 1054, lxxiii. 1108; Blayney's Preface to Dissertation on Dan. vii. 24.] H. B.

BLEDRI, surnamed Ddoeth or the Wise (*d.* 1022?), was an early bishop of Llandaff. His history is almost entirely derived from suspicious or late sources. But, if they can be believed, his election as bishop by the kings, clergy, and people of Morganwg, his investiture with the pastoral staff by Æthelred the Unready in the royal court, and his consecration by Archbishop Ælfric of Canterbury, illustrate very remarkably the dependence of Wales on England, which the imperial policy of Eadgar and Dunstan had produced, and the way in which the metropolitical jurisdiction of Canterbury followed the temporal supremacy of the English king. As Ælfric was archbishop between 995 and 1005, Bledri's appointment must have taken place within those years, and not in 983 as the original authority puts it. During Bledri's episcopate three important grants of land were made to the see of Llandaff, one of which came from Edwin, king of Gwent, as compensation for an outrage inflicted upon the bishop. A dispute had arisen between Edwin and Bledri, which resulted in a tumult, in which the bishop was wounded by some of Edwin's household. A synod of the clergy met at Llandaff, excommunicated the offenders, and placed Gwent under an interdict. The terrors of the church's censures led to Edwin's submission.

Bledri was called the Wise, and is said to have been the first scholar of his time in Wales. At a time when the famous school of St. David's was falling into decay, Bledri revived and disseminated learning in his diocese, by insisting that every priest should establish a sort of school in his church, 'that every one might know his duty to God and man.' Bledri died in 1022 or 1023.

[The Liber Landavensis, edited by the Rev. W. T. Rees for the Welsh MSS. Society, is our sole authority for Bledri's history, except that

the Gwentian Chronicle, published by the Cambrian Archæological Society, gives the above account of his learning and zeal for education. But the Liber Landavensis is more often wrong than right, and the Gwentian 'Brut' is the least trustworthy of the Welsh chronicles.] T. F. T.

BLEECK, ARTHUR HENRY (1827?–1877), orientalist, was for some time in the British Museum, where his remarkable linguistic capacity rendered him very useful. He afterwards went out to the East during the Crimean war, and until the conclusion of peace held a post in connection with the land transport corps at Sinope. Being refused readmission to the British Museum on his return to England, he worked for several years for Mr. Muncherjee Hormusjee Cana, who employed him to prepare an English version of the 'Avesta.' He died in January 1877.

His works are: 1. 'A Practical Grammar of the Turkish Language, with dialogues and vocabulary' (in conjunction with W. Burckhardt Barker), London, 1854, 8vo. 2. 'A concise Grammar of the Persian Language, containing dialogues, reading lessons, and a vocabulary: together with a new Plan for facilitating the Study of Languages, and specimens in Arabic, Armenian, Bengálí, Greek, Georgian, Hindústání, Hebrew, Latin, Persian, Russian, Sanskrit, Swedish, Syriac, and Turkish,' London, 1857, 8vo. 3. 'Catalogue of the Napoleon Library in the possession of Mr. Joshua Bates,' London, privately printed (1858), 8vo. 4. 'Avesta: the religious books of the Parsees; from Professor Spiegel's German translation of the original manuscripts,' 3 vols., London, 1864, 8vo.

[Athenæum, 3 Feb. 1877; Cat. of Printed Books in Brit. Mus.] T. C.

BLEEK, WILHELM HEINRICH IMMANUEL (1827–1875), the leading authority on South African philology, was the son of the biblical critic Friedrich Bleek, and was born at Berlin 8 March 1827. He began his education at Bonn, where his father was professor, but, after taking his doctorate in 1850, went to Berlin to continue his studies in classical philology. His doctor's dissertation, 'De nominum generibus linguarum Africæ australis,' &c., published in 1851, shows that thus early had he been attracted by the special branch of linguistic research which afterwards occupied all his energies. He set out with W. B. Baikie [q. v.] on his expedition up the Niger in 1854, but was compelled by ill-health to turn back at Fernando Po. In the following year, however, he was able to join Bishop Colenso in Natal, and here he devoted himself for a year and a half to the study of the language and habits of the Kaffirs. Settling at Cape Town he was appointed interpreter by Sir George Grey in 1857. Two years later he was obliged to return to Europe on sick leave, but 1860 saw him again at his work with the position of librarian to the valuable collection of rare books presented by Sir George Grey to the colony. With the intermission of a visit to England in 1869, when he was granted a well-deserved pension on the civil list, he remained busily engaged in the duties of this post and in collateral investigations into the languages of South Africa, until his death, 17 Aug. 1875. His chief works are: 1. 'The Languages of Mozambique,' London, 1856. 2. 'The Library of Sir George Grey, vol. i. Africa, vol. ii. Australia and Polynesia,' virtually a handbook of African, Australian, and Polynesian philology, London and Capetown, 1858–9. 3. 'Comparative Grammar of South African Languages,' parts i. and ii., London, 1862 and 1869, in which important distinctions between two groups of African languages are for the first time established. 4. 'Reynard the Fox in South Africa, or Hottentot Tales and Fables,' London, 1864 (Weimar, 1870), an interesting contribution to comparative mythology. 5. 'Bushman Folklore,' 1875. He also wrote a little tract, 'Ueber den Ursprung der Sprache,' in which he endeavoured to trace the origin of language to the cries of anthropoid apes, which was published in 1868 at Weimar with a preface by his cousin Ernst Haeckel. Less known is his elementary Latin grammar, published in German in 1863. He contributed philological and ethnological papers to the Berlin Gesellschaft für Erdkunde (1853), the Philological Society (1855 and 1874), the Anthropological Institute (1872), and on African folklore and mythology and kindred subjects to the 'Cape Monthly Magazine.' So important were his researches in his special department of linguistic science that on his premature death a memorial was widely signed by the first scholars of Europe to the effect that a successor should be appointed to carry on his work, and to this the Cape Colony assembly acceded. Bleek broke fresh ground in his treatises on African philology, and his books remain the first sources on the subject. His method of work was unusually thorough; he was indefatigable in examining natives with a view to elucidating their language, and his oral investigations were often very protracted before he could satisfy himself that he had accurately caught the precise sound of which he was in search. Personally this devoted student was kindly in disposition

and ready to help others at any inconvenience to himself.

[Prof. A. H. Sayce in Academy, No. 178, N.S.; Haeckel in Preface to Bleek's Ursprung der Sprache; Unsere Zeit, 1876; Cape Monthly Magazine, vols. xi. and xiii., 1875 and 1876.] S. L.-P.

BLEGBOROUGH, RALPH (1769–1827), physician, was the son of a surgeon at Richmond, Yorkshire, where he was born on 3 April 1769. He was educated at the grammar school of his native town, and, after acting for some time as apprentice to his father, continued his medical studies first at the university of Edinburgh, and then at Guy's and St. Thomas's Hospitals, London. Having become a member of the corporation of surgeons, London, he commenced in London as a general practitioner. He became M.D. of the university of Aberdeen on 29 Dec. 1804, and was admitted a licentiate of the College of Physicians on 30 Sept. 1805. About 1804 he entered into partnership with Dr. Walshman, a practitioner in midwifery, and henceforth devoted himself exclusively to this branch of his profession, in which his reputation became so high that he was selected as a medical witness before the committee of the House of Peers upon the question of the Gardner peerage. He devoted a large proportion of his time to gratuitous practice among the poor, and died, literally worn out by his benevolent exertions, on 23 Jan. 1827. Dr. Blegborough contributed several papers to the medical journals, and also published separately 'Two Articles on the Air Pump, extracted from the "Medical and Physical Journal,"' 1802; 'Facts and Observations respecting the Efficiency of the Air Pump and Vapour Bath in Gout and other Diseases,' 1803; and 'Address to the Governors of the Surrey Dispensary,' 1810.

BLENCOW or BLINCOW, JOHN (*fl.* 1640), divine, the son of John Blencow, of London, was born 29 Jan. 1608–9, entered Merchant Taylors' School in 1620, and proceeded to St. John's College, Oxford, in 1627, when he was elected to a fellowship. He graduated B.C.L. 25 June 1633. One Blincow, fellow of New College, was expelled from his fellowship by the parliamentary visitors in 1648, on the ground that he had taken up arms for the king, was 'dangerous, and absent.' Blencow was the author of a very curious sermon, and, Wood adds, 'perhaps other things.' The sermon, delivered at St. Paul's, and inscribed to Sir Henry Martin, is entitled 'Michael's Combat with the Divel; or, Moses his Funerall' (1640).

[Wood's Fasti Oxon., ed Bliss, i. 468; Robinson's Register of Merchant Taylors' School, i. 103; Brit. Mus. Cat. s. v. 'Blenkow.'] S. L.

BLENCOWE, SIR JOHN (1642–1726), judge, was born in 1642 at the manor of Marston St. Lawrence, on the Oxfordshire border of Northamptonshire. The family came originally from Greystock, in Cumberland, but this estate was granted to one Thomas Blencowe in the time of Henry VI. Fifth in descent from him was Thomas, father of John Blencowe, who married as his second wife Anne, daughter of the Rev. Dr. Francis Savage of Ripple in Worcestershire. John was educated at Oriel College, Oxford, with which his family was connected. A Blencowe was an early benefactor of the college, and Anthony Blencowe, D.C.L., was provost from 1572 to 1617. He was entered a student of the Inner Temple in 1663, called to the bar 1673, elected a master of the bench in 1687, received the degree of serjeant-at-law 11 April 1689, and represented Brackley in Northamptonshire for five years in the parliament of 1690, being a firm adherent of the government. He married Anne, eldest daughter of Dr. John Wallis, Savilian professor of geometry in Oxford. To this marriage Blencowe in part owed his advancement; for when the deanery (or bishopric, according to Granger) of Hereford was offered to Dr. Wallis he declined it, and asked a favour for his son-in-law, saying, 'I have a son-in-law, Mr. Serjeant Blencowe, of the Inner Temple, a member of parliament, an able lawyer, and not inferior to many of those on the bench, of a good life and great integrity, cordial to the government, and serviceable to it.' Accordingly, on 17 Sept. 1696, Blencowe was raised to the bench as a baron of the exchequer, in the room of Sir John Turton. He was removed to the common pleas on 18 Jan. 1697, and knighted. The report that he sat in the king's bench is untrue. Although Baker, Noble, and others speak of him as in the queen's bench from 1702 to 1714, and Luttrell (v. 183) says it was intended to remove him at the beginning of Queen Anne's reign, still Lord Raymond's law reports never speak of him as sitting in the queen's bench, but speak of him as in the common pleas, both at Anne's accession and George I's (LD. RAYMOND, 769, 1317). He beyond all doubt passed directly from the exchequer to the common pleas. In 1718 he is found concurring with other judges in favour of the king's prerogative to control the marriage and education of the royal family. He retired on a pension on 22 June 1722 at the

age of eighty, and died 6 May 1726, and was buried at Brackley. Before his death his faculties had decayed; he conceived he had discovered the longitude, and employed his son William in copying his writings to lay before parliament. He is described as being an honest, blunt, and kindly man, but of no great qualifications. He had a large family: John, his heir; Thomas, afterwards a bencher of the Inner Temple, from whom springs the family of Blencowe of Bincham, near Lewes; William; Mary, who married Alexander Prescott, of Thoby Priory, in Essex; Anne, who married in 1720 Sir E. Probyn, of Newlands, chief baron of the exchequer; Elizabeth; and Susannah, who married R. Jennens, of Princethorp. His third son William, born 6 Jan. 1682–3, was the decipherer [see BLENCOWE, WILLIAM]. The estates, with the patronage of Marston St. Lawrence, still continue in the family.

BLENCOWE, WILLIAM (1683–1712), decipherer, was the third son of Sir John Blencowe [q. v.], knight, baron of the exchequer, by the eldest daughter of the mathematician and decipherer, Dr. Wallis, and was born on 6 Jan. 1682–3. He was educated at Magdalen College, Oxford, where he graduated B.A. in 1701 (*List of Oxford Graduates*). On the nomination of Archbishop Tenison he became a fellow of All Souls, 21 Dec. 1702, and he was made M.A. in 1704. He was instructed in the art of deciphering by his maternal grandfather, and for his encouragement in the art received the survivorship of his pension of 100*l.* a year. Wallis died 28 Oct. 1703. As a matter of course Blencowe therefore succeeded him as decipherer to the government, and the statement of a survivor (*Gent. Mag.* lviii. 586) that he applied for the office 'unrecommended' cannot therefore be accepted as an accurate representation of facts. The salary he ultimately received for the office was 200*l.* a year (*Archives of All Souls*, 346). He desired a dispensation permitting him to retain his fellowship at All Souls without taking holy orders, and on the warden interposing his veto the queen interfered on his behalf. Ultimately the dispute led to the abolition of the warden's veto on dispensations, and the non-residence of the fellows became from that time a leading characteristic of All Souls College. The statement of Noble that at the trial of Bishop Atterbury he exercised his skill in deciphering certain papers is a mistake, the trial having taken place ten years after his death. In the prime of life Blencowe was attacked by a violent fever, from which he was recovering, when, on 25 Aug. 1712, he shot himself during temporary insanity caused by a relapse. He was buried in All Saints Church, Northampton, where the monument to his memory records that he was a 'man studious of many kinds of learning, particularly of the common law, which he professed and practised with reputation; and of the art of deciphering letters wherein he excelled, and served the public for ten years.'

BLENERHASSET, THOMAS (1550?–1625?), poet and writer on Ireland, was a younger son of William Blenerhasset of Horsford Park, near Norwich, who died in 1598. He was probably born about 1550, and was, according to his own account, educated at Cambridge without taking a degree. He subsequently entered the army, and was stationed for some years as captain at Guernsey Castle. At the beginning of the seventeenth century he took service with the English in Ireland, and in 1610 was one of the 'undertakers' for the plantation of Ulster. In 1611 he received 2,000 acres at Clancally in Fermanagh, and in 1612 he, with thirty-nine others, appealed to the lord-deputy, Sir Arthur Chichester, to grant them jointly a part of Sligo, 60,000 acres in Fermanagh, and some neighbouring territory, on their undertaking to expend 40,000*l.* on the land, and to settle upon it 1,000 'able men furnished for all kinds of handiwork.' In his signature to this appeal Blenerhasset describes himself as being still of Horsford, Norfolk. In 1624 Blenerhasset was stated to own the barony of Lurge and two proportions of Edernagh and Tullenageane in Fermanagh. According to Ware, the biographer of Irish writers, Blenerhasset died early in the reign of Charles I. His father's will proves him to have been married before 1598, and to have had several children. His eldest brother, Sir Edward Blenerhasset, who shared with him several grants of Irish land, died in 1618.

Blenerhasset's most important literary work was an expansion of the 'Mirrour for Magistrates.' This he accomplished while at Guernsey in 1577. He intended it for the private

perusal of a friend, but during his absence 'beyond the seas' it was published in London in 1578 under the title of 'The Second Parte of the Mirrour for Magistrates.' To it was prefixed an interesting letter, containing some autobiographical facts, addressed by the author to the friend for whom the work was written. The original 'Mirrour for Magistrates,' which dealt with episodes in English history from the time of Richard II, had been issued in 1559, under the editorship of William Baldwin [see BALDWIN, WILLIAM, *fl.* 1547], and had been reprinted in 1563, when Sackville's famous 'Induction' was first published as the preface. In 1574 John Higgins wrote a new series of poems on legends drawn from far earlier history than that of which Baldwin's work treated. This book, bearing the title of 'The First Parte of the Mirrour for Magistrates,' was reprinted in 1575. Blenerhasset's contribution to the 'Mirrour' was a continuation of Higgins's book, 'from the conquest of Cæsar unto the commyng of Duke William the Conqueror.' It dealt very feebly and prosaically with the legends of 'Guiderius, Carassus, Queen Hellina, Vortiger, Uter Pendragon, Cadwallader, Sigebert, Lady Ebbe, Alurede, Elgured, Edricus, and King Harolde.' In 1610 ten of these poems of Blenerhasset were included in a complete reprint of the various parts of the 'Mirrour for Magistrates' undertaken by Richard Niccols, and the whole of them were reprinted by Joseph Haslewood in his edition of the 'Mirrour' published in 1815 (i. 345–479). Blenerhasset's literary work also included a translation of Ovid's 'De Remedio Amoris,' executed while at Cambridge but never printed, and a poem called 'A Revelation of the true Minerva,' a panegyric on Queen Elizabeth printed in London in 1582, but of which only one copy, recently in the Heber collection, is known to be extant. In 1610 Blenerhasset wrote a brief pamphlet dedicated to Prince Henry, entitled 'A Direction for the Plantation in Ulster,' in which he showed how the extirpation of the Irish in Ulster was the best means for the 'securing of that wilde countrye to the crowne of England.'

[Norfolk Archæology, vii. 86–92; Irish State Paper Calendars, 1610–24; Ware's Irish Writers, ed. Harris, p. 333; Mirror for Magistrates, ed. Haslewood, i. xxxiv–xxxv; Ritson's Bibliotheca Poetica, p. 132; Corser's Collectanea Anglo-Poetica, viii. 429.] S. L.

BLENKIRON, WILLIAM (1807?–1871), breeder of racehorses, was born at Marrick, seven miles from Richmond in Yorkshire, about 1807. He was originally brought up as a farmer, but, abandoning that pursuit, came to London in 1834, and commenced business as a general agent at 78½ Wood Street, Cheapside; in 1845 he added to his establishment a manufactory of stocks and collars, and three years later retired in favour of his son.

Blenkiron always desired to be the owner of a racehorse, and in 1847, whilst residing at Dalston, he purchased a mare named Glance. She was by Venison out of Eyebrow, by Whisker, one of Lord George Bentinck's breeding. In course of time she bore a colt, Young Beverlac, which was run at race meetings with a moderate success. The colt was afterwards exchanged for three mares, and these formed the commencement of a stud destined to become the most celebrated of any establishment of horses in Europe. About 1852 Blenkiron, wanting more room, removed from Dalston to Middle Park, Kent. He brought with him seven or eight brood mares, and Neasham, the head of the list of Eltham sires. The establishment now rapidly increased, until it was augmented to upwards of two hundred of the highest class and best mares that money and experience could produce. Kingston, Touchstone, Birdcatcher, and Newminster were the four cornerstones of his extensive stud, and it was to the first of these that he, to a great extent, owed his success as a breeder; for that horse was the sire of Caractacus, who was perhaps the most sensational Derby winner on record. As a breeder of stock he had few equals in the matter of judgment, and no superior in the extent of his dealings; and whenever he desired to buy either brood mares or stallions, it was not of the least use to oppose him at an auction sale. Amongst his very numerous purchases he gave 3,000 guineas for Kingston, 5,000 guineas for Blink Bonny, 5,800 guineas for Gladiateur, 2,000 guineas for Rosa Bonheur, and 5,000 guineas for Blair Athol. The horses were pastured and stabled at his three establishments at Middle Park, Waltham Cross, and Esher; the cost per annum for oats alone exceeded 4,000*l.* He was never satisfied unless he was constantly weeding and improving his stock. The annual sales of stock at Middle Park drew together all connected with the turf, not only in England, but from France and other countries. The first regular sale of blood stock took place in June 1856, when 13 lots brought 1,447*l.*, being an average of 111*l.* each; at a sale in 1871, 46 lots produced 14,525*l.*, the average price being 315*l.* 15*s.* Middle Park was then the largest breeding stud that any country ever saw, and considered one of the sights of England. After 1866 it was found necessary

to hold two annual sales to dispose of the increase in the stock. Blenkiron bred Hermit, the Derby winner in 1867, and Gamos, which won the Oaks in 1870. These stud farms paid their proprietor a handsome return on his outlay during his lifetime, and his liberality was shown in many ways, conspicuously, however, in his founding the great two-year-old race at Newmarket, to which he contributed for some time 1,000*l.* a year. He died at Middle Park 25 Sept. 1871, in his sixty-fourth year, and was buried in Eltham churchyard 30 Sept.

[Gent. Mag. iii. 451–62 (1869); Rice's History of the British Turf (1879), ii. 338–44; Sportsman, 26 Sept. 1871, p. 2; Field, 30 Sept. 1871, p. 287.] G. C. B.

BLENNERHASSET, HARMAN (1764?–1831), lawyer and politician, was the youngest of three sons of Conway Blennerhasset of Conway Castle, Killorglin, county Kerry, Ireland, where the family had settled in the time of Elizabeth, and his mother was the daughter of Major Thomas Lacy, the descendant of an old Anglo-Norman family. He was born in Hampshire on 8 Oct. 1764 or 1765, during a temporary visit of his parents to England. He received his education at Westminster School and at Trinity College, Dublin, where he graduated B.A. in 1790 and LL.B. in the same year. Having, through the death of his elder brother, succeeded to the family estates, he spent some time in travel on the continent, where he imbibed so strong republican notions that he resolved to quit this country for the United States of America. While in England, obtaining the necessary outfit, he made the acquaintance of Miss Agnew, daughter of the lieutenant-governor of the Isle of Man, whom he married. Having disposed of his lands to a relative, and supplied himself with an extensive library and various philosophical apparatus, he shipped for New York in 1796. In 1798 he purchased the upper part of a beautiful island on the Ohio, about two miles below Parkersburg, and erected on it a splendid mansion, surrounded by fine grounds and adorned with costly pictures and statues. In this modern paradise he passed a retired and studious life, occupied in the study of chemistry, galvanism, astronomy, and similar sciences, until in 1806 he became implicated in the treasonable schemes of Aaron Burr without properly realising their intent. In support of the views of Burr he published a series of papers in the 'Ohio Gazette,' under the signature of 'Querist,' and he also invested a large sum in providing boats, provisions and arms in aid of Burr's contemplated expedition. In the spring of 1807 he was arrested, and although he regained his liberty, his house had during his absence been destroyed and pillaged by the mob, and in the abortive enterprise of Burr he had expended a large part of his fortune. He thereupon purchased 1,000 acres of land near Gibsonport, Mississippi, with the view of beginning the culture of cotton, but the venture turned out unsuccessful. In 1819 he removed to Montreal and commenced practice as a lawyer, hoping through the favour of his old schoolmate, the Duke of Richmond, to obtain a judgeship. Disappointed in this, he sailed in 1822 for Ireland to endeavour to recover his estates by a reversionary claim. In this he was also unsuccessful, and again courting retirement, he removed to the island of Guernsey, where he died in 1831.

[Hickson's Selections from Old Kerry Records, 1872; Reports of Trial of Colonel Aaron Burr, late President of the United States; Safford's Life of Harman Blennerhasset, 1853; Safford, The Blennerhasset Papers, embodying the Private Journal of Harman Blennerhasset, 1864.] T. F. H.

BLESSINGTON, MARGUERITE, Countess of (1789–1849), authoress, was born at Knockbrit, near Clonmel, co. Tipperary, 1 Sept. 1789. She was the second daughter and fourth of the seven children of Edmund Power, only son of Michael Power of Curragheen and Clonea, a small landowner descended from an old catholic family of some repute in co. Waterford. Her mother, Ellen, daughter of Edmund Sheehy, also came from an ancient catholic stock in co. Tipperary. Marguerite was chiefly noticeable when a girl as the one plain member in a singularly handsome family. Her father being dissolute, her home was miserable. Miss Anne Dwyer, a friend of her mother's, out of compassion imparted to her the first rudiments of education. Yet her precocity was such that by improvising stories for her brothers and sisters she became the wonder of the neighbourhood. Her father moved his family from Knockbrit to Clonmel. There, in 1797, he was appointed a magistrate, both in Waterford and Tipperary. When the revolt began, he, with the help of a troop of dragoons, resolutely hunted down the insurgents, on one occasion shooting with his own hand a young peasant, Joseph Lonnergan, son of a poor widow at Mullough. He provoked hatred all round. Besides engaging in business as a corn merchant and butter buyer, he started a newspaper. But as proprietor of the 'Clonmel Gazette or Munster Mercury' he began to sink money rapidly. An attempt to redeem his fortunes by entering into

yet larger mercantile speculations with a trading firm in Waterford also failed. Impending ruin infuriated his natural irascibility until he came at last to be a terror to his wife and children. Arrayed like a dandy of the period in buckskins and top-boots, he flaunted about then so constantly in lace ruffles and white cravat, that he was habitually spoken of among the Tipperary bloods as 'Shiver-the-Frills' or 'Beau Power.'

In 1804 Marguerite, being then a child of fourteen and a half, was proposed for by two officers of the 47th regiment, then stationed at Clonmel. Her parents forced her to marry one of these, Captain Maurice St. Leger Farmer of Poplar Hall and Laurel Grove, co. Kildare, a man who indulged in such ungovernable outbursts of passion as to suggest insanity. Three months after their marriage, on 7 March 1804, upon Captain Farmer being ordered to join his regiment, then encamped on the Curragh of Kildare, Marguerite resolutely refused to accompany him, and returned to her father's house at Clonmel. In 1807 she was at Cahir, and in 1809 at Dublin, and at eighteen her beauty had become so conspicuous that her portrait was painted by Sir Thomas Lawrence. In 1816 she was in Manchester Square, London. There she was still residing when, on 21 Oct. 1817, Captain Farmer was killed during a drunken orgie by falling from a window in the King's Bench prison. Four months afterwards his widow, on 16 Feb. 1818, was married at the church in Bryanston Square to Charles John Gardiner, second Viscount Mountjoy, and first Earl of Blessington. Seven years her senior and a widower, this nobleman drew from his estates in Ireland an annual income of thirty thousand pounds. This fortune he squandered on every whim. Upon his first wife's funeral four years earlier he had expended 3,000*l.* Upon his new bride he lavished every luxury. Their town mansion, 11 St. James's Square, was fitted up like the palace of a Sybarite. Under the influence of Lady Blessington it soon became a centre of social attraction. Early in 1822 she published anonymously her first work, 'The Magic Lantern, or Sketches of Scenes in the Metropolis,' 16mo. In 1822 she also published 'Sketches and Fragments,' 12mo. On 22 Aug. 1822 Lord and Lady Blessington started upon a continental tour. They were attended by the youngest sister of the countess, Mary Anne Power, afterwards, in 1832, married to the Baron de St. Marsault; by a young architect, who became famous as Charles Mathews the light comedian, and by Alfred Count d'Orsay, proverbially the handsomest man of his time, and a very Crichton in his accomplishments. With him the Countess of Blessington, down to the close of her life, was thenceforth most intimately associated.

At Genoa in 1823, for two months together, from 1 April to 1 June, the Blessingtons were in daily intercourse with Lord Byron. Before Byron parted from the Blessingtons, his acquaintance with whom had so rapidly ripened into intimate friendship that he did so with a passion of tears, he had sold his yacht Bolivar to the earl, and had written not only a *jeu d'esprit*, but one of the last of his minor poems to the countess.

Early in Lord Blessington's Italian tour his only legitimate son by his first wife, Luke, Viscount Mountjoy, died in his tenth year. Some time before its close the earl's only legitimate daughter, Lady Harriet Gardiner, then a girl of fifteen, was married on 1 Dec. 1827, at Naples, to Count d'Orsay. Towards the end of 1828 the whole party moved homewards, and on arriving in Paris took up their residence in the Hôtel Maréchal-Ney. There, on 23 May 1829, the Earl of Blessington died from a stroke of apoplexy at the age of forty-six. The earl's estate had diminished from 30,000*l.* to 23,000*l.* a year. Upon his death all his honours became extinct. The countess remained in Paris during the revolution of 1830. Towards the close of 1831 she took a house in Seamore Place, Mayfair, where she resumed her old social pre-eminence. She in some measure, however, shared the honours of fashionable supremacy with the Countess of Charleville, Lady Holland, and for a while with the Dowager Countess of Cork, down to the latter's death in 1840 at the age of ninety-four. 'Everybody goes to Lady Blessington,' writes Haydon in his 'Diary' at this period (iii. 12). N. P. Willis, shortly after this, on calling in upon her at Seamore Place, speaks of her, in his 'Pencillings by the Way' (p. 356), as 'one of the most lovely and fascinating women I have ever seen,' and of Count d'Orsay (p. 355) as 'the most splendid specimen of a man, and a well-dressed one,' he had ever beheld. Lady Blessington's income after the earl's death was restricted to her jointure of 2,000*l.* a year. Besides living expensively she had dependent upon her seven or eight members of her own family. To maintain her position she took to authorship. In 1833 appeared her first novel in 3 vols., 'Grace Cassidy, or the Repealers.' She then also began writing industriously for the periodicals, for annuals and magazines. Her house in Seamore Place, in the summer of 1833, was broken into and robbed of plate and jewellery to the value of 1,000*l.* In 1834 she began her many years' editorship of the 'Book of Beauty,' to which she was herself the most industrious

contributor. That year also she republished, from the 'New Monthly,' her 'Conversations with Lord Byron,' 8vo. In 1835 appeared her novel, in 3 vols., 'The Two Friends,' descriptive of society in the Faubourg St.-Germain. In 1836 were published her 'Flowers of Loveliness,' 4to, and her 'Confessions of an Elderly Gentleman,' illustrated by Parris, 8vo. Early in that year she moved into Gore House, Kensington, where for thirteen years she gathered around her the most distinguished men of intellect of that time. In 1837 she published 'The Victims of Society;' and in 1838 the 'Gems of Beauty,' and the 'Confessions of an Elderly Lady,' illustrated by Parris, 12mo. 'The Works of Lady Blessington' were issued from the press in a collected form in 2 vols. 8vo in 1838 at Philadelphia. In 1839 she produced 'The Governess' and 'Desultory Thoughts and Reflections,' besides two volumes of the most successful of all her writings, 'The Idler in Italy.' A third volume of that work appeared in 1840. In that year she also published, in a quarto volume illustrated by Chalons, her story in verse, 'The Belle of a Season.' In 1841 she produced her 'Idler in France,' and began her ten years' editorship of 'The Keepsake.' By that work in 1848 she was a loser to the extent of 700*l.* through the death, in a state of bankruptcy, of Charles Heath the engraver. In 1842 appeared, in 3 vols., her 'Lottery of Life and other Tales,' and in 1843, in 4 vols., 'Strathern, or Life at Home and Abroad: a Story of the Present Day.' From this work, although only four hundred copies of it were sold, she realised nearly 600*l.*, it having first appeared as a serial in the 'Sunday Times.' When the 'Daily News' was started, in January 1846, the Countess of Blessington was engaged to contribute to it, at the rate of 500*l.* a year, 'exclusive intelligence.' At the end of six months, however, she withdrew from that engagement. In 1846 she published her novel, in 3 vols., 'The Memoirs of a Femme de Chambre,' and (edited by her) 'Lionel Deerhurst, or Fashionable Life under the Regency.' In 1847 appeared, in 3 vols., her novel founded on fact, 'Marmaduke Herbert, or the Fatal Error.' One other work only appeared from her hand, and that posthumously in 1850, her novel in 3 vols., 'Country Quarters.' For nearly twenty years she had been earning an income, according to Jerdan (*Autobiography*, iv. 320–1), of between 2,000*l.* and 3,000*l.* a year. Her annual expenditure at Gore House, however, exceeded 4,000*l.*, and from 1843 her pecuniary difficulties were perpetually increasing. In 1845 the potato disease seriously affected her jointure, which, after rapidly dwindling, in 1848 finally disappeared. Count d'Orsay, meanwhile, who but a few months after his marriage had been separated from his young wife, had for the last dozen years been living at Gore House with the Countess of Blessington. In April 1849 the long-impending crash came upon both. To escape arrest Count d'Orsay, on the night of the 1st, fled to Paris, taking with him his valet and a single portmanteau. On the 14th Lady Blessington followed him thither. From the auction which took place at Gore House on 10 May 1849 less than 12,000*l.* was realised. Within a month from that time, on 4 June 1849, the Countess of Blessington died very suddenly in her sixtieth year in her apartments in the Rue du Cercle, near the Champs-Elysées, from an apoplectic seizure, complicated by heart disease. She was buried at Chambourcy, near St.-Germain-en-Laye, the residence of her most intimate friends during many years, the Duke and Duchess de Grammont.

BLETHYN, WILLIAM (*d.* 1590), bishop of Llandaff, was born in Wales, and educated at Oxford, at either New Inn Hall or Broadgates Hall (now Pembroke College). Having taken orders he became archdeacon of Brecknock, and in 1575 bishop of Llandaff, holding at the same time several livings in order to add to the scanty endowments of the see. He died in October 1590, leaving three sons, and was buried in the church of Mathern, Monmouthshire, where was his episcopal residence.

[Godwin's Comm. de Præsulibus Angliæ, p. 612; Wood's Athenæ Oxonienses, ii. 827.] A. M.

BLEWITT, JONAS (*d.* 1805), was one of the most distinguished organists of the latter half of the eighteenth century. He was the pupil of Samuel Jarvis, and about 1795 was organist of the united parishes of St. Margaret Pattens and St. Gabriel Fenchurch, and also of St. Catherine Coleman, Fenchurch Street. He was the author of a 'Complete Treatise on the Organ,' of 'Ten Voluntaries and Twelve Preludes' for the

same instrument, and wrote many songs for the Spa Gardens, Bermondsey, near which he lived. His death took place in 1805.

[Grove's Dict. of Music, i. 249; British Museum Catalogue; preface to Blewitt's Treatise on the Organ.] W. B. S.

BLEWITT, JONATHAN (1780?–1853), composer, son of Jonas Blewitt [q. v.], is generally said to have been born in 1782 or 1784, but is also stated to have been at the time of his death in his 73rd year. He was educated by his father and his godfather, Jonathan Battishill [q. v.], and he also received some instruction from Haydn. At the age of eleven he acted as deputy to his father, and subsequently he held several appointments as organist in London. He was also successively organist of Haverhill, Suffolk, and of Brecon, at which latter place he remained three years. About 1808 he returned to London for the production of an opera he had written for Drury Lane, but the theatre was burnt down before the work was brought out. Blewitt next went to Sheffield, and thence he proceeded (in 1811) to Ireland, where he lived for a time with Lord Cahir. He was appointed organist of St. Andrew's, Dublin, composer and director of the music at the Theatre Royal, and grand organist to the Freemasons of Ireland, the latter post being given him by the Duke of Leinster. On Logier's introducing his system into Ireland, Blewitt joined him, and was very successful as a teacher, but in 1826 he was back in London, and began the long series of pantomime compositions with which his name was connected for the rest of his life. For upwards of twenty-five years he wrote pantomime music for most of the London theatres, and his last work, 'Harlequin Hudibras,' was brought out at Drury Lane the year before his death. In 1828 and 1829 he was director of the music at Sadler's Wells Theatre, and he was also, at different times, musical director at Vauxhall, at the Tivoli Gardens, Margate, and pianist to Templeton's Vocal Entertainments. He wrote a few light operas and upwards of 2,000 pieces of vocal music, most of them comic songs, for which he was very celebrated, the best remembered being 'Barney Brallaghan.' In his latter years Blewitt sank into great poverty, and suffered much from a painful disease. He died in London 4 Sept. 1853, and was buried at St. Pancras. He left a widow and two daughters totally unprovided for.

[The Georgian Era, iv. 550; Grove's Dict. of Music, i. 249; Musical Times, 1 Oct. 1853; Gent. Mag. 3rd ser. xl. 429.] W. B. S.

BLEWITT, OCTAVIAN (1810–1884), secretary of the Royal Literary Fund, was son of John Edwards Blewitt, by his marriage with Caroline, daughter of Peter Symons, sometime mayor of Plymouth. He was born on 3 Oct. 1810 in St. Helen's Place, Bishopsgate, London, where his father was settled as a merchant. Much of his early life was spent at Marazion House, in Cornwall, the residence of his great-uncle, Hannibal Curnow Blewitt; and he received his education at Plymouth grammar school. Entering the medical profession, he served the usual five years' apprenticeship, partly to his uncle, Mr. Dryden, assistant-surgeon of Devonport dockyard, and partly to Mr. Pollard of Torquay. In December 1833 he came to London, where he continued his medical studies in the infirmary of St. George's, Hanover Square, and spent much of his time in the house of Sir James Clark, acting as tutor in classics to Clark's son and assisting him in preparing for the press his work on 'Phthisis.' Afterwards he visited the island of Madeira with a patient, remained at Funchal for eight months, and subsequently travelled much in Italy, Egypt, Greece, Turkey, and other countries. In March 1839 he was elected secretary of the Royal Literary Fund, which office he continued to hold till his death. During his secretaryship the institution largely extended the sphere of its operations and attained a thoroughly safe and assured position. Blewitt spent many years in arranging the papers, literary, financial, and historical, which constituted the records of the association; and these documents, when classified, were stitched into covers so as to be read like a book, and are now preserved in 130 folio boxes. In 1872 the King of the Belgians presided at the annual banquet of the Literary Fund, and testified his sense of the secretary's services by creating him a knight of the order of Leopold. He died in London in November 1884.

He was the author of: 1. 'A Panorama of Torquay,' Torquay, 1830, 12mo, which was so successful that the impression was speedily exhausted, and a second and enlarged edition, professing to be 'A Descriptive and Historical Sketch of the District comprised between the Dart and Teign,' was published at London in 1833, 8vo. 2. 'Treatise on the Happiness arising from the Exercise of the Christian Faith.' 3. The preface to Glynn's 'Autograph Portfolio.' 4. 'Handbook for Travellers in Central Italy, including the Papal States, Rome, and the Cities of Etruria,' London, 1843, 12mo (anon.); 2nd edition (with the author's name), 1850. This and the following work belong to the series

known as Murray's guide-books. 5. 'Handbook for Travellers in Southern Italy,' London, 1853, 12mo. For twenty-nine years Blewitt edited the newspaper portion of the 'Gardener's Chronicle,' and he contributed articles to the 'Quarterly Review,' 'Fraser's Magazine,' the 'St. Paul's Magazine,' and other periodicals.

[Biograph. v. 170; Boase and Courtney's Bibl. Cornubiensis, iii. 1072; Times, 4 Nov. 1884; Athenæum, 15 Nov. 1884, p. 626; Anderson's Book of British Topography, 93; Davidson's Bibl. Devoniensis, 57; Men of the Time (1884), 137; Sir C. Dilke's Memoir of his Grandfather, Charles Wentworth Dilke, 79.] T. C.

BLICKE, Sir CHARLES (1745–1815), surgeon, was a prominent member of his profession, and accumulated a large fortune by its practice in London. He was educated at St. Bartholomew's Hospital, where he was elected assistant-surgeon, and succeeded Percival Pott as surgeon 17 July 1787 (*MS. Journal St. Bartholomew's Hospital*). He was one of the court of assistants at Surgeons' Hall, in 1801 became a governor of the College of Surgeons, was knighted in 1803, and died 30 Dec. 1815. In 1772, while living in Old Jewry, he published his only work, 'An Essay on the Bilious or Yellow Fever of Jamaica, collected from the manuscript of a late Surgeon.' In the preface Blicke states that he has abridged the original work and simplified its style. The essayist, whose name is not preserved, advocates the treatment of the fever by bleeding, purging, warm baths, fresh air, and acid drinks. Some twenty authors are quoted to little purpose, and the only interesting contents of the composition are a few lines on the sufferings of the Carthagena expedition, in which the original writer had served, and the mention of the fact that the water of the Bristol hot wells was exported to Jamaica. Whatever he may have cut out, the editor certainly added nothing. The essay has been translated into Italian. In 1779 Blicke, then living in Mildred Court, received the famous Abernethy as his apprentice in surgery. The pupil thought his master fonder of money-making than of science.

[MacIlwain's Memoirs of Abernethy.] N. M.

BLIGH, RICHARD (1780–1838?), chancery barrister, the son of John Bligh, cousin of Admiral William Bligh [q. v.], by his wife, Lucy Shuter, was educated at Westminster School and Trinity College, Cambridge. He graduated B.A. 1803, M.A. 1806, and became an equity draughtsman at the chancery bar. He had some practice, but was chiefly engaged in reporting in the House of Lords for several years. He married a daughter of his cousin, Admiral William Bligh.

His works, in the order of their publication, are: 1. 'A Report of the Case of Bills of Exchange made payable at Bankers, as decided in the House of Lords,' London, 1821. 2. 'Reports of Cases heard in the House of Lords on Appeals and Writs of Error,' 10 vols., 1823. 3. 'A Digest of the Bankrupt Law,' 1832. 4. 'Bellum Agrarium; a Foreview of the Winter of 1835, suggested by the Poor Law Project, with Observations on the Report and the Bill,' 1834. 5. 'Reports of Cases in Bankruptcy' (a work in which Bligh was aided by Basil Montagu), 1835.

[Welch's Alumni Westmonasterienses, p. 452; Brit. Mus. Catal.; Davy's Grad. Cantab. with manuscript additions, i. 49.] J. M.

BLIGH, Sir RICHARD RODNEY (1737–1821), admiral, a native of Cornwall, is said to have been a godson of Lord Rodney, a statement which is highly improbable, as in 1737 Mr. Rodney was only nineteen years of age, and was in Newfoundland (Mundy, *Life of Rodney*, i. 38). He entered the navy about 1751, and was a midshipman of the Ramillies with Admiral Byng in the battle of Minorca, 20 May 1756. He was made lieutenant some time afterwards, and went out to the West Indies with Sir George Rodney, by whom he was promoted to the rank of commander, 22 Oct. 1762. He was posted on 6 Dec. 1777, and in 1782 commanded the Asia under Lord Howe at the relief of Gibraltar. In 1793 he was appointed to the Alexander, which during the early summer of 1794 was one of the squadron in the Bay of Biscay with Rear-admiral Montagu [see Montagu, George]. In the autumn the Alexander, accompanied by the Canada, had convoyed the Lisbon and Mediterranean trade well to the southward, and was returning, when on 6 Nov. the two fell in with a French squadron of five 74-gun ships, three frigates, and a brig. The Canada succeeded in getting away, but the Alexander, after a stout resistance, and in an almost sinking condition, was captured and taken into Brest (James, *Naval Hist.* (ed. 1860), i. 203).

A very sensational account of the brutal ill-treatment to which the prisoners were subjected is given by Captain Brenton (*Nav. Hist.* i. 364), and Ralfe has described Bligh as suffering great privations. But Brenton's unsupported statements are not to be fully trusted, and Ralfe's story is distinctly contradicted by Bligh's own letter (23 Nov.), in which he states that he was treated by his

captors with great kindness and humanity. He had already been advanced to the rank of rear-admiral, 4 July 1794, but had not received any official intimation of it. At the time of his capture he was thus in the simple capacity of captain, though the French not unnaturally described him as a rear-admiral. On his return to England in May 1795 he was tried by court-martial for the loss of the Alexander, but was honourably acquitted.

From 1796 to 1799 Bligh was at Jamaica as second in command. He became a vice-admiral 14 Feb. 1799, and in 1803 commanded in chief at Leith, an appointment which he quitted on his promotion to the rank of admiral, 23 April 1804. This was his last service afloat. In January 1815, when the order of the Bath was largely extended, and eighty naval officers were made K.C.B., Bligh was passed over. He felt himself aggrieved, and wrote several letters urging his claims, which were principally his sixty-four years' service, and his stout, although unsuccessful, defence of the Alexander. The admiralty could not then be brought to admit that these were sufficient reason for any special reward; but five years later, under a new reign and a modified ministry, he was invested with the G.C.B. He did not long enjoy the dignity, dying on 30 April 1821. He was twice married, and left, besides several daughters, a son, George Miller Bligh, who was a lieutenant of the Victory at Trafalgar, where he was severely wounded, and died a captain in 1835.

[Ralfe's Naval Biog. ii. 517; Gent. Mag. (1821) xci. 468; (1835) iii. N.S. 322.] J. K. L.

BLIGH or **BLIGHE, THOMAS** (1685-1775), general, was a member of an old Yorkshire family settled in Ireland. He was second son of Thomas Blighe, of Rathmore, county Meath, one of the knights of the shire, and an Irish privy councillor, and was born on 15 Jan. 1685. His elder brother John was in 1725 created Earl of Darnley, and died in 1728, being buried in Westminster Abbey. Thomas Bligh was often entitled 'honourable' by contemporary writers. Particulars of his first military commissions are wanting. He was returned to the Irish parliament as member for Athboy, county Meath, in 1715, holding the seat for sixty years, and in 1717 he held the rank of captain on the Irish establishment, and was promoted to the lieutenant-colonelcy of the 6th horse, now 5th dragoon guards, of which his uncle, Lieutenant-general Robert Napier, then was colonel. In 1737 he married Elizabeth, sister of W. Bury, of Shannon Grove, Limerick, and by this lady, who died in 1759, had an only child, who died young. In 1740 Bligh was appointed colonel of the 20th foot, in 1745 he became a brigadier-general, and commanded in a very sharp action at the causeway of Melle when marching to reinforce the garrison of Ghent (Cannon, *Hist. Rec. 4th Lt. Drags.* p. 38). In 1746 he was transferred from the 20th foot to the 12th dragoons, in 1747 he became a major-general, and in December the same year was transferred to the colonelcy of his old regiment, the 5th dragoon guards, which had then become the 2nd Irish horse, and in 1754 became a lieutenant-general. In 1758 preparations were made on an extensive scale for another descent on the French coast, to create a diversion in favour of the army under Prince Ferdinand of Brunswick in Germany, and Lieutenant-general Bligh, then in his seventy-fourth year, was appointed to command the troops. Horace Walpole speaks of Bligh as 'an old general routed out of some horse-armoury in Ireland' (Walpole, *Letters*, vol. iii.), but he appears to have been respected in the service, and, in spite of his years, to have been noted for a command in Germany (*Chatham Corresp.* vol. i.) The fleet under Howe, with the troops on board, quitted England at the beginning of August 1758, and in seven days arrived in Cherbourg roads. The troops were landed, the town of Cherbourg was captured, the harbour, pier, and forts were destroyed, and the troops re-embarked, bringing away with them the brass ordnance as trophies. In September a landing was effected on the coast of Brittany, as a preliminary to the siege of St. Malo; but, the latter being found impracticable, the troops, after marching a short way up the country, returned and re-embarked in the bay of St. Cas. A strong force of the enemy, under the Duke d'Aguillon, followed and attacked the British rear, which was most gallantly defended by Major-general Alexander Dury (not Drury as generally written) of the Guards, and inflicted very severe loss upon them. The most recent and most discriminating accounts of the transaction will be found in Sir F. Hamilton's 'Hist. Grenadier Guards,' vol. ii., and Burrows's 'Life of Lord Hawke.' Like other unsuccessful commanders of the period, Lieutenant-general Bligh was bitterly censured for his conduct of the affair, and soon after the return of the expedition to England resigned all his commissions and retired to his property in Ireland. His name is omitted from the Army Lists of 1759 and subsequent years. Some time after his retirement Bligh married a second wife, Frances, daughter of Theophilus Jones, of Leitrim, by whom he had no issue. He died at Brittas, near Dublin,

in the summer of 1775, at the age of ninety, and was buried at Rathmore. His ample fortune of 100,000*l.* he bequeathed to his younger brother, the Dean of Elphin.

[Collins's Peerage (ed. 1812), vii. 60–1; Cannon's Hist. Records 4th Dragoon Guards, 4th Dragoons, 12th Dragoons, 20th Foot; Chatham Corresp. vols. i. and ii.; Brit. Mus. Gen. Cat., sec B——h; Entick's Hist. of the War, vol. iii.; Hamilton's Hist. Grenadier Guards, vol. ii.; Burrows's Life of Hawke; Hist. MSS. Com. Reps. 2, 3; Cal. State Papers (Home Off. 1766–69), pp. 340, 344; Scots Mag. xxxvii. 525.] H. M. C.

BLIGH, WILLIAM (1754–1817), admiral, was baptised at St. Andrew's Church, Plymouth, on 4 Oct. 1754. He was the only son of Francis Bligh (*d.* 27 Dec. 1780), by his wife, Jane Pearce, a widow, whose maiden name was Balsam. They were married at the church of St. Andrew, Plymouth, on 4 Oct. 1753 (*Notes and Queries*, 8th ser. ii. 30, 94; Boase and Courtney, *Bibliotheca Cornubiensis*). Francis Bligh resided at Tynten or Tinten (the seat of an ancient Cornish family of that name), in the parish of St. Tudy, Cornwall. It is clear that the Blighs were settled in the parish of St. Tudy in 1680–1, and that a John Bligh or Blygh of Bodmin was a commissioner for the suppression of monasteries in the reign of Henry VIII. Moreover, four members of the family were mayors of Bodmin between the years 1505 and 1588. Indeed, the Cornish Blighs may be traced back as far as the reign of Henry IV. It is believed that Admiral Sir Richard Rodney Bligh [q. v.], and other naval officers named Bligh, were relatives of the subject of this notice.

'Bread-fruit Bligh,' as he was called, having entered the navy, accompanied Captain Cook on his second voyage round the world in 1772–4, as sailing-master in the Resolution; and during this voyage the fruit associated with Bligh's name was discovered at Otaheite. He became a lieutenant in the royal navy, made several important hydrographic surveys, was present at the memorable battle off the Doggerbank 5 Aug. 1781, fought under Lord Howe at Gibraltar in 1782, and, having acquired a high reputation as a skilful navigator, was appointed to the Bounty of 250 tons, in December 1787, arriving at his destination, Otaheite, ten months afterwards. Here he remained for five or six months, during which period his crew became demoralised by the luxurious climate and their apparently unrestricted intercourse with the natives. The object of the voyage, namely to obtain plants of the bread-fruit, with a view to its acclimatisation in the British West India islands, having been accomplished, Bligh set out on his voyage thither. But his irascible temper and overbearing conduct excited (under the leadership of Fletcher Christian) a mutiny on board the ship; and on 28 April 1789 he, with eighteen of his crew, were overmastered and cast adrift in an open boat, only twenty-three feet long, and deeply laden; they had a small amount of provisions alloted to them, but no chart. In this frail craft they sailed, for nearly three months, a distance of 3,618 miles, touching at some small islands, where they got only a few shellfish and some fruit; but at length, thanks to Bligh's skill, resource, and courage, they reached Timor, an island off the east coast of Java, on 14 June 1789. Here Bligh took passage in the Vlydte packet and reached England on 14 March 1790. Twelve of his companions, the survivors, followed in the Dutch fleet. The mutineers settled on Pitcairn Island, where their descendants still exist, happy and prosperous [see Adams, John, 1760?–1829]; but some of the ringleaders were captured by the commander of the Pandora, and brought back to Portsmouth, where three of them were executed. Byron's poem, 'The Island,' is based upon the story of the relations which existed between the women of Otaheite and the mutineers. Bligh was forthwith promoted to the rank of commander, and shortly afterwards, on his return to England, to that of post-captain. In 1791 he was appointed to the Providence, and sailed on a similar, but more successful, errand to his last, for the Society Islands, obtaining, in recognition of his discoveries, the gold medal of the Society of Arts in 1794; but there was only a small practical result of his voyage, as the West Indians preferred the plantain to the bread-fruit. In 1794 we find him captain of the 74-gun ship Warrior off Ushant, and in 1797 at Camperdown, commanding the 64-gun ship the Director. Bligh further distinguished himself in the same year by his intrepidity and address at the mutiny at the Nore. On 21 May 1801 he commanded the Glatton, of 54 guns, at Copenhagen, and was personally thanked by Nelson. On 21 May in the same year he was elected a fellow of the Royal Society, in consideration of his distinguished services in navigation, botany, &c. In 1805 he was appointed captain-general and governor of New South Wales; but from his temperament he was unsuited for the post, both his civil and military subordinates strongly resenting his harsh exercise of authority. Nevertheless the main object which he had in view seems to have been a good one, namely, the prevention of an unlimited importation of ardent spirits into

the colony; and in this as well as in other respects he received the loyal support of Lord Castlereagh; but on 26 Jan. 1808 Governor Bligh was forcibly deposed by Major George Johnston of the 102nd foot, and was imprisoned until March 1810 (cf. WENTWORTH, *New South Wales*, and BONWICK, *Curious Facts of Old Colonial Days*). For this act Major Johnston was tried at Chelsea Hospital in 1811, and was cashiered. Bligh on his release returned to England, and in the following year, on 31 July 1811, obtained his flag as rear-admiral of the blue, proceeding to vice-admiral of the blue in June 1814. He resided, towards the close of his life, at the Manor House, Farningham, Kent, and died in Bond Street, London, on 7 Dec. 1817 (*Gent. Mag.* lxxxvii. 630). He was buried in the eastern part of Lambeth churchyard, near the Tradescant tomb, by the side of his wife, Elizabeth Betham. She was a woman of superior attainments, whose father was a scholar, and the friend of Hume, Black, Adam Smith, and Robertson. Bligh left six daughters. Richard Bligh [q.v.] was a son-in-law and distant relative.

[Marshall's Naval Biographies, ii. iii. and iv.; Cook's Voyages; Belcher's Mutineers of the Bounty; Notes and Queries for 1856, 1871, and 1872; Gent. Mag. 1793–8, 1806, 1809, 1812, and 1815; information from Reginald Peacock, Esq.]

W. H. T.

BLIGHT, WILLIAM (1785–1862), captain in the royal navy, was entered 9 May 1793, as a volunteer on board the Intrepid, 64 guns, under the command of Captain the Hon. Charles Carpenter. In that ship he continued as midshipman, master's mate, and acting lieutenant, most of the time in the East and West Indies, until confirmed as lieutenant, 15 April 1803, and appointed to the Britannia of 100 guns, with Captain, and afterwards Rear-admiral, the Earl of Northesk. In the Britannia he had his share in the glory of Trafalgar, and was sent to take possession of the French Aigle of 74 guns, which was lost in the gale immediately after the battle. Blight, however, was fortunately rescued in time, and in the spring of 1806 followed Lord Northesk into the Dreadnought. In August 1806 he was appointed to the Néréide, 36 guns, with Captain Corbet, and served in the attack on Buenos Ayres July 1807. The Néréide afterwards went to the East Indies, and in February 1809, when Captain Corbet was tried for cruelty [see CORBET, ROBERT], Blight, then first lieutenant, was the principal witness in defence. He was afterwards, 1812–14, agent for transports at Palermo; in 1819–21 first lieutenant of the Queen Charlotte, flagship at Portsmouth; and 12 Feb. 1821 was promoted to the rank of commander. In May 1828 he was appointed to the Britannia, carrying the flag of Lord Northesk as commander-in-chief at Plymouth, from which he was transferred to the St. Vincent, and was posted from her on 22 July 1830. He held no further appointment in the navy, and retired with the rank of rear-admiral 27 Sept. 1855. He died 22 July 1862.

[Marshall's Roy. Nav. Biog. x. (vol. iii. part ii.) 153; O'Byrne's Naval Biog. Dict.; Gent. Mag. (1862, ii.) xiii. N.S. 238.]

J. K. L.

BLISS, NATHANIEL (1700–1764), astronomer-royal, was born 28 Nov. 1700. He was the son of Nathaniel Bliss, gentleman, of Bisley, Gloucestershire. He graduated at Pembroke College, Oxford, B.A. 27 June 1720, and M.A. 2 May 1723. He became rector of St. Ebbe's, Oxford, in 1736. He succeeded Halley as Savilian professor of geometry 18 Feb. 1742, and was elected a fellow of the Royal Society 20 May following. He opened in the same year an astronomical correspondence with Bradley, communicating to him, 15 Dec. 1742, his observations of Jupiter's satellites. Subsequently he aided him at the Royal Observatory on some special occasions, and, thus virtually designated as his successor, was, on his death in 1762, promoted to the post of astronomer-royal. He held it, however, only two years, dying 2 Sept. 1764.

The observations made under his supervision by Charles Green (his, and formerly Bradley's, assistant), being regarded as private property, were purchased from his widow by the board of longitude, and deposited at the Royal Observatory until 1 March 1804, when they were offered to the delegates of the Clarendon Press for publication. They were accordingly appended, with those made by Green after Bliss's death down to 15 March 1765, to the second folio volume of Bradley's observations, issued, under Professor Abram Robertson's editorship, in 1805. Although including only what was indispensable in order to deduce the places of the sun, moon, and planets at the most important points of their orbits (see DELAMBRE, *Hist. de l'Astr. au 18e Siècle*, p. 425), they are of value as being made on Bradley's system, and with Bradley's instruments; yet they have never been reduced.

Bliss was a frequent guest and scientific coadjutor of George, earl of Macclesfield. On 12 Feb. 1744–5, Bliss wrote requesting him to attempt a meridian observation of the brilliant comet then approaching the sun, which was successfully accomplished near noon, 28 and 29 Feb., both at Shirburn Castle and Green-

wich. He replaced Bradley (then in failing health) in observing the transit of Venus, 6 June 1761, and communicated to the Royal Society an account of Eustachio Zanotti's observation of the same event at Bologna (*Phil. Trans.* lii. 173, 232, 399). His own observation of the annular eclipse visible at Greenwich, 1 April 1764, is recorded in the same publication (liv. 141). An etching by J. Caldwall, from his portrait by D. Martin, bore the punning legend: 'Sure this is Bliss, if bliss on earth there be' (BROMLEY'S *Catalogue of Engraved Portraits*, p. 357). Bliss married early, and a son John, born in 1724, proceeded B.A. at Oxford 11 March 1745-6, and M.A. 7 July 1747.

[Gent. Mag. xxxiv. 450; Watt's Bibl. Brit.; Bradley's Miscellaneous Works and Correspondence, pp. lviii, 422, 426. A short notice of Bliss exists in manuscript in a copy of Thomas Streete's Astronomia Carolina, once the property of Bliss, and now in the British Museum. The notice was printed in Notes and Queries, 6th ser., xi. 235.]

A. M. C.

BLISS, PHILIP, D.C.L. (1787–1857), antiquary and bibliographer, was the son of the Rev. Philip Bliss, rector of Dodington and Frampton Cotterell in Gloucestershire, who married Anne, daughter of Thomas Michell of Conham, Wiltshire, and died on 1 Feb. 1803. The younger Philip Bliss was born at Chipping Sodbury on 21 Dec. 1787, and educated at its grammar school and at the Merchant Taylors' School, where he stayed from 1797 to 1806. In the latter year he was elected a scholar of St. John's College, Oxford, and in 1809 he became a fellow of his college, taking the degree of B.C.L. in 1815, and that of D.C.L. in 1820. From youth to old age he haunted libraries, and in 1810 he found congenial occupation in his appointment as assistant at the Bodleian, then presided over by Dr. Price. For a short time he was employed, through the nomination of Lord Spencer, at the British Museum, but he speedily returned to Oxford, and with Oxford his name will be ever associated. Bliss entered into deacon's orders in 1817, his first curacy being at Newington, near Oxford, and was advanced to the priesthood in 1818. Parochial preferment he never held, but for many years, and until 1855, he officiated as chaplain to his friend, Sir Alexander Croke, at Studley Priory. From July 1822 to December 1828 he was under-librarian at the Bodleian to Dr. Bandinel, and after that period held numerous university offices. He had tried for the keepership of the archives in 1818, and had been defeated, though he polled the respectable total of 122 votes. His first post was the registrarship of the university, which he retained from 1824 to 1853, when he retired on a well-earned pension of 200*l.* a year. He was keeper of the archives from 1826 to 1857, registrar of the university court 1831, and principal of St. Mary Hall, in succession to Bishop Hampden, 1848–57. In addition to these offices he discharged at various dates the duties of clerk of the market, delegate of the university press, and deputy professor of civil law. Bliss was the embodiment of the traditions and history of his *alma mater*. The punctuality of his habits and the method with which he kept the muniments entrusted to his care became a proverb at Oxford, while the sweetness of his disposition and the courtesy of his manners were the delight of all with whom he came in contact. He died at St. Mary Hall, Oxford, on 18 Nov. 1857, and was buried on the north side of St. Giles's churchyard, Oxford, on 23 Nov.; his wife, Sophia, second daughter of the Rev. Robert Barker Bell, whom he had married in 1825, survived him. Their issue was one son and one daughter.

Many of the works of Bliss are of the highest utility to the literary student. Whilst at the Bodleian he compiled part of the catalogue of Richard Gough's collection; the 'Oxford University Calendar' was edited by him for some years, and the catalogue of Oxford graduates, 1659–1850, appeared under his superintendence. He edited in 1811 Bishop Earle's 'Microcosmography,' adding thereto a valuable bibliography of character-books, and was responsible for the publication of that part of the volumes generally known as 'Letters from the Bodleian,' which contains John Aubrey's lives of eminent men. Among his other reprints were Arthur Wilson's 'Inconstant Lady' (1814); the 'account of the Christmas Prince as it was exhibited in the university of Oxford in 1607,' which was written by Griffin Higgs; a selection of 'bibliographical miscellanies,' of which one number only appeared in 1816 in 104 copies; 'thirteen psalms and the first chapter of Ecclesiastes translated into English verse by John Croke, with documents relating to the Croke family,' part of the 11th volume of the Percy Society's publications (1844), which was mainly prepared by Sir Alexander Croke, but seen through the press by Bliss; and the first part of what was intended to be a series of 'historical papers,' to be edited for the Roxburghe Society by Bliss and Bandinel. But the work with which Bliss has for all time linked his name, and for which successive generations of scholars must own their indebtedness to him, is his

edition in four volumes (1813-20) of Anthony à Wood's 'Athenæ Oxonienses and Fasti.' It originated in a conversation of Thomas Park, the antiquary, who told a London publisher of the notes which Bliss had collected as additions to the original work, and suggested the issue of a new edition. Another edition under the care of Bliss was among the projects of the directors of the Ecclesiastical History Society, but it went no further than the first volume containing the life of Wood, which appeared in 1848. Most of the fresh matter which Bliss intended to have incorporated in this impression is contained in an interleaved copy of the 1813 issue which was left by him to the Bodleian. His second great work related to the other Oxford antiquary, Tom Hearne. This was entitled 'Reliquiæ Hearnianæ; the Remains of Thomas Hearne,' and consisted of a selection from his voluminous manuscript diaries. The greater part of it had remained in the press untouched for nearly half a century before it was completed in 1857 at the suggestion of Mr. W. J. Thoms, the late editor of 'Notes and Queries.' This edition was soon exhausted, and a second was twelve years later included in the 'Library of Old Authors.' The library of Bliss, an extremely interesting collection, especially in character literature, volumes printed in London just before the great fire, books printed at Oxford, and works on the Psalms, were sold from June to August 1858. Many of them were purchased for the Bodleian Library. The Additional Manuscripts at the British Museum, 22574-22610, formerly belonged to him, and two volumes in the same set, 25100-25101, contain his notes on English poets and on fairy poetry. His letters to Dr. Hunter and Joseph Haslewood are in Nos. 24865 and 22308. Some selections from his correspondence are printed in 'Notes and Queries,' vols. viii. and x. of the 2nd series, and vol. i. of the 3rd series. A tribute to his poetic taste was paid in the same paper (2nd series, vol. x. 181, 204, 221) by printing the extracts from the old poets which he had incorporated in his edition of Wood.

December 1857, pp. 677-8, January 1858, pp. 99-100; Notes and Queries, 2nd ser. iv. 443, v. 47, 76, vii. 514.] W. P. C.

BLITHEMAN or BLYTHEMAN, WILLIAM (*d.* 1591), was an organist and gentleman of the chapel under Queen Elizabeth. Wood, in his 'Fasti' (ed. Bliss, i. 235), states that Dr. John Bull [q. v.] 'had been trained up under an excellent master named Blithman, organist of Queen Elizabeth's Chappel, who died much lamented in 1591;' and in a note by Bishop Tanner to this passage it is stated that 'John Blithman belonged to Christ Church quire; seems to have been master of the choristers 1564.' Whether Tanner's John Blitheman was the same as the subject of this notice cannot be ascertained. Blitheman died on Whit Sunday 1591, and was buried in St. Nicholas Olave. His epitaph, which was on 'an engraven plate in the north wall of the chancel,' is preserved in Stow (*Survey Book*, iii. 211), and runs as follows:—

Here Blitheman lies, a worthy wight,
who feared God above;
A Friend to all, a Foe to none,
whom Rich and Poore did love.
Of Princes Chappell, Gentleman,
unto his dying Day;
Whom all took great delight to heare
him on the Organs play.
Whose passing Skill in Musickes Art,
a Scholar left behinde;
John Bull (by name) his Master's veine
expressing in each kinde.
But nothing here continues long,
nor resting Place can have;
His Soule departed hence to Heaven,
his Body here in Grave.

Of Blitheman's music a few interesting pieces are in existence. The manuscript known as 'Queen Elizabeth's Virginal Book' (Fitzwilliam Museum, Cambridge) has (p. 91) an 'In homine' by him, and Thomas Mulliner's 'Virginal Book' (*Add. MS.* 30513) has several of his compositions. Other specimens are in Additional MSS. 29384, 31403, and 17801-5, and Hawkins printed a 'meane' by him (*History of Music*, ed. 1853, Appendix). All these examples show that he was a master of his art, and that Bull, whom (according to Stow) he 'spared neither time nor labour' to teach, owed much to his influence.

BLIZARD, THOMAS (1772-1838), surgeon, became a pupil of his uncle, Sir William Blizard [q. v.], and attained great skill as an operating surgeon. Having early become surgeon to the London Hospital, and gained a large and profitable city practice, he was able to retire on his fortune at the age of forty-six. He was notable both for his knowledge of anatomy and for his invention of a special knife for lithotomy. He died 7 May 1838. He was the author of a 'Description of an

Extra-Uterine Fœtus' (*Trans. Royal Soc.* vol. v.), and of a 'Case of Intussusception of the Bowels' (*Trans. Medico-Chir. Soc.* vol. i.)

[Gent. Mag. 1838.] G. T. B.

BLIZARD, Sir WILLIAM (1743–1835), surgeon, was born at Barn Elms in Surrey in 1743, and was the fourth child of William Blizard, an auctioneer. He received little school education, and after apprenticeship to a surgeon at Mortlake came to study at the London Hospital, also attending the lectures of Pott at St. Bartholomew's Hospital (*Hunterian Oration*, 1815). In 1780 he was appointed surgeon to the London Hospital, and in 1785, in conjunction with Dr. Maclaurin, founded the medical school there. The opening was celebrated by him in an ode, and on most of the important occasions of his life Blizard expressed himself in verse, which, had he been longer contemporary with Pope, would have certainly secured him a place in the 'Dunciad.' He lectured in the medical school on anatomy, physiology, and surgery. Abernethy attended his earlier lectures, and speaks of them with respect. As a hospital surgeon Blizard was famous for scrupulous attention to his duties in the wards, and he gave much time to the improvement of the London Hospital. He was often laughed at for the importance which he attached to learned diction and ceremonial observance (*Lancet*, 1824, iii. 19). The College of Surgeons had a house in Cock Lane, where the bodies of criminals just executed at Newgate were delivered to be anatomised. Sir William Blizard, when president of the College of Surgeons, attended at this house in full court dress to receive the bodies from the hangman; and the contrast between the president's elaborate costume and formal manner and the surly shabbiness of the executioner is described by an eyewitness (Sir R. Owen) as having made the ghastly scene almost ludicrous. Blizard was elected F.R.S. in 1787, and was twice president of the College of Surgeons. He published a paper on lachrymal fistula in the 'Philosophical Transactions,' 1780, and several other medical papers (*London Medical Journal*, 1789–90); 'Experiments on the Danger of Copper and Bell Metal in Pharmaceutical Preparations,' 1786; 'Suggestions for the Improvement of Hospitals,' 1796. 'A Popular Lecture on the Situation of the large Blood-vessels and the Methods of making effectual Pressure on them,' 1786, is the most lucid of his works, and went through several editions. None of his writings are of permanent value. His practice was considerable, and he used for many years to attend regularly at Batson's Coffee House in Cornhill at a certain hour to await consultations, being probably the last survivor of this method of practice. In his youth he wrote on politics in a revolutionary spirit, under the *nom de plume* of Curtius, but he afterwards became an admirer of Mr. Pitt and adopted conservative opinions. Blizard was an example of hereditary longevity. His father and mother had both lived to eighty-six, and one of his grandmothers to ninety, while he himself died at the age of ninety-two on 27 Aug. 1835. He was buried in Brixton Church. There is a portrait of him by Opie at the Royal College of Surgeons.

[Blizard's Works; Cooke's Memoir, London, 1835.] N. M.

BLOET, BLUET, or BLOETT, ROBERT, bishop of Lincoln (*d.* 1123), a Norman by nation, and brother of Hugh, bishop of Bayeux, was chancellor of William the Conqueror. When the king lay on his death-bed at Rouen, he sent Bloet to England with a letter praying Archbishop Lanfranc to crown William Rufus. Bloet crossed the Channel in company with Rufus himself, and became the new king's chancellor. After the death of Remigius in 1092, the see of Lincoln was kept vacant for a year. Rufus, however, repented of his evil ways while he lay sick at Gloucester in the spring of 1093, and at the same time that he made Anselm archbishop he gave the bishopric of Lincoln to Robert Bloet. The consecration of the new bishop was delayed, for Thomas, archbishop of York, objected to the claim of the archbishop of Canterbury over the see of Lincoln. Anselm might, if he chose, consecrate a bishop to the ancient see of Dorchester, but Lindesey Thomas claimed as part of the northern province. Bloet was at length (12 Feb. 1094) consecrated at Hastings, in the chapel of the castle, on the day after the dedication of Battle Abbey, by Anselm and seven other bishops who had assembled to take part in the ceremony at Battle. As the king appointed Bloet during his short-lived repentance, he received nothing for his grant of the bishopric. To make up for this loss, Bloet had to pay no less than 5,000*l.* for the decision in favour of the rights of Canterbury which enabled Anselm to perform the ceremony of his consecration. Although he resigned the chancellorship on his elevation to the episcopate, he held the higher office of justiciary under Henry, and was his most trusted adviser. In 1102 he besieged Tickhill, the castle of Robert of Belesme, for the king. His manner of life was magnificent,

and his household, in which the king's son Richard and other noble youths were trained, was large and splendid. Towards the end of his life he was much harassed by suits brought against him by an inferior justiciary. His wealth was diminished by heavy fines, and his archdeacon, Henry of Huntingdon, who was brought up in his household, quotes him in his 'De Contemptu Mundi' as an instance of the instability of earthly greatness. The bishop, he tells us, was deeply grieved at his reverse of fortune, speaking of it with tears, and ascribing his trouble to King Henry, who, he said, never spoke well of a man without at the same time meaning to ruin him. Bloet was a liberal benefactor to his cathedral church, which had been built by his predecessor, Remigius. He dedicated the church, furnished it with many rich ornaments, and doubled the number of prebends, making them forty-two in all. In spite of these benefactions his character has been painted in dark colours. In the earlier edition of William of Malmesbury's 'Gesta Pontificum,' the historian describes him as a man of loose and godless life. In his later edition he gives a less unfavourable picture, representing him, indeed, as a worldly man, but bringing no special charge against him. Later writers, such as Higden and Knighton, adopt and insist on the darker picture, accusing him of immorality, and adding that his ghost haunted his tomb at Lincoln until it was laid by masses and alms. On the other hand, Henry of Huntingdon represents him as a father of the fatherless, dear to his friends, gentle and pleasant with all men, and even William of Malmesbury allows that he was a genial man. In reading accusations of the monkish chroniclers, allowance must be made for the light in which the Lincoln people and the monks looked on some of Bloet's doings. Giraldus Cambrensis, writing in the interest of Lincoln, disapproves the partition of the see and the creation of the independent diocese of Ely (1109), for a bishopric at that time was looked on much as a lay fief, and its division implied a diminution in the profits of jurisdiction. The creation of the see of Ely was, however, the work of the king himself, and Bloet had no power to interfere. Giraldus speaks also of the bishop's folly in charging his church with an annual gift to the king of a rich gown of sable of the value of 100*l.*, though it is likely that the church received an ample equivalent. By removing the monks of Stow to Eynsham, Bloet was enabled to grant Stow to his church. While, however, Giraldus held this to be a good deed, the monks, who lost by the exchange, looked on it in a wholly different light, and Bloet's memory at Lincoln suffered at their hands, for his effigy on the west front of the church, known by the horn at its mouth (blow it), is called the 'swineherd of Stow' (Dimock). Bloet more deeply offended the monastic party by joining Roger, bishop of Salisbury, in persuading the bishops to petition the king (as they did in February 1123, after Bloet's death), that they might choose a secular priest as archbishop of Canterbury—a petition which the prior and monks of Canterbury and all of the monastic order who were at the council 'withstood for full two days, but it availed nought' (*A.-S. Chron.* 1123). The character of the bishop of Lincoln has been strenuously defended by Mr. Dimock in his preface to Giraldus Cambrensis, vii., in the Rolls Series. He was, in truth, a magnificent prelate, wise, generous, and kindhearted, worldly indeed in life, as many of his fellows also were, but by no means the evil man monkish chroniclers would have us believe him to have been. The charge of immorality made against him doubtless arose from the fact that he had a son born while he was chancellor of William the Conqueror. The death of Bloet is told in graphic terms by the Peterborough chronicler. It happened that on 10 Jan. 1123, the king was riding in his 'deer-fold' at Woodstock, and with him on either side were the bishops of Salisbury and Lincoln, 'and they were there riding and talking.' Then the bishop of Lincoln sank down and said to the king, 'Lord king, I am dying.' The king alighted and took the bishop in his arms. He was borne to his lodgings, and 'he was then forthwith dead.' He was buried 'with great worship' in his cathedral church before St. Mary's altar. His son Simon, whom he made dean of Lincoln, is also quoted in the 'De Contemptu Mundi;' for after having risen to great favour at court, he was disgraced and imprisoned, and, though he escaped from prison, lived in poverty and exile. The name Bloet is said to be the same word as 'blond.'

BLOIS, PETER DE. [See PETER.]

BLOMBERG, WILLIAM NICHOLAS (1702?–1750), biographer, the son of Baron Blomberg, a nobleman of Courland, was edu-

cated at Merton College, Oxford, was elected fellow of his college, and proceeded B.A. 1723, M.A. 1726. He became vicar of Fulham, Middlesex, in 1733, rector of that parish in 1734, rector of Cliffe, Kent, in 1739, and died on 5 Oct. 1750. He published 'An Account of the Life and Writings of Edmund Dickinson, M.D., physician-in-ordinary to King Charles and King James II. To which is added a treatise on the Grecian Games, printed from the Doctor's own manuscript,' London, 1739, 8vo. Dr. Dickinson was Blomberg's maternal grandfather.

[Faulkner's Fulham, 42, 47; Lysons's Environs of London, ii. 379; Cat. of Oxford Graduates (1851), 67; Gent. Mag. xx. 477; Hasted's Kent, i. 538.] T. C.

BLOME, RICHARD (*d.* 1705), a publisher and compiler of some celebrity, who by the aid of subscriptions adroitly levied issued many splendid works. Originally he was a ruler of paper, and afterwards a kind of arms painter. Wood says he practised for divers years progging tricks, in employing necessitous persons to write in several arts and to get contributions of noblemen to promote the work. Wood likewise remarks: 'This person Bloome is esteemed by the chiefest heralds a most impudent person, and the late industrious Garter (Sir W. D[ugdale]) hath told me that he gets a livelihood by bold practices.' He is no doubt the Richard Blome of the parish of St. Martin-in-the-Fields, Middlesex, gentleman, who, 'being weak and not well of body,' made his will on 7 May 1705. He desired to be buried in the church of Harlington, near Uxbridge. He left small legacies (40*s.* in all) to the poor of Harlington and St. Martin-in-the-Fields. The residue of his estate, including 'bookes, coppyes,' passed to Mrs. Jane Hilton. The will was proved at London on 22 Oct. 1705 by Jane Hilton, the sole executrix.

He published: 1. The fourth and fifth editions of Guillim's 'Display of Heraldrie,' 1660 and 1679. In the dedication to the Marquis of Hertford Blome mentions that his maternal grandfather, Richard Adams, was formerly in his lordship's service. 2. 'The Fanatick History, or an exact relation and account of the Old Anabaptists and New Quakers . . . which may prove the death and burial of the Fanatick doctrine,' London, 1660, 8vo. 3. 'A Geographical Description of the four parts of the World, taken from the notes and works of Nicholas Sanson and other eminent travellers and authors. Also a Treatise of Travel and another of Traffick. The whole illustrated with mapps and figures,' London, 1670, fol. 4. 'A Description of the Island of Jamaica, with the other Isles and Territories in America, to which the English are related; taken from the notes of Sr. T. Linch and other experienced persons in the said places. Illustrated with maps,' London, 1672, 8vo; again 1678, 'Together with the present state of Algiers.' 5. 'Britannia; or a Geographical Description of the Kingdoms of England, Scotland, and Ireland, with the Isles and Territories thereto belonging; and there is added an Alphabetical Table of the names, titles, and seats of the Nobility and Gentry; illustrated with a Map of each county of England,' &c., London, 1673, fol. There is also a list of 'Benefactors and promoters of this worke, whose names, titles, seates, and coates of armes, are entred as they gave their encouragements.' The book, which contains a map of London before the fire by W. Hollar, is truly described by Bishop Nicolson as a 'most entire piece of theft out of Camden and Speed.' 6. 'An Alphabetical Account of the Nobility and Gentry, which are (or lately were) related unto the several counties of England and Wales; as to their names, titles, and seats,' &c., London, 1673, fol. This useful list is printed at the end of Blome's 'Britannia.' The number of nobility and gentry included in the list is in England 6,474, and in Wales 703, making a total of 7,177. 7. 'An Essay to Heraldry, in two parts,' London, 1684, 8vo. Dedicated to George, earl of Berkeley; but Blome had a variety of patrons, and other names are occasionally found at the head of the dedication of this book. An edition entitled 'The Art of Heraldry' appeared in 1685, 12mo. 8. 'A View of the English Acquisitions in Guinea and the East Indies,' London, 1686, 12mo. 9. 'The Present State of his Majestie's Isles and Territories in America: with new Maps, together with astronomical tables from the year 1686 to 1700,' London, 1687, 8vo; translated into French, Amsterdam, 1688, 12mo, and into German, Leipzig, 1697, 12mo. 10. 'An Entire Body of Philosophy, according to the principles of Reneta des Cartes, in three books, translated from the French of Anthony Le Grand,' London, 1694, fol. 11. 'Gentleman's Recreation, consisting of Horsemanship, Hawking, Hunting, Fowling, Fishing, &c.,' London, 1710, fol. 12. 'History of the Old and New Testament,' London, 1711, 4to; translated from the French of the Sieur de Royaumont (i.e. Nicolas Fontaine).

BLOMEFIELD, FRANCIS (1705–1752), topographer of Norfolk, who was born at Fersfield, Norfolk, on 23 July 1705, was the son of Henry Blomefield of the same place, a gentleman of independent means, by his wife Alice, the daughter and heiress of John Batch, of Lynn. He was the fifth in descent from Henry Blomefield, of Fersfield, and each of his four ancestors having married an heiress or coheiress, he was the possessor of ample means with which to gratify his literary tastes. When only fifteen he began collecting material for his future work, and from 1720 to 1733 he records that he spent 175*l.* 16*s.* in journeying about making church notes and in buying some few manuscripts. He was educated at Diss and Thetford schools, and when under nineteen proceeded to the Norfolk college of Gonville and Caius at Cambridge, on All Fools' Day 1724. While at Cambridge he is said to have published a thin quarto 'Collectanea Cantabrigiensia;' but the only copy we have seen purports to have been printed at Norwich in 1750. He took his B.A. degree in 1727, and was ordained deacon on 17 March in the same year, the next year being licensed preacher by Dr. Thomas Tanner, the well-known antiquary and author of the 'Notitia.' In July 1729 he was ordained priest, and was immediately instituted rector of Hargham. Two months later he was presented to his father's family living of Fersfield, which he held, with the rectory of Hargham, till January 1730. He then resigned Hargham, which he only held as the temporary predecessor of the Rev. John Hare, the brother of the patron.

On 27 May 1732 his father died, and on 1 Sept. he married Mary, daughter of the Rev. Laurence Womack, rector of Caistor by Yarmouth, and cousin and heir of the Bishop of St. David's, one of a family who had long been parsons of Blomefield's native place. By her he had three daughters, of whom two survived him. In October 1733 he began to put forward proposals for his history of Norfolk, which were very well received; Tanner, who had just been made bishop of St. Asaph, especially encouraging him. In the spring of 1735 he was recovering from a violent fever, and had the good fortune to obtain access to the evidence room of the late Earl of Yarmouth, the head of the Paston family, at Oxnead, and lived among the parchments for a fortnight. To Blomefield is due the credit of being the discoverer in that interval of the well-known 'Paston Letters,' which he describes as 'innumerable letters of good consequence in history.' It is a significant fact that these same Paston letters afterwards came into the hands of 'honest (?) Tom Martin;' and as we know that this unscrupulous topographer possessed himself of many of Blomefield's manuscripts after his death, it may be that the Paston letters were among them, and that in this instance Martin was only 'from the robber rending his prey.'

By the early part of 1736 Blomefield had come to the conclusion that he was ready to begin his great work, and that he would print it in his own house. He bought a press and some type—apparently old and of different and insufficient founts, for his indexes are printed in all sorts of type, one after another—and hired a workman at 40*l.* a year. His troubles with his printers and engravers were endless, and to them was added the temporary loss of the whole of his collection for Diss Hundred, which miscarried when sent to Tanner for approval and correction. Then a fire is said to have consumed his press and printing office, and all the copies of his first volume. However, he gradually brought out number after number, and the work was so well received that he actually had to reprint his first part twice. His first folio volume was completed at Christmas 1739, just after he had received the gift of the rectory of Brockdish. The accounts of Thetford, which formed part of his first volume, and of Norwich, which took up the whole of the second volume, were separately published in 4to and folio respectively. 'Norwich' (913 pp. fol.) was advertised by him separately at 1*s.* a number of eight sheets, and its publication extended over more than four years, the date of its completion being 31 May 1745. He apparently took up his abode permanently at Norwich while his Norwich volume was in the press. Directly he began to advertise his Norwich volume, Thomas Kirkpatrick, the brother of the well-known John Kirkpatrick, issued a counter-advertisement in the local papers, complaining that Blomefield had stated that whatever occurred in John Kirkpatrick's original collections would be incorporated in the new work, and alleging that all such collections were in his own custody, and that neither Blomefield nor any one else had ever copied a line of them. To this Blomefield replied in a very temperate advertisement, that he would show any one (who would call on him at Fersfield) Tanner's, Le Neve's, and Kirkpatrick's collections. He added that Kirkpatrick always collected notes on loose papers, and that, when he had transcribed these papers into

his note-books, he gave them to Le Neve in exchange for anything Le Neve found about Norwich.

Blomefield was about halfway through his third volume when he died, literally in harness; for coming up to London to see some deeds in the Rolls Chapel he caught the smallpox, and died of it on Thursday, 16 Jan. 1752, at the early age of forty-seven. It is said he had always refused to be inoculated, thinking it was wrong to attempt to avoid evils sent by his Creator. He was buried on the Saturday following in the south side of the chancel of Fersfield Church. Little is known of his personal appearance, but though there is no portrait of him extant, he is said to have so much resembled John Flamsteed that 'honest Tom Martin' of Thetford preserved and valued a portrait of the astronomer for no other reason, and a copy of it is prefixed to the octavo edition of Blomefield. It is of a man with a good forehead, fine eyes under rather beetle brows, a prominent nose, and a firm mouth. There seems no doubt that he died in debt, for by his will, dated shortly before he died, he directed all his personal property to be sold and applied towards payment of his debts, and the winding up of his estate seemed so formidable a matter to his executors, that they declined to act and renounced probate: administration was therefore granted to his two principal creditors. Whether his great work cost him more than he expected one cannot say, but one of his female relations, who lived to be very old, told Mr. Freeman, now living at St. Giles, Norwich, that he was very fond of foxhunting, kept a pack of hounds, and got into difficulties thereby, and had to retire to Norwich, where he lived in Willow Lane. That he was a tory we know from his voting for Bacon and Wodehouse in 1734, and that he was of a jovial way of living may be supposed from his being a boon companion of Martin, who was notorious for his love of drinking.

It is difficult to say whether he had original collections for the rest of the county on a similar scale to what he printed. If he had, they were not made much use of by the Rev. Charles Parkin, who, though a most incompetent man, was entrusted with the completion of the history of Norfolk, and who, according to Craven Ord, died before he sent any (all?) of his work to the press, the book being ultimately finished by some bookseller's hack employed by Whittingham of Lynn. The third volume was published in folio at Lynn in 1769; the fourth and fifth volumes at Lynn in 1775. These were described as 'continued by the Rev. Charles Parkin.' The whole work was republished in London in eleven octavo volumes between 1805 and 1810. A very good index of the names mentioned in the octavo edition of the 'History' was prepared by J. N. Chadwick and issued by him at King's Lynn in 1862.

Blomefield probably worked on the principle of taking Le Neve's collections as the backbone of his history, and working up each parish as he came to it. Certain it is that in the five folio volumes there is vastly more of Le Neve's work than Blomefield's, and to the former, therefore, should more justly be given the credit of being the county historian of Norfolk. Indeed, if we were to analyse the book and eliminate Le Neve's, Tanner's, and Kirkpatrick's work, there would be very little of Blomefield's left. Some of Blomefield's unpublished manuscripts were taken possession of and sold by Martin, who thus acted as the literary wrecker of two fine collections, Le Neve's and Blomefield's. Others of them passed into the hands of the descendant of one of Blomefield's daughters, a Mr. Robert Martin, of Bressingham, who buried 'a large mass of them in the earth'!

One can hardly estimate the real value of the great work which, rightly or wrongly, bears Blomefield's name, and which, had he lived, would have been so much larger and better. It is full of errors, its descriptions of all buildings singularly scanty and bald, and its attempts at etymology ludicrous in the extreme; both Blomefield and his continuator apparently having 'water on the brain,' for they attempt to derive nearly every placename from some word or another which they allege to mean water. In critical faculty Blomefield was absolutely wanting, and he fell an easy victim to all the monstrous pedigree fabrications of the heralds, his pages chronicling as gospel all the ridiculous family histories of the Howards, the Wodehouses, the Clares, and others, which bear their own contradiction on their faces. Specimens of Blomefield's errors and omissions will be found at p. 318 of the third volume of the 'East Anglian.' His book, however, is an enduring monument of hard disinterested work, for it was wholly a labour of love, and as far as the facts chronicled it is usually very trustworthy. It is wonderful indeed how often the searchers among manuscripts of to-day come across Blomefield's private mark or his beautifully legible handwriting on charters or rolls. A very good point in his character was the unselfish readiness with which he imparted his knowledge to others working in the same field.

[East Anglian, ii. 50 and 348, iii. 165 and 318, iv. 227-83; Eastern Counties Collect. i. 48;

Trans. Norf. Arch. Society, ii. 201; information from Mr. Freeman of Norwich.] W. R.

BLOMEFIELD, MILES (1525-1574?), alchemist, has recorded some particulars of his birth and parentage in a quaint note written by himself in a volume which is preserved in the library of St. John's College, Cambridge, and which contains a unique copy of 'the boke called the Informacyon for pylgrymes vnto the holy lande,' printed by Wynkyn de Worde in 1524: 'I, Myles Blomefylde, of Burye Saynct Edmunde in Suffolke, was borne ye yeare following after ye pryntyng of this boke, (that is to saye) in the yeare of our Lorde 1525, the 5 day of Apryll, betwene 10 & 11, in ye nyght, nyghest xi. my fathers name John, and my mothers name Anne.' He had a license from the university of Cambridge to practise physic in 1552, and he followed his profession in his native town, though he appears to have been at Venice in 1568. It is supposed that he was living in 1574. Blomefield was an adept in alchemy, a collector of old and curious books, and the author of: 1. 'Blomfylds Quintaessens, or the Regiment of Life,' manuscript in the Cambridge University Library, Dd. 3, 83, art. 6. Dedicated to Queen Elizabeth, and said to be hardly the production of a sane mind. 2. 'Blomefield's Blossoms, or the Campe of Philosophy.' Printed in Elias Ashmole's 'Theatrum Chemicum Britannicum,' 305-23. Tanner and Warton confound him with William Blomefield, *alias* Rattlesden, sometime monk of Bury, and afterwards vicar of St. Simon and St. Jude at Norwich.

[Ashmole's Theatrum Chemicum, 478; Baker MS. xxiv. 117; Cat. of Camb. Univ. MSS. i. 183; Cooper's Athenæ Cantab. i. 327; Notes and Queries, 1st ser. i. 60, 90; Tanner's Bibl. Brit.; Warton's Hist. of English Poetry (1840), iii. 83.] T. C.

BLOMEFIELD, SIR THOMAS (1744-1822), baronet, of Attleborough, Norfolk, general and colonel-commandant royal artillery, to whose untiring labours as inspector of artillery and superintendent of the royal foundries the progress of the British artillery was largely due, was son of the Rev. Thos. Blomefield, M.A., rector of Hartley and Chalk, Kent, and chaplain to the Duke of Dorset, and was born on 16 June 1744. He was destined for the navy, and shipped in the Cambridge, 80 guns, when that vessel was commissioned by his father's intimate friend, Sir Piercy Brett, in September 1755. How long he remained afloat does not appear, but on 9 Feb. 1758 he entered as a cadet at the Royal Military Academy, Woolwich, where his abilities attracted the notice of Müller, then professor of fortification and artillery, whose friendship he retained ever after. In the unusually short period of eleven months he passed out as a lieutenant-fireworker, and soon after, when only fifteen, was appointed to command a bomb-ketch, under the orders of Admiral Rodney, at the bombardment of Havre, subsequently joining the fleet under Admiral Hawke engaged in blockading M. de Conflans at Quiberon (the arduous nature of these blockading duties is strikingly brought out in BURROW'S *Life of Admiral Lord Hawke*). He next served in the West Indies, at the capture of Martinique, the siege and capture of the Havannah, and afterwards at Pensacola and Mobile. In 1771, while a first-lieutenant, he became personal aide-de-camp to General Conway, then master-general of the ordnance, a post in which he was continued by Conway's successor at the Ordnance, Lord Townshend. In 1771 Blomefield, who had become a captain-lieutenant, resigned his appointment as aide-de-camp, and proceeded to America as brigade-major to Brigadier Phillips, royal artillery. Among his services at this period was the construction of floating batteries on the Canadian lakes; he was also actively engaged with the army under General Burgoyne until severely wounded by a musket-ball in the head in the action preceding the unfortunate convention at Saratoga. In the spring of 1779, Blomefield resumed his duties as aide-de-camp to the master-general, and in the following year attained the rank of captain, and was appointed inspector of artillery and superintendent of the Royal Brass Foundry. Never was the need of military supervision over military manufactures more apparent. It is recorded that when, in consequence of the complaints of Admiral Barrington at a most critical period in 1779, the elder Congreve was sent down to inspect the powder on board the king's ships, only four serviceable barrels were found in the whole fleet. The guns were not less inferior in quality; bursting with attendant loss of life was of frequent occurrence, and would doubtless have been more frequent but for the roguery of the powder-contractors. Attacking these abuses vigorously, Captain Blomefield, in the very first year of his office, condemned no fewer than 496 pieces of ordnance in proof; and so fully were the advantages of the new rules recognised, that in 1783 a royal warrant was issued reorganising the whole department, which was placed under his orders. From this period dates the high character of British cast-iron and brass guns. Blomefield

continued inspector of artillery up to his death. He became a lieutenant-colonel in 1793, colonel in 1800, major-general in 1803, and colonel commandant of a battalion in 1806. In 1807 he was selected to command the artillery in the expedition against Copenhagen, a service admitted to have been admirably carried out, although it is now generally lamented that some more justifiable means could not have been found by the government of the day for attaining the end sought. For his share in this duty Blomefield received the thanks of parliament and was created a baronet. It is remarked that this was the last occasion on which, in accordance with long-established custom, a claim was lodged by the commander of the British artillery on the church-bells of the captured city. No reply appears to have been given to the application. Blomefield, who married a daughter of Chief-justice Eardley Wilmot, by whom he had one child, attained the rank of general in 1821. He died at his residence on Shooter's Hill on 24 Aug. 1822. His professional journals and other papers were subsequently presented to the Royal Artillery Institution, Woolwich, by his son, the second baronet.

Blomefield was a good mathematician, an excellent chemist, and most laborious in experiments in gunnery. His private character and the result of his labours were thus described by one who knew him intimately: 'There was no display of his merits shown in his manner; all his duties and experiments were silently and unassumingly carried on, with a natural reserve and undeviating courtesy, so that it was only a close observer who could duly appreciate his value. His being generally and greatly esteemed arose as much from his being the perfect gentleman as from the ingenious turn of his mind, for there was no glare or obtrusion seen, but rather a strong desire to improve the service with as little show as possible. . . . The recent sieges of Copenhagen and in the Peninsula, where the mode of battering assumed a rapidity unknown on former occasions, strongly marked the confidence his brother officers had in the weapons placed in their hands, and surprised the enemy, who were known to declare that they could not have put their own ordnance of the same description to so severe a test. The complete success of these objects of his most serious and careful pursuit will be duly appreciated by those capable of judging of their merits. To such as are not, it may be allowed to suggest that many gallant lives have been saved to their country and their families by the constant and most anxious endeavours he at all times pursued to put safe and perfect machines into the hands of the gallant defenders of his majesty's dominions' (Duncan, *Hist. R. Art.* ii. 159).

BLOMFIELD, CHARLES JAMES (1786–1857), bishop of London, was born on 29 May 1786 at Bury St. Edmunds, where his father, Charles Blomfield, kept a school. He was educated at the grammar school of Bury and at Trinity College, Cambridge. He took his degree of B.A. in 1808, and was elected fellow of his college after winning very high university honours, being complimented, it is said, by Porson as 'a very pretty scholar.' In 1810 he published an edition of the 'Prometheus Vinctus,' with notes and glossary, which was followed by the 'Septem contra Thebas' (1812); the 'Persæ' (1814); and the 'Choephoræ' (1821); an edition of Callimachus in 1815, and of Euripides in 1821. He edited fragments of Sappho, Alcæus, and Stesichorus in Gaisford's 'Poetæ Minores Græci' (1823). Blomfield also wrote on classical subjects for the 'Edinburgh' and 'Quarterly' reviews, and for the 'Museum Criticum,' a journal established in 1813 by himself and his friend Monk, afterwards bishop of Gloucester. Beyond this he published but little except his 'Manual of Family Prayers' (1824), and sermons. In 1810 Blomfield was ordained, and, after holding preferment in the country, was presented to the valuable London benefice of St. Botolph, Bishopsgate. In 1822 he became archdeacon of Colchester, and in 1824 was appointed to the see of Chester; as bishop of Chester he did much to raise the scale of clerical qualifications. In 1828 Blomfield was translated to the bishopric of London, the duties of which he performed with immense energy, and, on the whole, with sound common sense and moderation. He had many opportunities for displaying his remarkable powers as a man of business when member of the poor law board and of the ecclesiastical commission (1836). Of the latter body he was the moving spirit; 'the better distribution of ecclesiastical revenues and duties, the prevention or diminution of pluralities and non-residence, and the augmentation of poor benefices and endowment of new ones,' being measures of church reform which he had much at heart. In the House of Lords he was always an effective speaker, especially upon ecclesiastical subjects. In 1836 the Bishop of London issued 'Proposals for the creation of a fund to be applied to the building and endowment of additional

churches in the metropolis,' and it is for his energetic and successful efforts in remedying the extremely inadequate provision of churches, schools, and clergymen for the rapidly increasing population of London, that his name is best remembered. He was said to be attempting too much when he insisted upon 'expatiating over the whole metropolis by building fifty churches at once;' but very considerable subscriptions flowed into the bishop's 'metropolis churches fund,' and a number of local associations for church extension were set on foot. Among the districts which especially profited by these efforts were Bethnal Green, Islington, St. Pancras, Paddington, and Westminster. The fund continued to exist till 1854, when it was merged in the 'London Diocesan Church Building Society.' To the colonial bishoprics fund, established for the much-needed increase of the colonial episcopate, Bishop Blomfield's influence also gave the first impulse. On the 'tractarian' movement becoming especially conspicuous in 1841, by the publication of the famous tract '90,' the attitude of the Bishop of London was regarded with close attention. He was anxious, he said, 'to keep things quiet as far as possible,' for it would be most injurious to the church that parties should be more distinctly separated and ranged against each other than they then were. In his important charge of 1842 he condemned the tractarian movement in so far as its supporters had endeavoured to give 'a Tridentine colouring' to the Articles of Religion of 1562, and had recommended ceremonies and forms not authorised by their own church; at the same time he admitted that 'those learned and pious men' had forcibly called the attention of the church to certain neglected duties; and if it was wrong to go beyond the directions of the rubrics, it was equally wrong to fall short of them. He therefore urged on his clergy the necessity of a more strict observance of certain rubrical directions, leaving it, to some extent, to their discretion to determine the exact period for introducing any changes in their parishes. These suggestions were at once adopted by some of the clergy of the diocese, but they were not generally approved of, and the clergy of Islington in particular declared that they could not read the prayer for the church militant or make collections through the offertory, as it would disgust the majority of their congregations. The bishop thereupon allowed to Islington a latitude which he had not yet granted to other parishes, and this concession was the beginning of endless dissension and turmoil. While some parishes began to claim the same immunity, others were anxious to carry out the suggestions of the bishop's charge in spite of the objections of their congregations. 'Thus,' says his biographer, 'between those who refused to act up to, and those who persisted in going beyond, his injunctions—between his unwillingness to retract words advisedly and deliberately spoken in his official character, and his readiness to sacrifice everything which did not involve a principle, in order to secure the peace of the church,' Bishop Blomfield was perplexed and harassed, and 'the storms which in some parishes had been excited by the introduction of the disputed changes continued to rage with unabated violence.' In order, if possible, to allay these storms, Archbishop Howley, in his pastoral on the rubrical controversy (1845), suggested that the disputants on both sides should suspend hostilities till some authoritative decision should be given on the points in controversy, and that matters should remain in every case *in statu quo*. The Bishop of London accordingly thought it best in the interests of peace to allow his clergy the option of relinquishing or continuing at their own discretion the practices which he had recommended. About 1847 Blomfield again came much into collision with the 'tractarian' clergy of his diocese; but with the temporary subsidence of the ritual controversy in 1851 his chief public labours may be said to have terminated. In 1856 he was compelled by ill-health to resign his see. He died at Fulham on 5 Aug. 1857. Blomfield was twice married (1810 and 1819); by his second wife, Dorothy, widow of Thomas Kent, barrister, he had a family of eleven children. His son and biographer, Alfred, was consecrated bishop suffragan of Colchester in 1882.

[Memoir of Charles James Blomfield, by his son Alfred Blomfield, 2 vols., London, 1863; Bishop Blomfield and his Times, by Dr. Biber, 1857.] W. W.

BLOMFIELD, EDWARD VALENTINE (1788–1816), classical scholar, younger brother of Charles James Blomfield, the well-known bishop of London, was the second son of Charles Blomfield, a schoolmaster at Bury St. Edmunds. Edward acquired a high reputation for learning and general accomplishments, being a good modern linguist and draughtsman, as well as a brilliant scholar. The promise of his early manhood was disappointed by a premature death, but he lived long enough to do work of some little mark in its day. He was born on 14 Feb. 1788, was educated under Dr. Becher at the grammar school in Bury St. Edmunds, and thence

proceeded to Caius College, Cambridge, in 1807. In 1811 he took his B.A. degree, being placed thirteenth in the list of wranglers. He had, however, obtained such classical distinctions as were then open to competition; he was Browne's medallist in 1809 and 1810 (in the former year being beaten by one candidate, but receiving a prize of books from the vice-chancellor, Dr. Barnes), members' prizeman in 1812, and finally first chancellor's classical medallist. The fellowships in his own college being full, he was elected to a classical lectureship and fellowship at Emmanuel, which he retained till his death in 1816. He died from a fever contracted in a long vacation tour in Switzerland in that year. He managed, after being taken ill at Dover, to reach Cambridge, where he died on 3 Oct., and was buried in Emmanuel College Chapel; in the cloisters of which is a tablet to his memory, with an inscription by his brother, Charles James, in which his death is said to be *suis non sibi immatura*.

His chief work was a translation of Matthiæ's 'Greek Grammar,' a book still unrivalled in its way. He had completed it in the spring of 1816, intending to furnish it with indexes, &c., in the autumn. It was left for his brother Charles James to edit, who prefixed to it a short essay on the virtues and learning of the translator. Edward had met with this book in the course of a tour in Germany, undertaken in 1813, as soon as the events of that year had opened the continent to English travellers. Another fruit of this tour was a paper in the 'Museum Criticum' on 'The State of Classical Literature in Germany,' a subject which had then become almost unknown in England. Besides a few other papers contributed to the 'Museum' Blomfield had projected a Greek-English Lexicon to take the place of the old Greek-Latin Lexicons of Scapula and Hedericus, which gave needless difficulty to students and were neither full nor accurate. He published a specimen of his Lexicon, which was well received, and his plans seem to have been rational and promising. Had he lived, some of the labours of Deans Liddell and Scott might have been anticipated. At any rate he showed that he knew what was wanted. Monk, the biographer of Bentley and Greek professor, who had been one of his intimate friends, paid a warm tribute to his learning and amiable qualities in the pages of the 'Museum Criticum.' He appears to have enjoyed a wide popularity among his contemporaries, and to have deserved it.

[Memoirs of Charles James Blomfield by his Son, 1863; Cambridge Museum Criticum, ii. 520 (by Monk); Preface to Matthiæ's Greek Grammar.] E. S. S.

BLOMFIELD, EZEKIEL (1778–1818), compiler, was born on 28 Oct. 1778 at North Walsham, Norfolk. His parents were very poor, and in 1783 he removed with them to Norwich. Before he was ten years of age he began making collections for a 'Table of Chronological Events' and a 'System of Natural History.' He read largely, but the book that determined his lifelong studies was Mrs. Barbauld's 'Evenings at Home,' which quickened his interest in the phenomena of nature. When about fifteen religious questions troubled him, and, becoming imbued with strong religious convictions, he was placed under the care of a nonconformist minister (the Rev. S. Newton of Norwich). Under his capable mastership he rapidly acquired Latin, Greek, and Hebrew. After combating old doubts, in 1796 he joined the church of Newton, and, resolving to be a minister of the gospel, proceeded to the nonconformist Homerton College. After a year spent at Norwich in ill-health, he accepted a call to a congregation at Wymondham. There he conciliated conflicting parties, and established Sunday schools, missionary societies, &c. On 20 Oct. 1800 he married Mary, daughter of a Mr. Fursnell of Hanworth (Norfolk). Soon after his marriage he delivered a course of lectures on history at Wymondham. As his family increased he eked out a slender income by hack-work for Brightley, the printer of Bungay, and subsequently went into partnership with him. Pecuniary difficulties followed, and led to his removal from Wymondham to Wortwell in 1809, where he remained until his death, frequently visiting the neighbouring village of Harleston. He founded the Norfolk and Norwich Auxiliary British and Foreign Bible Society. In 1810 he projected an academy for education of youths in classics. He planned a 'History of Education,' and delivered a successful course of lectures on the philosophy of history from materials gathered in 1815 and 1816. He died 14 July 1818, leaving a widow and young family totally unprovided for. Towards assisting them his 'Philosophy of History' was published in a fine quarto in 1819, with a memoir. It is somewhat fragmentary and commonplace. In 1807 had appeared, in two huge quartos, Blomfield's 'A General View of the World, Geographical, Historical, and Philosophical; on a Plan entirely new' (Bungay, 1807); this work shows wide but ill-digested reading.

[Memoir before Philosophy of History; local inquiries and books.] A. B. G.

BLOND, CHRISTOPHER LE. [See LE BLOND.]

BLONDEL, JAMES AUGUSTUS (*d.* 1734), physician, was a native of Paris, and received his medical education at Leyden, where he graduated M.D. 17 July 1692, his thesis, which was published, being 'Dissertatio de Crisibus.' He settled as a physician in London, and was admitted licentiate of the College of Physicians 26 March 1711. In 1720 he published anonymously 'The Strength of Imagination of Pregnant Women Examined, and the opinion that marks and deformities in children arise from thence, demonstrated to be a vulgar error.' To this work Dr. Daniel Turner replied in the twelfth chapter of his treatise on the 'Diseases of the Skin,' and he returned to the subject in his treatise on 'Gleets.' In answer to the statements of Turner, Blondel published in 1729 'The Power of the Mother's Imagination over the Fœtus examined, in reply to Dr. Turner.' This pamphlet, to which Dr. Turner wrote a special reply, was published in French at Leyden in 1737, in Dutch at Rotterdam in 1737, and in German at Strasbourg in 1756. He died 4 Oct. 1734, and was buried at Stepney.

[Rees's Cyclopædia, vol. iv.; Biographie Générale, vi. 254; Munk's Roll Coll. of Physicians, ii. 34.]

BLOOD, HOLCROFT (1660?–1707), general, was the son of the famous Colonel Thomas Blood [q. v.], and was born about 1660. When only a stripling he, unknown to his father, went to sea, and served in the Dutch war of 1672. Some years afterwards he became a cadet in the French guards, where he began to study the art of engineering. Returning to England he served as captain in the Irish campaigns after the revolution of 1688, and was wounded at the siege of Carrickfergus. Some time afterwards he was accused of robbing a postboy of some letters that came from Spain, but after a trial at the Old Bailey he was acquitted. The incident, indeed, turned out rather to his advantage than otherwise; for the king, convinced of his innocence, and having a high opinion of his abilities, secured his promotion, first as major and soon afterwards as lieutenant-colonel. He did great service as an engineer at the siege of Namur in 1695, and becoming, in 1703, colonel of a regiment of the train of artillery, he manœuvred it with so much skill at Hochstädt, and in other important actions, as to acquire the reputation of being one of the ablest engineers in Europe. In reward of his brilliant services he was promoted brigadier-general. He died at Brussels 30 Aug. 1707.

[Compleat History of Europe for the year 1707, pp. 477-8; Le Neve's Monumenta.]

T. F. H.

BLOOD, THOMAS (1618?–1680), the adventurer, better known as Colonel Blood, born about 1618, or soon afterwards, was the son of a blacksmith in easy circumstances, possessed of property in ironworks. The place of birth is uncertain; it was probably in Ireland. Of his early life little is known, except that he took the parliamentary side. Having visited Lancashire, Blood married there a Miss Holcroft about 1648, and returned to Ireland. He was made a J.P. by Henry Cromwell, and had large assignments of land as payment for his services and zeal. His prosperity was threatened by the Restoration, the land being taken from him, and he associated with such of the Cromwellians as were ripe for insurrection. Two of their designs were to surprise Dublin Castle, and to seize the person of the lord-lieutenant, James Butler, duke of Ormonde. The management of these attempts was entrusted to Blood. The enterprises, planned for 9 or 10 March 1663, were to be effected simultaneously. One of the confederate council, named Philip Arden, betrayed the plot to Ormonde. It had been arranged that several of the conspirators were to wait inside the castle, holding petitions for presentation, while eighty of the disbanded soldiers were to remain outside, disguised as blacksmiths and carpenters. The signal for the expected commotion was to be given, after Ormonde arrived, by a man who pretended to be a baker stumbling and overthrowing a basketful of white loaves. The men on guard would then scramble to seize the bread, and while discipline was thus relaxed they were to be seized and disarmed by the sham petitioners, who would be assisted by their confederates from outside, and imprison their adversaries. A discovery that they had been betrayed by Arden did not daunt Blood, who, with his men, arranged to anticipate the day first named, choosing 5 March instead. Twelve hours earlier than the time now fixed most of the confederates were arrested, Blood escaping; but his brother-in-law Lackie was among those captured, imprisoned, tried, convicted, and executed, on the charge of high treason. The Irish parliament ordered Blood's declaration to be burnt by the hangman. He made an attempt to rescue Lackie and the others and nearly succeeded in it. He found himself proclaimed, a large reward being offered for his apprehension; but he had fled to the hills, and remained there in safety, con-

fiding in the fidelity of the native Irish and such old Cromwellians as would shelter him. He assumed various disguises, and continually changed his places of refuge, sometimes assuming to be a quaker, sometimes an anabaptist, an independent, and even a Roman catholic priest. Rapidly flitting about among all sorts of people, entering sympathetically into their grievances and family affairs, instead of shrouding himself in mystery and thus exciting suspicion, he succeeded in baffling pursuers, and became acquainted with many desperate characters. When the danger became urgent he quitted Ireland, crossed to Holland, found a welcome among the disaffected sectaries, and obtained countenance from Admiral de Ruyter.

His daring spirit prompted him to return to England, where he associated with the zealous Fifth Monarchy men, and gained so much ascendency over them that he is declared to have established a court-martial at a tavern over some members who were under suspicion of having betrayed the secrets of their council; the culprits were condemned to death, but their lives were spared at his intercession. It is not improbable that he was at this time, and also still later, acting a double part, keeping the government informed of so much as might secure his own safety. He removed to Scotland and joined the covenanters in their revolt, not quitting them until after the defeat on Pentland Hills, 27 Nov. 1666, when more than five hundred were killed. He then returned to England, crossed to Ireland, landing three miles from Carrickfergus, but was pursued so closely by Lord Dungannon that he again removed to England.

His next adventure was the rescue of his friend, Captain Mason, from a guard of eight troopers, men selected by the Duke of York for their courage and trustworthiness. Mason was being sent northward for trial at the assizes; but it was not until near Doncaster that Blood, with only three companions, found an opportunity of engaging the soldiers, and obtaining a victory, at the cost of wounds to himself. Several troopers lost their lives. Five hundred pounds being offered for his capture he lay hidden until his severe wounds were healed, disguised as a medical practitioner, and then lived quietly at Rumford (Kent) under the name of Thomas Allen, *alias* Ayliffe. In November 1670 William, prince of Orange, came to England, and the Duke of Ormonde attended him on his being entertained by the city. Colonel Blood had never forgiven Ormonde's punishment of old associates in Dublin, so with five companions he waylaid the coach wherein his enemy rode through St. James's Street when returning to Clarendon House. The six footmen had been stopped previously. The duke was taken forcibly from the coach by Blood and his son-in-law, Thomas Hunt, who mounted him on horseback in the grasp of a confederate, to whom he was buckled. Nothing less was intended than to hurry the duke to Tyburn, and there hang him on a common gibbet in requital of his having hanged others. The coachman gave the alarm, with another hastened after Ormonde, and overtook him while struggling with the stout horseman, whom he had cast out of the saddle. Being buckled together they had fallen, Ormonde undermost and in great danger. The ruffians fired at the duke, but missed him in the dark, and escaped on horseback. This was near Berkeley House, afterwards Devonshire House. If Blood had not left his men, going on in advance to arrange the rope on the gallows, the duke could not have been saved. It was believed that George Villiers, second duke of Buckingham, had engaged Blood to perpetrate this crime, and Ormonde's son, Lord Ossory, in the king's presence distinctly charged Buckingham with the baseness of such private revenge. Thomas Carte, biographer of Ormonde, got the story of the rebuke and challenge from Robert Lesley of Glaslogh, in co. Monaghan, who had received it from the lips of Dr. Turner, bishop of Ely. Probably no instigation was required beyond the bitterness of Blood's own desire for vengeance on his former enemy. Yet Buckingham afterwards appeared as Blood's introducer to the king, and announced that the man could make discoveries. Among the persons suspected of complicity in this outrage, Bishop Kennet mentions 'Richard Holloway, a tobacco-cutter of Frying-pan Alley; Thomas Hunt, one Hurst, and Ralph Alexander.' Kennet believes that Blood did not intend to hang the duke, but to keep him in custody until he had signed a deed restoring the Irish estates which Blood had formerly possessed. Richard Baxter was inclined to take this view, but Archdeacon Eachard adheres to the Tyburn story. Six months later Blood made his great attempt to steal the crown jewels, on 9 May 1671, and this ultimately led to his regaining the Irish estates.

John Strype, in continuing to the date of 1720 John Stowe's 'Survey of the Cities of London and Westminster' (first written in 1598), gives a full account of the attempted robbery, declaring that he received it direct from Mr. Talbot Edwards himself, the late keeper of the regalia, who was nearly eighty years old. But Strype assigns a wrong date

(sixth edition, 1754), 1673, instead of 1671. About three weeks before the attempt Blood came to the Tower of London 'in the habit of a parson, with a long cloak, cassock, and canonical girdle, and brought a woman with him, whom he called his wife, although in truth his wife was then sick in Lancashire. This pretended wife desired to see the crown, and having seen it feigned to have a qualm come upon her.' She prevailed on Edwards to send for some spirits, and, when his own wife brought some, the stranger was invited into their private rooms to rest on a bed. At departure 'they seemed very thankful for this civility.' Three or four days later Blood returned to the Tower, bringing a present of four or five pairs of white gloves for Mrs. Edwards, and speedily improved the acquaintanceship. After a short interval, to avoid suspicion, he proposed to bring a nephew, 'who hath two or three hundred a year in land, and is at my disposal,' in order to make a match between him and the pretty daughter of Mrs. Edwards. This was assented to, and an invitation given to dine with the family at once, Blood saying grace with great show of devotion and loyalty, ending with a prayer for the king, queen, and royal family. After dinner he inspected the rooms, and managed to disarm the house of a handsome case of pistols, by pretending to purchase them as a present to a young nobleman, his neighbour. At departure he made an appointment to bring his nephew for a meeting with the intended bride, fixing the day and hour, 9 May, at seven o'clock in the morning. At the time preparations had been made by the unsuspecting family, the young lady in her best attire sending her waiting-maid to bring early news of the bridegroom's appearance. Blood brought three companions, who appear to have been one Parrot, Tom Hunt, and another, Richard Hallowell or Holloway. Parrot was a silk-dyer of Southwark, and had been lieutenant to Major-general Harrison, who suffered as a regicide (possibly the same Robert Parrot who was hanged for his part in Monmouth's rebellion in 1685). They were all armed, with rapiers in their canes, and every one had a dagger and pocket-pistols. Blood, Hunt, and Parrot entered the house, the fourth stayed outside to keep watch. He was the youngest, and the maid believed him to be the enamoured nephew.

On pretence of waiting until his wife came before going to the ladies, Blood prevailed on Edwards to show the crown jewels to his friends, to pass the time. When all had entered the room and closed the door as usual, Edwards was attacked, a cloak thrown over his head, a gag thrust into his mouth, 'a great plug of wood with a small hole in the middle to take breath at. This they tied on with a waxed leather, which went round his neck. At the same time they fastened an iron hook to his nose, that no sound might pass from him that way.' They told him that they would not harm him further if he submitted quietly, but that they were determined to carry off the crown, globe, and sceptre, and would show no mercy if he gave an alarm. Nevertheless he tried to make a noise and be heard above. They therefore knocked him down with a wooden mallet, and pointed three daggers at him. He still tried to call aloud; they beat him again and stabbed him, but not mortally, although they believed him to be dead. Then Parrot put the globe in his loose breeches. Blood held the crown, after crushing it, under his parson's cloak. The third prepared to file the sceptre in two and put it in a bag. At this moment young Edwards returned. He had been with Sir John Talbot in Flanders, and was newly home on leave to see his old father. After being stopped by the man who kept watch, young Edwards went to his mother and sister; while the conspirators, receiving notice of danger, made off with their plunder. The old man regained consciousness, gave the alarm, and was heard by his daughter, who rushed out, crying, 'Treason, the crown is stolen!' Blood and Parrot were hastening away, but young Edwards and Captain Beckman on hearing the cry pursued them, so that, despite resistance, they were captured with the jewels still in their possession. 'It was a bold attempt,' Blood boasted, 'but it was for a crown.' Instead of being executed for this attempt he met reward. His audacity saved him. Examined before Dr. Chamberlain, and next before Sir William Waller, Blood refused to make confession except to the king himself, and Charles admitted him to his presence, being desirous of seeing so bold a ruffian. Blood avowed that the plan was his own, but threatened that his confederates would avenge his death; refused to impeach others, but avowed his share in the capture of Ormonde, and that awe of his majesty's sacred person had hindered him from perpetrating assassination when the king was bathing at Battersea. He not only escaped punishment, but obtained the forfeited Irish estates of 500*l.* annual value, and seemed to have interest at court, being often seen in the presence-chamber. Before long he quarrelled with his protector, Buckingham, or at least fell under accusation of conspiring to have him charged with an atrocious crime. Innocent or guilty (and it seems probable that it was a trick to ruin him), he was committed

by the court of king's bench for 10,000*l.* damages of the Buckingham slander. He found bail and returned to his house in Bowling Alley, Westminster. His health, but not his spirit, was broken. His sickness lasted fourteen days. He declared himself not afraid of death, but fell into a speechless lethargy on the Monday, and died on Tuesday, 24 Aug. 1680. He was buried on the 26th, at Tothill Fields. Rumours being afloat that it had been a sham funeral, to keep the living man hidden elsewhere, his body was exhumed on the following Thursday, and identified at an inquest, after which it was reburied. Thus ended his remarkable life. Like William Bedloe he died a natural death, contrary to every expectation. John Evelyn met him at the treasurer's dinner-table on 10 May 1671.

[Carte's Life of James Butler, duke of Ormonde; Strype's Continuation of Stowe's Survey of London and Westminster, 6th ed. 1754; The Narrative of Col. Thomas Blood concerning the design reported to be lately laid against the Life and Honour of his Grace George, duke of Buckingham, &c., 1680; Remarks on the Life and Death of the fam'd Mr. Blood, 2nd edition, with large additions, printed for Richard Janeway, 1680; An Elegie on Colonel Blood, notorious for stealing the Crown, &c., who died 26 (*sic*) Aug. 1680. This Elegy is in rhymed verse (seventy-six lines), and begins, 'Thanks, ye kind Fates, for your last favour shown.' It is reprinted in vol. vi. of the Ballad Society's Roxburghe Ballads, and ends with the Epitaph:—

Here lies the man who boldly hath run through
More villanies than ever England knew;
And ne're to any friend he had was true.
Here let him then by all unpitied lie,
And let's rejoice his time was come to die.

London, printed by J. S. in the year 1680.]

J. W. E.

BLOOMFIELD, BENJAMIN, first Baron Bloomfield (1768–1846), lieutenant-general and colonel-commandant royal horse artillery, was the only son of John Bloomfield, of Newport, co. Tipperary, and was born 13 April 1768. After studying at the Royal Military Academy, he became a second-lieutenant in the royal artillery, at the age of thirteen, on 24 May 1781. Lord Bloomfield, in the early part of his military career, served in Newfoundland and at Gibraltar. He was one of the first officers appointed to the horse-brigade on its formation. He also served on board a gun-brig during the early part of the French war, and commanded some guns at the action at Vinegar Hill during the Irish rebellion of 1798. About 1806, when brevet-major and captain of a troop of horse-artillery doing duty with the 10th hussars at Brighton (and, as his biographer observes, a very poor man), his social and musical attainments attracted the notice of the Prince of Wales, afterwards George IV, who made him a gentleman-in-waiting and afterwards his chief equerry and clerk-marshal. He was A.D.C. 1811 to 1814 and was M.P. for Plymouth 1812 to 1818. In 1815 he was knighted, having been promoted to the rank of major-general the year before, and in 1817 succeeded Sir John McMahon as private secretary, in which capacity Sir Benjamin Bloomfield was the recognised confidant of the prince during the remainder of the regency and until 1822, when, having fallen into disfavour, he resigned his appointments. After his resignation he was sent, in 1822, as minister plenipotentiary to the court of Stockholm, and in May 1825 was raised to the Irish peerage as Baron Bloomfield of Oakhampton and Redwood, Tipperary. Subsequently he commanded the garrison at Woolwich for some years, where his hospitality and benevolence made him very popular, and where he founded the schools for the children of soldiers of the ordnance corps. He married, in 1797, Harriott, the eldest daughter of John Douglas, of Grantham, by whom he left issue. He died in Portman Square, London, on 15 Aug. 1846. Lord Bloomfield, while in Sweden, joined the Wesleyans, and after his death a tract was published under the title: 'A Coronet laid at Jesus' Feet in the Conversion of the late Lord Bloomfield,' by G. Scott, Wesleyan minister (London, 1856, 8vo).

[Hart's Army Lists; Fitzgerald's Life of George IV; Wellington Despatches, Correspondence, &c. (continuation of former series), ii. 198; Lady Bloomfield's Memoir of Lord Bloomfield, 2 vols. (London, 1884); Gent. Mag., New Series, xxvi. 422; Brit. Mus. Cat.] H. M. C.

BLOOMFIELD, JOHN ARTHUR DOUGLAS, second Baron Bloomfield (1802–1879), diplomatist, was the son of Benjamin Bloomfield, created, 14 May 1825, Baron Bloomfield in the peerage of Ireland [see Bloomfield, Benjamin]. He was born 12 Nov. 1802, and at the early age of sixteen became an attaché to the embassy at Vienna. Throughout his life he remained in the diplomatic service, and his history consists of little more than a list of the places where he served his country. He was paid attaché at Lisbon, October 1824; secretary of legation at Stuttgard, December 1825, and at Stockholm, September 1826; secretary of embassy at St. Petersburg, June 1839; envoy extraordinary and minister plenipotentiary to that court, 3 April 1844; removed in the same

capacity to Berlin, 28 April 1851; made ambassador extraordinary and plenipotentiary to the Emperor of Austria, 22 Nov. 1860, but resigned 28 Oct. 1871, when he retired on a pension and was created a peer of the United Kingdom. Previously to this date he had succeeded his father as second Baron Bloomfield in the peerage of Ireland, 15 Aug. 1846, had been made a C.B. 1848, K.C.B. 1851, G.C.B. 3 Sept. 1858, and a privy councillor 17 Dec. 1860. He died at his residence, Ciamhaltha, Newport, co. Tipperary, 17 Aug. 1879. He married, 4 Sept. 1845, the Hon. Georgiana, sixteenth and youngest child of Thomas Henry Liddell, first Baron Ravensworth. She was born at 51 Portland Place, London, 13 April 1822, was maid of honour to the queen from December 1841 to July 1845, and in the month after her marriage accompanied her husband to Russia. Her 'Reminiscences' of the state of society at the various courts where she resided is a work of much interest.

[Reminiscences of Court and Diplomatic Life, by Georgiana, Baroness Bloomfield (1883); Memoirs of Sir William Knighton (1838), ii. 130–1; Dod's Peerage, 1879; E. Walford's Tales of our Great Families (1877), i. 298–304.] G. C. B.

BLOOMFIELD, ROBERT (1766–1823), author of the 'Farmer's Boy,' was born at Honington, a village in Suffolk, on 3 Dec. 1766. His father, George Bloomfield, a tailor, died when Robert was a year old, leaving a family of six children. By his mother, who kept the village school, and by a Mr. Rodwell of Ixworth, the boy was taught to read and write. His mother married again when he was seven years old, and had another family. At eleven years of age he was taken into the house of his mother's brother-in-law, William Austin, a farmer in the neighbouring village of Sapiston. Here he acquired his knowledge of rustic manners. At the age of fifteen he was so diminutive in size as to be of little use on the farm. So the mother wrote to the elder sons, George and Nathaniel, the former a shoemaker and the latter a tailor, to inquire whether they could help their younger brother. George engaged to teach him the shoemaking business, and Nathaniel undertook to keep him provided with clothes. Accordingly, the boy came to London, and was domiciled in his brother's garret in Fisher's Court, Bell Alley, Coleman Street. Four men besides the brother lived and worked in the one garret. Robert was chiefly employed in running errands for the men, or reading the newspaper to them. At first he found in the newspapers many words that he could not understand; but after providing himself with a dictionary he was soon able to read with fluency 'the long and beautiful speeches of Burke, Fox, or North.' He further improved his intellect by attending on Sunday evenings the discourses of a dissenting minister named Fawcett, who officiated at a meeting-house in the Old Jewry. By attention to the teaching of this gentleman (whose language, as George Bloomfield puts it, 'was just such as the "Rambler" is written in') he 'gained the most enlarged notions of Providence,' and learned the correct pronunciation of 'hard words.' His reading at this time embraced the history of England, the 'British Traveller,' and a book of geography. He was particularly fond of scanning the poets' corner of the 'London Magazine,' and was one day induced by his brother to send the editor of that journal some verses entitled the 'Milkmaid,' which were accepted and published. Another trifle, the 'Sailor's Return,' soon followed. About this time the brothers changed their lodging to a garret in Blue-hart Court, Bell Alley, where they had for companion a Scotchman named Kay, who was possessed of a few books (including 'Paradise Lost' and Thomson's 'Seasons'), of which Robert was allowed the use. A dispute arising between the masters and journeymen shoemakers as to the masters' right to employ those who had not served an apprenticeship, Robert, only too glad of the change, accepted an invitation to stay under the roof of his former employer, Austin, until the difference should be settled. After an absence of three months he returned, and was apprenticed to his brother's landlord, continuing to work under his brother's eye until he had completely qualified himself. In 1785 George removed to Bury St. Edmunds. Robert remained in London, and on 12 Dec. 1790 wrote to his brother that he 'had sold his fiddle and got a wife.' The young couple lived in the most squalid poverty: it took them several years to acquire a bed of their own. In a garret where five or six others were at work, Bloomfield composed his 'Farmer's Boy.' He was accustomed to keep fifty or a hundred lines in his head until he could find an opportunity of putting them on paper. The whole of 'Winter' and a great part of 'Autumn' were finished before a line of them had been written. In November 1798, after passing through various hands, the manuscript came under the notice of Capel Lofft, by whose efforts it was published (in sumptuous quarto), with cuts by Bewick and a preface by Lofft, in March 1800. The success of the 'Farmer's Boy' was remarkable; twenty-six thousand

copies, it is estimated, were sold in less than three years. Translations appeared in French and Italian, and one enthusiastic admirer threw a portion of the work ('Spring') into Latin hexameters. Lamb did not share the general admiration for the poor thin verse of the 'Farmer's Boy.' Writing to Manning in November 1800, he says: 'Don't you think the fellow who wrote it (who is a shoemaker) has a poor mind? . . . I have just opened him, but he makes me sick.' Byron some years later, in 'English Bards and Scotch Reviewers,' referred to Bloomfield in complimentary terms after some satirical lines upon Blackett, another poetical shoemaker [q. v.] The success of the 'Farmer's Boy' enabled Bloomfield to remove to a small house in the City Road. About 1802 he received from the Duke of Grafton the post of undersealer in the Seal Office; but though the duties were light, his health would not permit him to attend to them, and he soon resigned. The duke made him an allowance (which was continued by his successor) of one shilling a day, and then Bloomfield employed himself in making Æolian harps. In 1802 appeared 'Rural Tales,' in 1804 'Good Tidings, or News from the Farm,' and in 1806 'Wild Flowers.' At the advice of some friends he now embarked in the book-trade, and soon became bankrupt. As he was in failing health, some friends took him in 1811 for a tour in Wales, and he recorded in a volume of verses, 'The Banks of the Wye' (1811), the impressions made upon him by the change of scene. In 1812 he retired for a time to Shefford, in Bedfordshire, returning to London in April of the following year. In June 1814 he went for a short tour to Canterbury and Dover. Having now become hypochondriacal and half blind, he retired to Shefford, where he died in great poverty on 19 Aug. 1823, leaving a widow and four children. Had he lived longer, he would probably have gone mad. Bernard Barton and others wrote verses to his memory, and a gravestone was raised to him in Campton Churchyard, Bedfordshire. In addition to the works previously mentioned Bloomfield published: 1. 'History of Little Davy's New Hat,' 1817. 2. 'May-day with the Muses,' 1822. 3. 'Hazlewood Hall; a Village Drama,' 1823. A collected edition of his works in three volumes, with a biographical sketch by Joseph Weston, appeared in 1824. Bloomfield was a man of a simple affectionate nature, but he was sadly wanting in independence and manliness. His letters preserved in the British Museum (*Add. MSS.* 28265-68) are singularly uninteresting, and afford convincing proof that he had, as Lamb said, a 'poor mind.' Selections from his correspondence were edited in 1870 by W. H. Hart. George Bloomfield, the elder brother, who also wrote verses, died—as he had lived—in wretched squalor, on 29 Jan. 1831.

[Joseph Weston's preface to the collected edition of Bloomfield's Works, 1824; Davy's Suffolk Collections, xci. 129-31, xciv. pp. 25-40; Add. MSS. 28265-68; Hone's Table Book, 801-5; Farmer's Boy, ed. 1800.] A. H. B.

BLOOR, JOSEPH (*d.* 1846), brother of Robert Bloor, proprietor of the Old Derby China Works, was engaged at the works in sundry capacities, mainly in mixing 'bodies' for the paste. He died in 1846.

[Letter from Mr. Haslem, author of the 'Old Derby China Factory.'] W. H. T.

BLOOR, ROBERT (*d.* 1846), ceramist, was probably born at Church Gresley, where many of his family are buried. He succeeded Kean and the second Duesbury at the Old Derby China Works, from whom he bought the concern, about the year 1810-11, for 5,000*l.* and the payment of certain annuities. He had for some time previously been clerk and salesman at the works. He was an energetic man of business, and greatly increased the sales of the manufacture, employing at one time as many as fifty painters, besides a great number of potters, burnishers, apprentices, women, and girls. Under his management, however, the former high quality and finished decoration of the Derby ware deteriorated. About the year 1820 his business was at its height; and, by the aid of auctions in various parts of England, Derby china, for the most part showily painted, but some of it slightly injured in the firing, was dispersed throughout the country; but this inferiority of the ware at length led to a falling off in the demand. In 1828 Bloor's mind gave way, and he never recovered. A statute of lunacy was taken out a few years before his death, which happened on 11 March 1846 at Hathern in Leicestershire. The works were then carried on by his widow and children, and finally by his granddaughter, Mrs. Thomas Clarke; she at length sold the concern to Samuel Boyle, who failed.

[Haslem's Old Derby China Factory; letters from Mr. Haslem; information supplied by S. Keys in Chaffers's Marks and Monograms on Pottery, 6th ed.] W. H. T.

BLORE, EDWARD (1787-1879), architect and artist, was born at Derby on 13 Sept. 1787, and was the eldest son of Thomas Blore, author of the 'History of Rutland' [q. v.] At an early age he began to display great fondness for architecture, and a facility in sketching;

and whilst still a young man was employed on the illustrations for the 'History of Rutland,' the second part of which was published in 1811. During the next few years he was engaged in making the sketches of York and Peterborough for Britton's 'English Cathedrals,' and in executing the architectural designs for Surtees's 'History and Antiquities of Durham,' and for other county histories. In 1816 Blore made the acquaintance of Sir Walter Scott, who was at that time anxious to find some one who could fully enter into his views for building a new house in Abbotsford in the Gothic style. At Scott's request Blore made a hasty sketch there and then, and was at once authorised by him to carry out the designs for the exterior of the building. Blore's intimacy with Scott also led to his being employed along with Turner and other artists upon Scott's publication, 'The Provincial Antiquities and Picturesque Scenery of Scotland.' Of this work Blore acted as manager, at the same time contributing all the architectural drawings. In 1824 he published his interesting volume, entitled 'The Monumental Remains of Noble and Eminent Persons.' During this time Blore was also devoting himself to the task of stimulating the newly awakened taste for Gothic architecture, and was in constant correspondence with Rickman, the well-known writer on Gothic, who seems to have much valued Blore's early instruction. At this period of the Gothic revival Blore had comparatively little opportunity for carrying out any specially remarkable designs for ecclesiastical buildings. One of his largest undertakings was in connection with Peterborough Cathedral, the present organ-screen and choir-fittings of which were from his designs. The monument to W. Hilton, R.A., in Lincoln Cathedral, and the font in the Royal Savoy Chapel, were likewise designed by him, and he was also entrusted with the restoration of Glasgow Cathedral, of Merton College Chapel, and of other buildings of the same kind.

Blore's practice as an architect soon became extremely extensive. Among his more important works may be mentioned the restoration of the hall, chapel, and library of Lambeth Palace, and the rebuilding of its residential portion; the building from his designs of Prince Woronzow's palace of Aloupka in the Crimea; Corehouse, Scotland; Crum Castle, Ireland; Worsley Hall, Lancashire; Thicket Priory, Yorkshire; Moreton Hall, Cheshire; the Pitt Press, Cambridge; Castle Hill, Devonshire; the government buildings, Sydney, New South Wales, &c. Blore held the appointment of special architect to King William IV and to Queen Victoria during the earlier part of her reign. In this capacity he was employed to carry out various works at Windsor Castle and Hampton Court Palace, and to complete the erection of Buckingham Palace, which had been begun by Nash. He also for many years filled the post of architect at Westminster Abbey, being succeeded by Sir Gilbert Scott at the time of his retirement from his profession. His death took place in London on 4 Sept. 1879. He was a fellow of the Royal Society, of the Society of Antiquaries, and one of the founders of the Royal Archæological Institute; he also held the honorary degree of D.C.L., conferred by the university of Oxford in 1834. He married in 1819, and had a family of two sons, the Rev. E. W. Blore, senior fellow of Trinity College, Cambridge (*d.* 1885), and the Rev. G. J. Blore, D.D., head-master of the King's School, Canterbury, and two daughters. As an evidence of his remarkable powers as a draughtsman, and of his unremitting labour for more than seventy years, he has left behind him no less than forty-eight volumes, as well as smaller sketch-books, containing nearly five thousand beautifully finished drawings. Of these drawings, which are now in the possession of his daughter, Mrs. Keyser, about one thousand portray the more interesting specimens of English and Scotch ecclesiastical architecture; there are also drawings of more than six hundred monuments and representations of 'almost every example of ancient castellated and domestic architecture remaining in England.'

[Proceedings of the Society of Antiquaries, 1880, viii. 347–52; Builder for 13 Sept. 1879, p. 1019; information derived from Charles Keyser, Esq., F.S.A.; Lockhart's Life of Scott.]

W. W.

BLORE, ROBERT (*d.* 1866?), manufacturer of small porcelain 'biscuit' figures in Bridge Gate, Derby, served his apprenticeship at the Old Derby China Works, but shortly afterwards went to Minton's factory. In 1830 he returned to Derby, and there set up a small establishment for himself. Although a clever workman, especially in the making of pastes and glazes, he does not appear to have been very successful in conducting a business, for after a while he returned to the potteries district, this time as an assistant at Mason's factory at Lane Delph. Thence he removed to Middlesborough, Yorkshire, where he superintended a 'pot-works' until his death.

[Haslem's Old Derby China Factory.]

W. H. T.

BLORE, THOMAS (1764–1818), topographer, born at Ashborne, Derbyshire, 1 Dec.

1764, received his education at the grammar school there, and afterwards became a solicitor at Derby. He then removed to Hopton to undertake the management of the affairs of Mr. Philip Gell, on whose death, in 1795, he came to London and entered the Middle Temple, though he was never called to the bar.

Subsequently, during a residence at Benwick Hall, near Hertford, Blore made extensive collections relating to the topography and antiquities of Hertfordshire. These filled three folio volumes of closely written manuscript, which formed the nucleus of Clutterbuck's history of the county, which was issued between 1815 and 1827. Afterwards Blore resided successively at Mansfield Woodhouse, at Burr House, near Bakewell, at Manton, in Rutland, and at Stamford. He also edited for a brief period 'Drakard's Stamford News.' He died in London 10 Nov. 1818, and was buried in Paddington Church, where a stone bearing the following strange inscription was erected: 'Sacred to the memory of Thomas Blore, Gentleman, of the honourable society of the Middle Temple and member of the Antiquarian Society, whose days were embittered and whose life was shortened by intense application. He died November 10th, 1818, aged 53 years.' He was father of Edward Blore [q. v.]

He was an able and diligent topographer, and it is to be regretted that his labours brought so few works to a successful termination. His publications are: 1. 'An History of the Manor and Manor House of South Winfield, in Derbyshire,' printed in Nichols's 'Miscellaneous Antiquities' (in continuation of the 'Bibliotheca Topographica Britannica'), vol. i. No. 3, 1791, 4to, reprinted separately, London, 1793, 4to. 2. 'Proposals for publishing a History of Derbyshire.' 3. 'A History of Alderwasley,' in four pages, folio, as a specimen of his 'History of Derbyshire.' 4. 'A History of Breadsall Priory, in the county of Derby,' printed in the 'Topographical Miscellany,' 1791. 5. 'A Statement of a Correspondence with Richard Phillips, Esq., respecting the "Antiquary's Magazine,"' Stamford, 1807, 8vo. 6. 'The History and Antiquities of the County of Rutland,' vol. i. pt. 2, one vol. royal folio, Stamford, 1811. With many plates and genealogical tables. This was the only part published. It includes the East Hundred and the Hundred of Casterton Parva. 7. 'An Account of the Public Schools, Hospitals, and other Charitable Foundations in the borough of Stamford, in the counties of Lincoln and Rutland,' Stamford, 1813, 8vo. 8. 'A Guide to Burghley House, Northamptonshire, the seat of the Marquis of Exeter; containing an Account of all the paintings, antiquities, &c., with biographical notices of the Artists,' Stamford, 1815, 8vo (anon.)

[Jewitt's Reliquary, iii. 1–13; Biog. Dict. of Living Authors (1816), 31; Watt's Bibl. Brit.; Cat. of Printed Books in Brit. Mus.; Notes and Queries, 4th ser. v. 465, viii. 436, ix. 393.]

T. C.

BLOUNT, CHARLES, fifth Lord Mountjoy (*d.* 1545), was the eldest son of William Blount, fourth Lord Mountjoy [q. v.], by his second wife, Alice Kebel. His father, on the recommendation of Erasmus, brought Peter Vulcanius from Germany to be his tutor, and Andreas Hyperius also assisted in his education. Erasmus showed a warm interest in his studies, and by way of encouragement dedicated to him a new edition of his 'Adagia,' published in 1529, and his edition of 'Livy' (1535; the dedicatory epistle is dated 1 March 1531). In his early days Blount served as page to Queen Catherine. He succeeded to the title of Lord Mountjoy on his father's death in 1534, and regularly attended court in great state. In 1544 he commanded part of the force sent to the north of France, and was present with Henry VIII at the siege of Boulogne. According to Naunton, he much reduced his patrimony by 'his excess in the action at Bullen' (*Fragm. Regalia*, ed. Arber, p. 56). He died in the following year, and was buried in St. Mary's Church, Aldermary, London. Before leaving for France in 1544 he made a will (proved 19 Dec. 1545) directing that the monument erected to his memory should be inscribed with some awkward English verses written by himself. He bequeathed 20 marks per annum to establish a lectureship in the parish of Westbury, Wiltshire.

Like his father, Charles was a patron of learning. Leland addressed to him on two occasions eulogistic Latin verses (*Collectanea*, v. 109). Roger Ascham, whose services he endeavoured in vain to secure as his children's tutor, called his house 'the home of the Muses,' and regretted that he should divide his attention between literature and the business of the court (*Aschami Epistolæ*, xix. xx. ed. Giles). Henry Bennet of Calais [q. v.] praises him in similar terms in the dedicatory epistle of his 'Life of Œcolampadius' (1561), addressed to his son James.

He married Anne, daughter of Robert, Lord Willoughby de Broke, by Dorothy Grey, who became his father's second wife, and by her had three sons and one daughter. A younger son, Francis, who travelled in Turkey

and was living in 1593, was a friend of Dr. John Dee (DEE's *Diary*, Camd. Soc. 445). His eldest son, JAMES, became sixth Lord Mountjoy, was made a knight of the Bath at the coronation of Queen Mary (29 Sept. 1553); was lord-lieutenant of Dorsetshire in 1559; was one of the commissioners who tried the Duke of Norfolk (1572), and spent the fortune of his family in the pursuit of alchemy. Sir William Cecil encouraged him in the manufacture of alum and copperas between 1566 and 1572 (*Cal. Dom. State Papers*, 1566-72). He died in 1581 (NICOLAS's *Sir Christopher Hatton*, p. 209). He married Catherine, daughter of Sir Thomas Leigh, of St. Oswald, Yorkshire, by whom he had three sons—William, Charles [q. v.], and probably Christopher [q. v.] William, born about 1561, followed his father's pursuits, became seventh Lord Mountjoy, and died without issue in 1594. Two letters of his to Sir Edward Stradling, dated 1577, one of which proves him to have had literary tastes, are printed in the 'Stradling Correspondence,' 1840, pp. 46–8.

[Sir Alexander Croke's Genealogical History of the Croke family, surnamed Le Blount, ii. 222-7; Erasmi Epistolæ, ed. Le Clerc, cols. 1176, 1233, 1304, 1358, 1373; Knight's Life of Erasmus; Brewer's Letters and Papers of Henry VIII; Cooper's Athenæ Cantabrigienses, i. 88; Dugdale's Baronage, 521.] S. L.

BLOUNT, CHARLES, EARL OF DEVONSHIRE and eighth LORD MOUNTJOY (1563–1606), second son of James, sixth lord Mountjoy, by his wife Catherine, daughter of Sir Thomas Leigh, of St. Oswald's, Yorkshire, and thus grandson of Charles Blount [q. v.], fifth lord Mountjoy, was born in 1563. He studied at Oxford for a short time, and was created M.A. in later years (16 June 1589). From Oxford he proceeded to the Inner Temple to study law. But, although always interested in learning, his ambition lay in other directions. His family had been steadily losing its reputation and its wealth for many years past. To recover both was Blount's aim from youth. When as a boy his parents had his portrait painted, he insisted on its being subscribed with the motto 'ad reædificandam antiquam domum.' Arrived in London, he soon made his way to court (*circ.* 1583), and his good looks at once attracted the attention of the queen. 'Fail you not to come to court, and I will bethink myself how to doe you good,' was one of her earliest remarks to him (NAUNTON, *Fragmenta Regalia*, ed. Arber, 57), and the favour she bestowed on him excited the jealousy of the Earl of Essex. On one occasion Elizabeth is said to have rewarded Blount for his skill in a tilting match with 'a queen at chesse of gold richly enamelled, which his servant had the next day fastened on his arme with a crimson ribband.' Essex noticed the token and angrily remarked at court to Sir Fulk Greville, 'Now I perceive every fool must have a favour.' The speech was reported to Blount, and a duel followed, 'near Marybone Park,' in which Essex was wounded. The two men lived subsequently on friendly terms.

Blount was elected M.P. for the family borough of Beeralston, Devonshire, in 1584, although the return was never delivered; he was re-elected and took his seat for the same borough in 1586 and 1593 (*Return of Members of Parlt.* i. 413, 417, 428). He was knighted in 1586 and 'had a company in the Low Countries [in the same year], from whence he came over with a noble acceptance of the queen' (NAUNTON; *Cal. Dom. State Papers*, Addenda, 1580–1625, p. 19). He was present at the skirmish near Zutphen, when Sir Philip Sidney received his fatal wound. In 1588 he was one of those who built ships at their own expense to join in the pursuit of the Armada (LEDIARD, *Naval History*, p. 353). His anxiety to distinguish himself in warfare led him to absent himself from court more frequently than the queen approved. Up to 1591 he was constantly visiting the English contingent in the Low Countries engaged in war with Spain, and in 1593 he 'stole over with Sir John Norris into the action of Brittany, which was then a hot and active warre' waged in behalf of the king of Navarre. On 30 June 1593 the queen wrote to Sir Thomas Sherley, 'treasurer at war,' that Blount was commanded by her to 'absent himself from his charge in Brittany' and to attend upon her, but that he was to receive his ordinary pay meanwhile. In December 1593 a company of 900 men in Brittany was still officially stated to be under his command. On 26 Jan. 1593–4 Blount was nominated captain of the town and island of Portsmouth, vacant by the death of Henry Ratcliffe, earl of Sussex, and he energetically superintended the renewal of the fortifications. The death of his elder brother, William, seventh Lord Mountjoy, later in 1594, put him in possession of the family peerage. In June 1597 Mountjoy accompanied Essex on his voyage to the Azores as lieutenant of the land forces (15 June), and on his return in the same year he was created a knight of the Garter.

On 14 Aug. 1598 O'Neil, the earl of Tyrone, signally defeated the English troops at Blackwater, and the government resolved

to despatch a vigorous lord deputy to crush Tyrone's insurrection. Mountjoy was generally believed to be best fitted for the office, but it seems almost certain that Essex brought all his influence to bear against Mountjoy's appointment. Ultimately the post was accepted by Essex himself, who wrote to Harrington at the time, 'I have beaten Knollys and Mountjoy in the council' (Harrington, *Nugæ Antiquæ*, i. 245). It was expected that Mountjoy would have accompanied Essex to Ireland, but he remained at home, and in August of the following year was appointed lieutenant of the force to be raised to resist another anticipated Spanish Armada. But there was no breach in his friendly relations with Essex. In the summer of 1599 Mountjoy sent a secret messenger to Scotland to assure King James that Essex would support his succession to the English throne, and according to Essex's friend, Sir Charles Davers, Mountjoy 'entered into' the business to 'strengthen' Essex's position. This expression implies that Mountjoy was encouraging Essex in his treasonable plan of relying upon an armed force from Scotland to overcome his enemies at the English court. When Essex was in confinement in October 1599, he committed the care of his fortunes to Mountjoy and Southampton. In the same month Mountjoy was offered the office in Ireland vacated by Essex. At first he declined it, but by the close of November he had accepted orders to depart within twenty days with thirteen or fourteen thousand men. But delays arose. On 11 Jan. 1600–1 a warrant was issued to pay him a large sum of money for preliminary expenses. He did not leave England till the following month. In the interval Essex was in frequent communication with Mountjoy, and begged him to bring his army from Ireland into England, and in concert with King James of Scotland to rescue him from prison and to overthrow the queen's councillors. But King James was unwilling to join in the plan, and Mountjoy refused to meddle with it after he had once reached Ireland. When Essex and his fellow-conspirators were charged with high treason in 1600–1, the queen and her government, who needed Mountjoy's services in Ireland, boldly overlooked his complicity in Essex's earlier plans, and suppressed passages in the confessions of the prisoners which implicated him. But Mountjoy was terribly alarmed on first hearing of the arrest of his friends (Fynes Morison, *Itinerary*, pt. ii. bk. i. c. 2, p. 89). In 1604 Sir Francis Bacon addressed his 'Apologie . . . concerning the late Earl of Essex' to Mountjoy, 'because you loved the earl.'

Mountjoy's success in Ireland well warranted the government's confidence in him. On his arrival he found the rebels holding all Ireland up to the very walls of Dublin, and at first his progress was slow. On 21 Oct. 1600 it was reported in London that Blount had asked for his recall, and that Sir George Carew was to take his place. But Mountjoy's services were not to be lightly dispensed with, and his persistent harrying of the enemy began to tell upon them. By July 1601 Lough Foyle, Tyrone's chief stronghold, had fallen. In December 1601 Tyrone summoned the largest rebel army ever known in Ireland, marched upon Kinsale, where 4,000 Spaniards, lately landed in his behalf, were besieged by Mountjoy. On 24 Dec. 1601 a battle was fought and a decisive victory gained by the English (cf. Winwood, *Memorials*, i. 369–70). The Spaniards capitulated, surrendered all the places they held, and left the country. Mountjoy assiduously marched through the enemy's country in the neighbourhood, laid it waste, and planted military garrisons in all the rebel fortresses. Reinforcements in 1602 enabled Mountjoy in the north and Sir George Carew in the south to obtain military possession of almost the whole of Ireland, and the deputy's commission was renewed for three years. Tyrone was thus rendered helpless, and, finding all offers of conditional submission rejected, agreed on 22 Dec. 1602 to 'both simply and absolutely submit himself to her majesty's mercy.' No very decided advice was sent Mountjoy from home. He was ordered to offer Tyrone his life—a course which he seems to have advised—and other 'honourable and reasonable' conditions. On 30 March 1602–3 Mountjoy received Tyrone in state at Dublin, and promised him pardon and the restoration of his title and some of his lands. But the queen died six days before, and on 6 April Mountjoy compelled Tyrone to make a new submission to King James. He was reinstated, although he wished to be recalled immediately, in the office of lord deputy on 17 April, and shortly afterwards given the honorary title of lord-lieutenant with increased salary. The latter patent was signed by James (21 April) at Worksop on his way to London, and is the earliest extant document signed by him as king of England (*Egerton Papers*, Camd. Soc. p. 367). But Mountjoy's work was not quite completed. The chief towns of Ireland had several grievances against his system of government. He had, like all his predecessors, debased the coinage, and had compelled the towns to maintain his garrisons, while he had shown little favour to the catholics. In April 1603 the magistrates of Cork quarrelled with the garrison there,

and the disaffection spread to Limerick, Wexford, Waterford, and Kilkenny. Mountjoy with a small force at once set out for the disaffected districts. He punished the offenders, and rapidly brought the towns to submission. On 26 May Mountjoy was summoned to England and never returned to Ireland, although he assisted the privy council, to which he was admitted as soon as he reached home, with his wide knowledge of Irish affairs until his death. He brought with him to his house at Wanstead, which he had purchased of Essex early in 1599, O'Neil, earl of Tyrone, in order to enable him to make a personal submission to James. On 17 Nov. 1603 he was one of the commissioners who sat in judgment at Winchester on Sir Walter Raleigh.

On 21 July 1603 Mountjoy was created Earl of Devonshire, and on 13 Aug. was made master of the ordnance. On 8 May 1604 he had been reappointed keeper of Portsmouth castle. Through the whole of that year he was in regular attendance on the king and high in his favour. Grants of land in Lancashire were made him on 21 June 1603 and on 27 Feb. 1603–4. He was nominated one of the commissioners for discharging the office of earl marshal (5 Feb. 1604–5), and on 13 Feb. 1604–5 received the manor of Loddington, Leicestershire, and part of the lands of Lord Cobham in Somerset and Kent (1 July). On 20 May 1604 he with other commissioners met commissioners from Spain to determine the English relations with the States-General and the Indies. Later in the year the new Spanish ambassador, Villa-Mediana, induced the Earl of Devonshire to accept a Spanish pension of 1,000*l.* a year. On 9 Nov. 1605 he was nominated the general of a force called out to repress a rising which, it was feared, might follow the discovery of the gunpowder treason (Winwood, *Memorials*, ii. 173).

A grave scandal disfigured Blount's private life, and caused him much anxiety in his last years. He had contracted in early life a liaison with Penelope, the wife of Lord Rich and a sister of the Earl of Essex. This lady (born in 1560) had come to know Sir Philip Sidney in 1575, and she is the Stella of Sidney's sonnets entitled 'Astrophel and Stella.' In 1580 she was married against her will to Lord Rich, a man of violent and coarse temper; but between the year of her marriage and the spring of 1583, when Sidney himself married, she was guilty of a criminal intimacy with her former lover. A few years after Sidney's death in 1586 Mountjoy appears to have succeeded to his place in Lady Rich's affections. By her husband she had seven children, but after 1590 she became Mountjoy's mistress, and bore him three sons, Mountjoy [q.v.], Charles, and St. John, and two daughters, Elizabeth and Isabel. During the lifetime of his brother-in-law, the Earl of Essex, Lord Rich showed no open resentment against his wife; but after Essex's death (25 Feb. 1600–1) he separated from her, paying her a yearly allowance. A year or two later he obtained a divorce from her *a mensa et thoro* in the ecclesiastical courts. Soon after his return from Ireland Mountjoy resolved to marry the lady, although the canon law did not allow the re-marriage of any person divorced by the ecclesiastical process. The earl after much persuasion induced William Laud, who became his chaplain on 3 Sept. 1603, to perform the ceremony at Wanstead on 26 Dec. 1605. Doubts as to the legality of Laud's action were at once raised, and in his 'Diary' Laud repeatedly refers to 'My cross about the Earl of Devon's marriage,' which he asserts was for many years a bar to his preferment in the church. The earl defended his conduct in a tract, dedicated to James I, which has been often printed, and of which a manuscript copy is in Lambeth Library (943, p. 47). After describing the indignities to which Lord Rich had subjected his wife, the earl argued that there was nothing unscriptural in Lady Rich's conduct, nor aught contrary to the canon law; but Laud attempted to confute his arguments, and forwarded elaborate notes to the earl, which have been printed in vol. vii. of Laud's collected works. While Lady Rich and the earl were openly living in adultery they were well received at court, and after her divorce Lady Rich received (17 Aug. 1603) a grant of 'the place and rank of the ancientest Earl of Essex, whose heir her father was,' to replace the inferior dignity of baroness which she derived from her marriage with Lord Rich. But her second marriage offended both the king and queen. It had been little expected. In 1602 it was generally understood that Mountjoy was to marry the only daughter of Thomas, tenth earl of Ormonde (Manningham, *Diary*, Camd. Soc. p. 59).

Amid the discussion raised by the marriage the earl died, after a short illness caused by inflammation of the lungs, on 3 April 1606, at Savoy House, in the Strand. 'The Earl of Devonshire left this life,' wrote Chamberlain to Winwood, 'on Thursday night last; soon and early for his years, but late enough for himself: happy had he been if he had gone two or three years since, before the world was weary of him, or that he had left his scandal behind him' (Winwood, *Memorials*, ii. 206). He was buried about

2 May in St. Paul's chapel of Westminster Abbey. The funeral was celebrated with great pomp, but the heralds declined to impale the countess's arms with the earl's. The earl left his wife 1,500*l.*, and a daughter 6,000*l.*, and provided very liberally for his son Mountjoy [q. v.] His second natural son, Charles, fought with the royalists in the civil wars, acted as scout-master-general at Abingdon in May 1643 (CLARENDON, *Hist.* ii. 485), and died in 1645. His third son, St. John, was made a knight of the Bath at the coronation of Charles I. The earl did not provide for all his reputed children, and a third of his property passed away from his family.

His titles became extinct at his death. In 1606 Sir Michael Blount of Iver, Buckinghamshire, and Mapledurham, Oxfordshire—eldest son of Sir Richard Blount, grandnephew of Walter, first Baron Mountjoy [q.v.]—who had been lieutenant of the Tower since 1590, and high sheriff of Oxfordshire in 1586 and 1596, laid a claim to the barony of Mountjoy before the House of Lords, but it was rejected (STOW, *Survey*, ed. Strype, bk. i. pp. 65, 75; DAVENPORT, *Lord Lieutenants and High Sheriffs of Oxfordshire*, 40–1).

Mountjoy was popular with the poets of his day. John Davies of Hereford published a sonnet to him in his 'Microcosmus' (1603), and Joshua Sylvester prefixed three sonnets in his praise to 'The second weeke' of his translation of 'Du Bartas' (1641), probably written about 1598. In 1605 Nicholas Breton dedicated to him 'The Honour of Valour.' Soon after the earl's death John Ford, the dramatist, published a poem entitled 'Fames Memoriall, or the Earle of Deuonshire Deceased' (London, 1606), with a dedication to the Countess Penelope, and a sonnet in the earl's praise by Barnaby Barnes. At the same time Samuel Daniel, the poet, produced 'A Funerall Poeme vppon the Death of the late noble Earle of Deuenshyre.' It has been suggested with some probability that Ford's tragedy of the 'Broken Heart' (1633) was founded on the story of Mountjoy's relations with Lady Rich. The poets pitch their panegyrics in a very high key, and warmly denounce the earl's detractors. Fynes Morison, who was secretary to Mountjoy in Ireland, drew up a minute account of his character and habits in his 'Itinerary.' He was of 'stature tall and of very comely proportion,' very careful in his dress and in his food, a constant smoker, very discreet in the conduct of political business, and fond of study and of gentle recreations. Manningham quaintly notes in his 'Diary,' p. 104, on 18 Dec. 1602: 'The Lord Mountjoy will never discourse at table; eates in silence.' But against the laudatory verdicts of Davies, Sylvester, Breton, Ford, Daniel, and Morison must be set the fact that Mountjoy in his relations with Essex and with Spain was guilty of political dishonesty, and although much may be pleaded in extenuation of his private faults, there is little there to indicate a very high moral character.

Roberts of Penzance.] S. L.

BLOUNT, CHARLES (1654–1693), deist, younger son of Sir Henry Blount [q. v.], was born at Upper Holloway 27 April 1654. His father married him, at the age of eighteen, to Eleanora, daughter of Sir Timothy Tyrrel of Shotover, and provided him with a good estate. In 1673 he published, anonymously, 'Mr. Dreyden vindicated, in Reply to the friendly vindication of Mr. Dreyden, and reflections on the Rota.' This was a warm defence of Dryden against the criticisms of Richard Leigh in a pamphlet called 'The Censure of the Rota on Mr. Dryden's Conquest of Granada.' Blount afterwards took some part in a translation of Lucian, and Dryden makes a complimentary reference to him in the life of Lucian prefixed to the translation (which was not published till 1711).

Blount is chiefly known as the author of some freethinking books, which cause him to be reckoned by Leland (*View of the Deistical Writers*) as the successor of Herbert of Cherbury and the predecessor of Toland. The first of these is the 'Anima Mundi, or historical relation of the opinions of the ancients concerning man's soul after this life, according to unenlightened nature, by Chas. Blount, gent.' His father is said to have helped him in this book, and probably shared or inspired his opinions (see *Oracles of Reason*, p. 154). It gave some offence by its sceptical tendency. Compton, bishop of London, desired its suppression, and during his absence it was burnt 'by some zealous person,' but afterwards reissued. Blount sent a copy of it to Hobbes, with a letter dated 1678 (*Oracles of Reason*, p. 97), in which he praises Hobbes's 'incom-

parable treatise on heresy,' then in manuscript, and takes occasion to impugn the authority of councils. Soon after Hobbes's death (4 Dec. 1679) he published a broadsheet called 'Last Sayings and Dying Legacy' of Mr. Thos. Hobbes of Malmesbury. It consists chiefly of extracts from the 'Leviathan,' and is clearly not intended, as Wood says, 'to expose' Hobbes. It is the work of a disciple. In 1680 appeared 'Great is Diana of the Ephesians, or the Original of Idolatry, together with the politick institution of the Gentiles' Sacrifices,' an attack upon priestcraft, with an ostensible reservation in favour of primitive christianity. In the same year he published his best known work, 'The Two First Books of Apollonius Tyaneus, written originally in Greek, with philological notes upon each chapter.' The notes are voluminous and make a show of considerable reading, though Macaulay declares that Blount shows ignorance which must have disqualified him for translating directly from the Greek. In some of them he attacks priestcraft, and shows himself a follower of Hobbes. Bayle (art. 'Apollonius,' note I) gives a report that these notes were partly taken from manuscripts left by Herbert of Cherbury. The statement is improbable, and perhaps arose from the fact that Blount's next book, the 'Religio Laici,' which professes to be supplementary to Dryden's poem of the same name (1682), was, in fact, chiefly taken from Herbert's treatise, 'De Religione Laici.'

Blount had meanwhile written some political papers of strong whig tendency. An 'Appeal from the Country to the City,' signed Junius Brutus, defends the reality of the popish plot, and argues that the Duke of Monmouth would be the best successor to the crown in the event of the king's death. In 1691 he published a letter to Sir W(illiam) L(eveson) G(ower), calling for the punishment of all concerned in the surrender of charters under James II (published in the *Oracles of Reason*). In 1693 he published some tracts, the significance of which was first pointed out by Macaulay (*History*, ch. xix.) The Licensing Act, passed in 1685, was to expire in 1693. Blount published two tracts, 'A just Vindication of Learning and of the Liberties of the Press, by Philopatris,' and 'Reasons humbly offered for the Liberty of Unlicensed Printing.' To the last is appended 'A just and true Character of Edmund Bohun,' the licenser of the day, who is bitterly attacked. The two pamphlets are in great part made up of passages taken without acknowledgment from Milton's 'Areopagitica,' though it may be noted that Blount in one passage explicitly cites Milton's book. Blount next laid a trap for Bohun [see BOHUN, EDMUND]. Bohun was requested by a bookseller to license an anonymous pamphlet, really by Blount, called 'King William and Queen Mary Conquerors, a discourse endeavouring to prove that their majesties have on their side against the late king the principal reasons that make conquest a good title. Showing also how this is consistent with that declaration of parliament, "King James abdicated the government, &c." Written with an especial regard to such as have hitherto refused the oath and yet incline to allow of the title of conquest, when consequent to a just war. Licensed 11 Jan. 1693, Edmund Bohun.' Bohun licensed the pamphlet, for the political theory set forth in the title-page was precisely that of which he was an almost solitary adherent. The suggestion that the title of the sovereigns rested upon conquest, as Blount had probably foreseen, excited intense indignation. The House of Commons ordered the pamphlet to be burnt by the common hangman, and Bohun was imprisoned and dismissed from his office. Bohun's blunder made the objections to the system felt. The Licensing Act was renewed, but after a division, and for only two years, after which it was never revived.

Blount had fallen in love with his deceased wife's sister, and in a letter (published in the *Oracles of Reason*) defends the legality of marriages between persons so connected. Despairing, however, of obtaining his wish, he gave himself a mortal wound; he shot himself, according to Luttrell, Wood, and Warton, or, as Pope says (Epilogue to *Satires*), pretended to kill himself by a stab in the arm, and really died. He survived for some time, refusing to take food from any one but his sister-in-law, and died in August 1693. He left several children. In the year of, but apparently before, his death, appeared the 'Oracles of Reason,' a collection of tracts chiefly by Blount, with a preface by Charles Gildon. The longest papers are an attack upon the early chapters of Genesis, under cover of passages from Thomas Burnet's 'Archæologia Philosophica.' The 'Miscellaneous Works' appeared in 1695, with another preface by Gildon containing a defence of suicide which caused some scandal, and including the 'Oracles' (with the original preface), the 'Anima Mundi,' the 'Diana of the Ephesians,' the 'Appeal from the Country,' and the pamphlet by Philopatris. Blount also published in 1684 a small educational book, called 'Janua Scientiarum,' a kind of catechism in geography, chronology, and so forth. Blount's books are chiefly borrowed from other writers; but his attacks upon orthodox opi-

nions are apparently serious, and had some real influence upon the deistical movement.

[Biog. Britannica (article with information from his family); Macaulay's History of England, chap. xix.; Bohun's Autobiography; Wood's Athenæ (arts. 'Henry Blount' and 'Hobbes;' T. Warton's Life of Sir Thomas Pope, p. 208.]

L. S.

BLOUNT, Sir CHRISTOPHER (1565?–1601), soldier and friend of the Earl of Essex, was probably the third son of James, sixth lord Mountjoy, and thus younger brother of Charles, lord Mountjoy, earl of Devonshire [q. v.] He was for some years in attendance on the Earl of Leicester, and gentleman of the horse to Queen Elizabeth. He served under Lord Willoughby [see BERTIE, PEREGRINE] in the Netherlands, in 1587-8, and was knighted there by his commander. From a letter addressed by Blount to Leicester (*Cottonian MSS.* D. iii. f. 213), dated June 1588, Blount would seem to have been at times at variance with Willoughby on tactical questions.

About 1589 Blount married Letitia or Lettice, eldest daughter of Sir Francis Knollys, K.G., whose first husband was Walter Devereux, first earl of Essex (*d.* 1576), and whose second was Robert Dudley, earl of Leicester (*d.* 1588). There was a great disparity of years between Blount and his wife, and the marriage placed him in the singular position of stepfather to the well-known Earl of Essex, who was of about his own age and very intimately acquainted with him. Among Lord Bagot's papers at Blithefield, Staffordshire, are letters from Essex to Bagot, 7 March 1591-2, directing Bagot to put Blount in possession of 'Ulceter Moores,' and an order (28 March 1596) directing that assistance be given Blount in his attempts to raise men for the country's defence (*Hist. MSS. Com. Rep.* iv. 330-1).

In 1596 Blount took part in the expedition to Cadiz under Essex, first as colonel of the land force and afterwards as camp-master. He appears to have lived in great state at Cadiz, and on his return home complaints were made that he had taken more than his share of the booty, but these were answered to the satisfaction of Lord Burghley. In 1597 he joined Essex, Lord Mountjoy, and Sir Walter Raleigh in their fruitless attempt to capture the Azores. In 1592 and 1597 he was returned to parliament as M.P. for Staffordshire.

It is stated that in 1598, when the success attending the insurrection of O'Neil, Earl of Tyrone, in Ireland was causing English statesmen to look askance at the office of Irish lord deputy, the post was offered (4 May) to Sir Christopher (CHAMBERLAIN'S *Letters*, temp. Eliz., Camd. Soc. p. 7), and promptly declined by him. In March 1598-9 Essex accepted it [see DEVEREUX, ROBERT, Earl of Essex, 1567–1601], and Sir Christopher was invited to take part in the expedition placed under the new lord deputy's command. Essex requested the queen to nominate Blount a member of the Irish privy council, but the request was refused, much to Essex's annoyance, and Essex impetuously threatened to leave Blount behind. He asked him, however, to superintend the embarkation of the troops at Chester, and finally directed him to sail with him to Dublin, where he arrived 12 April 1599. Little of interest is known of Blount's movements during the tedious campaign, in which he acted as marshal of the army. In August he defeated the rebels with 1,000 men at Leix, near Dublin, and soon afterwards he appears to have been wounded, and to have become a Roman catholic. Blount and Lord Southampton were Essex's chief advisers in Ireland. When the queen complained of the armistice made by Essex with Tyrone after his repeated failures to crush the rebellion, Blount, who 'lay hurt' in Southampton's lodgings in Dublin Castle, strongly dissuaded Essex from returning to England with an army, but suggested to him 'to draw forth of the army some 200 resolute gentlemen, and with those to come over, and so to make sure of the court, and so to make his own conditions.' Blount's advice was accepted, and Blount himself seems to have arrived in London a few months after Essex. There is nothing to prove that he was in very frequent communication with Essex during the earl's long imprisonment from October 1599 to 26 Aug. 1600. On 27 July 1600 Blount wrote to Cuffe, Essex's secretary, to present his duty to his master, 'though I offer no further service to your noble lord.' According to Blount's subsequent confession, he was invited by Essex to pay him a visit in London on 20 Jan. 1600-1, and there a part was assigned him in the plot formed by Essex to seize the queen and her advisers, and to stir up the city of London against them. Three years before, at Wanstead, Blount afterwards asserted, and again in Dublin Castle, Essex had made similar suggestions to him. There is little independent evidence to support Essex's statement at his trial that Blount chiefly incited him to rebellion, but there can be no doubt that Blount, as an enthusiastic catholic convert, sympathised with an attack on the existing government. On Saturday, 7 Feb., Blount was at Essex House, with all Essex's fellow-conspirators. The exact duty assigned to him

in the coming riot was to proceed to Whitehall and seize the outer gate. When the lord keeper Egerton visited Essex House on the Saturday, Blount was one of those who advised his detention, and throughout the following night his servants guarded the building. On the Sunday Blount accompanied Essex on his march through London, and was attacked by the queen's forces near Ludgate, where he was wounded and captured, and his page killed. On 18 Feb. 1600-1 he signed two confessions, exposing his own and Essex's guilt, and they helped greatly to secure Essex's conviction. On 5 March Blount, with Davers, Davis, Merrick, and Cuffe, was brought to trial at Westminster, and condemned to death. On 7 March he offered further testimony against himself, and on 18 March he was executed on Tower hill. In a speech from the scaffold he renewed his confession, and begged the forgiveness of Sir Walter Raleigh, who stood near him, and whose death he had especially aimed at. His widow survived him, dying 25 Dec. 1634, aged 94. Blount endeavoured to convert a fellow-prisoner, Sir John Davis, to Roman catholicism before his death. Bacon characterised Blount as 'so enterprising and prodigal of his own life.'

S. L.

BLOUNT or BLUNT, EDWARD (*fl.* 1588–1632), stationer and translator, son of Ralph Blount or Blunt, merchant tailor of London, 'put himself apprentice' for a term of ten years to William Ponsonby, a London stationer, on 24 June 1578. On 25 June 1588 he was duly admitted a freeman of the Stationers' Company. The first work published by him and registered in the extant Stationers' Books is Joshua Sylvester's 'The Profitt of Imprisonment' (25 May 1594; and cf. entry 30 Jan. 1598-9); the next is John Florio's 'Dictionarye in Italian and Englishe' (2 March 1595-6). In 1598 Blount, out of respect (as he tells us) for the memory of Marlowe, who had died five years before, brought out the poet's 'Hero and Leander' (printed by Adam Islip for Edward Blunt); and in a well-written dedication to Sir Thomas Walsingham, Blount speaks of himself as one of Marlowe's intimate friends. In 1600 Thomas Thorpe edited Marlowe's translation of 'Lucan's first booke,' and dedicated it 'to his kind and true friend, Edward Blunt,' in an address which begins: 'Blunt, I purpose to be blunt with you.' It was in the same year that Blount published and dedicated to the Earl of Southampton a translation by 'a respected friend,' entitled 'The Uniting of the Kingdom of Portugall to the Crowne of Castill.' Blount has also been credited on doubtful grounds with the authorship in the same year of the very curious 'Hospitall of Incvrable Fooles: Erected in English, as neer the first Italian modell and platforme as the vnskilful hand of an ignorant Architect could deuise. Printed by Edm. Bollifant for Edward Blount, 1600.' In 1603 Blount issued Florio's translation of 'Montaigne's Essays,' and in 1607 'Ars Aulica, or, The Courtier's Arte,' translated by himself from the Italian of Lorenzo Ducci, and dedicated to the brothers William, earl of Pembroke, and Philip, earl of Montgomery, the patrons of the first folio of Shakespeare. In 1620 he issued, with an introduction signed by himself, a series of essays entitled 'Horæ Subsecivæ: Obseruations and Discovrses;' he states in the preface that he did not know who the author was [see BRYDGES, GREY]. In the same year he also published Shelton's first English translation of 'Don Quixote.' The book is in two parts, and Blount prefaces the second with a dedication by himself to George Villiers, marquis of Buckingham. In 1623 Blount joined with another stationer, Isaac Jaggard, in producing, under Heming and Condell's direction, the great first folio of Shakespeare. His name ('Ed. Blount') appears as one of the printers on the title-page and in the colophon. The immediate supervision which Blount exercised in the preparation of all his books for the press has led to the reasonable inference that Blount was the active, although not very careful, editor of this edition of Shakespeare's plays. Another translation of the same date (by James Mabbe) edited by Blount is 'The Rogue: or the Life of Guzman de Alfarache, written in Spanish by Matheo Aleman, printed for Edward Blount, 1623.' It includes commendatory verses by Ben Jonson and Leonard Digges, and characteristic addresses by Blount himself. Blount played 'the mid-wife's part' (as he terms it) in the production of Bishop Earle's 'Microcosmographie' in 1628. The original edition bears no author's name, but contains an amusing address to the reader signed 'Ed. Blovnt.' The book was printed 'by William Stansby for Robert Allot.' But although he did not publish this work Blount had not yet retired from business. In 1632 he collected for the first time John Lyly's 'Sixe Court Comedies,' 12mo, and had them printed

by William Stansby for publication by himself. Blount signs both 'the Epistle Dedicatorie' addressed to Lord Lumley, and the notice 'to the reader,' in which he speaks in high praise of Lyly not only as a dramatist but as the originator of 'Euphueisme.' Blount appears to have had access to Lyly's manuscripts; in no earlier editions of the separate plays were any of Lyly's lyrics inserted. It was also in 1632 that R. Collins published Blount's 'Christian Policie,' a translation from the Spanish of Juan de Santa Maria, dedicated by the translator to James Hay, earl of Carlisle. Nothing is known of Blount in later years. His shop in earlier days had been 'in Paul's Churchyard at the signe of the Black Beare.' According to a document in the archives of the city of London, Blount married, before 2 Dec. 1623, Elizabeth, widow of a London stationer named Richard Bankworth (Overall's *Remembrancia*, p. 318).

[An Elizabethan Bookseller, by S. Lee, in Bibliographica, 1895, i. 474–98; Arber's Stationers' Registers, ii. 86, 702; Ames's Typog. Antiq. (ed. Herbert), p. 1214; Notes and Queries, 2nd ser. iii. 6–8; Cat. of Early Books in Brit. Museum. Sir Alexander Croke, in his Genealogical History of the Croke Family surnamed Le Blount, ii. 284–7, represents Blount as the son of a John Blount of St. Philip's, Bristol, and grandson of John Blount of Eldersfield, but the Stationers' Registers' opposing statement does not admit of question.] S. L.

BLOUNT, Sir HENRY (1602–1682), traveller, third son of Sir Thomas Pope Blount, was born at Tittenhanger, Hertfordshire, 15 Dec. 1602. He was educated at the free school of St. Albans, and, having shown an unusual quickness of parts, was entered as a gentleman commoner at Trinity College, Oxford, in 1616, before he had reached his fourteenth year. In 1618 he took his degree of B.A., and in the following year left Oxford, where, for his wit, easy address, and entertaining conversation, he was considered as promising a genius as any in the university. Thence he went to Gray's Inn, where he applied himself to the study of the law with great assiduity. It was, doubtless, during this period that he undertook his earlier travels, 'viewing Italy, France, and some little of Spain.' On 7 May 1634 he left Venice in a Venetian galley on his well-known voyage to the Levant. First touching at Rovigno in Istria, he proceeded to Zara, sailed down the Adriatic, and landed at Spalatro in Dalmatia; thence he crossed the Dinaric Alps, and descended into the plains of Bosnia, and arrived at Serajevo, the capital, after a journey of nine days. Departing thence with the Turkish troops proceeding to the war in Poland, he arrived at Valievo in Servia. Three days later he reached Belgrade, on the Danube. Proceeding by way of Nissa to Sophia in Bulgaria, he notices for the first time the 'mescheetos,' or mosques, the well-known signs of the presence of the Turk in Europe. Crossing the Balkans he stayed two days at Potarzeek (Tartar Bazardjik) in order to read his Cæsar. Here he allowed himself to be persuaded by a learned Jew that he was in the immediate neighbourhood of the true Thermopylæ. Thence he journeyed by way of Philippoli to Adrianople, finally reaching Constantinople after a land journey of 1,500 miles in fifty-two days. Here he stayed five days, and observed little beyond the ravages of the great fire of the previous year (1633). Taking passage in the Turkish fleet bound for Egypt, he visited Rhodes, where he noted the huge cannon made for P. d'Aubusson, a former grand master of the knights there. Three days later he arrived at Alexandria; thence he reached Cairo by water in five days, finally taking up his quarters in the house of a Venetian gentleman, Signor Santo Seghezzi, at Bulak, the river harbour of the city of the Khalifs. Of all the antiquities of Egypt he chiefly sought to understand the Tables of Isis. In this he failed, the three Egyptian priests to whom he was introduced (probably Copts) 'being ignorant of all things not Mahometan.' His two principal excursions were to the interior of the great pyramid of Gizeh, and to the Labyrinth in the Fayûm, which mass of buildings he regarded as the remains of 'some regall palace.' Leaving Cairo in November, he took passage on board a French vessel at Alexandria, bound for Palermo. Re-embarking at Trepassi for Naples, he returned, viâ Rome, Florence, and Bologna, to Venice, where he arrived after eleven months, having journeyed above six thousand miles. The publication of his (1) 'Voyage to the Levant' at once established his fame both as an author and a traveller. Between 1636 and 1671 it passed through no less than eight editions in English, besides a German one in 1687. It is also to be found in the collections of Vander-Aaa in Dutch, Churchill, Osborne, and Pinkerton. The only remaining pieces that can be ascribed to him with certainty are (2) a letter on the merits of a whalebone instrument called a provang, and upon the virtues of coffee and tobacco, prefixed to the 'Organon Salutis' by his legal friend Walter Rumsey, Lond. 1657, and (3) a Latin fragment, 'De Anima,' preserved to us in the 'Oracles of Reason' of his gifted son Charles Blount [q. v.] Anthony à Wood is in error

in ascribing to him the 'Sixe Court Comedies,' by John Lyly, and the 'Exchange Walk;' the former was published by Edward Blount [q. v.], the stationer and joint publisher with Jaggard of the first folio Shakespeare; the latter is, in all probability, a blundering reference to the 'Exchange Ware,' a dialogue acted at Cambridge, the second edition of which appeared in 1615.

On 21 March 1639-40 Blount was knighted at Whitehall by Charles I. In the civil wars he sided with the royalists, and attended the king at York, Edgehill, and at Oxford as one of the gentlemen pensioners. He was appointed on commissions on several occasions: on 20 Jan. 1651 to regulate abuses of the law, again on 1 Nov. 1655, on the trade and navigation of the Commonwealth, and once again on trade after the Restoration, 18 Oct. 1669. From this period until his death he appears to have lived in retirement at Tittenhanger, whence he circulated among his many friends the following: 'I am glad to hear it was reported that I was dead, but give God thanks that I am in good health.' His character has been variously estimated by different writers. Gildon, who edited the collected works of his son Charles Blount [q. v.], regarded him as 'the Socrates of his age;' on the other hand, the orthodox Weldon set him down as a 'sceptic philosopher,' whose adventures were written with a purpose. The truth seems to be that although apparently wanting in several qualities of a good traveller, he combined with a sturdy independence of thought keen powers of observation of men and manners. The modern flavour of the latter is quite refreshing. Speaking of the new palaces that were being built in and near Cairo during his sojourn in Egypt, he writes that they are those 'of Turkes and such Egyptians as most engage against their own country, and so flourish in its oppression' (p. 210). He died at Tittenhanger, 9 Oct. 1682, at the ripe age of eighty years, and was buried two days later at Ridge. His portrait was engraved by Loggan in 1679.

C. H. C.

BLOUNT, MARTHA (1690-1762), friend of Pope, was born on 15 June 1690, probably at the family seat, Mapledurham, near Reading (Carruthers, *Pope*, p. 65 note). She was educated first at Hammersmith, doubtless at the Roman catholic convent there, and afterwards in the Rue Boulanger, Paris. Her father was Lister Blount, and her family had long been of the highest position among Roman catholic gentry. It is not known when Miss Blount and Pope first met. Her family and his were in close friendship in 1710, in which year her father and her maternal grandfather died, both on the same day; from a story which she told Spence (Spence, *Anecdotes*, p. 356), it may be assumed that Pope and she were in the habit of meeting on easy terms as early as about 1705. From 1710 to 1715 Miss Blount continued to live at Mapledurham with her widowed mother, her brother Michael, and her sister Teresa. During this period she and her sister were prominent figures in the fashionable world. In 1712 Pope sent them his 'Rape of the Lock' and his 'Miscellany' (Carruthers, p. 79); in 1713 the sisters were corresponding with James Moore Smythe, author of the comedy 'The Rival Modes' (*ibid.* p. 70), he as Alexis, Teresa as Zephalinda, and Martha as Parthenissa; in 1714 Pope wrote to Martha from Bath that if she would come she would be the best mermaid in Christendom; in 1715 he had two fans painted for the sisters. Gay called them 'two lovely sisters' (Gay to Pope, *Welcome from Greece*), Pope spoke of their 'endless smiles' (*Epistle to Jervas*, line 61) and of Martha's 'resistless charms' (his *Epistle* to her with Voiture's works, line 59). In their portraits, still at Mapledurham, where they appear arm in arm, they both look very charming.

If Miss Blount's brother had died unmarried, Mapledurham would have become her property. But in 1715 Michael Blount married Mary Agnes, coheir of Sir J. Tichborne, and Martha with her mother and sister thenceforth had a country residence at Petersham, costing 20*l.* a year, and a town house, at one time in Bolton Street, at another in Welbeck Street (Pope to Caryll, 6 May 1733). The change in her fortunes called out Pope's warm pity. He had reason, too, to think that her mother, sister, and brother treated her unkindly; and though at first he was the friend of both sisters, having even settled 40*l.* a year on Teresa in 1717 for six years (Carruthers, p. 75), he quarrelled with the latter lady before long, and showed so much preference and partisanship for Martha, that it was the cause of rumours which seriously affected her honour. His 'Birthday Poem' to her in 1723 strengthened these rumours; his letters, however, vehemently declared them to be false (to Caryll, Christmas Day, 1725, &c.), and he attributed the scandal to

Teresa. Pope, indeed, advised Miss Blount to leave her mother and sister altogether when this calumny was abroad, but she refused the advice.

In 1732 Martha Blount seems to have been seriously ill, under Dr. Arbuthnot's care. In 1733 Pope's mother died, to whom Martha had always shown affectionate attention. In 1735 Pope dedicated his 'Epistle on Women' to her, telling her she had 'sense, good humour, and a poet.' In 1739 her brother died, leaving children to whom she was much attached. In 1743, after the death of her mother, she paid a memorable visit to the Allens at Prior Park, where Pope was staying. Ruffhead says she behaved during the visit in an arrogant and unbecoming manner; Warburton and Warton say she 'took the huff' because the Allens, as protestants, refused to let their carriage take her to a Roman catholic chapel; she says (*Mapledurham MSS.*, Carruthers, p. 378): 'They talk to one another without putting me at all into the conversation. . . . I'll get out of it as soon as I can.' Pope defended her; called Mrs. Allen 'a minx, and an impertinent one,' and, after his own departure, advised Miss Blount to 'leave them without a word.' Pope was seized with his last illness a few weeks after this unhappy episode. Ralph Allen went to see him, to find him still eager in Patty Blount's defence. Johnson relates that during Pope's last illness he saw Miss Blount in his garden, and sent for her, and (what is incredible) that Patty met the messenger (Lord Marchmont) with a callous cry, 'What! not dead yet!' Pope bequeathed to Miss Blount 1,000*l.*, three score of his books, his household goods, chattels, and plate, the furniture of his grotto, the urns in his garden, and the residue after all legacies were paid.

Miss Blount retained her place in the fashionable world after Pope's death. She lived at last in Berkeley Row, by Hanover Square, and there Swinburne the traveller, her relative, visited her (Roscoe, i. 581 note). He found her a little, neat, fair, prim old woman, easy and gay in her manners. By her will she left the residue of her property to her 'dear nephew,' Michael Blount, of Mapledurham. She died in 1762, aged 72. A pleasing portrait is in Ayre's 'Pope,' vol. ii. facing page 17.

'Pope;' Carruthers's Life of Pope; Ruffhead's Life of Pope, i. 214, ii. 71; Ayre's Memoirs of Pope, ii. 17 et seq.; Pope's Letters; Johnson's Lives of the Poets; Walpole's Letters, ed. Cunningham, 1857, v. 166.] J. H.

BLOUNT, MOUNTJOY, Lord Mountjoy, and Earl of Newport (1597?–1666), natural son of Charles Blount, earl of Devonshire [q. v.], by Penelope, Lady Rich, was born about 1597. His father left him a very plentiful revenue (Clarendon, *Hist.*, 1849, i. 89), and the earliest contemporary notice of him states that in 1617 he was parting 'with Wanstead to the king or Buckingham in order to be made a baron.' As a young man he seems to have been a favourite at court, and was created Baron Mountjoy in the Irish peerage on 2 Jan. 1617–18. On 8 Jan. 1620–1 he acted in a masque before the king at Essex House, the residence of Viscount Doncaster, and in April 1622 the emperor's ambassador in London 'ran at tilt in the prince (Charles) his company with the Lord Montjoy.' In the same year Mountjoy and Colonel Edward Cecil spent some time in the Low Countries, and a false report that they had been slain there reached home (Yonge's *Diary*, Camd. Soc. 64). On 10 Feb. 1622–3 Chamberlain wrote that the king had proposed Mountjoy as a husband for Mdlle. St. Luc, a niece of the French ambassador, to whom James had been showing many attentions, and had promised the lady, in case she accepted him, to advance Mountjoy to an earldom. On 21 Feb. 1622–3 Mountjoy accompanied the Earl of Carlisle on a visit to the French court to ask the king to excuse Prince Charles's journey through Paris, on his way to Spain, without the king's leave or kissing the king's hand. After performing this task Mountjoy rode on to Spain.

In November 1623 Mountjoy attended Mendoza, the Spanish ambassador in London. On 5 June 1627 Blount was created Baron Mountjoy of Thurveston, in the English peerage, with a clause of precedency over all barons created since 20 May. Lords Fauconberg and Lovelace brought the clause to the attention of the lords' committee of privileges, who reported (29 April 1628) that the grant of precedency was illegal. On 27 July of the same year Mountjoy was created earl of Newport in the Isle of Wight. Newport was nominated to a command in the expedition for the relief of Rochelle in August 1628, but the assassination of Buckingham delayed its departure till October, when Newport was appointed rear-admiral of the fleet and sailed in the St. Andrew. Throughout 1629 and 1630 Newport was petitioning for payment of his services; he complained that during his absence from England his property had wasted away, and that during his minority he had been deprived of Wanstead. A warrant of payment

was issued to him on 12 May 1631. In June 1630 he was granted the reversion to the custodianship of Hyde Park, and on 31 Aug. 1634 he became master of the ordnance for life. Through the five following years Newport was actively engaged in the duties of the ordnance office, out of which he contrived to make large profits for his own purse. He accompanied the army to Scotland early in 1639 in close attendance on the king, and in September of the same year sold gunpowder at an unjustifiable price to Cardenas, the Spanish ambassador, for the Spanish fleet, under Oquendo, which was attacking the Dutch fleet in the Channel, and had weighed anchor in the Downs. In this transaction the king received 5,000*l.* and Newport 1,000*l.* above the value of the powder. Newport's boldness whenever money was to be made was further illustrated in the next month, when he bargained with Cardenas, though Charles I had ordered a strict neutrality to be observed in the quarrel between Spain and Holland, to convey Spanish soldiers from Oquendo's ships to Dunkirk at thirty shillings a head. On 29 April 1640 Newport voted with the minority in the lords in favour of the commons' resolution that redress of grievances should precede supply, and excused his conduct immediately afterwards to the king as a mistake made in the confusion of the moment. But in the Long parliament Newport formally joined the opposition in the Lords.

In December 1640 Newport appealed to the lords against one Faucet, who had charged him at York in 1639 with improperly performing his ordnance duties, and on 13 Jan. 1640–1 Faucet was ordered to pay Newport 500*l.* and to make a public submission, first in the house and afterwards at the next York sessions (*Lords' Journals*, iv. 118–138). Newport, on learning from George Goring of the plot to bring an army to the king's aid in 1641 during the trial of Strafford, straightway informed Bedford and Mandeville, who carried the intelligence to Pym (April 1641). As if to conciliate his enemies, Charles thereupon appointed Newport constable of the Tower. After the bill of attainder against Strafford had passed the House of Lords (7 May), and the king was hesitating whether or no to assent to it, Newport announced that he was ready to execute Strafford with or without the king's assent. In his 'Diary' Laud mentions Newport as a witness of the solemn farewell which he took of Strafford through his prison window, as his friend passed on his way to execution. In June the king ordered Newport to proceed to York 'to look to the munition in the north,' and on 25 June the lords petitioned Charles to allow Newport to receive meanwhile his pay as constable of the Tower. On 18 Aug. parliament directed Newport to take up his residence in the Tower and to see that it was safely guarded. On 9 Sept. Newport, with Warwick, Bedford, Mandeville, and two others, protested against the action of the majority of the lords in passing an order directing the performance of divine service in all churches according to former acts of parliament, and in refusing to communicate the order to the commons. While Charles was in Scotland in August 1641 Newport is reported to have said at a meeting of some peers in Kensington that the queen and her children in London were hostages for the king's good behaviour. He denied the expression when questioned by the king on his return, but the king declined to accept the denial. Newport brought the matter before the lords (27 Dec. 1641), and on the same day Sir Edward Hungerford and Hollis delivered messages from the commons suggesting the formation of a committee of both houses to petition the king and queen to announce the name of their informant on the subject. On 28 Dec. the petition was presented, and on 30 Dec. the king haughtily replied that he did not credit the rumour, and charged Newport with wilful misrepresentation. When Lunsford, Charles's creature, was appointed lieutenant of the Tower (23 Dec.), the commons repeated their request to Newport to take personal charge of the fortress, and Charles straightway dismissed Newport from the constableship.

Newport had no intention of taking up arms against the king, in spite of his marked hostility to the court. With Hamilton, Essex, and Holland he consented to accompany the king to the city in his search for the five members (5 Jan. 1641–2), and on 15 June 1642 he was one of the king's supporters at York who signed the paper declaring that the king desired the preservation of peace and the liberty of the kingdom. He soon afterwards fought with the king's forces in Yorkshire. In December 1642 he was the Duke of Newcastle's lieutenant-general, and was entrusted with an important part in the royalists' attack on Tadcaster; but 'whether out of neglect or treachery,' writes the Duchess of Newcastle, Newport did not follow out his instructions, and the attack failed (*Life of Duke of Newcastle*, 1872, pp. 26–8). Newport was also defeated in a slight skirmish by Sir Hugh Cholmley in the north riding (January 1642–3). In the following month he quarrelled with Newcastle because

the latter wished him to employ catholics in his army. On 13 Feb. 1642–3 information reached the Marquis of Huntly that Newcastle had committed Newport to prison at Pomfret (Pontefract) (Spalding, *Memorialls*, ii. 234–5). On 11 March 1642–3 the lords remaining at Westminster sent for Newport as a delinquent. On 15 March it was reported that 'he was stayed at Coventry,' and the parliamentary committee there were directed to bring him to London, which they declined to do until they received the order of the House of Commons (21 March). On 28 March 1642–3 Newport surrendered himself and was committed to the custody of the gentleman usher of the House of Lords; on 4 April 1643 leave was granted him 'to take the air' with his custodian. Newport's saddle and horse-arms, and other property left in the Tower, when he occupied it as constable, were handed over to Sir Thomas Middleton by order of the commons, 11 June 1643, but the lords had allowed Lady Newport to remove some of the furniture earlier. In the following year Newport was released. He was present at the second battle of Newbury (27 Oct. 1644), and marched in the king's company with the royal regiment to Bath on the night following the battle (Symonds's *Diary*, Camd. Soc. 146; Money's *Newbury* (1884), 249). At the end of 1645 he was with the king's forces in Devonshire. On 23 Jan. 1645–6, when Dartmouth was stormed and fell, Newport was taken prisoner. He was sent to London, and the lords committed him to the custody of the gentleman usher (26 Jan. 1645–6), but it was reported that Newport 'was a means of delivering up [to the parliament] divers forts of great strength without forcing.' On 11 Feb. Newport petitioned the lords to confine him in some private place where his maintenance would cost him less money. On 17 Feb. 1645–6 his recognisances in 1,000*l.* were accepted by the lords that he would not leave the parishes of St. Martin's-in-the-Fields and Covent Garden if freed from custody. On 23 March the bail was raised to 2,000*l.*, and Newport was allowed 'to take the air' within five miles of London. On 22 July 1646 he was released from his bail. On 4 Oct. 1647 the lords recommended to the commons Newport's petition 'for lessening of his compositions,' in consideration of his loss of the office of master of the ordnance.

Little is heard of Newport after the capture and death of Charles I. On 16 Feb. 1653–4 Lord Lisle and Major-general Lambert were ordered in council to 'accommodate the business' of Newport and Lord Vaux, who had been apprehended on a warrant 'touching a challenge.' In June 1655 Newport and Lord Willoughby of Parham were committed to the Tower on suspicion of treason.

At the Restoration Newport recovered some of his importance, but age was telling upon him, and he took no active part in public affairs. In June 1660 he was formally suspended and discharged from the office of master of the ordnance. He was at court on the day before the coronation of Charles II, 22 March 1660–1, and carried the king's mantle (Evelyn's *Diary*, ed. Bray, i. 34). On 10 Nov. 1662 he was granted a pension of 1,000*l.* a year as gentleman of the bedchamber, which was renewed, 6 Jan. and 18 March 1662–3, with the proviso that it was to date from 24 June 1660. Newport died at Oxford, in St. Aldate's parish, 12 Feb. 1665–6, 'to which place he before had retired to avoid the plague raging in London.' He was buried in the south aisle adjoining the choir of Christ Church Cathedral, Oxford (Wood, *Fasti*, ed. Bliss, i. 250).

Lord Newport married Anne, daughter of John, Baron Boteler, of Bramfield, Hertfordshire. Lady Newport is frequently mentioned in the State Papers as a prominent leader of London society, and in 1637 she was induced by her sister, the wife of Endymion Porter, to follow a prevailing fashion and declare herself a catholic. Her husband, angered by this step, begged Laud's assistance in punishing those who had influenced Lady Newport, and Laud's endeavour to carry out Newport's wish led him into a serious quarrel with the queen (cf. Laud's *Works*, iii. 229; Strafford's *Letters*, ii. 125). It is possible that Newport's temporary alliances with the leaders of the parliamentary opposition were a result of the irritation produced by his wife's conversion. There is little to prove that she was in much intercourse with her husband during the civil wars. Passes were granted her by the authorities to travel to France (23 Sept. 1642), to go to the west of England (11 Nov. 1642), and to leave the country on her giving security to do nothing prejudicial to the state (14 March 1652–3). In June 1657, when a plot against the Protector's life was on foot in London, a search after her with a view to her arrest was suggested (Thurloe, *State Papers*). Care must be taken to distinguish between the Earl of Newport (in the Isle of Wight) and his sons from Richard Newport [q. v.], created Baron Newport of High Ercall, Shropshire, 14 Oct. 1642, who died in 1650, and from Richard Newport's son and heir Francis [q.v.], created Viscount Newport of Bradford, Shropshire,

11 March 1674–5, and Earl of Bradford 11 May 1694, who died in 1708.

Newport had three sons and two daughters. His eldest son, George, who had been taken prisoner by Sir Thomas Middleton on the fall of Oswestry (3 July 1644), became the second earl of Newport, and died without issue in 1675–6. His second son, Charles, died in infancy, and was buried at St. Martin's-in-the-Fields (Stow's *Survey*, ed. Strype, bk. vi. p. 71); the third, Henry, succeeded his brother as earl of Newport (cf. *Savile Correspondence*, Camd. Soc. 40, 118). With his death in 1681 the peerage became extinct. The first earl's two daughters, Isabella and Anne, were allowed by the House of Lords to travel from London to their father's house at Fotheringay (13 July 1643). Isabella married Nicholas Knollys, who sat in parliament in 1660 as earl of Banbury, but his legitimacy was disputed.

Two portraits of Newport, the one (at an early age) by Martin Droeshout, and the other by Hollar, are mentioned by Granger (*Biog. Hist.* i. 399, ii. 135).

L.

BLOUNT, RICHARD (1565–1638), jesuit, of the Leicestershire branch of the Blount family, was younger brother of Sir Thomas Pope Blount, of Osbaston, Leicestershire, and Tittenhanger, Hertfordshire, and grandson of Walter, son of John Blount, of Blunt's Hall, Staffordshire. Born in Leicestershire in 1565, he matriculated at Balliol College, Oxford. In 1583 his aunt Lady Paulet nominated him fellow of Trinity, but he only held the fellowship three weeks, leaving the university on becoming a catholic. On 22 July 1583 he reached the English college of Douay (then temporarily removed to Rheims), and next year entered the English college at Rome, where he was ordained priest in 1589. On 2 Sept. 1590 he left the college for Spain, in company with Father Robert Parsons, who in 1591 devised a plan for sending Blount and other priests into England. He applied to the Spanish admiral to equip them as if they were sailors who had formed part of the expedition against Spain under the Earl of Essex, and, having been taken prisoners, were now duly released, with permission to return to England. In this disguise they were on their arrival taken before Lord Howard of Effingham, afterwards Earl of Nottingham, the English lord high admiral, and as they had made themselves so accurately acquainted with the details of the expedition as to be able to answer all the questions put to them, they were without trouble or delay permitted to land. The stratagem came to Lord Burghley's ears when it was too late, and the searches and inquiries ordered by the privy council were without result (Morris, *Troubles of our Catholic Forefathers*, i. 190).

Blount found a home and a centre for his missionary work at Scotney Castle, the seat of the Darells of Sussex, and the narrative of his wonderful escape, in 1598, from the hands of the pursuivants who had beset and occupied that mansion has been recorded by Mr. William Darell. He entered the Society of Jesus in England in 1596, and was professed of the four vows 5 May 1608. In 1617 he was appointed superior of the English missions of the society, whose members so increased in number under his government, that from a handful of nineteen—four of whom were in captivity—in 1598, they had risen to nearly two hundred in 1619, including forty professed fathers, 109 being scattered up and down in England. Father-general Mutius Vitelleschi therefore determined to raise England to a vice-province of the society in the same year (1619), and appointed Blount the vice-provincial; and by letters patent dated 21 Jan. 1622–3, England was raised to a full province of the society, Father Blount being declared the first provincial (Foley, *Records*, vii. 65).

Blount laboured in the English mission for nearly fifty years, and his escapes during the heat of the persecution were marvellous. After his escape from Scotney he passed to the house of a lady of rank, which was his home for the remainder of his life. The perils to which he was exposed made Blount so cautious that though when he died he had been more than forty years a jesuit, and twenty-one years superior in England, and though he wrote and received numberless letters, yet the place where he lived was so well kept secret that we are in ignorance of it even now. We know only that it was in London. It is said that Abbot, archbishop of Canterbury, was acquainted with his dwelling-place, and that the primate would make no use of his knowledge from a kindly remembrance of the time they had spent together at Oxford, and out of respect for the lady in whose house Blount resided. For fifteen years Blount kept himself out of sight of the domestics, and on the rare occasions when business took him from home he left the house and re-entered it by night.

He died in London on 13 May 1638, and was buried in Queen Henrietta Maria's private chapel in Somerset House, which was then served by the Capuchin friars.

J. 55; Foley's Records, iii. 481, vii. 64; Panzani's Memoirs, 220-223; Morris's Troubles of our Catholic Forefathers, i. 157, 187-215, 320; Dodd's Church Hist. iii. 110.] T. C.

BLOUNT, SIR THOMAS (*d.* 1400), supporter of Richard II, was probably the son, by his first wife, of Sir John Blount, who was summoned to parliament in 1327 as Lord Blount of Belton. His father has been identified with the Sir John Blount who was custos or mayor of London from 1301 to 1307, engaged in the Scotch war of 1304, and was afterwards constable of the Tower; but the dates seem to make the identification doubtful (STOW'S *London*, ed. Strype, v. 109; *Liber Albus*, ed. Riley, 5, 15, &c.) At Richard II's coronation Sir Thomas was deputy for John Hastings, earl of Pembroke, in the office of king's 'naperer,' or keeper of his linen, and he was in close attendance on Richard II throughout his reign. At its close he declined to recognise the claim of Henry IV to supersede Richard. After Henry's coronation (6 Oct. 1399) he joined John Holland, earl of Huntingdon, Thomas Holland, earl of Kent, the Earl of Salisbury, the Earl of Rutland, the Abbot of Westminster, and others in an insurrection. Sir Thomas, who is described by contemporary chroniclers as a noble and wise knight, met the leading conspirators at dinner with the Abbot of Westminster 18 Dec. 1399, and there they agreed to surprise Henry at a tournament at Windsor. But Henry discovered the plot through the treachery of the Earl of Rutland, and, summoning an army in London, advanced against the rebels, who had assembled in some hundreds near Windsor. The latter retreated before Henry, and managed to reach Cirencester, where many of them were captured (6 Jan. 1400), but Blount, with a few friends, fled to Oxford, and was taken and executed in the Green Ditch near the city (WOOD, *Annals of Oxford*, ed. Gutch, i. 537). Eleven persons, described as Blount's servants, were condemned to outlawry at Oxford at the same time, and afterwards (19 Feb. 1400) pardoned. The revolting cruelty of Blount's death has been described at great length by many contemporary chroniclers. He was first hanged, then cut down and eviscerated, although still alive and replying to the taunts of Sir Thomas Erpingham, the king's chamberlain, who directed the horrible procedure; he was finally beheaded and quartered, and his head was sent to London. His large estates were forfeited to the crown, but some were bestowed on Sir Walter Blount (*d.* 1403) [q. v.], a distant relative, and his wife Sancha. With Sir Thomas Blount the Belton line of the Blount family became extinct.

Sir Thomas's cousin Nicholas, who aided him in the insurrection, escaped to Italy, and was outlawed. He entered the service of Galeazzo Visconti, duke of Milan, and fought with the Milanese against Rupert, emperor of Germany, from 1401 to 1404. He returned to England in 1404, and lived in concealment till Henry IV's death in 1413. On his return to this country he assumed the name of Croke. He married Agnes, daughter of John Heynes, by whom he became the ancestor of Sir John Croke [q. v.] and of Sir George Croke [q. v.]

L.

BLOUNT or **BLUNT**, THOMAS (*fl.* 1668), colonel, born in or about 1604, was the second son of Edward Blount, of the Middle Temple and Wricklesmarsh, in Charlton, Kent, by his second wife, Fortune, daughter of Sir William Garway, knight, of London. During the rebellion his leanings were to the popular party, and he became, says Sir Roger Twysden, 'a great stickler for the two houses of parliament.' Being present at the meetings of the cavalier country-gentlemen at Maidstone, which resulted in the getting up the Kentish petition of March 1642, he turned informer, and gave an account of the proceedings in evidence at the bar of the house. His name appears in 1643 on one of the earliest lists of the committee of Kent. Upon the accession of Charles II Blount was promptly committed to prison, where he saw fit to modify his opinions, and his petitions for release were certainly not wanting in servility. Blount was a highly ingenious man, and lived in intimacy with the most distinguished fellows of the Royal Society, to which he was himself admitted in February 1664-5. He constructed with his own hands a carriage with an improved action, 'for the ease of both man and horse,' which at the time attracted considerable attention, and is often mentioned by

Pepys. Both Pepys and his contemporary diarist Evelyn tell us of the colonel's experiments and inventions at his stately seat at Charlton—his vineyard, the wine of which was 'good for little,' new-invented ploughs, and subterranean warren. He was among the first to adopt the application of the *way-wiser*, or odometer, to a carriage. Blount was living in January 1667–8, when he withdrew from the Royal Society.

BLOUNT, THOMAS (1618–1679), author of 'Ancient Tenures,' son of Myles Blount, of Orleton in Herefordshire, the fifth son of Roger Blount of Monkland, in the same county, was born at Bordesley, Worcestershire, being of a younger house of the ancient family of his name. He entered himself of the Inner Temple, and was in due time called to the bar. He was never advantaged, says Anthony à Wood, who knew him and received from him copies of some of his works, by the help of a university in learning. He succeeded to considerable property, both in Essex and Warwick, the former of which he appears to have derived from his mother, as a manor farm near Maldon is described in his will as being her jointure land. His religious tenets, those of a zealous Roman catholic, interfered with the practice of his profession; but he still continued the study of the law as an amateur, and gave gratuitous advice to his neighbours while residing at Orleton, where, says Wood, he had a 'fair and plentiful estate.' It was what Wood calls his 'geny,' supported by his 'fair and plentiful estate,' which led him to the paths of literature, and made him hunt after the difficult and uncouth terms of legal and other science, and 'get nothing but his own satisfaction.' He bestowed the waste hours of some years in reading histories of various countries—Turkey, France, Spain, Italy, &c. He had a reasonable acquaintance with the Latin and French tongues, and a smattering of both Greek and other languages. The agitation due to the alleged popish plot of 1678 was for Blount a source of trouble, obliging him to fly in fear from his home and lead a wandering life. Of the last year of his life, Wood says: 'He contracted the palsy, as by his last letter sent to me, dated 28 April 1679, I was informed, adding therein that he had then quitted all books except those of devotion. On 26 Dec. following, being St. Stephen's Day, he died at Orleton in the year of his age 61.' (According to Sir William Dugdale's diary, '16 Dec., Mr. Tho. Blount dyed at Orlton in Herefordshire of an apoplexie.') He was buried in the church there, and soon after had a comely monument put over his grave by Anne, his widow, daughter of Edmund Church of Maldon, in Essex.

In the possession of William Blount, M.D., of Herefordshire, were, in 1808, several letters addressed by Dugdale to his friend Blount. In the first of these, bearing date 29 June 1674, Sir William, then Mr. William Dugdale, writes, praying his interference in the matter of one Scott, a bookseller in Little Britain, who owed Dugdale money for his 'Monasticons.' In another letter we learn that Blount corrected some of Dugdale's proof-sheets. In another he is introduced to Sir John Cotton, son of the great collector, to see some manuscripts in his library, as a 'person well verst in antiquities and deserving all encouragement in these his commendable studies.'

Blount's chief works are: 1. 'The Art of making Devises, treating of Hieroglyphicks, Symboles, Emblemes, Ænigmas, Sentences, Parables, Reverses of Medalls, Armes, Blazons, Cimiers, Cyphres, and Rebus, translated from the French of Henry Estienne, Lord of Tossez,' 1646; the same, together with a 'Catalogue of Coronet Devises, both on the Kings and the Parliament's side, in the late Warres,' 1650. 2. 'The Academie of Eloquence, containing a compleat English Rhetorique exemplified, with *Common places* and *Formes* digested into an easie and methodical way to speak and write fluently, according to the *mode* of the present times, together with Letters, both Amorous and Moral, upon emergent occasions,' 1654 (? 29 Jan. 1653), often reprinted; a book 'specially intended' for the youth of both sexes. 3. 'Glossographia, or a Dictionary interpreting all such hard words, of whatsoever language, now used in our refined English tongue, with etymologies, definitions, and historical observations on the same; also the Terms of Divinity, Law, Physick, Mathematicks, and other Arts and Sciences explicated; very useful for all such as desire to understand what they read,' London, 1656, 8vo; 1670, 1671, 8vo; 1679, 1691; enlarged by William Nelson, 1717, fol. Much of this was adopted by Edward Phillips in his 'New World of English Words,' which appeared the year after. 4. 'The Lamps of the Law and Lights of the Gospel, or the Titles of some late Spiritual, Polemical, and

Metaphysical New Books,' London, 1658, 8vo, written in imitation of J. Birkenhead's, Paul's Churchyard, and published under the name of 'Grass and Hay Withers.' 5. 'Boscobel, or the History of his Sacred Majesties most miraculous preservation after the battle of Worcester, 3 Sept. 1651,' London, 1660, frequently republished (translated into French and Portuguese; the last of which was done by Peter Gifford, of White Ladies, in Staffordshire, a Roman catholic). 6. 'The Catholic Almanac for 1661-2-3,' &c. (which selling not so well as John Booker's almanac did, he afterwards wrote 'Animadversions upon Booker,' &c.; *vid. inf.*) 7. 'The Pedigree of the Blounts, printed in Peacham's Complete Gentleman,' 1661. 8. 'Animadversions upon Booker's Telescopium Uranicum, or Ephemeris, 1665, which is very erroneous,' &c., London, 1665, in one sheet. 9. 'The several Statutes concerning Bankrupts, methodically digested, together with the Resolutions of our learned Judges on them,' 1670, 'intended for the generality of men and ordinary capacities,' says Blount in explanation. 10. 'A Law Dictionary interpreting such difficult and obscure Words and Terms as are found either in our Common or Statute, Ancient or Modern Lawes. With References to the several Statutes, Records, Registers, Law-Books, Charters, Ancient Deeds, and Manuscripts, wherein the Words are used; and Etymologies, where they properly occur,' 1670. This is the Νομολέξικον, republished in 1691, with some corrections and the addition of above six hundred words. Mr. Phillips incorporated a number of the articles in this book in a second edition of his own. In a letter to Wood, Blount says: 'I am much discouraged in my so much fancied scrutiny of words, since I am lately assured my last Dictionary [meaning the 'Law Dictionary'] is at the press surreptitiously being transcribed, mutilated, and disguised with some new title; and this by a beggarly half-witted scholar hired for the purpose by some of the law booksellers, to transcribe that in four or five months, which cost me twice as many years in compiling,' &c. It was this matter which occasioned the publication of the 'World of Errors,' &c. (*vid. inf.*) 11. 'Journey to Jerusalem in 1669.' 1672. 12. 'Animadversions upon Sir Richard Baker's Chronicle and its continuation, wherein many errors are discovered and some truths advanced,' Oxford, 1672. This book bears the motto from Cic. 'De Orat.:' 'Prima est historiæ lex ne quid falsi dicere audeat, deinde ne quid veri non audeat.' This was revised by Wood. It was called in and silenced by Dr. Mews, because it said that the word 'conventicle' was first taken up in the time of Wycliffe. 13. 'A World of Errors discovered in the Interpreter of hard Words written against Sir Edward Philips book entitled A New World of English Words,' &c., 1673. 14. 'Fragmenta Antiquitatis, Ancient Tenures of Land, and Jocular Customs of some Manors,' &c., 1679; new edition, enlarged, with explanatory notes, &c., by Jos. Beckwith, F.A.S., York, 1784; new edition, with considerable additions from authentic sources, by Hercules Malebysse Beckwith, 1815. 15. 'A Catalogue of the Catholics who lost their lives in the King's Cause during the Civil Wars,' printed at the end of Lord Castlemain's 'Catholick Apology.' 16. 'Boscobel, pt. ii., and Claustrum regale reseratum,' published by Mrs. Anne Windham, of Trent, 1681. Of 'Boscobel' the first part contains the history of the king's escape after the battle of Worcester up to the time of his leaving the White Ladies and Boscobel; the second, his concealment at Trent in Somersetshire, with his adventures in the west of England. The famous Worcestershire historian, Dr. Nash (*Worcestershire Supplement*, p. 90), strangely remarks of this book: 'Who was the author is not known; certainly not Mr. Blount. In a manuscript I have seen,' continues Dr. Nash, 'he denies that he was the author of "Boscobel," and says the first time he ever saw the book was at Lord Oxford's at Brampton Bryan. Blount's grandson says: "I dare say my grandfather, Counsellor Blount, was not the author of 'Boscobel,' for in a letter to my father I have seen the following sense expressed: 'The other day, being on a visit to Lord Oxford, I met with a tract called "Boscobel." My lord expressed great surprise on seeing me eager to peruse it, saying I was deemed the author. How the world comes to be so kind to give it me I know not; but whatever merit it may have, for I had not time to examine it, I do not choose to usurp it. I scorn to take the fame of another's productions. So if the same opinion prevails amongst my friends in your part of the world, I desire you will contradict it; for I do not so much as know the author of that piece.'" Notwithstanding this flat denial of Blount's, the piece seems, by general consent, to be undoubtedly his. The first edition of 1660, printed for Henry Seile, stationer to the king's most excellent majesty in London, contains a preface signed by Thomas Blount. In the majority of cases Blount seems not to have attached his name to his works. William Denton, the author of 'Horæ Subsecivæ,' a book written against the papists, and of 'The Burnt Child dreads the Fire,' justifying an act of parliament for preventing dangers which might happen from

popish recusants, speaks in his 'Jus Cæsaris et Ecclesiæ vere dictæ,' an odd and rambling work concerning presbytery, the power of kings, liturgies, and conventicles, of three persons, R. P., I. S., and P. W., as having written against his two former books. Whether either of these three was Blount, who certainly answered one of Denton's books in a little treatise of one sheet, it is now difficult to tell. Blount also left behind him an imperfect 'Chronicle of England,' which he and I. B. (which was all Wood knew of his collaborator, for Blount would never disclose his name) had for several years been compiling; but 'what became of it afterwards,' says Wood, 'I cannot tell.' He also wrote 'Animadversions upon Britannia, written by R. Blome,' but whether it was printed is uncertain. A 'History of Hereford,' two vols. small fol., was left in manuscript, in which the parishes were arranged alphabetically. Of these the second volume, beginning with letter L, was for some time in the possession of Dr. Blount of Hereford; but the other, having been lent to Sir Robert Cornewall, was lost. Mr. Speaker Cornewall examined his father's papers at the request of Dr. Nash, the Worcestershire historian, but could find nothing of Blount's. Nash quotes from a letter, which mentions the loan to Sir Robert Cornewall, the following extract: 'The other volume I (Blount's grandson) had, but my son took it with him to London, in hopes of meeting with the present baronet, and with an intent of revising the whole if he could get it. . . . After my son's death, whether my son Edward took care to preserve it I do not know.' There is probably little chance of ever recovering either volume of this historical manuscript. It has escaped the researches of Mr. Gough. 'Les Termes de la Ley,' by T. B. of the Inner Temple, 1685, is supposed by Loveday to be by Thomas Blount.

BLOUNT, Sir THOMAS POPE (1649–1697), politician and author, was descended from an old Staffordshire family, the Blounts of Blount Hall. He was the eldest son of Sir Henry Blount, and elder brother of Charles Blount, both noticed above, and was born at Upper Holloway 12 Sept. 1649. Having been carefully educated under the direction of his father, he early acquired a high reputation for the extent and variety of his learning and accomplishments. In his father's lifetime he succeeded to the estate of Tittenhanger upon the death of his mother in 1678, his father having given up the estate to her. On 27 Jan. 1679–80 he was created by Charles II a baronet. In the last three parliaments of Charles he served for the borough of St. Albans, and after the revolution he was made knight of the shire for Hertford. In the first year of King William he was chosen by the House of Commons commissioner of accounts, an office which he held during three successive years till his death at Tittenhanger 30 June 1697. He was buried in the vault of the family at Ridge, in Hertfordshire. By his wife, Jane, only daughter of Sir Henry Cæsar, Benington Place, Hertfordshire, whom he married at St. Olave's, Hart Street, London, 22 July 1669, he had five sons and nine daughters.

The most elaborate and important work of Blount is his 'Censura celebriorum Authorum, sive Tractatus in quo varia virorum doctorum de clarissimis cujusque seculi scriptoribus judicia traduntur,' 1690. A second edition, in which, for greater facility of reference, all the passages from the modern languages, English, French, or Italian, were translated into Latin, appeared at Geneva in 1694, and a third impression appeared at the same place in 1710. The translations were the work of the anonymous foreign editor. In the original preface to the work, Blount states that he had been led to compile it solely for his own private use, and that he had been induced to publish it at the urgent request of various learned men, a request which he had complied with, not to gratify his own ambition, for a life of quiet and retirement had always been his supreme delight, but solely that he might benefit letters. It is a bibliographical dictionary of a peculiar kind, and may be described as a record of the opinions of the greatest writers of all ages on one another. The independent research implied, in his time, in the compilation of such a work, comparatively minor though it is, was, of course, very great; but the plan necessarily left little room for the exercise of discrimination, except in the selection of writers to be treated of. The number of names is nearly six hundred, beginning at the earliest records of literature and science. There are many curious omissions. In later scientific names it is very defective, and the later English poets, such as Beaumont, Fletcher, Spenser, Ben Jonson, Shake-

speare, and Milton, are passed over, while several of their learned contemporaries, whose fame has now utterly vanished, find a place. In 1693 he published 'A Natural History, containing many not common observations extracted out of the best authors.' In the following year appeared 'De Re Poetica, or Remarks upon Poetry, with Characters and Censures of the most considerable Poets, whether Ancient or Modern, extracted out of the best and choicest critics.' The first part of the work treats on poetry in general, on the different varieties of poetry, and on English, French, Italian, and Spanish poetry, in connection with the characteristics of the several languages—the opinions of the 'choicest critics' being given on their subject almost without any comment of his own. The second part gives an account of sixty-seven poets of various ages and countries, including those mentioned above as omitted from the list of celebrated authors. His 'Essays on several Subjects,' which first appeared in 1692, and a third impression of which, with additions, was published in 1697, is the only work in which he has an opportunity of displaying his individuality as a writer. The essays in the first edition numbered seven in all. The first illustrates the proposition that interest governs the world, and that popery is nothing but an invention of priests to get money; the second is on the great mischief and prejudice of learning; the third treats of education and custom, lamenting that as children are apt to believe everything, when they grow up they are apt to settle in their first impressions; in the fourth, on the respect due to the ancients, the conclusion is arrived at that we ought not to enslave ourselves too much to their opinions; the fifth answers in the negative the question as to whether the men of the present age are inferior to those of former ages either in respect of virtue, learning, or long life; the sixth demonstrates that the passions are our best servants, but our worst masters; the seventh attributes the variety of opinions to the uncertainty of human knowledge; and the eighth, on religion—added to the third impression—asserts that the God which men imagine to themselves is a picture of their own complexions. The most prominent characteristic of the essays is their strong sceptical spirit, using these terms in the best sense, their freedom from conventionality, and the air of comfortable cynicism that pervades them, a cynicism recognising the enormous prevalence of stupidity and falseness of all kinds, but also possessing a cheerful conviction of the possibilities of amendment. It is worthy of note that, universal scholar as he was, no man despised mere learning more heartily. 'There is not,' he says, 'a simpler animal and a more superfluous member of the state than a mere scholar.'

[Biog. Brit. ed. Kippis, ii. 378-80; Wood's Athenæ, ed. Bliss, iv. 53, 55; Chauncy's History of Hertfordshire; Clutterbuck's History of Hertfordshire; Add. MSS. 5524 and 6672.]

T. F. H.

BLOUNT, Sir WALTER (*d.* 1403), soldier and supporter of John of Gaunt, duke of Lancaster, was almost certainly the son of Sir John Blount of Sodington, by his second wife, Eleanor Beauchamp, widow of Sir John Meriet. In 1367 he accompanied the Black Prince and John of Gaunt in their expedition to Spain to restore Don Pedro the Cruel to the throne of Leon and Castile. After the return of the expedition, which was successfully terminated by the battle of Navarette (1367), Blount married Donna Sancha de Ayála, the daughter of Don Diego Gomez, who held high office in Toledo, by his wife (of very high family), Donna Inez de Ayála. Donna Sancha appears to have first come to England in attendance on Constantia, the elder daughter of King Pedro, whom John of Gaunt married in 1372. In 1374 John Blount, Sir Walter's half-brother, who had succeeded his mother, Isolda Mountjoy, in the Mountjoy property, made over to Walter the Mountjoy estates in Derbyshire, and to them Walter added by purchase, in 1381, the great estates of the Bakepuiz family in Derbyshire, Leicestershire, and Hertfordshire. Permission was granted Blount in 1377 to proceed with Duke John of Gaunt to Castile in order to assert the duke's right by virtue of his marriage to the throne of Leon and Castile; but the expedition did not start till 1386, when Blount probably accompanied it. On 17 April 1393 he, with Henry Bowet [q. v.] and another, was appointed to negotiate a permanent peace with the king of Castile. In 1398 Duke John granted to Blount and his wife, with the king's approval, an annuity of 100 marks in consideration of their labours in his service. Blount was an executor of John of Gaunt, who died early in 1399, and received a small legacy. He represented Derbyshire in Henry IV's first parliament, which met on 6 Oct. 1399. At the battle of Shrewsbury (23 July 1403) he was the king's standard-bearer, and was killed by Archibald, fourth earl of Douglas, one of the bravest followers of Henry Percy (Hotspur). Blount was dressed in armour resembling that worn by Henry IV, and was mistaken by Douglas for the king (Walsingham,

Hist. Anglicana, ed. Riley, ii. 258; *Annales Henrici Quarti*, 367, 369). Shakespeare gives Blount, whom he calls Sir Walter Blunt, a prominent place in the first part of his 'Henry IV,' and represents both Hotspur and Henry IV as eulogising his military prowess and manly character. He was buried in the church St. Mary 'of Newark,' Leicester. His widow Donna Sancha lived till 1418. In 1406 she founded the hospital of St. Leonards, situate between Alkmonton and Hungry-Bentley, Derbyshire.

Sir Walter had two sons: 1. Sir JOHN, who was at one time governor of Calais; was in 1482 besieged in a castle of Aquitaine by a great French army, which he defeated with a small force (WALSINGHAM, *Ypodigma Neustriæ*, Rolls Ser., p. 437); was created knight of the Garter in 1413; and was present at the siege of Rouen in 1418: 2. Sir THOMAS, who was treasurer of Calais during Henry VI's wars in France (STEVENSON'S *Letters, &c.*, illustrating the wars in France temp. Henry VI, Rolls Ser., ii. passim), and founded a chantry at Newark in 1422 (at the expense of the Duke of Exeter) in memory of his father and mother. Sir John died without male issue. Sir Thomas was the father (by Margaret, daughter of Sir Thomas Gresley of Gresley, Derbyshire) of Sir Walter Blount, first Baron Mountjoy [q. v.]

[Sir Alexander Croke's Genealogical History of the Croke Family, surnamed Le Blount, ii. 170–97; Burke's Extinct Peerage; Courtenay's Shakespeare's Historical Plays; Hall's Chronicle, ed. Grafton, fol. 22; Rymer's Fœdera, vii. 183, 743.] S. L.

BLOUNT, WALTER, first BARON MONTJOY or MOUNTJOY (*d.* 1474), lord high treasurer of England, eldest son of Sir Thomas Blount and grandson of Sir Walter Blount [q. v.], became treasurer of Calais in 1460, apparently in immediate succession to his father; fought bravely with the Yorkists at the decisive battle of Towton (29 March 1461), and was rewarded first by knighthood and afterwards by promotion to the governorship of Calais. In October 1461 he was besieging with a very large force 'the Castell of Hampnes by side Cales,' which apparently held out for Henry VI. In 1465 he was nominated lord high treasurer of England, and was raised to the peerage as Baron Montjoy or Mountjoy, on 20 June of the same year. In 1467 he was given the Devonshire estates forfeited to the crown by the attainder of Thomas Courtenay, earl of Devonshire, in 1461. He was directed in 1468 to accompany the king in a projected expedition to aid the Duke of Brittany against Louis XI. In the following year Mountjoy accompanied Edward IV on his public entry into London after his release from the temporary confinement to which Warwick and Clarence had subjected him. He was created a knight of the Garter on 23 April 1472.

Lord Mountjoy died late in 1474, and was buried in the church of Grey Friars, London. His piety was as far-famed as his bravery. On 17 Sept. 1469 he and his wife were received into the fraternity of the chapter of the Holy Trinity priory at Canterbury. By his will, dated 8 July 1474, he largely increased the endowment of the hospital of St. Leonards, near Alkmonton, Derbyshire, originally founded by his grandmother, Donna Sancha de Ayála [see under BLOUNT, SIR WALTER, *d.* 1403], and established a chapel in the same village. He was twice married: (1) to Helena, daughter of Sir John Byron of Clayton, Lancashire, and (2), in 1467, to Ann, widow of Humphrey Stafford, duke of Buckingham, and daughter of Ralph Nevill, earl of Westmorland, by Joan Beaufort, only daughter of Catherine Swynford and John of Gaunt. By his second wife, who died in 1479, he had no issue. In 1470 Lord Mountjoy was appointed custodian of the estates of the dukedom of Buckingham during the minority of his stepson Henry Stafford, the heir. By his first marriage he had three sons. WILLIAM, the eldest, was killed while fighting with Edward IV at Barnet in 1471, and was buried with his father at Grey Friars. William's son Edward succeeded his grandfather as the second Baron Mountjoy in 1474, but died in the following year, and was buried in the Grey Friars' church in London. The second son, Sir JOHN, succeeded his nephew Edward as third Baron Mountjoy in 1475; was appointed captain of Guisnes and Hammes near Calais in 1477; was continued in the office by Richard III in 1483; died in 1485, bequeathing his body to the Grey Friars' church; and was succeeded in his title by his son William [q. v.] The third son, Sir JAMES, became lieutenant of Hammes in 1476; joined in offering the castle of Hammes to Henry, earl of Richmond, in 1484–5; was with Henry VII on his landing at Milford Haven in 1485; was knighted there; became a knight banneret in 1487; and died in 1493 (cf. POLYDORE VERGIL, Camd. Soc. 208, 212).

[Sir Alexander Croke's Genealogical History of the Croke Family, surnamed Le Blount, ii. 197–204; Dugdale's Baronage; Rymer's Fœdera, xi. 504, 578, 630, 656–7, 767; Stow's Survey, ed. Strype, bk. iii. 133; Paston Letters, ed. Gairdner, ii. 5, 52, 169, 389; Nichols's Leicestershire, iii. 7, iv. 523, 524.] S. L.

BLOUNT, WILLIAM, fourth LORD MOUNTJOY (*d.* 1534), patron of learning and statesman, born at Barton, in Staffordshire, was the son and heir of John, third lord Mountjoy, by Lora, his wife, and grandson of Sir Walter Blount, first Lord Mountjoy [q.v.] He succeeded to the title, while still a child, on his father's death in 1485. Polydore Vergil, who designates him 'regulus disertus ornatus,' states that he was created a privy councillor in 1486 (*Anglica Historia*, 1546, p. 567); but his youthful age, which is attested by a grant (dated 24 Jan. 1488) to Sir James Blount of the custody of all the late lord's lands, and of the wardship and marriage of William, the present lord, seems to conflict with the date (*Materials for the History of Henry VII*, Rolls Ser. ii. 230). About 1496 Blount was in Paris, studying under Erasmus, and a long intimacy between the two men was then first contracted. 'Whither would I not follow so humane, so kind, so amiable a young man?' wrote Erasmus of Blount about this time (ERASMUS, *Epist.* xiv), and in 1498 the scholar was brought by his pupil for the first time to England (Erasmus to Fisher, 5 Dec. 1498; SEEBOHM, *Oxf. Reformers*, 94). For some years Erasmus was domiciled in Lord Mountjoy's house, and throughout his sojourn in this country he depended largely on his patron's bounty. Mountjoy is stated to have paid Erasmus a yearly pension of 100 crowns, besides many other presents. Lord Mountjoy, on his return from Paris, is said by Erasmus to have regularly studied history with Prince Henry, afterwards Henry VIII, who was his junior by some years (ERASMUS, *Dedication of Livy to Charles, fifth Lord Mountjoy*). There are other indications that the prince and Mountjoy were intimate with one another from an early date.

But Blount did not confine himself to literary pursuits, although he never ceased to interest himself in them. In 1497 he held a command in the army sent to suppress the revolt in behalf of Perkin Warbeck. In 1499 he was formally granted all the dignities and estates enjoyed by his father. In May 1509 he wrote to Erasmus that the accession of Henry VIII was of good omen for learning in England. Towards the end of the year he was appointed lieutenant of the castle of Hammes, in Picardy, and of the marches of Calais. In 1511 Mountjoy was in England again, and in the following year became chamberlain to Queen Catherine. On 17 May 1513 he was directed to provide transports for the king's army, which was bound for France. In the same year he acted as lieutenant of Tournai, and on 20 Jan. 1513–14 he was appointed bailiff of the city in the place of Sir Edward Poynings. He held this post for three years. Fifteen letters sent by Mountjoy during that time to Henry VIII and Wolsey are preserved among the Cottonian MSS. at the British Museum (Calig. D 6. f. 299; Calig. E 2. f. 29065; V. Calig. E 4. f. 290), and they testify to his energetic rule. He set up and administered law-courts, and made the small and irregular advances sent him from home go as far as possible in strengthening the fortifications. His friend Erasmus paid him a visit at Tournai, and Mountjoy tried in vain to induce Wolsey to give the scholar a prebend in the church there. Later Mountjoy sent Erasmus a manuscript of Suetonius from St. Martin's monastery at Tournai for his edition of that author. In one letter to Wolsey (8 Dec. 1515) Mountjoy wrote that a commissary had come from the pope with indulgences for sale in aid of the rebuilding of St. Peter's, and that he had refused to permit the publication of the brief, but had allowed the commissary to receive alms in a box with two keys, one of which was kept by Mountjoy. He was recalled early in 1517—in accordance with his own wish—and acted as chamberlain to Queen Catherine in the succeeding years. With his wife he attended Henry VIII at the field of the cloth of gold in 1520, and he was present at Henry's meeting with Charles V near Dover in 1522. In 1523 he was despatched to France, at the head of an army of 6,000 men, with Charles Brandon, duke of Suffolk, but Suffolk's mismanagement of the expedition led to Mountjoy's recall. Soon afterwards he was made master of the mint. In July 1533 Mountjoy, who retained the office of the queen's chamberlain throughout the troubles of the time, was directed to acquaint Queen Catherine at Ampthill with the king's resolve to complete the divorce between them. The interview has been vividly described by Mr. Froude. In October 1533 Mountjoy begged Cromwell to relieve him of the duty of attending as chamberlain upon the divorced queen.

Mountjoy signed the articles drawn up against Wolsey in 1530, and the declaration of parliament addressed to Clement VII in 1533, stating that, if the pope refused the divorce between the king and Catherine, the former would renounce the papal supremacy. Mountjoy died 8 Nov. 1534, and was buried near his father in Grey Friars' church in the city of London (STOW'S *Survey*, ed. Strype, bk. iii. p. 133). His will is dated 13 Oct. 1534. He was a knight of the Garter, and on 26 Jan. 1534-5 King James V of Scotland succeeded to his place in the order.

Erasmus lamented his patron's death in the

dedication to his 'Ecclesiastes,' addressed to the Bishop of Augsburg (1535), and in the dedication of the 1536 edition of his 'Adagia,' addressed to Charles, fifth Lord Mountjoy. Three letters in very readable Latin from Mountjoy to Erasmus, and thirteen from Erasmus to Mountjoy, appear in the collections of Erasmus's letters. The first edition of Erasmus's 'Adagia,' published in 1508, is addressed to Mountjoy, and Erasmus states that he wrote that work and 'De scribendis epistolis' at Mountjoy's suggestion. About 1523 Mountjoy requested Erasmus to draw up a dialogue on the subject of the religious differences of the day, with a view to aiding in their settlement. Leland was another friend of Mountjoy, and wrote verse in his praise (*Collectanea*, v. 122). Among the many scholars whom Mountjoy also befriended were Richard Whytforde, Battus, the friend of Erasmus, and Richard Sampson, afterwards bishop of Chichester. Mountjoy was likewise intimate with Sir Thomas More, Grocyn, and Colet, and Ascham many years afterwards referred to his house as *domicilium Musarum*. Fuller, in dedicating the second book of his 'Church History' (1655) to Lord Dorchester, refers to Mountjoy as 'a great patron to Erasmus, and well skilled in chymistry and mathematics,' and one of the chief revivers of learning in England (Fuller, *Hist.*, ed. Brewer, i. 126).

Mountjoy was thrice married: 1, (probably before 1500) to Elizabeth, daughter of Sir William Say; 2, (before 1517) to Alice, daughter of Sir Henry Kebel, lord mayor of London in 1510–11, and widow of William Browne, lord mayor of London in 1507–8; (she died in 1521, and was buried in the Grey Friars' church, London); and 3, to Dorothy, daughter of Thomas Grey, marquis of Dorset, and widow of Robert Willoughby, Baron Broke; she died before 1524. Erasmus, writing to his friend Botzen in 1524, tells us that when Lord Mountjoy was studying with him at Paris he wrote for his pupil's amusement two declamations, the one in praise and the other in contempt of matrimony, and that Mountjoy passionately declared for the former. Erasmus adds that at the time of writing (1524) Mountjoy had become a widower for the third time, and was likely to take a fourth wife. By his first wife he had two daughters, Gertrude and Mary. Gertrude married Henry Courtenay, marquis of Exeter, and was herself attainted when her husband was executed in 1539; she was afterwards pardoned, and dying in 1558, a monument was erected to her memory in Wimborne Minster. Mary, the second daughter, married Henry Bourchier, earl of Essex. By his second wife, Mountjoy had a son Charles [q. v.], and a daughter Catherine, who married (1) John Champernown, and (2) Sir Maurice Berkeley of Bruton. By his third wife he had a son John, who died without issue, and two daughters, Dorothy and Mary.

[Sir Alexander Croke's Genealogical Account of the Croke Family, surnamed Le Blount, ii. 204–222; Erasmi Epistolæ, ed. Le Clerc; Dugdale's Baronage, 520–1; Rymer's Fœdera; Froude's History, i. 470; Brewer's Letters and Papers of Henry VIII, 1509–35; Nichols's Leicestershire, iii. 7, iv. 521; Cooper's Athenæ Cantab. i. 50, 529; Seebohm's Oxford Reformers, passim.] S. L.

BLOW, JAMES (*d.* 1759), printer, a native of Scotland, was apprenticed to Patrick Neill [q. v.], a printer of Glasgow, and when Neill set up the first regular printing establishment in Belfast (before 1694), Blow came with him as an assistant. Blow was Neill's brother-in-law, but in which way is not known. In Neill's will (dated 21 Dec. 1704) he says: 'I recommend my son John' [he left also a younger son, James, and a daughter] 'to the care of my brother Blow, to teach him the trade I taught him, and if he keep the printing-house in Belfast, to instruct him in that calling.' According to Blow's son Daniel (who died near Dundonald, co. Down, in 1810, aged 91) the printing of bibles was begun in Belfast by Blow 'about 1704.' There is a copy of the bible which shows the imprint, 'printed by and for James Blow and for George Grierson, printer to the king's most excellent majesty, at the King's Arms and Two Bibles in Essex Street, Dublin, MDCCII.,' 8vo. But one of the figures of the date has been mutilated, and the true date is MDCCLI. The bibles of 1751 are Blow's work throughout, but some others purporting to be Blow's bibles are made-up copies, only the title and first sheet being Belfast work, and the remainder Scotch. The patent to print bibles was first given to the Grierson family in 1726 by Lord Carteret, appointed lord-lieutenant on 22 Aug. 1724. George Grierson (who died in 1753, aged 74) married, as his second wife, a daughter of Blow and widow of Francis Cromie, merchant, of Belfast (died December 1731). Bohn, borrowing a note by John Hodgson, in the 'Ulster Journal of Archæology,' vol. iii., 1855, pp. 76–7, mentions in his edition of 'Lowndes,' 1864, i. 189, 'The Bible, Belfast, James Blood [i.e. Blow], 1716, 8vo. First edition of the Scriptures printed in Ireland.' Bohn adds: 'An error occurs in a verse in Isaiah. "Sin no more" is printed "Sin on more." The error was not discovered until the entire impression (8,000 copies) were bound and partly distributed.' Bohn's date is, to

say the least, ten years too early; the reference to Isaiah is a manifest error. The earliest book mentioned by Benn as bearing Blow's imprint is the 'Works of Sir David Lindsay,' 1714, 12mo. But he printed for the presbyterians, and it is probable that some of their publications, without name of place or printer, are by him. James Kirkpatrick's 'Historical Essay upon the Loyalty of Presbyterians,' 1713, 4to, the most important of these, is assigned by Benn to Blow; but this is not borne out by the character of the type. In the ecclesiastical contest (1720–7) between the subscribers and non-subscribers to the Westminster Confession, Blow printed for the non-subscribing section. One of the most interesting productions of Blow's press is 'The Church Catechism in Irish, with the English placed over against it in the same Karakter,' 1722. Blow died in 1759. His last known publication was Henry Grove's 'Discourse concerning the Nature and Design of the Lord's Supper,' 4th edition, 1759 (advertised in the 'Belfast Newsletter,' 2 Feb.) Blow lost two young children in 1717. His son Daniel succeeded him as a printer, and his grandsons founded the paper-making firm of Blow, Ward, & Greenfield. The original wooden press employed by the Blows was in use at Youghal as late as 1824.

[Benn's History of Belfast (1877), 424 seq.; Belfast Funeral Register (presbyterian); collections of Belfast publications in Linenhall Library, Belfast; others in private hands; private information.] A. G.

BLOW, JOHN (1648–1708), musical composer, is said by all his biographers to have been born at North Collingham, in Nottinghamshire, in 1648, but the registers of that parish contain no entries relating to him or to any of his family, and Anthony à Wood, in a manuscript account of his life, preserved in the Bodleian Library (Wood 19 D (4) No. 106), has the following note: 'Dr. Rogers tells me that John Blow was borne in London.' He is said to have received his first instruction in music from John Hingeston and Christopher Gibbons, but as the latter was organist of Winchester Cathedral from 1638 to 1661 he can hardly have been Blow's master at this period. With regard to Hingeston the statement is more likely to be accurate, as that musician was organist to Cromwell, and also held office after the Restoration. Blow was one of the first set of the children of the Chapel Royal on its re-establishment in 1660 under Captain Henry Cooke. He must have begun composition at an early age, for Clifford's 'Divine Services and Anthems usually sung in His Majestie's Chappell' (1663) contains the words of three anthems, 'I will magnifie,' 'Lord, Thou hast been our refuge,' and 'Lord, rebuke me not,' which were set by him when he was still at the Chapel Royal. Another composition of this date which is still extant is the so-called 'Club Anthem,' 'I will always give thanks,' a work with orchestral accompaniments, the first part of which was written by Pelham Humphreys, the last by Blow, and the intermediate bass solo by William Turner. This is generally said (on the authority of Dr. Tudway) to have been composed to celebrate a naval victory over the Dutch in 1665, but as Humphreys left the choir in 1664 it is more probable that Boyce is right in attributing its origin to the friendship which existed among the three choristers. When he was still at the Chapel Royal, Blow composed his celebrated duet to Herrick's words, 'Goe, perjur'd man,' which was written in imitation of Carissimi's 'Dite o cieli,' Charles II having asked him whether he could copy that work. On his voice breaking, Blow still continued to study with assiduity. On 21 Aug. 1667 Pepys made the following entry in his diary, which probably refers to him: 'This morning come two of Captain Cooke's boys, whose voices are broke, and are gone from the chapel, but have extraordinary skill; and they and my boy, with his broken voice, did sing three parts; their names were Blaew and Loggings; but notwithstanding their skill, yet to hear them sing with their broken voices, which they could not command to keep in tune, would make a man mad—so bad it was.' Two years later, at the early age of twenty-one, he succeeded Albertus Bryan as organist of Westminster Abbey, and on 16 March 1673–4 he was sworn in as a gentleman of the Chapel Royal in place of Roger Hill, deceased. On 21 July 1674 he became master of the children of the same establishment, in which post he succeeded his old companion, Pelham Humphreys. In the same year (4 Sept.) he was married at St. Paul's, Covent Garden, to Elizabeth, only daughter of Edward Braddock, one of the gentlemen of the Chapel Royal, and a member of the abbey choir. In October 1676 Blow was appointed organist of the Chapel Royal, and shortly after he is said to have received the Lambeth degree of Mus. Doc. from Archbishop Sancroft. It has been stated by all his biographers, from Anthony à Wood downwards, that Blow's musical degree was obtained in this manner, but the music school at Oxford formerly contained a manuscript act song, composed in 1678 and performed in 1679, which seems to show that the degree

was obtained at Oxford. Unfortunately the manuscript has been lost, and as there is no entry of his name on the graduates' list (from which the names of musical graduates were formerly often omitted), the evidence on this point must at present remain unsettled. In 1680 Blow resigned his appointment as organist at Westminster Abbey to his great pupil, Henry Purcell. It was probably a few years later that he wrote his only composition for the stage, the little masque of 'Venus and Adonis,' in three acts and a prologue. This charming work, which has never been printed, was composed for Mary Davis, the mistress of Charles II, who sang the part of Venus on its production before the king, that of Cupid being taken by her daughter, Lady Mary Tudor. The original manuscript is preserved in the Chapter Library at Westminster, and copies are in the British Museum (*Add. MSS.* 22100) and the Christ Church collection, Oxford. For New Year's day, 1681, he composed an ode beginning 'Great Sir, ye joy of all our hearts,' one of several similar compositions called forth by his connection with the court. In 1685 Blow was appointed a member of the royal band, and composer in ordinary to James II, at whose coronation in Westminster Abbey he sang among the basses of the choir. From 1687 to 1693 he was almoner and master of the choristers at St. Paul's Cathedral, in which appointments he succeeded Michael Wise; but in 1693 he resigned them in favour of his pupil, Jeremiah Clarke. Towards the close of James II's reign Blow is said to have written his celebrated anthem, 'I beheld and lo!' in connection with which the following anecdote is related on the authority of his pupil, Samuel Weeley, a vicar choral of St. Paul's. An anthem by an Italian composer having been performed at the Chapel Royal, James II was so pleased with it, that he asked Blow whether he could produce anything so good. The following Sunday Blow's 'I beheld and lo!' was sung, and at the close of the service Father Petre was sent by the king to express his approval of it to the composer. Father Petre, however, added as his own opinion that the anthem was too long, to which Blow replied, 'That is the opinion of one fool—I heed it not.' This retort so incensed the priest, that he persuaded James to remove Blow from his office; but before this could be accomplished the revolution of 1688 took place, and Blow retained his appointments until his death. About 1697 he was living at an estate he had bought at Hampton, where he wrote (15 Oct. 1697) an anthem, 'I was glad when they said unto me,' for the opening of St. Paul's Cathedral. In the same year he wrote an anthem, 'Praise the Lord, O my Soul,' to celebrate the peace of Ryswick. In 1699 a new establishment was founded in the Chapel Royal, and Blow was admitted into it as composer at a salary of 40*l.* per annum, which sum was afterwards raised to 73*l.* In the following year he published his 'Amphion Anglicus,' the full title of which is as follows: 'Amphion Anglicus. A Work of many compositions for One, Two, Three, and Four Voices: with several *accompaniments* of Instrumental Musick; and a Thorow-Bass to each Song: Figur'd for an Organ, Harpsichord, or Theorboe-Lute. By Dr. John Blow. London: Printed by William Pearson, for the Author; and are to be Sold at his House in the Broad-Sanctuary, over against Westminster-Abby, and by Henry Playford, at his Shop in the Temple-Change, Fleet-Street, 1700.' In the dedication addressed to the Princess Anne he expresses his intention of publishing his church compositions—'To those, in truth, I have ever more especially consecrated the Thoughts of my whole Life. All the rest I consider but as the Blossoms, or rather the Leaves; those I only esteem as the Fruits of all my Labours in this kind. With them I began my first Youthful Raptures in this Art. With them I hope calmly and comfortably to finish my days.' In accordance with the custom of the day, the collection is introduced by a number of laudatory verses. These are by William Pittis, Tom d'Urfey, Henry Hall, Jeremiah Clarke, an anonymous writer who dates from Whitehall, William Crofts, J. Phillips, 'H. P.,' John Barrett, William Luddington, Richard Brown, Ed. Langbridge, S. Akeroyd, William Pearson, and 'Mr. Herbert.' Many of these men were Blow's own pupils, and their effusions breathe a more genuine spirit than is usual in such productions, and show in what high esteem the amiable composer was held. Blow died at Westminster on 1 Oct. 1708, and was buried on the 7th of the same month in the north aisle of the abbey. His will, dated 3 Jan. 1707, when 'he was sick in body but of sound and perfect mind and memory,' shows him to have been possessed of considerable property. To his daughter Katharine he left two leasehold houses in Great Sanctuary; to his daughter Elizabeth a leasehold house in Great Sanctuary, and two leasehold houses in Orchard Street; and to his daughter Mary three houses in Turk Lane. His copyhold estate at Hampton was directed to be sold for the benefit of his daughters, and he also left to Elizabeth Luddington, his 'true and faithful servant,' sums of 100*l.*, and 10*l.* for mourning, besides 'my rings which I weare—all my wearing cloaths,

morning Gowns, and Linnen;' to his sister Cage 50*l.*, and 10*l.* for mourning; and to his niece, Elizabeth Blow, 50*l.*, 'to be disposed of as my said daughters shall think fit for her use,' and 6*l.* for mourning. Blow's wife died in childbed on 29 Oct. 1683, aged 30. By her he had five children: (1) Henry (buried in Westminster Abbey 1 Sept. 1676); (2) John, died 2 June 1693, aged 15 (said to have been a child of great talent); (3) Elizabeth, married 30 April 1719 to Captain William Edgeworth, and died 2 Sept. 1719; (4) Katharine, died unmarried 19 May 1730; (5) Mary, died unmarried 19 Nov. 1738. Blow's portrait was painted by Sir Peter Lely, and is now in the possession of the Rev. Sir F. Gore Ouseley. There is a fine engraving of him drawn from the life by R. White prefixed to the 'Amphion Anglicus;' other engravings are a small oval published by J. Hinton, and another (with Boyce, Arne, Purcell, and Croft) drawn by R. Smirke, published in September 1801. Although he was a voluminous composer, very little of his music has been published separately. An elegy on Queen Mary, 'The Queen's Epicedium,' was printed, with two odes by Purcell, in 1695, an ode on St. Cecilia's day in 1684, an ode on the death of Purcell in 1696 (words by Dryden), a collection of lessons for the harpsichord in 1698, other similar collections (with several by Purcell) in 1700 and 1705, and 'The Psalms set full for the Organ or Harpsichord' (no date). Three services and ten anthems are printed by Boyce, and many of his smaller compositions are to be found in the contemporary publications of Playford and others. Blow wrote many birthday, New Year, and St. Cecilia odes, upwards of one hundred anthems, and fourteen services, most of which are still extant in the collections of the British Museum, Christ Church, Oxford, Music School, Royal College of Music, and Fitzwilliam Museum, Cambridge. His compositions have for long been most undeservedly neglected. During his lifetime he was overshadowed by Purcell, and in later years the attack which Burney made upon his music deterred musicians from investigating its merits for themselves. Those who have done so are unanimous in thinking that Burney's strictures reflect more discredit upon his critical acumen than upon Blow's music, which was in many respects far in advance of the age in which he wrote, and displays an extraordinary degree of power and individuality. By his contemporaries he was chiefly admired for his organ-playing, in which he 'was reckon'd the greatest Master in the World, for playing most gravely and seriously in his Voluntaries; and also for his mastery of Canon.' The celebrated 'Gloria' from his 'Jubilate in C major,' which is engraved upon his tombstone at Westminster, is said to have been sung at St. Peter's at Rome, where it was introduced by Cardinal Howard, to whom it was given by the sub-dean of the Chapel Royal, Dr. Ralph Battell, and Purcell in his additions to the twelfth edition of Playford's 'Introduction to the Skill of Music' (1694) quotes this composition with the remark that Blow's 'character is sufficiently known by his Works, of which this very Instance is enough to recommend him as one of the Greatest Masters in the World.'

BLOWER, SAMUEL (*d.* 1701), nonconformist divine, of Magdalen College, Oxford, was ejected in 1662 from Woodstock in Oxfordshire. He had been previously cast out of his fellowship at Magdalen for very slight nonconformity. In 1662-3 he settled in Northampton, and was the first pastor or founder of the meeting-house on Castle Hill there. According to a local history of the congregation, 'Mr. Blower's ministry must have been fruitful. The church covenant was signed by 164 names. For many years he had laboured in adverse circumstances, kept the people together, and prepared the way for his successors.' Of the adverse circumstances there is still a survival in a huge wall and window shutters of extraordinary thickness, prepared specially 'to protect the place from violent attacks.' Blower resigned the charge in his old age in 1694. He retired to Abingdon in Berkshire, which is supposed to have been his birthplace, and died there in 1701. His only published writing was a funeral sermon for Mrs. Elizabeth Tub on Psalm xviii. 46.

BLOXAM, ANDREW (1801–1878), naturalist, was born at Rugby 22 Sept. 1801, and was fourth son of Rev. R. R. Bloxam, one of the masters of Rugby School, which school he entered in 1809, leaving it in 1820 for Worcester College, Oxford, of which he afterwards became a fellow. In the autumn of 1824 he accepted the situation of naturalist on board the Blonde frigate, Captain Lord Byron, his eldest brother being the chaplain. The vessel conveyed the bodies of the King and Queen of the Sandwich Islands, who had died in this country, to their native land, the voyage lasting eighteen months. A large collection of natural history specimens were made, and these were deposited in the British Museum on his return in 1826.

He took holy orders a few months later, and settled in Leicestershire at Twycross, afterwards removing to Harborough Magna, where he died 2 Feb. 1878. His labours were not confined to any one department; he wrote on conchology, ornithology, flowerless and flowering plants, and he possessed a critical knowledge of British 'Rubi' and 'Rosæ,' of which he published dried sets. In conjunction with Mr. Churchill Babington he wrote an account of the botany of Charnwood Forest for Potter's history of that district. He may be regarded as perhaps the last of the all-round British naturalists.

Bloxam married Ann, daughter of Rev. J. Roby, of Congerstone, and by her had a numerous family. A water-colour drawing by Turner, in the National Gallery, represents the six brothers Bloxam attending the funeral of their uncle, Sir T. Lawrence, R.A.

BLOXHAM, JOHN (*d.* 1334?), a Carmelite, was educated at Oxford. He entered the Carmelite community at Chester, and finally rose to be provincial of the order in England. He was in high favour with Edward II and Edward III, by both of whom he was employed in important missions in Scotland and Ireland. He was energetic in promoting the interests of his order and in reforming abuses, which he found during his tours of inspection, both in Scotland and Ireland, as well as in England. He died at Oxford about the year 1334, and was buried there.

The following are the titles of works ascribed to Bloxham, none of which have been printed: 'Annotationes in Apocalypsim;' 'Hibernensium Ordinationes;' 'Comment. in Sententias;' 'De Septem Signaculis;' 186 letters. Bloxham is said to have been a zealous advocate of the papal authority, and to have taught it as an essential article of faith.

[Leland's Comm. de Scriptoribus Britannicis, ii. 403; Bale's Scriptores Illustres Majoris Brytanniæ, i. 398; Villiers de St. Etienne, Bibliotheca Carmelitana.]
A. M.

BLOXHAM, JOHN (*d.* 1387), warden of Merton College, Oxford, was a bachelor of theology of Oxford. He was elected seventh warden of Merton in 1375, and was also archdeacon of Winchester from 1382 till death. It is said that he was frequently employed by Edward III on business in Scotland and Ireland, and wrote 'Diversorum titulorum opuscula,' and 'Elegantes epistolæ.' He died in 1387, and was buried in the choir of his college chapel.

[Wood's Hist. and Antiquities of Oxford, i. 6. 23 (ed. Gutch); Leland, De Scriptoribus; Tanner's Bibl. Brit.]

BLUND or BLUNT, JOHN LE (*d.* 1248), chancellor of York, was one of the leaders of the movement for the restoration of the university of Oxford to its ancient position as a seat of learning, in which the Franciscan friars, Edmund Rich, Adam de Marisco, and Robert Grosseteste, took a chief part. Having received his earlier education at Oxford, Blund, like Edmund Rich, transferred himself to the university of Paris. He was studying here in 1229 when the violent reprisals taken on the students by the order of the queen, for a brawl in which some tavern-keepers had been roughly handled, caused the dispersion of the whole body, scholars and teachers (Matt. Paris, iii. 168, ed. Luard). Blund, with other 'famosi Angli,' returned to his native country, where he resumed his residence at Oxford as a teacher, and rendered important assistance to Edmund Rich in his introduction of the Aristotelian philosophy. His celebrity as a theologian marked out Blund for preferment in the church. He was already canon of Chichester and chancellor of York (Gervas. Cantuar. *Gesta Regum*, ii. 129; Le Neve (ed. Hardy), iii. 163), when the sudden death of Archbishop Richard Grant (1 Aug. 1231) left the primatial throne vacant. The election first of Ralph Neville, bishop of Chichester, and then of John, the prior of Canterbury, had been successively annulled by the pope. The powerful Peter des Roches, bishop of Winchester, was Blund's patron. His influence with the monks of Canterbury secured

the election of his nominee, to whom, on his departure for Rome, he gave one thousand marks as a present, and a second thousand as a loan, by the judicious use of which he might win the favour of the papal curia. He was elected 26 Aug. 1232. The royal assent was given without delay, and he started on his journey to Rome, accompanied by a number of the monks by whom he had been elected. Blund carried with him an assurance from the university of which he was a distinguished ornament—'studens ac legens theologiam'—that his appointment would be popular. One of the body, Michael of Cornwall, addressed a copy of verses to the pope, in which he called on the whole of the university and men of every rank from the king to the commonalty to bear witness to the honesty of Blund's life, and the futility of any charges that might be brought against him (Mich. Cornub. *Poemata*; Hook, *Lives of the Archbishops*, iii. 157). All, however, was in vain. The well-deserved unpopularity of Des Roches in his adopted country rendered it impolitic for the pope to accept his nominee as archbishop. A colourable pretext for his rejection was suggested by his enemy, Simon Langton, archdeacon of Canterbury, brother of Archbishop Stephen Langton—that the archbishop elect by his own confession held two benefices with cure of souls, without a papal dispensation. This was in direct violation of the canons. Des Roches had written to the emperor, Frederick II., urging him to interpose in Blund's behalf. But the relations of pope and emperor were not such as to render such mediation hopeful. The choice of the electors was for a third time in succession quashed, and Blund returned home (1233) to end his days a simple presbyter (Matt. Paris, iii. 223; Rog. Wendover, *Flores Histor.* iv. 248, 267). A pleasing letter of Grosseteste's, after he had become bishop of Lincoln, excusing himself for not admitting to a benefice one of Blund's relatives, on the ground of his almost total illiteracy, bears witness to their long-standing friendship (Grosseteste, *Epistolæ*, ed. Luard, p. 68, ep. 19). Blund died chancellor of York, the same year as his old opponent, Simon Langton, 1248.

[Matt. Paris (ed. Luard), iii. 168, 223, 243, v. 41; Rog. Wendover (Eng. Hist. Soc.), iv. 248, 267; Gervas. Cantuar. Gesta Regum, ii. 129; Annal. Monast. Osn. iv. 73; Dunstap. iii. 132; Grosseteste, Epist. (ed. Luard), p. 68.] E. V.

BLUNDELL, HENRY (1724-1810), art collector, was born at Ince-Blundell in Lancashire, where his family, who were Roman catholics, had been resident for many centuries. His father was Robert Blundell, and his mother was Catharine, daughter of Sir Rowland Stanley of Hooton, and the family thus became connected with the Welds of Lulworth, in whom the estate is now vested. In 1752 his father married as his second wife Margaret Anderton, and in 1761, resigning the estates to his son, retired on an annual allowance to Liverpool, where he died in 1773. In 1760 Blundell married Elizabeth, daughter of Sir George Mostyn, and settled at the ancestral mansion, Ince-Blundell Hall. His wife died in 1767 at the age of thirty-three, having borne him a son and daughters. The year of his marriage was that of the death of Sir Francis Anderton, and, after some compromise had been effected, his fortune was increased by the accession of the Lostock estates. The Roman catholic gentry were excluded by the penal laws from public life, and Blundell, probably influenced by the example of his friend and neighbour Towneley, turned his attention to classical art and archæology. His first purchase was the statuette of a seated philosopher, obtained from Jenkins in 1777. Visconti, to whom he was personally known, bears testimony to his fine taste. Michaelis says that 'a vigorous weeding-out could only have heightened the value of the collection, and the praise expended by Visconti on the collector is misleading.' His chief agent was a jesuit, Father John Thorpe, and his chief purveyor the well-known Thomas Jenkins.

Blundell's name appears on the title-pages of two books relating to his collection: 1. 'An Account of the Statues, Busts, Bass-relieves, Cinerary Urns, and other Ancient Marbles and Paintings at Ince.' Collected by H. B. Liverpool, printed by J. McCreery, 1803. This work is now very rare. It was printed for presentation only. Lowndes is mistaken when he describes it as containing a frontispiece and six plates. He may have seen a copy with engravings inserted, but the volume was not issued with them. 2. 'Engravings and Etchings of Sepulchral Monuments, Cinerary Urns, Gems, Bronzes, Prints, Greek Inscriptions, Fragments, &c., in the Collection of Henry Blundell, Esq., at Ince,' 1809, 2 vols. in folio, containing 158 plates and three frontispieces. Of this work only fifty copies were printed for presentation to Blundell's friends. The work was begun by the advice and assistance of his friend Towneley, whose help is not believed to have been very great.

Blundell purchased many works of art which came into the market through the revolutionary wars. He bought a relief—still at Ince—which he had himself formerly presented to the pope. Dr. S. H. Spiker has

left an interesting account of a visit he paid to Ince in 1816 in company with Richard Heber the book-collector. There is a full catalogue in the works of Michaelis, who examined the collection in 1873 and 1877. A later account, understood to be by Mr. F. G. Stephens, appeared in the 'Athenæum' in 1883. This writer notices also the paintings, some of great interest, and other objects of art at Ince-Blundell.

Blundell was anxious for the perpetuation of his family, and quarrelled with his son for resolving not to marry. In consequence of their estrangement, the father settled the Lostock estates upon his daughters—Katharine, wife of Thomas Stonor of Stonor, and Elizabeth, wife of Stephen Tempest of Broughton. Blundell died at Ince-Blundell on 28 March 1810. His funeral in Sefton Church was followed by a procession half a mile in length. A tablet to his memory was the work of the then unknown John Gibson. The epitaph is attributed to William Roscoe. Blundell's death was followed by a litigation amongst his children, but the will was sustained, and the Lostock property, which in 1802 had a rent-roll of 4,753*l.* 0*s.* 4½*d.*, went to the daughters, and the Ince-Blundell estate, which at the same time had an income of 3,263*l.* 9*s.* 1*d.*, passed to Charles Robert Blundell, who died 12 Oct. 1837. He had met his father's proposals by a threat of alienating the family estates; and he now left them to a maternal relative, the second son of Edward Weld, of Lulworth, in preference to his sisters' children. After much litigation from 1840 to 1847 his will was upheld.

(1810), pp. 289, 385; Baines's History of Lancashire, iv. 213; Foster's Lancashire Pedigrees, 1873; Gibson's Lydiate Hall and its Associations, 1876; Gregson's Fragments relating to Lancashire, 1824, p. 224, new ed. 1869, p. 221; Catalogue of the Towneley Library, pp. 10, 16; Athenæum, Nos. 2917, 2918, 2919, 22 and 29 Sept. and 6 Oct. 1883; Nichols's Illustrations, iii. 739 (a communication from James Dallaway which is repeated in his work of Statuary and Sculpture among the Ancients, London, 1816, p. 352; Spiker's Reise durch England im Jahr 1816, Leipzig, 1818, i. 396 (Engl. transl., London, 1820, i. 313); Waagen's Art Treasures of the United Kingdom, iii. 242; (Michaelis gives other references to notices of the marbles); Roscoe's Life of William Roscoe, London, 1833, p. 63; Waagen's Art Treasures of Great Britain, 1854; Early Exhibitions of Art in Liverpool, 1876, p. 35; Britton's Beauties of England and Wales, ix. 309.] W. E. A. A.

BLUNDELL, JAMES (1790–1877), physician, was born in London on 27 Dec. 1790. He was educated by the Rev. T. Thomason, and studied at the United Borough Hospitals under his uncle Dr. Haighton, a well-known physiologist. He graduated as M.D. at Edinburgh on 24 June 1813. In 1814 he began to lecture at London, in conjunction with his uncle, on midwifery, and soon afterwards began a course on physiology. He succeeded Haighton as lecturer at Guy's Hospital, and for many years had the largest class on midwifery in London. He ceased to lecture in 1836. He made a large fortune, leaving 350,000*l.* He was admitted a licentiate of the College of Physicians in 1818 and fellow on 6 Aug. 1838. He was author of 'Researches, Physiological and Pathological, instituted principally with a View to the Improvement of Medical and Surgical Practice' (1825). Dr. Munk says that this work shows great original research and prepared the way for many improvements in abdominal surgery. He also published 'Principles and Practice of Obstetricy, with Notes' (1834), and 'Observations on some of the more important Diseases of Women' (1837). Both of these were edited by Dr. Castle.

[Munk's Roll, i. vii, iii. 180.]

BLUNDELL, PETER (1520–1601), merchant and benefactor, was born at Tiverton in 1520. At first he was but a poor lad, who made his living by running on the errands and watching the horses of the carriers in the kersey-trade who visited that town. But even in this poor calling he managed to save enough money to buy a single kersey, which was carried to London by one of his friends without any charge, and sold for Blundell's profit. From this small beginning he progressed so rapidly in buying and selling kerseys, as well as in acting for other merchants in the same trade, that he was enabled to establish a manufactory for himself. By this means he gradually accumulated a vast estate, and was able, besides leaving substantial legacies to his nephews, to spend nearly 40,000*l.* in various benefactions. By his will, dated 9 June 1599, he directed that his body should be buried in the church of St. Michael Paternoster, afterwards known as St. Michael Royal, London. He died a bachelor 18 April 1601, and was buried 4 May. It may be noted that one of his nephews, Robert Chilcot, followed his example, both in trade and in charitable disposition.

Blundell's benefactions were not confined to any particular place or class. He left large sums to the London hospitals and to the city companies, to various institutions at Tiverton

and to the city of Exeter, the last benefaction being designed for the encouragement of the city's mechanics. But his chief public work consisted of the establishment and endowment under his will of the school known as Blundell's School, which was erected in 1604 at the east end of the town of Tiverton. Within this building have been educated a large number of the youth of the west of England, including Bishops Bull, Hayter, and Conybeare, Mr. Abraham Hayward, the essayist, and Mr. R. D. Blackmore, the novelist. John Ridd, the hero of Mr. Blackmore's novel of 'Lorna Doone,' was educated there, and two views of the school-buildings will be found in the illustrated edition of that work. Particulars of the feoffees, masters, and principal scholars may be obtained from the works of Incledon, Dunsford, and Harding. Minutes of the proceedings of the feoffees from 1665 to 1774 are in the possession of Lieutenant-colonel Carew, of Crowcombe Court, Somerset. When an annual school-feast was set on foot about 1750, a ticket was engraved by Hogarth.

[Incledon's Donations of P. Blundell, 1792 and 1804; Dunsford's Tiverton, 114–18, 180–9, 203, 265, 342–55; Harding's Tiverton, books i., iii., and iv.; Polwhele's Cornwall, v. 74–6; Prince's Worthies; Moore's Devon, ii. 116–19; Fourth Rep. Hist. MS. Comm. p. 374.]

W. P. C.

BLUNDELL, WILLIAM (1620–1698), royalist officer and topographer, son of Nicholas Blundell, by Jane, daughter of Roger Bradshaigh, of Haigh, near Wigan, was born at Crosby Hall, Lancashire, and probably was sent to one of the secret places of education that were maintained by catholics in various parts of the country. At the age of fifteen he married Ann, daughter of Sir Thomas Haggerston, bart., of Haggerston, co. Northumberland. In 1642 he accepted a captain's commission from Sir Thomas Tildesley, authorising him to raise a company of one hundred dragoons for the royal cause. He joined in the march to Lancaster, where he received a serious wound, having his thigh shattered by a musket-shot. From this period till the close of the civil war his life was one of privation and anxiety. By the law of 1646 no papist delinquent could compound for his estate, and consequently all his real property was seized, and remained in the hands of the commissioners for nine or ten years. Ultimately he repurchased it at a cost of 1,340*l.* In addition to this he found himself saddled with the arrears of the rents reserved to the crown, arising out of frequent grants for recusancy, some of which had never been discharged. These went back as far as the reign of Elizabeth, and he was forced by the government to pay on this score 1,167*l.* 15*s.* 6½*d.* Moreover, the cost of making out this prodigious bill was added to the account, constituting an addition of 34*l.* 10*s.* 2*d.* to the foregoing sum. This remarkable document, a roll of twenty feet in length, is still preserved. After the civil war Blundell retired to Crosby Hall, where he died 24 May 1698.

His works are: 1. 'A Short Treatise on the Penal Laws;' this exists in manuscript at Crosby, but a printed copy cannot be found, although the author states that a few copies were printed in London. 2. 'An Exact Chronographical and Historical Discovery of the hitherto unknown Isle of Man, containing a true and perfect description of this island at large; the history of their antient kings, late lords, and bishops of ye island, the ceremonies of their inaugurations, and installments,' &c., 2 vols., Douglas, 1876–77, 8vo, edited by William Harrison, and forming vols. xxv. and xxvii. of the publications of the Manx Society. 3. 'Manuscript Commonplace Books,' kept on the method described by Drexilius in his 'Aurifodina;' a selection of the most interesting of the original notes, anecdotes, and observations, in these volumes has been published, with introductory chapters, by the Rev. Thomas Ellison Gibson, under the title of 'Crosby Records, a Cavalier's Note Book,' London, 1880, 4to.

[Memoir by Gibson prefixed to the Cavalier's Note Book; Publications of the Manx Society.]

T. C.

BLUNDEVILL, RANDULPH DE, EARL OF CHESTER (*d.* 1232), warrior and statesman, was son and heir of Hugh 'de Kevelioc,' earl (palatine) of Chester, whom he succeeded in 1180 (DUGDALE, *Mon. Angl.* iii. 218) or 1181 (WALTER OF COVENTRY, i. 317). His surname, like his father's, was derived from his birthplace, 'Blundevill' being identified by Dugdale with Oswestry. In 1187 he received in marriage, 'per donationem regis Henrici' (*Gesta Regis Henrici Secundi*, ii. 29), Constance, daughter and heir of Conan, duke of Brittany, and widow of Geoffrey, second son of Henry II, and *jure uxoris* 'duke' (or 'count') of Brittany, who died 19 Aug. 1186. By this marriage he became stepfather of Arthur, and, in consequence of it, he occasionally assumed the styles of Duke of Brittany and Earl of Richmond (see two charters printed by Ormerod on p. 37, and also an Inspeximus in *Cart.* 22 Ed. III, n. 6). He is said by Matthew Paris to have carried the crown (but cf. BEN. ABB. p. 558; ROGER DE HOVEDEN, p. 656) at the coronation of

Richard I. In 1190 his sister Maud was married to David, earl of Huntingdon, brother to William, king of Scots (W. Cov. i. 423; *Gesta Regis Ricardi*, ii. 146). In the fifth year of Richard's reign he was among those before whom fines were levied (Hunter, *Fines*, pref. p. lxiii), his sole exercise of judicial functions. With his brother-in-law, David, in Richard's interest, he joined in the siege of Nottingham (February 1194), which surrendered, after Richard had joined them, on 28 March (W. Cov. ii. 52). He was then present at the second coronation (17 April), where he bore one of the three swords. After this he accompanied Richard to Normandy. We find him at variance with his wife as early as 1196, when he intercepted her at Pontorson on her way to Richard and confined her in his castle of St. Jean Beveron. Her son's forces, failing to rescue her, ravaged the earl's lands (W. Cov. ii. 98; Hoveden, iv. 7).

On the accession of John he was one of those suspected magnates whose oaths of fealty were exacted at Northampton before the king's arrival (W. Cov. ii. 145; *Ann. Burt.* p. 139). He was, however, present at the coronation on 27 May 1199 (W. Cov. ii. 146). Having accompanied John abroad, he was, in October, deserted by his wife (Hoveden, iv. 97), who fled with Arthur to Angers, and there married Guy, brother to the Vicomte of Thouars. Dugdale repeats the legendary story that he divorced her in consequence of John's attentions. The earl, soon after her desertion, married Clemence, widow of Alan de Dinan, daughter of William, sister of Geoffrey, the great-niece of Ralph de Fougères, and niece of William de Humez, constable of Normandy. Dugdale's account is here inaccurate. She appears as his wife in the deeds of agreement between the earl and the house of Fougères 7 Oct. 1200 (printed in Ormerod's *Cheshire*, i. 39–40), by which he obtained, with her, lands both in England and Normandy. He also gave the king 100*l.* (Angev.) to pursue his claims in France. Remaining abroad, he was entrusted by John with Similly Castle in Normandy, 23 Sept. 1201. But the king a year and a half later, hearing reports of his infidelity, came to Vire Castle (13 April 1203), whither the earl with Fulk Paynell hurried the next morning, and the two cleared themselves of the charges made against them. Blundevill, however, was constrained to surrender the castle and give pledges. But he was then entrusted (31 May 1203) with the keep of Avranches, on which he had some hereditary claim. On 20 Dec. 1204 he had a safe conduct to a great council on 7 Jan. 1205, and on 6 March 1205 he was given the honour of Richmond (save the constabulary) as it had been held by Geoffrey, earl of Richmond, his former wife's first husband, in compensation for the lands he had lost beyond sea (*Ann. Worc.* p. 393). He accounted for it in 1211 as forty and a half knights' fees.

On 30 Nov. 1205, and again on 10 April 1209, he was appointed to escort the King of Scots to the south, and in the autumn of 1209, with Geoffrey Fitzpiers and the Bishop of Winchester, he led an army into Wales (*Ann. Dunst.* p. 32). The next year, with the Earl of Salisbury, he again marched into Wales (Gervase of Canterbury, ii. 106), and was henceforth constantly fighting the Welsh. There is a well-known story that in the course of these struggles he had to take refuge in Rhuddlan Castle, and was there besieged by the Welsh till relieved by a rabble from Chester fair, sent to his aid by his constable (Dugdale). On 1 May 1214 he founded his abbey of Dieulacres ('Dieu l'accroisce!') in Leek, Staffordshire, dedicated to the Virgin and St. Benedict, and transferred thither the white monks from Pulton Abbey, Cheshire (founded 1153), which was too exposed to the Welsh (*Mon. Angl.*)

In the summer of 1214 he accompanied John to Poitou, and Matthew Paris asserts that the preference of Hubert de Burgh to him, in October, as surety for the king to France in 8,000 marcs, laid the foundation of their rivalry (iii. 231). He remained, however, with John on their return, and witnessed his grant of freedom of election to churches on 21 Nov. 1214 (Stubbs, *Sel. Chart.* 281). He was also present at the parliament of 6 Jan. 1215 at the Temple. He was entrusted with the castle of Newcastle-under-Lyme, 20 May 1215, and was among those who adhered to John when the barons entered London on 24 May (Matt. Paris). He was one of the few witnesses *ex parte regis* to the charter, 15 June. Unswerving in his loyalty, he thenceforth placed himself at the head of John's adherents (W. Cov. ii. 225), and was rewarded with the custody of the Leicester fief, belonging to his uncle, Simon de Montfort, 21 July (1215), and with the castle of the Peak 13 Aug. (1215). He was also (31 Oct.) given the lands of all the king's enemies within his fiefs. Throughout the struggle which followed the charter he was staunchly faithful to John, and afterwards to his son Henry. On 6 Jan. 1216 the king's constable of Richmond Castle was instructed to obey his orders, and on the 30th (Jan. 1216) he was entrusted with the castle and county of Lancaster. On Ash Wednesday (4 March) he took the cross with John and others (Gervase, ii. 109), and on 13 April (1216) re-

ceived the castles of Shrewsbury and Bridgenorth with their shires. Ordered on 5 June (1216) to destroy Richmond if untenable, he stormed and plundered Worcester in conjunction with Fulk de Bréauté, 17 July (*Ann. Wig.* p. 406; *Tewk.* p. 62). John died on 19 Oct., and the earl, who was one of his executors (*Fœdera*, i. 144), was present at Henry's coronation (28 Oct.) at Gloucester (*Ann. Wav.* 286; *Burt.* 224), and at the Bristol council (11 Nov.), where he was one of the witnesses to Henry's 'First Charter.' He now, like many others, fought as a crusader against the aliens at home (*Contin. Hoved.* in Bouquet, xviii. p. 183):

> Bajulosque crucis crux alba decorans
> Instabiles statuit fidei fundamine turmas.
> (*Pol. Song.* p. 23.)

Placing himself at the head of the king's forces at Easter 1217 he laid siege to Mountsorrel (Leicestershire), which was held for Louis, but on the latter's return to England (26 April) he despatched a French force with the barons (*Ann. Dunst.* p. 49) under Robert Fitzwalter, who raised the siege early in May (Matt. Paris). The earl, retiring before him, withdrew to Nottingham, and joined the regent (Pembroke) in his critical advance on Lincoln, where he shared in the royalist victory ('The Fair of Lincoln') on 20 May (1217). A highly mythical account of his conduct on this occasion, by Walter de Wittlesey, is reproduced by Dugdale. His services were rewarded (23 May) with the earldom of Lincoln, forfeited by Gilbert de Gant, his cousin and rival, to which he had a claim through his great-grandfather, *jure uxoris* earl of Lincoln. He then, with Earl Ferrers of Derby, led the royalists against Mountsorrel (*Ann. Burt.* p. 224), and, finding it abandoned, razed it (*Ann. Dunst.* p. 50). The honour of Lancaster was now entrusted to him; he was granted (6 June) the lands of all the king's enemies within the fief of Lincoln, and on 8 July 1217 it was proposed to the pope that he should share the regency with Pembroke (*Royal Letters*, i. 532). The honour of Brittany was now again entrusted to him, but, free at length to discharge his vow, he left for the Holy Land (W. Cov. ii. 241) at Whitsuntide (May 1218) with Earl Ferrers of Derby (*Ann. Wav.* 289, *Dunst.* 54), after granting a charter to his barons of the Palatinate (Dugdale), and reached Jerusalem 'peregre' (*Ann. Burt.* 225, *Wint.* 83). In the autumn, with his constable and following, he joined the besiegers of Damietta (Matt. Paris, ii. 230), and distinguished himself greatly at its capture, 5 Nov. 1219 (*Ann. Dunst.* p. 55), 'ubi, dux christianæ cohortis, præstitit gloriâ' (*Mon. Angl.*) He subsequently returned to England, which he reached about 1 Aug. 1220 (*Ann. Dunst.* p. 60; W. Cov. ii. 246).

It is from this point that we begin to trace the change in his policy. He found on his return that the regent, his old ally, had been dead for a year, and that Hubert de Burgh was now supreme. He had thus lost his chance of succeeding to the regency himself. 'The peculiar jurisdiction of his palatine earldom, and the great accumulation of power which he received as *custos* of the earldom of Leicester, made his position in the kingdom unique, and fitted him for the part of a leader of opposition to royal or ministerial tyranny' (*Const. Hist.* ii. 46). At first, however, his royalist sympathies blinded him to the state of the case, and on the outbreak of the Earl of Aumâle, who had surprised the castle of Fotheringhay, which he had happened to leave unguarded (W. Cov. ii. 248), he attended his excommunication at St. Paul's, 25 Jan. 1221 (*Ann. Dunst.* p. 64), and assisted to besiege him in Biham, which fell 8 Feb. (Matt. Paris, ii. 244). The fief of Leicester had now again been committed to him. But early in the following year he appears as 'the spokesman of the malcontents' (*Const. Hist.* ii. 34), the primate intervening between Hubert and himself at a stormy interview in London, January 1222 (W. Cov. ii. 251; *Royal Letters*, i. 174). An appeal was sent him from Palestine this year by Philip de Albini (Wendover, iv. 75).

Hubert's demand for the restoration of the royal castles by the earl and his other opponents in 1223 brought matters to a crisis. The earl, with Aumâle and De Bréauté, planned to surprise the Tower, as a counterblow to Hubert's *coup d'état*, but at Henry's approach withdrew with them to Waltham (*Ann. Dunst.* p. 83). Thence they came to the king at London and violently demanded Hubert's dismissal. Failing to obtain it, they departed to Leicester, where the earl held his court at Christmas, while the king held his at Northampton (*ib.* p. 84; Matt. Paris, ii. 260). But finding the king's party the stronger, and threatened by the primate with excommunication, they came to Northampton (30 Dec.) and surrendered their castles. Shrewsbury and Bridgenorth were transferred from the earl to Hugh le Despenser, and Lancaster to Earl Ferrers of Derby. The primate, however, was accused of duplicity in the matter by the earl and his allies, who sent envoys to lay their case before the pope (W. Cov. ii. 262). On the outburst of De Bréauté against the justiciar in 1224 Fulk fled for refuge to the earl as the chief opponent of Hubert (Matt. Paris, ii. 261), and the earl wrote to Henry

to plead for Fulk and for his brother (then besieged in Bedford), while assuring him of his own fidelity, in proof of which he had made a truce with Llewellyn that he might be free to serve him (*Royal Letters*, ii. 233–5). In the previous year (1223), however, he had averted an expedition against Llewellyn as his 'amicus et familiaris' (*Ann. Dunst.* p. 82). On receiving a safe-conduct he reluctantly joined the besiegers of Bedford with Peter des Roches. Finding themselves suspected, they returned home (*Ann. Dunst.* p. 87), but came back before its fall (14 Aug. 1224). He also persuaded Fulk to submit (W. Cov. ii. 265). The latter afterwards protested that he had been led on by the earl (Matt. Paris, ii. 265, iii. 250). The earl now again appealed to Rome in vindication of his policy, but without effect (*Ann. Dunst.* p. 89).

On 11 Feb. 1225 he was among the witnesses to Henry's 'Third Charter' (*Sel. Chart.* p. 345), and in 1226 made peace with William Marshall and Llewellyn (*Ann. Dunst.* p. 100). In 1227 he headed the opposition which supported the Earl of Cornwall against the king (Matt. Paris, ii. 296), and in the same year he again received the honour of Brittany (Richmond) as he had held it under John.

In April 1229 he attended the council of Westminster to oppose the grant of a tenth to the pope (*Ann. Tewk.* p. 77), and forbad those within his dominion to contribute. On 17 July he was ordered to be at Portsmouth with his knights on 14 Oct., and when there (19 Oct.) received from the king a confirmation of the territory between Ribble and Mersey, being the three wapentakes he had purchased from Roger de Mersay (*Eg. MS.* 15664, fo. 47; Ormerod's *Cheshire*, i. 36–7). The expedition being postponed to the spring, he sailed with the king, and landing at St. Malo, 2 May 1230 (*Royal Letters*, No. 288), took part in the siege of Nantes (*Pat. de Transfr. in Britan.* p. 1, m. 3). On Henry's departure (26 Oct. 1230) he was left in Brittany, with Aumâle and William Marshall, in charge of the army (500 knights and 1,000 men-at-arms), and having fortified his castle of St. Jean Beveron, he made raids into Normandy and Anjou (Matt. Paris, ii. 328–9). In June 1231 he captured the train of the French army, then invading Brittany, but arranged a truce with them for three years, 5 July (1231), and, reaching England about 1 Aug., joined the king in Wales at Castle Maud (*ib.* ii. 333; *Ann. Worc.* 422). He found him at war with Llewellyn (*Ann. Tewk.* 79), and, though honourably received by him, left him in anger, being accused of favouring Llewellyn (*Ann. Dunst.* 127). In a council at Westminster next spring (7 March 1232), he headed the opposition to a grant to the king on the plea that the barons had served in person (Matt. Paris, ii. 339); but when Henry gave the Londoners permission that summer to drag Hubert from sanctuary at Merton, the earl intervened to prevent it (*ib.* ii. 347; *Ann. Tewk.* 86). He died at Wallingford on 26 (*ib.* 87) or 28 (Matt. Paris) Oct. 1232, 'almost the last relic of the great feudal aristocracy of the Conquest' (*Const. Hist.* ii. 47).

His body was borne to its burial-place at Chester with great and unusual honour (*Ann. Osn.* 73); but his heart, in accordance with his wish, was interred at Dieulacres (*Ann. Tewk.* 87). He is said to have been of fiery spirit, but of small stature (Dugdale, *Ann. Osn.* 73). His long tenure of the earldom of Chester (more than half a century), and the power of the influence he wielded, greatly impressed his contemporaries; monkish fables clustered round his memory (*Mon. Angl.*), and his name figures as a household word in the 'Vision of Piers Ploughman:'

> I kan rymes of Robyn Hood,
> And Randolph, Erle of Chestre.
> *Passus*, vii. l. 11.

a passage which has been held to imply the existence of a lost ballad-cycle on his life (Hales, *Percy Folio*, i. 258; Sweet, *Notes to Piers the Plowman*, pp. 136–7; Ritson, *Ancient Songs*, i. vii. xlvi).

Shortly before his death he divested himself of his earldom of Lincoln in favour of his sister, Hawys de Quency (*Vincent MSS.* 215, 216). By her it was granted to her son-in-law, John de Lacy, constable of Chester, the grant being confirmed by the king, 23 Nov. 1232 (Nichols, *Leicester*, App. i. 39 *b*; *Coll. Top. and Gen.* vii. 130; *Third Report on the Dignity of a Peer*, p. 238).

Three of his charters to his men of Chester are printed in the Appendix to 'Eighth Report on Historical MSS.' (i. 356), and translated in Harland's 'Mamecestre' (i. 188–9), in which there is also (i. 200–2) a translation of his charter to Salford (circ. 1230), inaccurately printed in Baines's 'Lancashire' (ii. 170). His charter to the nuns of Grenefield (*Cart. Harl. Ant.* 52, A. 16) is printed in Nichols's 'Leicester' (App. i. 39 *b*), and in Ormerod's 'Cheshire' are his charter of confirmation to St. Werburgh (i. 33) and his two charters to Stanlaw Abbey (i. 38). In the 'Monasticon' (vi. 114) is his confirmation of Cheshunt parsonage to his canons of the priory of Fougères. Three of his Dieulacres charters are printed *s. v.* and another one (*Add. MS.* 15771) at v. 325. His sundry benefactions are recorded by Dugdale (*Baronage*, i. 44 *b*).

Engravings of his seals are given in Vincent's 'Discovery of Brooke's Errors' (p. 317),

Nichols's 'Leicester' (i. pl. xii.), Ormerod's 'Cheshire' (i. 33, 37, 38, 41), 'Topographer and Genealogist' (ii. 315).

Leaving no issue by either of his wives, of whom the second survived him twenty years, dying 1252 (*Ann. Burt.* 305), the great estates of his house passed to his four sisters: (1) Maud, wife of David, earl of Huntingdon, and mother of John 'de Scotiâ,' who succeeded him in the earldom of Chester; (2) Mabel, wife of William de Albini, earl of Arundel; (3) Agnes, wife to William, Earl Ferrers of Derby; (4) Hawys, wife of Robert de Quency, son to Laher, earl of Winchester.

Bale (*De Script. Brit.*), followed by Pits, enters him as a writer, by a strange confusion, as 'Ranulfus de *Glauvcyle*, cestrie comes.'

H. R.

BLUNDEVILLE, THOMAS (*fl.* 1561), writer on horsemanship, &c., was the son of Edward Blundeville, of Newton Flotman, Norfolk. The authors of 'Athenæ Cantabrigienses' suppose that he was educated at Cambridge, though they are 'unable to specify the period or the college or house to which he belonged.' In the preface to Jasper Heywood's translation of Seneca's 'Thyestes,' 1560, there is the following mention of Blundeville:—

> And there the gentle Blundeville is
> By name and eke by kynde,
> Of whom we learn by Plutarches lore
> What frute by foes to fynde.

At the death of his father in 1568 he inherited an estate at Newton Flotman, which he seems to have managed prudently. In 1571 he erected in the church of Newton Flotman a monument containing effigies of his great-grandfather, grandfather, and father, with their ages and the dates of their deaths; beneath are inscribed some English verses. Under the same monument he lies buried, and there is an effigy of him kneeling bareheaded, in armour, at a faldstool, on which are placed his helmet and a book. He was twice married. By his first wife he had a son, Andrew, who was killed in the Low Countries; and by his second wife he left two daughters. The list of Blundeville's works is as follows: 1. 'Three Morall Treatises, no less pleasant than necessary for all men to read, whereof the one is called the Learned Prince, the other the Fruites of Foes, the thyrde the Porte of Rest,' 4to, 1561. The first two pieces are in verse, the third in prose; the first is dedicated to the queen. Prefixed to the second piece are three four-line stanzas by Roger Ascham. The 'Fruites of Foes' and the 'Porte of Rest' have separate title-pages, dated 1561. There must have been an earlier edition of the 'Fruites of Foes' (which appears to have been licensed to Richard Tottell in 1558); for the separate title-page has the words 'Newly corrected and cleansed of many faultes escaped in the former printing.' Later editions of the 'Three Morall Treatises' appeared in 1568, 1580, 1609. 2. 'The fower chiefyst offices belonging to Horsemanshippe. That is to saye, the office of the Breeder, of the Rider, of the Keper, and of the Ferrer. In the firste part whereof is declared the order of breding of horses. In the seconde howe to breake them and to make theym horses of seruyce. Conteyning the whole arte of Ridynge lately set forth, and nowe newly corrected and amended of manye faultes escaped in the fyrste printynge, as well touchyng the bittes as otherwyse. Thirdly, howe to dyet them. . . . Fourthly, to what diseases they be subiecte,' n.d., 4to, black letter. The book is dedicated to Robert Dudley, earl of Leicester; each part has a separate title and signatures. Part iii., 'the Order of Dietynge of Horses,' is dated 1565 on the title-page, and part iv. is dated 1566. The general title-page and the title-pages of the first two parts bear no date. Later editions were published in 1580, 1597, 1609. 3. 'A very briefe and profitable Treatise, declaring howe many Counsels and what manner of Counselers a Prince that will gouerne well ought to haue,' London, 1570, 8vo. The treatise was written originally in Spanish by Federigo Furio, translated thence into Italian by Alfonso d'Ulloa, and from Italian into English by Blundeville. There is a dedication, dated from Newton Flotman 1 April 1570, to the Earl of Leicester. 4. 'A ritch Storehouse or Treasure for nobilitye and gentlemen, written in Latin by John Sturmius, and translated by T. B., gent.' London, 1570, 8vo. 5. 'The true order and

Methode of wryting and reading Hystories, according to the Precepts of Francisco Patritio and Accontio Tridentino, no less plainely than briefly set forth in our vulgar speach, to the greate profite and commoditye of all those that delight in Hystories,' London, 1574, 8vo. The book is dedicated to the Earl of Leicester. 6. 'A newe booke, containing the arte of ryding and breakinge Horses, &c.,' n.d., 8vo. This is merely a separate issue of the second tract in the work numbered 2. 7. 'A Briefe Description of universal Mappes and Cardes and of their vse; and also the vse of Ptholemey his Tables,' &c. London, 1589, 4to. There is a dedication to Francis Wyndham, one of the justices of the common pleas, dated 'from my poore Swan's Nest, 17 Decem. 1588.' 8. 'M. Blvndevile his Exercises, containing sixe Treatises, . . . whiche Treatises are verie necessarie to be read and learned of all young gentlemen that haue not bene exercised in suche disciplines, and yet are desirous to haue knowledge as well in Cosmographie, Astronomie and Geographie, as also in the Arte of Nauigation,' &c., London, 1594, 4to. A second edition, 'corrected and augmented by the author,' was published in 1597; the seventh edition appeared in 1636. 9. 'The Art of Logike, Plainely taught in the English tongue, as well according to the doctrine of Aristotle as of all other moderne and best accounted Authors thereof,' &c. London, 1599, 4to, republished in 1617. 10. 'The Theoriques of the planets, together with the making of two instruments for seamen to find out the latitude without seeing sun, moon, or stars, invented by Dr. Gilbert,' London, 1602, 4to.

[Blomefield's Norfolk, v. 64, 68–70; Tanner's Bibl. Brit. 108; Cooper's Athenæ Cantab.; Hazlitt's Collections and Notes, 1876; Davy's Suffolk Collections, lxxxix. 215; Hazlitt's Collections and Notes, second series; Ames's Typog. Antiq. (Herbert), 693, 694, 697–701, &c.]

A. H. B.

BLUNDEVILLE or BLUNVILLE, THOMAS DE (*d.* 1236), bishop of Norwich. Among the various spellings of this bishop's name, the form used in the Dunstable Annals (*Ann. Monast.* iii. 100), Thomas de *Flamvilla*, is the strangest. Bishop Thomas was sprung from a family of Norfolk gentry who appear to have held estates in the county as early as the close of the twelfth century, and who continued to be considerable landowners for at least three hundred years. He was the son of Robert de Blunville of Newton Flotman, Norfolk, and younger brother of William de Blunville, constable of Corfe Castle during the reign of King John. He is described as the nephew of Hubert de Burgh, the great justiciary. He commenced his career as a clerk in the exchequer, and gradually became a personage of some influence. In the Excerpta from the Fine Rolls of the reign of Henry III there are two or three notices of him, all showing that he made use of his opportunities to enrich himself. When Pandulf died in 1226, Blunville succeeded him in the bishopric of Norwich, helped thereto, says Matthew Paris, by the influence of Hubert de Burgh (*Chron. Majora*, iii. 121). He was consecrated at Westminster on 20 Dec. 1226. In that same year St. Francis of Assisi had died, and the Franciscans had settled in Lynn, Yarmouth, and Norwich. They had been received with great enthusiasm, and when the bishop came to his diocese he found the friars already established there, and seems to have befriended them. Little is known of his episcopate. He is mentioned as dedicating an altar at Dunstable in 1231. He robbed two or three benefices in his diocese of their tithes to enrich the priory at Norwich; he bestowed certain liberties upon his town of Lynn, whereby he gained popularity at no great sacrifice; he had a long-standing quarrel with the priories of Binham and Wymondham—two cells of the great abbey of St. Albans—and compelled the priors of both houses to go in person to Rome and prosecute their appeal. When, in 1232, Hubert de Burgh was fleeing from the pursuit of Henry III and his emissaries, he took refuge with his nephew, Bishop Thomas, at his manor of Terling, in Essex, and it was from the chapel of that manor that he was compelled to deliver himself up to his pursuers at last. All records of the diocese of Norwich during his episcopate have perished. He died on 16 Aug. 1236.

[Annales Monastici (Rolls Ser.), iv. 419, iii. 127, 100; Matthew Paris' Chronica Majora, iii. 121, 226, 372, 378, vi. 87; Rymer's Fœdera, i. 103, 208; Blomefield's Norf. 8vo, v. 64, ii. 491.]

A. J.

BLUNT. [See also BLOUNT.]

BLUNT, HENRY (1791–1843), divine, the son of Henry and Mary Blunt (her maiden name was Atkinson), was born at Dulwich, 12 Aug., and was baptised at the chapel of Dulwich College, 20 Aug. 1794. He was educated at Merchant Taylors' School, which he entered in his twelfth year, 1806, and left for Pembroke College, Cambridge, as Parkin exhibitioner, in 1813. He took his B.A. degree as ninth wrangler in 1817, and became fellow of his college. He was ordained on

his fellowship by Dr. Howley, bishop of London, receiving deacon's orders 5 July 1818 and priest's orders 20 Dec. of the same year. After having filled preacherships at the Philanthropic Institution, and Park Chapel, Chelsea, and Grosvenor Chapel, in 1820 he was appointed vicar of Clare in Suffolk, and on 21 Dec. of that year he married Julia Ann Nailer, one of the six daughters of a merchant residing at Chelsea. At Clare, in addition to his parochial duties, Blunt took private pupils. In 1824 Dr. Wellesley, a brother of the first Duke of Wellington, then rector of Chelsea, induced him to resign his country living to become his curate. This post he filled for six years with steadily increasing fame as a preacher, and on the erection of Trinity Church, in Sloane Street, in 1830, he was appointed its first incumbent, becoming a rector 15 June 1832. So high was the estimation in which Blunt was held that, on the resignation of Dr. Wellesley in 1832, he was offered by Lord Cadogan, the patron, the mother church of St. Luke's, with the understanding that he was to hold the two livings together, with a sufficient staff of curates. This offer was unhesitatingly declined. In 1835 he was presented by the Duke of Bedford to the rectory of Streatham, Surrey. His health, always delicate, had by that time been completely undermined by the incessant labours of a large London parish, and pulmonary weakness compelled him to pass successive winters at various health resorts, Rome, Pau, Torquay, &c.; he died in his rectory at Streatham, 20 July 1843, in the 49th year of his age. He was buried at Streatham.

Blunt's chief work as a preacher and a writer was done at Chelsea. Here the influence he exerted, especially over the higher classes, was very great, while the clearness and simplicity of his style made him also acceptable to hearers of the humbler classes. There is little depth or originality of thought in his writings, nor are they conspicuous for any rhetorical power; but the practical and earnest piety and tender sympathy which animate the whole, together with the beauty of his language, have given a well-deserved popularity to his sermons. For his time he may be called a good evangelical churchman, decidedly opposed to the then rising tractarianism, but holding his own opinions without narrowness or bitterness. The most popular of his printed works were the courses of lectures delivered in successive Lents at Chelsea to crowded audiences on the lives of various leading persons in the Old and New Testament. The first of these were the 'Lectures on the Life of Jacob,' delivered in 1823; these were succeeded by courses on 'St. Peter,' 1829, 'Abraham,' 1831, 'St. Paul,' in two series, 1832, 1833, and closing with one on the 'Prophet Elisha' in 1839, the six years' interval being marked by the publication of three courses on 'The Life of Jesus Christ,' 1834–36, a volume of discourses on 'Some of the Doctrinal Articles of the Church of England' in 1835, and a volume of selected 'Sermons' in 1837, and 'Expository Sermons on the Epistles to the Seven Churches' in 1838. The last of Blunt's works published in his lifetime, exclusive of separate sermons, was an 'Exposition of the Pentateuch' (3 vols.) for family reading. Three volumes of 'posthumous sermons' were issued under the editorship of his old friend, the Rev. John Brown, of Cheltenham, and passed through a number of editions. The lectures on St. Peter went through sixteen editions between 1829 and 1842, those on Jacob fifteen editions, 1828–40, those on Abraham eleven editions, 1831–44. In these lectures we have Blunt at his best. They are expository and practical, and only incidentally deal with doctrine. Few works of the kind are so full of human interest, and to this, as well as to the simple beauty of their style, their popularity is chiefly due. It should be added that, in spite of very feeble health, Blunt was a diligent parish priest, and 'by holy living and faithful preaching became a leading power amongst the vast population of 30,000 souls amongst whom he lived.' In his early youth before he went to college, he, with a young layman, afterwards his brother-in-law, established the first Sunday school at Chelsea at the 'Clock House,' and he continued to manifest a deep interest in that form of education. He also, amidst much ridicule and determined opposition, introduced bible and communicants' classes. He published the first parish magazine, called the 'Poor Churchman's Evening Companion.'

[Private information; Davies's Successful Preachers, pp. 189–205.] E. V.

BLUNT, JOHN LE (*d.* 1248). [See BLUND.]

BLUNT, JOHN HENRY, D.D. (1823–1884), ecclesiastical historian and theological writer, was born at Chelsea on 25 Aug. 1823, where he was educated in a private school. For some years after leaving school he was engaged in the business of a manufacturing chemist; but in 1850 he abandoned that pursuit and entered University College, Durham, with the object of taking holy orders in the church of England. In 1852 he became licentiate in theology, was ordained deacon in 1852, and priest in 1855. In 1855 he became an M.A. of Durham. After filling a number

of curacies he was appointed in 1868 vicar of Kennington, near Oxford, by the warden and fellows of All Souls' College. In 1873 he was presented by Mr. Gladstone with the crown living of Beverston in Gloucestershire, which he retained until his death. In June 1882 his university made him a doctor of divinity. He died rather suddenly in London on 11 April 1884 (Good Friday), and was buried in Battersea cemetery.

In his earlier years Blunt was a constant contributor to church reviews and magazines, and the author of many pamphlets and sermons. In 1855 his first volume on the 'Atonement' was published. He afterwards became a voluminous writer in the fields of theology and ecclesiastical history. His theological dictionaries collect much valuable matter in a convenient form. His 'Annotated Book of Common Prayer' is equally useful. His 'History of the English Reformation' is a solid and careful study of a critical period, and, though perhaps written from a high-church rather than a purely historical standpoint, is generally accurate and thorough. Blunt was a man of great mental and physical energy, and his close application to literary work in all probability hastened his death. The following list includes the more important works of which he was either sole author or editor: 1. 'The Atonement,' 1855. 2. 'Three Essays on the Reformation,' 1860. 3. 'Miscellaneous Sermons,' 1860. 4. 'Directorium Pastorale,' 1864. 5. 'Key to the Bible,' 1865. 6. 'Household Theology,' 1865. 7. 'Annotated Book of Common Prayer,' 1866; revised and enlarged, 1884. 8. 'Sacramental Ordinances,' 1867. 9. 'History of the Reformation,' 1868. 10. 'Key to Church History,' 1869. 11. 'Union and Disunion,' 1870. 12. 'Plain Account of the English Bible,' 1870. 13. 'Dictionary of Theology,' 1870. 14. 'Key to the Prayer Book,' 1871. 15. 'Condition and Prospects of the Church of England,' 1871. 16. 'The Book of Church Law,' 1872. 17. 'Key to Christian Doctrine and Practice,' 1882. 27. 'Cyclopædia of Religion,' 1884; this work he was engaged upon at the time of his death.

[Communication from Mr. R. G. Blunt.]

T. F. T.

BLUNT, JOHN JAMES (1794–1855) divine, was born in 1794 at Newcastle under-Lyme in Staffordshire, and was educated at the grammar school of that town, of which his father, the Rev. John Blunt, was 'the very able master.' Blunt was admitted a pensioner of St. John's College, Cambridge, in 1812, was elected first Bell scholar in 1813, and in the following year gained the Browne's medal for the Latin ode. He took his B.A. degree as fifteenth wrangler in 1816, and, after having obtained a fellowship in the same year, carried off the first member's prize for a Latin essay in 1818, proceeded M.A. in 1819, and took the degree of B.D. in 1826. Blunt had been appointed one of the Worts travelling bachelors in 1818, and travelled in Italy and Sicily. His attention was especially arrested by the traces of the heathen customs still surviving in the manners of the people; and after a second visit which he paid to Italy in the years 1820-21, he published 'Vestiges of Ancient Manners and Customs discoverable in Modern Italy and Sicily,' 8vo, London, 1823, which was translated into German, but which was not reprinted in England, and is now very rare. Blunt devoted himself for many years to parochial duty at Hodnet, in Shropshire, as curate to Reginald Heber and his successor in the living. He was afterwards curate at Chetwynd. He became a contributor to the 'Quarterly Review,' to which he furnished articles on the 'Life' and 'Journals' of Bishop Heber March 1827, on the 'Works' of Milton June 1827, of Archdeacon Paley October 1828, and of Dr. Parr April 1829, and on the 'Works,' and subsequently the 'Memoirs,' October 1839, of Bishop Butler. These, with others to the number of fourteen in all, were gathered into a volume, and published, after the author's death, with the title of 'Essays contributed to the Quarterly Review,' 8vo, London, 1860. Blunt contributed to Murray's 'Family Library' a 'Sketch of the Reformation in England,' 8vo, London, 1832, which was translated into French and German, and which had reached its fifteenth edition in the lifetime of the author, and double that number within two years after his death. Blunt had already published, as the substance of a course of sermons delivered at Cambridge in 1827, 'The Veracity of the Gospels and Acts of the Apostles argued from the Undesigned Coincidences to be found in them when compared (1) with each other, and (2) with Josephus,' 8vo, London, 1828, which two years afterwards was supplemented by a treatise, also adapted from previous university sermons, entitled 'The Veracity of the Five

Books of Moses argued from the Undesigned Coincidences to be found in them when compared in their several parts,' 8vo, London, 1830. He preached the Hulsean Lectures for 1831 and 1832, in which he applied the same canon of undesigned coincidences to other books of Scripture, and published 'Hulsean Lectures for the Year 1831: the Veracity of the Historical Books of the Old Testament, from the Conclusion of the Pentateuch to the Opening of the Prophets, argued from the Undesigned Coincidences to be found in them when compared in their several parts; being a Continuation of the Argument for the Veracity of the Five Books of Moses,' 8vo, London, 1832, and 'Hulsean Lectures for the Year 1832. Principles for the Proper Understanding of the Mosaic Writings stated and applied; together with an Incidental Argument for the Truth of the Resurrection of Our Lord,' 8vo, London, 1833. A new edition of this entire series, rearranged, was published as 'Undesigned Coincidences in the Writings both of the Old and New Testament, an Argument of their Veracity,' &c., 8vo, London, 1847; sixth edition, 1859. Towards the close of his curate life Blunt published the 'Advantages enjoyed by a Minister of the Church of England, and the Duties they entail upon him: a Sermon preached in the Parish Church of Newport, at the Visitation of the Archdeacon of Salop, June 26, 1833,' 8vo, London, 1833, and in 1834 was presented by his college to the rectory of Great Oakley in Essex. 'He established his parish school, his clubs and societies; he rebuilt his dilapidated and long tenantless parsonage; he married a wife; he was useful and contented' (*Quarterly Review*, July 1858). He was elected Lady Margaret professor of divinity on 9 May 1839, from which time he resided regularly in Cambridge, relinquishing his parochial cure. Blunt commenced his professorial work by a course of lectures in the Lent term of 1840, of which the first was published as an 'Introduction to a Course of Lectures on the Early Fathers,' 8vo, Cambridge, 1840, which was followed by the 'Second Part of an Introduction,' &c., 8vo, Cambridge, &c., 1843, both being afterwards published together as 'Two Introductory Lectures,' &c., 8vo, Cambridge, &c. 1856, with a 'Memoir' of Blunt prefixed by Professor Selwyn, his successor in the Lady Margaret divinity chair. After five years of exegetical treatment of the primitive fathers Blunt delivered a course of lectures, published after his death as he left them, 'On the Right Use of the Early Fathers: two series of lectures,' &c. 8vo, London, 1857; second edition, corrected, 1858. The first series had been delivered in the October term of 1845, and the second in the October term of 1846. The substance of a later course of lectures, delivered during the Lent term of 1854, was published after his death with the title of 'A History of the Christian Church during the First Three Centuries,' 8vo, London, 1856, second edition 1857, which had been foreshadowed by 'A Sketch of the Church of the First Two Centuries after Christ, drawn from the Writings of the Fathers down to Clemens Alexandrinus inclusive, in a Course of Sermons preached before the University of Cambridge in January 1836,' 8vo, Cambridge, 1836. Blunt frequently occupied the university pulpit, and three volumes of his discourses as select preacher have been published: 'Five Sermons,' &c. 8vo, Cambridge, 1847; 'Four Sermons,' &c. 8vo, Cambridge, 1850; 'Five Sermons,' &c. 8vo, Cambridge, 1852, which were subsequently collected into a single volume as 'Sermons preached before the University of Cambridge 1845–51,' 8vo, London, 1873. Of the discourses delivered by Blunt two may be mentioned—'The Ramsden Sermon, "On the Subject of Church Extension over the Colonies and Dependencies of the British Empire," preached before the University of Cambridge Sunday May 23, 1852,' 8vo, Cambridge, 1852, and 'A Sermon in Memory of the late Duke of Wellington, preached before the University of Cambridge on Sunday, Nov. 21, 1852,' 8vo, Cambridge, 1852. He also published 'Plain Sermons preached to a Country Congregation,' 8vo, London, 1857, second series 1859, third series 1861, which, in the two-volume form they finally assumed, had reached a fifth edition in 1868. Other sermons by Blunt have been published. He is also author of 'Acquirements and Principal Obligations and Duties of the Parish Priest. Being a Course of Lectures delivered at the University of Cambridge to the Students in Divinity,' 8vo, London, 1856. At the death of Denison, bishop of Salisbury, in 1854, the see was offered to Blunt. He was too far advanced in life, and refused the offer. His health had declined during 1854, but he was able to deliver a course of lectures in the Lent term of 1855 on the study of the early fathers. His last public act was to vote for the university petition against the admission of dissenters to degrees. He died of erysipelas at his house in Cambridge, 17 June 1855. He was twice married: first (14 June 1836) to Elizabeth Roylance, daughter of the late Baddeley Child, of Barlaston, by whom he left two daughters; and secondly, to Harriet,

daughter of the late Sneyd Kynnesley, of Loxley Park, who survived him.

[Times, 19 June 1855; Guardian, 20 June 1855; Cambridge Chronicle, 23 June 1855; Gent. Mag. September 1843 and August 1855; Memoir prefixed to Two Introductory Lectures, Cambridge, 1856; Quarterly Review, July 1858; Graduati Cantab. 1873.] A. H. G.

BLYKE, RICHARD (*d.* 1775), antiquary, son of Theophilus Blyke, deputy secretary-at-war, who was buried in the churchyard of Isleworth, Middlesex, in 1718 (Lysons, *Environs*, iii. 105), was a native of Hereford. He became deputy-auditor of the office of the Imprest, and was a fellow of the Royal Society and the Society of Antiquaries. He was a member of the committee appointed to prepare the rolls of parliament for the press. He died in 1775, and was buried in the churchyard of Isleworth, Middlesex. Blyke edited, in collaboration with John Topham, F.R.S., Serjeant Glanville's 'Reports of Determinations on Contested Elections,' 1775. He also made extensive manuscript collections, in twenty-two volumes of various sizes, for a topographical history of Herefordshire. These were purchased at the sale of his library by Charles, duke of Norfolk.

[Aungier's Hist. of Syon Monastery, 171; Gough's British Topography, i. 410; Nichols's Illustr. of Lit. v. 435; Nichols's Lit. Anecd. ii. 204, iii. 206, 207, 250, 621, 743, viii. 488.] T. C.

BLYSSE, JOHN, M.D. (*d.* 1530), was born in the diocese of Bath and Wells, took his B.A. degree at Oxford, June 1507, and was elected probationary fellow of Merton in 1509, having the character of 'an excellent disputant in philosophy.' He proceeded in arts, and applied himself to the study of medicine. He came to London, and practised in 1525, becoming a member of the College of Physicians. Being an astronomer as well as a physician, he left certain 'astronomical tables' at Merton, which have disappeared long ago. He died a Dominican, and was buried in the church of the Blackfriars at London.

[Wood's Athenæ Oxon. (Bliss), i. 57.]

BLYTH, EDWARD (1810–1873), zoologist, was born in London 23 Dec. 1810. From early youth natural history absorbed him; he was up at three or four in the morning, reading, making notes, sketching bones, stuffing birds, collecting butterflies. He purchased a druggist's business at Tooting on coming of age, but it was not successful. He contributed to the 'Magazine of Natural History' from 1833, and to the 'Field Naturalist,' and undertook the Mammals, Birds, and Reptiles, in an illustrated translation of Cuvier, published in 1840, making considerable additions of his own. Among his papers contributed to the Zoological Society is an important monograph of the genus Ovis (1840). When a small stipend for a curator of the museum of the Asiatic Society of Bengal was voted by the directors of the East India Company, Blyth received the appointment, and arrived at Calcutta in September 1841. From this time forth, in addition to his museum duties, he contributed reports and memoirs on zoology, especially on birds and mammals, to almost every number of the journal of the society for twenty years. In 1849 he published his catalogue of birds in the society's museum. Its value would have been greater had it not included so much matter in the form of appendices, addenda, and further addenda. He made field excursions whenever he could, a favourite resort being Khulna, and thus he added largely to his knowledge. He contributed to the 'Indian Field,' the 'India Sporting Review' (on the 'Osteology of the Elephant,' and on the 'Feline Animals of India'), and the 'Calcutta Review' (on the 'Birds of India'). In 1854 Blyth married; his wife, however, died in 1857. His stipend never increased; and he had to contend against much ill-health. In 1862 his health compelled his return to England, and a pension of 150*l.* a year was afterwards granted him. His catalogue of the mammalia in the society's museum was not published till 1863. At home Blyth's abilities and great knowledge were highly appreciated, notably by Charles Darwin, who repeatedly refers to his observations in his 'Animals and Plants under Domestication.' Many papers by him are scattered through the 'Annals of Natural History,' 'Zoological Proceedings,' 'Zoologist,' and 'Ibis.' He contributed to 'Land and Water' and the 'Field' under the *nom de plume* of Zoophilus; among his more elaborate papers in the 'Field' are 'Wild Animals dispersed by Human Agency' and 'On the Gruidæ or Crane Family.' This was his last effort. He died of heart disease 27 Dec. 1873. His valuable 'Catalogue of the Mammals and Birds of Burma' was edited by Drs. Anderson and Dobson and Lord Walden in 1875 in an extra number of the 'Journ. As. Soc. Bengal.' Gould describes him as 'one of the first zoologists of his time, and the founder of the study of that science in India.' His marvellous memory made him the storehouse to which many other observers had recourse. He retained through life, amid disappoint-

ments and ill-health, a warm and fresh love of nature.

Mr. Allan Hume, who knew Blyth's work well, and the difficulties under which it was done, says: 'It is impossible to overrate the extent and importance of Blyth's many-sided labours. Starting in life without one single advantage, by sheer strength of will, ability, and industry, he achieved a reputation rarely surpassed, and did an amount of sterling work such as no other single labourer in this field has ever compassed. . . . Neither neglect nor harshness could drive, nor wealth nor worldly advantages tempt him, from what he deemed the nobler path. Ill-paid, and subjected as he was to ceaseless humiliations, he felt that the position he held gave him opportunities for that work which was his mission, such as no other then could, and he clung to it with a single-hearted constancy nothing short of heroic.'

[Memoir by A. Grote, prefixed to Catalogue of Mammals and Birds of Burma, by E. Blyth, in Journ. As. Soc. Bengal, extra number, 1875; Hume's Stray Feathers, vol. ii. Calcutta, 1874, In Memoriam Ed. Blyth.] G. T. B.

BLYTHE, GEOFFREY, LL.D. (*d.* 1530), bishop of Lichfield and Coventry, was a son of William Blythe of Norton, Derbyshire, but originally of Leeds, Yorkshire, by a sister of Thomas Rotheram, archbishop of York. He was brother to John Blythe, bishop of Salisbury, and master of King's Hall, Cambridge. Geoffrey Blythe was educated at Eton, and thence elected to King's College, Cambridge, in 1483 (Harwood, *Alumni Eton.* 119). He proceeded to the degree of LL.D. On 4 April 1493 he became prebendary of Strensall in the church of York, and on 9 May following was collated to the archdeaconry of Cleveland in the same church. In 1494 he became treasurer of the church of Sarum; was rector of Corfe, Dorsetshire, 5 March 1494–5; and about 1496 had the prebend of Sneating in the church of St. Paul. On 4 April 1496 he was ordained priest, in March 1496–7 admitted dean of York, and on 9 Feb. 1497–8 collated to the archdeaconry of Gloucester. He was appointed master of King's Hall, Cambridge, on 11 Feb. 1498–9, and was collated to the archdeaconry of Sarum on 21 Aug. 1499, in which year he had the prebend of Stratton in that church. King Henry VII entertained a high opinion of his abilities, and often employed him in foreign embassies. He was special ambassador on 27 May 1502 to Ladislaus II, king of Hungary and Bohemia, and on his return was rewarded with the bishopric of Lichfield and Coventry. Blythe was consecrated to that see by Richard Fox, bishop of Winchester, on 27 Sept. 1503. During the first years of his government of the diocese he was accused of treason, but of this charge he most honourably acquitted himself, and accordingly letters patent for his pardon were issued on 18 Feb. 1508–9 (Rymer, *Fœdera*, ed. 1712, xiii. 246). In 1512 he was appointed lord-president of Wales, continuing in that office till 1524 (Clive, *Hist. of Ludlow and the Lords Marchers*, 155, 283, 292). By an inquisition taken on 15 June 1513, after the death of Sir Ralph Langeford, knight, it was found that the deceased, by his deed, 14 Jan. 1510–11, by covin and deceit between him and Blythe, in order to defraud the king of the custody, conveyed certain manors and lands in Derbyshire, Nottinghamshire, and Lincolnshire to Anthony Fitzherbert (Thoroton, *Nottinghamshire*, 344). Blythe resigned the mastership of King's Hall, Cambridge, in 1528. He is said to have died in London, and he was buried in Lichfield Cathedral before the image of St. Chad, one of his predecessors in the see. A noble monument which was erected to his memory has been long destroyed. Accounts differ as to the date of his death, but his will, dated 28 April 1530, was proved on 1 March 1530–1. Rowland Lee, his successor, was not elected till 10 Jan. 1533–4.

Blythe bequeathed legacies to his cathedrals of Lichfield and Coventry, the churches of St. Chad in Shrewsbury and Norton, Eton College, King's College, and King's Hall. Among his bequests to King's College was a great standing cup gilt with a cover, which had been presented to him by Ladislaus, king of Hungary. He also gave a similar cup to Eton College. Blythe in his lifetime built fair houses for the choristers of Lichfield Cathedral; also a chapel at Norton, in which he erected an alabaster tomb for his parents, and established a chantry. He gave to King's College a gilt mitre for the barne-bishop in 1510, a pair of great organs value 40*l.* in 1512, a rochet of the best cloth for the barne-bishop in 1518, and a fair banner of the assumption of the blessed Virgin Mary in 1519. He, with his dean and chapter, collected all the statutes of the cathedral of Lichfield, and got the same confirmed by Cardinal Wolsey as legate in 1526.

[Cole's Hist. of King's Coll. Camb. i. 107; Addit. MSS. 5802, ff. 150, 151, 5827, f. 86, 5831, f. 21; Wharton's Anglia Sacra, i. 455; Godwin, De Præsulibus (Richardson), 323; Foxe's Acts and Monuments (Townsend), iv. 557, vii. 451; Dodd's Church Hist. i. 181; Wood's Athenæ Oxon. (Bliss), ii. 702; Cooper's Athenæ Cantab. i. 40, 528; Cranmer's Works, ed. Cox (Parker Soc.), ii. 259.] T. C.

BLYTHE, GEOFFREY, LL.D. (*d.* 1542), divine, is supposed to have been a nephew of Geoffrey Blythe, bishop of Lichfield and Coventry [q. v.] He was educated at Eton, and elected thence to King's College, Cambridge, in 1515 (B.A. 1520–1; M.A. 1523). He became a prebendary of Lichfield in 1520, and was appointed master of King's Hall, Cambridge, in 1528, in which year he occurs as vicar of Chesterton, Cambridgeshire. In 1529 he commenced LL.D., and his grace for that degree states that he had studied at Louvain. He held the archdeaconry of Stafford for a few days in 1530, and on 7 June in that year he was admitted treasurer of the church of Lichfield, with which he held the precentorship. Blythe was one of the divines who preached at Cambridge against Hugh Latimer. He was buried at All Saints', Cambridge, on 8 March 1541–2.

[Harwood's Alumni Eton. 135; Le Neve's Fasti (Hardy); Foxe's Acts and Monuments, ed. Townsend, vii. 451; Cooper's Athenæ Cantab. i. 79.] T. C.

BLYTHE, JOHN (*d.* 1499), bishop of Salisbury, was the son of William Blythe, of Norton, Derbyshire, by a sister of Thomas Rotheram, archbishop of York. His younger brother Geoffrey [q. v.] was bishop of Lichfield (1503–1533). He was educated at Cambridge, and in 1488 was the warden of King's Hall in that university. In 1477 Blyth was archdeacon of Stow, in 1478 archdeacon of Huntingdon, prebendary of Lincoln (1482–5), in 1484 prebendary of York, and in 1485 archdeacon of Richmond. He was master of the rolls from 5 May 1492 until his consecration to the bishopric of Salisbury, at Lambeth, 23 Feb. 1494. Between the years 1493 and 1495 he was chancellor of the university of Cambridge, and in that capacity he delivered an oration before Henry VII, his mother, the Countess of Pembroke, and Prince Arthur, at Cambridge (*Letters, &c., Rich. III and Hen. VII*, i. 422). As bishop he took part in the ceremonial of the creation of Henry, duke of York, 1494. He died 23 Aug. 1499, and was buried behind the high altar of his cathedral church, in a tomb which from its position lay north and south. A manuscript copy of his Cambridge oration exists in the Bodleian Library at Oxford, and an outline of it with extracts has been printed in the 'Letters of Richard III' (Rolls Ser.) During Blyth's episcopate in 1496, the islands of Jersey and Guernsey were taken from the see of Coutances, and added to that of Salisbury, until in 1499 they were finally included in the bishopric of Winchester.

[Wood's Athenæ Oxon. (ed. Bliss), ii. 691; Foss's Lives of the Judges, v. 38; Godwin, De Præsulibus; Letters and Papers Rich. III and Hen. VII (ed. Gairdner) (Rolls Ser.); Le Neve's Fasti (Hardy); Cassan's Lives of the Bishops of Salisbury; Jones's History of the Diocese of Salisbury.] W. H.

BLYTHE, JOHN DEAN (1842–1869), son of Peter Dean Blythe and his wife Elizabeth, was born at Ashton-under-Lyne on 12 April 1842. His grandfather, James Blythe, was a notable Scotch schoolmaster at the village of Limekilns, about fifteen miles from Edinburgh. After a brief stay at the Ryecroft British school, Blythe worked in a factory; then obtained a post on a local paper as reporter, and afterwards entered a firm in Manchester, in whose employment he remained until his death. He attended night classes and studied by himself. He learned Latin, French, and Spanish, and read English literature. A retentive memory enabled him to recall an immense number of passages, especially from Shakespeare. On one occasion Blythe supplied the references to fifty-seven out of sixty passages selected to try him. Amongst his manuscripts was one containing over five hundred entries, alphabetically arranged, of the contents of 'A Midsummer Night's Dream.' His literary efforts were encouraged by the Rev. Joseph Rayner Stephens and John Critchley Prince. A contribution to 'Punch' and some verses in the Ashton newspapers are the only pieces known to have been printed during Blythe's lifetime. In politics he was a philosophical radical. He attended, as a teacher, the Sunday school of the Methodist New Connexion, in Stamford Street, Manchester, during the greater portion of his life. He edited a manuscript magazine which circulated amongst the members of a self-improvement society. On 5 Feb. 1869 he was killed by the accidental discharge of a revolver in the hands of a friend. He left behind him a considerable amount of manuscript, and a small memorial volume was issued, entitled 'A Sketch of the Life [by Joseph Williamson] and a Selection from the Writings of John Dean Blythe,' Manchester, 1870.

[A Sketch of the Life, &c. of J. D. Blythe, 1870.] W. E. A. A.

BOADEN, JAMES (1762–1839), biographer, dramatist, and journalist, was the son of William Boaden, a merchant in the Russia trade. He was born at Whitehaven, Cumberland, on 23 May 1762, and at an early age came with his parents to London, where he was educated for commerce. After serving some time in a counting-house he turned his attention to journalism, and in 1789 was

appointed editor of the 'Oracle' newspaper, which had been started in that year as a rival to the 'World.' Boaden's first dramatic piece was 'Osmyn and Daraxa, a Musical Romance,' acted in 1793. His next play, 'Fontainville Forest,' 1794, 8vo, founded on Mrs. Radcliffe's 'Romance of the Forest,' was received with much applause at Covent Garden. About this time Boaden entered himself of the Middle Temple, but does not appear to have been called to the bar. From 1795 to 1803 he continued to write plays which were well received. The titles of these are: 1. 'The Secret Tribunal,' 1795, 8vo. 2. 'Italian Monk,' 1797, 8vo, founded on Mrs. Radcliffe's novel of the same name. 3. 'Cambro Britons,' 1798, 8vo. 4. 'Aurelio and Miranda,' 1799, 8vo. 5. 'Voice of Nature,' 1803, 8vo. 6. 'Maid of Bristol,' 1803, 8vo. In 1796 Boaden addressed to George Steevens, the Shakespearean commentator, 'A Letter containing a Critical Examination of the Papers of Shakespeare published by Mr. Samuel Ireland,' 8vo. He stated clearly in this letter his grounds for believing the Ireland papers to be spurious; but he did not attempt to deny that he, like so many others, had been at first deceived. In reply to this letter appeared an anonymous pamphlet, entitled 'A Comparative Review of the Opinions of Mr. James Boaden (editor of the "Oracle") in February, March, and April 1795, and of James Boaden, Esq. (author of "Fontainville Forest" and of a "Letter to George Steevens, Esq.") in February 1796, relative to the Shakespeare MSS. By a Friend to Consistency.' The 'Friend to Consistency' (James Wyatt) pointed out that Boaden had been most enthusiastic about the 'invaluable remains of our immortal bard' when they were first presented to the public. In later life Boaden applied himself to the writing of biographies of celebrated actors and actresses. His 'Life of Kemble' (with whom he had been on terms of intimacy), in two volumes, 8vo, appeared in 1825. It was followed by the 'Life of Mrs. Siddons,' 1827, 2 vols. 8vo, and 'Life of Mrs. Jordan,' 1831, 2 vols. 8vo. These memoirs are very pleasant reading; the style is easy and genial, and the author is careful to state his facts with accuracy. In 1833 Boaden published his 'Memoirs of Mrs. Inchbald,' 2 vols. 8vo, to which were added some dramatic pieces published (for the first time) from Mrs. Inchbald's manuscripts. Boaden's attempts at novel-writing are of little interest, though they were esteemed 'ingenious performances' in their day. 'The Man of Two Lives' is the title of one, and the 'Doom of Giallo, or the Vision of Judgment,' 1835, 2 vols. 8vo, of the other. In 1824 appeared 'An Inquiry into the Authenticity of the various Pictures and Prints of Shakespeare,' and in 1837 a tract of considerable interest 'On the Sonnets of Shakespeare, identifying the person to whom they are addressed, and elucidating several points in the Poet's History.' The writer maintains that the Mr. W. H. to whom the sonnets were dedicated was William Herbert, afterwards Earl of Pembroke, a view which has been adopted by many later scholars. The essay first appeared in some numbers of the 'Gentleman's Magazine,' 1832. Boaden died on 16 Feb. 1839. He was a man of amiable manners and wide information; witty in conversation and possessed of a good store of anecdotes. He left nine children, of whom John [q. v.] was an artist, and another (a daughter) inherited a facility for play-writing.

[Gent. Mag. 1839, pp. 437–8; Biographia Dramatica, ed. Stephen Jones, 1812; Boaden's Works.] A. H. B.

BOADEN, JOHN (*d.* 1839), portrait painter, who was the son of James Boaden [q. v.], the dramatic author and critic, exhibited at the Royal Academy between the years 1810 and 1833, and at the Society of British Artists until 1839. He confined himself to portraiture, painting occasionally portrait groups and theatrical portraits in character; but his works, although pleasing, did not rise above mediocrity. There is by him a portrait of the Rev. Chauncy Hare Townshend, the donor of the 'Townshend Bequest' in the South Kensington Museum. He died in 1839.

[Redgrave's Dictionary of Artists, 1878.] R. E. G.

BOADICEA (*d.* 62) was the wife of Prasutagus, king of the Iceni or Eceni, a people occupying the district which now forms the counties of Norfolk and Suffolk. The Iceni were a powerful and warlike race, who, however, had come to terms with the Romans as early as the time of Cæsar. About the year 50 the harsh policy of the proprætor Ostorius led to a revolt, headed by the Iceni; but this insurrection was speedily quelled, and the Iceni were reduced once more to the rank of tributaries, Prasutagus being permitted to retain his former position as king, or possibly, as has been suggested, being now set over the Iceni by the Romans. Prasutagus, a man of great wealth, died about the year 60, bequeathing his property to the Roman emperor jointly with his daughters, hoping by this means to secure his kingdom and family from

molestation. These precautions had, however, a contrary effect; the will was made by the Roman officials a pretext for regarding the whole property as their spoil. Boadicea, the widow of Prasutagus, was flogged, her daughters outraged, and other members of the family were treated as slaves, or deprived of their ancestral property. Roused to desperation by such treatment and fearing worse in the future, the Iceni, under the leadership of their queen Boadicea, headed a revolt, in which they were joined by the Trinobantes, a people occupying what are now the counties of Essex and Middlesex, in whose midst was the Roman colony of Camulodunum (Colchester), where a body of Roman veterans kept the native inhabitants in subjection by a system of terrorism. Taking advantage of the absence of Suetonius Paullinus, the Roman governor, in the island of Mona (Anglesey), the Iceni and their allies broke into open revolt. Camulodunum was taken and destroyed, and the temple of Claudius, which was considered to be in a peculiar degree a monument of the British humiliation, was stormed, and after a siege of two days so completely demolished that its site is undiscoverable at the present day. The devastation quickly spread far and wide. Suetonius hastened up to Londinium, collecting soldiers on his march, but did not yet feel sufficiently strong to encounter his enemies, and was forced to leave Londinium, which, as well as Verulamium, soon shared the fate of Camulodunum. The Romans were massacred in great numbers, seventy thousand according to Tacitus having been put to death, none being spared to be kept or sold as slaves. But Boadicea's triumph was of short duration. Suetonius succeeded in gaining a position in a narrow valley where it was impossible for the Britons to employ their tactics of outflanking. Tacitus gives a picturesque account of the preparations for battle on both sides. Boadicea, accompanied by her daughters, drove in her chariot through the lines of her army, reminding them of the wrongs which they had endured at the hands of the Romans, and of the mortal insults to which she and her daughters had been subjected, and inciting them to revenge. Suetonius encouraged his men in a different fashion, exhorting them not to fear multitudes consisting more of women than of men. The battle was quickly decided. Suetonius, with a force of not more than ten thousand men, inflicted an overwhelming defeat upon twenty times the number of his opponents. Eighty thousand Britons were killed, the Roman loss being only four hundred; while Boadicea, in despair at the crushing nature of her defeat, destroyed her life by poison. This battle completely put an end to the revolt and finally established the Roman supremacy in Britain.

The form of the name Boadicea which is here adopted as being sanctioned by long popular usage is without authority. The more correct form is probably Boudicca or Bodicca, which, along with the masculine Bodiccius, are found in Roman inscriptions. These names are presumed to be connected with the Welsh *budd*, advantage (Irish *búaid*, victory), Welsh *buddugol*, victorious; so that as a proper name Boudicca may be considered equivalent to Victoria.

[Tacitus, Ann. xiv. 31–7, Agricola, c. 15, 16; Dion Cassius, lxii. 1–12; Elton's Origins of English History; Rhys's Celtic Britain.] A. M.

BOAG, JOHN (1775–1863), compiler of the 'Imperial Lexicon,' was born at Highgate in the parish of Beith, Ayrshire, on 7 Jan. 1775. He matriculated at the university of Glasgow in 1797, and completed his academical course with a view to taking orders in the church of Scotland, but joined the body of independents or congregationalists, who in 1812 formed themselves into the Congregational Union of Scotland. He acted for many years as an evangelist, and not infrequently in the open air or by the wayside. He had small charges in the Isle of Man and Helensburgh. Ultimately he accepted the appointment of pastor over a very small independent congregation in the village of Blackburn, Linlithgowshire, from which, it is believed, he never received more than 25*l.* to 30*l.* a year. He also kept a day-school on his own account. It was in this humble position that Boag compiled his *magnum opus*. His aim was to combine etymology, pronunciation, and explanation of scientific terms and others used in art and literature. He wished also to incorporate (1) new words since Johnson, and (2) modifications and other changes of meanings. He commenced this arduous undertaking after he had entered his seventieth year. Within three years his manuscript was ready for the press. It was printed and published by the Edinburgh Printing and Publishing Company. Unfortunately this company speedily became bankrupt. About 1847 Messrs. Fullarton & Co. became proprietors of the 'Imperial Lexicon,' and issued it in parts or numbers, constituting two massive volumes. The work had an enormous sale and held its own until the publication of Ogilvie's Dictionary, which was largely based upon it. Prefixed was a 'Popular Grammar of the English Language,' by Mr. R. Whyte. Besides his 'Imperial Lexicon,' Boag was the author of a number

of pamphlets on questions of the day, and was a frequent contributor to contemporary religious periodicals.

He married Agnes Hamilton on 19 June 1798, by whom he had six sons and three daughters. One of his sons was Sir Robert Boag, mayor of Belfast. He died at Craigton House, Linlithgowshire—the residence of a daughter-in-law, with whom he had resided in his later years—on 15 Sept. 1863, in the eighty-ninth year of his age.

[Communications from Blackburn (Linlithgowshire); from Rev. James Ronaldson, Longridge, Fauldhouse; Rev. George Boag, M.A., Holme Eden Vicarage, Carlisle; John Macnab, Esq., Edinburgh (of Fullarton & Co.); and Boag's books.] A. B. G.

BOARDMAN, BORDMAN, BOURDMAN, or **BOURMAN, ANDREW,** D.D. (1550?–1639), divine, was a native of Lancashire, where he was born about 1550. He was admitted a scholar of St. John's College, Cambridge, 9 Nov. 1568, and matriculated as a pensioner on the 12th of the same month. He became B.A. in 1571–2, M.A. in 1575, B.D. in 1582, and D.D. in 1594. He was admitted to a fellowship on the Lady Margaret foundation 12 March 1572–3 (Baker, *History of St. John's*, 1869, i. 289), the same day being also that of the admission of his friend Everard Digby, of Rutland, the son of Sir Everard Digby, to whose 'Theoria Analytica,' &c. 4to, London, 1579, he contributed some Greek verses prefixed to the work. Boardman was appointed Greek lecturer of his college 5 Sept. 1580, and at Michaelmas following was elected one of the college preachers (Baker, *History*, &c. i. 334). He was made junior bursar of his college 27 Jan. 1581–2 (*Athenæ Cantabrigienses*, ii. 549), and in the same year, the year of his first degree in divinity, was appointed minister of St. Mary's Church, Bury St. Edmunds, where he dwelt in a house which was identified in the current feoffees' accounts as 'next St. James steple' (Tymms, *Historie*, &c.) He vacated this preferment in 1586, and removed to a benefice then known as Allchurch, near Warwick, and ultimately became also vicar of St. Mary's Church in that town, to which he was appointed by the municipality 11 Jan. 1590–1, in succession to Leonard Fetherston, deprived. He appears to have held this united preferment for nearly fifty years, and to have died in its enjoyment shortly before 16 July 1639, the date at which the Rev. Richard Venour is recorded to have been presented, by King Charles I, to the living then vacant by the death of his predecessor (Dugdale, *Warwickshire*, 439). The authors of 'Athenæ Cantabrigienses' identify Dr. Boardman as the writer of some English commendatory verses, to which the initials A. B. are subscribed, prefixed to Thomas Morley's 'Plaine and Easie Introduction to Practicall Musicke,' 4to, London, 1597, and other editions. During the earlier portion of his connection with Warwick, Boardman had given umbrage to Thomas Cartwright, master of the Earl of Leicester's Hospital (Brook, *Life of Cartwright*, &c. 311). The literary result of the controversy was 'The Fan of the Faithfull to trie the Truth in Controversie; collected by A. B.; dedicated by James Price,' 16mo, London.

[Dugdale's Warwickshire, 1730; Tymms's Historie of the Church of St. Marie, Bury St. Edmund's, 1845; Brook's Memoir of Thomas Cartwright, London, 1845; Cooper's Athenæ Cantab. ii. 238–9; Baker's History of St. John's College, ed. Mayor, 1869.] A. H. G.

BOASE, HENRY (1763–1827), banker and author, was the fourth son of Arthur Boase, of Madron, a parish in Cornwall, who died August 1780, by Jane, daughter of Henry Lugg. He was born at Madron on 3 June 1763, and in 1785 went from Penzance to Roscoff, in Brittany, in a fishing-boat, to proceed to Morlaix, where he resided for some time, and acquired a good knowledge of the French language. Not finding any business opening in Cornwall, he went to London, where he obtained a situation as corresponding clerk in the banking house of Messrs. Ransom, Morland, & Hammersley in 1788. This house had an extensive continental connection, and after the flight of Louis XVI in 1791 a large part of the funds for the support of the emigrant clergy and nobility passed through their hands. Through his knowledge of French, Boase was, on this occasion, able to render such great service to his employers, that he was promoted to be chief clerk in 1792, and seven years later he became the managing partner. During his residence in London he was well acquainted with Granville Sharpe, Robert Owen, and other men eminent for their philanthropic exertions; was a leading member of the London Missionary Society; and took a considerable part in the foundation of the British and Foreign Bible Society, in conjunction with the Rev. Thomas Charles, of Bala, with whom he had become intimately acquainted whilst engaged in distributing, as Mrs. Palmer's banker, her donation of 1,000*l.* to the poor beneficed clergy of Wales. He was also much interested in the formation of schools on the new system of Joseph Lancaster. His

correspondence, part of which is preserved in the British Museum (*Addit. MS.* 29281), gives many details on these matters. His mind was also much occupied with the financial questions of the day, and he became well known in banking circles by the publication of the following works: 1. 'Remarks on the Impolicy of repealing the Bank Restriction Bill,' 1802. 2. 'Guineas, an unnecessary and expensive Incumbrance on Commerce,' 1802, 2nd edition 1803. 3. 'A Letter to the Right Hon. Lord King in Defence of the Conduct of the Directors of the Banks of England and Ireland,' 1804. 4. 'The Disadvantage of the new Plan of Finance,' 1807. 5. 'Remarks on the new Doctrine concerning the supposed Depreciation of our Currency,' 1811. His health was so seriously affected by the London winters, that at the close of 1809 he retired from business and went to live at Penzance. There he became a partner in the Penzance Union Bank; served the office of mayor in 1816; aided Dr. Paris and Mr. Ashhurst Majendie to found the Geological Society of Cornwall; took an active share in promoting the Penzance Public Library, and furnished to Sir Thomas Bernard valuable evidence as to the pernicious effects of the duties on salt. In 1821 he was elected a fellow of the Royal Society of Literature. He died at Alverton, Penzance, 8 April 1827. He married, 26 Oct. 1794, Anne, the only child of Matthew Craige of Walsall, by whom he left a large family.

[An Account of the Family of Boase (1876), pp. 4–8.] G. C. B.

BOASE, HENRY SAMUEL, M.D. (1799–1883), geologist, was the eldest son of Henry Boase [q. v.] of Madron—the parish in which Penzance is situated. He was born in Knightsbridge—his mother being Anne, the daughter of Matthew Craige—on 2 Sept. 1799. Boase received his earliest education at the school kept in those days in Sloane Street by the Messrs. Watson. He was removed in 1814 to the grammar school at Tiverton, but showing at this time a fondness for chemistry—a science then rendered fashionable by the discoveries made by Humphry Davy—he was sent, in 1815, to Dublin, to pursue his studies under the direction of Dr. Edmund Davy, then professor of chemistry in the university of that city. After a few years Boase proceeded to Edinburgh, and studied medicine in that university, being admitted to his M.D. degree in 1821. His first independent start in life was made at Penzance, where he practised with considerable success as a physician for several years. Boase's scientific education rendered him a valuable member of the Royal Geological Society of Cornwall, of which he was secretary from 1822 to 1829, and he delivered occasional lectures on chemistry to the members. But he soon turned to geology, and undertook a thorough examination of the primary rocks of the interesting county of Cornwall. In 1829 he began to collect specimens, and to study with considerable earnestness the geological phenomena of that important mineral district. He pursued also at the same time a chemical investigation into the constitution of the older rocks, and of the metalliferous deposits which they enclose. This inquiry led him in 1836 to publish in Thompson's 'Records' a description of an earth—similar to *Donaria*, obtained by Bergemann from the *organite* of Brevig in Norway—which has, however, been proved by later investigations to be identical with *Thorina*.

In 1832 Boase commenced, in the fourth volume of the 'Transactions of the Cornwall Geological Society,' his 'Contributions towards a Knowledge of the Geology of Cornwall,' and he contributed to Mr. Davies Gilbert's 'Parochial History of Cornwall' succinct descriptions of the geology of each parish in the county. In 1834 he published 'A Treatise on Primary Geology' (London, 8vo).

The connection of his father with banking led Boase to become a partner in the Penzance Union Bank, which position he retained from 1823 to 1828.

Desiring to associate with the active scientific world, Boase removed to London, and resided in Burton Crescent during the years 1837 and 1838. He did not secure the recognised position which he desired, but he was, on 4 May 1837, admitted a fellow of the Royal Society.

Investigations into the chemistry of some tinctorial products and their application to textile fabrics brought Boase into familiar intercourse with some of the large bleaching and dyeing establishments of Scotland. In 1838 he removed from London to Dundee, and became managing partner in the firm of Turnbull Brothers of the Claverhouse Bleachfield. This establishment benefited by the application of Boase's chemical knowledge to the bleaching processes. The 17th of July 1855 we find the date of a patent taken out by Boase for 'improvements in the process of drying organic substances.' He finally retired from business in 1871.

In the intervals of an active life Boase found opportunities for continuing his scientific studies, one of the results being the publication in 1860 of 'The Philosophy of

Nature, a Systematic Treatise of the Causes and Laws of Natural Phenomena' (London, 8vo). This work is certainly the result of long-continued and careful thought. It deals 'with the relationship of the principal sciences, both concrete and pure; it shows that whatever department of nature we make the object of our investigation, whether as to its outward appearance or as to its inner constitution, it will be found to have both a real and ideal side, and accordingly as we direct our attention to the one or the other, the knowledge obtained must relate either to forces or ideas—that it must be resolved into either a physical or a formal science.' There is a considerable amount of deductive power shown in this volume, but the reasoning from the inductive facts is not always satisfactory. This work never attracted any special notice; the neglect being evidently due, as Boase himself expresses it, to 'the frequent antagonism of our opinions to those which more generally prevail.' He also published: 'An Essay on Human Nature,' London, 1865 (8vo); 'The Second Adam, the Seed of the Woman,' anon., London, 1876 (8vo); 'A few Words on Evolution and Creation,' London, 1883 (8vo).

In addition to the above we find that Boase contributed several memoirs and papers to the 'Transactions of the Cornwall Geological Society' and to scientific journals, the following being the most important; those omitted were chiefly devoted to the chemical examination of metallic and earthy minerals: 1. 'Observations on the Submersion of part of the Mount's Bay, and on the Inundation of Marine Sand on the North Coast of Cornwall,' 'Cornwall Geol. Soc. Trans.' ii. 1822. 2. 'On the Differences in the Annual Statements of the quantity of Rain falling in adjacent places,' Thompson's 'Ann. Phil.' iv. 1822. 3. 'Some Observations on the Alluvial Formations of the Western part of Cornwall,' 'Cornwall Geol. Soc. Trans.' iii. 1827. 4. 'Contributions towards a Knowledge of the Geology of Cornwall' (1830), ibid. iv. 1832. 5. 'Note on Capros aper *Lacép.*, Zeus aper *Linn.*, and a Tetrodon taken in Mount's Bay, Cornwall,' 'Zoological Society Proceedings,' i. 1833. 6. 'An Inquiry into the Nature of the Structure of Rocks,' 'Philosophical Magazine,' vii. 1835. 7. 'Remarks on Mr. Hopkins's "Researches on Physical Geology,"' ibid. ix. 1836; with 'Additional Remarks on these "Researches,"' ibid. x. 1837. 8. 'A Sketch of M. Faye's "Examen d'un Mémoire de M. Plante sur la force répulsive et le milieu résistant," with a few remarks thereon,' ibid. xxi. 1861.

Boase died after a short illness on 5 May 1883, leaving a numerous family by his wife, Elizabeth Valentina, who died in 1876. This lady was the eldest daughter of William Stoddard.

BOAST, JOHN. [See BOSTE.]

BOATE, DE BOOT, BOOTIUS, or BOTIUS, ARNOLD (1600?–1653?), Hebraist, was the son of Godefrid de Boot of Gorcom, Holland. Born about 1600 he graduated at the university of Leyden, where he received the degree of doctor of medicine, and applied himself assiduously to the study of Hebrew rabbinical writings. His labours in that direction were mainly in relation to questions which had been raised concerning the various readings in the Hebrew text of the Bible, and the possibility of correcting them by the Septuagint. Boate's first work appears to have been that produced in conjunction with Francis Taylor, and published at Leyden in 1636 with the following title: 'Examen Præfationis Morini in Biblia Græca de textus Ebraici corruptione et Græci authoritate: cujus auctores Franciscus Taylor et Arnoldus Bootius.' The publication consisted of 226 pages, 12mo, and the preface was dated at London in October 1635. About this time Boate entered into correspondence with Primate Ussher, then engaged on biblical and chronological works. At his instance Boate became a resident in Dublin, where many Dutch merchants then carried on trade, and through Ussher's influence he soon acquired extensive medical practice. A treatise by Boate and his brother Gerard depreciatory of the Aristotelian philosophy was published at Dublin in 1641, with the following title: 'Philosophia Naturalis reformata, id est Philosophiæ Aristotelicæ accurata examinatio ac solida confutatio et novæ et verioris introductio. Per Gerardum et Arnoldum Bootios, fratres Hollandos, medicinæ doctores.' This volume of three hundred and eighty pages in small quarto was dedicated to Robert Sydney, earl of Leicester, then recently appointed to the viceroyalty of Ireland, and father of Algernon Sydney. Prefixed to the book were also dedicatory epistles to Primate Ussher and to the university of Leyden, of which the authors designated themselves 'quondam alumni.' A certificate was also prefixed under date of 18 Jan. 1640-1, from Edward Parry, chaplain to the archbishop of Dublin, and subsequently bishop of Ossory. On Christmas day 1642 Boate was married at Dublin to Margaret, daughter of Thomas Dungan,

justice of the common pleas in Ireland. She was at the time of her marriage in her seventeenth year, and is described as of great beauty, and endowed with rare abilities, virtues, and accomplishments. In addition to his 'ample and flourishing practice' at Dublin Boate was engaged as physician-general of the English forces in Ireland, large numbers of which were then employed there against the Irish confederates. An interesting medical work by Boate—'Observationes medicæ de affectibus a veteribus omissis' (12mo)—appeared in 1649 (cf. HALLER'S *Bibl. Med.*) Boate quitted Ireland in May 1644, and in that year published in quarto at London a treatise with the following title on the Hebrew text of the Old Testament: 'Animadversiones sacræ ad textum Hebraicum Veteris Testamenti: in quibus loci multi difficiles hactenus non satis intellecti vulgo, multæque phrases obscuriores ac vocabula parum adhuc percepta explicantur. . . . Auctore Arnoldo Bootio, M.D.' Boate's work was severely criticised by the erudite Louis Capel, professor at the protestant university at Saumur, whose treatise, entitled 'Arcanum Punctuationis revelatum,' published in 1624, was regarded as an assault on the integrity of the Hebrew text of the Bible. Boate fixed his residence at Paris, and maintained correspondence with Ussher, who acknowledged his obligations to him for valuable aid and for information in connection with continental manuscripts, and with the works of erudition in progress abroad. A reply to criticisms by Louis Capel was published by Boate at Paris in 1650, addressed to Ussher, and entitled 'De Textus Hebraici Veteris Testamenti certitudine et authoritate contra Ludovici Capelli criticam Epistola Arnoldi Bootii ad reverendissimum Jacobum Usserium archiepiscopum Armachanum.' To this publication were appended a letter dated August 1650, from Ussher to Boate, and an appendix addressed by the latter to Buxtorf. Boate's wife died in her twenty-fifth year at Paris in April 1651. As a memorial of her virtues and of his attachment to her he published there in the same year in English 'The Character of a Trulie Vertuous and Pious Woman, as it hath been acted by Mistris Margaret Dungan (wife to Doctor Arnold Boate) in the constant course of her whole life.' This small volume, apparently unknown to bibliographers, was inscribed to Thomas Syderserf, the deprived bishop of Galloway, who contributed to it a Latin elegy on the deceased lady. Boate's views as to the Hebrew text of the Bible were vindicated by Ussher in a Latin letter addressed by him to Capel in 1652. In that year we find Boate in communication with Samuel Hartlib in reference to the publication of 'Ireland's Naturall History'—a work prepared by Boate's brother Gerard [q. v.] The last printed work of Boate appears to have been a quarto volume of two hundred and forty pages, issued at Paris in 1653, with the following title: 'Arnoldi Bootii Vindiciæ seu apodixis apologetica pro Hebraica veritate contra duos notissimos et infensissimos ejus hostes, Johannem Morinum et Ludovicum Capellum.' Prefixed is a dedication, dated Paris, 5 May 1653, to Gisbert Voet, an eminent protestant theologian, professor of Hebrew in the university of Utrecht. The date of Boate's death has not been ascertained.

[Parr's Life of James Ussher, London, 1686; Works of Ussher, Dublin, 1848; Epistola Jacobi Usserii Armachani ad Ludovicum Capellum de variantibus textus Hebraici lectionibus, London, 1652, 1658; Bibliotheca Belgica, cura J. F. Foppens, Bruxelles, 1739; History of City of Dublin, 1854; Hist. of Irish Confederation and War in Ireland, 1641–43, Dublin, 1882.] J. T. G.

BOATE, DE BOOT, BOOTIUS, or **BOTIUS, GERARD** (1604-1650), physician, brother of Arnold Boate [q. v.], was born at Gorcum, Holland, in 1604. He entered the university of Leyden as a medical student 21 June 1628, and graduated there as doctor of medicine 3 July 1628. In 1630 he published a book styled 'Horæ Jucundæ.' Boate settled in London, was employed as physician to the king, and, in conjunction with his brother Arnold, produced the treatise on philosophy, already mentioned as published in 1641. He became a contributor to the fund under the English act of parliament of 1642, which admitted the Dutch to subscribe money for the reduction of the Irish, to be subsequently repaid by grant of forfeited lands in Ireland. With a view to augmenting the interest of 'adventurers' for Irish lands, he undertook the compilation of a work to supply information on the profits to be derived from the various productions of that country. Boate had never visited Ireland, but materials for his work were furnished by his brother Arnold and by some of the English who had been ejected from Irish lands sometime occupied by them. Boate commenced the 'Natural History' early in 1645 and completed it within the year, but its publication was deferred. He was admitted a licentiate of the College of Physicians 6 Nov. 1646. In April 1649 the appointment of Boate as doctor to the hospital at Dublin was referred by the council of state at London to Oliver Cromwell, who in the preceding month had been appointed

commander-in-chief for Ireland. The treasurer-at-war in the following September paid Boate fifty pounds 'on account of his entertainment as physician for Ireland.' Boate arrived in Ireland at the latter end of 1649, while Cromwell was in command there, but he survived only a short time. He died in January 1649–50.

Boate's papers and his 'Natural History' left behind him in London came into the hands of Milton's friend, Samuel Hartlib, a Pole, resident in England. With the assent of Arnold Boate, then at Paris, the 'Natural History' was published at London in 1652 by Hartlib, with a dedication to Oliver Cromwell and to Charles Fleetwood, commander-in-chief in Ireland. It bore the title: 'Ireland's Naturall History. Being a true and ample description of its situation, greatness, shape, and nature; of its hills, woods, heaths, bogs; of its fruitfull parts and profitable grounds, with the severall ways of manuring and improving the same; with its heads or promontories, harbours, roades, and bayes; of its springs and fountaines, brookes, rivers, loghs; of its metalls, mineralls, freestone, marble, sea-coal, turf, and other things that are taken out of the ground. And lastly of the nature and temperature of its air and season, and what diseases it is free from or subject unto. Conducing to the advancement of navigation, husbandry, and other profitable arts and professions. Written by Gerard Boate, late Doctor of Physick to the State in Ireland, and now published by Samuel Hartlib, Esq., for the common good of Ireland, and more especially for the benefit of the Adventurers and Planters there.' In his dedication to Cromwell and Fleetwood, Hartlib observed: 'I lookt also somewhat upon the hopefull appearance of replanting Ireland shortly, not only by the adventurers, but happily by the calling in of exiled Bohemians and other Protestants also, and happily by the invitation of some well affected out of the Low Countries, which to advance are thoughts suitable to your noble genius, and to further the settlement thereof, the Natural History of that countrie will not be unfit, but very subservient.' The 'Natural History' is divided into twenty-four chapters. In a letter, dated Paris, 10 Aug., prefixed to the volume and addressed to Hartlib, Arnold Boate stated that his brother had contemplated three more books on the plants, 'living creatures,' and natives of Ireland respectively.

A French version, under the title of 'Histoire Naturelle d'Irlande,' was published at Paris in 1666. In relation to the work the author of a defective and inaccurate notice of Boate in the 'Grand Dictionnaire' of Moreri, observed: 'Il y a peu d'ouvrages mieux exécutés dans ce genre. Il serait à souhaiter que nous eussions une histoire dressée sur le même plan de tous les pays du monde, au moins de ceux de l'Europe.' In repayment of Gerard Boate's contributions in money above mentioned, his relict, Katherine Boate, obtained, under certificate dated 15 Nov. 1667, upwards of one thousand acres of land in Tipperary.

A quarto edition of the 'Natural History' by Boate was published at Dublin in 1726, and reissued there in 1755. It was again published in the first volume of a 'Collection of Tracts and Treatises illustrative of the Natural History, Antiquities, and Political and Social State of Ireland,' 8vo, Dublin, 1860. No edition of Boate's 'Natural History' has hitherto been published with annotations or additions.

[Bibliotheca Belgica, cura I. F. Foppens, 1739; Calendar of State Papers, Domestic Series, London, 1857; Munk's College of Physicians, i. 243; Ashburnham MSS., Royal Irish Academy, Dublin, H. iv. 2; MS. Records of Proceedings under Act of Setlement, Public Record Office, Ireland; Le Grand Dictionnaire historique, par Louis Moreri, Paris, 1759, tome ii. p. 78.] J. T. G.

BOBART or **BOBERT, JACOB** (1599–1680), the elder, botanist, was born at Brunswick in 1599, and in 1632 was appointed superintendent of the Oxford Physic Garden on its foundation by the Earl of Danby in that year. In 1648 he published an anonymous catalogue, in alphabetical order, of sixteen hundred plants then under his care ('Catalogus plantarum horti medici Oxoniensis, scil. Latino-Anglicus et Anglico-Latinus'); this was revised in 1658 in conjunction with his son [see BOBART, JACOB, the younger], Dr. Philip Stephens, and William Brown. Very little seems to be known of his life, save a few stray hints, such as Granger's statement that 'on rejoicing days he used to have his beard tagged with silver,' and that a goat followed him instead of a dog. He died on 4 Feb. 1679–80 at the garden house, and was buried in the churchyard of St. Peter in the East, where there is a tablet to his memory. His will was dated 2 Nov. 1677, and was proved at the Oxford registry; in it he desired to be buried near his dear wife Mary. He left houses to his sons Jacob and Tilleman (or Tillemant), and mentions a deceased son Joseph; he left legacies also to six daughters, his second wife Ann being residuary legatee. The following portraits exist: engraving by Bougher, dated 1675; a full length as frontis-

piece to 'Vertumnus,' a poem addressed to his son, and another in the 'Oxford Almanac' for 1719.

[Bobart's (H. T.) Biograph. Sketch (privately printed), 1884; Wood's Fasti (Bliss); Pulteney's Sketches, i. 165 (1790); Granger's Biog. Hist. England, i. 88-9 (1775).] B. D. J.

BOBART, JACOB (1641–1719), the younger, botanist, the younger son of Jacob Bobart (1599–1680), was born at Oxford 2 Aug. 1641, succeeded his father as superintendent of the Physic Garden, and on the death of Dr. Morison in 1683 lectured as botanical professor. In 1699 he brought out the third part of Morison's 'Historia Plantarum,' the second having been issued during the writer's life in 1680, whilst the first was never printed. In Gray's 'Notes on Hudibras' occurs the following: 'Mr. Jacob Bobart, botany professor of Oxford, did about forty years ago (in 1704) find a dead rat in the Physic Garden, which he made to resemble the common picture of dragons by altering its head and tail, and thrusting in taper sharp sticks, which distended the skin on each side till it mimicked wings. He let it dry as hard as possible. The learned immediately pronounced it a dragon, and one of them sent an accurate description of it to Dr. Magliabecchi, librarian to the Grand Duke of Tuscany. Several fine copies of verses were wrote upon so rare a subject; but at last Mr. Bobart owned the cheat. However, it was looked upon as a masterpiece of art, and as such deposited in the museum or anatomy school at Oxford.'

Whilst he held this appointment he formed a hortus siccus according to the fashion of the times in twelve vols. folio, which is kept at the garden. He vainly tried for the post of curator to the Apothecaries' Garden at Chelsea in 1692. Consul William Sherard, who afterwards left his library and an endowment to the Oxford Garden, wrote in July 1719 that Vice-chancellor Shippen had compelled Bobart, 'my old master,' who was then in weak health, to resign the office of botanic professor, Dr. E. Sandys receiving the post. He says: 'I am surprised the vice-chancellor hath obliged Mr. Bobart to resign his place . . . they ought to have let him spend the short remainder of his time in the garden.' He died on 28 Dec. 1719, and was buried two days later.

Among the Sherardian letters in the library of the Royal Society are fourteen from Bobart to the consul, and in the 'Sloane MS.,' No. 3343, in the British Museum, are many of Bobart's memoranda of considerable gardening interest. An interleaved copy of Bauhin's 'Pinax,' with copious annotations by Bobart, is in the botanical department of the Natural History Museum at Cromwell Road, and an interleaved copy of the 'Oxford Garden Catalogue,' in the possession of the writer, has a few additions in same handwriting. The genus *Bobartia* was named in honour of the two Bobarts by Linnæus in the 'Amœnitates Academicæ.'

Hist. England, 2nd ed. i. 89, note (1775).] B. D. J.

BOBBIN, TIM. [See COLLIER, JOHN.]

BOCFELD, ADAM (*fl.* 1350), a Franciscan writer on Aristotle, who appears to have flourished between 1340 and 1380, wrote commentaries on the books of Aristotle, de Topicis, de Cœlo et Mundo, de Generatione et Corruptione, de Meteoribus, and on the Metaphysics. Manuscripts of all these, save the last, were in the possession of Luke Wadding.

[Wadding's Script. Ord. Min. fo. 1; Sbaralea's Supplementum ad Scriptores, fo. 1; Tanner's Bibl. Brit. 137.]

BOCHER, BOUCHER, or BUTCHER, JOAN (*d.* 1550), anabaptist martyr, sometimes called JOAN OF KENT and JOAN KNEL, seems to have first come into notice about 1540 as 'a great dispenser of Tindal's New Testament' to the ladies of Henry VIII's court. She was a 'great reader of scripture,' and found a sympathetic friend in Anne Askew [q. v.], who was burnt for heresy in 1546. Before 1543 she had adopted opinions about the incarnation which conflicted with the contemporary notions of both catholic and protestant orthodoxy, and she was charged with heresy before Dr. Leigh, the commissary of Archbishop Cranmer. Articles drawn up in 1543 by the archbishop's enemies against Dr. Leigh charge him with displaying illegal clemency towards her, but Strype asserts that Henry VIII himself interfered to stop proceedings against her at this time (*Memorials of Cranmer*, 1848, i. 257). In 1548 Joan was again in trouble and with fatal result. She was examined before Archbishop Cranmer, Sir Thomas Smith, Hugh Latimer, and other divines, and she insisted that Christ did not 'take flesh of the Virgin.' According to Latimer, she said that 'our Saviour had a phantasticall body' (LATIMER, *Works*, Parker Soc., ii. 114). Sentence of excommunication was passed on her, and was read by

the archbishop in St. Mary's chapel of St. Paul's Cathedral on 12 April 1549. On 30 April Cranmer sent a detailed account of Joan's heresy and of his proceedings against her to the king, Edward VI, and at the same time handed her over to the privy council for punishment. She was kept in prison for a year, and was there visited by Roger Hutchinson, Lever, Whitehead, Latimer, and other protestant clergymen, but they failed to induce her to change her opinions. For a time she was detained by Lord-chancellor Rich in his own residence, York House, 'where my lord of Canterbury and Bishop Ridley resorted almost daily to her. But she was so high in spirit that they could do nothing' (Foxe, *Acts and Monuments*, 1847, vii. 631). On 27 April 1550 Lord-chancellor Rich, in accordance with an order of the council, issued a writ to the sheriff of London to burn her. On 2 May following Joan was burned at Smithfield. Dr. Scory, afterwards bishop of Rochester, 'preached at her death,' and was reviled by Joan as a lying rogue.

Foxe in his 'Acts and Monuments' (ed. Townsend, 1847, v. 699), following Sir John Hayward's 'Life of Edward VI,' asserts that Cranmer was solely responsible for Joan's death, and that he obtained the king's signature to the order for her execution by something like coercion. It has been pointed out, however, that in Edward VI's private diary, printed from the 'Cottonian MS.' (Nero C. x) in Burnet's 'Reformation' (ed. Pocock, vol. ii.), the king notes the fact of Joan's execution without comment; that Joan was burned under a writ issued by the lord chancellor to the sheriff of London, in accordance with a resolution drawn up by those members of the council who were present at the meeting of 27 April 1550; and that neither the king nor the archbishop attended that meeting. Burnet (*Reformation*, ed. Pocock, ii. 202) rightly condemns the policy that led the protestant reformers to burn Joan, a supporter of their own party, and adds: 'The woman's carriage made her be looked on as a frantic person fitter for Bedlam than a stake.' Edmund Becke [q. v.] took at the time another view, and published immediately after Joan's death 'A brefe Confutacioun of this Anabaptisticall Opinion ... For the maintenaunce wherof Jhone Boucher ... most obstinately suffered,' MDL. (reprinted in J. P. Collier's 'Illustrations of Early English Literature,' 1864, vol. ii.)

[Cranmer's report of the heresy and excommunication of Joan made to the privy council (30 April 1549) is printed from his register in Strype's Memorials of Cranmer, 1848, ii. 488–92, in Wilkins's Concilia, iv. 43, and in Burnet's Reformation, ed. Pocock, v. 246–9. See also Strype's Memorials, II. i. 335 et seq.; Roger Hutchinson's Works (Parker Society), 145–7; Fabyan's Chronicle, 1559, fol. 555; Stow's Chronicle, 1615, p. 604; Froude's History, iv. 407, 526; Lingard's History, v. 159; and especially the notes on Strype's Cranmer (1848), ii. 97–100. Other authorities are mentioned in the text.] S. L.

BOCK, EBERHARDT OTTO GEORGE VON (*d.* 1814), baron, a major-general in the British army, was descended from an old military family, and entered the Hanoverian cavalry about the year 1781. His name appears as a premier-lieutenant in the 6th Hanoverian dragoons in 1789, and as rittmeister (captain) in 1800. On the dissolution of the Hanoverian army after the convention of Lauenburg, Bock was one of the officers who came to England, where he raised four troops of heavy cavalry, which became the 1st dragoons, King's German legion, of which he was gazetted colonel 21 April 1804. The regiment was formed at Weymouth, and was a particular favourite of George III. Bock served at its head in the expedition to Hanover in 1805; also in Ireland, whither it was sent after its return home. From Ireland Bock, who had attained the rank of major-general in 1810, proceeded to the Peninsula in 1811 in command of a brigade composed of the two heavy cavalry regiments of the legion, with which he made the subsequent campaigns in Spain and the south of France in 1812–13. The steadiness and gallantry of Bock's heavy Germans often won approval, particularly on 23 July 1812, the day after the victory at Salamanca, when in a charge, which by the enemy's own admission was the most brilliant cavalry affair that occurred during the whole war, they attacked, broke, and made prisoners three entire battalions of French infantry. With one of his sons, Captain L. von Bock, and some other officers, Bock was lost in the Bellona transport, on the Tulbest rocks, on 21 Jan. 1814, on a voyage from Passages to England. His body was washed on shore at the little Breton village of Pleubian (arrondissement of Paimpol), where it was recognised and interred.

[Gross-Britt. u. Braunschw.-Lunenburg Staats-Kalendar, 1780–1803; Beamish's Hist. German Legion (1832–7); Foy's Histoire de la Guerre de la Péninsule, i. 290; Alison's Hist. of Europe, x. 367–8]. H. M. C.

BOCKING, EDWARD (*d.* 1534), Benedictine, was the leading supporter of Elizabeth Barton, the nun of Kent [q. v.] He probably belonged to the family of Bocking

settled at Ash Bocking, Suffolk, some members of which held property at Longham, Norfolk, in the fifteenth and sixteenth centuries (CARTHEW, *Hundred of Launditch*, pt. ii. 422–4). A John Bocking was one of Sir John Fastolf's clerks; he is repeatedly mentioned in the 'Paston Letters,' and much of his correspondence is printed there. He died in 1478, when Sir William Bocking, his brother, administered his effects (*Paston Letters*, ed. Gairdner, iii. 228). A Nicholas Bocking was also in Sir John Fastolf's service. Edward Bocking proceeded B.D. at Oxford on 16 June 1513 and D.D. in June 1518. He is stated to have been educated at Canterbury College, Oxford, which was afterwards absorbed in Christ Church, and (before 1513) was appointed warden there. About 1526 he had retired from Oxford to the Benedictine priory, Christ Church, Canterbury. In that year he (with a brother-monk, William Hadley) was sent by his prior, Thomas Goldwell, to Addington, Kent, to report on the alleged divine revelations of Elizabeth Barton, a maidservant of the village, who was popularly believed to be inspired by the Holy Ghost. He fulfilled his mission dishonestly. He found the girl recovering from an hysterical disorder; but he induced her—and for some years with complete success—to feign her manifestations, and to declare herself an emissary from the Virgin, sent to overthrow the Lutherans, and (subsequently) to prevent the divorce of Queen Catherine. In 1527 Bocking caused Elizabeth to be removed to the priory of St. Sepulchre's, Canterbury, and informed Archbishop Warham that 'a voice had spoken in her in one of her trances, that it was the pleasure of God that he should be her ghostly father.' About the same time he caused a collection of the nun's oracles, drawn up under his direction, to be widely circulated in manuscript. He continued in Elizabeth's service for nearly six years, and led her to follow his example of railing and jesting 'like a frantic person against the king's grace, his purposed marriage, against his acts of parliament, and against the maintenance of heresies within this realm.' A few months after Henry VIII's marriage with Anne Boleyn (28 May 1533), the nun's continued denunciations of the king's conduct led Cromwell to arrest her on a charge of treason. On 25 Sept. Bocking and her other associates shared her fate. Bocking soon confessed to the imposture, and he, with six others, was hanged at Tyburn on 20 April 1534, in accordance with the terms of the act of attainder drawn up against all the nun's immediate supporters in the previous January. Cranmer, writing to Henry VIII, 13 Dec. 1533, described the powerful and baneful influence that Bocking exerted over the novices in the priory of Christ Church, Canterbury (CRANMER, *Letters*, Parker Society, 271). Sir Richard Morison very fiercely attacks Bocking, whom he misnames Joannes, in his 'Apomaxis Calumniarum . . . quibus Joannes Cocleus . . . Henrici Octavi . . . famam impetere . . . studuit,' 1538, ff. 74–5.

[Tanner's Bibl. Brit.; Wood's Fasti (Bliss), i. 36, 47; Oxf. Univ. Reg. (Oxf. Hist. Soc.), i. 83; and the authorities quoted under ELIZABETH BARTON.] S. L.

BOCKING, RALPH (*d.* 1270), Dominican, is stated to have been a native of Chichester. He was the private confessor of Richard Wych, who held the see of Chichester from 1245 till his death in 1253. Ralph lived for many years on very intimate terms with the bishop, and on the latter's canonisation, early in 1262, was requested by Isabel, countess of Arundel, and Robert de Kilwardby (chief of the Dominican order in England, and afterwards archbishop of Canterbury) to write St. Richard's life. Ralph readily performed the task, and dedicated it to the Lady Isabel. His style is declamatory; but he utilises much information derived from the bishop, and he describes much that he himself witnessed. A thirteenth-century manuscript of the life is in the British Museum (*MS. Sloane*, 1772, ff. 25–70). It was printed in the Bollandists' 'Acta Sanctorum,' 1675, under 3 April. A popular abridgment of Ralph's life by John Elmer, manuscripts of which are extant in the British Museum (*MS. Cotton*, Tib. E, 1), in the Bodleian (*MS. Tanner*, 15), and at York, is printed in Capgrave's 'Nova Legenda Angliæ,' fol. 269 *b*. Bale attributes to Ralph a series of sermons, but of them nothing is now known.

[Hardy's Descriptive Catalogue, iii. 136-8, 179; Tanner's Bibl. Brit.; Bollandists' Acta Sanctorum, Aprilis, i. 282–318.] S. L.

BOCKMAN, R. (*fl.* 1750), portrait painter and mezzotint engraver, the initial of whose christian name is given by Füssli as C. or G., was known as an artist in Amsterdam, whence he appears to have come first to England. He worked in this country in the early part of the eighteenth century. He painted several portraits of the Duke of Cumberland, and a life-size half-length of Admiral Russell, which is in the hospital at Greenwich. He copied after Kneller, and engraved portraits in mezzotint after Vandyck, Vanloo, Dahl, Worsdale, and others. He painted and engraved (1743) a picture of 'St. Dunstan holding the Devil by the nose with the tongs.' His

widow applied for relief to the Society of Artists in 1769. Heinecken mentions amongst his portraits those of 'Thomas Chubb the Deist,' of 'Thomas Holles, duke of Newcastle,' of 'Charles, Lord Talbot,' and of 'William Walker.'

[Heinecken's Dictionnaire des Artistes, 1789; Füssli's Allgemeines Künstler-Lexikon, 1806; Redgrave's Dict. of Artists, 1878.] E. R.

BOCLAND, GEOFFREY DE (*fl.* 1195–1224), justice, was both a lawyer and a churchman. He was a justiciar in the years 1195–7, 1201–4, and 1218, in all which years fines were levied before him on the feast of St. Margaret at Westminster. As early as the beginning of John's reign he was connected with the exchequer, and as late as 1220 he was a justice itinerant in the county of Hereford. His ecclesiastical career begins in 1200, when he was archdeacon of Norfolk (not Norwich, as BLOMEFIELD, *Norwich*, i. 642). Between 1200 and 1216 the churches of Tenham and Pageham were granted him, and in the latter year, 25 March, he is found dean of St. Martin's-le-Grand, preferment which he obtained from the crown. He was concerned in the revolt of the barons in 1216, and twice in the year time and a safe-conduct were given him to appear before the king. In this year also his manor of Tacheworth in Herefordshire was forfeited and granted to Nicholas de Jelland. On Henry III's accession he was restored to his judicial position, and in 1224 he was still alive. In that year a claim was made against him by the archdeacon of Colchester for Newport, an important portion of his deanery, and he obtained a prohibition by writ against the archdeacon. Shortly before there had also been a dispute as to a vicarage in Colchester archdeaconry, that of Wytham, between Bocland and the canons of St. Martin's. The dean at last resigned whatever right he had to Eustace de Fauconbergh, bishop of London, who granted it to the canons of St. Martin's, ordaining a perpetual vicarage there; and the grant was confirmed in 1222 under the seals of the bishop, dean, and chapter of St. Paul's, and dean and canons of St. Martin's (NEWCOURT, *Repert.* ii. 675). But by February 1231 he was dead, and had been succeeded by Walter de Maitland as dean of St. Martin's. Maitland was appointed 14 Sept. 1225 (NEWCOURT). An elder brother of his, William de Bocland, married a daughter of one Geoffrey de Say, and sister-in-law of Geoffrey FitzPeter, and on the latter's death in 1214 Geoffrey de Bocland was ordered to sell to the king, at the market price, the corn and stock on Fitz Peter's estate at Berkhampstead. About the middle of the fourteenth century Maud, widow of William de Bocland, confirmed to the monastery of Walden the grant of the advowson of Essenham vicarage in the archdeaconry of Colchester (NEWCOURT, ii. 245).

[Foss's Lives of the Judges; Dugdale's Origines Juridiciales, 42; Le Neve, 219; Maitland's London, 767; Rot. de Liberat. 2 John, 8, De oblatis, 2 John, 89; Chart 2 John, 99.] J. A. H.

BOCLAND, HUGH DE, or HUGH OF BUCKLAND (*d.* 1119?), sheriff of Berkshire and several other counties, received his surname from the manor of Buckland, near Faringdon, of which he was tenant under the monastery of Abingdon. Before the death of William Rufus he was already sheriff of Berkshire, and he is stated in the Abingdon history to have been one of the persons who profited by the unjust transactions of Modbert, whom the king appointed to administer the affairs of the monastery in the interest of the royal revenues, during the period when the office of abbot was vacant. He was ordered by Henry I to restore to the abbey the possessions which he had in this manner wrongfully obtained. Notwithstanding this, the Abingdon historian gives Hugh a high character for uprightness and wisdom. The same authority states that he was held in great esteem by Henry I, and that he was sheriff of eight counties. Six of these the evidence of charters enables us to identify, viz. Berkshire, Hertfordshire, Bedfordshire, Buckinghamshire, Essex, and Middlesex. It is sometimes stated that Hugh de Bocland was justiciar of England, but this assertion is extremely questionable. It is true that he is so described in the copy of Henry I's charter of liberties, which Matthew Paris quotes as having been read to the barons in 1213; but in the obviously more accurate copy of this charter given by the same historian under the date 1100, the designation of justiciar is wanting. The Abingdon chronicle also speaks of Hugh as 'justiciarius publicarum compellationum;' the precise import of this expression, however, is not clear. The statement in Foss's 'Lives of the Judges' that he was canon of St. Paul's is probably erroneous, although his name occurs (without date or reference to any authority) in the list of prebendaries of Harleston in Newcourt's 'Repertorium,' i. 151. He witnessed a St. Albans charter dated 1116, and also another charter of the same abbey, which Mr. Luard assigns, apparently on good grounds, to the year 1119. As we find from the Abingdon history that William de Bochelande (presumably a son of Hugh) was sheriff of Berkshire in 1120, it may be inferred that Hugh de Bocland died in 1119.

Another Hugh de Bocland, who may have been a grandson of the subject of this article, was sheriff of Berkshire from 1170 to 1176, and was one of the itinerant justices in 1173 and 1174.

[Chron. Mon. Abingdon, ed. Stevenson, ii. 5, 43, 117, 160; Matt. Paris, Chron. Maj. ed. Luard, ii. 115, 552, vi. 37; Rymer's Fœdera, ed. 1816, i. 9, 10, 12; Foss's Lives of the Judges, i. 107, 219.] H. B.

BODDINGTON, HENRY JOHN (1811–1865), artist, the second son of Edward Williams and his wife Anne, *née* Hildebrand, was born in London, of a very large family of artists. His paternal grandfather, Edward Williams, an engraver, married a sister of James Ward, R.A., the animal painter, and hence he was related to George Morland, R.A., and H. B. Chalon, who married other sisters of James Ward, and to John Jackson, R.A., who married that artist's daughter. A son of this engraver, also named Edward Williams, who, after a brief period of apprenticeship to a carver and gilder, established himself as an artist, was the father of seven sons, who all became landscape painters. To avoid confusion with their relatives and other artists of the same name, the second, fifth, and sixth of these sons took the names of (Henry John) Boddington, (Arthur) Gilbert, and (Sidney) Percy respectively.

Boddington was trained in no school; what teaching he had he received from his father, in whose studio he worked from childhood. In 1832, when just of age, he married Clara Boddington, whose name he adopted. After a few years of great poverty and struggle he became a very prosperous artist. He lived first at Pentonville, removed thence to Fulham, thence to Hammersmith, and finally in 1854 to Barnes. His earliest pictures were studied from the scenery of Surrey and the banks of the Thames. Work of his was first exhibited at the Royal Academy in 1837, and from 1839 onwards one or two pictures by him were exhibited there every year until his death and four years after it. The rooms of the Society of British Artists in Suffolk Street, however, received the greater number of his productions. His name appears for the first time in the catalogue for 1837. In 1842 he became a member of the society, and afterwards exhibited there an average of ten pictures every year until his death. In 1843 he visited Devonshire, staying at Ashburton; in 1846 the English lakes; and in 1847, for the first time, North Wales, which, especially the country around Bettws and Dolgelly, was afterwards his favourite working-ground. He also painted in Scotland, Yorkshire, and other parts of England, but the subjects of most of his pictures are in the districts already named. He was never on the continent. Boddington preserved such a general level of passable merit that no one picture can be selected as excelling in a remarkable degree. He is not represented in any of the public galleries, nor—except one or two as woodcuts in the 'Illustrated London News'—have any of his works been engraved. He has perhaps more affinity with Constable than with any other of the leaders of our landscape art. His paintings are mostly taken from quiet English country life. He was a very rapid sketcher.

Boddington was of a humorous, amiable, and manly character. After suffering for several years from a progressive disease of the brain, he died at his house at Barnes 11 April 1865. His only child, Edwin Boddington, and several of his nephews are painters, and carry on the family tradition to another generation.

[Information from Mr. H. S. Percy; Our Living Painters (London, 1859); Redgrave's Dict. of Artists of the English School.] W. H-H.

BODE, JOHN ERNEST (1816–1874), divine, was born in 1816. His father was William Bode, of the post office; his mother was Mary, only daughter of the Rev. T. Lloyd, of Peterly House, Oxon. He was educated at Eton and the Charterhouse, 1830–4, where he became a scholar on the foundation. From the Charterhouse he proceeded to Christ Church, Oxford, and was the first to gain, in 1835, the Hertford scholarship, instituted the year before. He took his B.A. degree in 1837, when he was first class in classics, and his M.A. in 1840. He became a student and a tutor of his college, 1841–7, of which he was appointed censor in 1844, and acted as one of the public examiners in classics for the years 1846–1848. He was ordained deacon in 1841, and priest in 1843. In 1847 he was presented by his college to the rectory of Westwell, Oxfordshire; and on 22 July in the same year was married to Miss Hester Charlotte Lodge, of St. Nicholas, Guildford. In 1848 Bode was appointed one of the select preachers in the university, and on 12 Dec. 1850, being Founder's Day, preached a sermon at the Charterhouse Chapel, which was afterwards published as 'Our Schoolboy Days viewed through the Glass of Religion,' 8vo, London, 1850. In 1855 he preached the Bampton Lectures before the university of Oxford, published as 'The Absence of Precision in the Formularies of the Church of England, scrip-

tural and favourable to a State of Probation,' 8vo, Oxford, 1855. In 1857 Bode contested unsuccessfully with Mr. Matthew Arnold the chair of poetry at Oxford; his claims rested mainly on a volume of poems suggested by a course of reading of the old English and Scotch ballads from 1841, and published as 'Ballads from Herodotus, with an Introductory Poem,' 8vo, London, 1853; second edition, 'with four additional poems,' 1854. Bode also published 'Short Occasional Poems,' 8vo, London, 1858, and a smaller volume entitled 'Hymns from the Gospel of the Day, for each Sunday and the Festivals of Our Lord,' 12mo, Oxford, 1860. In 1860 Bode was presented by the governors of the Charterhouse to the living of Castle Camps, Cambridgeshire, at the rectory house of which he died suddenly, at the age of fifty-eight, on 6 Oct. 1874.

[Charterhouse, Lists of Scholars, 5 May 1830, and 2 May 1832; Charter-House, its Foundation and History, 1849; Graduates of Oxford, 1851; Honours Register of Oxford, 1883; Gent. Mag. September, 1811, &c.; Sussex Advertiser, 27 July 1847; Men of the Time, 1872; Crockford's Clerical Directory, 1874; English Churchman and Clerical Journal 15 Oct. 1874.] A. H. G.

BODEN, JOSEPH (*d.* 1811), lieutenant-colonel in the East India Company's service, founder of the Boden professorship of Sanskrit in the university of Oxford—whose name is spelt Bowden in Dodswell and Miles' 'Lists of the Indian Army'—was appointed lieutenant in the Bombay native infantry on 24 Nov. 1781. He became captain on 25 Oct. 1796, major on 12 Oct. 1802, and lieutenant-colonel on 21 May 1806. His name was borne at various times on the rolls of the 3rd, 5th, 6th, 8th, and 9th native infantry, and he held successively the offices of judge-advocate, aide-de-camp to the governor, quartermaster-general, and member of the military board at Bombay. There is no record of his field-service at the India Office. He retired from the service in 1807, and died at Lisbon, whither he had gone for the benefit of his health, on 21 Nov. 1811. On the demise of his daughter his property went to the university of Oxford, under conditions recorded on a tablet placed by his executors in Trinity Church, Cheltenham, which bears the following inscription: 'In a vault beneath this church are deposited the remains of Eliz. Boden, who died 29 Aug. 1827, aged 19 years. By her decease the residuary property of her father, the late Lieutenant-colonel Joseph Boden, H.E.I.C. Bombay Establishment, now in the Court of Chancery and valued at 25,000*l.* or thereabouts, devolves to the University of Oxford, and, according to the following instructions extracted from his will, is to be "by that Body appropriated in and towards the erection and endowment of a professorship in the Sanskrit language at or in any or either of the Colleges of the said University, being of opinion that a more general and critical knowledge of the language will be the means of enabling my countrymen to proceed in the conversion of the natives of India in the Christian religion, by disseminating a knowledge of the Sacred scriptures among them, more effectually than by all other means whatever."' The offer was accepted by the university in convocation on 9 Nov. 1827, and the first election took place in 1832, when Professor H. H. Wilson was appointed to the Sanskrit chair. Four Sanskrit scholarships in connection with the same endowment were founded by decrees of the Court of Chancery in 1830 and 1860. Boden never wrote a book of any kind and was not himself a Sanskrit scholar (MONIER WILLIAMS, in *Notes and Queries*, 5th ser. v. 414).

[India Office Records; Dodswell and Miles' Indian Army Lists; Notes and Queries, 5th ser. v. 414, 458; Gent. Mag. lxxxi. 2, 589; Gloucestershire Notes and Queries (London and Stroud), i. 2.] H. M. C.

BODENHAM, JOHN (*fl.* 1600), reputed editor of Elizabethan miscellanies, was concerned in the publication of 'Wits Commonwealth,' 1597, 'Wits Theater,' 1598, 'Belvedere, or the Garden of the Muses,' 1600, and 'England's Helicon,' 1600. It has been usually stated that he was the editor of these collections; but the truth appears to be that he merely planned the publication of the series, and left the editorial work to others, giving the benefit of his patronage and advice to the compilers, while they in turn were willing that he should receive such credit as the publications brought. Prefixed to 'England's Helicon' is a sonnet by 'A. B.' to 'his Loving Kinde Friend Maister John Bodenham,' which begins—

'Wits Common-wealth' the first fruites of thy paines
Drew on 'Wits Theater' the second sonne.

These lines would lead us to suppose that Bodenham was the editor of the collections of sententious extracts, 'Wits Commonwealth' and 'Wits Theater,' books which passed through many editions, and were very popular throughout the seventeenth century. But on turning to Nicholas Ling's epistle to Bodenham, prefixed to 'Wits Commonwealth,' we find that the material for that volume was chiefly collected by Ling, and that Bodenham had done little beyond sug-

gesting the publication of such a collection. In regard to 'Wits Theater' there is perfectly clear evidence that the editor was Robert Allott, who compiled 'England's Parnassus' [q. v.] A copy (preserved in the British Museum) of the 1599 edition of 'Wits Theater' contains an epistle overlooked by bibliographers, in which Robert Allott dedicates to Bodenham this 'collection of the flowers of antiquities and histories.' The anthology, 'Belvedere, or the Garden of the Muses,' 1600, has a prefatory sonnet by 'A. M.' (Antony Munday?), in which Bodenham is addressed as

Art's lover, Learning's friend,
First causer and collectour of these floures,

words which imply that Bodenham had suggested the compilation of such an anthology, and had himself collected some materials for the volume. 'Belvedere' is of small interest, as the extracts are in most instances limited to a single couplet. The authors' names are not annexed to the extracts, but a general list is given at the beginning. A disparaging notice of 'Belvedere' occurs in an anonymous play, the 'Returne from Pernassus' (printed in 1606, but acted before the death of Queen Elizabeth); nevertheless, it appears to have enjoyed some popularity, and in 1610 a second edition was issued under the title of 'The Garden of the Muses,' the first title, 'Belvedere,' being dropped. 'England's Helicon,' 1600, the most delightful of early poetical miscellanies, preserves the choicest lyrics of Breton, Barnfield, Lodge, 'the shepherd Toney,' and others. Here first appeared the full text of the pastoral song, 'Come live with me and be my love,' with the name of 'C. Marlowe' subscribed. The editor of the collection appears to have been 'A. B.,' who concludes his prefatory sonnet to Bodenham with these lines:—

My paines heerein I cannot terme it great,
But what-so-ere, my love (and all) is thine.
Take love, take paines, take all remaines in me:
And where thou art my hart still lives with thee.

Following the sonnet is a prose epistle by the same 'A. B.,' to 'his very loving friends, M. Nicholas Wanton and M. George Faucet,' in which the writer says: 'Helicon, though not as I could wish, yet in such good sort as time would permit, having past the pikes of the presse, comes now to Yorke to salute her rightful Patrone first, and next (as his deare friends and kindsmen) to offer you her kinde service.' The 'rightful Patrone' must be Bodenham. In the face of 'A. B.'s' sonnet and epistle, it is strange that one authority after another should persist in saying that the editor of 'England's Helicon' was Bodenham. A second edition, containing nine additional pieces, appeared in 1614. A reprint of the second edition was published in 1812 under the editorship of Brydges and Haslewood, and a reprint of the first edition was included in Collier's 'Seven English Miscellanies,' 1867. Mr. W. J. Craig is preparing (1885) a new edition. Of Bodenham's life no particulars have been discovered.

BODKIN, Sir WILLIAM HENRY (1791–1874), legal writer, son of Peter Bodkin, a member of a family long connected with the county of Galway, was born at Islington 4 Aug. 1791. His mother was a Sarah Gilbert, of Lichfield. He was educated at the Islington Academy. He was married in 1812 to Sarah Sophia, eldest daughter of Peter Raymond Poland, of Winchester Hall, Highgate. In 1821 we find him hon. secretary to the Society for the Suppression of Mendicity. He was called in 1826 to the bar by the Honourable Society of Gray's Inn, of which society he afterwards became a bencher. For several years he went on the home circuit. He practised largely in criminal business at the Middlesex, Westminster, and Kentish sessions, and at the Central Criminal Court. He was made recorder of Dover in 1832. In the intervals of legal employment he busied himself, in his capacity of secretary to the Society for Suppression of Mendicity, with the poor laws. He wished to encourage the systematic giving of relief, but at the same time to extirpate the gross abuses to which the poor laws had become liable in his time. At the general election in 1841 he was returned to parliament in the conservative interest as the colleague of Mr. J. Stoddart Douglas in the representation of Rochester, defeating Lord Melgund, afterwards Earl of Minto, by a narrow majority of two votes. He was himself defeated by Twisden Hodges and Ralph Bernal [q. v.] at the next general election in 1847. He twice unsuccessfully contested the city of Rochester, having lost his seat through supporting Sir Robert Peel's free-trade measures. It is to Sir William Bodkin that the statute is due by which irremovable poor are made chargeable to the common fund of unions. Sir William's act was passed for one year only; but it has been continued and extended, and is, in fact, the foundation of the present system. In 1859 he was appointed assistant judge of the Middlesex sessions. In

1865 he married again (his first wife having died in 1848) Sarah Constance, daughter of Joseph Johnson Miles, J.P., of Highgate. In 1867 he was made a knight. Owing to an attack of cancer in the cheek, he resigned his office, some weeks before his death, to Mr. Edlin, Q.C. He died, aged 83, 26 March 1874, at his house, West Hill, Highgate, and was buried in the Highgate cemetery. For many years Sir William Bodkin was counsel to the treasury, and the president of the Society of Arts, of which he was one of the earliest and most zealous members. He was also a deputy lieutenant of Middlesex and chairman of the Metropolitan Assessment Sessions.

He is the author of: 1. 'Brief Observations on the Bill now pending in Parliament to amend the Laws relative to the Relief of the Poor in England,' London, 1821. 2. 'A Speech delivered at a Meeting of the Constituents at the Crown Inn, Rochester,' 8 Sept. 1841.

BODLEY, Sir JOSIAS (1550?–1618), soldier and military engineer, was the fifth and youngest son of John Bodley of Exeter, of whose sons Sir Thomas Bodley was the eldest. The date of his birth is not known, but it was probably about 1550. His early youth was spent abroad with his family at Wesel and Geneva [see Bodley, Sir Thomas]. He had the same foreign education as the rest of his brothers, and figures with them as one of the correspondents of the learned Drusius. On the return of the family to England, he is said by Wood to have studied for a short time at Merton College, Oxford, but would seem to have left it without taking a degree. For a long interval nothing then is heard of him; we only know from a casual allusion by himself, in his 'Journey to Lecale,' to the Polish drinking customs of which he had been a witness, that he at some time visited Poland. He afterwards served in the English army in the Netherlands, and appears in 1598 as captain of a company of old troops withdrawn from Holland for service in Leinster against the great Earl of Tyrone. Thenceforward his life, with short intervals, was spent in military service in Ireland. In 1601, when governor of Newry, he distinguished himself by destroying a village on some small islet called Loghrorcan by Moryson, by means of arrows tipped with wild fire; and in the last months of the same year he was employed as trench-master at the siege of Kinsale, with an allowance of ten shillings per day. In 1603 he was engaged in a like capacity at Waterford, and in various garrisons in Ulster. On 28 May 1604, he had the custody of Duncannon Castle granted to him (by privy seal order of 15 Jan.), and resigned it in June 1606. On 25 March 1604 he was knighted by the lord deputy Mountjoy. In 1605 he was engaged on fortifications in Munster, and seems in that and following years to have been held in high repute for his skill in engineering. In 1607 he was in England, but returned to Ireland with an appointment from the privy council as superintendent of castles, at a stipend of twenty Irish shillings per day; in which work, in that and the next year, he says that he rode over seven hundred miles. The survey for the great Ulster plantation was entrusted to him, with others, in 1609, and was so well performed that in 1616 the king proposed to employ him in a renewed survey of the same province. But he complained in 1611 that he had had no share in the division, and prayed for a 'competent allowance' for the rest of his life. The prayer was answered on 3 Dec. 1612 by the issue of letters patent appointing him director-general of fortifications in Ireland for life. In November 1613 he was in England. He had probably come over in the earlier part of the year for the purpose of attending the funeral of his brother Thomas on 29 March, to whose library he had given in 1601 an astronomical sphere (which is now, by loan from the library, preserved in the new observatory at Oxford) and some other brass instruments. Sir Thomas in his will made a bequest to Josias of 100*l.* with some leasehold property in London, and a release from debt for loans. In 1615 he applied to Secretary Winwood for arrears of his allowance, which were ordered to be paid to him on 19 Jan. 1615–16, and in the application he says that he had served three apprenticeships in the army, a period which would carry back the date of his entering it to about the year 1594. But he had now reached the last years of his service, for on 9 Feb. 1617–18 we find that two successors were jointly appointed to the post of director of fortifications in the room of Bodley, deceased. His burial-place in Ireland has not been recorded.

In the catalogue of Sir James Ware's manuscripts (Dubl. 1648), two productions of his are mentioned. The first is entitled 'Descriptio (lepida) itineris d. Josiæ Bodleii ad Lecaliam in Ultonia anno 1602.' This copy is now in the British Museum, Add. MS. 4784, another copy is among the Tanner MSS. in the Bodleian Library, and others are to be met with elsewhere. It is a jocose

description, in doggerel Latin, of a journey in company with Captains Toby Caulfield and John Jephson, from Armagh to Downpatrick (the barony of which was called Lecale) to keep Christmas with the governor there, Sir Richard Morrison. A description of the governor of Armagh is supposed to refer to the author himself. The passage runs: 'unus valde honestus homo, cum barba nigra, qui tractat omnes bene, secundum parvam habilitatem suam, et tractaret multo melius si haberet plus illius rei quam Angli vocant *meanes*.' He enlarges much in vindication of hard drinking and occasional, as distinct from habitual, drunkenness, and also of much tobacco-smoking. The tract is printed with a translation, and with notes which were never completed, in vol. ii. of the 'Ulster Journal of Archæology,' 1854, pp. 73–99. The second Ware MS. is said to be Observations in English on the forts in Ireland and on the colonies planted in Ulster. Where this manuscript is now preserved does not appear; but probably the tract may only consist of some of his official reports, very many of which are preserved among the state papers.

[Prince's Worthies of Devon; Calendars of the State Papers of Ireland, 1603–1625 (5 vols., 1872–80); Calendars of the Carew MSS., 1601–1624 (2 vols. 1870–3); Fynes Moryson's Itinerary (1617), part ii. pp. 25, 97–8; Liber Munerum Hiberniæ, vol. i. part ii. 106.] W. D. M.

BODLEY, LAURENCE, D.D. (*d.* 1615), canon of Exeter, was brother of Sir Thomas Bodley, being the third son of John Bodley. He was educated at Oxford, and took the degree of B.A. 21 Jan. 1565-6, and that of M.A. 9 July 1568, probably as a member of Christ Church; as a member of that society he was created D.D. 30 March 1613, the day after he had attended the funeral of his brother. He was prebendary of Wells in 1580, and canon of Exeter before 1588 (when the extant list of canons commences), and was also rector of Shobrooke, Devon. It was probably mainly through him that the dean and chapter of Exeter gave, in 1602, eighty-one early and valuable manuscripts from the library of their cathedral to the new library at Oxford, including (amongst other gifts of Bishop Leofric, the founder of the church) the well-known 'Leofric Missal.' In the will of his brother, Sir Thomas, he appears as the principal legatee among his kindred. He died 19 April 1615.

[Prince's Worthies of Devon; Wood MSS. E. 6, 9, and 29, in the Bodl. Libr.; Le Neve's Fasti, ed. Hardy; Macray's Annals of the Bodl. Libr.] W. D. M.

BODLEY, SIR THOMAS (1545–1613), diplomatist and scholar, is chiefly remembered as the founder at the close of his life of the library at Oxford to which his name is attached, and is little known for the many state embassies which gave him earlier importance in the eyes of his contemporaries. For our knowledge of his early life and education we are indebted to a short autobiographical sketch written in 1609, of which the original manuscript remains in the library he refounded (copies are of common occurrence), and which was first printed in 1647, and afterwards by Thomas Hearne in 1703. We learn from this that he was born at Exeter 2 March 1544-5; his parents were (John) Bodleigh or Bodley, 'descended from an ancient family of Bodleigh or Budleigh, of Dunscombe-by-Crediton, and (Joan) Hone, daughter of Robert Hone, of Ottery St. Mary. His father, who afterwards became noted as the recipient from Queen Elizabeth, in 1562, of a patent for seven years for the exclusive printing of the Geneva Bible, was, in the reign of Queen Mary, compelled, on account of his known protestantism, to seek safety in Germany, whither his wife and children followed him, settling first at Wesel, next at Frankfort, and finally at Geneva, in all which places there were large congregations of English refugees. At Geneva, at the age of twelve, young Bodley became an auditor of Ant. Chevallier in Hebrew, of Phil. Beroald in Greek, and of Calvin and Beza in divinity, besides having Robert Constantine, the author of a Greek lexicon, to read Homer with him privately in the house of a physician with whom he boarded. On the accession of Queen Elizabeth the family returned to England and settled at London, and Thomas was sent to Magdalen College at Oxford, entering there as a commoner under the tuition of Laurence Humphrey, D.D., afterwards president, whose religious teaching would be very much in accordance with that which had been inculcated at Geneva. In 1563 he took the degree of B.A., and in the same year was elected a probationer-fellow of Merton College, being admitted actual fellow in the year following. In 1565 he tells us that he commenced a Greek lecture in the college hall without stipend, encouraging thereby the still comparatively new study of which the early years of that century had seen the revival. His lecture gave such satisfaction that the society afterwards granted him an annual fee of four marks, and made the lectureship a permanent institution. He took the degree of M.A. in 1566, and then undertook in addition a public lecture in natural philosophy in the univer-

sity school. Three years later, in 1569, he was elected (under the system of open choice which commenced in that year, and continued until the better system of rotation was introduced by the Laudian statutes) one of the university proctors, and afterwards, to use his own words, 'supplied the place of the university orator,' that is, acted as deputy for one of his co-fellows of Merton, Arthur Atye, the actual public orator and principal of Alban Hall. With this his public employment in the university ceased, but not his own private study. He seems then to have specially devoted himself to Hebrew (probably under the eminent scholar, J. Drusius, who at that time lived for some few years in Merton College, and became intimate with Bodley and his brothers), and is said to have equalled, or even surpassed, most of his contemporaries in his knowledge of that language. Then, for the sake of acquiring modern languages and political knowledge, he obtained from his college and the crown in 1576 a license to travel, which was extended in 1578. By spending nearly four years in Italy, France, and Germany, he became a proficient in various languages, and particularly in Italian, French, and Spanish. Shortly after his return he was appointed a gentleman usher to the queen, but how he had gained her notice does not appear. His first attempt to enter into public life seems to have been unsuccessfully made in 1584, when he was recommended by Sir Francis Cobham for election to parliament for Hythe. He was M.P. for Plymouth in the same year, and for St. Germans in 1586. In April 1585 he received his first diplomatic commission, being despatched to Denmark, chiefly with the view of engaging King Frederick II in a league with the Duke of Brunswick, the Landgrave of Hesse, and other protestant German princes (to whom he was next sent), to help Henry, king of Navarre, and the French Huguenots. A confidential mission to Henry III of France followed, when that sovereign fled from Paris to escape from the Duke of Guise in May 1588; upon this errand Bodley went in great secrecy, entirely unaccompanied, and having only autograph letters from the queen, the purport of which does not seem to be known, save only that the effect of the message 'tended greatly to the advantage . . . of all the protestants in France.' His marriage to a rich widow, named Ann Ball, daughter of a Mr. Carew of Bristol, appears to have taken place in the preceding year, 1587, since on the monument which he erected to her memory in the church of St. Bartholomew the Less, Smithfield, after her death in June 1611, he says that they had lived together for twenty-four years. This proves Anthony à Wood to be mistaken in saying that the marriage took place about 1585. That he had shown great ability in the conduct of these several embassies is proved by his being despatched to the Hague very soon after his return from France as the queen's permanent resident in the United Provinces, a mission then of paramount importance, when the Netherlands were the continental field in which the power of Spain was to be met and worsted. Here, according to stipulations made with the queen, he was admitted as a member of the council of state, taking place next to Count Maurice of Nassau, and having the right of voting on all questions—privileges which were retained, as Clarendon tells us (*Hist. Reb.* bk. i.), until the commencement of the reign of Charles I, Sir Dudley Carleton being the last English representative to whom they were accorded. In this difficult post he remained for seven years, from 1589 to 1596, and in his autobiography he takes great credit to himself for the skill and circumspection with which he composed dangerous jealousies and discontents, chiefly caused by 'the insolent demeanour of some of her highness's ministers' (amongst whom he, no doubt, specially refers to the Earl of Leicester), and he avers that, in consequence, he seldom afterwards received any set instructions, but was left to his own discretion in the management of affairs. But as early as 1592 he began to grow weary of the work, and begged to be recalled, only, however, obtaining a short respite in 1593. In 1594 his brother Miles, who had for five years conducted business for him in England (for his wife appears to have joined him abroad in 1589, when a ship was provided for her passage), died suddenly, and he renewed his application and obtained again a short leave of absence, returning in January 1595. In June and July he was again in England, and in August was back at his post. But it appears from several printed letters that the queen expressed dissatisfaction at some of his recommendations; indeed, he heard one day, 'for his comfort,' that she had wished, in her wonted Tudor fashion, 'that he were hanged;' and abroad the Dutch were dilatory and difficult to persuade, and so he pressed again and again for a recall. Burghley and Essex both were urging at home that he should be made secretary of state, although their mutual illwill and opposition resulted in Burghley's at last hindering what he found Essex recommending. So at length Bodley obtained the welcome recall, and made his final return to England in the summer of 1596, weary of statecraft and diplomacy, which he never resumed. In 1598, indeed,

it was proposed that he should accompany Lord Buckhurst in May to Abbeville, to conclude a truce between Spain and the United Provinces, and he was spoken of again for a like errand in October; but he did not consent to go, and the last attempt to draw him back to office was made as late as January 1604-5, when, under a fresh sovereign, the second Cecil, the lord treasurer, pressed him to become secretary of state, but could not prevail. Bodley, who had been knighted on 18 April 1604 (*Dugdale MS.* R. f. 201, Bodl. Libr.), was then busied with that greater work which made the closing years of his life eclipse all that had gone before.

It was on 23 Feb. 1597-8 that he wrote his formal letter to the vice-chancellor at Oxford, offering to restore to its former use that room which was all that then remained of the old public library, to which Duke Humphrey of Gloucester had been a chief benefactor. But for some time before, when resolving to keep, as he himself says, 'out of the throng of court contentions,' he had been considering how he could still best 'do the true part of a profitable member of the state,' and had concluded at last 'to set up my staff at the library door in Oxon . . . which then in every part lay ruined and waste.' His offer was gratefully accepted by the university, and only a fortnight afterwards Dudley Carleton writes (in one of his gossipping letters preserved in the State Paper Office) that the proposal met with great favour amongst Bodley's countrymen of Devonshire, 'and every man bethinks himself how by some good book or other he may be written in the scroll of the benefactors.' We see by this how earnestly at once Bodley began to solicit help from his 'great store of honourable friends.' And the help came abundantly in the kind he most needed. As to money he had 'some purse-ability to go through with the charge,' although in but one year's time Carleton writes that the library had already cost him much more money than he expected, 'because the timber works of the house were rotten, and had to be new made.' But books poured in from donors in all parts of England and abroad for some time. Bodley employed Bill, a London bookseller, to travel on the continent as his agent for purchases there; while at home, in 1610, the Stationers' Company agreed to give a copy of every book which they published. The indefatigable industry which he displayed in the prosecution of his work, and the attention to matters of minute detail, as well as to the broad principles on which his library should be based (betokening one practised in schools of careful forethought and business habits), are largely shown in his draft of statutes and in his letters to his first librarian, Thomas James, which were published by Hearne in 1703 under the title of 'Reliquiæ Bodleianæ.' The library was solemnly opened with full formality on 8 Nov. 1602, and in 1604 King James I granted letters patent, styling the library by Bodley's name (a distinction well deserved for him who had now founded the first practically public library in Europe; the second, that of Angelo Rocca at Rome, being opened only in this same year 1604), and giving license for the holding of lands in mortmain. In the following year the king himself visited the library, with a full appreciation alike of the founder and the foundation, and repeated his visit in 1614. The first catalogue, a small but thick quarto volume of 655 pages, appeared in 1605, when already the old fifteenth-century room was beginning to be found too small; and consequently five years later the addition of an eastern wing was commenced, which was completed in 1612. In 1611 Bodley began the permanent endowment of the library by attaching to it a farm in Berkshire and some houses in the city of London; the former is still the property of the library, but the latter were sold in 1853. After 1611 Bodley's health was failing fast. He had long been afflicted with the stone, and complicated disorders (ague, dropsy, &c.) are spoken of as being now superadded. And so after a lingering decay he died at his London house on 28 Jan. 1612–3 (a year and a half after the death of his wife), aged, as he says in his will dated 2 Jan., '67 complete and more.' Having no children he made the university his chief heir, provoking, however, thereby sharp, and in some measure just, censure from his contemporaries for his neglect of relatives and friends. John Chamberlain, a friend to whom nothing was bequeathed, speaks with great bitterness in letters to Sir R. Winwood and Sir Dudley Carleton on the subject, saying 'he was so carried away with the vanity and vainglory of his library that he forgat all other respects and duties almost' (Winwood, *Memorials*, iii. 429; *Cal. Dom. State Papers*, 1611–18, p. 169). But the will is full of legacies to his relatives, servants, and others, although probably not in the proportion that was expected. To his brothers, Laurence [q. v.] and Sir Josias [q. v.], bequests were made in money and houses. The four sons of his deceased brother Miles and the children of his sisters Prothasy Sparry, Alce Carter, and Sybill Culverwell, and his wife's children by her first husband, are all remembered. But one sister is altogether ignored, who had offended her brothers by eloping with a poor minister named John

Burnett, who afterwards lived at Standlake and Ducklington in Oxfordshire, and whose grandchildren in the next century petitioned the university for relief, as being very poor and infirm labouring people.

Bodley was buried on 29 March 1613 in the chapel of his college, Merton, as he had desired in his will, with great ceremony, having bequeathed 666*l.* 13*s.* 4*d.* for the purpose of providing mourning for many persons (including sixty-seven poor scholars) and a dinner. Two volumes of academic verses were printed in commemoration of him—the one written by members of his own college, the other by members of the university in general—as well as a funeral oration, delivered by Sir Isaac Wake, the public orator. In 1615 a monument was erected in Merton chapel, executed by Nicholas Stone, a well-known sculptor, for which Bodley's executor, William Hakewill, paid 200*l.* The library contains a very fine full-length portrait (several times engraved), which has been assigned, but (as dates show) incorrectly, to Corn. Jansen, as well as one other very inferior portrait and a marble bust.

[Wood's Athenæ Oxon.; Reliquiæ Bodleianæ, 1703; Lodge's Portraits, where one of Bodley's despatches is printed from a Harl. MS.; Macray's Annals of the Bodleian Library, 1868; Bodley's will (a contemporary copy) in Bodl. MS. Addit. A. 186; Calendars of the Domestic State Papers; Notes and Queries, 6th series, ii. 423. Twenty-nine letters are printed in vol. i. of Collins's Sidney Papers, 1746, and there are some in Murdin's Burghley State Papers, 1759; reports of his negotiations and several letters are among the Marquis of Bath's MSS. at Longleat.]

W. D. M.

BOECE or BOETHIUS, HECTOR (1465?-1536), belonged to the family of Boyis, or Bois, of Panbride in Angus, the common form of Boece being a retranslation of the Latin Boethius. His father was probably Alexander Boyis, who appears as a burgess of Dundee about the end of the fifteenth century in several entries in the Great Seal Register. Boece calls Dundee his country ('patria'), and alludes to the Panbride family as a cadet when he mentions that the estate, along with the hand of a colleiress, was given to his great grandfather, Hugh, whose father had fallen at Dupplin. From Dundee he took the designation of Deidonanus, accepting ambitiously, says Buchanan, the common derivation of Deidonum for the town at the mouth of the Tay, which that writer derives from Tao Dunum, the Hill of Tay. From Dundee, where he received his first education, Boece passed, like many of his countrymen, to Paris, then the most frequented university in Europe. Assuming his birth to have been in 1465, its probable but not certain date, it is not likely that the commencement of his studies at Paris was later than 1485. After finishing his undergraduate course under the severe discipline of the college of Montaigu, reorganised in 1483 on the principle of monastic poverty by James Standone, a native of Brabant, an active educational reformer, and at one time rector of the university, Boece became a regent, or professor, in this college, probably from 1492 to 1498. He commemorates amongst his contemporaries in the college Peter Syrus, the theologian; Peter Rolandus, his instructor in logic; John Gasserus, the canonist—names now forgotten; but also one which will live as long as literature, Erasmus, 'the splendour and ornament of our age.' Thirty-two years later, Erasmus in a complimentary letter congratulates Boece, then principal of King's College in Aberdeen, upon the progress Scotland had made in the liberal arts, and sent him a catalogue of his works. In another letter of a humorous turn, while disclaiming the title of poet which Boece had given him, he communicated two attempts in poetry under strict injunctions not to publish them. Of his own countrymen then studying in Paris, Boece mentions Patrick Panter, another of the worthies of Angus, afterwards secretary of James IV and abbot of Cambuskenneth, to whom the king entrusted the education of his natural son, Alexander Stewart, before sending him abroad to finish it under Erasmus; Walter Ogilvy, celebrated for oratory; George Dundas, a learned scholar both in Greek and Latin, afterwards grand-master in Scotland of the Knights of Jerusalem; and John Major, the theologian, logician, and historian, who, returning like Boece to Scotland, introduced the new learning in Glasgow and St. Andrews, and had Knox and Buchanan for pupils. About 1498 Boece became acquainted with William Elphinstone, bishop of Aberdeen since 1483-4, who had served in several high offices at home as well as embassies abroad, and had kept up his knowledge of what was passing in the French universities. Elphinstone had himself taught law, both at Paris and Orleans, between 1462 and 1471, and he now required Boece's aid in carrying out the favourite project of his old age, the foundation of a university in Aberdeen. Four years before, Elphinstone had obtained a bull from Pope Alexander VI at the request of James IV, on a preamble stating that the north parts of his kingdom were inhabited by a rude, illiterate, and savage people, and erecting in the city of old Aberdeen a 'studium generale' and uni-

versity for theology, canon and civil law, medicine and the liberal arts, and any other lawful faculty, to be there studied and taught by ecclesiastical and lay masters and doctors in the same manner as in Paris and Bologna, and for conferring on deserving persons the degrees of bachelor, licentiate, doctor, and all other degrees. The office of chancellor was conferred by the bull on the bishop and his successors. The graduates were given liberty to teach without further examination, and statutes were to be framed by the chancellor, rector, resident doctors, with a competent number of licentiates in each faculty, and circumspect students, along with two, at least, of the king's council. The next ten years were occupied by Elphinstone, with the advice of Boece, in preliminary arrangements, and in obtaining endowments. In 1505 Elphinstone, aided by the king, the canons of his cathedral—especially Scherar, prebendary of Clatt—and others, was able to carry out his design by the foundation of the collegiate church dedicated to St. Mary in the Nativity within the university, known later as King's College. The foundation was to consist of thirty-six persons in all, which did not, of course, preclude the participation of other persons in the studies besides the foundationers. Of these four were entitled to be doctors in the respective faculties of theology, canon law, civil law, and medicine. The doctors, along with two masters in the faculty of arts, were to be the regents, or rulers, as well as teachers. Besides the doctors there were to be five masters of arts prosecuting their studies for a theological degree, thirteen poor scholars studying for a degree in arts, eight chaplains and four choristers. To the doctor in theology who was also to be principal a salary of forty merks was assigned. For each of the doctors in canon and civil law thirty, and for the doctor of medicine twenty merks were deemed sufficient, and the same sum was allowed to one of the masters of arts who was to be sub-principal; another of the masters who was to teach grammar had the prebend of the church of St. Mary ad Nives; twelve of the poor scholars had twelve merks apiece, and the thirteenth 5*l.* from Scherar's endowment. Other provisions were made for the masters studying theology, the chaplains, and the choristers. All the members of the college had rooms provided for them within the college except the canonist, mediciner, the master of arts who taught grammar, and the sub-principal, who had rooms without the college. The principal and students of theology, after becoming bachelors, were to read theology every reading-day, and to preach six times a year to the people, and, before becoming bachelors, every Lord's day and holiday in Latin to the students. The regents in arts were to instruct in the liberal sciences like those in Paris; the canonist, civilian, and mediciner after the manner of that university and Orleans.

Dr. Johnson, disciplined in the school of poverty, but of English poverty, smiled at the emoluments of Boece, which he estimates at 2*l.* 4*s.* 6*d.* of sterling money. 'In the present age of trade and taxes it is difficult even for the imagination so to raise the value of money, or so to diminish the demands of life, as to suppose four and forty shillings a year an honourable stipend; yet it was probably equal not only to the needs, but to the rank of Boethius.' Scotch writers anxious to defend their country from the imputation of poverty have rejoined that forty merks was, having regard to the comparative cost of living then, equivalent to 26*l.* 13*s.* 4*d.* sterling, but it is difficult to estimate the purchasing power of money in a particular age and country. The salaries of King's College were certainly on a moderate scale, and in this respect the example of the college of Montaigu was not forgotten. Want of wealth did not diminish the zeal for learning of Boece and his coadjutors. He summoned to his aid William Hay, his schoolfellow at Dundee, and fellow-student in Paris, who became sub-principal, and succeeded to the principalship after Boece's death. He was received kindly by the canons, who at Aberdeen, as well as in other cathedral cities, had already done something to supply the want of a university by lecturing on theology, law, and arts. Two continued to teach in the university—Alexander Hay (who had been master of the grammar school), and James Ogilvy, as professors of civil law. Boece's brother Arthur also taught law; Alexander Galloway, rector of Kinkell, the man-of-business of Bishop Elphinstone, was lecturer on the canon law; John Adams, afterwards the head of the Friars Preachers, was professor of theology; Henry Spittal, a kinsman of Elphinstone, taught philosophy; and John Vaus, a pupil of the Aberdeen School, Latin grammar, the first of the long race of Scottish grammarians. In the science and art of healing, besides Gray the mediciner, Boece himself had some proficiency, and we hear of his being consulted by Robert Chrystal, abbot of Kinlos, on his deathbed, when he made the acquaintance of John Ferrerius, a monk of that foundation, who afterwards wrote a short addition to his history. History was not specially taught, for it did not enter into the mediæval curriculum; but no more assiduous collector of its materials could be found in Scotland than

Bishop Elphinstone. It was to this study, apart from his engrossing duties as first principal, that Boece devoted himself. A manuscript of John of Fordun, the earliest extant chronicler of Scotland, presented by him to the college, is still preserved, and it was on Elphinstone's collections that his own history of Scotland was based.

The first publication of Boece was the lives of the Bishops of Mortlach and Aberdeen, printed at Paris in 1522 by Iodocus Badius, with the well-known imprint of his press. The most interesting portion, the memoir of his patron, Elphinstone, who had died eight years before, unable to survive Flodden, gives many incidental notices of Boece's own life and studies. The lives are written in a simpler and purer style than his history, and the legendary element so conspicuous in his history is almost absent. The next and only other printed book of Boece was his history of Scotland from the earliest times to the accession of James III, published by Badius in 1527, and of which a second edition, with the continuation of Ferrerius down to the death of that king, was printed at Lausanne, and published at Paris in 1574. Prior to this no history of Scotland had been printed except the compendium of Major. The chronicles of Wyntoun and John of Fordun were in manuscripts widely dispersed, but not widely known; and now for the first time the annals of Northern Britain could be bought by any one who could afford the comparatively cheap price asked by the Parisian printers of that day. They were related in a style which the admirers of Boece compared to Livy, and followed the model of the earlier books of the great Roman historian in sacrificing accuracy to a flowing narrative adapted to the public for whom it was written. This accounts for its rapid popularity. It was translated, at the request of James V, between 1530 and 1533, into Scottish prose by John Bellenden, archdean of Moray, employed about the same time in the translation of Livy, and printed in 1536 at Edinburgh by Thomas Davidson. A metrical version of Boece's history in the Scottish dialect was also made at the same time, but not published until recently, from the manuscript in the university of Cambridge. In 1577 it was done into English for Holinshed's chronicles by William Harrison, who naïvely excuses himself as a divine for applying his time to civil history: 'This is the cause wherefore I have chosen rather only with the loss of three or four dayes to translate Hector out of the Scottish (a tongue verie like unto ours) than with more expense of time to devise a newe or follow the latin copy.' In the next generation Buchanan, not unwilling to cavil at Boece, used his history as material for his own more elaborate work. The English, Welsh, and Irish historians, who had a special quarrel with Boece for the antiquity which he ascribed to the Scots by adopting as historic the myth of Scota the daughter of Pharaoh, attacked his credit even before it began to be weighed in the scales of criticism. The epigram of Leland still sticks:—

Hectoris historici tot quot mendacia scripsit
Si vis ut numerem, lector amice, tibi,
Me jubeas etiam fluctus numerare marinos
Et liquidi stellas connumerare poli.

That part of his narrative prior to the reign of Malcolm Canmore is as unreliable as the early books of Livy, and even when he comes to times nearer his own he is apt to follow tradition without examination of its probability. Father Innes in the last century and Mr. Skene in this have done the work of Niebuhr, and traced the origin of the mythic and traditional Scottish story. By the aid of the earliest sources, the chronicles of the Picts and Scots of Wyntoun and Fordun, they have deciphered at least a part of the true history.

The gravest charge against Boece, that he invented the authorities on whom he relies—Veremundus, a Spaniard, archdeacon of St. Andrews, and John Campbell, whose manuscripts, originally preserved in Iona, he says he procured access to through the Earl of Argyle and his kinsman, John Campbell of Lundy, the treasurer—though long accepted, must now be deemed at least not proven, and probably unfounded. These manuscripts no longer exist, but his statement as to them could have been contradicted by persons living when he wrote, if it was untrue; and Chambers of Ormond, a Scottish historian of the reign of Mary, makes independent reference to Veremundus, possibly one of the unnamed earlier chroniclers to whom Wyntoun frequently alludes. The two other authorities he specifies are Turgot, the bishop of St. Andrews, author of the 'Life of Queen Margaret,' and the abbot of Inchcolm, who is known to be Bower, the continuator of Fordun, in whose pages many of the statements for which Boece has been censured are to be found. Of the credulity shown in his history the story of the stranded trees on which the clack or barnacle geese (see Max Müller's *Lectures*, &c., ii. 584) grew, is only one of many samples. Boece was always more ready to believe than to doubt, and a striking contrast to his contemporary Major. Dr. Johnson probably gives a fair verdict,

though it may be thought somewhat lenient. 'His history is written with elegance and vigour, but his fabulousness and credulity are justly blamed. His fabulousness, if he was the author of the fictions, is a fault for which no apology can be made, but his credulity may be excused in an age in which all men were credulous. Learning was then rising on the world, but eyes so long accustomed to darkness were too much dazzled with its light to see anything distinctly. The first race of scholars in the fifteenth century, and for some time after, were for the most part learning to speak rather than to think, and were therefore more studious of elegance than of truth.' As a reward for his history, Boece received the degree of doctor from the university in 1528, a compliment of a tun of wine or 20*l.* Scots, to help to buy him bonnets, from the town of Aberdeen, which had a little earlier presented him to the chaplaincy of St. Andrew's altar in the church of St. Nicholas. He received a royal pension of 50*l.* Scots in 1527, and two years later the same or a grant of similar amount, until the king presented him to a benefice of 100 merks Scots. The last payment of this pension was at Whitsunday 1534, when he probably obtained a gift of the rectory of Tiree in Buchan, which he held to his death in 1536. He appears before this, in 1528, to have held the vicarage of Tullynessle, one of the gifts of James IV to King's College. He had two brothers, Arthur, the lawyer, one of the first senators of the College of Justice, and Walter, a parson of the church of St. Mary ad Nives in Aberdeen. The last act of his life of which we have evidence on record is his being party to a marriage contract between Isabella Boyis, probably a daughter of Arthur, and the son of John Brabaner, a burgess of Aberdeen, on 18 Jan. 1535. He was buried on the north side of Elphinstone's tomb, before the high altar of the chapel at King's College. His coat of arms, a saltire and chief, is one of three on the south wall without motto, but with the letters 'H B ob. 1536.'

The portrait hung on the stair of the Senate Hall, and which has been engraved as that of Boece, is of doubtful authenticity. Lord Hailes declared that his countrymen were reformed from popery, but not from Boece, but now that the latter reformation has been accomplished we may do justice to his real merits as we do to those of the mediæval church. His learning and zeal co-operated with the liberality of Elphinstone in laying the foundation of the university which has diffused culture in the northern districts of Britain. A love of historical studies dating from his time has continued to mark the Aberdonian scholars, who have contributed more to Scottish history than the inhabitants of any other part of Scotland.

[The best life is by Irving in his Lives of Scottish Writers, but the records of the university and town of Aberdeen, the works of Erasmus, and the History of the University of Paris, should be consulted. The editions of Boece's History are mentioned above. His Vitæ Episcoporum Murthlacensium et Aberdonensium, originally printed 1522, was reprinted by the Bannatyne Club in 1825. Bellenden's translation of the History, printed in black letter by 'Thomas Davidson,' was reprinted at Edinburgh in 1821, with a biographical introduction by Thomas Maitland, Lord Dundrennan.] Æ. M.

BOEHM, ANTHONY WILLIAM (1673–1722), German chaplain at St. James's, was the son of the Rev. Anthony Boehm, minister of Oestorff, in the county of Pyrmont, Germany, and was born 1 June 1673. After courses of education at Lemgo and Hameln, he entered in 1693 the then newly founded university of Halle. In 1698 he was called to Arolsen, the seat of the Count of Waldeck, to educate the count's two daughters in the principles of Christianity; but, the liberality of his religious opinions having aroused the hostility of certain ecclesiastics, the count felt constrained, in opposition to his better judgment, to dispense with his services. Shortly afterwards he received an invitation to become chaplain to the Duchess-dowager of Coburg, but he finally resolved to respond to the request of some German families in London, who were desirous of obtaining German instruction for their children. He set out for London 25 Aug. 1701, and after spending some months in the strenuous study of English, he opened his school in February 1702. He met with fair success, but his office was by no means a lucrative one. It so happened, however, that on his way to England he had made the acquaintance of Henry William Ludolf, secretary to Prince George of Denmark, and when the prince, at the request of Queen Anne, resolved to introduce the common prayer book into his own chapel, Boehm, on the recommendation of the secretary, was appointed assistant chaplain to read the prayers, which the then chaplain found too hard for him. After the death of the prince the service was continued at the chapel as before, and on the accession of George I no alteration was made, 'so that,' in the words of his biographer, 'he continued his pious labours to his dying day, which, after three or four days' illness, happened at Greenwich 27 May 1722, in the forty-ninth year of his age.' He was buried

in Greenwich churchyard, where a monument was erected to his memory. Boehm was a very voluminous author. Besides a large number of works in German, many translations, and various editions of other authors, he published 'Enchiridion Precum cum Introductione de natura Orationis,' 1707, 2nd edition 1715; a volume of 'Discourses and Tracts;' 'The Duty of the Reformation,' 1718; 'The Doctrine of Godly Sorrow,' 1720; 'Plain Directions for reading the Holy Bible,' 1708, 2nd edition 1721; 'The First Principles of practical Christianity, in Questions and Answers, expressed in the very Words of Scripture,' 1708, 2nd edition 1710. He also left a number of works in manuscript.

[The collected writings of Boehm were published at Altona in 1731–2 by the Rev. J. J. Rambach, professor of divinity at Halle, accompanied with a preface and memoirs. These memoirs, translated into English by John Christian Jacobi, appeared at London 1735; they contain a full list of his various publications and manuscripts. A condensation of the memoirs is given in Wilford's Memorials of Eminent Persons.] T. F. H.

BOGAN, ZACHARY (1625–1659), author, was the third son of William Bogan, of Gatcombe House, Little Hempston, near Totnes, who married Joane, one of the daughters and heirs of Zachary Irish, of Chudleigh. He was born at Gatcombe in the summer of 1625, and received the rudiments of his education under a well-known schoolmaster who lived a few miles distant from his father's house. When only just turned fifteen he was admitted a commoner of St. Alban Hall, Oxford (Michaelmas term 1640), and on 26 Nov. in the following year was chosen a scholar of Corpus Christi College; but the civil war drove him soon after to his father's house in the country. In 1646 he returned to his college, and on 21 Oct. took his B.A. degree, becoming M.A. on 19 Nov. 1650. In the year after he had taken his first degree he was elected a fellow of his college, and in 1649 was recognised as fellow by the parliamentary visitors of the university. Whilst his energies lasted, and he was able to act as one of the college tutors, he had under his charge many pupils afterwards eminent as antiquaries and divines. But a constitution naturally weak and a disposition prone to melancholy (both of which drawbacks were often feelingly referred to in the prefaces to his works) were enfeebled by ill-health, aggravated by excessive study. After much bodily suffering he died, in his college at Oxford, 1 Sept. 1659, and was buried in the middle of the north cloister belonging to the college and adjacent to the south side of the chapel, when a funeral discourse was preached over the grave by one of the fellows. His portion as a younger son was 1,500*l.* He left on his death a third of that amount to the city of Oxford for the benefit of its poor, in acknowledgment of which gift his portrait was painted and hung up in the council-chamber, and it may still be seen in the town-hall. His library was left to Mr. Agas, the rest of his property passed to his elder brother. Bogan was a great-nephew of Sir Thomas Bodley.

Bogan's skill in languages was universally recognised in his lifetime, and had not his years been prematurely cut short, his learning would have made a permanent mark in literature. His works were: 1. 'A View of the Threats and Punishments recorded in the Scriptures,' 1653, which he dedicated to his 'honoured father.' 2. 'Meditations of the Mirth of a Christian Life and the Vaine Mirth of a Wicked Life,' 1653, dedicated to his 'honoured mother.' 3. An addition of four books on 'customs in marriages, burials, feastings, divinations, &c.' to the 'Archæologiæ Atticæ' of Francis Rous the younger, which was first added to the original work in 1649, but without any mention of his name, probably because it was chiefly compiled in his undergraduate days. The addition was acknowledged as Bogan's in the subsequent editions. 4. 'Homerus Ἑβραίζων, sive comparatio Homeri cum Scriptoribus Sacris, quoad normam loquendi.' To which was added, 'Hesiodus Ὁμηρίζων,' 1658. The preface was signed from his father's house in Devonshire October 1657. 5. 'A Help to Prayer, both Extempore and by a Set Forme,' which was written in 1651, but not published until 1660, when it was edited by Daniel Agas. A long epistle by Bogan to Edm. Dickinson is appended to the latter's 'Delphi Phœnicizantes,' a work popular in Germany and Holland, and written to show that all that was famous at Delphi was based on the history of Joshua and the sacred writings. Bogan had intended to publish works on the Greek particles, and on the best use of the Greek and Latin poets, and the former was nearly finished when he was seized by his last illness.

BOGDANI or BOGDANE, JAMES (*d.* 1720), painter, was born in Hungary, the son of a deputy from the states of that country

to the emperor. He received no professional training, but by the force of his natural abilities attained to a considerable degree of excellence as a painter of still-life and birds. He came at an early age to this country, where he was for some time known only as 'The Hungarian.' Queen Anne patronised him, and he made a fortune by the practice of his art; but in his later years he experienced a series of misfortunes which reduced him to poverty; and, after a residence of nearly fifty years in England, he died in London in 1720. His pictures and goods were sold by auction at his house, the sign of the Golden Eagle, Great Queen Street, Lincoln's Inn Fields. There are at Hampton Court eight pictures by Bogdani, some of which were expressly painted for the panels in the 'King's Closet.'

L. F.

BOGLE, GEORGE (1746–1781), diplomatist, was the youngest son of George Bogle, of Daldowie, near Bothwell, Lanarkshire, and Anne, daughter of Sir John Sinclair, baronet, of Stevenson, Haddingtonshire, and was born 26 Nov. 1746. He received his early education at Haddington and Glasgow, and, after attending the university of Edinburgh from November 1760 to April 1761, was sent to a private school at Enfield for three years. In June 1765 he entered as clerk the counting-house of Bogle & Scott, of which his eldest brother was the head, where he remained till, in 1769, he obtained an appointment in the service of the East India Company. From Warren Hastings, the governor of Bengal, he received, on 10 Oct. 1772, the appointment of assistant secretary to the board of revenue; on 9 March of the following year, that of registrar to the Sadr Diwáni Adálat, the court of appeals for the natives, and soon afterwards that of secretary to the select committee. Having won by his abilities and character the special approval of Warren Hastings, he was, 13 May 1774, selected to act as envoy to the Lama of Tibet, with the view of opening up commercial and friendly intercourse between that country and the plains of India. He and his companions were the first Englishmen to cross the Tsanpu in its upper range, and not only was he completely successful in his mission, but formed a strong personal friendship with the Lama, with whom he continued to correspond after his return to India. Notwithstanding, however, that his important services were admitted by all parties, he remained, after his return in 1775, for some time practically without employment, on account of the factions against Hastings, until the latter, by the death of one of the council in September 1776, was able to secure a majority of votes. On 12 Nov. following Bogle was appointed to superintend the arrangements in connection with the renewal of the leases of the company's provinces, and was also made commissioner of lawsuits. In 1779 he was appointed collector of Rangpúr, where he established a fair, which was much frequented by Bhutan merchants, and was continued for many years. At the request of Warren Hastings he had agreed to undertake a second mission to Tibet, but the news that the Lama had gone on a visit to Pekin caused it to be postponed, and the death of Bogle, 3 April 1781, at Calcutta, where he had been called to serve on a committee of revenue, prevented it being carried out. From Gleig's 'Memoirs of Warren Hastings' (ii. 19) we learn that Hastings sent to Dr. Samuel Johnson a copy of Bogle's journal in Tibet, to obtain his opinion on the propriety of publishing it. There is no information as to what Johnson advised, but from a communication to the Royal Society in April 1777 it would appear that Bogle intended to publish it, although the multiplicity of matters engaging his attention prevented him carrying out his purpose. A volume of manuscripts which his executors had given to Alex. Dalrymple, geographer to the East India Company, in 1792, to prepare for the press, was never published, and at the sale of Dalrymple's library was bought by Lord Valentia. After the Arley Castle sale it came into the possession of the trustees of the British Museum (*Add. MS.* 19283). Another copy of the journal of Bogle is said to have been presented to the Royal Society.

[From his journals, memoranda, official and private correspondence preserved by his family in Scotland, a narrative of his mission to Tibet was compiled by Clements R. Markham, and, accompanied by a life and notes, was published in 1876. There is also a notice of Bogle in Memorials of the Life and Writings of Rev. Robert Morehead (1875), pp. 393–5.]

T. F. H.

BOGUE, DAVID (1750–1825), one of the founders of the London Missionary Society, was born at Hallydown, parish of Coldingham, Berwickshire, on 18 Feb. 1750. He was fourth son of John Bogue, laird of Hallydown—a farm—and Margaret Swanston his wife. His elementary education was obtained at the parish school of Eyemouth.

He proceeded, while still in his teens, to the university of Edinburgh, and studied for the ministry; he received license as a preacher of the gospel, though never destined to excel as a pulpit orator. In 1771 he was in London as usher in an academy at Edmonton; he was afterwards in the same capacity at Hampstead, and later at Camberwell, with a Rev. Mr. Smith, whom he assisted also in his ministerial duties. He subsequently became minister of an independent or congregational chapel at Gosport. In 1780 he added to his clerical work a tutorship in an institution of the town for the education of young men destined for the independent ministry. There grew out of this his scheme of foreign missions, which led to the formation of the London Missionary Society. Among its missionaries were John Williams of Erromanga, Dr. Robert Moffat, and Dr. David Livingstone. Bogue also took an active part in founding the two kindred institutions—the British and Foreign Bible Society and the Religious Tract Society. To the latter he contributed the first of a series of long-popular tracts. In 1790 he published 'Reasons for seeking a Repeal of the Test Acts. By a Dissenter.'

In 1796 he and the Rev. Greville Ewing of Glasgow and the Rev. William Innes of Edinburgh, who like himself had left the church of Scotland and become the one an independent, and the other a baptist minister, agreed with Robert Haldane, of Airthrie—who sold his family estate in order to provide the funds—to go out to India that they might act as missionaries to the natives. The East India Company refused to sanction the scheme. It was afterwards noted that a massacre of Europeans took place on the very spot at which the three friends had intended to settle.

In 1801 Bogue published 'An Essay on the Divine Authority of the New Testament,' prepared at the request of the London Missionary Society, and quickly translated into French, German, Italian, and Spanish. In 1807 appeared his 'Catechism for the Use of all the Churches in the French Empire. From the French.' In 1808 he published a striking sermon 'preached before the promoters of the Protestant Dissenters' Grammar School, Mill Hill.' In 1809 he edited a volume of sermons by Benjamin Grosvenor [q. v.] In the same year was published the 'History of Dissenters from the Revolution in 1689 to the year 1808' (3 vols.), prepared in association with Dr. James Bennet [q. v.] A second edition, enlarged, was issued in 1812 (4 vols. 8vo), and another in 1833. It is a standard work, the fruit of infinite research and painstaking zeal, although at times somewhat partisan and embittered. In 1815 the Senatus Academicus of Yale College, Connecticut, conferred upon Bogue the degree of D.D.

Bogue was well known in all the churches. He was wont to make an annual missionary preaching tour on behalf of the London Missionary Society. In one of these journeys he was seized with a sudden illness at Brighton. There he died on 25 Oct. 1825, in the seventy-fifth year of his age.

BOGUE, RICHARD (1783–1813), captain royal artillery, who fell before Leipzig in 1813, was son of John Bogue, M.D., of Fareham, Hampshire, and was born in 1783. He entered the Royal Military Academy, Woolwich, as a cadet, 31 Jan. 1797, passing out as a second lieutenant in the royal artillery in July 1798, and becoming a second captain in that corps in March 1806. In June 1813 he went out to the north of Germany with some artillery detachments, which were united under his command as a rocket brigade, afterwards officially known as the (late) 2nd rocket troop, royal artillery. The troop, while attached to the army of the Prince Royal of Sweden (Bernadotte), rendered very important service in the memorable battles around Leipzig on 16–19 Oct. 1813. On 18 Oct., the second day of fighting, when supporting Bulow's corps, which was on the extreme left of the prince royal, in an attack upon a retiring body of French near the village of Paunsdorf, Bogue was killed by a cannon-ball which struck him on the head, or, by some accounts, the breast. He lies buried in the village of Taucha, some miles north-east of Leipzig.

Art. i. 394, 404, ii. 290; Marquis of Londonderry's Narrative of War in Germany, p. 172 (London, 1830); Alison's Hist. of Europe, xii. 246 (ed. 1849–50); Murray's Handbook of N. Germany (name misspelt Bowyer), p. 288.] H. M. C.

BOHEMUS, MAURITIUS (*fl.* 1647–1662), ejected minister, was born at Colberg on the Pomeranian coast. His uncle, Dr. Johannes Bergius (Palmer has 'Burgius' incorrectly), was chaplain to the elector of Brandenburg; he was born at Stettin 24 Feb. 1587, and died at Berlin 27 Dec. 1658. Bohemus was rector of Hallaton, Leicestershire, and ejected thence in 1662, when he returned to Germany. He seems to have been thrice

married. Jane, wife of 'Mr. Bohemus,' was buried at Hallaton 14 Dec. 1647; his wife Elizabeth was buried 10 July 1654; he married Hannah Vowe 27 Feb. 1656. By his wife Elizabeth he had a daughter Anne, baptised 12 March 1652; probably the Mrs. Ann Boheme buried at Walcot 20 Nov. 1695.

He published: 1. 'A Christians Delight, or Morning-Meditations,' &c., London, 1654, 12mo (has Latin dedication to Sir Arthur Haselrig, signed 'Mauritius' Bohemus; the English title-page has 'Maritius.' The title-page incorrectly states the number of 'Meditations' as ninety-seven; there are ninety-eight, and an appendix makes up one hundred. Palmer, mistaking Calamy, makes this two works). 2. 'The Pearle of Peace and Concord,' &c., London, 1655, 16mo (a translation of a German work by Dr. Bergius, published twenty years before, with an irenical aim in view of the differences among protestants; Bohemus dedicates his translation to Oliver Cromwell).

[Calamy's Account, 1713, p. 438; Calamy's Continuation, 1727, p. 594; Palmer's Nonconf. Memorial, 1802, ii. 387; Allg. Deut. Biog. 1875, ii. 385; Burial Register of Walcot, Lincolnshire.] A. G.

BOHLER, JOHN (1797–1872), botanist, born at South Wingfield, near Alfreton, Derbyshire, 31 Dec. 1797, was a simple stocking-weaver, but his early instincts led him to gather plants, and he became a collector of medicinal plants for the doctors. He then took up the science of botany, and became an expert field botanist and microscopist, traversing England, Ireland, and Wales. In time he became acquainted with the 'habitats' of all our indigenous flowers, and made a special study of lichens. In 1835–7 he published 'Lichenes Britannici, or Specimens of the Lichens of Britain,' containing sixteen monthly fasciculi, each of eight actual specimens, collected and mounted by himself, with original descriptions, &c.—128 in all, at 3*s.* 6*d.* each—forming a valuable work which is now very scarce. The British Museum has no copy of it. About 1860 he explored Snowdon and the adjacent mountains and hills under the auspices of a botanical committee of the British Association. Later in life he became a great collector of rare fungi, gathered from their widely scattered localities throughout the land. Dr. Aveling's fine folio, 'Roche Abbey, Yorkshire,' London, 1870, has in the appendix 'A Flora of Roche Abbey,' by Bohler. He also compiled 'The Flora of Sherwood Forest' for Mr. Robert White's 'Worksop, the Dukeries, and Sherwood Forest,' Worksop, 1875, 4to, and arranged his materials in accordance with Hooker's 'Student's Flora.' He also contributed botanical papers and notes to various scientific journals. He died at Sheffield 24 Sept. 1872.

[Reliquary, xi. 212; White's Worksop, p. 303; Pritzel's Thesaurus, p. 32; Jackson's Lit. of Botany, p. 243, and the writer's MS. notes.] J. W.-G.

BOHN, HENRY GEORGE (1796–1884), bookseller and publisher, was the son of Henry Martin Bohn, a native of Munster, Westphalia, who, after learning the art of bookbinding in his native town, settled in 1795 in London, where he married a lady of Scotch parentage. By the introduction of certain new features of the bookbinding art he acquired a considerable connection, and after removing to 17 and 18 Henrietta Street, Covent Garden, he also established a business in second-hand books. The son Henry George was born 4 Jan. 1796. Immediately after leaving school he entered his father's business, but at a very early date his energetic and independent character showed itself. Some of his suggestions were not followed, and thereupon, leaving Henrietta Street, he accepted a post in a mercantile house in the city. He made great progress there, but his father speedily persuaded him to return to the family roof, and until he was well over thirty years of age he took a leading part in the conduct of his father's business. As early as 1813, when Bohn was in his eighteenth year, he published in London a translation from the German of the romance of 'Ferandino.' His knowledge of languages was turned to account in trade, and he visited the chief continental cities to make purchases of rare and valuable foreign books. As his father declined to admit him into partnership, he resolved, after his marriage in 1831 to Elizabeth Simpkin, only child of William Simpkin, of the firm of Simpkin, Marshall, & Co., to commence business on his own account at 4 York Street, Covent Garden. Notwithstanding that his capital at starting was, it is stated, only 1,000*l.*, supplemented with a second 1,000*l.* lent by a friend, his progress was rapid. He devoted his attention during the next ten years chiefly to the amassing of important and valuable old books. In 1841 he published a '"guinea catalogue" of these books,' containing 1,948 pages and 23,208 articles, with a list of remainders occupying 152 pages. The issue of the catalogue at once made him famous, and secured him an unrivalled position as a second-hand bookseller; but he soon discontinued the purchase of rare and valuable works to take up the 'remainder' trade, which he developed with astonishing skill and for a time made

his chief business. In 1846 he discovered, in the cheap issue of works of a solid and instructive kind, a new method of turning his copyrights to account; this method proved far more lucrative, and has given him a unique position among publishers. In 1845 Mr. David Bogue of Fleet Street commenced the publication of the 'European Library,' into the first issue of which, the 'Life of Lorenzo de' Medici,' illustrations were introduced from a volume of illustrations of which Bohn possessed the remainder. After obtaining an injunction in the court of chancery against Bogue, Bohn started a rival series, the 'Standard Library,' similar in size and appearance, but at a reduced price. The enterprise was prosecuted by Bohn with such energy and skill that the 'European Library' was discontinued, and the books passed into his hands. The 'Standard Library' was followed by the 'Scientific' and the 'Antiquarian' in 1847, the 'Classical' in 1848, the 'Illustrated' in 1849, the 'Shilling Series' in 1850, the 'Ecclesiastical' in 1851, the 'Philological' in 1852, and the 'British Classics' in 1853, the whole ultimately numbering over six hundred volumes.

The success of the 'library' scheme led Bohn to entertain the ambition of founding a publishing house of the highest rank; but as his sons did not enter into his views and took to other professions he resolved gradually to realise his property and retire from business. In 1864 he sold the stock, copyrights, and stereotypes of his 'libraries' for about 40,000*l.* to Messrs. Bell & Daldy, afterwards Messrs. Bell & Sons, who succeeded him in York Street. Various other valuable literary property was also sold to this firm. From 1865 to 1875 he was more or less engaged in cataloguing his general stock stored at the several warehouses rented by him near Covent Garden. Meantime he secured temporary premises in Henrietta Street, occupying the old site of his father's house there. During these ten years his second-hand books were sold by auction, realising over 13,000*l.* His principal copyrights not included in the libraries were bought by Messrs. Chatto & Windus for about 20,000*l.*, and other sales were effected, the entire properties realising from beginning to end little short of 100,000*l.*

While the success of Bohn indicated practical shrewdness of a very exceptional kind, it is traceable as much to his extraordinary energy and capacity for work. Besides being a constant attendant at all important sales and being present at the meetings of the learned societies of which he was a fellow, he personally superintended every department of his business. Nor did these cares by any means absorb his whole attention. He took a large share in the editing and compiling of his own publications. His knowledge of foreign languages enabled him to make several of the translations for his series of 'Foreign Classics.' The information obtained in the practice of his business he also utilised in 'Observations on the Plan and Progress of the Catalogue of the Library of the British Museum,' 1855, in which he suggested various improvements in method, and especially the addition of an index of matters, which he endeavoured to show might be rapidly accomplished by a proper subdivision of labour. He prepared a greatly improved reprint of Lowndes's 'Bibliographer's Manual,' 'The Origin and Progress of Printing,' 1857, and the 'Biography and Bibliography of Shakespeare,' 1863, the bibliographical part being a reprint with some additions of the pages relating to Shakespeare in the 'Bibliographer's Manual.' The last two books were written for the Philobiblon Society, of which he was a member; he also wrote a 'Dictionary of Quotations,' 1867, into which he introduced a few verses from his own manuscript poems. For his 'libraries' he wrote a variety of compilations, including a 'Handbook of Proverbs' and a 'Polyglot of Foreign Proverbs' for the Antiquarian Library; a 'Handbook of Games' for the Scientific Library, and a 'Pictorial Handbook of Modern Geography' and a 'Guide to the Knowledge of Pottery and Porcelain' for the Illustrated Library. He also contributed an edition of Hurd's 'Addison,' in six volumes, to his series of 'British Classics.' His miscellaneous contributions include a biographical notice of Robert Seymour, with a descriptive list of the plates to Seymour's 'Humorous Sketches illustrated in Prose and Verse by Alfred Crowquill,' 1866; prefaces to editions of Irving's 'Life of Mahomet,' and Emerson's 'Representative Men;' a chapter 'On the Artists of the Present Day' to the second edition of Chatto's 'Treatise on Wood Engraving,' 1861; and an alphabetical reference, with a 'list of all the coloured plates of the genus *Pinus* published in the great works of Lambert, Lawson, and Forbes,' to the edition of Gordon's 'Pinetum' published in 1880. He was strongly opposed to the abolition of the paper duty, and in 1861 published a pamphlet on the subject, consisting of letters contributed by him to several newspapers

About 1850, when he was in the zenith of his fame, he secured a fine residential property at Twickenham. From time to time he enlarged his freehold estate, and expended considerable sums in acquiring rare and valuable shrubs. He also became known for his

annual entertainments, when his remarkable collection of roses was exhibited.

Very early in life he exhibited a taste for purchasing articles of vertu, and for half a century at least he was a frequenter at Christie's and other sale rooms. In 1875 his various works of art exceeded the capacity of his house, and being then nearly eighty years old he resolved to sell that portion of his collection consisting of china, ivories, &c., and between 1875 and 1878 this sale was effected, bringing nearly 25,000*l.* The pictures and miniatures were left untouched; and having freed his rooms of the china, beyond what was required for decorative purposes, he largely added to the pictures, and by 1883 his house was as crowded as before. Up to his eighty-seventh year he had possessed great physical strength—it is related that he joined actively in a quadrille party on his Twickenham lawn at the age of eighty-five—but early in 1882 he became very infirm, although still mentally strong. He then resolved to employ his enforced leisure in the compilation of a *catalogue raisonné* of his art collection, comprising a short account of the painters represented, and for two years and upwards he was engaged with his daughter, Mrs. F. K. Munton, in this work. Amidst growing feebleness he struggled almost to his last moment to complete the task—indeed, his indomitable spirit was shown in his eighty-ninth year, about a week before he died, when he refused to obey the injunction of his medical adviser to desist, saying he could not die till he had settled the preface; and he actually revised the proof of this a day or two before his death, which took place on 22 Aug. 1884. The sale by his executors of the remaining portion of the art collection (which realised a further sum of about 20,000*l.*) attracted considerable public attention in March 1885.

[Times, 25 Aug. 1884 and March–April 1885; Athenæum for 30 Aug. 1884; Bookseller for September 1884; Bibliographer for October 1884; Brit. Mus. Cat.] T. F. H.

BOHN, JAMES STUART BURGES (1803–1880), bookseller, was son of John Bohn, a bookseller of London, who died on 13 Oct. 1843, in his eighty-sixth year. James was born in London 20 Dec. 1803, and, after a good education at Winchester, was sent to Göttingen to perfect himself in German and French. He assisted his father for some years, but in February 1834 commenced bookselling on his own account at 12 King William Street, Strand. Here his great knowledge of books soon attracted many customers, and his shop became a meeting-place for a number of the most learned men of the day. In 1840 he published a catalogue extending to 792 pages; it contains, amongst much other valuable matter, nearly complete lists of the works of Burnet, Defoe, Hearne, and Ritson, and it still finds a place on the shelves of all bibliographers. He, however, was not successful in business, and in 1845 had to recommence at 66 St. James's Street, and here he republished Dugdale's 'Monasticon' in eight ponderous folio volumes. Being after this again unsuccessful, he gave up his shop in 1847, and turned his attention to literature, and was for many years a contributor to the 'Family Herald;' he also acted as assistant editor on the 'Reader.' In 1857 he prepared for Mr. David Nutt a catalogue of theological books in foreign languages, a volume of 704 pages, enriched by many original notes. For several years before his decease he was in the employment of his friend Mr. Nicholas Trübner, of Ludgate Hill. Here he compiled several catalogues of Brazilian, Mexican, Spanish, Portuguese, Latin, German, and French books. He died at Peckham 4 Jan. 1880.

[Bookseller, February 1880, pp. 105–106.] G. C. B.

BOHUN, EDMUND (1645–1699), chief justice of Carolina, was the son of Baxter Bohun, and grandson of Edmund Bohun, of Westhall Hall, Suffolk. He was born 12 March 1644–5; his father died when he was fourteen; he entered Queens' College, Cambridge, as a fellow-commoner on 13 June 1663, and left in 1666, on account of the plague (according to Wood), without a degree. In 1669 he married Mary Brampton, and settled at Westhall. He was for a time in the commission of the peace, but made himself unpopular (as his wife told him) by overloquacity, and was probably despised as a wrong-headed pedant. He was brought up as a dissenter, but became an Anglican, hating equally dissent and popery. Having lived beyond his means, he went to London in 1684, hoping to get preferment from his acquaintance, Sancroft, Arlington, or Sir Leoline Jenkins. He got nothing, except 7*l.* from Jenkins, and on the accession of James II was left out of the commission for publicly attacking a Whitehall Jesuit. He tried to make something by his pen, and composed his dictionary for a stationer (Brome) in 1688. He wrote some tracts after the Revolution maintaining the doctrine of non-resistance, but inferring that, as James had deserted the throne, submission was due to William and Mary. He thus was a unique specimen of the 'non-resisting Williamite.' In 1691 he returned to occupy a house at

Dale Hall, for which he was unable to find a tenant. To his horror, a second edition of his dictionary was brought out the same year without his knowledge. Some passages were afterwards used to support charges of Jacobitism, in refutation of which he published three charges delivered at the Ipswich quarter-sessions in 1691 and 1692, with a preface protesting against the injustice. In 1692 Moore, bishop of Norwich, procured for him the place of licenser, with 200*l.* a year, with 25*l.* down to buy decent clothes. He was greatly distressed at this time by the loss of a son, and after five months' office fell into a trap laid for him by Charles Blount [see BLOUNT, CHARLES, 1654–1693]. Blount sent him anonymously a tract in defence of his own peculiar political theory. Bohun read it 'with incredible satisfaction,' licensed it 9 Jan. 1693, and on its appearance was summoned before the House of Commons 20 Jan. 1693. At the same time Blount published a second tract with 'a true character of E. Bohun, licenser of the press,' in which he was bitterly attacked for his supposed Jacobitism. The House of Commons, indignant at Bohun's sanction of the doctrine of a conquest by William, sent him to prison, and voted that he should be dismissed his office. He retired to the country, but some time afterwards obtained (it does not appear how) the chief justiceship of Carolina, with a salary of 60*l.* a year. He sailed in midsummer, 1698, and found the colony suffering from piracy, hurricanes, and fevers. He had hardly time to get into difficulties with other officials, when he died of an epidemic fever on 5 Oct. 1699. His son, Edmund, was a merchant in Carolina, and collected plants for Hans Sloane and Petiver. Some of his letters are in the Sloane MSS. He afterwards settled at Westhall.

Bohun wrote various tracts, compilations, and translations. His original works are: 1. 'Address to the Freemen and Freeholders of the Nation,' 1682. 2. 'Reflections on a Pamphlet entitled "A quiet and modest Vindication of the Proceedings of the last two Parliaments,"' 1683. 3. 'The Justice of the Peace' (a 'moral essay'), 1684 and 1693. 4. 'Defence of Sir R. Filmer against Algernon Sidney, &c.,' 1684. 5. 'History of the Desertion,' 1689. 6. 'The Doctrine of Non-resistance . . . no way concerned in the controversies . . . between the Williamites and the Jacobites,' 1689 (the last two are printed in the State Tracts, vol. i. 1705). 7. 'Three charges, &c.,' 1693. 8. 'Character of Queen Elizabeth,' 1693, chiefly from R. Johnstone's 'Historia rerum Britannicarum,' 1655 (French translation in 1694). He also published the 'Origin of Atheism,' &c., translated from 'Dorotheus Licureus;' edited an edition of Filmer's 'Patriarcha,' and Jewel's 'Apology,' Degory Wheare's 'Method and Order of Reading Histories,' Sleidan's 'Commentaries' and 'the present state of Germany,' from Puffendorff. His chief work was the 'Geographical Dictionary, representing the present and ancient names of all the countries, provinces, &c., of the whole world, their distances, longitudes, and latitudes, with a short historical account of the same, by Edmund Bohun, Esq.,' 1688. The second edition appeared in 1691; the third, 'continued, corrected, and enlarged' by Mr. Barnard, in 1693 [see BARNARD, JOHN, *fl.* 1685–1693]; the 'great historical, geographical, and poetical dictionary, founded on Moreri,' wherein are inserted the last five years' historical and geographical collections of E. B., 'designed at first for his own geographical dictionary, and never extant till now,' appeared in 1694.

[Diary and Autobiography of E. Bohun, edited with memoir, &c., by S. Wilton Rix, privately printed, Beccles, 1853; Wood's Athenæ (Bliss), iii. 216, under 'Degorie Whear;' Macaulay's History, chap. xix. iv. 350.] L. S.

BOHUN, HENRY DE, first EARL OF HEREFORD (1176–1220), constable of England, was the grandson of Humphrey III de Bohun [q. v.] and Margaret, daughter of Milo of Gloucester, earl of Hereford and constable, through whom the hereditary right to the office of constable passed to the family of de Bohun. He was born in 1176, and on the accession of John was created earl of Hereford by charter 28 April 1199. In 1200 he was sent with other nobles to summon his uncle, William the Lion of Scotland, to appear at Lincoln to do homage. In 1215 he joined the confederate barons who obtained the concession of Magna Charta, and was one of the twenty-five appointed to insure its observance. On John's death he still adhered to the party of Louis of France, and was taken prisoner in the battle of Lincoln 20 May 1217. He died on a pilgrimage to the Holy Land 1 June 1220. His wife was Maud, daughter of Geoffrey Fitz-Piers, earl of Essex, by whom he had a son Humphrey V [q. v.], who succeeded him.

[Chronicles of Rog. Hovoden, Gervase of Canterbury, and Matt. Paris; Dugdale's Baronage, i. 180.] E. M. T.

BOHUN, HUMPHREY III DE (*d.* 1187), baronial supporter of Henry II, was the third of his name in the family settled in England after the Norman conquest. The founder of the house, Humphrey de Bohun, surnamed 'with the beard,' was succeeded by his son Humphrey II, who married, at some

date between 1087 and 1100, Maud, daughter of Edward de Saresburie. Humphrey III was probably born about the end of the first decade of the twelfth century, and in some points he seems to have been confounded with his father. For example, to the father was probably due the foundation of the priory of Farleigh in Wiltshire, which is attributed to the son. The latter is also said to have served as steward or sewer to Henry I. At the beginning of Stephen's reign he was one of the witnesses of that king's laws; but in 1139, when the Empress Matilda landed, he joined her standard, and by the advice of Milo of Gloucester, earl of Hereford, his father-in-law, he fortified his stronghold of Trowbridge against the king. Yet in the next year he appears as sewer to Stephen, an office which he also held in the empress's household. He was taken prisoner at Winchester in 1141, fighting on Matilda's side.

After the accession of Henry II Humphrey de Bohun scarcely appears at all in the history of the early years of the reign. He was, however, one of the barons summoned to the council held at Clarendon in January 1164, in which were framed the celebrated constitutions, and nine years later, 1173, he stood firm by the king in the rebellion of Prince Henry, and with Richard de Lucy, the justiciar, and other loyal barons invaded Scotland to check William the Lion, who supported the prince. But the landing of Robert de Beaumont, earl of Leicester, compelled them hastily to conclude a truce and to march against the earl's forces, which they totally defeated at Fornham St. Geneviève in Suffolk, 16 or 17 Oct. In 1175 Bohun was present at the convention of Falaise, when the Scottish king recognised the supremacy of the English crown. He died 6 April 1187, and was buried at Lanthony, Gloucestershire; having married Margaret, eldest daughter of Milo of Gloucester, earl of Hereford, and constable of England (*d.* 1146), on the failure of whose male line those honours were carried over through the same Margaret to the house of Bohun. Humphrey's son, Humphrey IV, sometimes styled earl of Hereford and constable, predeceased him in 1182, having married Margaret, daughter of Henry, earl of Huntingdon (son of David, king of Scotland), and widow of Conan-le-Petit, earl of Brittany and Richmond (*d.* 1171), and leaving a son Henry [q. v.], created earl of Hereford in 1199.

[Chronicles of Benedict of Peterborough and Roger of Hoveden; Dugdale's Baronage, i. 179; Foss's Judges of England, i. 125; Eyton's Itinerary of Henry II; Add. MS. 31939, f. 182.]

E. M. T.

BOHUN, HUMPHREY V DE, second EARL OF HEREFORD and first EARL OF ESSEX (*d.* 1274), constable of England, succeeded his father Henry, first earl [q. v.], in 1220, and at some date after the death of William de Mandeville, his mother's brother, which took place in 1227, he was created earl of Essex. In the last-named year he joined Richard of Cornwall at Stamford, to support him in his quarrel with the king. He served the office of marshal of the household at the coronation of Queen Eleanor in 1236, and at the christening of Prince Edward in 1239 he was one of the sponsors. He was sheriff of Kent in 1239 and the two following years. He took part in Henry's French expedition of 1242, but is said to have retired with other nobles in disgust at the king's partiality to the aliens. In 1244 he aided in the repression of a Welsh rising on the marches; but in the same year he was defeated by them in a second outbreak, one of the chief causes of insurrection being, it was declared, his retention of part of the inheritance of his sister-in-law Isabel, wife of David, son of Llewellyn, prince of Wales. In 1246 he joined in the letter of remonstrance from the English peers to Pope Innocent IV. He was present in the parliament of 1248, and two years later he took the cross and went to the Holy Land. Humphrey de Bohun appears as one of those who spoke in defence of Simon de Montfort in 1252, and next year he was present at the renewal of the charters and the solemn excommunication of their transgressors. In 1254 he was with the king in Gascony, but received offence from slights put upon him when performing his duties as constable. In 1257 he had the custody of part of the marches of Wales, and was employed in the Welsh war which then broke out.

When the barons formed the confederation for redress of grievances in 1258, the Earl of Hereford was of their number, and had a share in the settlement of the government under the Provisions of Oxford, being one of the original commissioners, and subsequently one of the council of fifteen. In 1260 he appears as a justice itinerant for the counties of Gloucester, Worcester, and Hereford. In the divisions which soon split up the barons' confederation Humphrey de Bohun separated himself from Simon de Montfort's party, and is found in 1263 supporting the king, while his son Humphrey VI is ranged on the opposite side. In the battle of Lewes, 14 May 1264, he was taken prisoner. In the narrative of events of the ensuing year the movements of Humphrey de Bohun have been evidently confused with those of his son. It is stated that at the battle of Evesham, 4 Aug. 1265, he fought

on the side of Simon de Montfort, and was taken prisoner. But this account applies only to the younger Humphrey, for immediately after that victory Hereford stood high in the king's favour, and was employed as one of the arbitrators to bring to reason the remnant of de Montfort's party by the dictum of Kenilworth.

Humphrey de Bohun died 24 Sept. 1274, and was buried at Lanthony, Gloucestershire. He married twice: first, Maud, daughter of the Comte d'Eu, by whom he had his son Humphrey VI, who died before him, and four daughters; and secondly, Maud de Avenebury, by whom he had a son John, lord of Haresfield.

[Chronicles of Gerv. of Canterbury, Matt. Paris, Will. Rishanger; Dugdale's Baronage, i. 180; Foss's Judges, ii. 245; Stubbs's Const. Hist.]

E. M. T.

BOHUN, HUMPHREY VII DE, third EARL OF HEREFORD, and second EARL OF ESSEX (*d.* 1298), constable of England, was born about the middle of the thirteenth century, the grandson of Humphrey V [q. v.], second earl, and son of Humphrey VI, who predeceased his father, 27 Aug. 1265, immediately after the battle of Evesham, at which he was made prisoner, fighting on de Montfort's side. Humphrey VII served in 1286 in the army of occupation in Wales. In 1289 he was found levying private war against the Earl of Gloucester, and was peremptorily ordered to keep the peace. In 1292 he was fined and imprisoned. In 1296–7 he was sent as escort to John, the young earl of Holland, who had lately married the English princess, Elizabeth, and was now returning to his own country to claim his inheritance. The princess, who was only in her fourteenth year, was married two years afterwards to Humphrey de Bohun, the earl's son. From this time to the date of his death Hereford played a conspicuous part, in conjunction with Roger Bigod, fifth earl of Norfolk, in opposing Edward I's measures for arbitrary taxation, and in at length obtaining the confirmation of the charters, being, however, chiefly moved by the alarm given to the barons by Edward's reforms. At the assembly of the magnates at Salisbury early in 1297, he, with Bigod, refused to serve in Gascony on the plea that they were not bound to foreign service except in company with the king [see BIGOD, ROGER, fifth earl of Norfolk]. At a levy of the military forces of the kingdom, the two earls refused to do their duty as constable and marshal, and were both deprived. The list of grievances which their party then presented was only partially inquired into when Edward sailed for Flanders; but the confirmation of the charters was agreed to by Prince Edward acting as regent, and was allowed by the king himself in Flanders. On Edward's return to England in 1298, he was required by the two earls, as the price of their attendance in the invasion of Scotland, to promise a re-confirmation of the charters. After the battle of Falkirk, 22 July, Hereford had leave to return to England; and soon after he died at Pleshy, in Essex, and was buried at Walden. He married Maud, daughter of Ingelram de Fienes, and was succeeded by his son, Humphrey VIII.

[Chronicles of Will. Rishanger, Th. Walsingham, Walt. de Hemingburgh; Dugdale's Baronage, i. 182; Stubbs's Constitutional History.]

E. M. T.

BOHUN, HUMPHREY VIII DE, fourth EARL OF HEREFORD, and third EARL OF ESSEX (1276–1322), constable of England, was son of Humphrey VII, third earl of Hereford. He was born in 1276. In 1301 he appears among the barons who addressed the letter of protest to the pope from the parliament of Lincoln. In 1302 he married Elizabeth, daughter of Edward I, and widow of John, earl of Holland, and on the occasion made surrender to the crown of all his lands and title, receiving them back in tail. In a great tournament held at Fulham in 1305 he took a leading part, and again in 1307 he was present at another passage of arms at Wallingford, held against the king's favourite, Piers Gaveston. In 1308 he was sent north, in company with the Earl of Gloucester, to oppose Robert Bruce. The next year he joined with other barons in a letter of remonstrance addressed to the pope. In 1310 Humphrey de Bohun was one of the twenty-one ordainers appointed on 20 March to reform the government and the king's household. The ordinances which they presented were finally accepted in October 1311; but three months later, January 1312, the king recalled his banished favourite, Gaveston. Immediately Thomas, earl of Lancaster, and the confederate barons, including Hereford, took up arms and besieged Gaveston in Scarborough. On 19 May Gaveston surrendered, and was shortly afterwards beheaded by Lancaster's party at Blacklow Hill. Edward was powerless to punish the rebellious lords; negotiations for a peace were opened, and in October 1313 the earls and their followers were pardoned. In 1314 the war with Scotland was renewed, and the battle of Bannockburn was fought on 24 June. Here Gloucester was slain and Hereford taken prisoner. He was exchanged for the wife of Robert Bruce, who had long been a captive in England.

The jealousy of the barons was now moved by the growing power of the two Despen-

sers, father and son. At a parliament held at York, September 1314, Edward was called upon to confirm the ordinances of 1311, and the elder Despenser was removed from the council. In 1315 Hereford was engaged upon the Welsh border, and was successful in quelling a rising. The factions which now sprang up among the barons threatened to bring about a state of civil war, when the movements of Robert Bruce, who had advanced south and captured Berwick, 2 April 1318, compelled the different parties to submit to a reconciliation. A general pardon was granted to Lancaster and his followers, and a new council was appointed August 1318. Of this council Hereford was a member, and he also took part in the military operations against Scotland, which, however, were hampered by Lancaster's perverse refusal to assist. A truce was concluded in 1319.

The feeling against the Despensers now broke out in open revolt. Bohun and Roger Mortimer, the principal lords on the Welsh border, prepared to attack Hugh le Despenser the younger, who held Glamorgan, in the autumn of 1320. Early in the next year the king issued writs forbidding unlawful assemblies; and a parliament was summoned to meet at Westminster on 15 July 1321. Bohun appeared in London at the head of an armed force, and took the lead in denouncing the favourites, who were sentenced to forfeiture and exile. But in October the king appeared in the field, and with unwonted vigour attacked his enemies in detail. They were driven north, and at the battle of Boroughbridge, in Yorkshire, 16 March 1322, they were totally defeated. Hereford was among the slain, and was buried in the church of the Friars Preachers of York.

By his wife, Elizabeth, daughter of Edward I, Humphrey de Bohun had six sons and four daughters. He was succeeded by his second son, John, who, dying in 1335, was followed by his brother, Humphrey IX, as sixth earl. In 1361 Humphrey X, earl of Northampton, succeeded, being the son of William de Bohun, another son of the fourth earl of Hereford. With Humphrey X the title became extinct in 1372, but was revived as a dukedom in 1397, in the person of Henry Bolingbroke, who married Mary, daughter and coheir of the last earl.
